PART 1
Geography

Concepts and skills

Chapter 1
The geography toolkit **4**

1A What are the geographical concepts?

1.1 Geographical concepts 6

1B What are the geographical skills?

1.2 Geographical skills 14

1.3 Observing, questioning and planning 15

1.4 Collecting, recording, evaluating and responding 18

1.5 Interpreting, analysing and concluding 28

1.6 Communicating 32

1.7 Reflecting and responding 34

1C What is fieldwork?

1.8 Fieldwork in geography 36

1D What are the career opportunities for geographers?

1.9 Careers in geography 42

Unit 1 Environmental change and management

Chapter 2
Changing and managing the environment **44**

2A What is environmental change?

2.1 Understanding environmental change 46

2.2 Degrading the land 48

2.3 Degrading the atmosphere 50

2.4 Degrading water 52

2.5 Damming the rivers 54

2.6 Pollutants in our water 56

2A Rich task: Return to Eden 58

2B What factors influence environmental change?

2.7 Our environment: the key to sustaining life 60

2.8 Challenges to sustainability 62

2.9 Loss of biodiversity 64

2.10 Climate change 66

2.11 Pollution 68

2.12 The real cost of your mobile phone 70

2.13 Ecosystem decline: invasive species 72

2B Rich task: Invasion of the cane toad 74

2C How are we responding to environmental changes?

2.14 One world, many views 76

2.15 Living water 78

2.16 Responding to salinity 80

2.17 Responding to deforestation 84

2C Rich task: Deforestation on Easter Island 86

Chapter 3
Coastal change and management **90**

3A How is the coastal environment changing?

3.1 Change in coastal environments 92

3.2 A dynamic balance 94

3.3 Climate change and coasts 96

3.4 The impact of climate change on the Great Barrier Reef 98

3.5 The impact of population growth on coasts 100

3.6 Loss of coastal biodiversity 102

3.7 Coastal and marine pollution 104

3A Rich task: Dunwich's disappearing churches 106

3B How can coastal changes be managed?

3.8 New ways of managing coasts 108

3.9 Change at Rainbow Beach 110

3.10 Integrated Coastal Zone Management (ICZM) 112

3.11 ICZM in the Netherlands 114

3.12 Protecting the coast 116

3.13 Reducing the impacts of coastal tourism 118

3.14 Indigenous management of the coast 120

3B Rich task: Ningaloo Coast 122

3C How can geographers help to manage coastal changes?

3.15 The role of geographers in managing environmental change 124

3.16 Using spatial technologies 126

3.17 Understanding spatial variations 128

3.18 Assessing environmental change 130

3.19 Responding to environmental issues 132

3C Rich task: Gulf of Mexico oil spill 134

Unit 2 Geographies of human wellbeing

Chapter 4
An unequal world **138**

4A How does wellbeing vary around the world?
4.1 Defining wellbeing 140
4.2 Different views of wellbeing 142
4.3 Mapping wellbeing 144
4.4 Exploring links between wellbeing 146
4.5 Contrasts in wealth 148
4.6 Living in poverty 150
4.7 Contrasts in health 152
4.8 The Sub-Saharan HIV epidemic 154
4.9 Contrasts in education 156
4A Rich task: Global obesity epidemic 158

4B How does wellbeing vary within countries?
4.10 Variations in wellbeing within India 160
4.11 India's rural–urban divide 162
4.12 Wellbeing in Bolivia 164
4.13 Wellbeing in Australia 168
4.14 Wellbeing in Indigenous Australian communities 170
4B Rich task: Investigating wellbeing at the local scale 172

Chapter 5
Inequalities in wellbeing **174**

5A How does the natural environment cause inequality?
5.1 Why wellbeing varies 176
5.2 Environment factors and wellbeing 178
5.3 The influence of climate 180
5.4 The influence of climate change 182
5.5 The influence of natural resources on inequality 184
5.6 The influence of location on inequality 186
5A Rich task: Prisoners of geography 188

5B How do human activities cause inequality?
5.7 Human factors and wellbeing 190
5.8 Changes in population structure 192
5.9 Population growth and inequalities in wellbeing 194
5.10 Gender and inequalities in wellbeing 196
5.11 Technology and inequalities in wellbeing 198
5.12 Politics and inequalities in wellbeing 200
5.13 Conflict and wellbeing 202
5.14 The lasting impacts of conflict 204
5.15 War in Darfur 206
5.16 Conflict and refugees 208
5B Rich task: Demographic change in Japan 210

Chapter 6
Improving wellbeing **212**

6A How can we improve wellbeing?
6.1 Improving wellbeing 214
6.2 Improving wellbeing for women and children 216
6.3 Improving access to education 218
6.4 Improving wellbeing in Australia 220
6.5 Improving the wellbeing of Indigenous Australians 222
6A Rich task: The wellbeing of refugees in Australia 224

6B Who is working to improve wellbeing?
6.6 Organisations working to improve wellbeing 226
6.7 IFAD: Helping to improve wellbeing in India 228
6.8 The government and foreign aid 230
6.9 The role of NGOs 232
6B Rich task: Charity 234

PART 2 History

Concepts and skills

Chapter 7
The history toolkit **238**

7A What are the historical concepts?
7.1 Historical concepts 240

7B What are the historical skills?
7.2 Historical skills 248
7.3 Chronology, terms and concepts 249
7.4 Historical questions and research 251
7.5 Analysis and use of sources 254
7.6 Perspectives and interpretations 259
7.7 Explanation and communication 260

7C What are the career opportunities for historians?
7.8 Careers in history 262

Unit 1 Australia at war (1914—1945)

Chapter 8
Introduction to Australia at war (1914–1945) **264**

8A What events defined the years between World War I and World War II?
8.1 The aftermath of World War I 266
8.2 The Treaty of Versailles 268
8.3 The Roaring Twenties 270
8.4 The Great Depression 272

8B What were the key events of World War II?
8.5 Key events of World War II 274

8C What was the significance of World War II?
8.6 The significance of World War II 278

Chapter 9

World War II (1939-1945) **280**

9A What were the causes of World War II and what course did it take?

9.1 World War II: a timeline 282
9.2 Causes of World War II 284
9.3 Significant individual: Adolf Hitler 288
9.4 The course of the war in Europe 290
9.5 The end of the war in Europe 294
9.6 The course of the war in Asia and the Pacific 296
9.7 Significant individuals: wartime leaders 302
9A Rich task: The Kokoda campaign 304

9B What were some of the most significant events of World War II?

9.8 The Holocaust 306
9.9 The atomic bombings 312
9B Rich task: Antisemitism in Nazi Germany 316

9C How did World War II affect the lives of Australians and Australia's international relationships?

9.10 Australia's commitment to the war 318
9.11 Australian experiences of the war abroad 320
9.12 Life on the home front 322
9.13 Indigenous Australians at war 328
9.14 Australia's international relationships 330
9C Rich task: Australian wartime propaganda posters 334

Unit 2 Rights and freedoms

Chapter 10

Introduction to rights and freedoms **336**

10A How did the outcomes of World War II shape the modern world?

10.1 The effects of World War II on the modern world 338

10B In what ways have people fought for rights and freedoms since 1945?

10.2 The struggle for rights and freedoms since 1945 344

Chapter 11

Rights and freedoms **350**

11A How have Indigenous peoples in Australia struggled for rights and freedoms?

11.1 Rights and freedoms: a timeline 352
11.2 Background to the struggle for Indigenous rights 354
11.3 Indigenous protests during the 19th and 20th centuries 358
11.4 Significant individual: Jack Patten 360
11.5 Indigenous achievements and contributions during the 19th and 20th centuries 362
11.6 The Universal Declaration of Human Rights 364
11A Rich task: The Stolen Generations 366

11B How have African Americans and Indigenous peoples in Australia achieved change?

11.7 The US civil rights movement 368
11.8 Significant individual: Dr Martin Luther King Jnr 372
11.9 Australia's civil rights movement 374
11.10 Land rights: a continuing struggle 378
11.11 Towards reconciliation 382
11B Rich task: Charles Perkins: a significant individual 384

11C How do activists continue the struggle for civil rights and freedoms?

11.12 Two speeches, two perspectives 386
11.13 The reconciliation movement 388
11C Rich task: The Yirrkala Bark petitions 392

Unit 3 The globalising world

Chapter 12

Introduction to the globalising world **394**

12A How have changes in technology influenced the globalising world?

12.1 Changes in technology since 1945 396

12B How have changes in health and population influenced the globalising world?

12.2 Changes in health and population since 1945 400

12C How have conflicts influenced the world since 1945?

12.3 Australia's role in global conflicts since 1945 404

Chapter 13

Popular culture (obook only chapter) **408**

13A How did developments in population culture influence Australia after World War II?

13.1 Popular culture: a timeline
13.2 Defining popular culture
13.3 Changes to radio and film
13.4 Changes to sport
13.5 Changes to music
13.6 The impact of changing technology on television and film
13.7 The birth of Australian soapies and mini-series
13A Rich task: The influence of popular culture in Australia

13B How have the music, film and television industries in Australia changed since World War II?

13.8 Changes in the music industry
13.9 Changes in the film industry
13.10 Changes in the television industry
13B Rich task: Singles charts

13C What contributions has Australia made to international popular culture?

13.11 Australian music goes global
13.12 Significant individuals: The Go-Betweens
13.13 Australian film goes global
13.14 Australian television goes global
13.15 Australian sport goes global
13C Rich task: 'Ozploitation'

Chapter 14
The environment movement (obook only chapter) 410

14A How and why did the environment movement develop?
14.1 The environment movement – a timeline
14.2 The birth of the environment movement
14.3 The national parks movement of the 19th century
14A Rich task: The impacts of the Industrial Revolution

14B What events led to growing environmental awareness?
14.4 The 20th century – a rapidly changing world
14.5 The impact of population increase and urbanisation
14.6 The impact of increasing industrial production and trade
14.7 The influence of popular culture
14.8 The influence of environmental ideas
14B Rich task: Sustainability in business

14C How have governments and activists around the world responded to environmental threats?
14.9 Key campaigns and events 1945 to 1975
14.10 Nuclear weapons testing
14.11 Nuclear disasters
14.12 Significant events and campaigns in Australia
14.13 Australian government responses
14.14 International responses
14C Rich task: Environmental threats to the Great Barrier Reef

Chapter 15
Migration experiences 412

15A How have world events influenced migration to Australia since World War II?
15.1 Migration experiences: a timeline 414
15.2 Australia: an immigration nation 416
15.3 The influence of world events 420
15.4 Migration to Australia after World War II 423
15A Rich task: The census 428

15B How have government policies influenced migration to Australia since World War II?
15.5 White Australia policy 430
15.6 The end of White Australia 432
15.7 Towards a multicultural Australia 436
15.8 The migration debate since 1980 438
15.9 The ongoing migration debate 443
15B Rich task: The *Tampa* crisis 446

15C How did the Vietnam War affect migration to Australia?
15.10 The impact of the Vietnam War on migration 448
15.11 Vietnamese emigration: moral obligations 451
15.12 Significant individuals: the contribution of immigrants to Australia 454
15C Rich task: SBS and the *Thoi Su* controversy 456

15D How has migration shaped Australia's identity and global relationships?
15.13 The changing face of Australia 458
15.14 Challenges and positive developments 462
15D Rich task: Big Australia 464

Chapter 16
Political crisis: The Vietnam War (obook only chapter) 466

16A Why did Australia become involved in the Vietnam War between 1965 and 1973?
16.1 Australia in the Vietnam War era: a timeline
16.2 French Indochina
16.3 Fear of communism in Australia
16.4 Australia's initial involvement
16.5 Commitment of ground troops to the Vietnam War
16.6 Conscription
16A Rich task: The referendum on communism

16B What was the nature of Australia's involvement in the Vietnam War?
16.7 Where did Australians fight?
16.8 The nature of warfare in Vietnam
16.9 The Australian withdrawal from Vietnam
16B Rich task: Entertaining the troops

16C How was Australia changed as a result of involvement in the Vietnam War?
16.10 Impact of the war on Vietnam veterans
16.11 The impact of war on the Vietnamese people
16.12 Immigration and 'boat people'
16.13 Australia's growing relationship with South-East Asia
16C Rich task: SBS and the *Thoi Su* controversy

PART 3
Economics and business

Concepts and skills

Chapter 17
The economics and business toolkit 470

17A What are the economics and business skills?
17.1 Economics and business skills 472
17.2 Ask questions and conduct research 473
17.3 Interpret and analyse sources 475
17.4 Apply strategies to resolve economics and business issues 476
17.5 Communicate your findings and reflect 477

Unit 1 Enterprising behaviours and capabilities

Chapter 18
Measuring Australia's economic performance 478

18A How is the performance of the Australian economy measured?
18.1 Measuring growth in the Australian economy – GDP 480

18.2 Measuring price changes in the Australian economy – inflation ... 482
18.3 Measuring participation in the Australian economy – the unemployment rate ... 484
18A Rich task: Youth unemployment ... 486

18B How well does the Australia economy perform compared with other economies around the world?
18.4 Australia's economic scorecard ... 488
18B Rich task: The story behind our economic growth ... 490

Chapter 19
Living standards ... 492

19A Why do living standards vary around the world?
19.1 Defining and measuring living standards ... 494
19.2 Factors that affect a country's living standard ... 496
19A Rich task: Poverty in Australia ... 498

19B What is the connection between economic performance and living standards?
19.3 Policies to improve living standards ... 500
19B Rich task: Climate change and living standards ... 504

Unit 2 Work and work futures

Chapter 20
The business environment ... 506

20A What is a competitive advantage and how does it benefit business?
20.1 Gaining a competitive advantage ... 508
20A Rich task: Undertaking a small business venture ... 512

20B What is innovation and how can it be used in business?
20.2 Innovation in business ... 514
20B Rich task: The importance of innovation in business ... 518

PART 4
Civics and citizenship

Concepts and skills

Chapter 21
The civics and citizenship toolkit ... 524

21A What are the civics and citizenship skills?
21.1 Civics and citizenship skills ... 526
21.2 Ask questions and conduct research ... 527
21.3 Interpret and analyse sources ... 529
21.4 Apply strategies to resolve civics and citizenship issues ... 531
21.5 Communicate your findings and reflect ... 532

Unit 1 Government and democracy

Chapter 22
Australia's democracy and the global context ... 534

22A What are the key features of Australia's democracy?
22.1 Key features of Australia's system of government ... 536
22.2 Principles of Australia's system of government ... 538
22.3 Australia's Commonwealth Parliament ... 542
22.4 Comparing systems of government in Australia and Indonesia ... 548
22A Rich task: Should our government limit free speech? ... 552

22B How is Australia's democracy influenced by the international community?
22.5 How Australia's democracy is shaped by international factors ... 554
22B Rich task: Australia's international democratic ranking ... 556

22C What are the features of a resilient democracy and a cohesive society?
22.6 Safeguards to Australia's democratic society ... 558
22.7 Threats to Australia's democratic society ... 560
22C Rich task: Maintaining Australia's democratic and cohesive society ... 564

Unit 2 Laws and citizens

Chapter 23
The Australian Constitution and the High Court ... 568

23A How does the Australian Constitution work?
23.1 The Australian Constitution – an introduction ... 570
23.2 How the Australian Constitution works ... 572
23A Rich task: Constitutional recognition of Indigenous Australians ... 576

23B What role does the High Court of Australia play in interpreting the Constitution?
23.3 The Australian Constitution and the High Court ... 578
23B Rich task: Freedom of 'hate speech' ... 582

Chapter 24
Australia's international legal obligations ... 584

24A What are Australia's global roles and responsibilities?
24.1 Australia's role as a member of the United Nations ... 586
24.2 Australia's international role and responsibilities ... 588
24A Rich task: Australia's treatment of asylum seekers ... 592

24B How are government policies in Australia shaped by our international legal obligations?
24.3 Australia's international legal obligations ... 594
24B Rich task: Australia's international obligations to Aboriginal and Torres Strait Islander peoples ... 598

Glossary: Geography ... 600
Glossary: History ... 604
Glossary: Economics and business ... 609
Glossary: Civics and citizenship ... 612
Index ... 615
Acknowledgements ... 619

Developing a range of questions to investigate a legal issue	Chapter 22	557
Creating an online survey	Chapter 22	566
Gathering and assessing the reliability of information	Chapter 23	576
Creating a timeline	Chapter 23	583
Recognising and considering multiple perspectives	Chapter 24	593
Creating and delivering an audiovisual presentation	Chapter 24	599

Using *Oxford Big Ideas Humanities*

Oxford Big Ideas Humanities is a brand-new series developed and written to provide complete coverage of the Victorian Curriculum: Humanities – Geography, History, Economics and Business, and Civics and Citizenship – across Years 7–10.

Focus on inquiry

Each chapter of *Oxford Big Ideas Humanities* is structured around key inquiry questions from the Victorian Curriculum. Each unit of the text supports teachers and students as they adopt an inquiry-based approach to the key learning areas in The Humanities.

The learning sequence in each chapter is clearly set out under key inquiry questions. Students are encouraged to use their prior knowledge and make predictions at the start of each new topic.

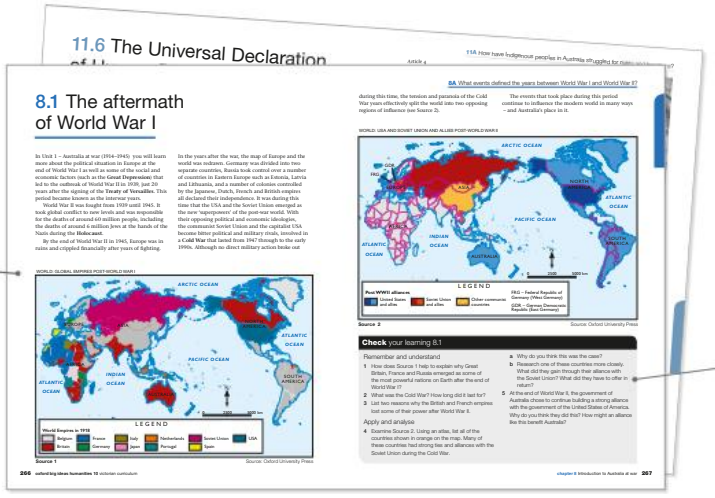

Stunning full-colour photography generates discussion and interest

Focus on engagement

Each unit of the Student book combines a range of engaging source materials – such as photographs, videos, data tables, graphs and illustrations – with supporting questions and activities.

Source materials – such as photographs, technical illustrations, infographics, cartoons, and graphs – simplify difficult concepts and engage reluctant learners.

Check your learning activities accompany every unit, allowing students to consolidate and extend their understanding. These are graded according to Bloom's Taxonomy – catering for a range of abilities and learning styles.

Focus on concepts and skills

Complete coverage of all concepts and skills provided in stand-alone reference 'Toolkits'. All of these concepts and skills are also integrated throughout the text so students can see them at work in context.

Complete coverage of all **concepts and skills** is provided for all four Humanities subjects. These can be used as introductory units of work or stand-alone reference and revision sections throughout the year.

Rich task activities encourage students to apply the knowledge and skills they have learned in each chapter to a new and interesting case study, event or issue.

Skill drill activities guide and support students step by step as they learn and apply key skills.

Extend your understanding activities challenge students to conduct further research, or complete group work, to deepen their understanding of an issue or skill being investigated.

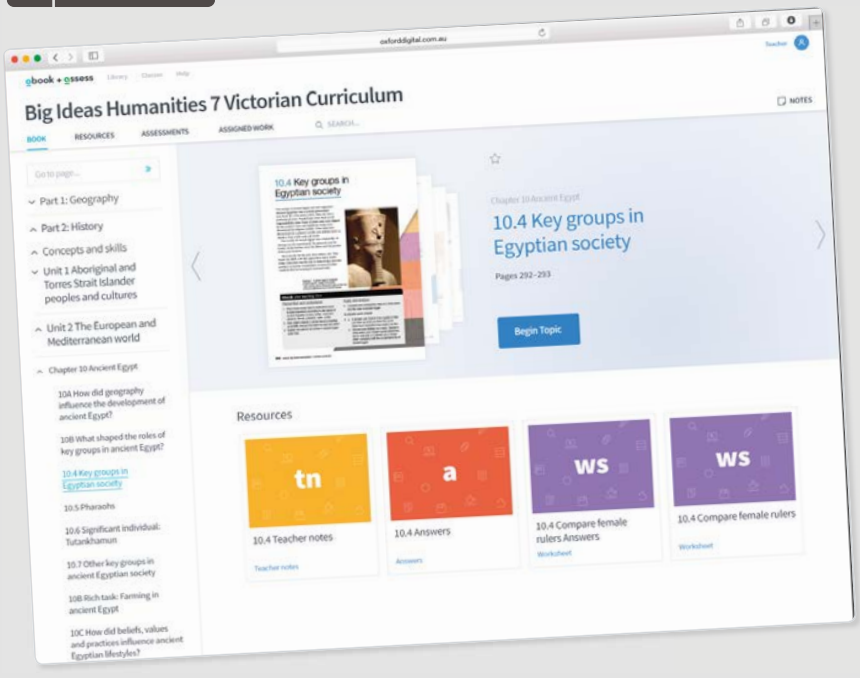

Integrated digital support

obook assess

Student obook assess provides a fully interactive electronic version of the print Student book in an easy-to-read format. A host of additional resources for students – such as videos, worksheets, interactives objects, online quizzes and multimedia links – are linked to each unit in the book making easier to access than ever before.

obook assess is compatible with laptops, iPads, tablets and IWBs and access to content is provided online and offline.

DASHBOARD

TEACHER obook assess

Teacher support is offered in digital format via Teacher obook assess. Teacher notes, answers, tests, additional worksheets, lesson ideas, planning tips, assessment advice and is provided for every unit. **Teacher obook assess** allows teachers to manage their classes by assigning work, tracking progress and planning assessment.

Concepts and skills

The geography toolkit

Geography is the study of the places that make up the world around us. Geographers are interested in how human activities and natural processes change the Earth's places, as well as the links between these places. More than ever before, geographers help other people understand how change affects people and places and how this change can be managed.

Geographers have a sense of wonder and curiosity about the world and this leads them to ask questions about what they see and experience.

Geographers use a range of key concepts and skills to answer such questions. Each of these concepts and skills is a tool that you can use to better understand your world. As you master each of these concepts and skills you will gradually fill your toolkit with a range of useful geographical tools. These will help you better understand this amazing planet.

1A
What are the geographical concepts?

1B
What are the geographical skills?

chapter 1

Source 1 Mount Kilimanjaro, Africa's highest peak

1C
What is fieldwork?

1D
What are the career opportunities for geographers?

1.1 Geographical concepts

Geographers use seven key concepts to help investigate and understand the world. These concepts provide a framework to thinking geographically and will help guide you through every geographical inquiry. At times you will use several of these concepts at once, while at other times you may focus on just one. The seven key concepts in geography are:

- **place**
- **space**
- **environment**
- **interconnection**
- **sustainability**
- **scale**
- **change.**

Place

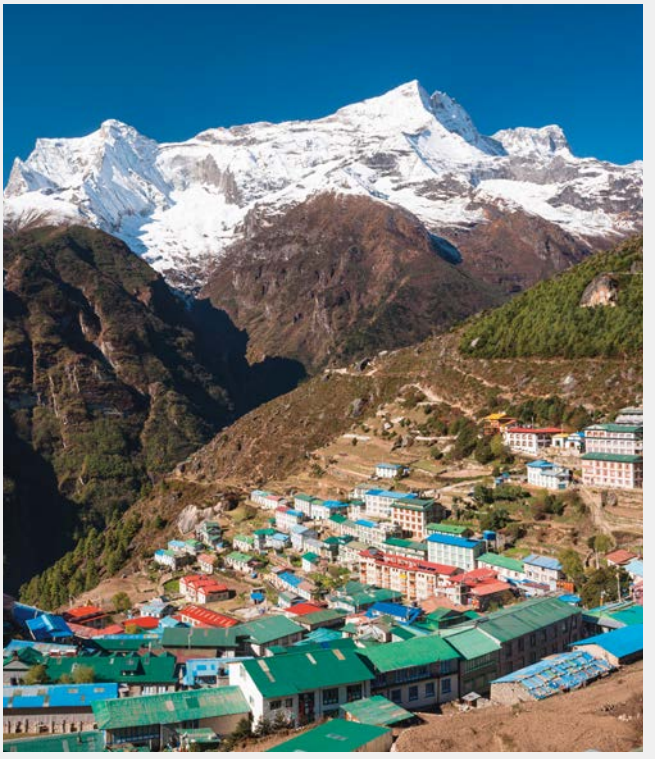

A place is a part of the Earth's surface that is identified and given meaning by people. For example, the Serengeti – which is a vast ecosystem in Africa – is a place. It is famous for its enormous plains filled with a range of wildlife. Places aren't defined by size, however. They can be very large, like a whole continent, or small, like a corner of a library. Your home and school are important places for you, because they are places where you live and spend a lot of time.

Places can be natural (that is, shaped by the environment and largely unchanged by humans), or built (that is, constructed by humans). Each place is unique, with its own set of characteristics.

The life of every person and animal on Earth is influenced by place. Places determine our relationships with one another. Our closest relationships are likely to be with people in places that are physically near. The environmental and social qualities of a place all influence the way we live. Climate, landscapes, types of plants and resources, transport networks, entertainment venues and workplaces all have a major impact on our daily lives.

Geographers use the concept of place when they investigate what a place is like, and when they look for explanations for what they see. For example, a geographer visiting Namche Bazaar near Mount Everest (see Source 1) would be interested in the forces that have shaped these mountains.

They would look for clues and begin to ask questions, much like a detective. Why are the sides of the mountains so steep? Why are the highest mountain peaks in a line? Why are there stripes in the mountain peaks? By seeking answers to these questions the geographer is aiming to explain, not just describe, a place.

Source 1 The town of Namche Bazaar lies at the base of Mount Everest.

Geographers use the concept of place when conducting any geographical inquiry. For example, a geographer visiting Namche Bazaar would use the concept of place to help understand why people choose to live in this challenging environment and how they overcome these challenges. They would also investigate the ways people have altered this environment, and assess the environmental and social impacts of these changes.

Space

To most people, space means the empty universe, but to a geographer it has a different meaning. Geographers use the key concept of space when investigating the way that things are arranged on the Earth's surface. They also investigate the ways people use and change the spaces in which they live.

Geographers look for patterns in the way features and structures are arranged, and the concept of space helps them to do this. It has three main elements:

- location – where things are located on the Earth's surface
- organisation – how and why things are arranged and managed on the Earth's surface by people
- spatial distribution – the shapes and patterns in which things are arranged on the Earth's surface.

At first, you may find you confuse the concepts of place and space, as people often use the words interchangeably. To a geographer, however, the concepts of place and space are quite separate. It may help you to remember that places can be divided and organised into spaces. Spaces also are assigned with different purposes.

For example, a place like your school is organised into different spaces, each with its own purpose. There are spaces for learning, spaces for sports and spaces to eat. Larger places, such as your suburb, town or city, are also organised into different spaces. There are spaces for housing, spaces for businesses, and spaces for sports and entertainment – all with their own function.

Understanding of the location, patterns and planning of spaces helps geographers to make sense of our world. Geographers would look at a photograph like this one of New York City (see Source 2) and might examine it by using the key concept of space in the following terms:

- location – they would observe that Manhattan Island is located in the mouth of the Hudson River and that land is limited. Clearly, there is an open space in the centre of the city. Geographers might identify that it has been designated as a space for recreation and enjoying nature. They may ask questions like, How big is the park? When was it established?
- organisation – they would conclude that there are many tall buildings in a confined area. Were the buildings constructed around a set perimeter, after the park was established? Are the buildings mainly used for business or housing purposes?
- spatial distribution – geographers may investigate how many buildings there are per square kilometre, how sparsely or densely they are situated from each other, and how sparsely or densely they are populated.

Further investigation would reveal that there is a complex network of bridges, ferries, subways and walkways that link the island to surrounding areas. In fact, Manhattan Island in New York is one of the most densely populated places on Earth, with more than 26 000 people living in every square kilometre! New Yorkers would perceive and use the space around them in quite a different way from someone living on a huge block in an outer suburban area.

Geographers also investigate the ways that people use and change the space in which they live. They recognise that different groups of people use space in different ways and that this changes over time. By examining, researching and describing how spaces are used, geographers can further our understanding of the world and help manage it into the future.

Source 2 Manhattan Island in New York is one of the most densely populated places on Earth.

Environment

You will have heard people talk about 'the environment' and probably studied aspects of the environment before. In geographical terms, the key concept of environment means the living and non-living components and elements that make up an area, and the ways they are organised into a system.

Geographers are interested in investigating and describing the relationships between people and the environment. In particular they examine:

- the ways in which different groups of people perceive and use the natural environment and why these perceptions differ
- the ways in which people change the environment and how these changes can be managed
- the impact of environmental hazards on people and how the impacts of these hazards can be reduced.

The world in which we live is made up of many different environments. Some environments are natural (or physical) such as deserts, **grasslands**, mountains, coral reefs, forests, oceans and ice caps. The natural environment provides us with basic resources for living such as food, water and clean air. Natural processes such as tectonic plate movement, **erosion** and weathering have formed these environments over millions of years. In order for an environment to be considered natural its soils, rocks, climate, plants and animals must remain largely untouched by humans. Today there are very few natural environments left on Earth. The Australian World Heritage-listed Heard Island and McDonald Islands are outstanding examples of pristine natural environments with no introduced animals or plant species, and no human impact.

Other environments have been so changed by humans – largely for settlement and economic activity – that very few natural features remain. These are known as built (or human) environments and include large cities, towns, suburbs and areas of farmland. For example, mountainous land in the Philippines has been transformed into terraced pond fields for rice farming by skilfully following the natural contours of the land.

Researching an environment also allows geographers to evaluate how people can best interconnect with that environment, and identify potential risks for people interacting with that environment. For example, examining the landscape and height, as well as the ascent routes of Mount Kilimanjaro (see Source 3) in Tanzania allows prospective travellers to know that, unlike with Mount Everest, they don't need to bring additional oxygen for their climb, but they do need to follow one of six official routes.

The study of different environments helps geographers to better understand and appreciate natural processes, such as how weather works, how mountains are formed and how rainforests and coral reefs grow. The concept helps geographers to analyse the changes humans make to natural environments and better appreciate their impact so that they can be managed more wisely.

Source 3
Mt Kilimanjaro in Africa is a popular place for climbers to interact with the natural environment.

Interconnection

Nothing on Earth exists in isolation. All environments and every living and non-living thing are connected. Geographers use this concept of interconnection to better understand the links between places and people, and how these interconnections affect the environment and the way we live. These connections can be on a local level or a global level.

Natural processes link places and people. For example, the water cycle links the water in the oceans with the land. When it brings rain to inland areas, water flows across the land and into rivers and streams. Farmers rely on this natural link to provide the water they need to grow food.

Links between places and people can affect the way people live. In turn, the way people live can affect places. A relatively small change in one area can have a great impact on another it is connected with. The melting of ice from a glacier at the top of a mountain, for example, will affect the land at the bottom of the mountain. The extra water could potentially damage crops that are being grown there, or the changed conditions may benefit farmers.

Human activities such as the movement of people, the production and trade of goods, and the flow of money within and between different countries also link places and people. Interconnection through electronic means such as mobile phone and Internet is now a part of everyday life for many of us.

Being consumers in a global marketplace also means we are connected to many places via international trade. More than 3000 ships carrying 2 million containers pass through the Port of Melbourne (see Source 4) each year. These ships and the goods they carry link dozens of countries around the world.

Source 4 A container ship prepares to berth at Port Melbourne.

Sustainability

The concept of sustainability relates to the ongoing capacity of the Earth to maintain all life. This means developing ways to ensure the Earth's resources be used and managed responsibly so they can be maintained for future generations.

Sustainable patterns of living meet the needs of the current generations without compromising the ability of future generations to meet their own needs. Many of the world's resources (such as oil, coal and natural gas) are non-renewable. This means that if we continue to use them they will one day run out. Other resources (such as wind, forests, solar and water) are renewable. This means that they replace themselves naturally, or can be replaced to meet the needs of society. Sustainability encourages us to think more carefully about these different types of resources – the ways in which they are formed and the speed at which they are being used. It also encourages us to look more closely at renewable options and take greater care of the Earth. Actions to improve sustainability can operate at a number of levels:

- local – recycling of paper by individuals, schools and households reduces the number of trees that need to be cut down
- national – in Australia, the government has begun to encourage sustainable use of energy by offering incentives to promote the use of solar panels
- international – organisations such as the Marine Stewardship Council (MSC) are working with fisheries and retailers to promote responsible and environmentally viable fishing practices around the world.

There can be debate surrounding the sustainability of an environment, as people or organisations with different interests may put forward different points of view. A tree-logging company may protest that their practices are sustainable because they re-plant as much as they cut down. On the other hand, a conservation group may be equally convinced that a forest cannot be sustained when its trees are cut down. New trees may take decades to grow, in which time the ecosystem will have been altered. Many underdeveloped countries, such as Myanmar (Burma) (see Source 5), face enormous challenges controlling and monitoring forest clearance.

Sustainability is an important concept for geographers. They use it to investigate how natural and human systems work, and understand how resources can be managed in such a way that they will be sustained into the future.

Source 5 Logging in Myanmar (Burma) gives local communities a source of income but leaves hillsides bare and easily eroded by heavy rain.

Scale

The concept of scale is used to guide geographical inquiries. Geographers study things that take place on many different spatial levels – meaning from small areas (such as a local park) to very large areas (such as the use of oil and gas all over the world). They use the concept of scale to look for explanations and outcomes at different levels. For example, a geographic inquiry on climate change may be carried out at a range of scales (from smallest to largest) (see Source 6):

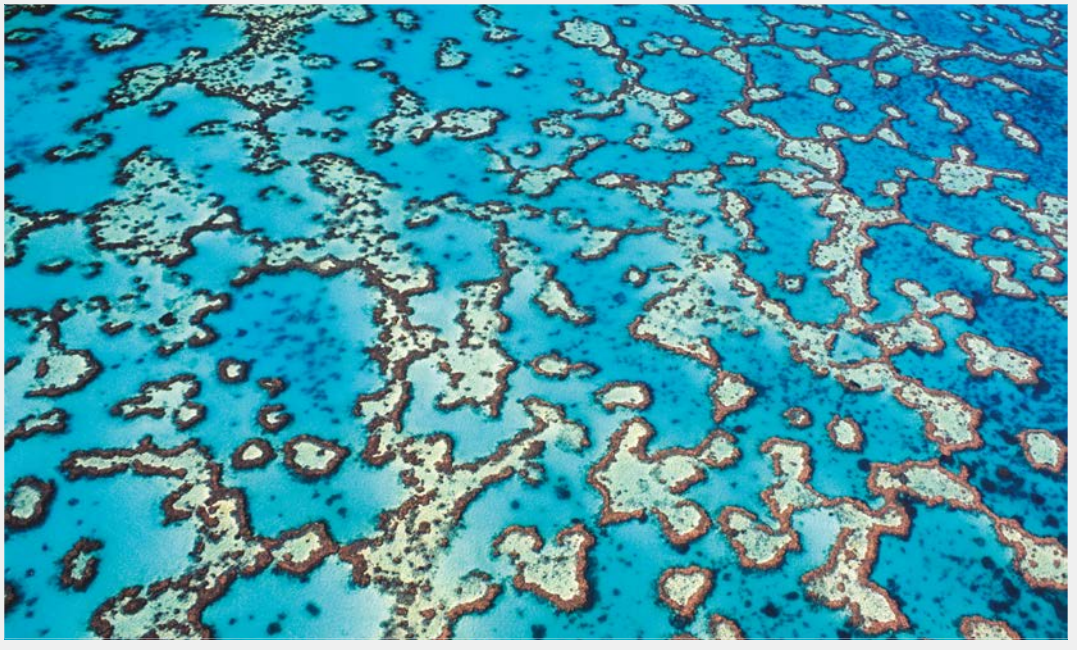

- local – such as an inquiry into increased electricity use (for air conditioning) in your neighbourhood due to higher than average temperatures. Increased energy consumption may result in power outages.
- regional – such as inquiry into coral bleaching on the Great Barrier Reef (see Source 7). Warming ocean temperatures can trigger coral bleaching often resulting in coral death.
- national – such as an inquiry into changing weather patterns and increased frequency of extreme weather events in Australia. This affects government allocation of resources across many sectors (water security, agriculture, emergency services, coastal communities and infrastructure).
- international – such as inquiry into drought in Africa. Rains have become less reliable in many places as the climate has changed and many African nations have been hit by a series of devastating droughts that have brought widespread hunger and starvation.
- global – such as an inquiry into the reduction in Arctic sea ice due to global warming. This reduction in white ice means that less of the Sun's energy is reflected back into space and more is absorbed into the earth and sea, resulting in further increases in temperatures globally.

Some geographic studies investigate a large area. For example, something that affects a whole country, such as a severe drought, would involve a study at the national scale. If an event or phenomenon affects the whole world, such as climate change and rising sea levels, it would be examined at the global scale.

It may be necessary to use different scales when studying the same thing. For example, as mentioned above, climate change is occurring globally and should be examined at the global scale. However, it can be examined at other scales too.

Source 6 Geographical inquiries can be carried out on a number of different scale levels.

Scale	Example of climate change inquiry
Local scale	Electricity consumption in your neighbourhood (increased use of air conditioning)
Regional scale	Coral bleaching on the Great Barrier Reef
National scale	Frequency of extreme weather events across Australia
Global scale	Reduction in Arctic sea ice; rising temperatures throughout the world

Source 7 The Great Barrier Reef off the coast of Queensland is the world's largest coral reef system. A geographical inquiry of the reef could be undertaken at a range of scales.

Change

The Earth is constantly changing. Some changes occur very rapidly and are easy to observe, while others take place over millions of years and are almost undetectable to us.

The concept of change is important in geography because it helps us to understand what is happening around us and to see the world as a dynamic place. Change in both time and space allows geographers to examine how environments develop, transform or disappear.

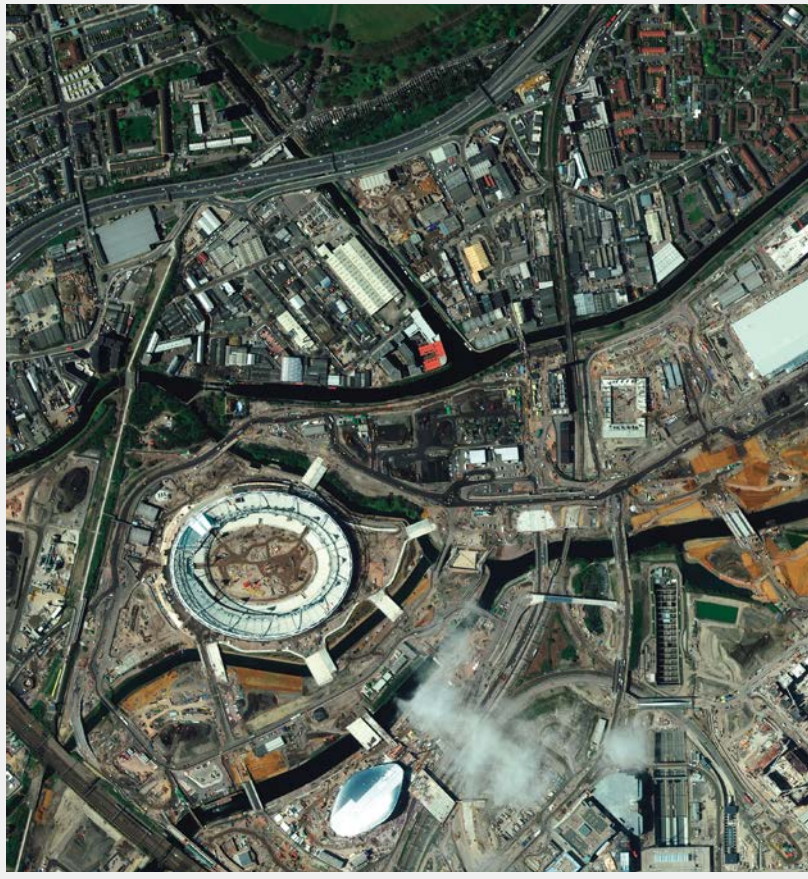

Change can be the result of natural forces. For example, the Earth has been shaped and changed by climate, earthquakes, volcanoes and running water over millions of years. It can also be the result of human activity, such as the building of a new bridge or clearing of forest for farmland.

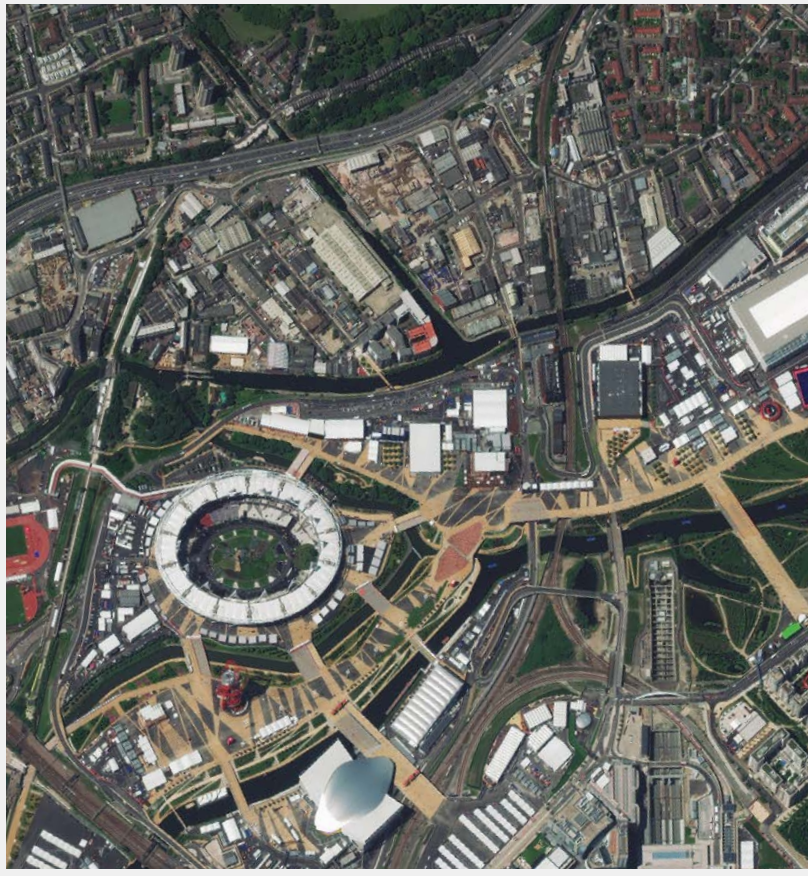

Changes also take place on many levels, from local through to global. Local changes that happen quickly, such as storm damage in your street, are easy to observe and explain. Regional or national changes resulting from a bushfire or an earthquake can also happen quickly and their effects can be widespread, with devastating impacts on places and people.

Changes that take place on a global scale can take much longer. Global warming, for example, is a long-term change that happens slowly. Global warming has widespread and long-term effects that are not easily explained.

Observing and understanding changes that are natural and have occurred over time or changes that have been made by humans over time, is an important part of any geographical inquiry. Geographers need to look at different types of changes, why they have occurred, over what time period they have occurred and what further changes may take place as a result.

Sometimes changes can be positive, such as the regeneration of vegetation, while other changes can have negative consequences, such as the pollution of waterways from industry. Geographers play an important role in ensuring that change is managed in a sustainable way.

Source 8 In preparation for the 2012 Summer Olympic Games, Newham, in East London, was transformed from a suburb of derelict buildings and polluted rivers into a vast sporting complex.

Source 9 The resources and buildings for the London 2012 Olympic Games were planned with sustainability as a primary concern, adopting a Zero Waste Games Vision. The Velodrome in this photo was built using 100% sustainably sourced timber.

Check your learning 1.1

Remember and understand

1 Is Namche Bazaar an example of the natural, or built environment?

2 List three natural environments and three built environments. Your answers can be drawn from the photographs in this section, or you can use your own observations.

3 At what scale would a study of Mount Kilimanjaro's glaciers take place?

Apply and analyse

4 Examine Source 5.
   - **a** What evidence of change can you identify in this picture?
   - **b** How might this change impact on the natural environment in this place?
   - **c** How might it impact on the people in the nearby village?

5 Examine Sources 8 and 9.
   - **a** Describe the arrangement of the sporting facilities. Using the key concept of sustainability, what factors do you think would need to be considered when planning the development of this area?
   - **b** What examples of interconnection can you identify in these satellite images?

6 Examine Source 2. With a partner, construct four questions you could ask to investigate why so many people live in such a small space. Share your questions with your classmates.

7 Examine Source 4. Use three geographic concepts to describe the Port of Melbourne. Jot down a couple of points for each concept.

8 The geographic concepts are closely linked to each other. For example, a geographer examining the changes at Newham in preparation for the 2012 Olympic Games would be interested in assessing the impacts and sustainability of these changes at the local scale. Describe some possible links between:
   - **a** environment and sustainability
   - **b** space and interconnection
   - **c** place and space
   - **d** scale and environment.

Evaluate and create

9 Research the host city for the next summer or winter Olympics. What changes are being made to natural and human environments in preparation for these games?

10 Choose one of the key geographical concepts outlined in this section. Find a photograph in a magazine or on the Internet that illustrates this concept. Explain your choice of photograph and how you think it describes the concept for you.

1.2 Geographical skills

Geographers are investigators. They explore the world around them by asking questions about what they see. These questions begin an investigation that requires them to collect and analyse information and to communicate what they have discovered. To complete an investigation they need a set of skills such as drawing **maps** and cross-sections, surveying, sketching and presenting information. Five sets of skills are used to complete a full geographical inquiry. These are listed in Source 1.

To become a better geographer you should try to learn new skills as you continue to practice, use and develop the skills you have already learned. It might help you to think of each of these skills as individual tools in your toolkit. For some geographical inquiries, you may only need to use one tool; for others, you may need to use many. As you develop each new skill you will have gained another important tool in explaining the natural processes and human activities that shape our amazing planet.

Source 1 The five categories of skills used in a geographical inquiry

Observing, questioning and planning	• Develop geographically significant questions and plan an inquiry that identifies and applies appropriate geographical methodologies and concepts
Collecting, recording, evaluating and representing	• Collect, select, record and organise relevant geographical data and information, using ethical protocols, from a range of appropriate primary and secondary sources • Evaluate sources for their reliability, bias and usefulness, and represent multi-variable data in a range of appropriate forms, for example, scatter plots, tables, field sketches and annotated diagrams, with and without the use of digital and spatial technologies • Represent the spatial distribution of geographical phenomena by constructing special purpose maps that conform to cartographic conventions, using spatial technologies as appropriate
Interpreting, analysing and concluding	• Evaluate multi-variable data and other geographical information using qualitative and quantitative methods, and digital and spatial technologies as appropriate, to make generalisations and inferences, propose explanations for patterns, trends, relationships and anomalies, and predict outcomes • Apply geographical concepts to synthesise information from various sources and draw conclusions based on the analysis of data and information, taking into account alternative points of view • Identify how **geographic information systems (GIS)** might be used to analyse geographical data and make predictions
Communicating	• Present findings, arguments and explanations in a range of appropriate communication forms, selected for their effectiveness and to suit audience and purpose; using relevant geographical terminology, and digital technologies as appropriate
Reflecting and responding	• Reflect on and evaluate the findings of the inquiry to propose individual and collective action in response to a contemporary geographical challenge, taking account of environmental, economic and social considerations; and explain the predicted outcomes and consequences of their proposal

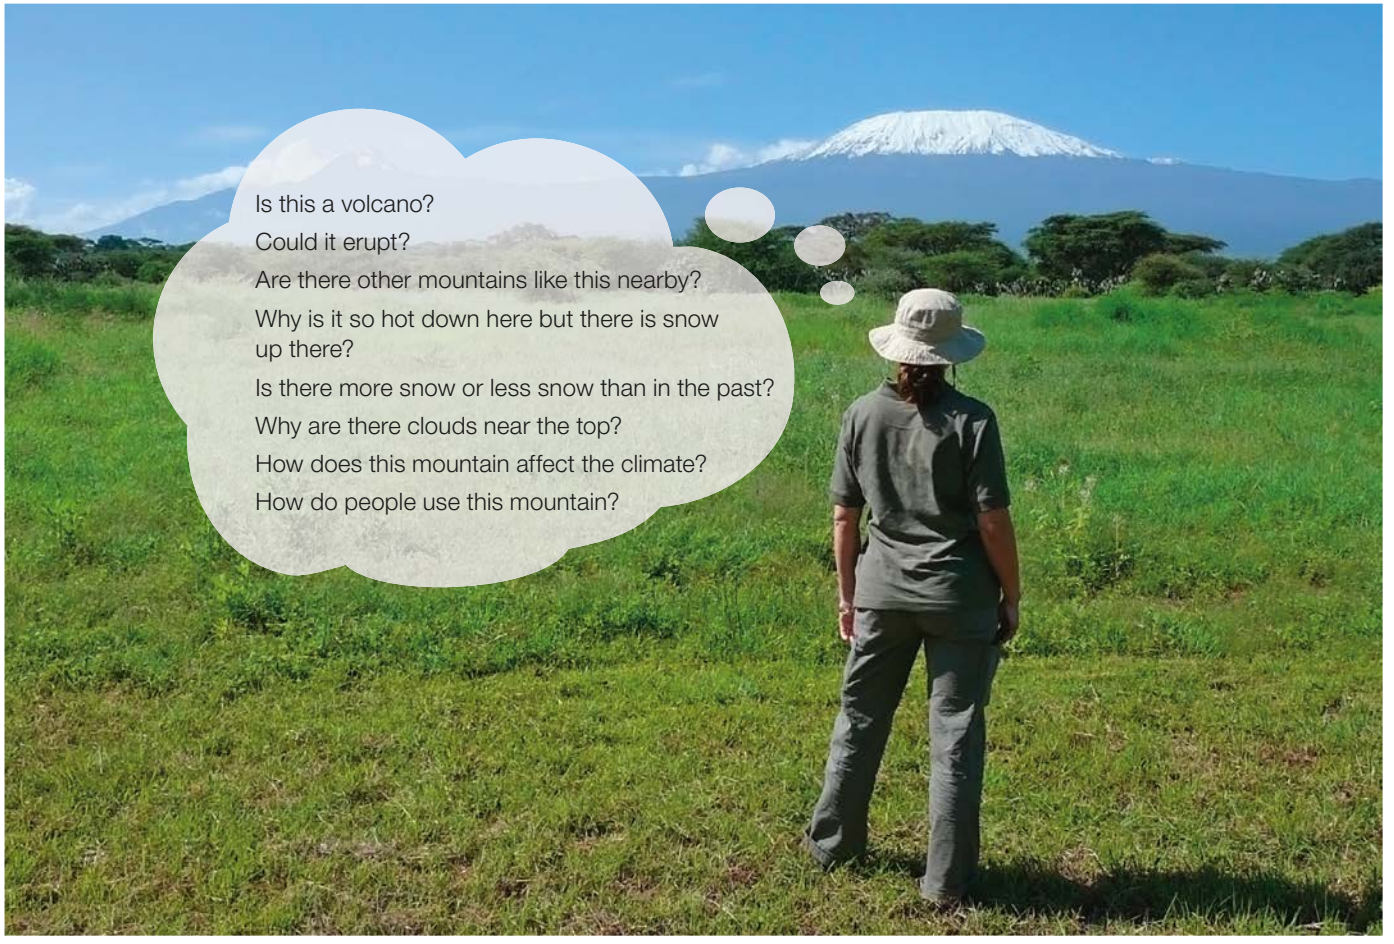

1.3 Observing, questioning and planning

Observe the world and its geographical characteristics

Understanding our world begins by observing the processes that are taking place all around us. Geographers look at people, land, air, water, plants and animals and the connections between them to understand what is happening. They also seek to investigate where, why and how natural, managed and constructed environments are formed and changed. These observations often include identifying any problems or issues that need to be investigated and resolved.

Developing geographical questions

One of your greatest assets as a geographer is curiosity. Geographers look at the world around them and ask questions about what they see, experience or have thought about. You may, for example, see a news item about a volcanic eruption or hear a report about the world's most liveable cities. Or you may visit the centre of a large city on a field trip or a national park on holiday. As you begin to think like a geographer you will begin to ask questions about these events and places and these questions may be the starting point for a geographical inquiry.

Source 1 Asking questions is an important part of a geographical inquiry. This woman is examining Mount Kilimanjaro, off in the distance.

Plan a geographical inquiry

Asking geographical questions is a good way to develop a range of possibilities for further research and investigation. It is usually best to narrow your investigation by selecting one of the geographical questions you have written as the basis for your inquiry. You should select a question in which you are interested and that helps you to better understand the environment you are investigating.

Planning an inquiry about Mount Kilimanjaro

Having chosen to investigate the key geographical question 'How does this mountain affect the climate?', it is time to consider what information you need to answer this question and where you are going to locate the information. A good way to do this is to use a planning table like the one below.

Source 2 Planning is a key stage in conducting a geographical inquiry.

Key inquiry question	Information needed	Possible sources of this information
How does this mountain affect the climate?	Climate data, particularly temperature and rainfall for places at various distances from Kilimanjaro including the summit	Atlas map to locate towns and cities at various distances from Kilimanjaro
		Encyclopaedia entry for the climates of Kenya and Tanzania
		Online search for climate data for selected towns and cities
	Observation of photographs and satellite images of the region	Photographs and satellite images of Kilimanjaro from throughout this chapter
		Google Earth, including historic imagery
	An understanding of the impact of landforms on temperature and rainfall	Printed resources such as geography textbooks, encyclopaedias and Bureau of Meteorology (BOM) books and leaflets
		BOM website

skill**drill:** Place, space and interconnection

Developing geographical questions

You can learn to develop geographical questions that will help you begin an inquiry about a particular topic or place. Start your questions with the words 'what', 'where', 'how', 'why', 'what impact' or 'what should' when thinking about your topic.

Your questions should examine ideas such as:

- Where is it?
- How big is it?
- What pattern or shape is it?
- Why is it like this? Is it like this because something else is at this location?
- How does it interact with other things in this place?
- How is it changing?
- How should people best manage this change?

The very best questions open up an exciting area for you to explore. Examine Source 1. A visitor to this place might ask a simple question, such as 'How much snow is there on the mountain?'. This is a question with a relatively straightforward answer.

A better geographical question would be to ask 'Does the amount of snow on the mountain change over time?'. This question opens up a whole new area to explore, because the answer to that question will lead on to further questions and greater depth of understanding. Some other example questions are:

- Is this a volcano?
- Why is it green on the ground but there is snow on the mountain?
- Are the animals all eating the same things?
- Is there more or less snow than in the past?
- How do people use the mountain?

Apply the skill

1 Why is 'Does the amount of snow on the mountain change over time?' a better geographical question than 'How much snow is there on the mountain?'

2 Examine Source 5 on page 10, which shows forest clearing in Myanmar. Work with a partner to develop a set of geographical questions about this place.

3 Where could you begin to find the answers to your questions?

Source 3 Mt Kilimanjaro in Africa

Check your learning 1.3

Remember and understand

1 What are the five sets of skills in a full geographical inquiry?

2 Imagine that while watching the news on television this evening you see an item about a large earthquake in China.
   - **a** How could this news item be the beginning of a geographical inquiry?
   - **b** Write a series of geographical questions about this earthquake.

Apply and analyse

3 For the geographical questions that you have written, develop a planning table similar to the one shown here for Mount Kilimanjaro (see Source 2).

Evaluate and create

4 Bring a copy of your local newspaper to class. Search through the newspaper, or think about your local area, and identify examples of stories or issues that could be investigated as part of a geographical inquiry.
Examples may include a shopping centre extension, or a proposal for a new set of traffic lights or a pedestrian crossing. Choose one local issue and work with a partner to develop a series of geographical questions about it. Then, complete a planning table for one of your questions.

1.4 Collecting, recording, evaluating and representing

Collect, record and evaluate primary and secondary data

Good planning and preparation will ensure that your geographical inquiry will run smoothly, be relevant and give you the answers you are looking for. Once you have identified the issue, formulate your key inquiry question. You can conduct a sound, useful inquiry by following these steps:

- collect and record the information you think you will need to answer your key inquiry question
- evaluate this information and data to determine that it is accurate and relevant
- represent your findings in an interesting and appropriate way (such as tables, graphs, maps and sketches).

Geographers find answers to their questions in many places. They may collect information themselves by interviewing people, taking photographs, making sketches out in the field or conducting surveys and questionnaires. This kind of information will generally only be relevant to a particular inquiry and is called **primary data**.

Often a geographer collects information that supports his or her inquiry but has not been specifically collected or designed by the geographer for the inquiry. This type of information is called **secondary data**. Secondary data sources include maps, graphs, statistics, and websites that someone else has developed. One of the best secondary sources of information may be photographs from newspapers and magazines, and satellite images from Google Earth. It is important to always evaluate any secondary sources for reliability, relevance and bias. This is particularly true for information obtained through the Internet. Unlike a printed source such as a book or atlas it can be very difficult to establish who has written and published information online.

Reliability

When undertaking an inquiry, geographers need to evaluate the sources they use for reliability and potential bias, as well as usefulness. In the case of collecting data from primary sources, such as interviewing subjects directly on a topic, the information gathered will be reliable because it is gathered first-hand. It is therefore important for the geographer to keep in mind any potential bias that may be influencing an interview subject's response. An interview that a geographer is conducting on the potential effects of turning local parkland into an industrial park, for instance, would have very different responses from a representative of the industrial developer than from a member of a local wildlife conservation group. It is important for a geographer to evaluate this kind of bias, and remember to ask questions about the motivation behind it.

When selecting secondary sources, such as maps, graphs, photographs or other data, the geographer also needs to ensure the data is reliable and unbiased. This includes evaluating the creator of the data – is the data from a recognised source like a government body, such as the Bureau of Meteorology or a research agency like the CSIRO? Is the data provided without bias? Or is it presented on a website for a company that might have a vested interest in influencing public opinion?

Ethics in geography

When conducting research and obtaining data for an inquiry, it is important for a geographer to be mindful of issues that are likely to raise ethical concerns. This may include being aware of privacy concerns, ensuring anonymity if required, and obtaining informed consent from research participants. Geographers may also need to outline where and how the information obtained will be used or published, and special attention may need to be given for relational data where geographical references or co-ordinates might disclose a participant's location or identity.

If geographers undertake an inquiry that involves consulting with Aboriginal and Torres Strait Islander communities, they should be aware that there are guidelines and protocols that should be followed. While these are not necessarily rules, it is important to know that Aboriginal and Torres Strait Islander people have distinctive regional and cultural identities that require respectful consideration for meaningful consultation.

This may involve preferred terminology, cues for cultural communication, and other means for making consultation harmonious and productive. If conducting such an inquiry, it is advisable to do further reading, such as of the *Aboriginal and Torres Strait Islander Peoples Engagement Toolkit*, which can be found online.

skill**drill:** Data and information

Evaluating the reliability of websites

There is an enormous amount of material available online, but it is important to keep in mind that not all websites provide reliable information. You must be careful not to naively accept that all information published online is from a reliable source. Websites should be critically evaluated for reliability by following these steps:

Step 1 Find out how old the information is. When was it first published? This will help you decide whether it is useful for your inquiry or not.

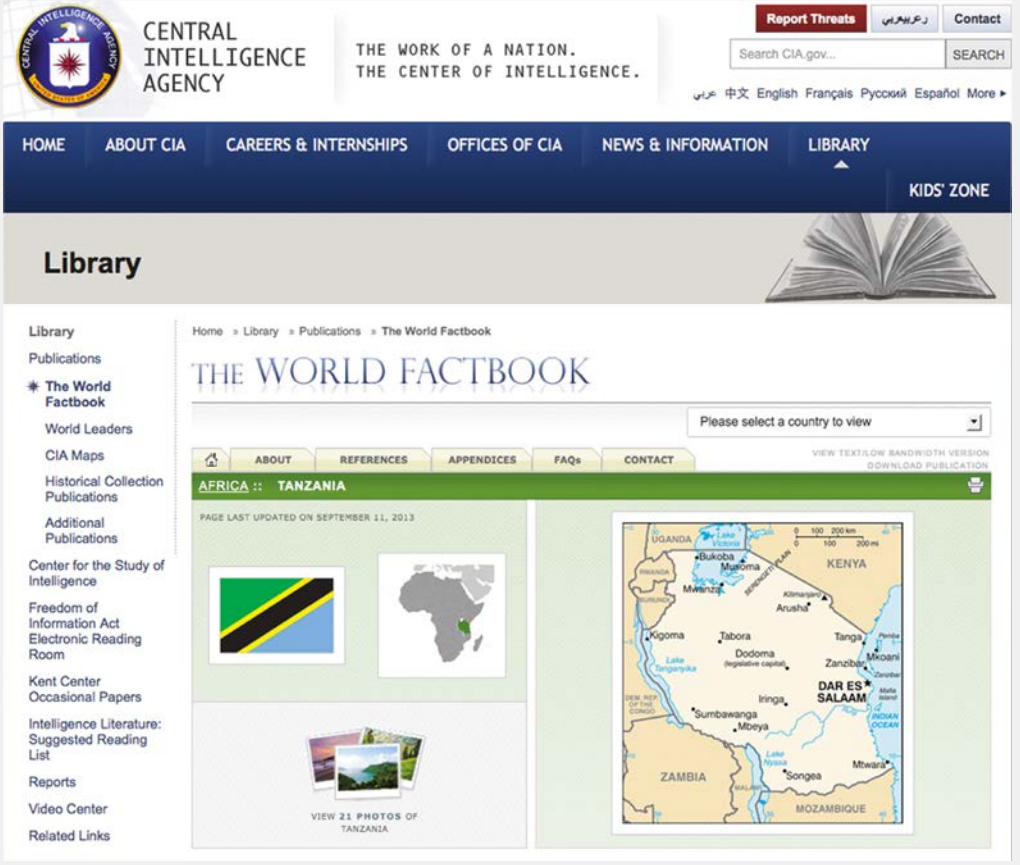

Step 2 Find out who published the information. Is it possible they have a bias? You can often find out more about the organisation publishing information by going to their 'home' page or 'about us' page.

Step 3 Look at the extension at the end of the website address, as this gives you an important clue about the origin of the information. For example .com is used by commercial organisations such as online stores, .org is used by non-commercial organisations such as NGOs and welfare groups, .gov by government departments, .edu refers to schools and universities, .biz by businesses and .mil by military groups.

Step 4 If you cannot find out when the information was published or who published it, it is probably too unreliable to use in a geographical inquiry. Look for a more reliable source of information.

Apply the skill

1 Common websites used for reference information include the CIA World Factbook, the Australian Bureau of Statistics, National Geographic and the United Nations Development Programme. Using the steps listed above, assess the reliability of the data found on these websites.

Source 1 This web page offers data about Tanzania. How can you determine if it contains reliable information?

Evaluating and representing geographical data visually

Geographers present the information they gather during their inquiries in a number of different ways. They make maps, create graphs and tables or even draw diagrams to help them look for patterns in the data they have gathered. These tools help geographers analyse and interpret the information they have gathered, and also present the information to other people (the general public, the government, the media) and help them understand the geographer's findings.

Maps

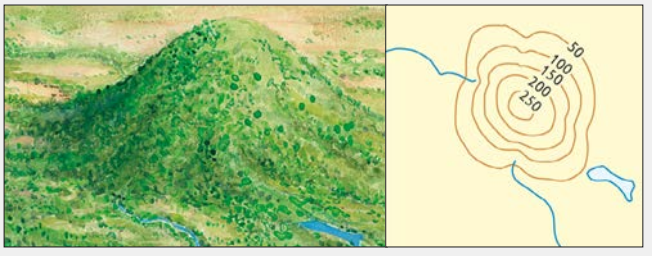

One of the most useful tools that geographers use to process information is a map. A map is a simplified plan of an area. Maps are drawn in the plan view (directly from above) because this ensures the scale will be the same across the entire area. If maps were drawn from an angle, some parts of the mapped area would look distorted and so it would not be an accurate representation of the area. When properly used, maps can reveal a great deal about our planet and the ways in which we use it.

Topographic maps

A piece of paper only shows two dimensions: width and length. The Earth's surface, however, has a third dimension: height. Cartographers (map makers) use a variety of methods to show this third dimension.

Topographic maps are one of a geographer's most useful tools. Because most topographic maps are drawn of a small region they can show that region in great detail, right down to individual buildings and rocks. They also show the height of the land above sea level through the use of **contour lines**, which join together all places of an equal height. By learning to interpret the contour patterns made by these lines you can work out the shape and height of the land that has been mapped (see Source 2).

Digital maps and terrain models

There are about 6000 man-made satellites orbiting the Earth. Many of these collect digital data about the shape and height of the land and transmit it back to computers on the ground. This data is then interpreted and can be used to draw maps. Cartographers can use computer programs to add colours to these digital maps to highlight certain aspects of the environment. In Source 3, for example, the land has been shaded according to its height. The data can also be manipulated in other ways. In Source 4 it has been used to create a side view of the landform being mapped. This type of illustration is known as a digital terrain model.

Source 3 In this digital map of the Mount Kilimanjaro region land has been shaded according to its height above sea level. Shadows have also been added to help map users understand the shape and height of the land.

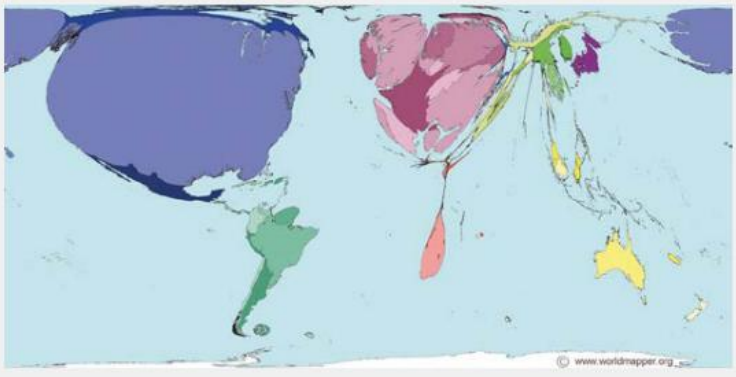

Source 4 This is a digital terrain model of Mount Kilimanjaro and the surrounding area. The data was collected by a NASA space shuttle and an orbiting satellite. Cartographers have exaggerated the height of the landform so that it appears twice as high as it actually is.

Cartograms

You will have already seen **cartograms** in the course of your geography studies. These are the maps that look distorted and have areas that appear thinner or more enlarged than they would normally be, depending on what they are showing. Cartograms are sometimes called 'value by area' maps, which means the spaces on the maps are distorted to show a representation of a value rather than land area.

For example, while Vietnam is a relatively small country in terms of land area, it is the fifth largest rice growing country, so it would be exaggerated to a much greater relative size. The United States of America, which actually has a much larger land mass than Vietnam, is the 10th largest rice producer, so would appear much smaller than actual size on a cartogram.

There are various software programs available that can generate cartograms.

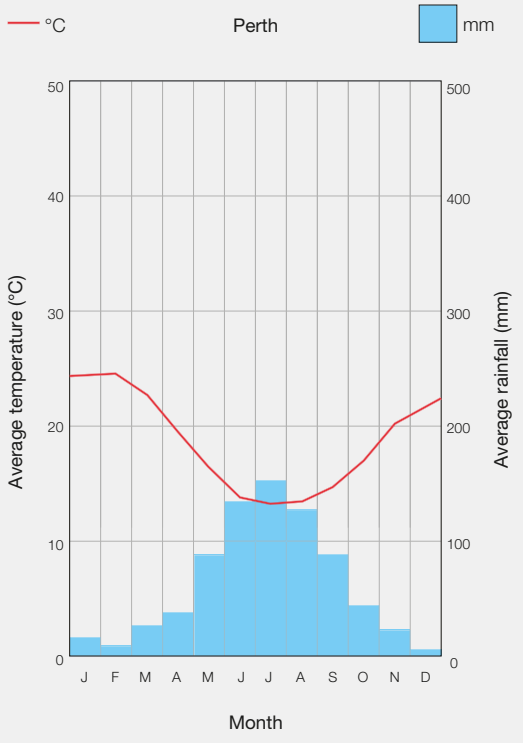

Source 5 This cartogram shows the percentage of the population living on more than US$200 a day. The distortion shows that the United States has many more people living on this amount than Asia does.

Graphs

In Years 7 and 8 you will have learned how to create and interpret simple graphs, such as **bar graphs**, column graphs and pie charts. In Years 9 and 10 you will be working with more complex graphs. You won't necessarily be creating these kinds of graphs yourself, but you will be learning how to interpret them and make sense of the information they provide. Some of these styles of complex graphs are described below.

Climate graphs

Climate graphs show the general climate of a place – what the weather is like overall in a certain location, graphing the average monthly temperature and rainfall over the course of a year (or other set period of time) (see Source 6). Climate graphs combine line and column graphs. Temperature is recorded as a **line graph** and rainfall is recorded as a bar graph.

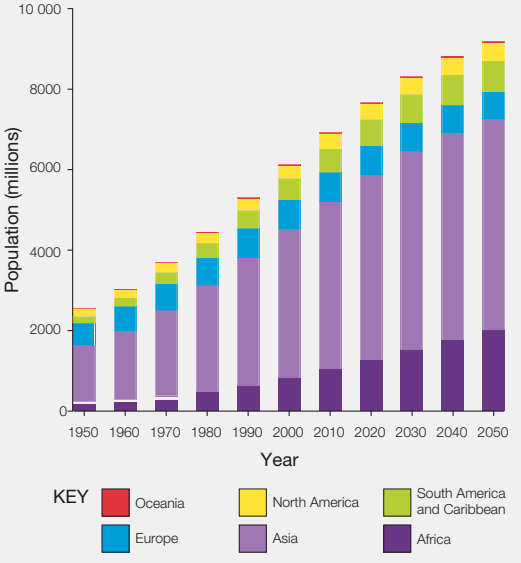

Source 6 A climate graph showing the average monthly temperature and rainfall in Perth

Compound column graphs

A **compound column graph**, sometimes called a stacked column graph or stacked bar graph, is used by geographers to compare the parts of something to the whole. They are a more complex type of column graph in which each column is split into sections. The results are then stacked on top of each other, in different colours or different shades of a colour, so that results can be easily compared (see Source 7).

Each column in a compound column graph represents a total, and each different coloured segment represents a part that makes up that total. The graph in Source 7, for example, shows the total increase in world population, from 1950 projected up to 2050. Of the total increase in population, it is immediately clear that Asia, coloured light purple, has experienced and will continue to experience the greatest growth. It is also immediately clear that Oceania, coloured red, has experienced very small population growth in comparison. Presenting the information in this way means we can quickly see and compare a number of figures that contribute to a total.

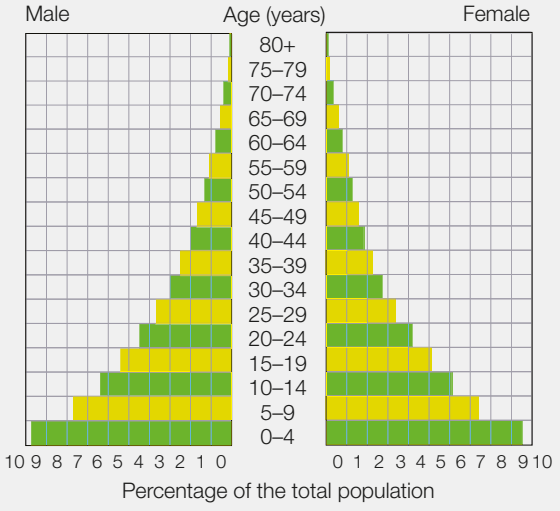

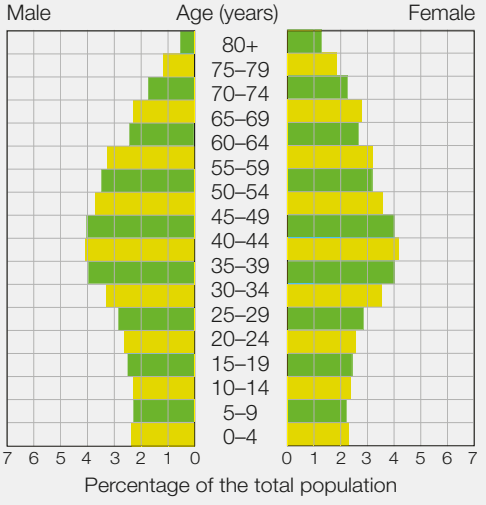

Source 7 A compound column graph showing the increase in world population by region, 1950–2050 (columns on the right provide projections)

Population pyramids

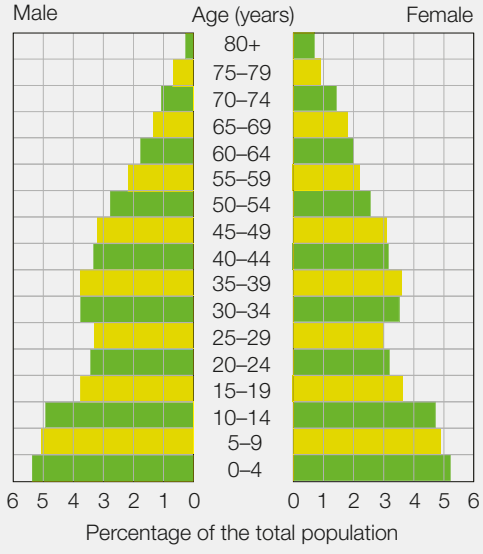

Population pyramids are horizontal bar graphs that show the proportion of males and females in different age groups in a population. They can be used in a number of ways. Most commonly, they are used to compare the population structures and growth rates of different countries. A triangular-shaped graph shows a population with a high birth rate – that is, the population in that country is growing – while a graph that tapers in (is narrower) at the younger ages indicates a population that is contracting or declining (see Source 8).

Population pyramids can also help geographers to identify the ways in which the population in a single country is changing over time. In these population pyramids of Australia's population, for example, it is clear that the percentage of Australia's population over the age of 65 increased between 1960 (see Source 9) and 2009 (see Source 10). Geographers describe this change as the ageing of the population.

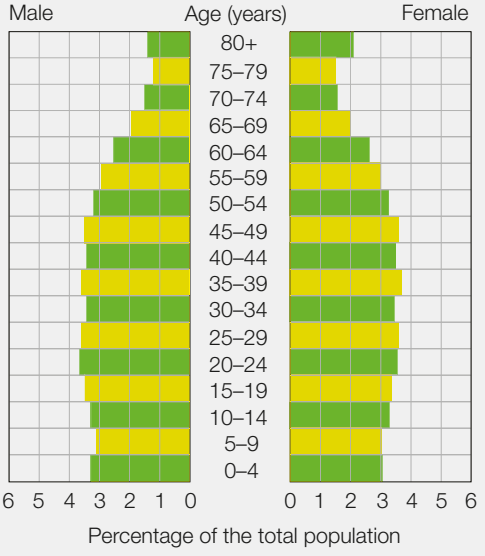

Source 8 Population pyramids showing growing (left) and contracting (right) populations

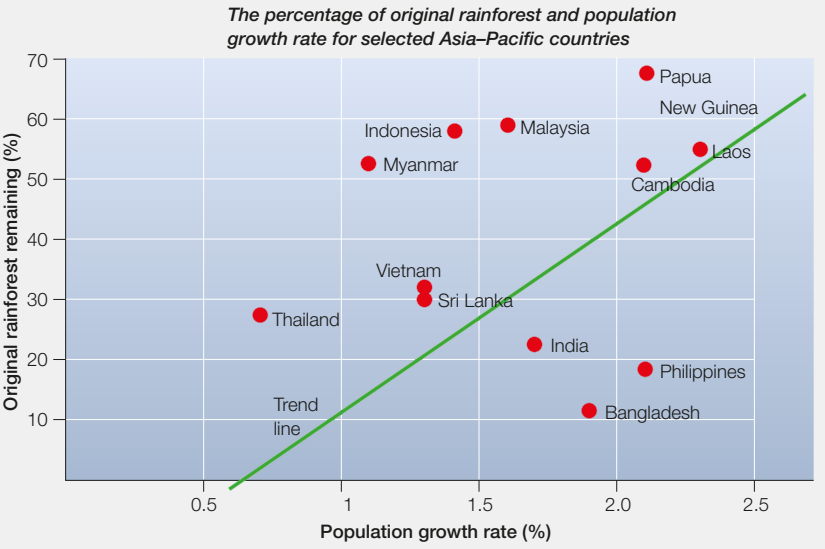

Source 9 Population pyramid for Australia, 1960

Source 10 Population pyramid for Australia, 2009

Scatter plots

Maps can be useful for showing a pattern but they don't really explain that pattern. A special type of graph, called a **scatter plot**, (or scatter graph) is a better way of doing this. A scatter plot compares two sets of data in a visual way so that connections between them can be easily seen. Scatter plots are also called scattergrams. The following scatter plot compares the amount of original forest cover remaining in selected Asian countries with their population growth rates. It is essentially testing the theory that forests are more endangered in countries where the population is growing rapidly.

Source 11 Scatter graph showing remaining forest and the population growth rate.

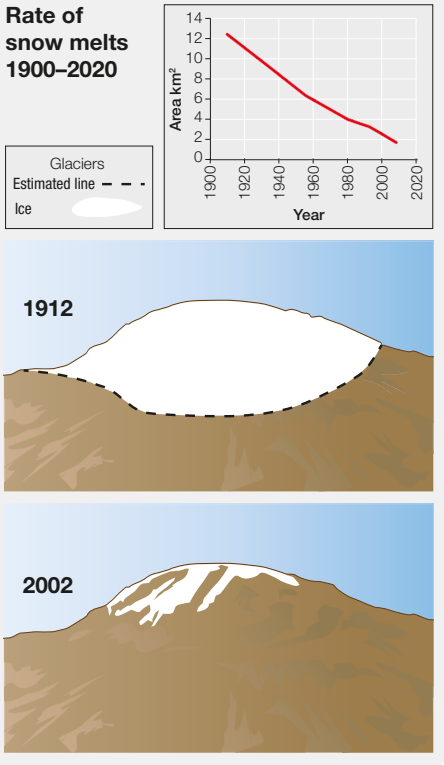

Because most of the countries lie close to the trend line in this graph it is possible to say that there is a relationship between the amount of forest in a country and the rate at which its population is growing. Countries with the fastest growing populations have the most rainforest remaining. Those countries that lie apart from the general trend such as Bangladesh are called outliers. A geographer studying this graph might use it as the beginning of a geographical inquiry into deforestation in Bangladesh.

Other graphic representations

In addition to maps and graphs, geographers use a range of other visual representations to communicate information they have collected. These include geographic diagrams, sketches, tables, geographic photographs and geographic information systems (GIS). These ways of presenting information allow geographers to communicate their findings in the most clear and appropriate manner.

Geographical diagrams

Geographical diagrams are simplified drawings of the real world. They allow geographers to show the features or characteristics of places or things much more directly than describing them in words. Certain interesting or complex processes can also be easily explained and demonstrated in a diagram, and communicated quickly and effectively by simple visual representation (see Source 12).

Source 12 This diagram shows the dramatic rate at which snows have melted on Mt Kilimanjaro.

Tables

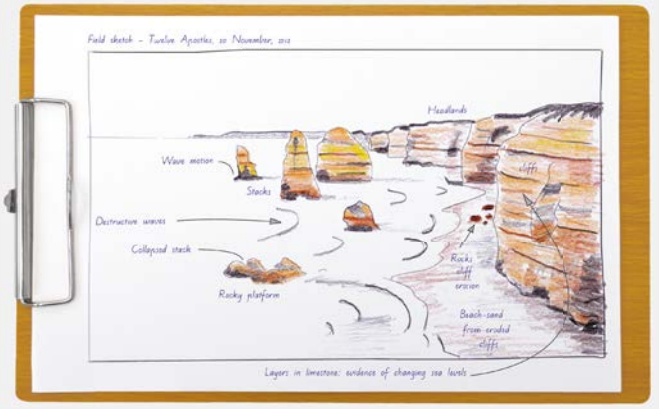

Tables allow geographers to present and compare data by organising it under different headings. Tables can be useful for presenting information over a range of time periods or locations.

Source 13 This table, based on data gathered by geographers in 2006, shows the change in area of seven glaciers (A–G) on Mount Kilimanjaro, 1912–2003.

Areas (10^3 m^2)	Glacier Area A	Glacier Area B	Glacier Area C	Glacier Area D	Glacier Area E	Glacier Area F	Glacier Area G	Total
1912	5676	3	27	5011	811	372	158	12058
1953	3829	0	16	2156	493	181	0	6675
1976	2440	0	0	1409	209	113	0	4171
1989	1900	0	0	1168	147	90	0	3305
2003	1304	0	0	1025	132	49	0	2510

Geographical sketches

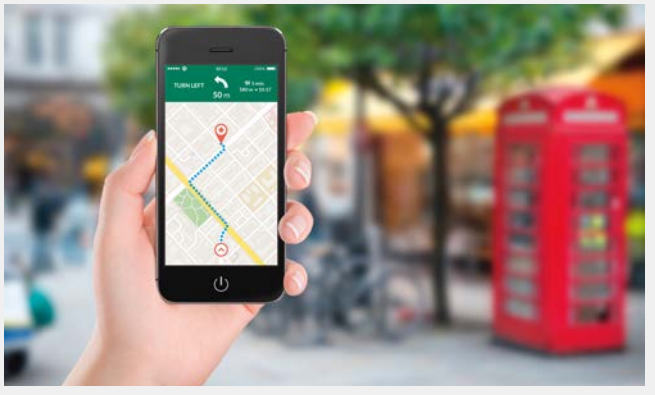

A **geographical sketch** can be an extremely useful way of collecting information and presenting it in a straightforward and immediate way. They are often completed in the field (and are known as field sketches) or are sketched from photographs. The aim of a geographical sketch is to focus on those parts of the environment that are relevant to the current geographical inquiry. For example, a geographer studying the role of waves in the erosion of a coastline would sketch the rocks and landforms of a beach while another geographer studying tourism at the coast would sketch the buildings and roads at the same beach. Sketches allow the geographer to simplify information to make it easier to understand.

Source 14 Field sketches are useful for capturing information quickly and directly.

Geographic information systems (GIS)

A geographic information system (GIS) is a way of collecting, storing, presenting and using geographical data. GIS encompasses collecting geospatial data – real-world distance between landmarks, water depth, height and width of buildings, layout of streets and suburbs – and presenting it through digital means. Smartphone apps like Google Maps and Google Earth use GIS data to allow you to navigate through the real world, using data that has been gathered using computer technology. GIS has many different applications and is used for planning, telecommunications, transport and logistics, to name just a few.

Source 15 Geographic Information Systems (GIS) gather present real-world geographical data using computer technology. Today, GIS can be found on almost every smartphone in the form of apps like Google Maps and Google Earth.

Geographic photographs

Geographic photographs differ from other types of photographs in that they are taken to depict and present a place or particular feature of the landscape for the purpose of demonstrating an aspect that you are studying. This is quite different from taking photos of you and your friends for fun, or even from taking an attractive picture of a landscape. Geographic photographs are used as a source of data.

Source 16 A geographic photograph demonstrates a particular aspect of a place or environment, like this one of the Mt Kilimanjaro glacier area.

skill**drill:** Data and information

Collecting and evaluating geographic photographs

Geographers take photographs with the purpose of capturing a specific visual reference. This skill in geography is learning to capture a scene on camera that shows exactly what you want it to. You will not necessarily be taking the prettiest picture – you will be taking the picture that is relevant to your inquiry. Then, you can show the key features by adding notes or labels to your photograph. This is known as annotating the photograph. Annotating your photograph will help with your evaluation of the subject, too.

Step 1 Prepare for your session. Read the manual for your camera and get to know what your camera is capable of doing. Learn about exposure and how to frame your subject – there are plenty of tips online to help you with this. It is important to hold your camera steady, or you can practice using a tripod. This is especially useful when collecting photographs of the same place over a period of time.

Step 2 Decide on your subject and ensure you are photographing the relevant parts you want to feature. Select the features of the landscape that show important aspects of your geographical inquiry. Remember your key inquiry question. It could be something like, 'How does tourism affect this environment?' If so, ensure you include evidence of any impact, like rubbish left along a shoreline. In the case of the photo shown here, the key inquiry question was, 'Are the glaciers becoming smaller because of natural or human factors?'

Step 3 Evaluate photo drafts as you go. Remember that your photograph is part of your geography **fieldwork** or study, and ensure that your photographs include the aspects you want to show. You might need to try photographing your subject from different angles, or from above or below it to capture what you are after.

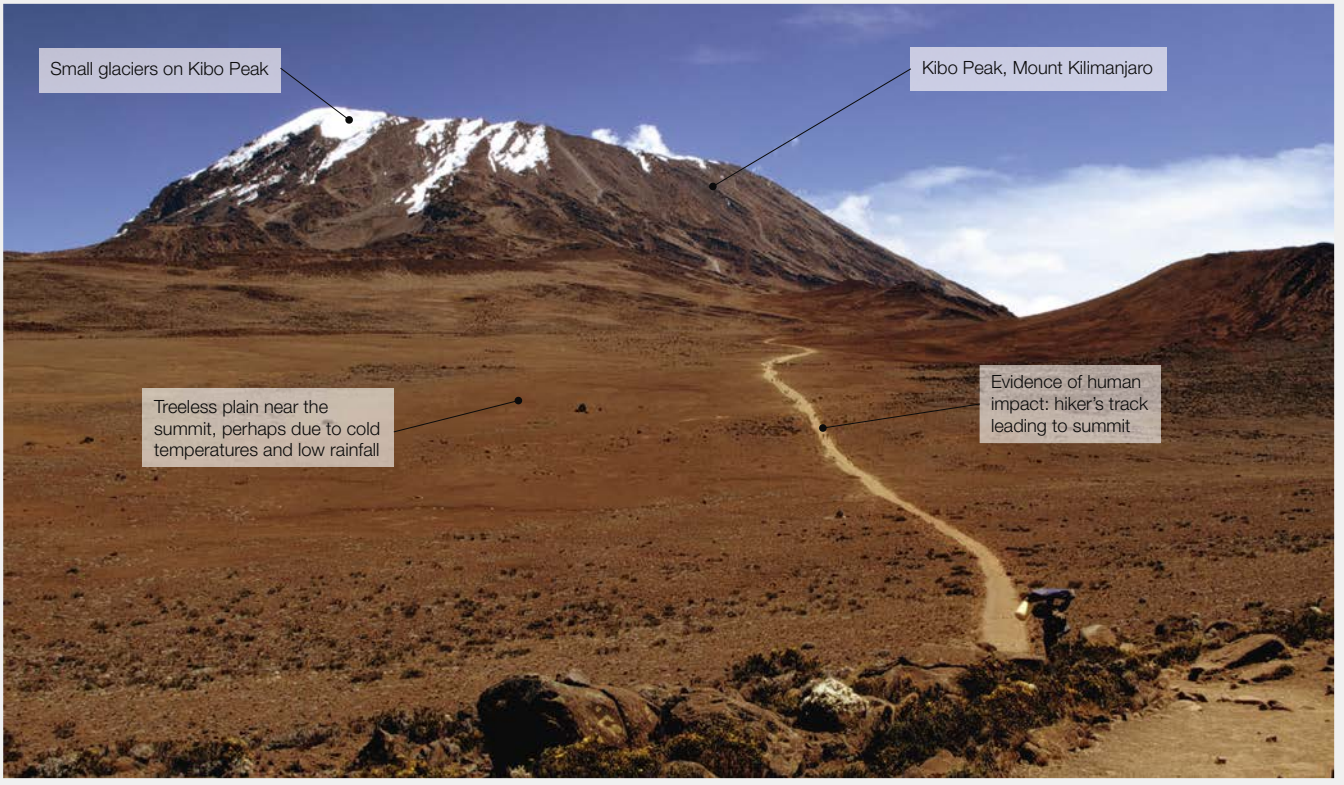

Step 4 **Annotate** your photographs, remembering to focus on the topic of the inquiry. Write short labels that include the key features of the landscape. Keep your labels neat, relatively short and relevant to your inquiry. Note any observations you have and possible causes for changes or damage you note in the environment.

Step 5 Place your labels, taking care not to obscure important parts of the photograph. Space the labels around the photograph without making them too cluttered. Avoid having the lines from the labels crossing each other. If you think you have too many labels, go over them again and delete any you think aren't really relevant to your inquiry question.

Apply the skill

1 Prepare for a geographic photo session. Decide on a subject and head out to a natural environment such as a forest, stream or coastline with your camera. Evaluate your photographs as you go to ensure you are collecting the information you are seeking.

2 Annotate your photographs following the steps listed on the previous page. Choose your best three photos and set up a digital display on the school computer network or print them out and set up a wall in your classroom as a photo gallery.

Source 17 An annotated image of Mt Kilimanjaro

Check your learning 1.4

Remember and understand

1 Why is a website that ends with .edu more reliable than one that ends with .com?

2 What advantages do scatter plots have over maps?

3 What do population pyramids show? Why are they a useful tool for geographers?

4 Examine Source 11. In which of these countries is the population increasing most rapidly? How much original forest cover remains in this country?

Apply and analyse

5 What is the difference between primary sources and secondary sources of information? Is the CIA Factbook (see Source 1) an example of a primary or secondary source?

6 Using Source 3, describe the terrain of the region surrounding Mount Kilimanjaro. Do you think Source 3 is more useful for this task than Source 4? Why?

7 Describe the differences between the population pyramids in Sources 9 and 10. What do these differences reveal about the populations at these points in time?

Evaluate and create

8 Examine Source 4. Sketch the probable contour pattern of the landscape shown. Use Source 2 as a guide to common contour patterns.

9 Research the size of the population of a country other than Australia over a 10-year period. Create a graph or graphs to present your findings.

1.5 Interpreting, analysing and concluding

Once you have collected, recorded, evaluated and represented your information, it is time to make sense of it all so that you can reach some conclusions about the geographical questions that began your inquiry. Geographers look for order, diversity, trends, patterns, anomalies and relationships in their information. It can often help to classify information by sorting it into groups.

Using models to identify trends, patterns and relationships in geographical data

There are a number of methods and models that geographers use to help them during this stage of their inquiries. These include the:

- PQE method
- SHEEPT method.

Using the PQE method

PQE is a tool used by geographers to describe the data they have gathered (particularly on maps) and to look for patterns in this data. The letters PQE stand for pattern, quantify and exceptions.

P – Pattern

In this step, you need to give a general overview of any patterns you may identify.

When looking at any form of data, look for things that stand out or form patterns. A pattern may be a group of similar features on a diagram, a concentration of a particular colour or feature on a map, or a particular shape that is created by data on a column graph. For example, when looking at a map of Africa (see Source 1) you might say, 'the forests seem to be located mainly in Central Africa and Southern Africa'.

Q – Quantify

In this step, you need to add specific and accurate information to define and explain the patterns.

Quantifying involves using statistics, amounts, sizes and locations to give specific details. For example, rather than just saying, 'The most forest is located in the centre of the continent', you would need to quantify this statement. You might say instead, '240.3 million hectares of forest has been recorded in Central Africa, compared to 35.4 million hectares in East Africa'.

E – Exceptions

In this step, you need to identify everything that does not fit your patterns.

Often, you may find that there are things in your data that do not fit into a pattern you have identified. These are called exceptions. They also need to be identified and quantified. For example, you might say 'There are also forest regions located in North Africa and West Africa'.

Using the SHEEPT method

SHEEPT is a tool used by geographers to help them consider the many factors that may contribute to the patterns identified in their data. When you are examining issues related to your inquiry, it is useful to think about them in terms of these six factors and rank them in order of importance. This will help you reach your conclusions. The letters SHEEPT stand for:

S social (S) – factors relating to culture and people

H historical (H) – factors relating to past events

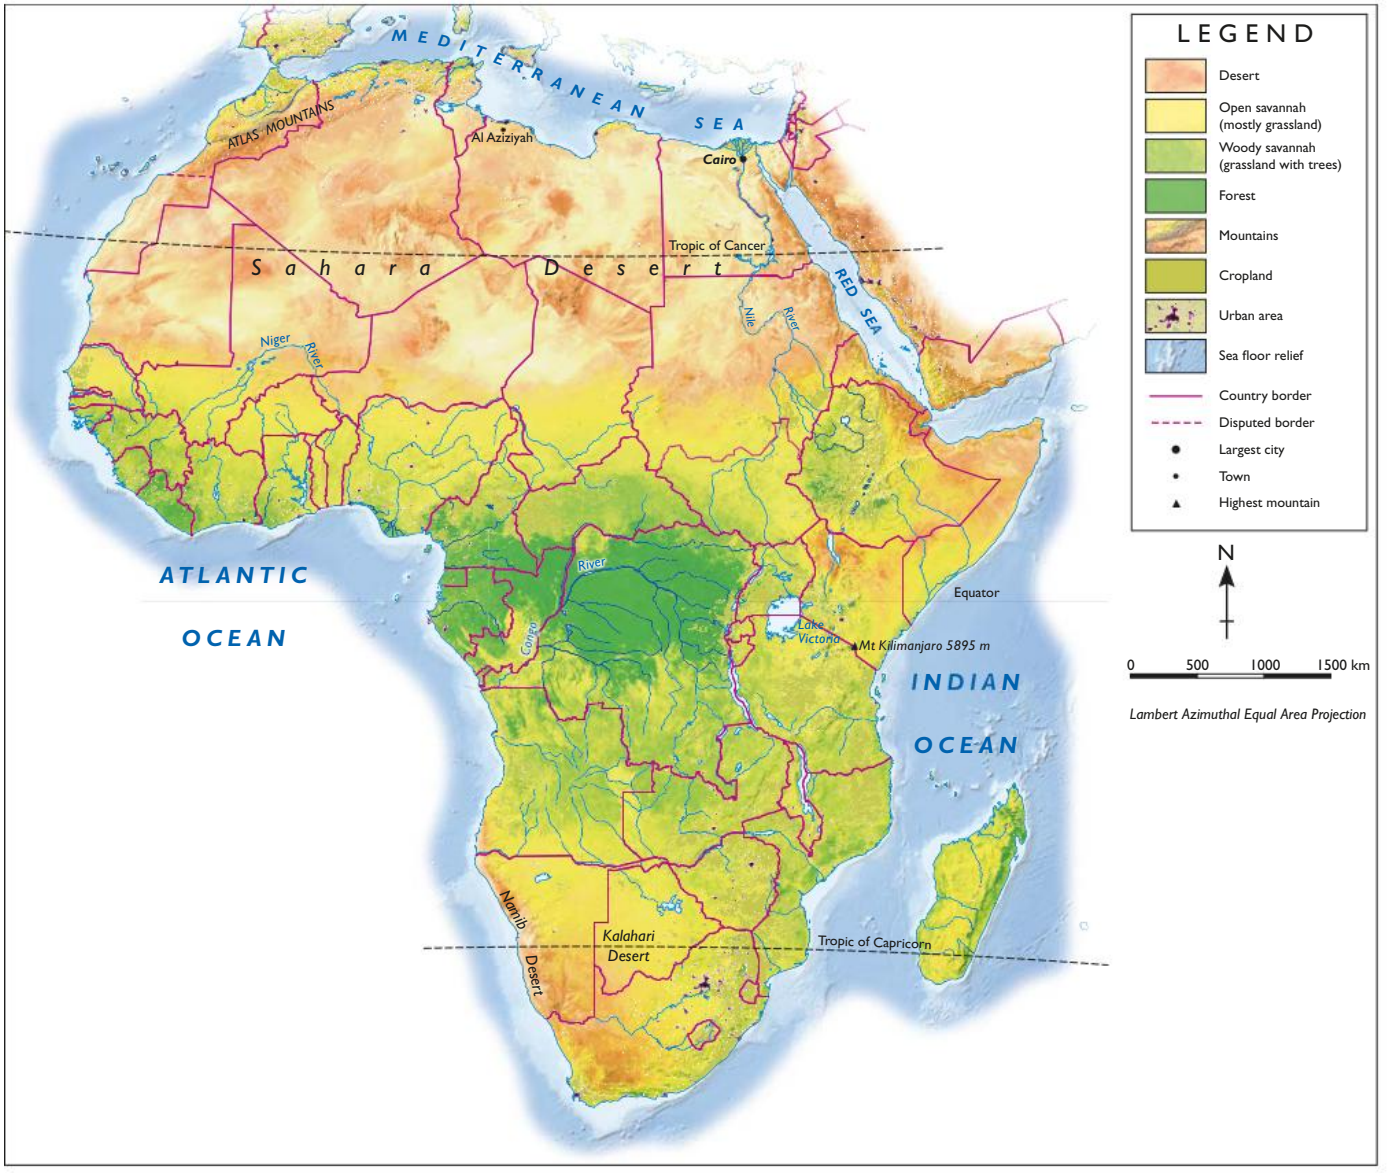

E environmental (E) – factors relating to the natural environment (including climate, landforms and vegetation)

E **economic** (E) – factors relating to the earning or spending of money (including income earned from industry and tourism and the cost of building a dam or highway)

P political (P) – factors relating to governments (including laws, regulations and policies)

T technological (T) – factors relating to the availability and use of different types of technology (including the development of greener technologies, alternative energy sources and GIS).

AFRICA: ENVIRONMENTS

Source 1

Source: Oxford University Press

Distinguishing between quantitative and qualitative data

Primary and secondary data provide either **quantitative data** or **qualitative data**. Quantitative data includes anything that can be recorded as numbers (for example, Uluru is 3.6 kilometres long and 1.9 kilometres wide and has a circumference of 9.4 kilometres). Qualitative data, on the other hand, includes anything that can be recorded in words (for example, Uluru, one of Australia's best-known natural landmarks, is very large).

The PQE method uses mainly quantitative data. Examples of quantitative data include:

- climate and temperature statistics
- tourist numbers
- population figures (including birth and death rates)
- types and amounts of food grown
- plant and animal species and wildlife in certain areas
- forest clearance rates
- numbers of people killed in natural disasters
- numbers of volcanic eruptions and earthquakes.

The SHEEPT method uses mainly qualitative data. Examples of qualitative data include:

- opinions
- points of view
- personal stories
- likes and dislikes
- feelings.

Good geographical inquiries will always be based on a combination of primary and secondary data that is both quantitative and qualitative. Even though qualitative data is an important part of any geographical inquiry, quantitative data is considered to be more valuable because it is less open to personal interpretations and can be more accurately represented in graphs and charts.

Before you move to the next stage of your inquiry, it is important to check that you have recorded all your data without errors and that it is balanced and fair. Your data should not reflect your personal opinions, emotions or attitudes; instead it should present the facts in a clear and concise way.

Using other methods to interpret geographical data

Analysing geographic photographs

Landscapes can be photographed from several different angles depending on the position of the camera at the time the photograph was taken. Each angle makes some features of the landscape easier to see and interpret than other features, and so you need to carefully consider at which angle the photograph has been taken.

Analysing satellite images

A satellite image is taken from space. It allows us to see large areas of the Earth's surface. These images are often used to investigate patterns such as the streams and rivers that radiate from Mount Kilimanjaro. It is difficult, however, to see smaller features of the environment.

Source 2 In this **ground level photograph** of Mount Kilimanjaro, the camera is being held by someone at the same level as the landscape being photographed. This angle allows you to clearly see the height of any object and the detail in vertical surfaces. However, objects such as the mountain and the tent hide the landscape behind them.

Analysing false colour images

You may have heard the terms '**false colour image**' or 'false colour map' before. The term 'false colour' does not mean the colours used in an image are incorrect, it just means different colours have been used to make the image or map easier to interpret. The cartographer or person working on the image has chosen colours that make some aspects easier to see or understand than a normal 'natural' photograph or map would be.

The colours used in a false colour image can be quite exaggerated and unnatural-looking. This is because the colours of the natural features are too similar to demonstrate a particular point or aspect. If someone is trying to show where a muddy brown river meets a brown-coloured riverbank where there are brown rocks and some brownish shrubs, they might decide to use false colour to clearly show where the different elements are. In that case, they may decide to make the shrub areas bright green, the river neon yellow and the rocks bright red, leaving just the river bank brown.

You should examine the accompanying legend to interpret the colours used in a false colour map.

Source 3 In this **oblique aerial photograph** the camera is positioned above the landscape, but is angled towards the scene being photographed (oblique means 'at an angle'). This allows you to see both the foreground and the background of the scene. You can also see both the height of an object and its width or area. Objects in the background, however, seem much smaller than those in the foreground.

Source 4 In this **vertical aerial photograph**, the camera is positioned directly above the landscape. This vertical (or plan) view allows you to see the extent of any feature such as Kilimanjaro's crater. It is very difficult, however, to judge the steepness of the mountainside or the depth of the crater. Plan views are used for making maps, as the scale is the same over the area shown and similar objects look the same size.

Source 5 This image of Mount Kilimanjaro was taken by a satellite orbiting at 830 km above the Earth's surface.

Check your learning 1.5

Remember and understand

1 What do the letters PQE stand for?
2 What do the letters in SHEEPT stand for?
3 What is an oblique aerial photograph?
4 What are some of the advantages and disadvantages of using a vertical aerial photograph?

Apply and analyse

5 Look at Source 1. Use the PQE method to think about Africa's deserts.
   a Can you identify a pattern?
   b Can you quantify this pattern?
   c Are there any exceptions in this pattern?
6 Which type of photograph would you take on a field trip?
7 Some geographers are very interested in the amount of snow and ice on Mount Kilimanjaro, as it has been gradually declining for several decades. Which type of photograph do you think would be most useful to show the decline of the total area of the mountain's snow and ice?

Evaluate and create

8 Conduct your own Internet research on the way in which Mount Kilimanjaro is managed and use the SHEEPT method to think more closely about the factors that impact on it.
   a List at least one point for each of the SHEEPT factors.
   b What conclusion(s) can you make about the way in which Mount Kilimanjaro is managed?
9 The oblique aerial photograph (Source 3) was taken in 1991 and the ground level photograph (Source 2) was taken in 2009.
   a How has the mountain top changed in this time?
   b With a partner, discuss some geographical questions you could ask to investigate why the mountain has changed in this time. Don't worry about the answers; just concentrate on writing some good questions.
   c Share your questions with the class. List three questions from the class discussion that you think could be the beginning of a geographical inquiry.
   d Where could you find information to help you investigate these questions?

1.6 Communicating

During a geographical inquiry you may discover something new that other people should know about. It is important that you be able to communicate your findings clearly and effectively. There are several ways of doing this and you should select the method that best suits your audience and purpose:

- oral methods, such as reports, discussions and debates
- audio methods, such as radio reports
- graphical methods, such as graphs, annotated photographs, sketches and satellite images
- written methods, such as essays or other text-based presentations.

skill**drill:** Data and information

Planning, creating and delivering a PowerPoint presentation

Geographers often present their findings to an audience in order to share the results of an inquiry and help others understand how this impacts on their world. Using PowerPoint is a good way of organising and presenting your findings.

You may have found doing oral presentations a little daunting in the past, but following these steps will prepare you to give a PowerPoint presentation with confidence. PowerPoint allows you to embed images and provides a structure for outlining your key points in a clear and concise way. You can then talk through your presentation using the slides to both prompt and support you – using visual aids captures your audience's attention and makes your presentation a lot more informative, too.

Follow these simple steps and tips when planning, creating and delivering the findings of a geographical inquiry:

Plan your presentation

Step 1 Gather the findings of the research you have carried out as part of your geographical inquiry. This should include any written research materials you have collected, the sources you have used, the results of any surveys or interviews, and a range of relevant images, graphs, maps or photographs.

Step 2 Plan your presentation carefully so it has a clear beginning, middle and end. It's likely that you will have a lot of information, so it's important that you present only the most relevant parts and that these are structured logically for the audience.

Step 3 Know the requirements of your presentation. Your teacher will tell you how long your presentation is expected to be and what key points need to be covered. It is important that you plan you presentation in line with these requirements. For example, if you are required to talk for 10 minutes, you might like to present around 10 PowerPoint slides and talk to each one for around a minute. Before you start creating your PowerPoint presentation, it is really useful to sketch out a rough plan of what you want to cover on each slide. Have a practice on your own following your plan. Time how long it takes you to cover the information you plan to fit on one slide. Plan the rest of your presentation using this as a guide.

Source 1 A PowerPoint presentation can be a very effective way of presenting the findings of your geographical inquiry.

Create your presentation

Step 4 Once you have worked out the length of your presentation and the content you need to cover, it is time to create your slides. If you are not familiar with PowerPoint, there are plenty of online guides to assist you. Here are some tips to help you create a clear and visually engaging PowerPoint presentation:

- Be sure you present the content in clear, concise dot-point form, not huge slabs of information in paragraph form. You do not need to put all your findings up on the screen.

- Do not fill up your slides with a lot of random pictures that only loosely relate to the content. Include visuals that relate to the content on that particular slide.
- A common mistake is to have objects and text moving on the screen in a way that just distracts the audience. Use graphics, sound, video, animations and transitions only if they add value to the point being made.
- Use a design that ensures your audience can clearly see and read the slides. You need enough contrast between the text colour and the background colour on the slide, and make sure your font size is large enough.

Step 5 Prepare a set of cue cards. When delivering an audiovisual presentation to an audience do not just stand up and read out the text on each slide. Rather, you should be talking in a way that develops and expands the points on each slide. Carefully plan in advance what you are going to talk about during each slide. Record this plan on cue cards, and refer to these cue cards during your speech to remind you of what to say. Cue cards are also a great support to have if you are prone to nerves!

Step 6 Practise your presentation. You can do this on your own, or in front of a friend or family member. You might feel a bit silly at first, but practising will help you perfect your timing and get you used to talking through the key points of your presentation using your cue cards and slides to support you.

Deliver your presentation

Step 7 Before delivering your presentation, be sure that you're confident that the technology you're using is in good working order. Prior to class, check that everything is working as it should and that the screen you are projecting onto is ready and clearly visible to the audience. If your PowerPoint presentation contains any audio or video footage, check that your speakers are working and audible to the audience.

Step 8 Deliver your presentation by working through the slides in the same way you practised. Here are some tips to help you deliver the best PowerPoint you can:

- Speak clearly – not too fast, not too slow. Vary your tone and pitch to make your presentation more interesting.
- One thing at a time – what is on the screen should be the thing you are talking about. Your audience will quickly read every slide as soon as it is displayed. If there are four points on the slide, they will have read all four points while you are still talking about the first point. Plan your presentation so just one new point is displayed at any given moment. Click to go to the next point only when you are ready to talk about that next point.
- Make eye contact with different members of your audience. Do not just look down at your cue cards!

Step 9 Invite the audience to ask questions and do your best to answer them correctly. If you do not know the answer, or are unsure, don't just make something up on the spot. You are better off being honest and offering to answer any questions at a later stage once you've researched the answer.

Apply the skill

1 Prepare and deliver a PowerPoint presentation on an issue of geography that you find interesting. It could be the local issue that you researched in the previous section, or something you have noticed in the news. Ensure you include some interesting visual elements, such as photographs or graphs, as well as your key points.

Check your learning 1.6

Remember and understand

1 Why is communicating an important part of a geographical inquiry?

2 List three ways you could communicate the findings of your geographical inquiry.

Apply and analyse

3 What do you most enjoy about other students' oral presentations? What do you least enjoy?

Evaluate and create

4 Imagine that you are preparing a PowerPoint presentation for your class on the decline of the glaciers on Mount Kilimanjaro. What are some of the main points you would raise in your presentation? What images from this toolkit would you use to illustrate these points?

1.7 Reflecting and responding

Reflecting

The final steps in completing a geographical inquiry are to reflect on the results of your inquiry and the methods that you used. This is an essential step as it allows you to learn important lessons from any mistakes that you have made and apply these lessons in your next geographical inquiry. There are several ways to reflect on your geographical inquiry. Reflecting involves looking at what you have learned, thinking about how it was learned, and asking critical questions about the way your geographical inquiry was conducted. One of the best methods to help you reflect is to complete a self-evaluation checklist (see Source 1).

The title of my geographical inquiry is:

My geographical inquiry set out to investigate:

GENERAL POINTS	My rating 1	2	3	4	5	Comments
I was able to complete all stages of my geographical inquiry.						
I was able to answer all my key inquiry questions.						
I was able to plan my inquiry effectively.						
My maps, graphs, tables and diagrams were clear and accurate.						
I was able to analyse my data and reach a conclusion.						
I was able to communicate my findings in an interesting and appropriate way.						

AREAS OF STRENGTH	Comments
My areas of strength are:	
I'm getting much better at:	

AREAS NEEDING IMPROVEMENT	Comments
The part I found most difficult was:	
I need the most help with:	

IMPORTANT ISSUES HIGHLIGHTED BY MY INQUIRY	Comments
The most important thing I learnt from my inquiry was:	
This issue is important to me because:	
This issue is important to my community /country/world because:	

Source 1 A self-evaluation checklist is a very useful way of reflecting on the findings of your geographical inquiry.

Responding

As well as reflecting on the ways in which you conducted your inquiry, you also need to respond to what you found out. You may even decide that you need to recommend some action based what you found.

Geographers often use the information gathered and analysed in their inquiry for a specific purpose. This could be to report on an issue and educate people, to raise awareness of a potential problem, or to lobby local, state or federal government about a particular concern. This can be done via various means, from presenting official reports or studies, to using social media and starting an online petition. The work you do as a geographer can contribute to your environment, and responding and acting is an important part of this work.

Source 2 Children at school near Mount Kilimanjaro using newly installed taps to wash their hands before preparing food

If the results of your geographical inquiry lead you to recommend a plan of action, there are some important things to consider.

- Is it environmentally sustainable? Does the plan impact in a negative way on the natural environment and natural processes?
- Does it bring more economic benefits than it costs? Is it affordable in both the short term and the long term?
- Does everyone affected by this plan of action benefit from its outcomes or just a few people?

Case study

A geographical inquiry conducted on the lower slopes of Mount Kilimanjaro found that many schools lacked a reliable supply of clean water for sanitation. Based on this inquiry, the members of several non-government organisations along with the local villagers laid hundreds of metres of new pipes and installed tanks and taps so that children at the schools could wash their hands before preparing food (see Source 2).

Check your learning 1.7

Remember and understand

1 A self-evaluation checklist is one way to reflect on a geographical inquiry. What are two other ways?

2 Why are the findings of a geographical inquiry often useful to the community?

Apply and analyse

3 What geographical questions do you think began the inquiry that resulted in the new taps in the Tanzanian school shown in Source 2?

4 Why is it important that an action plan for change consider the issue of sustainability?

Evaluate and create

5 Create a checklist to assess your map-drawing skills.

1.8 Fieldwork in geography

Why is fieldwork important?

A historian studying a period in the past will try to find primary sources of information such as letters or diaries to better understand that period. For geographers, the field is an essential primary source of data. Books, websites and maps can give you some information about a particular place but they are usually secondary sources of information. To really understand a landscape or issue you need to go and see it for yourself.

A field trip can be a fun and exciting experience as you spend time with your classmates in an interesting place. As well as being fun, field trips are an essential part of your geography course. This is because fieldwork:

- helps you to better understand how the world 'works' as it builds a bridge between what you learn in a classroom and the world outside that classroom.
- teaches you new skills, particularly in collecting information. Many of these skills, such as surveying and digital mapping, are in demand in the workplace.
- allows you to learn about the world in a new and different way. Not everyone learns well by reading books or answering questions in the classroom. Many students learn more by completing practical, hands-on activities such as fieldwork.
- gives you the opportunity to discover how other people feel about their environment and to compare this to your own values and ideas about your world.
- requires you to be organised and to work cooperatively with other people.

The skills associated with fieldwork

The aim of all fieldwork is to enable you to develop the skills of observation, information gathering, analysis and interpretation of different forms of data and communication of your results. The types of fieldwork you conduct will differ according to your chosen topic and the fieldwork site. All fieldwork is activity-based and inquiry-based. You will be:

- identifying different types of environments and the features within them
- describing what you see around you in geographic terms
- recording data from different sources
- sampling things like water quality and wind speed
- investigating why things are where they are
- comparing different features to see if there is a pattern
- calculating amounts such as water flow, number of different species of plants and animals, visitor numbers
- analysing different forms of data
- forming a more complete picture of the area you are studying
- communicating your findings.

All these activities are aimed at developing and improving your geographic skills and understanding.

Fieldwork locations and inquiry questions

Fieldwork can take place in many locations and for a wide variety of purposes. The best locations tend to be where change is happening before your eyes. Rivers and coasts are popular fieldwork locations because the constant movement of water in these places changes the natural environment, often resulting in a response from people. Shopping centres, parks and city streets are also popular because the constant movement of people creates patterns, flows and changes.

Source 1 You never know where fieldwork will take you! These geographers are using a drill to examine the age of the glaciers on Mount Kilimanjaro.

Source 2 Examples of fieldwork locations and inquiry questions for a range of topics

Unit	Fieldwork locations	Inquiry questions
Biomes and food security	Local farm	What crops or animals are grown on this farm? What makes this place suitable for this type of farming? How has the farmer changed the natural environment? What new technologies is the farmer using? How does this impact on the farm's productivity?
	Rural urban fringe	Is the city growing in this region? What are the main drivers of this growth? How has this impacted on food and fibre production in the past? What evidence is there for changing land use patterns?
Geographies of interconnections	Local business	How is this business connected to people in other places? How have new communication and information technologies changed this business? What is the size and shape of the region served by this business?
	Major shopping centre	How many businesses in this centre are foreign owned? Where are the goods offered in the shops in this centre manufactured? Where do the customers who use this centre come from? How is this shopping centre connected to people in other places?
Environmental change and management	River or stream	What natural processes are shaping this riverine or coastal environment? How do these natural processes impact on human activities? What human activities have changed the natural processes and environment in this place? How have these environmental changes been managed? How effective has this management been? What further management strategies could be used to better manage change in this place?
	Coast	
Geographies of human wellbeing	Two contrasting suburbs	What are living conditions like in these two suburbs? What are the similarities and differences? How can these differences be mapped? Why do these differences occur? How can wellbeing be improved in these places?
	Program to improve wellbeing	What are the aims of this program? Why does this program exist? How successful is the program in reducing inequalities in wellbeing? How could it become more successful? Could this program be applied in other regions and places?

Source 2 provides examples of fieldwork locations and inquiry questions that can be the beginning of an investigation at some of these locations.

Conducting successful fieldwork

Fieldwork is a type of geographical inquiry, so whenever you take part in fieldwork you will need to follow the stages that are outlined in this toolkit, namely:

Stage 1 Observe, ask questions and plan

Begin by looking at an issue or location and compile a set of related inquiry questions that you would like to answer. There are some suggestions in the previous table to get you started. Plan what information you will need to answer your key questions, how you will collect it and what equipment and skills you will need.

Stage 2 Collect, record, evaluate and represent data

Plan your fieldwork so that you can collect the evidence and data that you will need. There is a range of geographic skills that are well suited to field work. These include taking photos, drawing field sketches, conducting surveys and collecting data such as stream and pedestrian flows. You need to consider ethical principles such as people's right to confidentiality and the right to refuse to take part in a survey. If your class is planning a field trip to a natural environment such as a forest or beach, you will need to ensure you do not damage the environment by trampling on plants or animals, or by dropping litter.

Stage 3 Analyse data and draw conclusions

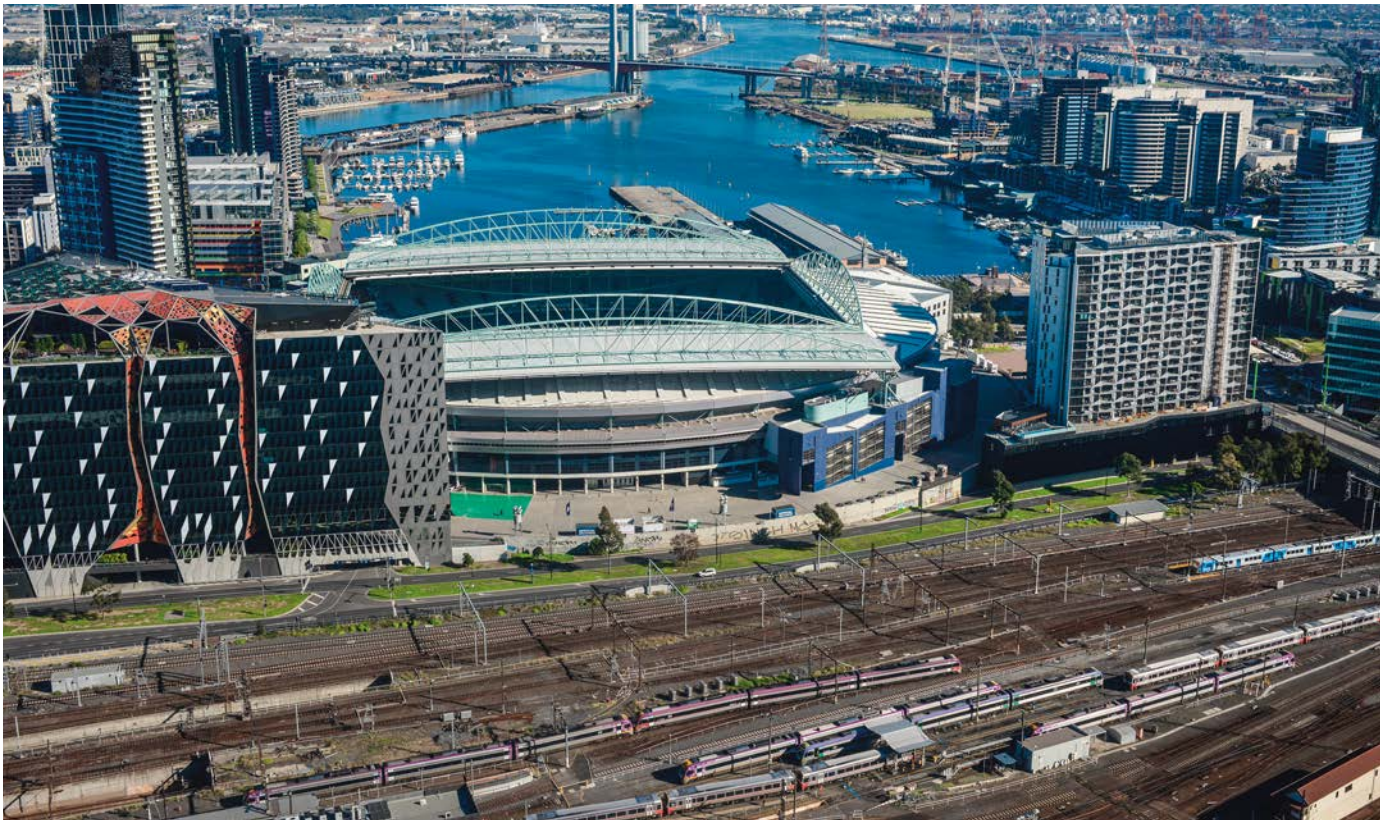

Analyse the evidence you have collected and look for patterns or clues that will help you to answer your inquiry questions. This is usually done in the classroom where you can more easily draw maps and graphs to interpret your information and reach some conclusions.

Stage 4 Communicate your findings

Communicate what you have found to an audience in the form of a written report, an oral presentation or an annotated visual display (AVD).

Stage 5 Reflect and take action

Think about your fieldwork findings and reflect on ways to improve your investigation process. Finally, decide on a course of action, if this is appropriate. This should take into account environmental, economic and social factors.

Source 3 An inner city urban renewal projecct

A fieldwork example: Inner city renewal

In the following example, the Year 10 geography class at Gumtree College are investigating an urban renewal project near the central business district ( ) in their capital city. Fifteen years ago the area was a vast neglected industrial site of old docks, cranes, sheds and railway lines. It has now been transformed into a residential and commercial hub with apartment blocks, office buildings, parks, shops, theatres, television studios and a major sporting arena. The Gumtree College students are investigating this area as part of their studies of environmental change and management of an urban environment.

Stage 1 Observe, ask questions and plan

Prior to their field trip, the students used the Internet and a promotional DVD to learn more about the area. Based on these observations they brainstormed a series of geographical questions that could form the basis of their inquiry. These included:

- How has this region changed over time?
- What are the causes of change in this region?
- What are the consequences of change on the built environment and on the natural environment?
- How are environmental changes in this region managed at present?
- How can environmental changes in this region be better managed in the future?

After some discussion, the students decided on the third question, but decided to modify it slightly to make it easier to study and measure. Their inquiry question

Source 4 Students completing a field sketch of an inner city renewal project

became 'What are the consequences of change in this region on the built environment?'

It was decided that the class would spend one full day in the region after travelling into the inner city by train. Following the field trip they would then spend time in class preparing a field report.

The students spent some time before the field trip planning what information they could collect and observe for their inquiry. They decided that they could investigate previous land uses in the area by accessing old photographs and maps. Then, while on the field trip, they would look for examples of changing land uses. This could include old buildings being demolished, or the appearance of new buildings, roads, bridges or other structures that were not in the old photographs and maps.

Stage 2 Collect, record, evaluate and represent data

The students researched the region and collected a series of photographs that showed the ways in which the region was used in the past and how these uses have changed over time. They found the National Library of Australia website (http://trove.nla.gov.au/) particularly useful. They printed some of these photographs and took them to the area when they visited on their field trip. Activities they completed on the field trip included:

- completing a field sketch of new housing developments in a part of the area (see Source 4).
- taking geographic photographs and comparing these to old photographs (see Source 5). The photographs they took included images of a new train station, new sports stadium, new roads and new apartment buildings. Some students also photographed an old goods shed and old wharf facilities.
- mapping examples of land use changes on an outline map of the region. Included on the map were examples of buildings that have retained their original use, old buildings that have changed use, new buildings and areas cleared for new buildings.
- selecting examples of change as case studies. Some groups of students chose a new train station that had replaced an old one, some chose a new sports stadium that had been built on an area previously used for rail yards, and another group selected a goods shed that had been converted into restaurants. At each site students listed the changes they observed and the impacts of these changes on surrounding areas. They also discussed the possible reasons for these changes. Some completed a field sketch of their case study.

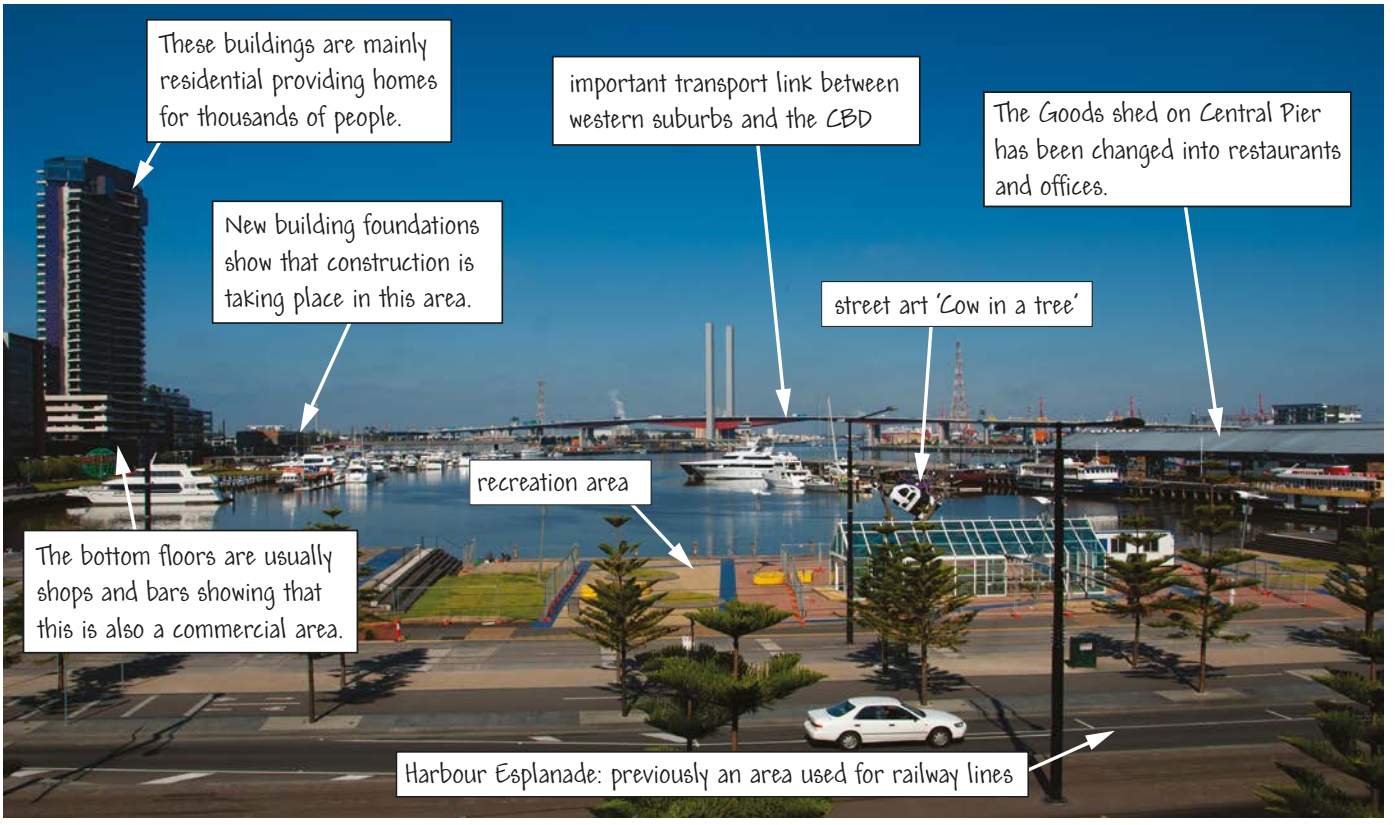

Source 5 Students using old photographs of the region to observe change over time

Stage 3 Analyse data and draw conclusions

After completing their fieldwork, students returned to the classroom to make sense of the information they had collected and recorded. They used this information to make a series of conclusions about changes to the built environments that have occurred over time. In order to do this, they:

- constructed an overlay map to compare an old map of the region with the map they drew while on the field trip. They discovered that the shape of the river banks had changed little and that previous land reclamation areas had remained the same over the last 50 years. The rail yards had been moved to make way for the new sports stadium and the footprint of the new train station was slightly larger than the previous station. Many goods-handling areas and buildings from the previous industrial land use had been replaced with new apartment buildings and a large park. Roads from the CBD had been extended into the new precinct and new tram lines had been added.
- annotated their photographs of their case study sites to show how these sites had changed over time and the impacts of these changes on other areas (see Source 6). Students concluded that change had been uneven, with some areas changing little, while others had undergone large-scale and dramatic changes. They also concluded that one of the driving forces for these changes has been the growth of the population of the city, increasing the demand for inner-city housing.

Source 6 An annotated geographic photograph completed as part of a geographical inquiry by students at Gumtree College

- concluded that the changes in this area have been largely positive as the area had become an unattractive wasteland prior to the urban renewal project. Some students felt that the area could be improved to make it more attractive for people to live there. They suggested that a school would be an asset in the area, as would more open spaces and recreation facilities like a water park or skate park.

Stage 4 Communicate your findings

Students completed field reports based on their geographical inquiry. Each student was required to complete a sketch book that included a range of visual and written material. Examples of visual material included an overlay map to show change over time and a range of annotated photographs. Written material included reports on the ways in which the area has changed over time and a description of the ways in which it is expected to change over the next 20 years.

Groups of students delivered presentations on their selected case studies. Most used ICT programs such as PowerPoint and Prezi to present photographs of their site. These were posted on the school website and discussion forum, and several parents from the school community added their own memories about the region as it was in the past. The class discussed the differences and similarities between each of the case studies.

Stage 5 Reflect and take action

Following the submission of their field reports students reflected on their findings and the methods they used to reach their conclusions. They decided that the key inquiry question they had chosen was a good one although several students commented that it was difficult to work out why change had occurred in this place over time. They completed a self-evaluation checklist to reflect on the findings of their fieldwork (see Source 1 on page 34) and the ways in which they could improve.

Many students felt that the overlay map was a very good way to demonstrate how an area has changed over time and suggested that this technique could also be used on old photographs. The fieldwork was used as the basis for a class discussion about the positive and negative impacts of the observed changes on the natural environment.

Remember and understand

1 Why is it important to plan ahead for fieldwork?

2 What are some of the key advantages of fieldwork for geography students?

Apply and analyse

3 Name a place you are familiar with that could be investigated using some of the techniques used by the Gumtree College students. Work with a partner to decide on a variety of inquiry questions that could be used to guide a field trip to this location.

4 Gumtree College students worked in groups to study individual sites. What are some of the advantages of working in this way rather than as a whole class?

5 Examine Source 6. How might this annotated photograph help the students to answer their inquiry question?

6 What other information could the students have collected on their field trip to help them answer their inquiry question?

Evaluate and create

7 Year 10 students at another school studied change in rivers as part of a geographical inquiry into environmental change and management. They planned a field trip to a local river (see Source 7).

a What inquiry questions could they generate to guide their inquiry at this site?

b Work in a small group to describe the steps you would undertake to explore one of these questions using fieldwork.

Source 7 This site is the planned location for a fieldwork trip to investigate environmental change and management of a river.

1.9 Careers in geography

In recent years there has been a marked increase in the number and range of jobs and careers that are linked to geography. This is likely to continue well into the future, due to a growing awareness of how important it is to understand our fragile environment. Many employers are also becoming more aware of the many skills that geographers have and the usefulness of these skills in a wide range of careers.

Many geographers find that their skills and expertise are in such demand that they can easily find employment all around the world. There are many jobs and careers that are linked to your study of geography at school. Some of these are listed in Source 1.

Source 1 Studying geography can lead to many interesting and exciting careers.

Working indoors	Sharing knowledge	Related opportunities
Urban planner	Cartographer: both printed and digital maps	Studying hazards and disasters
Meteorologist and climatologist	Teacher	Studying climate change
GIS specialist	Environmental educator	Archaeologist
Transport planner	Map editor and librarian	Agricultural scientist
Working with statistics such as census data	Tour guide	Researcher
Geomatic / geospatial engineer	Writer/editor	Medical geographer/ health services planner
Regional planner	Journalist	Social data analyst
Geography analyst/ strategy consultant	Travel consultant	Developing new GIS applications

Working indoors

Not all geography jobs involve working outside. New information and communication technologies (ICT) have increased the number and range of geography careers that are completed indoors. Many of these are involved with planning future strategies and changes to the built environment. Planners are concerned about the ways in which different parts of a suburb or city fit together and the links between them. Like many geographers, planners increasingly use GIS systems and other ICT applications. A relatively new geography career is using geomatic engineering. This uses GPS, GIS, 3-D computer images, surveying, satellite images and photos in the field of engineering. It is one of Australia's fastest growing ICT fields.

Career profile: Lucy Johnson – Urban planner

Lucy Johnson uses her geographic skills to help create and manage liveable spaces in a city council planning department. Residents and developers who wish to change the ways in which their properties are used must apply to Lucy and her fellow planners for permission. She assesses every proposal carefully to ensure that it does not adversely affect the natural environment or other local residents. 'Some proposals are met with great opposition from residents, who are extremely passionate about preserving their streetscapes and the character of their neighbourhood,' says Lucy. It is part of her job to find a balance between development and the protection of the character of the neighbourhood.

Lucy believes that, '…town planning is crucial, not just in creating physical environments, but in sustainably changing the way in which we use land and accommodate population growth. Our resources are finite and we must ensure that future generations can live and prosper just as we do.' She also believes career opportunities in her chosen field are vast, varied and increasingly more important.

Source 2 Lucy Johnson is an urban planner who helps to create liveable spaces in Melbourne.

Sharing knowledge

Geographers are good communicators who are used to working in teams to solve problems and propose solutions. Many geographers have used these and other skills to share their knowledge with the community. There are many career opportunities in education, including teaching in schools and universities – even overseas. Other geographers work in publishing, as writers, journalists, editors or cartographers.

Source 3 This Australian geography teacher is educating Fijian kindergarten children about the importance of better nutrition and increased physical activity.

Exploring new ideas

The inquiry and research skills that are part of your geography course (including observing, questioning, interpreting, analysing and communicating) are in great demand in many industries. Many geographers are also researchers who explore new ideas and propose new ways of thinking about the world in which we live. These geographers are making new and exciting discoveries in areas such as climate change, reducing the impacts of disasters, the spread of diseases and food security. They are also in demand with mining and oil companies around the world (see Source 4).

Source 4 These geographers are using a 3-D visualisation and GIS to predict the most productive locations for oil drilling.

Check your learning 1.9

Remember and understand

2 List three jobs you could do as a geographer if you wanted a job where you could explore new ideas.

Apply and analyse

3 What geography careers in Source 1 are connected to the concept of sustainability?

4 What skills do geographers have that make them useful in helping communities recover from natural disasters?

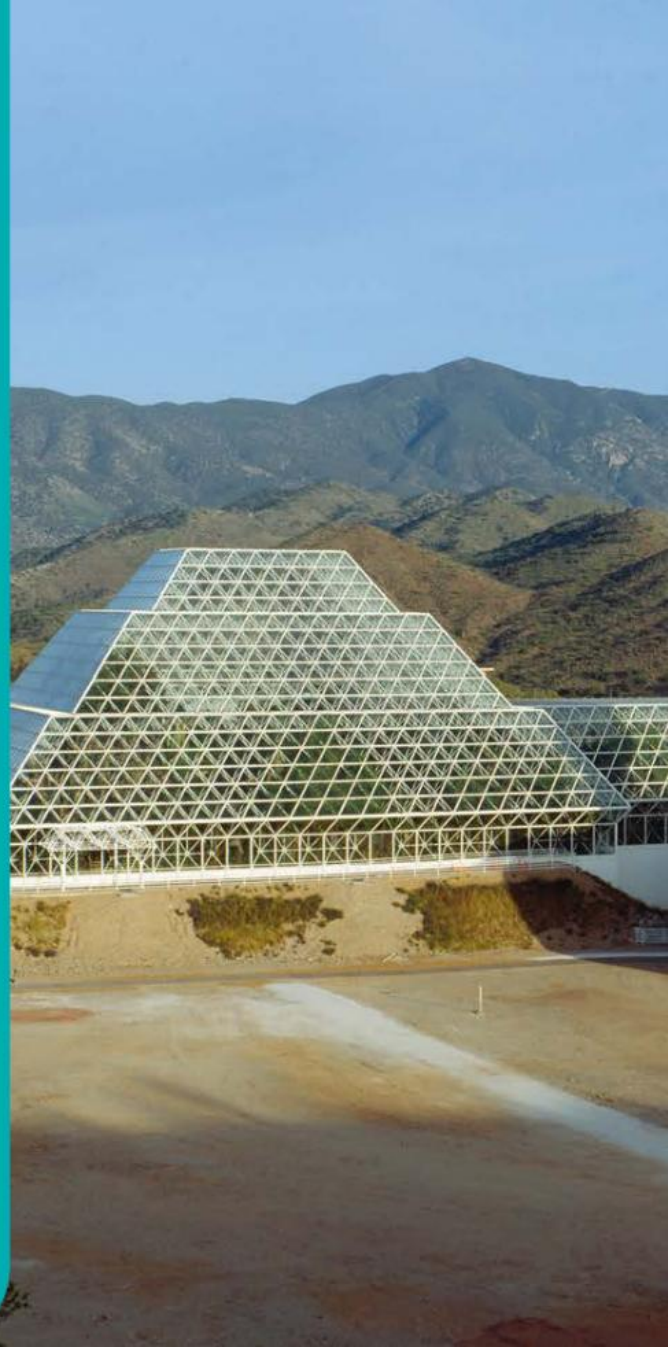

5 Why do you think a background in geography would be useful for an archaeologist?

Evaluate and create

6 Select one of the careers from Source 1 that interests you. Research this career and prepare a one-page fact sheet that includes at least one picture. Include answers to the following questions in your career fact sheet.

- **a** What qualifications are needed in this career?
- **b** How does someone working this career use geographic skills and concepts?
- **c** What aspect of this career do you think is most attractive?

Changing and managing the environment

Biosphere 2 is one of the world's largest scientific experiments. It is located in the Arizona desert. It is a miniature replica of the world's **biomes** and was built to explore the possibility of sustaining human life on other planets. Eight people were sealed inside for two years with the aim of surviving without outside help. Despite a cost of US$200 million, Biosphere 2 could not generate enough breathable air, drinkable water or food for the eight people inside. After 18 months, oxygen had to be pumped in from outside.

The Earth supports 7 billion people every day, supplying us with the water, air and food we need to survive. Today, many human activities are threatening the planet's ability to support life. As a result, it is vitally important that we take care to manage the environment.

2A

What is environmental change?

1 One of the biggest problems faced by the inhabitants of Biosphere 2 was a build-up of carbon dioxide and falling oxygen levels. How are these levels maintained on Earth?

2 How do you think the inhabitants dealt with their waste?

2B

What factors influence environmental change?

1 Biosphere 2, built north of the expanding city of Tucson, came under threat in 2007 when the land on which it sits was going to be used for a new housing estate. Apart from housing, what are some other ways in which people change the land?

2 How would the building of Biosphere 2 have changed the surrounding land?

chapter 2

Source 1 Biosphere 2 was built in 1987 with the aim of creating an artificial environment on Earth that could sustain human life and be transferred to other planets.

2C

How are we responding to environmental changes?

1 How do the Earth's systems provide us with a supply of fresh water?

2 Brainstorm some of the ways in which the supply of fresh water on Earth is threatened.

2.1 Understanding environmental change

We live in a changed world. Today, less than a quarter of the planet's land surface can still be considered to be wild. The rest of the Earth's surface has been transformed in a variety of ways by human activities. These activities include:

- removing natural tree cover to use the land for farming and cities
- damming and diverting rivers to produce electricity and more reliable sources of water
- digging for valuable minerals and energy sources beneath the surface
- polluting the land, air and water with waste materials.

These changes have had dire consequences for many ecosystems and species of plants and animals that we share the planet with. Tens of thousands of species are becoming extinct each year, largely as a result of the loss of natural habitat, but also due to pollution and the changes brought about by climate change. There are three main categories of environmental change: changes to the land, changes to the atmosphere and changes to water.

Changes to the land

As the human population has increased over the last two centuries, cities, towns and farms have spread rapidly across the Earth's surface. This process has greatly altered the soils and plants of the land. Perhaps the greatest changes have been to the world's forests. Vast areas have been cleared to make way for farms and cities and the forests' resources (such as wood from trees) have been used for energy and building materials. Less than one-quarter of the world's original forest cover remains intact today and the small amount that remains is under increasing pressure from expanding populations in Africa, Asia and South America. Fertile soil, too, is a declining resource as overuse has led to a loss of fertility, soil erosion (see Source 1) and increased salt in many regions.

Changes to the atmosphere

The Earth is surrounded by a combination of different gases known as the **atmosphere**. These gases provide many of the requirements for life on Earth as we

Source 1 A gigantic dust storm approaches the capital city of Sudan, Khartoum. Dust storms such as these are becoming more frequent. They are the result of changes made to the land such as over farming and the removal of natural land cover (like trees and other vegetation).

know it, including oxygen and fresh water. The atmosphere also protects the Earth (and everything on it) from the freezing cold conditions and dangerous ultraviolet rays of space. Despite the importance of the atmosphere to sustaining life on Earth, it has been used as a dumping ground for many gases and chemicals produced by human activities. The burning of fossil fuels such as coal for transport, electricity generation and industry has changed the natural levels of certain gases in the atmosphere. In addition to this, many airborne chemicals have been released through the production of goods and services we use every day, such as steel and oil (see Source 2). In some cases, the chemicals released into the atmosphere have brought about a partial breakdown in the layer of gases (known as the ozone layer) that shields us from ultraviolet light. In addition to this, they are responsible for an increase in the acidity of rain, and a warming of the atmosphere leading to global changes in our climate.

Changes to water

Fresh water is vital to the survival of all life on Earth. Water is used by humans in countless ways. We use it for drinking, washing, transport, fire-fighting, producing electricity, mining, fishing and recreation, as well as a host of other things. Above all, however, we rely on fresh water for producing the food we eat. About 70% of the total water taken from rivers, streams and underground water sources is used to irrigate crops and provide water for farm animals.

The diversion and damming of rivers to provide a reliable supply of water for farmers and for city dwellers is causing water shortages in other places around the world.

Human changes to the natural water supply are also having serious impacts on the natural environment. Some fresh water supplies are now becoming so polluted that they are undrinkable, leading to further problems for the animals, birds, fish and plants who also rely on the water to survive.

Source 3 The Glen Canyon Dam in the Arizona Desert, USA provides water and electricity to the nearby town of Page. Around the world, human changes to water supplies are having serious impacts on the natural environment.

Source 2 These trees in Wales have been killed by a combination of acid rain and other pollution. Over the last 30 years, emissions from nearby steel manufacturing plants and oil refineries have brought about increased levels of acid rain resulting in this environmental change.

Check your learning 2.1

Remember and understand

1 How have human activities impacted the land?

2 Why have human changes to the environment increased over the last 200 years?

Apply and analyse

3 Examine the image of Glen Canyon Dam. List all of the human impacts on this environment that you can see.

4 Sources 1 and 3 show the effects of environmental changes in desert areas. What factors do you think make these areas particularly vulnerable to the effects of human activities?

Evaluate and create

5 Make a list of all of the environmental changes mentioned on these pages.

- **a** Rank them from the one you know the most about to the one you know the least about.
- **b** For the three at the bottom of your list, write one question you would like answered before you have finished this unit.
- **c** Share your three questions with your classmates.

2.2 Degrading the land

The loss of productivity and decline in fertility of land-based environments as a result of human activities is referred to as land degradation. Land degradation currently affects about one-quarter of the world's total land area and about 38 per cent of the world's farmed areas. About 1.5 billion people, including many Australians, are directly affected by land degradation. It is also contributing to climate change, as cleared, degraded land stores much less carbon than natural land cover such as rainforest. The three main types of land degradation are soil degradation, soil erosion and ecosystem decline.

Soil degradation

Soil degradation refers to the loss of fertility of the soil, often due to a chemical change. Soil can degrade by becoming compacted by large machinery and hard-hooved animals such as cattle and sheep, or becoming acidic due to a build-up of fertiliser or a loss of soil nutrients caused by farming the land too intensively. One of the greatest problems for Australia is the build-up of salt in the topsoil (called **salinity**).

Soil erosion

Soil **erosion** is when soil is gradually worn away by natural phenomena such as rivers, rain, waves, glaciers and the wind. Human activities, particularly clearing trees for farming, accelerate erosion in many places. Cleared land is more vulnerable to wind erosion, gully erosion (water scouring away the land) and sheet erosion (the loss of topsoil over a large area). Much of Australia is at risk from one or more of these types of erosion (see Source 3).

Ecosystem decline

As well as soils, the natural **ecosystems** of an area, such as forests and streams, can become degraded. This may be through a loss of vegetation, the invasion of alien plant and animal pests or a decline in the quality of streams and rivers. When coupled with a decline in soil quality, a degradation of ecosystems can lead to **desertification**, particularly in areas close to existing deserts.

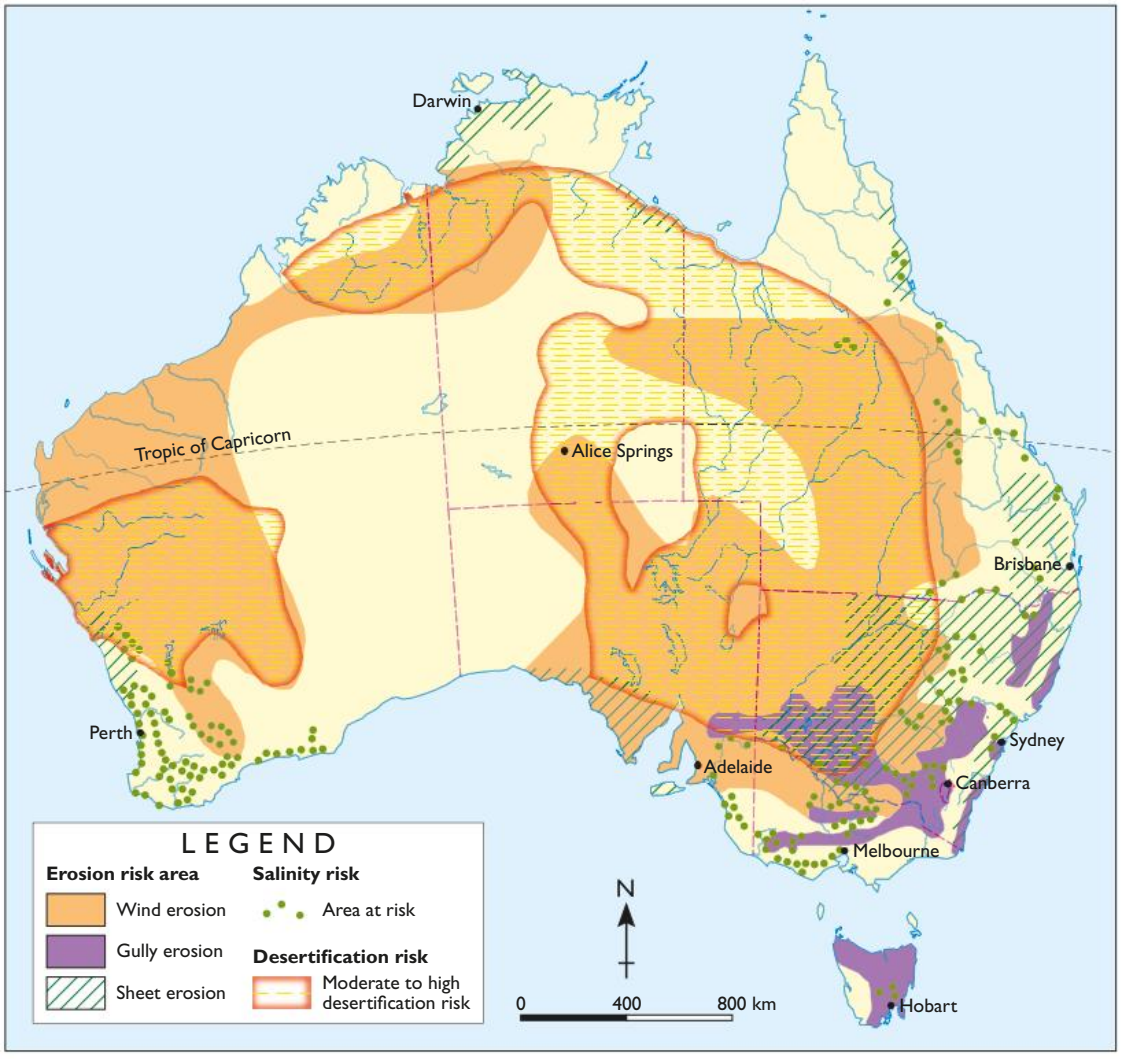

Source 1 Soil can be carried on the wind for thousands of kilometres. This dust storm which blanketed Sydney, Canberra and Brisbane in 2009 originated near Kati Thanda (Lake Eyre) in South Australia. Dust was carried as far as northern New Zealand.

Source 2 In some arid and semi-arid areas of Australia, cattle grazing has led to a breakdown in soil structure and the loss of plants. This can lead to areas such as this becoming desertified.

AUSTRALIA: DISTRIBUTION OF LAND DEGRADATION

Source 3 Source: *Oxford Atlas*

Check your learning 2.2

Remember and understand

1 What is land degradation?

2 Why is land degradation a concern for many people in Australia and around the world?

Apply and analyse

3 Conduct research to compare the footprint of a cow with that of a kangaroo. What does this tell you about the relative impacts of introduced and native species on Australia's soils?

4 Use an atlas to estimate the distance covered by the 2009 dust storm shown in Source 1.

5 Examine Source 3.

- **a** Describe the areas of Australia at risk from gully erosion. Use the names of states and specific places in your description. You may need to refer to a more detailed map of Australia to assist you.
- **b** Which areas are most at risk from salinity?
- **c** List those areas that are at risk from erosion, salinity and desertification.
- **d** Use the SHEEPT method to list the reasons why some places are more at risk of land degradation than others. For more information on the SHEEPT method, refer to page 28 of 'The geography toolkit'.

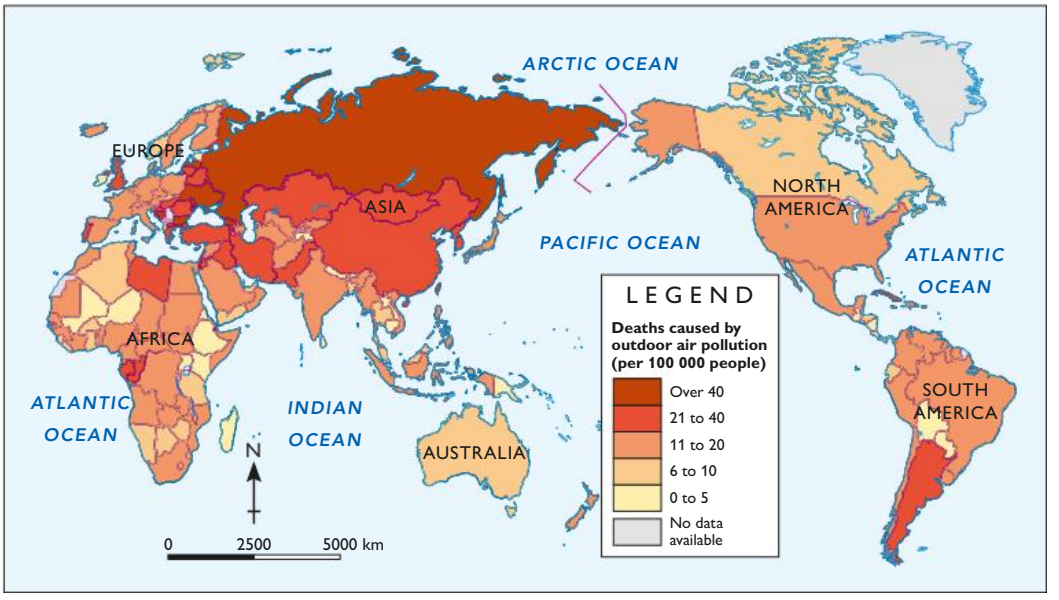

Evaluate and create

6 Examine Source 2, showing a degraded environment in Australia. Discuss in a small group some steps that could be taken to restore this land. Use these steps to develop and present an action plan. This should include an annotated copy or field sketch of Source 2.

2.3 Degrading the atmosphere

The layer of gases that surrounds the Earth – known as the atmosphere – is being degraded in many ways. Pollutants such as carbon, nitrogen and sulphur released into the atmosphere from factories and transport are disturbing the natural balance of gases that form the atmosphere. This change in the composition of the atmosphere, together with a reduction in forest cover, is responsible for an increase in global temperatures and changes in our climate. We will examine the effects of climate change later in this chapter, but to begin we will examine some of the health impacts that increases in air pollution are having on the planet and how these are affected by changes in the **ozone layer**, a region of the atmosphere that protects the Earth from the Sun's ultraviolet radiation.

WORLD: ANNUAL DEATHS CAUSED BY OUTDOOR AIR POLLUTION

Source 1

Source: Oxford University Press

Air pollution

Air pollution is considered to be the world's worst environmental health risk today. Air pollution leads to increased rates of asthma, lung and heart disease. It is estimated that more than 3.5 million people around the world die each year from outdoor air pollution (see Source 1). This is largely the result of breathing air with high concentrations of fine particles from traffic exhaust, factory and power plant emissions, and fires. Another 4.3 million deaths each year are the result of indoor air pollution. These are largely due to fuels such as coal and dried animal waste that are burned indoors for heating and cooking (mainly in developing countries).

As tougher laws and restrictions governing emissions from factories and vehicles are introduced in countries across the developed world, outdoor air quality is slowly improving. However, in many countries across the developing world, air quality is actually getting worse. This is particularly true of countries in Asia and Africa. In these countries, the number of deaths each year from air pollution is increasing. This is due mainly to the rapid growth and expansion of cities. As these cities grow, the demand for cheap energy increases. Currently, the cheapest and most reliable source of energy in these countries comes from burning fossil fuels such as coal and oil. Measurements of air quality show that 98 per cent of cities in the developing world have rates of air pollution that exceed safe guidelines.

India – an air pollution hotspot

India has some of the highest levels of air pollution on the planet. In a recent report published by the World Health Organization (WHO) half of the world's 40 most polluted cities were in India. The list includes the vast cities of Delhi, Jaipur and Lucknow (see Source 2). It is estimated that more than half a million Indians die prematurely from the effects of air pollution each year. Much of this pollution comes from a rapid increase in the number of vehicles clogging India's congested roads. In addition to this, there has been a rapid growth in industry across India. More and more, these factories demand cheap energy and much of this energy comes from coal-fired power plants.

Source 2 Commuters on the streets of India's capital, Delhi, face serious air pollution from vehicle exhaust and emissions from coal-fired power plants. More than half a million Indians die prematurely from the effects of air pollution each year.

In fact, around 70 per cent of India's electricity is generated from burning coal, much of which is imported from overseas. Australia exports about 47 million tonnes of coal to India each year, a figure that is expected to grow in the future as the population grows and demand increases.

A good news story – the recovering ozone layer

Around 10 kilometres above the surface of the Earth sits a concentration of ozone – molecules that contain three atoms of oxygen. This region of the atmosphere is known as the ozone layer. The ozone layer shields the Earth and its inhabitants from much of the Sun's ultraviolet radiation. Exposure to this radiation is linked to increased rates of cancer, especially skin cancer, as well as lower productivity of plants.

The number of ozone molecules in the ozone layer is constantly changing, but in the 1970s scientists recorded a steady decline of ozone (particularly in an area above Antarctica). Known as the ozone hole, this reduction of molecules was linked to the release of chemicals into the atmosphere from aerosol cans and refrigerators. In 1987, an international agreement banned the use of these chemicals in an attempt to stop the ozone hole from increasing in size. In recent years, there are signs that the ozone layer is beginning to recover. It is now expected that it will return to 1980 levels by 2070. The Secretary-General of the United Nations referred to this agreement as 'perhaps the single most successful international agreement to date'.

Check your learning 2.3

Remember and understand

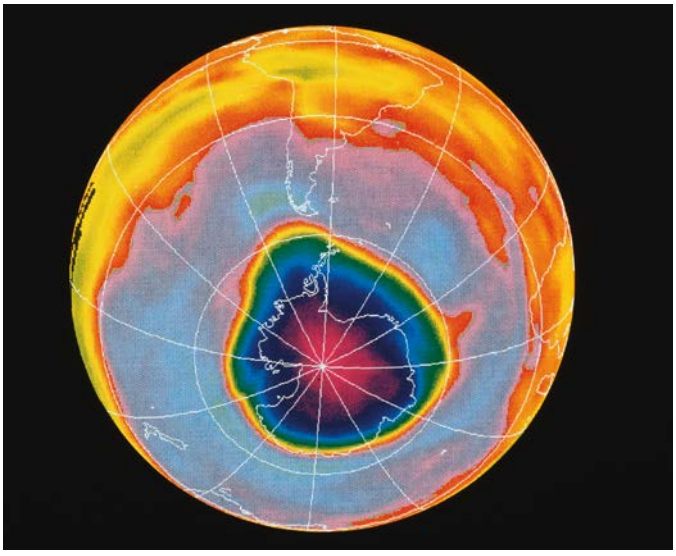

1 What is the ozone layer?
2 Why is the air quality so poor in India?

Apply and analyse

3 Use the geographic concept of interconnection to describe Australia's role in air pollution in India.
4 Air pollution has been described as a 'transnational' problem, meaning that it crosses international borders. Explain why this makes it a difficult problem to solve.
5 Examine Source 1.
   a Which regions have the highest death rates due to air pollution?
   b In which regions do you predict the rates to grow? Give some reasons for your answer.

Evaluate and create

6 Access the real time air quality map at http://aqicn.org/map/ This shows the current pollutant levels for hundreds of cities around the world.
   a Scroll down for the legend. Describe the distribution of the cities that have levels currently greater than 150 AQI (air quality index).
   b What precautions are suggested for people who live in these cities?
   c Describe the AQI in Australian cities.

Source 3 A satellite map showing a severe depletion or 'hole' in the ozone layer over Antarctica on 3 October 1990. The hole appears here as the violet and pink areas covering Antarctica (outlined in white) and beyond.

2.4 Degrading water

Inland waters such as rivers, lakes and wetlands are some of the world's most degraded environments. Human activities have reduced the quality and quantity of clean fresh water in many of these places. Extracting water from rivers to use in homes, factories and farms, and damming rivers for water supply, flood control and hydroelectricity have all affected the health of these inland waters. Pollution from farms and industry sources entering these waters has also caused damage.

People extract large amounts of fresh water from various natural sources. The highest demand for fresh water is for irrigating farms to grow food. In Australia, for example, 70 per cent of the water extracted from rivers and **aquifers** is used in farming. As the world's population and its demand for food and water grows, many of the world's water resources are becoming degraded by having too much water extracted. This has led to shrinking lakes in some regions and increased salinity in the water in others.

Source 1 An irrigation dam near Mahabaleshwar in western India

Source 2 A toxic bloom of blue-green algae caused by excess nutrients from farm fertilisers has built up in a dam in northern California.

Damming the rivers

Of the world's 292 large river systems, two-thirds have been changed by dams and reservoirs. Dams disrupt the flow of water, flooding some areas and stopping water reaching other areas. Damming also disrupts ecosystem services such as the provision of fresh water, fertile soil and food production. The natural interaction between rivers and coastal ecosystems is degraded as fewer nutrients and less water and sediment reach the river mouth and sea.

Pollutants in our water

Water pollution is the contamination of our rivers, lakes, wetlands, estuaries, seas and oceans. This pollution can be the result of human activities near the water such as shipping, fishing and oil drilling, or from activities conducted on land, a long way from the waterways. Land activities such as the use of fertilisers and pesticides in farming, littering, clearing land, creating tips and landfill, processing sewage and industrial activities can all cause pollution of the waterways.

The results of water pollution are devastating. People lose access to safe, clean, drinking water. Fish and other animals in the water are killed or slowly decline in health and population numbers and an important food source is lost. In extreme cases, water pollution can contribute to widespread food shortages and famine.

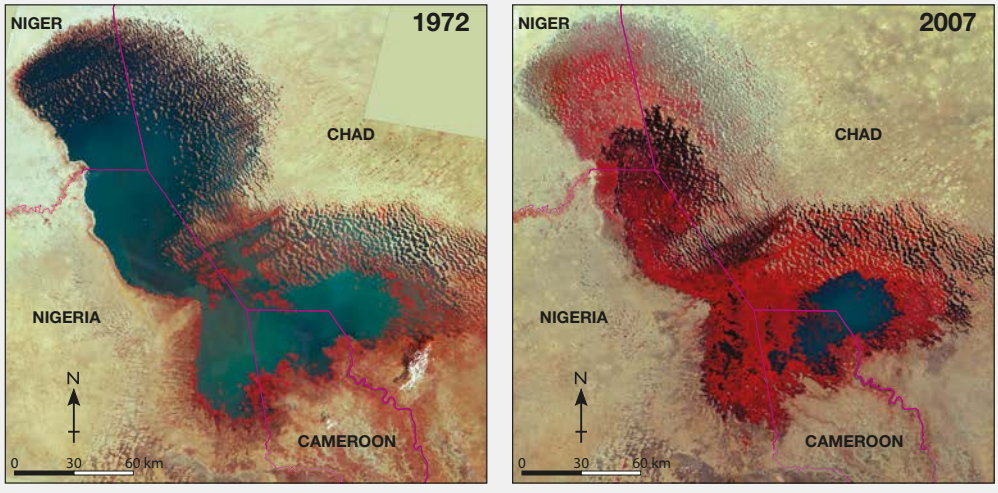

key**concept:** Sustainability

Africa's disappearing lake

Lake Chad was once one of Africa's largest and most important freshwater lakes. It provided water to millions of people across four countries and supported a great diversity of wildlife. In 1963, it was the world's sixth largest lake with a total surface area of 23 000 square kilometres. By 2001, this had declined by almost 75 per cent to a paltry 300 square kilometres. This decline is due to a combination of factors including:

- increasing population in the region (e.g. the population of all four affected countries is expected to double by 2050 adding another 300 million people to the region.)
- increasing demand for water to irrigate crops
- drying of the climate due to a decrease in the number of large rainfall events such as monsoonal storms
- extremely high rates of evaporation due to the climate and the shallowness of the lake
- increasing desertification in the Lake Chad catchment area.

For more information on the key concept of sustainability, refer to page 10 of 'The geography toolkit'.

Source 3
Satellite images of Lake Chad in 1972 and 2007

Remember and understand

1 In what ways can building a dam contribute to water degradation downstream?
2 Which human activities contribute to water degradation?

Apply and analyse

3 How do you feel about the scene in Source 2? What has caused water degradation in this river?
4 Use the SHEEPT method to classify the factors responsible for the degradation of fresh water resources around the world. (For more information on the SHEEPT method refer to page 28 of 'The geography toolkit'.)
5 Examine Source 3.
  a Describe the changes in Lake Chad evident in these two satellite images.
  b Do you think that Lake Chad will disappear completely? Give some reasons for your answer.
6 Examine Source 1.
  a Why do you think this dam might have been constructed? Give evidence from the photograph for your answer.
  b How has this dam changed the natural environment?

Evaluate and create

7 Construct a flow diagram to explore the links between the factors responsible for the decline of Lake Chad.
8 What are some of the issues affecting the health of fresh water resources in your region?

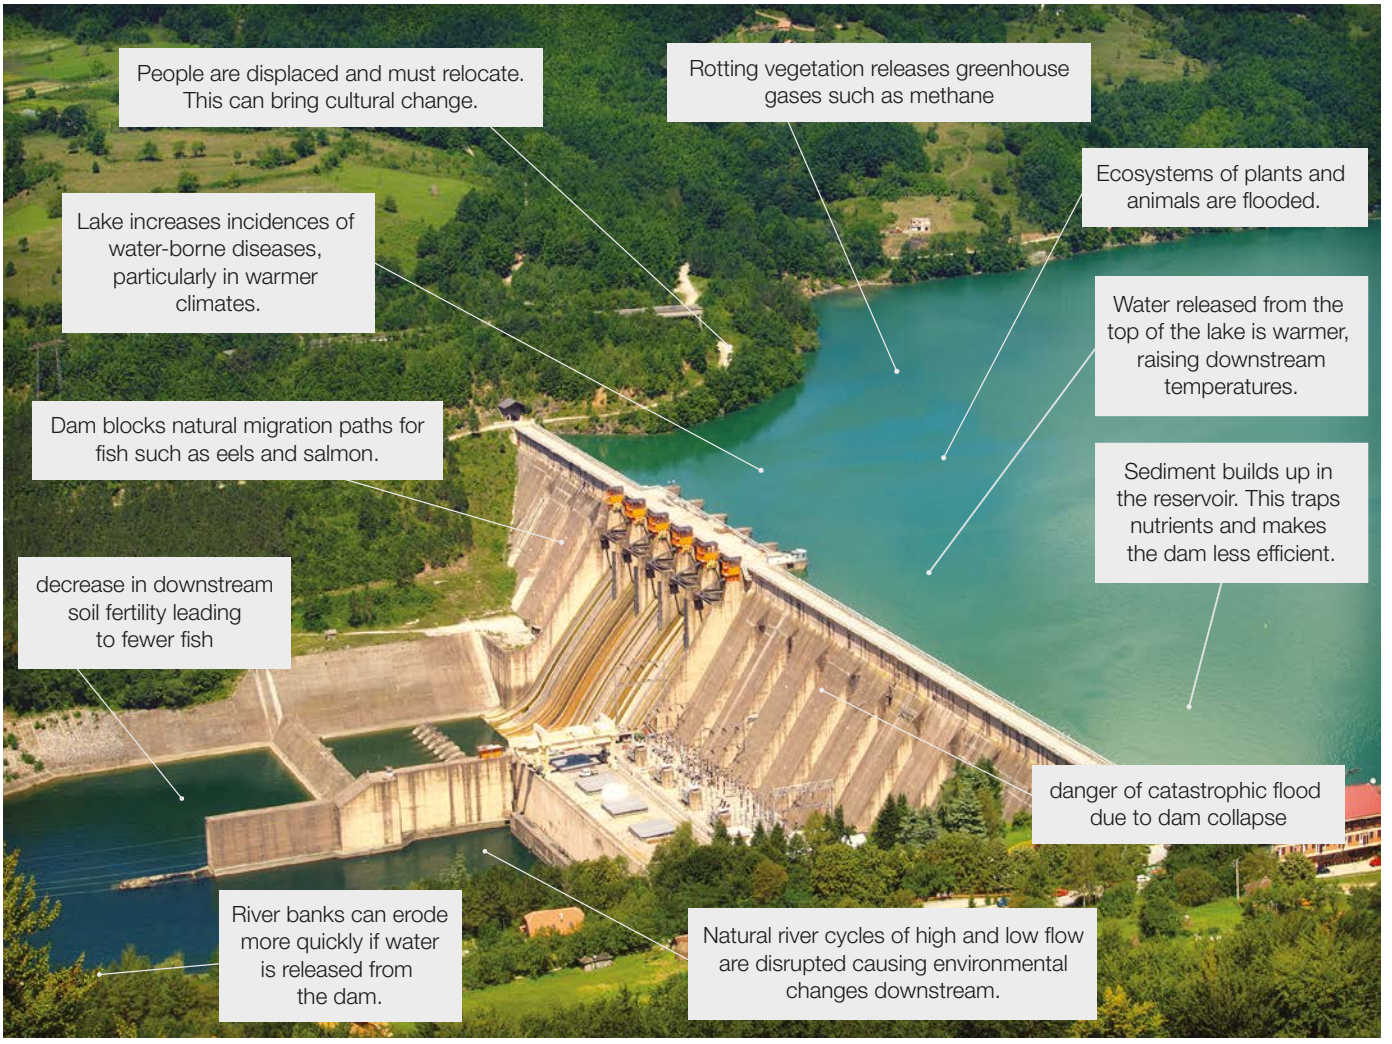

2.5 Damming the rivers

There are many human activities that bring environmental change to streams and rivers but perhaps the most dramatic of these is building a dam across a river. One of the main reasons dams are built is to allow a reservoir of water to build up behind the dam which can then be used for the irrigation of farms, a reliable water supply for towns and cities, flood control and for recreation. The energy of the moving water can also be captured behind the dam, and when released through pipes and turbines inside the dam can be used to generate electricity.

This type of electricity (hydroelectricity) provides a cleaner alternative to other methods of power generation such as coal and oil burning.

As international pressure mounts to reduce carbon emissions, more and more dams are being built across fast-flowing rivers all over the world. Generally speaking, the bigger the dam, the greater the amount of electricity it can generate. Big dams (over 15 metres high) are now considered the most efficient. There are more than 50000 big dams in the world, half of which are in China, who has 1600 more under construction. China is by far the world's leading hydroelectricity generator and is home to the Three Gorges Dam, the largest dam in the world.

While big dams bring many benefits, they can also create problems for the environment. Source 1 shows some of the human and environmental impacts of damming a fast-flowing river.

Source 1 Some of the human and environmental impacts of damming rivers

key**concept:** Sustainability

The world's largest river restoration project

While much of the world seems engaged in a dam-building frenzy, in the north-western United States two large dams are being torn down piece by piece. For nearly 100 years there have been hydroelectricity dams on the Elwha River in Washington State, but in 2011 excavators mounted on barges began dismantling them.

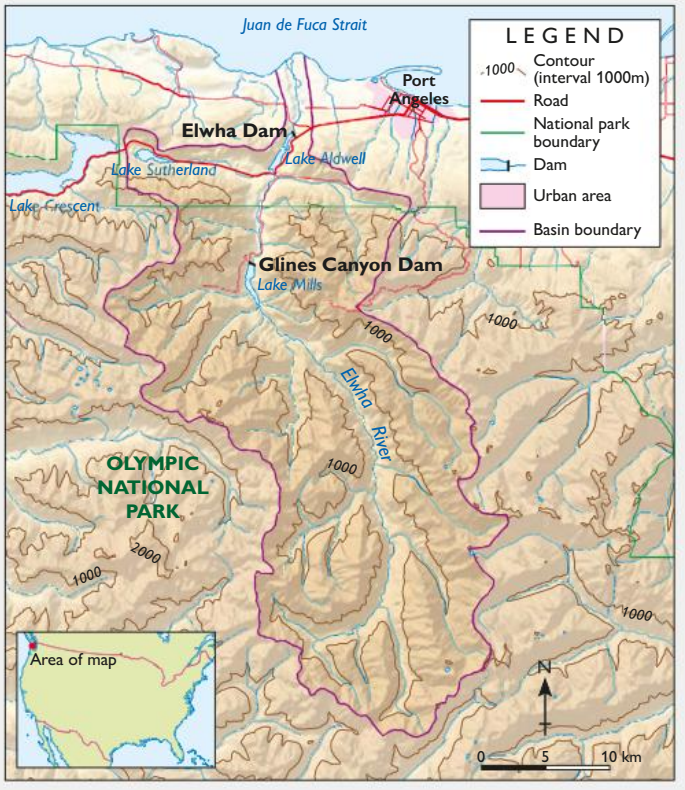

Most of the Elwha River runs through the Olympic National Park. Studies on the impact of the dams found that natural ecosystems had significantly declined in quality and capacity as a result of the dams. The greatest impact was on the Chinook salmon, whose migration to spawning rivers had been blocked. This resulted in a 70 per cent decrease in spawning sites (where salmon reproduce). This then impacted on river fertility and reduced the amount of food available to wildlife in the national park such as bears. By removing the dams, it is hoped that the natural ecosystems will be restored.

Source 3 The 64-metre-high Glines Canyon dam partially removed in March, 2012.

For more information on the key concept of sustainability, refer to page 10 of 'The geography toolkit'.

ELWHA RIVER: FORMER LOCATIONS OF THE ELWHA RIVER DAM AND THE GLINES CANYON DAM

Check your learning 2.5

Remember and understand

1 Why are many fast-flowing rivers dammed?

2 Why has the Glines Canyon dam been removed?

Apply and analyse

3 Most of the world's big dams are in China. Brainstorm the factors that may be responsible for this. Classify them using the SHEEPT method. (For more information on the SHEEPT method, refer to page 28 of 'The geography toolkit'.)

4 Examine Source 2.

- **a** Describe the location of the dams on the Elwha River.
- **b** Estimate the length of this river and the area of its catchment.
- **c** Why is it important to consider the whole catchment rather than just the river when analysing the impact of a dam?

Evaluate and create

5 Source 1 shows some of the negative impacts of dams. Create a similar diagram with a dam's potential positive impacts on people and the environment.

6 Debate this topic: 'Despite their negative impacts, dams are beneficial to people and the environment.'

2.6 Pollutants in our water

More than one billion people around the world today lack access to safe drinking water. This is due to many factors, one of which is the contamination of freshwater sources such as rivers, streams and groundwater with harmful substances. As well as making water unsafe to drink, pollutants reduce the ability of the environment to provide other ecosystem services such as food supply, pest control and recreation.

Pollutants that enter our waters can be classified as either physical, chemical or biological.

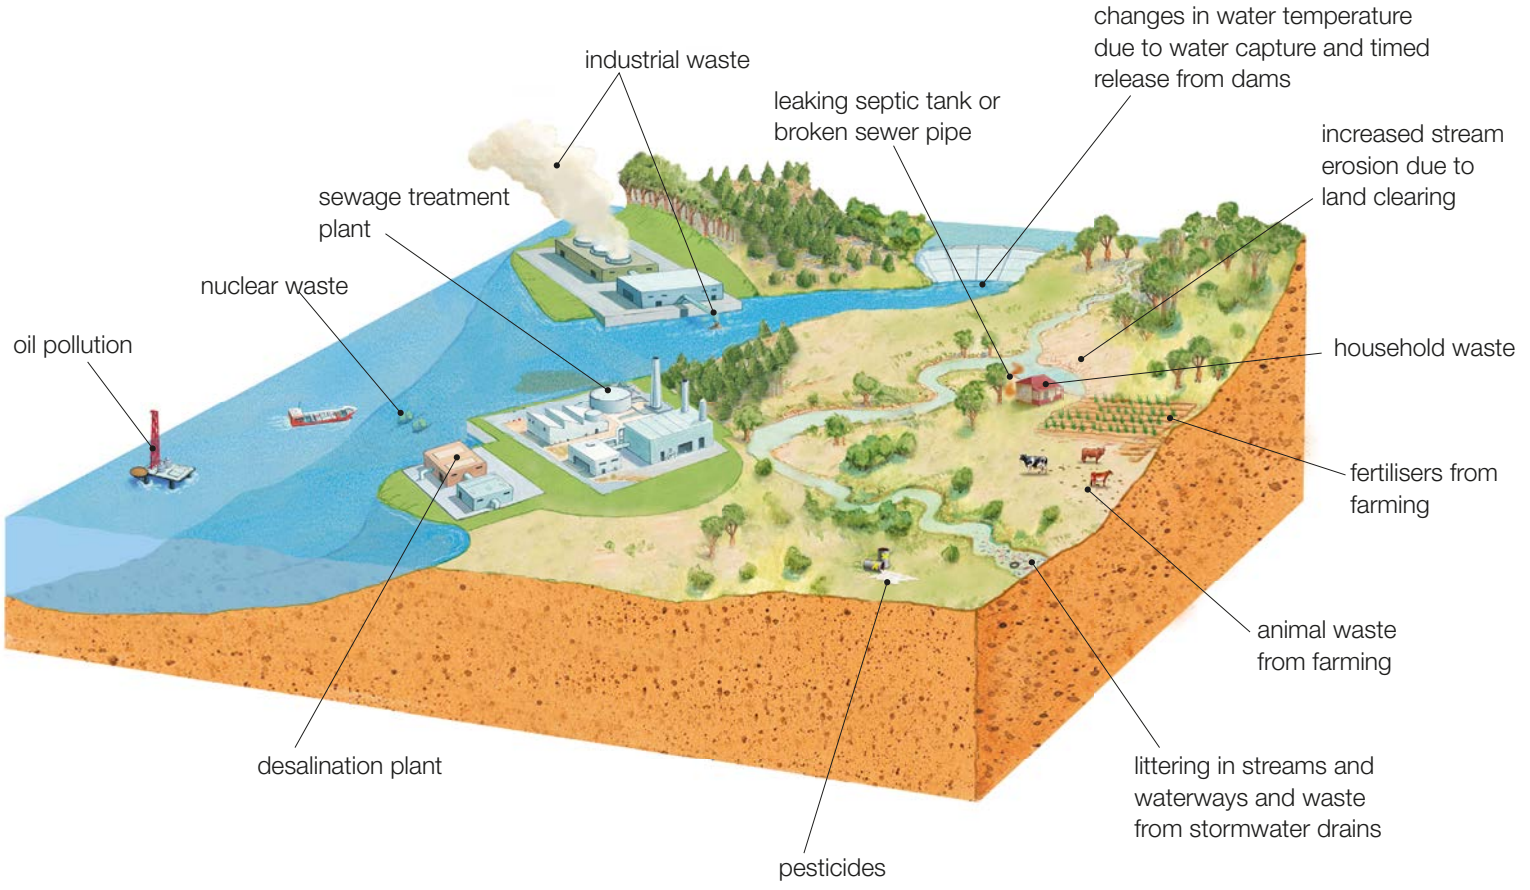

Physical pollutants

Physical pollutants include particles of soil eroded from the landscape and washed into the waterways and any litter such as plastic bags, cigarette butts, shopping trolleys and tyres. It is estimated, for example, that more than 7 billion cigarette butts are littered in Australia each year. Many of these end up washed into drains and carried to streams and coasts where they release chemicals and present a danger to marine life and seabirds.

Soil washing into the waterways is a major source of pollution. These particles of soil can make water cloudy and prevent sunlight entering the water, affecting the plants and animals. When the sediment settles, it can smother small animals and plants living in the water. These sediment particles may also have other substances bound to them such as chemicals and bacteria that can cause pollution.

Chemical pollutants

Chemical pollutants include heavy metals, oils, pesticides, industrial chemicals and salt. When the concentration of chemicals in waterways reaches

Source 1 Major sources of water pollution

levels that are above natural levels it causes pollution. For example, too much of a naturally occurring plant nutrient changes the chemical balance of water causing excessive plant and algae growth.

Biological pollutants

Biological pollutants include bacteria, parasites and invasive plants and animals. Biological pollutants come from a range of sources including sewage treatment plants, farms, factories and storm water. They can cause harm to other plants and animals in the water, or cause harm to people who drink the water. Bacterial and parasitical pollution such as giardia in the water is usually spread by human and animal waste entering waterways, causing illness.

key**concept:** Place

The Ganges River

One of the world's most polluted rivers is the Ganges River of India. An estimated 2900 million litres of sewage is emptied into the river every day, creating a toxic river. In addition, the river is used to dispose of medical waste, dead bodies and waste from tanneries (where leather is made from animal skins) and other factories. A count of harmful bacteria in the river found levels 100 times higher than those considered safe for human use. Millions of people rely on the water of the Ganges for drinking, bathing and cleaning, as well as for its **spiritual** significance.

For more information on the key concept of place, refer to page 6 of 'The geography toolkit'.

Source 2 Around 2 million people a day bathe in the Ganges River, one of the world's most polluted rivers.

Source 3 An estimated 100 million tonnes of mining waste was discharged into the Queen River in Tasmania between 1893 and 1995, giving it the reputation as Australia's most polluted river.

Check your learning 2.6

Remember and understand

1 What are the three main types of water pollution?
2 Which of these is the main source of pollutants in the Ganges River?

Apply and analyse

3 Examine Source 1, showing some of main sources of water pollution. Classify each of these as physical, chemical or biological.
4 As well as water pollution, what other environmental impacts of mining can you identify in Source 3, showing the Queen River valley? How might these also contribute to water pollution?
5 There have been several government attempts to reduce pollution in the Ganges River but these have been largely ineffective. Discuss some possible reasons for this with a partner and then with your class.

Evaluate and create

6 The United Nations considers these 10 rivers to be the most 'at risk': Salween-Nu, Danube, La Plata, Rio Grande, Ganges, Indus, Nile, Murray–Darling, Mekong and Yangtze.
   a Locate each of these rivers on a world map and describe their distribution.
   b Select one of these rivers and research the problems it faces.
   c Present your findings to the class.

2A rich task

Return to Eden

The region at the **confluence** of the Tigris and Euphrates Rivers in Iraq once supported one of the world's great wetlands – the area where farming was first developed as well as the location of the world's first towns. For this reason, many thought of the area as the Garden of Eden. The wetlands once covered 20 000 square kilometres and supported complex communities of plants, animals, birds and people.

Between the 1970s and 2002, however, the area of the marshes shrunk by more than 90 per cent and the only major marsh that survived was the Al Hawizeh Marshes sitting on the Iraq and Iran borders. This was a result of new irrigation dams that drew water from the rivers upstream to support further agriculture. Much of the marshland became dry and the ecosystems collapsed. The numbers of migratory birds declined dramatically and the local people were forced to move to the cities.

Since 2003 many of the drainage structures have been dismantled and the marshes allowed to reflood. By the end of 2006, more than half of the region had been reflooded and much of the original vegetation had recovered. Farmers are also returning to the area.

skill**drill:** Data and information

Constructing overlay maps from satellite images

One way to show how a place has changed over time is to construct an overlay map of the area. **Overlay maps** allow geographers to show a place at two different times so that they can instantly see any changes that have taken place. To construct an overlay map from two satellite images, follow these steps:

Step 1 Construct a base map of the region using the earlier satellite image. This should be traced rather than drawn freehand to make it as accurate as possible. Draw a rectangle the same size and shape as the satellite image. Add key natural and human features: rivers, canals, towns, and lakes.

Step 2 Add labels to rivers and towns. Add a north arrow, legend and title. Include the date of the image, scale and source.

Step 3 On a plastic sheet or piece of tracing paper construct a map of the same region from a later satellite image. Ensure that the two satellite images you use show the same region at the same scale. This map will sit on top of your base map so line up features such as rivers that have stayed the same.

Step 4 Place the overlay map on top of the base map and use a piece of tape like a hinge along the top to stick them together.

Step 5 Add a title to the overlay map that does not cover the one on the base map. A north arrow, legend, scale and source should not be needed as these are the same as for the base map.

Apply the skill

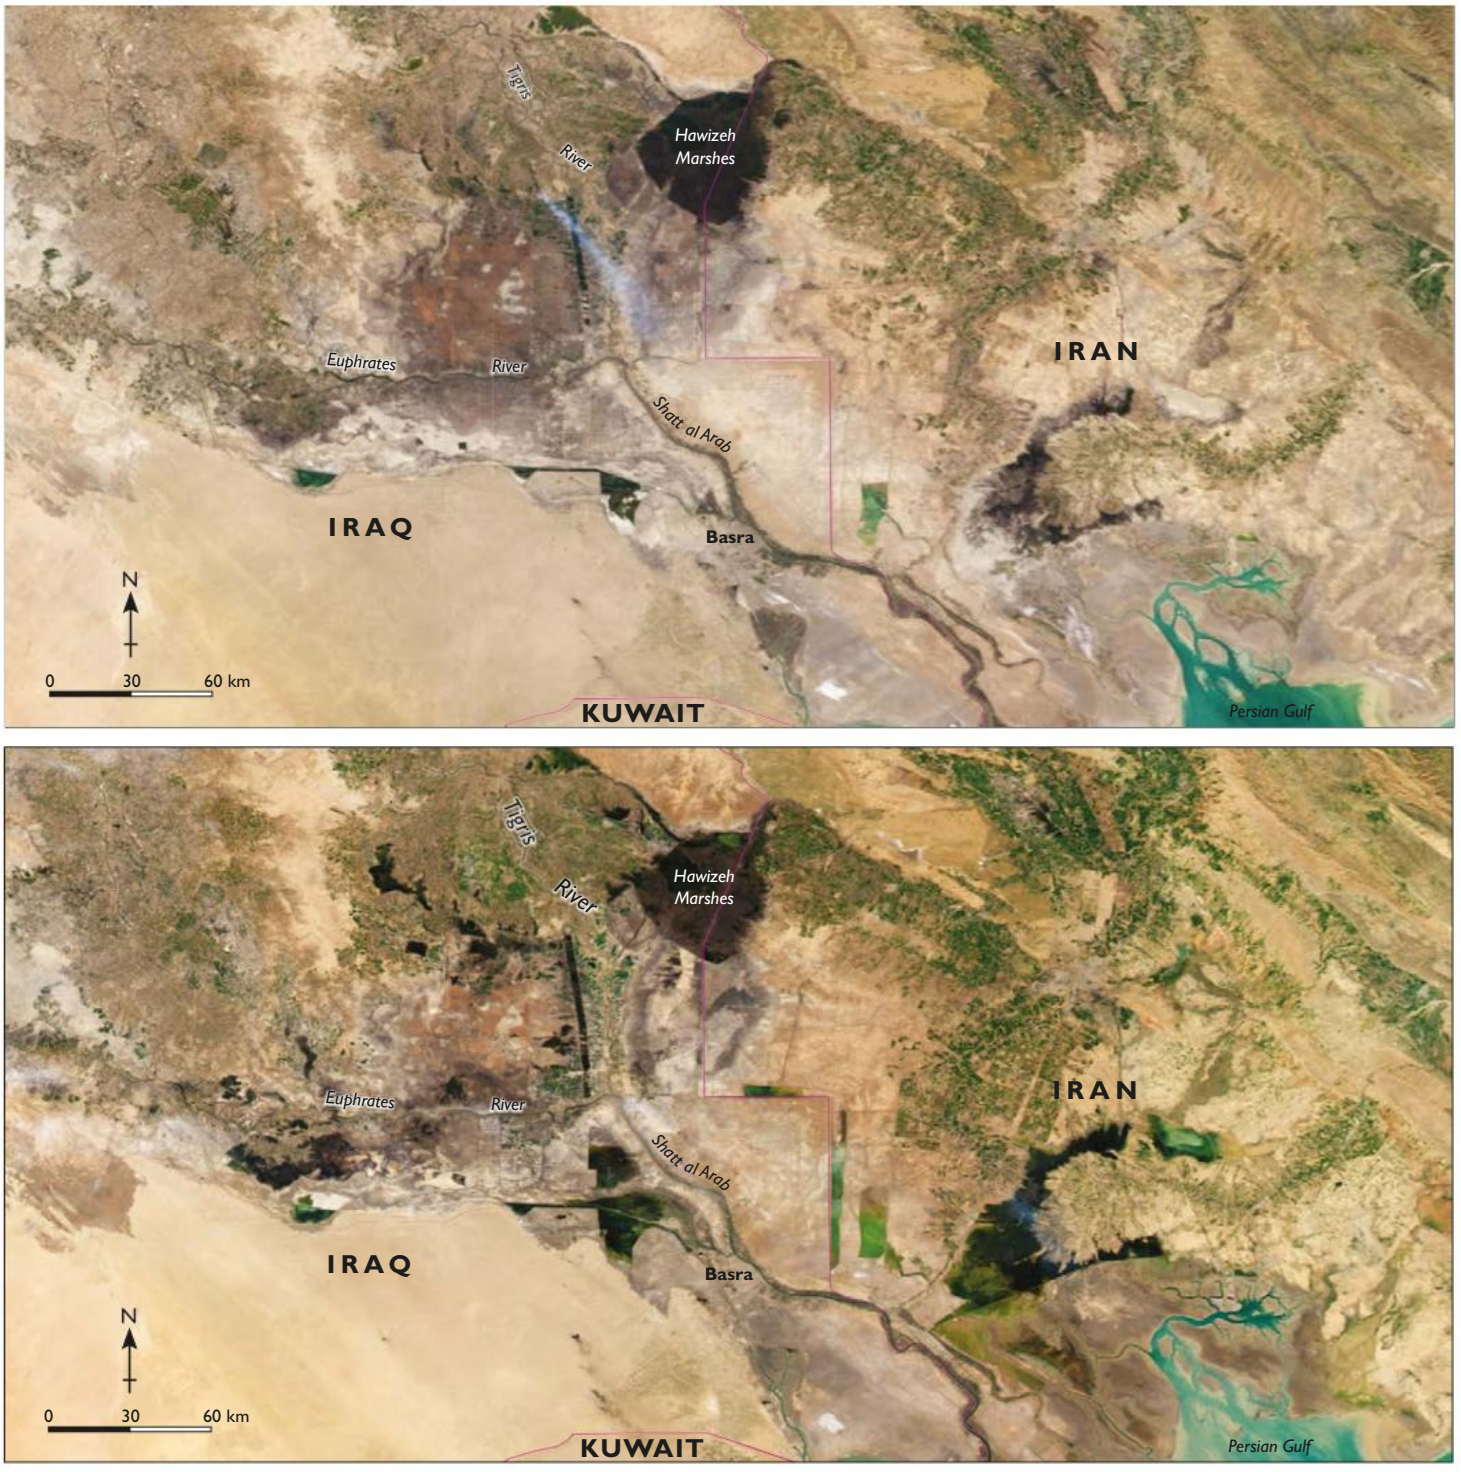

1 Construct an overlay map of the marshes using the 2000 and 2010 satellite images in Source 1.

2 Describe the changes to the rivers and marshes of this region from 2000 to 2010 as shown in your overlay map.

3 Describe the scale of this series of environmental changes. Is this change at the local, regional, national, international or global scale? Give some reasons for your answer.

Extend your understanding

1 The decline and rebirth of the Mesopotamian Marshes is an example of the pressure faced by many of the world's freshwater resources but it is also a beacon of hope as it shows that areas can be restored. Select one of these other examples of water resources under pressure: Aral Sea, tributaries of the Dead Sea, Kara-Bogaz-Gol lagoon, Everglades wetlands, Lake Chad, Lake Balkash, Lake Chapala, Lake Nakuru or the Coorong.

Source 1 Satellite images of the Mesopotamian Marshes from 2000 and 2010 (the green areas show the extent of the marshes)

Work in groups to:

a Research the changes that have occurred over time.

b Describe the causes of these changes.

c Describe any attempts that have been made to restore the natural environment and comment on their effectiveness.

d Present your findings as an Annotated Visual Display (AVD). Use images such as satellite images, maps and aerial photographs in your display.

e Compare your example to those researched by other groups in your class. What are the similarities between them? What is unique about the one you researched?

2.7 Our environment: the key to sustaining life

As far as we know, planet Earth is the only place in the universe capable of supporting human life. This is because the environment here provides organisms such as plants and animals with everything they need to survive: food, light, water and air. Humans, of course, are one of these organisms, and our survival on Earth is largely due to the services provided by the natural environment around us (see Source 1).

Unlike most other organisms, however, humans have the ability to degrade the environment to such an extent that the **ecosystem services** on which we rely become threatened. This is now happening around the world in many different places and in many different ways.

A working environment

The way in which we think about our environment has changed dramatically over the last few decades. Once seen as a bottomless pit of resources providing everything we need, it is now viewed as a fragile system threatened by human actions. The ecosystem services it provides (like clean air, plant pollination and fertile soil) have long been ignored or taken for granted.

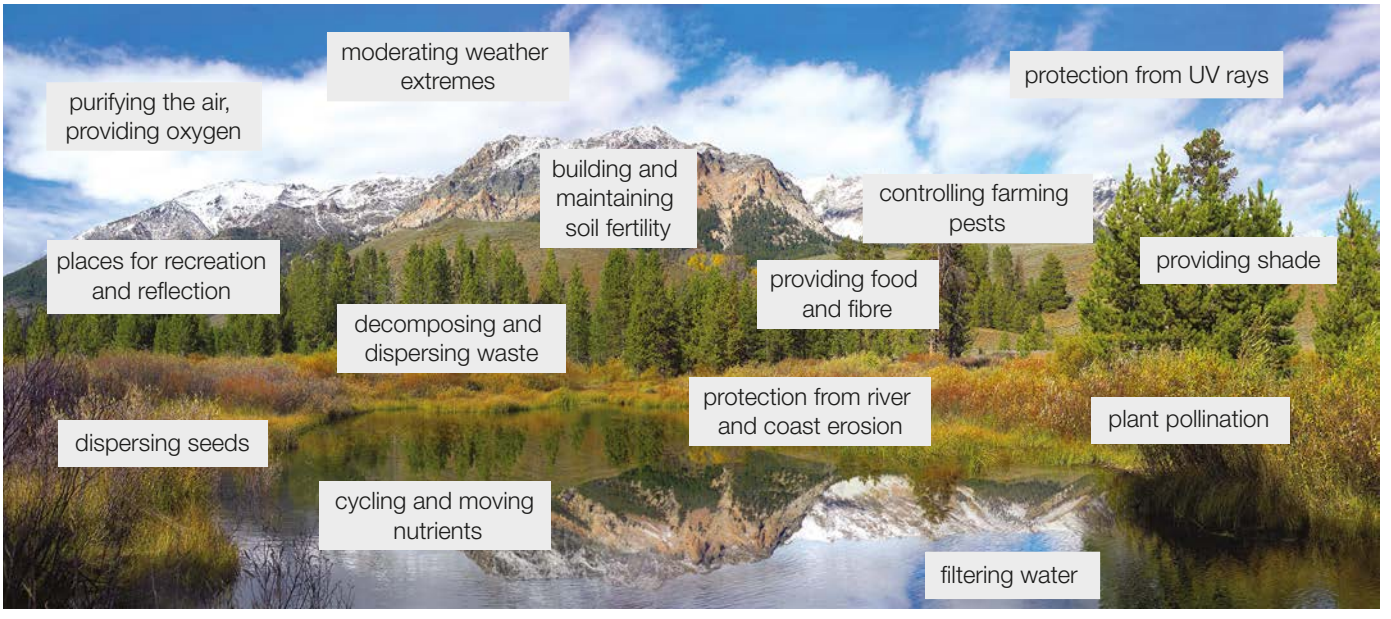

This is partly because, unlike products we can touch such as food, water and timber, humans have been unable to put a monetary value on these ecosystem services. However, as the environment becomes degraded, the true value of these services is beginning to be recognised.

The four S's of ecosystem services

Ecosystem services can be classified according to the products they provide and the functions they perform. There are four main classifications: **sources**, **sinks**, **services** and **spirituality**.

Sources

Sources (also called provisioning services) are those natural products that can be used or converted by humans for our use. For example, mineral deposits such as coal which we turn into fuel, iron ore which we use in manufacturing, timber from natural forests, and food sources – from plant crops to deep sea fish.

Source 1 Some of the ecosystem services provided by the environment

Sinks

Sinks (also called regulating services) are those processes in the natural environment that absorb our waste. For example, micro-organisms in oceans break down oil spills. In a similar way, bacteria in the soil breaks down human waste.

Services

Services (also called supporting services) are things that are done for us by the natural environment that don't produce consumable resources. For example, wetlands filter water and slow floodwaters. Forests absorb carbon dioxide and produce oxygen.

Spirituality

Spirituality (also called cultural services) refers to the personal relationships that human beings have with the environment. For some, this is a deep connection to the land formed over many generations (such as the connection that Indigenous Australians have with their ancestral lands). For others, it is the experience of spending time in the natural environment and the sense of wellbeing that this brings. For example, people taking part in activities such as surfing and bushwalking often feel a deep connection with the environment.

Check your learning 2.7

Remember and understand

1 What are ecosystem services?
2 Why do we often take them for granted?

Apply and analyse

3 Classify each of the ecosystem services shown in Source 1 as source, sink, service or spirituality.
4 Can you think of one more example of each?
5 Examine the image of the Australian Alps (Source 2) and give an example of a source, sink, service and spirituality function of this environment.

Evaluate and create

6 Which of the ecosystem services shown in Source 1 do you consider to be the most valuable to humans? Justify your choice.
7 Which ecosystem service do you think is most threatened by human activities? What would change if this service could no longer be provided by the environment?
8 The designers of Biosphere 2 attempted to provide all of the ecosystem services shown in Source 1. Conduct some research to find out which services they were able to provide easily and which were the most difficult to provide.

Source 2 This rock formation is known as The Cathedral. It is located in Mt Buffalo National Park in Victoria. Mt Buffalo is part of a mountainous region of south-east Australia known as the Australian Alps. The traditional owners of these parts of Australia – such as the Walgal and Ngarigo people – have a deep spiritual connection to the land.

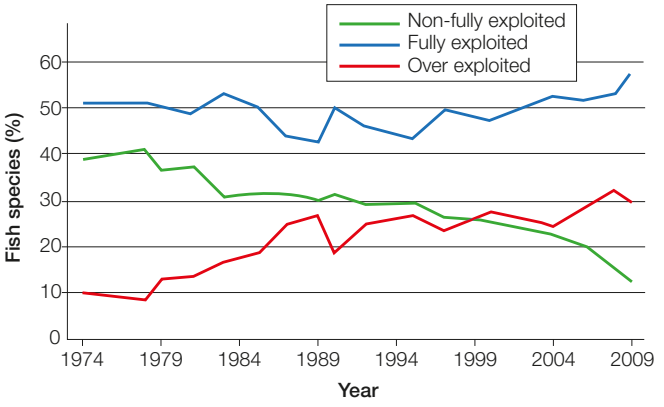

2.8 Challenges to sustainability

Virtually all human activities impact on the natural environment in some way, but humans can reduce these impacts by using the Earth's resources sustainably. The concept of **sustainability** relates to the ongoing capacity of the environment to support the lives of all living things into the future. The sustainable use of resources such as **fossil fuels**, forests and oceans is about carefully managing these resources so that they meet the needs of today without compromising the ability of future generations to do the same – put simply, it is about using the Earth's resources at levels that allow the planet to replace or replenish them naturally. This is a particularly important concept when we consider our use of natural resources that supply us with food and water, such as forests, rivers, the oceans and farmland. If resources are used sustainably, the quality of the environment is maintained and the resources will continue to provide for future generations.

Case study: the fishing industry and world fish production

Fish are a vital food resource, providing over 15 per cent of the animal protein eaten each day by three billion people. Currently, about 540 million people are employed in the fishing (fish catching) or aquaculture (fish farming) industries.

Many of the world's fish species, however, have been fished beyond sustainable levels and their numbers are now in serious decline (see Source 1). More than half of the species investigated by the United Nations are described as being 'fully exploited' and have no potential for increased production in the future. Another third of fish species are described as being 'over exploited'. This means that they are currently being fished at an unsustainable level. However, if effective management plans are put in place now to reduce the numbers taken from the sea, these species may recover.

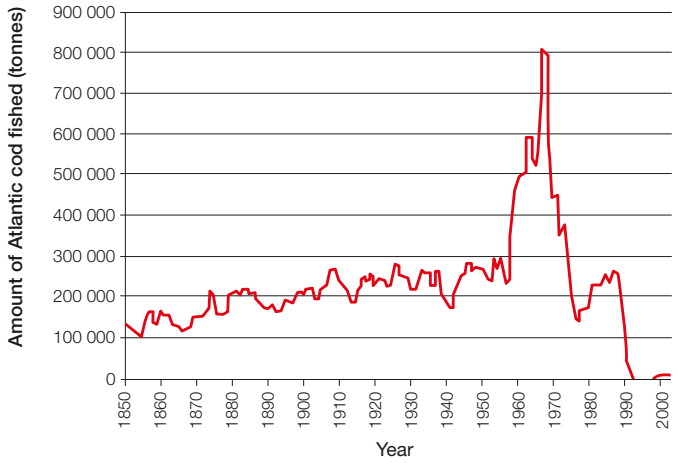

Source 1 Global trends in world marine fish species supplies since 1974 Source: FAO

Source 2 These Bluefin tuna are caught in the Mediterranean Sea then fattened in cages before being shot, frozen and shipped to Japan to become sushi. Remaining stocks of wild tuna are listed as endangered species but little is being done to protect them.

Unsustainable levels of fishing are being driven by the food demands of an increasing world population and by modern fishing techniques. These techniques include using spotter planes and GPS to locate large schools of fish, fishing in deeper waters and dragging huge nets along the ocean floor. Fewer and fewer fish are now surviving to adulthood, because they are being caught and eaten as juveniles, before they have had a chance to breed and produce more fish. This means that the fish being caught are not being replaced.

Source 3 Amount of Atlantic cod fished off the East Coast of Newfoundland, 1850–2000

Source 4 Large-scale fishing practices implemented from the 1960s onwards devastated the population of Atlantic cod in the United States and Canada.

A warning from the past: the disappearing Atlantic cod

The people of the north-western United States and Canada have fished the coastal waters of the Atlantic Ocean for hundreds of years. The most prized fish of their catch is the Atlantic cod which once existed in vast numbers. Up until the mid-1950s, around 300 000 tonnes of Atlantic cod were caught each year in the region's waters. By the middle of the 1960s, large-scale fishing trawlers, using vast nets and mechanical winches, were catching 100 tonnes of Atlantic cod an hour. By 1968, the amount caught peaked at more than 800 000 tonnes before the Atlantic cod population collapsed. Despite attempts to protect the remaining cod in the last few decades, the population has never recovered (see Source 3).

Making fishing sustainable

In more recent times, countries such as Australia, New Zealand and the USA have put in place fisheries management plans to make their fishing industries sustainable and to ensure good numbers of fish stock in the ocean in the future. These plans monitor fish populations and place quotas on the fishing industry, limiting the numbers of fish that can be caught. These management plans have proven very effective at increasing and maintaining fish numbers.

Consumers can also play a part in ensuring the sustainability of fish supplies by choosing to only eat fish that have been farmed or caught in sustainable ways. Organisations such as the Australian Marine Conservation Society provide lists of fish that are safe to eat and fish that you should avoid because they are endangered.

Check your learning 2.8

Remember and understand

1 In your own words, define sustainability.

2 Explain why the history of Atlantic cod fishing is an example of unsustainable resource use.

Apply and analyse

3 Copy and annotate Source 3 to describe the important trends and changes in the numbers of Atlantic cod caught off the coast of Newfoundland, 1850–2000.

Evaluate and create

4 Aquaculture is seen by many as the best way of providing fish for human consumption in the future. Research this booming industry. Do you see this as a sustainable alternative to traditional fishing?

Construct your own line graph to explore global trends in fish supplies into the future.

- **a** Draw up a set of axes: the vertical axis (*y*-axis) should show the percentage of fish species from 0 to 100 per cent. The horizontal axis (*x*-axis) should show the year from 1974 to 2050.
- **b** Copy the line showing fish species that are 'over exploited' from Source 1 onto your graph.
- **c** Based on the trend from 1974–2009, continue this line in a different colour to show the likely trend until 2050.
- **d** Describe the trend shown on your completed graph. If your prediction turns out to be true, what will this mean for the fishing industry and consumers around the world?

2.9 Loss of biodiversity

Biodiversity refers to the variety of living organisms on the planet. Biodiversity is measured by the number of species present in a particular ecosystem or region. The Earth's biodiversity is currently under threat, decreasing at a rate that rivals the mass **extinction** of the dinosaurs. It is difficult to give an exact figure on the number of species reaching extinction each year but it has been estimated at between 17 000 and 100 000 species annually. The world's most famous fossil hunter, Dr Richard Leakey, believes that this represents 'a rate comparable with the impact of a giant asteroid slamming into the planet'.

This loss of biodiversity not only impacts the natural environment but also has serious consequences for all human beings on Earth. Ecosystem services such as food, fibre and fresh water supplies, crop pollination by insects and birds, and protection against natural disasters are in decline.

Source 1 Much of the world's land surface is no longer in its natural state. Farmland and cities have replaced areas once covered by forests and grasslands. Farming, as with this beef cattle farm in Brazil, tends to replace hundreds of species with just one. This greatly reduces biodiversity.

What's causing the loss of biodiversity?

This loss of biodiversity is due almost entirely to the impact of just one species – humans. Our use of the Earth's resources and the changes this use brings to the natural environment are pushing many species to extinction. The five main causes of this are:

- habitat change such as deforestation
- over exploitation of resources such as fresh water
- pollution of land, water and air
- the spread of **invasive species**
- **climate change** brought about by human activity.

Species facing extinction

The International Union for the Conservation of Nature (IUCN) is an organisation that assesses the likelihood that species will become extinct. Of the almost 50 000 species they have studied, 36 per cent can be considered threatened with extinction. Birds and amphibians (such as frogs) are particularly under threat (see Source 3).

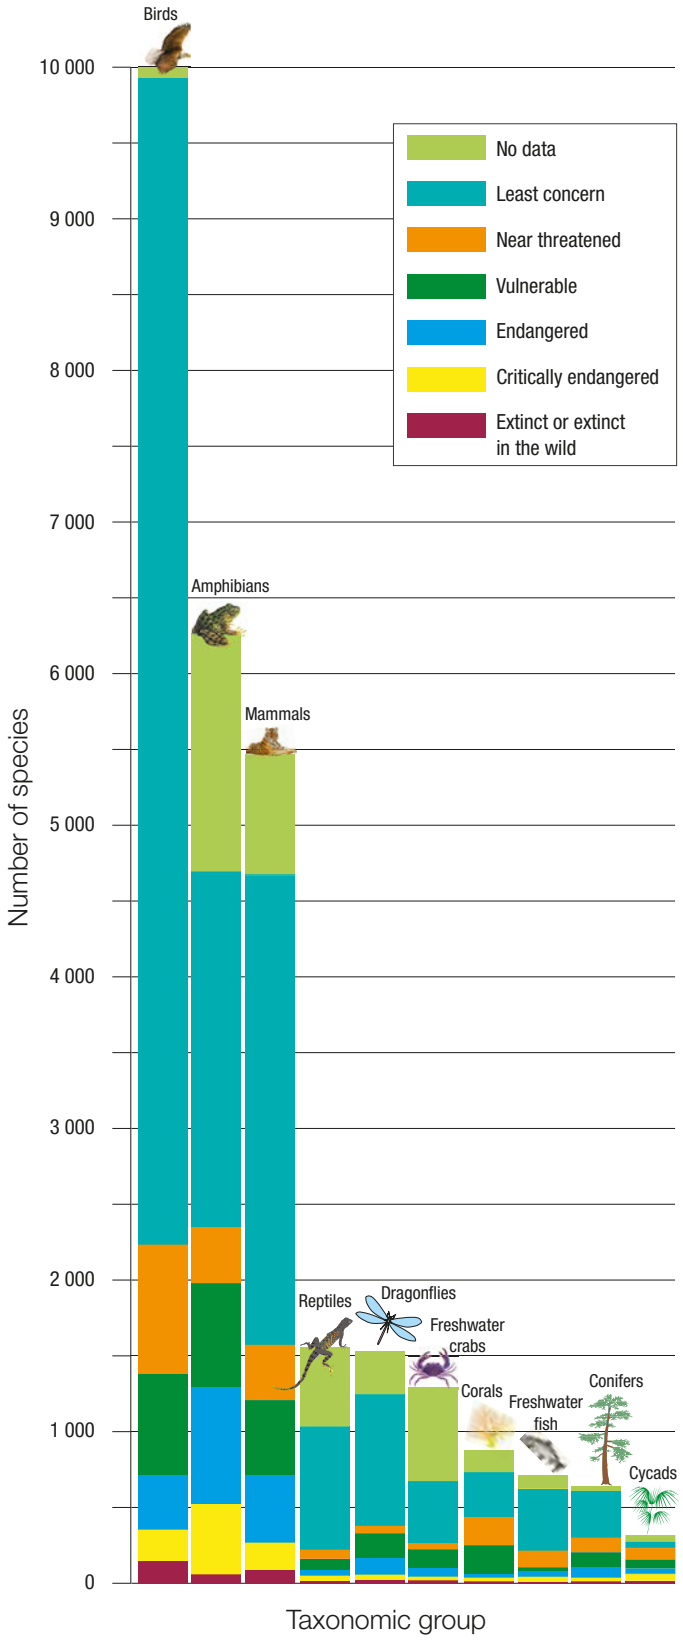

A world without frogs?

The number of frog species in the world is in dramatic decline and many researchers are linking this to climate change. The skin of frogs is particularly thin and permeable, meaning that moisture is able to pass through it easily. With the drier, warmer climate, many frogs are losing more water through their skin than they are taking in.

They are also losing their breeding grounds, as small ponds and water collected in the hollows of trees are drying up and disappearing.

Source 2 The last golden toad was seen in 1989, and like 33 other amphibian species since then, it is now considered extinct.

Source 3 IUCN data on the levels of threat faced by the major life groups (known as taxonomic groups)

The greatest threat, however, is from disease. A parasitic fungus from Africa, known as amphibian chytrid, has spread across the planet in the last few decades. Warmer temperatures associated with climate change have created favourable conditions for the spread of this parasite which was previously held back by cooler night-time temperatures.

After studying the spread of this disease in Central America, a leading researcher in this field stated that 'disease is the bullet killing frogs, but climate change is pulling the trigger.' He found that two-thirds of all of the region's species of harlequin frogs were already extinct from this combination of factors. He and other scientists believe that frogs may be the planet's early warning system on climate change.

Check your learning 2.9

Remember and understand

1 What is biodiversity?

2 Why is biodiversity important?

Apply and analyse

3 How would a person with a human-centred world view (see Source 2 on page 76) feel about the environmental change shown in Source 1?

4 Examine Source 3.

- **a** Which taxonomic group has suffered the most extinctions? Which of the five main causes of biodiversity loss do you think is most responsible for this?
- **b** Use the graph to describe the levels of threat faced by amphibians.
- **c** What is the level of threat facing the world's corals? Find out what ecosystem services would be threatened by a loss of coral species.

Evaluate and create

5 Describe the change in biodiversity shown in Source 1. Which of the five main causes of the loss of biodiversity does this illustrate?

6 Find an image which illustrates another of the causes and give it a suitable title and caption.

Search for the IUCN red list on the Internet. Use this list to investigate Australia's Southern Corroboree Frog. How many of these frogs remain in the wild and what dangers do they face?

2.10 Climate change

Although the world's climate has been changing for millions of years, in more recent times there has been an increase in the concentration of certain gases in the atmosphere. Many of these gases – known as **greenhouse gases** – are found naturally in the environment, but human activities have increased the levels of these gases to a point where they are influencing the global climate. The four main greenhouse gases include:

- carbon dioxide from burning fossil fuels such as coal
- methane from the large-scale farming of livestock
- nitrous oxide from the use of fertilisers
- fluorinated gases from refrigerators and solvents.

Greenhouse gases trap some of the Sun's energy within the atmosphere causing temperatures to rise. This is known as **global warming**.

When temperatures rise, other changes take place in the world's ecosystems. Rainfall patterns change, as some places become drier and others become wetter. Ice melts and less snow falls in both the polar regions. Sea levels rise and droughts, floods, cyclones and bushfires become more severe and more frequent. These, and other changes associated with increased greenhouse gases, are changing the world's ecosystems and the services they provide.

Environmental responses to climate change

Ecosystems develop and flourish under specific environmental conditions. As climate change alters these conditions, the plants and animals within the ecosystems respond in one of four ways:

- They change their basic biology – certain animals may reproduce less often or lay smaller eggs.
- They change the timing of certain events such as flowering – certain plants may flower earlier or later depending on the conditions. This can impact on birds that rely on these plants for food.
- They die out – when a species dies out it can have serious impacts on the entire ecosystem.
- They move – in general, many plants and animals are moving towards the poles and into higher altitudes (Source 2), as temperatures in these places are similar to those in their previous habitats. This affects plants and animals already living in these places.

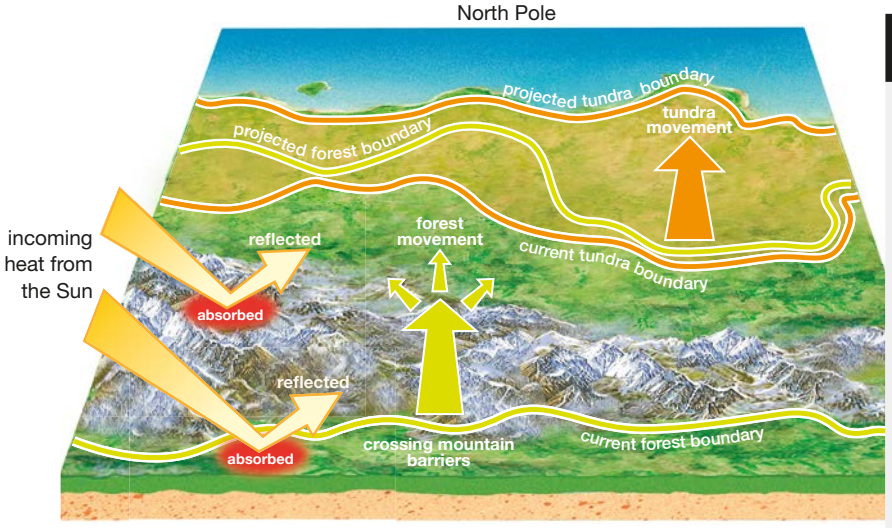

Source 1 Some of the causes of human-induced climate change

Case study: Climate change and the Saami

One of the largest Indigenous groups in the Arctic region is the Saami people of northern Scandinavia. Numbering around 70000 people and living in one of the world's harshest environments, many Saami groups rely on traditional reindeer herding for their livelihood. They migrate north in spring and summer and south in winter to find sufficient food, such as grass and small shrubs, for their herds. A typical herd is made up of several thousand reindeer. Typically, Saami herders will travel hundreds of kilometres a year with their herds.

While it would seem that warmer temperatures would bring better grazing conditions to the frozen Saami lands, the reverse is actually true. Warmer winter temperatures melt the snow, turning it to water. It then refreezes as a layer of ice which the reindeer cannot penetrate to reach the lichen below. This ice is known as *cuokke* to the Saami people and can result in their herds starving to death. The Saami respond by keeping their herds in pens and feeding them hay and straw but this food is expensive and difficult to find. These changing conditions may bring an end to the Saami's nomadic way of life which has existed for thousands of years.

Source 2 The movement of tundra (frozen, treeless land) and forests towards the North Pole in the Arctic. As mountain slopes become forested they absorb more heat from the Sun rather than reflecting it, further increasing temperatures.

Source 3 A Saami man moves his reindeer herd north in spring.

Check your learning 2.10

Remember and understand

1 What are some of the main causes of climate change?

2 How might climate change bring an end to the traditional Saami way of life?

Apply and analyse

3 Discuss with a partner how climate change affects ecosystem services (see Source 1 on page 60). Brainstorm these ideas as a class.

4 Describe the impact of climate change on plants and animals in the Arctic region.

5 Why is more solar radiation absorbed as forests move northwards?

Evaluate and create

6 Construct a flow diagram that shows how plants and animals respond to environmental changes. Add examples of these responses to your diagram.

7 The Saami people are not the only Indigenous people whose way of life is threatened by climate change. Research the impact of climate change on Indigenous people in the Pacific Islands and compare their situation to the Saami.

2.11 Pollution

Pollution is any substance released into the environment that has harmful or poisonous effects. Polluting substances reduce the ability of the natural environment to provide ecosystem services. Pollution is often a side-effect of a process intended to benefit human beings. Pesticides, for example, are designed to kill harmful insects that damage crops but they can also pollute our water and kill beneficial organisms such as bees. The loss of bees then reduces the amount of pollination that occurs, setting off a chain of negative effects in the environment. Here we look at some common forms of air, water and land pollution.

Air pollution

Air pollution is the contamination of the atmosphere through the release of harmful gases and small particles. Air pollution can happen on a variety of scales. Sometimes it is local (for example, a factory releases smoke and gases through a smokestack affecting the surrounding area). In urban environments such as Santiago, however, factories, vehicles, houses and other sources of pollution combine to produce large-scale pollution which affects the air quality right across the city (see Source 1). When this large-scale pollution causes changes to the atmosphere, for example pollutants such as carbon dioxide and methane trapping the Sun's heat in the atmosphere and causing global warming, we have pollution on a global scale.

Source 1 Air pollution in Santiago, Chile, is trapped by the Andes Mountains and can remain over the city for days, even weeks.

Source 2 When an offshore oil platform exploded in the Gulf of Mexico in 2010, it caused one of the largest oil spills in history.

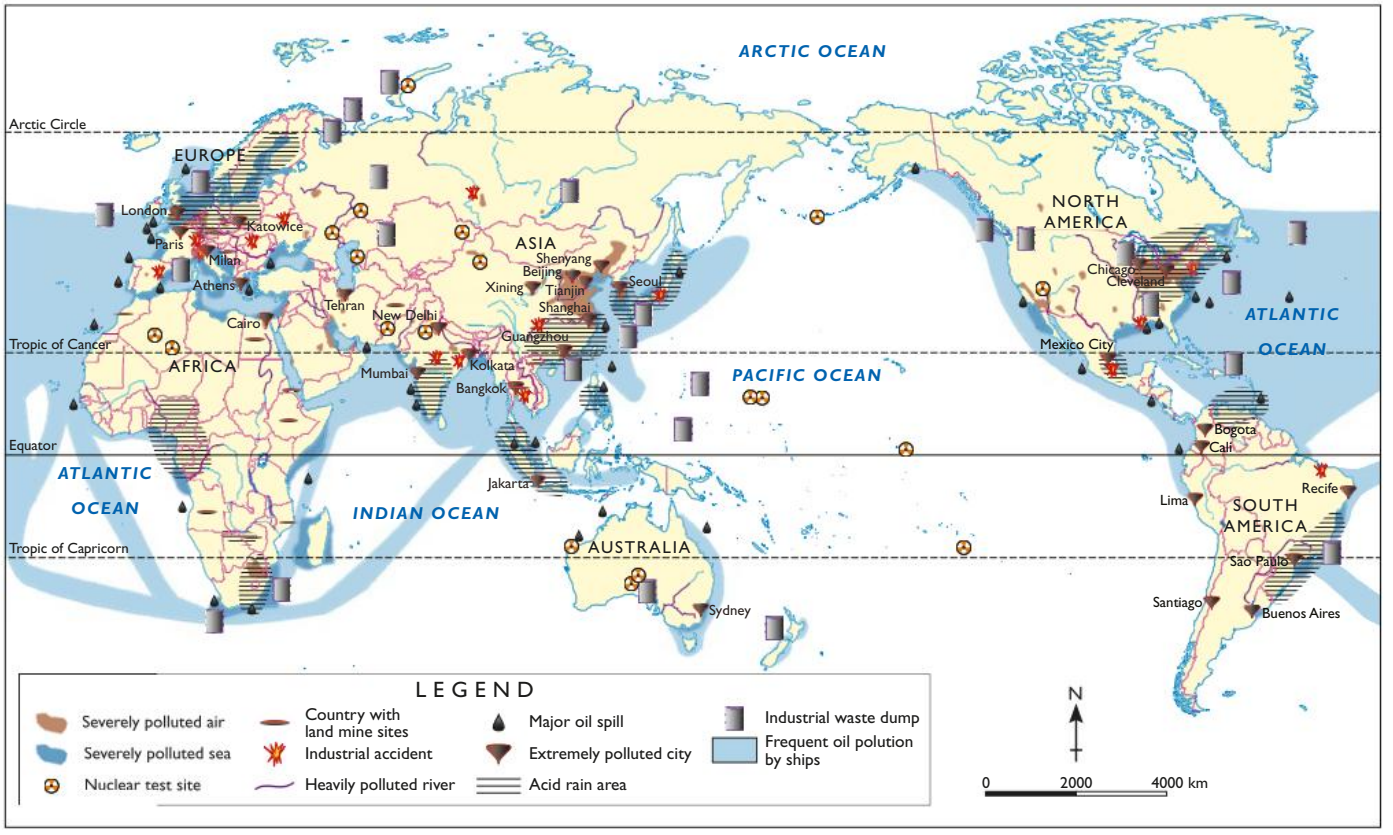

Water pollution

Water pollution is the contamination of rivers, lakes, wetlands, estuaries, seas and oceans through the release of harmful substances. Water pollution can be caused by human activities on or near the water such as shipping and deep-sea oil drilling. Ships, for example, release waste water and oil into the sea causing pollution. Land activities, sometimes a long way from water, can also lead to pollution entering our waterways. These land activities include farming (especially when using fertilisers and pesticides), littering, land clearing, creating tips and **landfill**, processing sewage and industrial activities. Industrial or farming waste released into a river can travel the length of that river and enter waterways, causing water pollution over a widespread area. Likewise, litter washed down stormwater drains during a storm can end up polluting the ocean.

Land pollution

Land pollution is the contamination of areas of land through the release of harmful substances. Soil contamination is often localised, such as at the sites of old petrol stations, mines, sewage treatment facilities or landfill. Soil contamination can also occur on a much larger scale, such as increasing **salinity** (salt levels) in the soil resulting from rising water tables in Australia's Murray–Darling Basin. Land pollution can cause the contamination of groundwater, which is often an important source of drinking water.

WORLD: GLOBAL DISTRIBUTION OF POLLUTION

Source 3

Source: Oxford University Press

Source 4 Landfill can cause soil contamination.

Check your learning 2.11

Remember and understand

1 Define and give examples of the main forms of pollution.

Apply and analyse

2 Examine Source 3.

- **a** Describe the distribution of severe air pollution.
- **b** Use an atlas to list those countries with landmine sites. Are landmines an example of pollution? Why/why not?
- **c** Which countries experience three or more types of pollution? What may be the underlying causes of pollution there?

3 In what ways would the explosion of an offshore oil platform (see Source 2) pollute the environment?

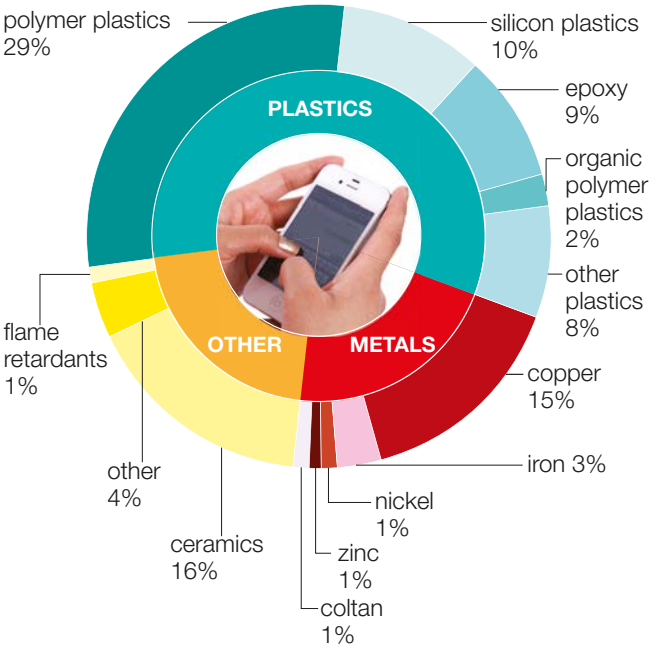

Evaluate and create

4 Source 3 shows acid rain as a form of pollution. Research acid rain and report on its causes, distribution and effects on ecosystem services.

5 Which type of pollution do you consider has the greatest impact on ecosystem services?

2.12 The real cost of your mobile phone

When exploring the ways in which the environment is changing, it is important to look not only at the effects of these changes but also their causes. For example, when investigating declines in fish populations, geographers look for causes such as increases in world population, pollution levels and changing consumption patterns. Similarly, when looking at the environmental changes brought about by industry and mining around the world, geographers need to explore a range of possible causes. One of the main factors driving the growth in mining and production is increased demand for electronic consumer goods such as mobile phones. Current estimates put the number of mobile phone subscribers around the world at about 6 billion. This number has increased significantly over the past decade (see Source 5). The **raw materials** used in the production of mobile phones come from different locations around the world. Dramatic increases in demand for these materials has created serious environmental problems in a number of locations.

Source 1 The raw components of a mobile phone

Plastics

Plastics are a by-product of refining oil. Oil is usually found in the Earth's crust and is accessed by drilling into the crust, either on land or on the seabed. There are significant environmental risks associated with mining and using oil. These range from the potential for oil spills at the mine site to the greenhouse gases produced when oil is used for fuel. Many plastics are hard to dispose of and take thousands of years to break down. Since the 1950s, more than a billion tonnes of plastic has been discarded around the world.

Source 2 This bird has died from eating plastic which it mistook for brightly coloured fish. Thousands of sea birds and other marine animals die each year in this way.

Metals

Copper

Because copper conducts electrical signals, it is used a great deal in electronic devices. Copper is mined in many places around the world. Chile's Escondida copper mine is the world's largest. The mine is essentially two giant pits dug into the desert floor. Waste rock is left in piles called tailings and copper is transported in pipes 180 kilometres to the coast. Like many large mines, Escondida is located in the desert. This creates problems for the mining operators who need water for their mining operation and their workers. A desalination plant is being built on the coast to provide this water. The water will be piped to the mine.

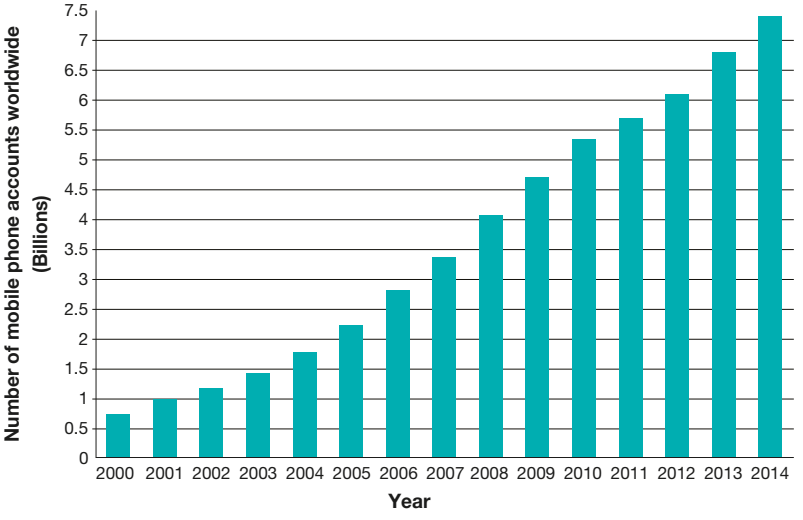

Source 3 The Escondida copper mine in the Chilean desert

Source 4 A coltan mine in the Democratic Republic of the Congo. As well as causing environmental change there is also evidence that profits from coltan mining are being used by armies in the region to fund long-running and bloody conflicts.

Coltan

Coltan is a mineral ore, high in iron, that is used in mobile phones as well as video-game players and some computers. Australia is the world's largest supplier of coltan. The Democratic Republic of the Congo (DRC) in Africa is another large supplier. To reach the coltan in the DRC, miners have stripped away rainforest, including the rainforest in national parks. The roads they cut through the rainforest to reach the mines are then used by local people hunting wild animals for food. One of the animals hunted by locals for meat in the rainforest is the gorilla. The western lowland gorilla is now a critically endangered animal and has all but vanished from the rainforests of the DRC.

Source 5 Growth in the number of mobile phones worldwide

Check your learning 2.12

Remember and understand

1 How does the production and use of plastic change the environment?

2 What is coltan? How has the mining of coltan changed the environment in the Democratic Republic of the Congo?

Apply and analyse

3 Examine Source 5 carefully.

- **a** Describe the global trend in mobile phone use over the period.
- **b** Conduct research to determine the five countries around the world that have experienced the largest growth over this period. Why might this be the case?

4 The bird in Source 2 was found on the Midway Islands. Use an atlas to locate these islands and explain where you think the plastic that caused the death of this and many other birds originated.

Evaluate and create

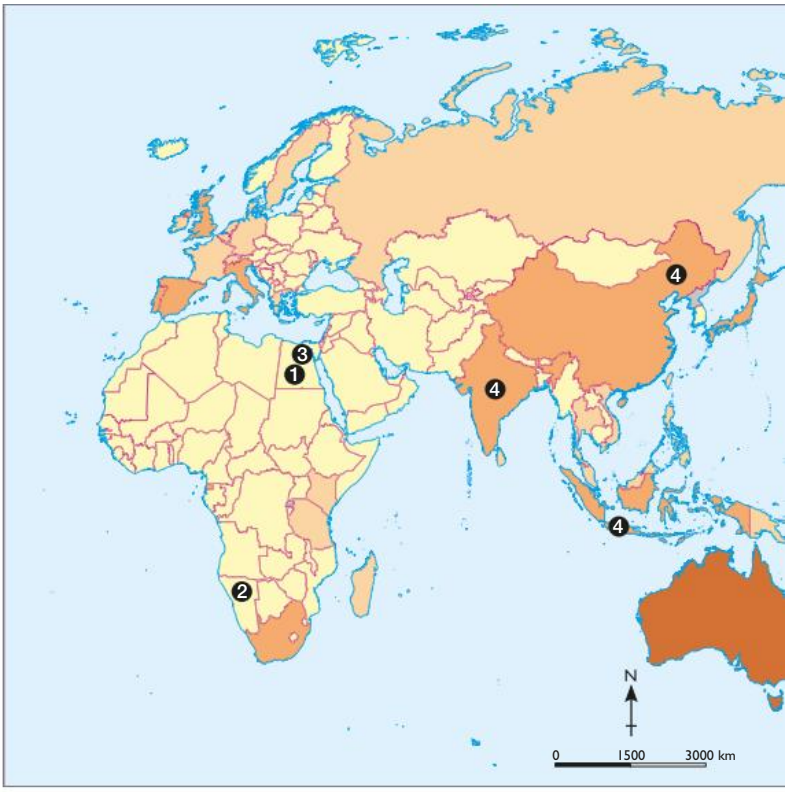

5 Select another popular consumer item of your choice and research the environmental changes brought about by its production and use.

2.13 Ecosystem decline: invasive species

Invasive species is a term used by geographers and scientists to describe groups of organisms (e.g. plants, animals, bacteria or fungi) found in an area they are not native to. In many cases, invasive species upset the biological diversity of areas they spread to and can have other negative effects. Many ecosystems around the world are threatened by invasive species of plants, animals and insects. Sometimes, invasive species are brought to a new place deliberately. For example, goats and rabbits were brought to Australia on the First Fleet to provide a source of food for the new settlers. Other species may be brought to a new place accidentally. For example, rats often hide aboard ships going to new places. Other marine pests were brought to Australian seas unintentionally in ballast water carried on container ships.

However they move from one place to another, invasive species have the potential to degrade the land and disrupt the natural balance of the ecosystem. They often compete with native species for food, land or water, leading to a loss of biodiversity. Australia has 362 invasive species, the second highest number in the world (see Source 1). Some of the world's most successful invasive organisms include the castor oil plant, Chytrid frog fungus, domestic cat, black rat, American mink and the water hyacinth.

WORLD: NUMBERS OF INVASIVE SPECIES BY COUNTRY

Source 1

1 Castor oil plant *(Ricinus communis)*

Native to: North-east Africa and the Middle East

Invaded: Common on every continent except Antarctica

Method of invasion: Carried as an ornamental plant and cash crop in the production of castor oil. Seeds dispersed by rodents and birds

Preferred biomes: Grassland, temperate forest

Impacts: Displaces native plant species, poisonous to many animal species including humans

2 Chytrid frog fungus *(Batrachochytrium dendrobatidis)*

Native to: Africa

Invaded: All six continents. The fungus has infected 93 frog species, more than half of which are Australian.

Method of invasion: Frogs carrying the fungus introduced as a food source and for scientific purposes.

Preferred biomes: Rainforests, freshwater sources

Impacts: About one-third of all amphibian species have the fungus, causing a decline of frog species worldwide.

3 Domestic cat *(Felis catus)*

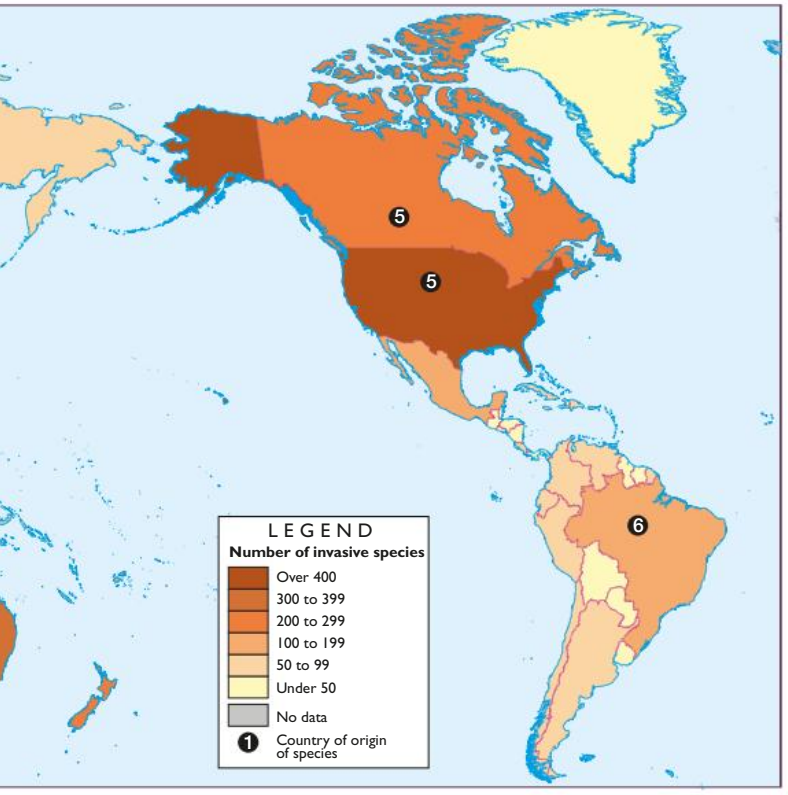

Native to: Unknown (first domesticated in ancient Egypt)

Invaded: Virtually every country, listed as a harmful species in more than 60

Method of invasion: Carried as pets or to restrict rat numbers and then released or escaped into the wild

Preferred biomes: Grasslands, forests and tundra close to water

Impacts: Caused or contributed to the extinction of birds and small mammals around the world, particularly on islands

Source: Oxford University Press

4 Black rat *(Rattus rattus)*

Native to: South-East Asia, north-east China and India

Invaded: Widespread around the world

Method of invasion: Deliberately introduced as a food source or accidently introduced as a stowaway on ships

Preferred biomes: Grassland, temperate forest, tropical forest

Impacts: Preys on native birds (especially flightless species and the eggs of seabirds), reptiles and insects, eats native plants and seeds, major agricultural pest. They have caused or contributed to the extinction of birds, mammals, reptiles and plants.

5 American mink *(Neovison vison)*

Native to: North America

Invaded: Widespread throughout Europe

Method of invasion: Bred in mink farms for their fur, they escape or are released by animal activists

Preferred biomes: Forests near wetlands and rivers

Impacts: Kills large numbers of native species such as voles and salmon, can drive native mink from their habitats

6 Water hyacinth *(Eichhornia crassipes)*

Native to: South America

Invaded: Widespread in streams and rivers around the world particularly in North America and Europe

Method of invasion: Carried as an ornamental plant

Preferred biomes: Freshwater sources including rivers, lakes and streams

Impacts: Grows as a thick mat clogging rivers and streams, inhibiting plants and some fish species and providing a habitat for other pests including malarial mosquitoes

Check your learning 2.13

Remember and understand

1 How do invasive species move between countries?

2 How can an animal that is not a pest in one country become a major pest when introduced to a new country?

3 How do rats cause land degradation?

Apply and analyse

4 Compare the six examples of invasive organisms shown. What are some of the similarities? How is each unique? Which do you consider has had the greatest impact?

5 Examine Source 1.

- **a** Which countries have the highest numbers of invasive species?
- **b** Why do you think these countries have so many invasive species? What features do they share that might help to explain the high numbers?
- **c** Why do you think that Africa and the Middle East have such low numbers of invasive species?

Evaluate and create

6 Some researchers consider humans to be an invasive species. Complete a file card for the human species describing their method of invasion, preferred biomes and impacts.

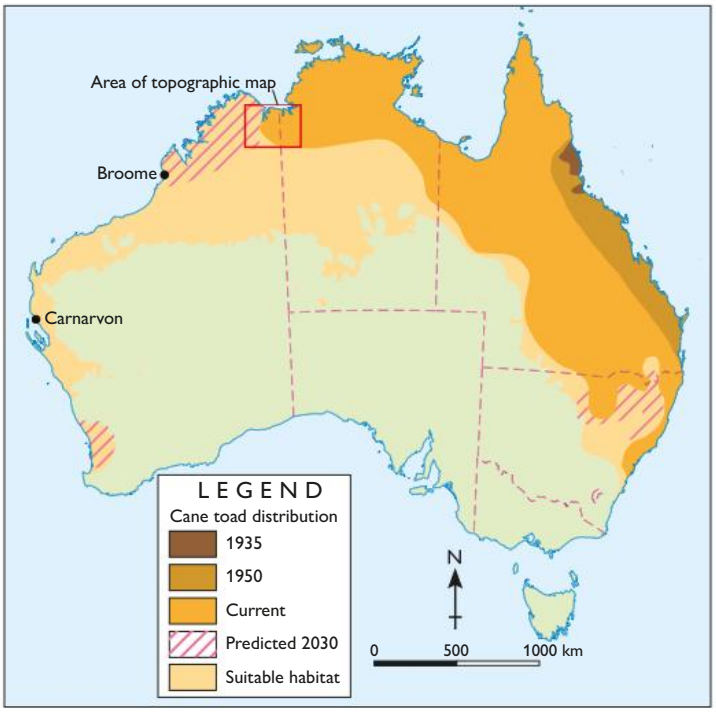

7 Australia is one of the most invaded countries but is also the origin of many plants and animals that are considered invasive species in other countries. These include the golden wattle, Queensland fruit fly, Australian magpie, spotted jellyfish and brushtail possum. Research one of these invading Australians. Describe how and where it has spread and its impact on native plants and animals.

2B rich task

Invasion of the cane toad

Native to Central and South America, cane toads were released in northern Queensland cane fields in 1935 to help control cane beetles which were eating and destroying the sugarcane plants. The cane toads were of little benefit to the farmers but as they spread beyond the cane fields, southwards into New South Wales and westwards towards Western Australia, they soon became pests themselves. Like many introduced species, cane toads have no natural predators in Australia, so there was little to stop their spread.

AUSTRALIA: DISTRIBUTION OF CANE TOADS, 2012

Source 1 Source: Oxford University Press

Animals such as snakes, goannas, freshwater crocodiles and quolls have eaten frogs for millions of years. They see cane toads as a new food source. However, the poisonous skin of the cane toad kills its attacker within minutes. This is devastating the local populations of these native animals.

Source 2 The cane toad has become a serious pest in Queensland and the Northern Territory.

skill**drill:** Data and information

Using a topographic map to explore environmental change

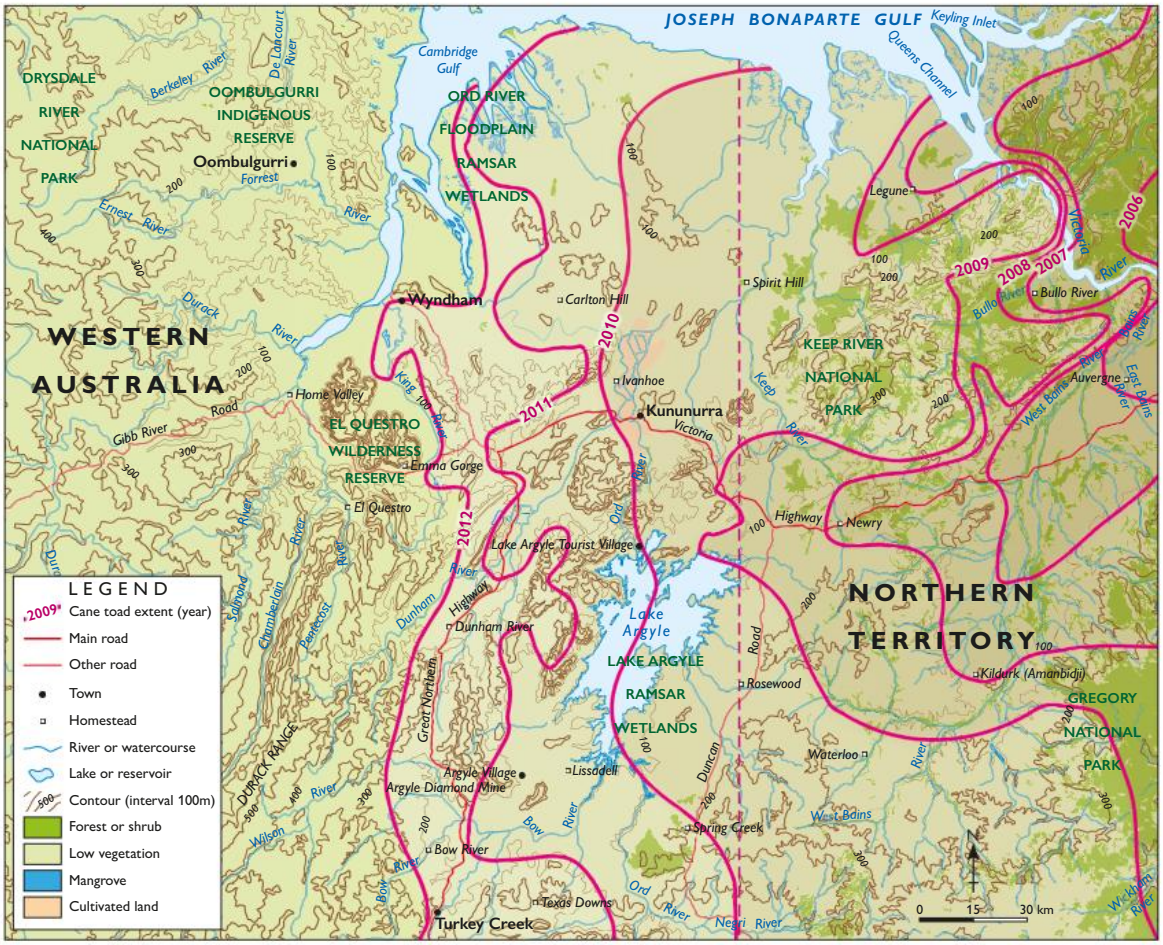

Because topographic maps show the shape of the land in great detail, they are one of the most useful tools used by geographers. By adding extra information, topographic maps can be used to show changes over time and the reasons for these changes. Source 3 has been drawn to show the expansion of the cane toad's territory every year from 2006 to 2012. The **contour lines** on the topographic map show the shape of the land over which the cane toads are spreading (including the heights of valleys, hills and ridges). Geographers use this information to measure and predict the rate and direction of the cane toad's spread. Follow these steps:

Step 1 Look closely at the lines and dates showing cane toad expansion to estimate in which direction the spread is moving.

Step 2 Are the lines becoming closer together or further apart from one year to the next? This will tell you if the rate of spread is increasing or decreasing.

Step 3 Select an area between two lines that shows a typical rate of spread. Use the line scale to estimate the distance between the lines in this place. This will give you a rate in kilometres per year. Divide this by 52 to give you a rate per week. This could also be expressed as metres per week.

NORTH-EAST WESTERN AUSTRALIA AND NORTH-WEST NORTHERN TERRITORY: ADVANCE OF THE CANE TOAD 2006–2012

Source 3

Source: Oxford University Press

Step 4 Look at the contour lines and other features shown in the legend to identify any natural or built features that are affecting the pattern and rate of spread being shown on the map.

Apply the skill

Examine Source 3 carefully and complete the following tasks.

1. Using the steps provided, estimate the direction in which cane toads are spreading across northern Australia.
2. Calculate the rate of spread for the cane toad between 2011 and 2012.
3. Use the rate of spread you calculated, together with the line scales provided in Sources 1 and 3, to estimate the amount of time it will take cane toads to spread to the Western Australian towns of Broome and Carnarvon.

   What natural features appear to be affecting the rate of spread of the cane toad?

Extend your understanding

Examine Source 1.

1. Estimate, in square kilometres, the size of the region currently inhabited by cane toads.
2. Estimate the size of the region cane toads are predicted to inhabit under current climate conditions.
3. How do you think climate change will affect the distribution of cane toads? Why do you think this is the case?
4. Kakadu National Park in the Northern Territory contains vast areas of protected wetlands and large numbers of unique plants and animals. Cane toads were first detected in the park in 2001 and since then have had a range of devastating impacts on this unique environment. Research these impacts and the efforts taken by park authorities to minimise them. Discuss the effectiveness of these methods with your classmates.

2.14 One world, many views

In December 2011, Miranda Gibson, a 30-year-old school teacher, built a platform in a tree 60 metres above the forest floor in Tasmania's Styx Valley. She then set up home on the platform and vowed not to leave it until the tree and the surrounding forest had been granted protection from logging companies. Armed with a laptop and wireless Internet connection, she wrote a daily blog which was viewed by tens of thousands of supporters. She also made the news around the world. Despite freezing cold, snow and rain, she remained up the tree for 449 days, an Australian record, and was forced down only when a nearby bushfire threatened her safety. While she had many supporters around the world, she also had many critics. At one stage, a pro-logging group camped at the base of the tree to protest against Gibson's protest.

Source 1 Miranda Gibson made her home high in the branches of this tree for 449 days.

Why is it that some people become so passionate about preserving the natural environment while others do not? For example, one person can look at a rainforest and see the beauty of nature, whereas the person standing beside them can only see the money to be made by turning the tree into timber. We can see these differences all over the world, wherever the natural environment is changing.

Studies show that different people view the environment in different ways because of the fundamental beliefs they hold about human beings and our place in the natural world. The reasons for holding these beliefs are very complex, but it appears that where we live, our standard of living, our education and our religion all play important roles. Although each person's view of the world is unique, researchers have managed to classify them into four major groups (see Source 2). It is important to understand that one view is not necessarily 'better' or 'worse' than another, it is simply different.

World views

Human-centred

Egocentric
I am the most important creature on Earth. Everything and everyone else is important to the extent that they support me and my lifestyle.

Anthropocentric
Humans are the most important species. We are in charge of the Earth and the natural world. We can use nature to support us and our lifestyle.

Earth-centred

Ecocentric
We should do whatever we can to minimise our impact and preserve the Earth's biodiversity. We are no more important than any other organism.

Biocentric
We have a responsibility to use the Earth's resources in a sustainable way. Other species may be useful to us but they also have as much right to exist as we do.

Source 2 World views about the environment

What is your world view?

In order to evaluate the different ways in which people view the world, US environmental social researchers have developed a set of 15 statements called the New Ecological Paradigm (NEP) scale. People are asked to read each of the statements and decide whether they agree or disagree with them on a scale from 1 to 5, where 1 is 'strongly disagree' and 5 is 'strongly agree'. This allows researchers to compare the world views of different groups of people within and between countries.

Source 3 The New Ecological Paradigm (NEP) scale

1. We are approaching the limit of the number of people the Earth can support.
2. Humans have the right to modify the natural environment to suit their needs.
3. When humans interfere with nature it often produces disastrous consequences.
4. Human ingenuity will ensure that we do not make the Earth unliveable.
5. Humans are seriously abusing the environment.
6. The Earth has plenty of natural resources if we just learn how to develop them.
7. Plants and animals have as much right as humans to exist.
8. The balance of nature is strong enough to cope with the impacts of modern industrial nations.
9. Despite our special abilities, humans are still subject to the laws of nature.
10. The so-called 'ecological crisis' facing humankind has been greatly exaggerated.
11. The Earth is like a spaceship with very limited room and resources.
12. Humans were meant to rule over the rest of nature.
13. The balance of nature is very delicate and easily upset.
14. Humans will eventually learn enough about how nature works to be able to control it.
15. If things continue on their present course, we will soon experience a major ecological catastrophe.

Source: Dunlap, Riley E.; et al. (2000). Measuring endorsement of the new ecological paradigm: A revised NEP scale. *Journal of Social Issues, 56* (3), 425–442

Check your learning 2.14

Remember and understand

1 What is the main difference between human-centred and Earth-centred world views?

2 Use Source 2 to classify Miranda Gibson's world view.

Apply and analyse

3 Read the 15 statements in Source 3. In a table, record the numbers of the statements you agree with in one column and the numbers of the statements you disagree with in another. (If you agreed with all or most of the seven even-numbered statements, researchers would classify you as having a human-centred world view. If you agreed with all or most of the odd-numbered statements, they would classify you as having an Earth-centred world view.)

- **a** Describe your world view based on your responses to this test. Did you find your results surprising?
- **b** Find a classmate with a similar world view to you and discuss with them their views of Miranda Gibson's anti-logging protest.
- **c** Find a classmate with a very different world view to yours and find out what they think about the anti-logging protest.
- **d** Ask an older person such as one of your parents to respond to the 15 statements and compare their responses to yours.

Evaluate and create

4 Do you think the NEP scale is an accurate way to evaluate people's world views? Can you suggest any ways in which this method could be improved?

5 Using the Internet, do some further research on the issue of logging in Tasmania's Styx Valley. Identify the individuals and groups who believe the area should be logged and the individuals and groups who believe the area should be protected from logging.

- **a** For each of the individuals or groups, summarise their point of view in regard to logging in the Styx Valley.
- **b** Give some possible reasons why these different points of view exist in relation to this issue.

2.15 Living water

Indigenous Australians have been part of the Australian landscape for more than 40 000 years. Over that time they have developed relationships with the land and the water that have helped them to survive and thrive in some of the harshest environments on Earth. As non-Indigenous Australians struggle with issues such as **water scarcity** and degradation, some are learning that the principles followed by Aboriginal and Torres Strait Islander peoples provide a model that can help them to view and use water more sustainably.

While Indigenous views and values vary from place to place and are both diverse and complex, it is possible to see some common principles with regards to their relationship with water. For example, many Aboriginal peoples refer to permanent sources of water as 'living water'. This describes the importance of water as not only a life-giving force but also of having a life of its own. Indigenous people do not see water as a mere commodity or resource but as a sacred source of life.

> Water is the life for us all. It's the main part. If we are gonna lose that I don't know where we gonna stand. If that water go away, everything will die. That's the power of water.
>
> John 'Dudu' Nangkiriyn

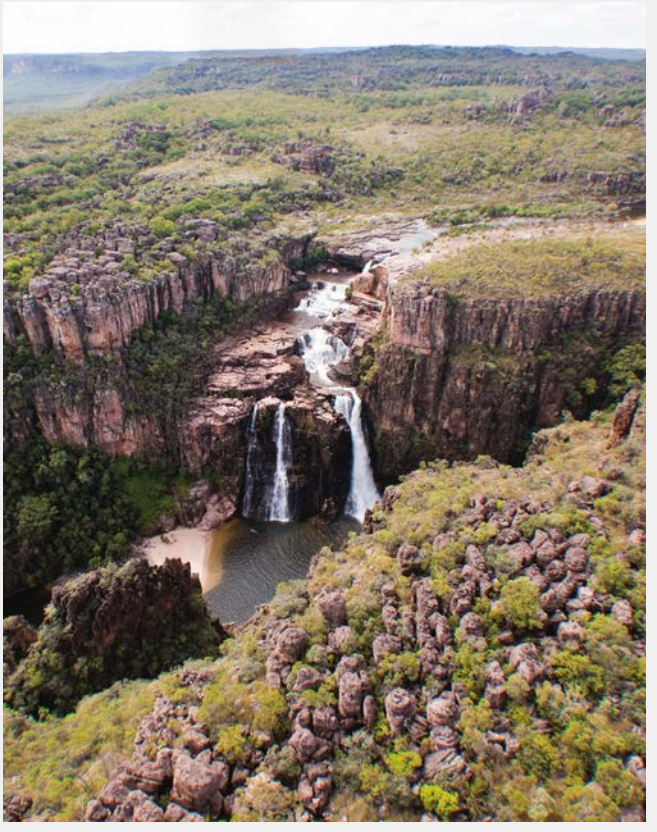

key**concept:** Interconnection

Holistic views of the natural world

Indigenous Australians believe that all features of a landscape (land, water, animals, plants and people) are inextricably linked together to form one interconnected whole. Change in one part of the landscape will bring change to the others. This fundamental belief is a key component of Aboriginal views of creation as well as the management of land and water. This traditional view, dating back tens of thousands of years, is now accepted as scientific fact by many researchers and scientists who refer to it as interconnection.

This holistic view of landscapes links Indigenous people with the natural world. Indigenous people believe that they have custodial responsibility for the land and water in the country in which they live and that this responsibility is passed to them by their ancestors and from them to their descendants. Water resources such as rivers, lakes, billabongs and groundwater are protected by a complex series of laws, customs and beliefs. The Nyungar people of south-western Western Australia, for example, throw a handful of sand into streams and lakes as they approach, in order to warn the spirit of the water of their approach.

For more information on the key concept of interconnection, refer to page 9 of 'The geography toolkit'.

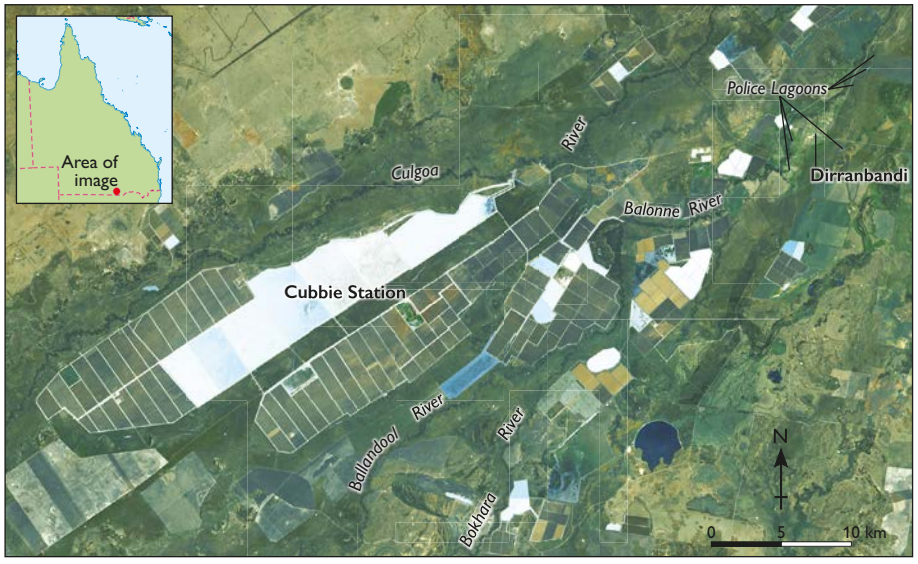

Source 1 According to the traditional beliefs of the Gagudju people of Kakadu, a creator-being, known as Almudj, created the waterholes of the region. Almudj brings the wet season every year, may appear as a rainbow, can punish people by drowning them and lives in a pool beneath a waterfall.

Case study: the Police Lagoons

The views of Indigenous Australians with regard to the management of water can, at times, conflict with the views of non-Indigenous Australians, many of whom believe that water is a commodity that can be bought, sold and traded. There are, however, many examples of communities who have been able to take into account both sets of views when developing water management strategies.

One of these is the town of Dirranbandi and the nearby Police Lagoons, a series of wetlands beside the Balonne River in southern Queensland. The Police Lagoons are ephemeral wetlands which means they only fill with water during the rainy season. Before European settlement, the lagoons filled with water once a year and provided an important habitat for plants and animals. The lagoons were also an important meeting place for ceremonies, including burials, for the Kamilaroi and Kooma Indigenous peoples, as well as a source of food. With the development of large-scale farming in the region, including the establishment of Cubbie Station, the largest cotton farm in Australia, the Balonne River floods less often and the lagoons are without water for longer periods of time.

Following consultation with local Indigenous people, a new management plan for the lagoons will be developed that will take into account the cultural needs of the Indigenous population and emphasise sustainability. Information and knowledge will also be shared between the Indigenous community and government geographers. This will lead to a healthier wetland and see more frequent flooding of the lagoons.

Source 2 Satellite image of the Balonne River floodplain in southern Queensland

Check your learning 2.15

Remember and understand

1 Why do the views of Indigenous and non-Indigenous Australians sometimes conflict?

2 Why do you think that Indigenous views are often ignored when decisions about water use are made?

Apply and analyse

3 How might the Indigenous concept of interconnection help non-Indigenous Australians to better manage scarce water resources in arid regions of Australia?

4 What are your beliefs about the natural environment? Where do these beliefs come from?

5 Examine Source 2.

- **a** Describe the location of the Police Lagoons.
- **b** This is an ephemeral wetland. Explain how an ephemeral wetland operates.
- **c** Why are these wetlands significant to local Aboriginal peoples?
- **d** What land uses can you identify in the satellite image?
- **e** How do these land uses put pressure on the water resources in this region?

Evaluate and create

6 Discuss a set of guidelines or rules that could be introduced to help water users and managers use the expertise and knowledge of Indigenous peoples in making decisions about water use in Australia.

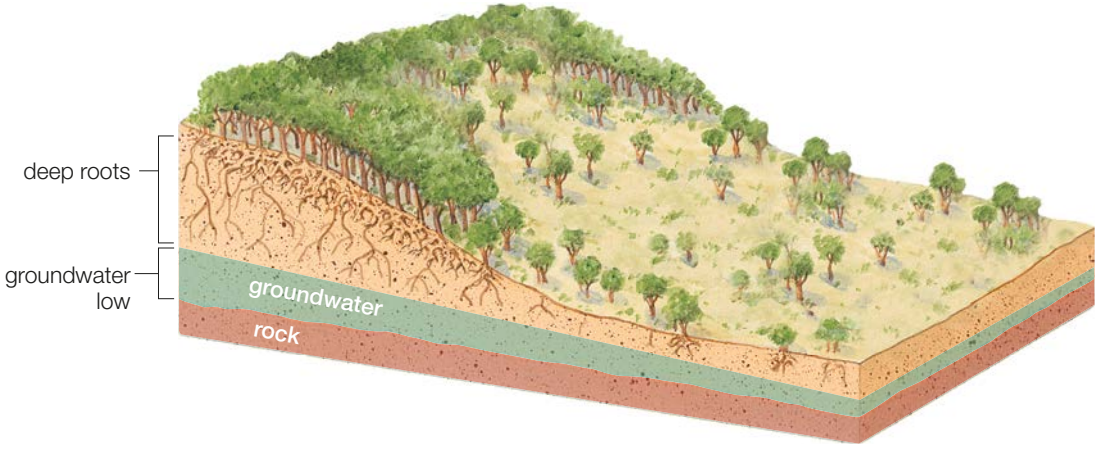

7 Research the interconnection between water resources in your local area and Indigenous Australians. How have these interconnections changed over time?

2.16 Responding to salinity

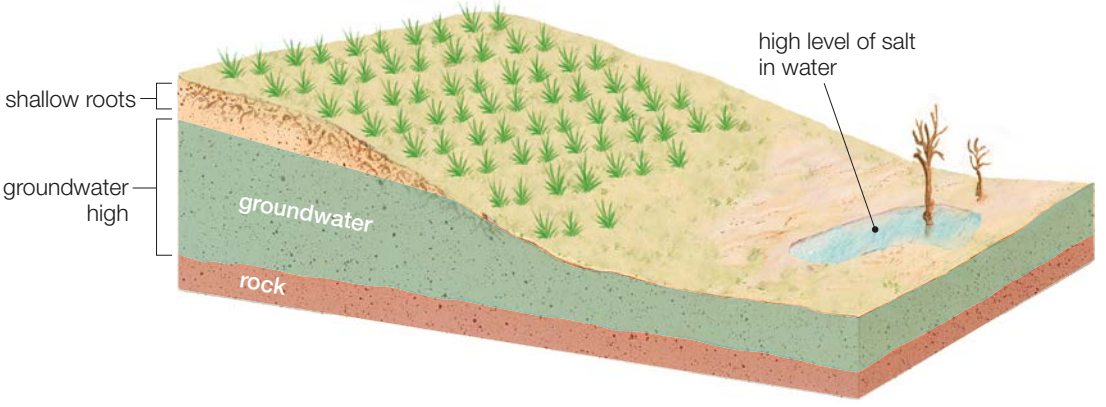

Salt is a natural part of the Australian environment. Deposited by salt-laden winds from the sea and from the weathering of rocks, it is a component of most soils. It has been estimated, for example, that in parts of Western Australia the soil typically contains between 170 and 950 tonnes of salt per 10 000 square metres. Because this salt has accumulated slowly over millions of years, Australia's native vegetation has adapted to the salty soils. The native deep-rooted trees and shrubs soak up much of the rainwater entering the soil. This keeps the **water table** low in the ground and means the salt stays deep in the soil and away from plant roots.

However, changes in the Australian landscape since the arrival of Europeans have significantly altered this system. Large areas of native vegetation have been cleared and replaced by shallow-rooted crops and grasses (Sources 1 and 2). This means that much more water is held in the soil and so the water table rises, bringing with it the salt that has accumulated over millions of years. It collects in low-lying areas, killing the introduced plants. As the water evaporates, salt is left at or near the surface, creating large salt pans where nothing can grow (see Source 4). The salt also moves across the landscape turning freshwater streams into salty drains.

In some places, **irrigation** also increases the amount of water in the soil. This has the effect of raising the water table and bringing salt to the surface. Studies estimate that salinity currently affects 19 500 Australian farms and 20 000 square kilometres of agricultural land, much of it in Western Australia's wheat belt. At present, it has the potential to affect 46 000 square kilometres of agricultural land. This is expected to increase to 136 000 square kilometres within 50 years. This makes salinity Australia's most serious and widespread land degradation issue.

Source 1 Salt in the Australian landscape before land clearing

Source 2 Salt in the Australian landscape after land clearing

keyconcept: Change

Salinity in the Western Australian wheat belt

The largest area of salty soils in Australia is in the south-west corner of Western Australia, a region known as the wheat belt. This is a vast area of 19.3 million hectares, 16 per cent of which is at risk of salinity due to rising water tables. Most of this is agricultural land and would result in lost profits for farmers of at least $80 million a year. Source 3 shows the areas of the wheat belt with rising water tables in 2000 and the predicted salinity-affected areas in 2050.

Salinity in the wheat belt also poses a threat to biodiversity as plants and animals lose their habitats. As salt accumulates in the low-lying regions in the landscape such as freshwater lakes, plants and animals that live in these regions are at the greatest risk. At least 1500 plant species in Western Australia suffer from salinity with 450 possibly becoming extinct. Animal species are likely to decline by one-third if salinity continues to spread. For more information on the key concept of change, refer to pages 12–13 of 'The geography toolkit'.

WESTERN AUSTRALIA: DRYLAND SALINITY RISK IN THE SOUTH-WEST IN 2000 AND 2050

Source 3

Source: Oxford University Press

Source 4 Salt rising to the surface in the Western Australian wheat belt

Case study: fighting salinity at Toolibin Lake

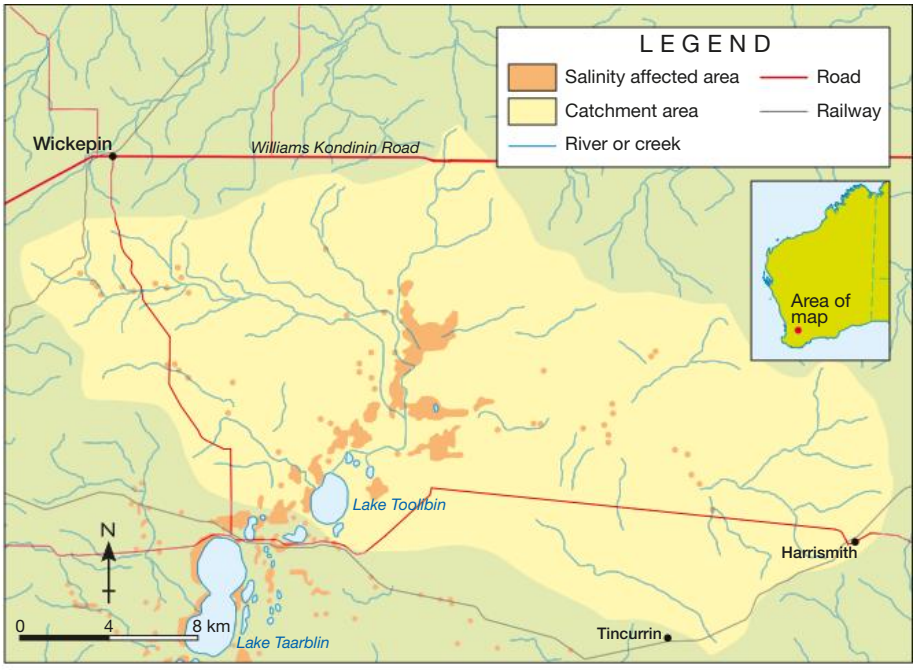

In many local areas, attempts are being made to repair the damage of the past. These attempts tend to be small in scale, as repairing degraded land is expensive and difficult to achieve over a large area. For the repairs to be effective and not cause further damage, it is important for those undertaking the work to have a detailed understanding of the complex ecology of the site.

Toolibin Lake, in the Western Australian wheat belt, is a small ephemeral wetland (meaning it only fills with water occasionally, depending on rainfall).

As one of the last remaining freshwater wetlands in the region, it contains important habitats for a number of plant and animal species, many of which are endangered. In the 1970s, the lake bed began to show signs of increasing salinity and many trees died. Source 5 shows the distribution of salinity in the area. A geographic investigation found that this was due to the flow of salty water into the lake from surrounding farmland together with a rising water table. In the 1990s, a number of measures were put in place to lower the water table and reduce the salinity (Source 6).

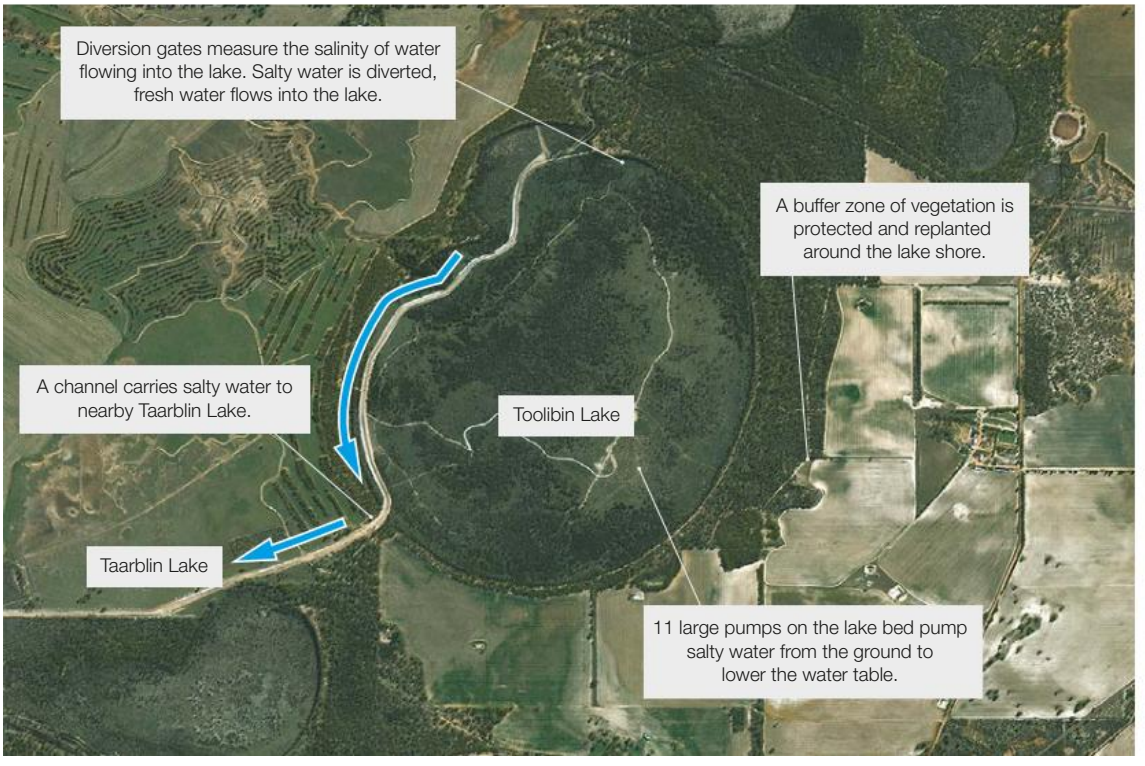

These measures included measuring the salt levels in the stream that flows into the lake and diverting excessively salty water to a nearby lake. Pumps on the lake bed were installed to lower the water table and to

TOOLIBIN LAKE: AREAS OF SALINITY

Source 5

Source: Oxford University Press

Source 6
An aerial photograph of Toolibin Lake showing the measures used to lower the water table and reduce salinity

remove salty water from the soil. Around the lake, belts of trees were planted to intercept water as it flowed towards the lake and also to help in lowering the water table.

A review of these measures in 2010 showed that the water table had been held below the target of 1.5 metres across most of the lake. However, an analysis of satellite imagery from 1990 to 2009 showed that in some areas of the lake, trees had flourished, but in others, they had continued to decline.

Source 7 The red-tailed phascogale, a small marsupial, is one of 32 rare or endangered animal species in the wheat belt.

Researchers then examined the ways in which the two dominant tree species, sheoak and paperbark, had responded to changing water and salt levels. They found that the trees had responded in very different ways. New sheoak seedlings were found on the floor of the lake but the paperbark trees had continued to decline in health and numbers. This information could then be used to develop new management plans for the lake. Much of this is now centred on working with the local Landcare group. Landcare is a national network of thousands of locally-based community groups who care for the natural resources of Australia. In the Toolibin Lake much of this work has focussed on increasing the number of trees planted on surrounding farms. The farms in the area tend to grow cereal crops such as wheat. Getting the farmers to put trees on their farms will further reduce salinity across the region.

Building an eco-bridge

Additional measures are being introduced to help endangered animals in the region such as the red-tailed phascogale, which is a small marsupial. Farmers and other land managers are being encouraged to plant trees in corridors between existing stands of native trees, fence off remaining vegetation and creeks and to control feral pests such as cats and foxes. It is hoped that these activities will provide a large, linked safe area, known as an eco-bridge, for native species to thrive.

Check your learning 2.16

Remember and understand

1 Where does salt in the soil come from naturally?
2 How did the arrival of European settlers in Australia affect soil salinity?
3 Why is the water in Toolibin Lake becoming salty?

Apply and analyse

4 Classify the causes of salinity at Toolibin Lake using the SHEEPT method. For more information on SHEEPT, refer to page 28 of 'The geography toolkit'.
5 Examine Source 3.
   a Describe the predicted change in salinity in the wheat belt between 2000 and 2050 in terms of both area and distribution.
   b How do you think this change will impact on the natural environment of the region?
6 What is an eco-bridge? Explain how the measures put in place to protect endangered species could also help to reduce salinity.

Evaluate and create

7 Research ways in which farmers throughout the wheat belt may be able to lower the water table and reduce salinity.
8 In small groups, discuss why repairing land degradation in the Toolibin Lake area has been so difficult. What do you think this means for repairing the damage of a much larger area such as the entire Western Australian wheat belt?

2.17 Responding to deforestation

One of the leading causes of land degradation on a global scale is **deforestation**. Forests have been cleared by humans for thousands of years. Traditionally, forests have been cleared for farming, to clear the way for human settlements and to provide building materials. Today, two key economic realities continue to drive deforestation:

1 Trees grow slowly and other crops such as soya beans grow quickly. As populations continue to grow and expand, and people tend to their current needs rather than the needs of future generations, forests continue to be cleared and replaced by farms to provide people with income and food.

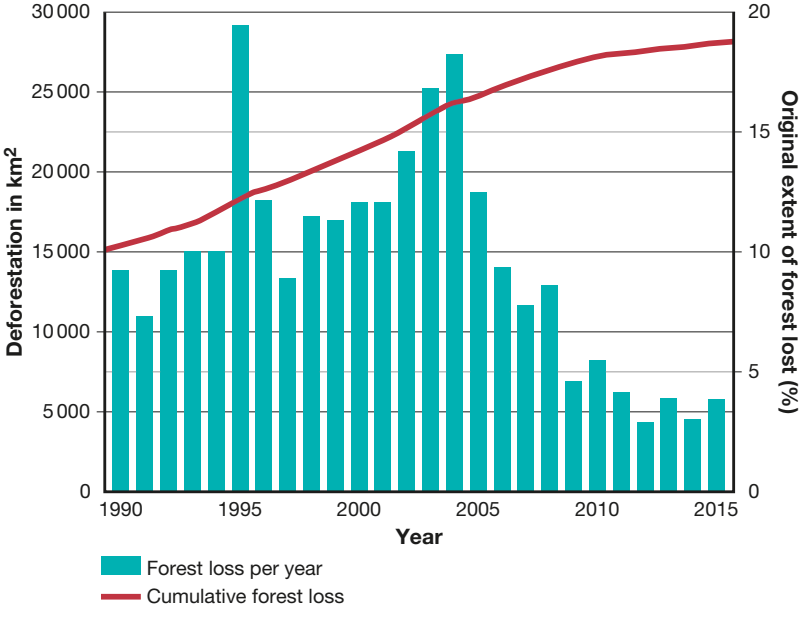

2 Many ecosystem services provided by forests, such as absorbing and storing carbon and filtering water, do not have a monetary value and cannot be bought and sold. Produce from farms and timber from forests are easily bought and sold so are seen as more valuable to local populations than intact forests.

Source 1 A section of Amazon rainforest in Brazil that has been cleared for cattle ranching

Case study: the Amazon rainforest

The Amazon, the world's largest tropical **rainforest**, provides an example of the changes that are sweeping across many forest biomes today. Well known as a biodiversity hot spot due to its large numbers of plant and animal species, the Amazon is now considered to be an environmental hotspot too. The Amazon covers an area roughly the size of Australia, but since the 1970s, an area the size of New South Wales has been cleared for other uses. In recent years, rainforest clearing has slowed but still continues. Source 2 shows deforestation levels since 1990. Some climate scientists believe that unless the remaining rainforest is protected, a combination of climate change, droughts, fires and deforestation will gradually turn the rainforest into **savanna** and **grasslands**.

Source 2 Annual and cumulative deforestation of the Amazon rainforest in Brazil

skill**drill:** Place, space and interconnection

Using satellite images to analyse environmental change

Satellite images are a useful tool for observing change over a large region of the Earth's surface. By examining them closely, you can describe changes that have occurred over time and suggest explanations for these changes.

Step 1 Examine two satellite images taken at the same location at different points in time.

Step 2 Locate the area on the Earth's surface using an atlas.

Step 3 Look closely at the first image. Describe the natural and human features that you can see.

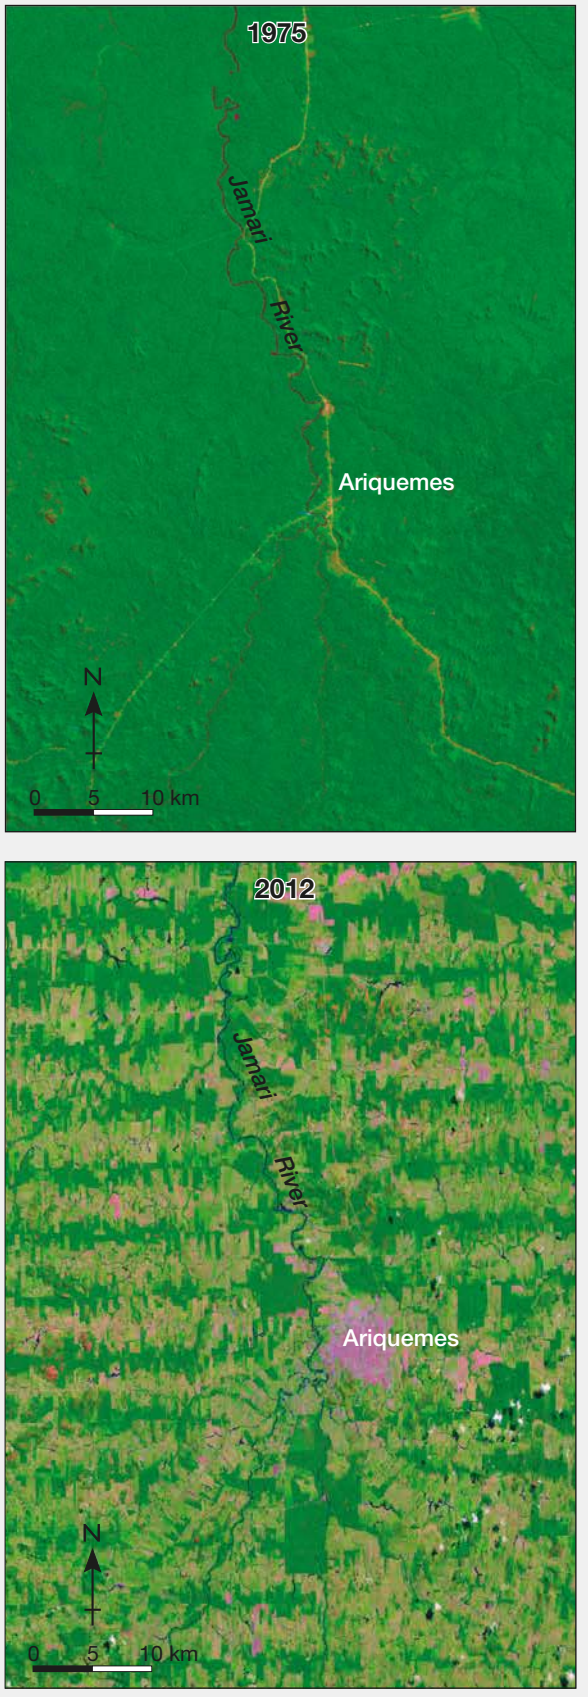

Step 4 Describe the differences between the first image and the second one.

Step 5 Try to quantify the changes. For example, if there has been desertification, calculate the area of desert shown in each of the images. The difference will give you the area that has changed over time.

Step 6 Suggest an explanation for these changes based on your observations.

Apply the skill

1 The two satellite images in Source 3 show a section of the Amazon rainforest in the state of Rondúnia, western Brazil, in 1975 and 2012.
Follow the steps above to describe the satellite images shown and explain the changes that have taken place in this section of the rainforest over the 37-year period.

Source 3 Two satellite images of a section of the Amazon rainforest in the state of Rondúnia, western Brazil. The top image was taken in 1975 and the image on the bottom was taken in 2012. Urban areas are represented by pink shading; light green shading represents farmland and dark green shading shows the rainforest areas.

Managing change in the Amazon rainforest

Many of the world's forested areas have been altered by human activities. It has been estimated that of the 60 million square kilometres of forest that once covered the Earth, only about two-thirds still remains. Each year the world loses about 50000 square kilometres of forest, most of it converted to farmland to grow food to support growing populations. For reference, the entire state of Tasmania is around 70000 square kilometres. While deforestation may seem to be an unstoppable process, there are encouraging signs of change in some regions of the world, including the Amazon rainforest.

The Amazon rainforest is a vast biome, covering an area of more than five million square kilometres. While most of the Amazon lies in Brazil, it also stretches into seven neighbouring countries including Suriname. By studying satellite images (such as those shown in Source 3), scientists have been able to estimate that 15 per cent of the forest has been lost since 1970. The vast size of the forest, and the types of changes that are taking place there, make it a very difficult environment in which to manage change. There are signs, however, that international cooperation and modern spatial technologies may be helping to slow the rate of deforestation in the Amazon.

Amazon Region Protected Areas (ARPA)

The Amazon Region Protected Areas (ARPA) program is the largest tropical forest conservation effort in the world. Led by the Brazilian Ministry for the Environment and funded by a number of organisations such as the World Bank, the German government and the World Wildlife Fund, it aims to protect 150 million acres (600000km^2) of rainforest.

Areas suitable for conservation are identified in the forest and then protected from deforestation by Brazilian law. Some of the identified areas have been partially deforested in the past and are now managed by local communities in order to rehabilitate them. This allows the forest to recover.

By 2012, 128 million acres (518000km^2) of the Amazon were protected by law. This figure meant that the Brazilian government was on target to achieve its goal of tripling the area of the rainforest under protection compared to levels in 2000.

Source 4 Tumucumaque Mountains National Park is the world's largest tropical forest national park. It is now part of the ARPA program and is protected by law from deforestation.

Source 5 A Trio tribesman in Suriname using a GPS device to help map his forest home.

Modern spatial technologies

The Amazon rainforest is home to hundreds of indigenous tribes who have been greatly affected by deforestation. Because no official records are kept, it can be difficult for indigenous tribes to prove ownership of the land on which they have lived for thousands of years. This situation can make them, and their tribal lands, vulnerable to the influences of outsiders who have an established record of moving in and claiming the land and clearing it for use as farms, mines and dams.

Modern spatial technologies such as global positioning systems (GPS) and Google Earth are beginning to change this situation. Some tribes, such as the Trio people of Suriname, have been provided with handheld GPS devices and training that allows them to map the area of the forest in which they live. The Suriname government has begun to recognise these digital maps as official documents which can provide the tribespeople with proof of ownership of the forest.

In Brazil, some tribes are investigating possible threats to their homeland by using the satellite and aerial images on Google Earth. By looking closely at the images they can see changes over time, investigate these and pass on information to government officials. These changes may include expanding soya bean farms or runoff from a mine changing water quality in streams and rivers.

Check your learning 2.17

Remember and understand

1 Why are forests cleared?
2 What do many climate scientists believe may happen to the Amazon rainforest in the future?
3 What is the ARPA program? What are the aims of this program?
4 How have modern spatial technologies helped to protect forest areas in the Amazon rainforest?

Apply and analyse

5 Look closely at Source 2.
   a Describe the trend in Amazon forest loss since 1990.
   b Roughly calculate the average amount of rainforest lost each year.
6 The image in Source 5 was taken near the village of Kwamalasamutu in Suriname. Use Google Earth to locate this village and then zoom out to investigate changes such as deforestation nearby.

Evaluate and create

7 Imagine that the Brazilian government decided to ban forest clearing and instead encouraged people to replant the forest.
   a How would this decision affect ecosystem services and the Brazilian economy?
   b Is this likely to happen? Give some reasons for your answer.

2C rich task

Deforestation on Easter Island

Easter Island is one of the world's most remote places. It lies in the Pacific Ocean, over 2000 kilometres from the nearest inhabited country. When European explorers first visited the island in the 16th century, they found the local people living in primitive conditions and engaged in almost continual warfare. Most baffling of all were the more than 600 stone statues weighing hundreds of tonnes that dotted the island.

The statues were built by the ancient Polynesians who lived on the island, probably as a tribute to tribal chiefs. To move them from the quarry to prominent sites, islanders used the trunks of large trees to create tracks and rollers. Over time, the population of the island reached about 7000 and there was increased pressure on timber resources for statue transport as well as for housing, boats, fuel and agriculture. The trees, however, were not being replaced by new growth, because rats brought by the original Polynesian sailors as a food source ate all the seeds.

The destruction of the island's trees and shrubs led to a decline in living conditions for the people. Statue building ceased, the population declined, soils became less fertile and more easily eroded, water quality declined and, as competition for scarce resources increased, tribal warfare broke out.

In many ways, the history of Easter Island serves as a warning to the rest of the world about the dangers of extreme environmental change.

skill**drill:** Data and information

Interpreting topographic maps

Topographic maps show a small region of the Earth's surface in great detail. This includes the height and shape of the land (known as the topography) which is shown through the use of contour lines or relief shading. By examining topographic maps, geographers can better understand the natural environment and the ways in which human activities bring about environmental change. Follow these steps when interpreting a topographic map:

Step 1 Read the title of the map so that you know what the map is showing. You may like to find it in an atlas so that you understand its location relative to other places.

Step 2 Look closely at the legend and find an example of each feature shown in the legend on the map. Take note of those features which often appear together and those that occupy large areas on the map.

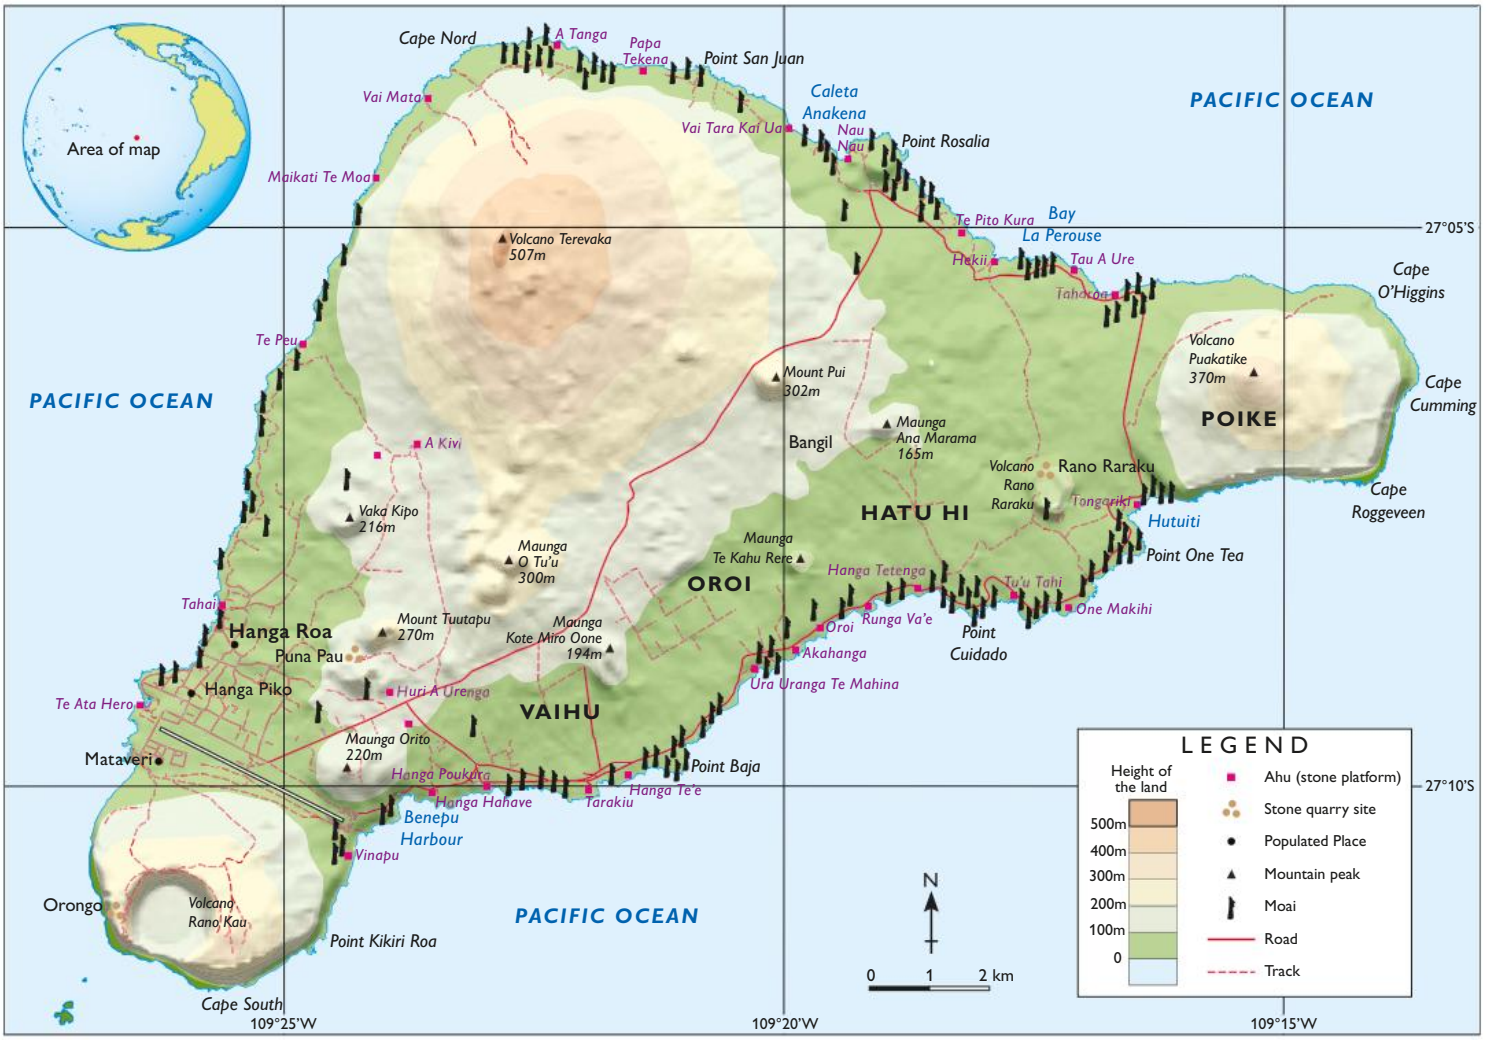

Step 3 Use the line scale to roughly estimate the overall size of features on the map. For example, the length of an island or the distance between two cities.

Step 4 Look closely at the legend showing the colours used to represent the height of the land. Look at the patterns of these colours on the map and try to picture the landforms that are shown. Remember that the closer together these colours appear the steeper the land.

Source 1 A selection of stone moai statues on Easter Island

EASTER ISLAND: TOPOGRAPHIC MAP

Source 2

Source: Oxford University Press

Apply the skill

1 How did statue building contribute to deforestation on Easter Island?

2 Examine Source 2.

- **a** Use the legend to describe the relief (shape of the land) of Easter Island. In your description use the names of specific places such as mountains.
- **b** How has the relief affected the distribution of roads and populated places?

3 Examine the distribution of the moai in Source 2.

- **a** Use the line scale to estimate the distance from the quarry site at Puna Pau to the Vai Mata ahu (stone platform).
- **b** Describe the distribution of the statues on the island.
- **c** How does the relief affect this distribution?

Extend your understanding

1 How did statue building contribute to environmental change on Easter Island?

2 The reasons for the decline of the Easter Islanders are still widely debated. Use the Internet to find out about two or more conflicting theories. Why is there often disagreement about historical events?

3 Did the Easter Islanders use their resources sustainably? Give three reasons for your answer.

4 What lessons are there from Easter Island for the ways in which we use ecosystem services today?

Coastal change and management

Coasts are areas where the land meets the sea. Home to more than one billion people around the world, coastal areas are some of the most visited and heavily populated areas on the planet. Human activities in coastal areas have affected many of the natural environmental processes there. This has led to a wide range of issues including a loss of biodiversity, high levels of pollution, erosion, and rising sea levels due to climate change. In fact, coasts are one of the Earth's most threatened environments.

Coasts are critically important – not only to the people who live along them, but also to the health of the planet. Around the world, geographers are playing a vital role in developing strategies to manage these problems and protect coasts for future generations.

3A

How is the coastal environment changing?

1 As a class, discuss the ways in which human activities have impacted on the coastal landscape shown in Source 1.

2 How would a 2-metre rise in sea level affect this coast?

3B

How can coastal changes be managed?

1 In Source 1, what evidence can you see of management strategies to control or limit human activities that may have a negative impact on the natural environment?

2 Brainstorm further strategies that could be put in place to protect this coast. Why do you think these have not been used in this environment?

chapter 3

Source 1 Welcome to Hong Kong, China – one of the most densely populated coastal cities on Earth. Changes brought about by human activities in coastal areas like Hong Kong need to be carefully managed in order to protect the environment for future generations.

3C

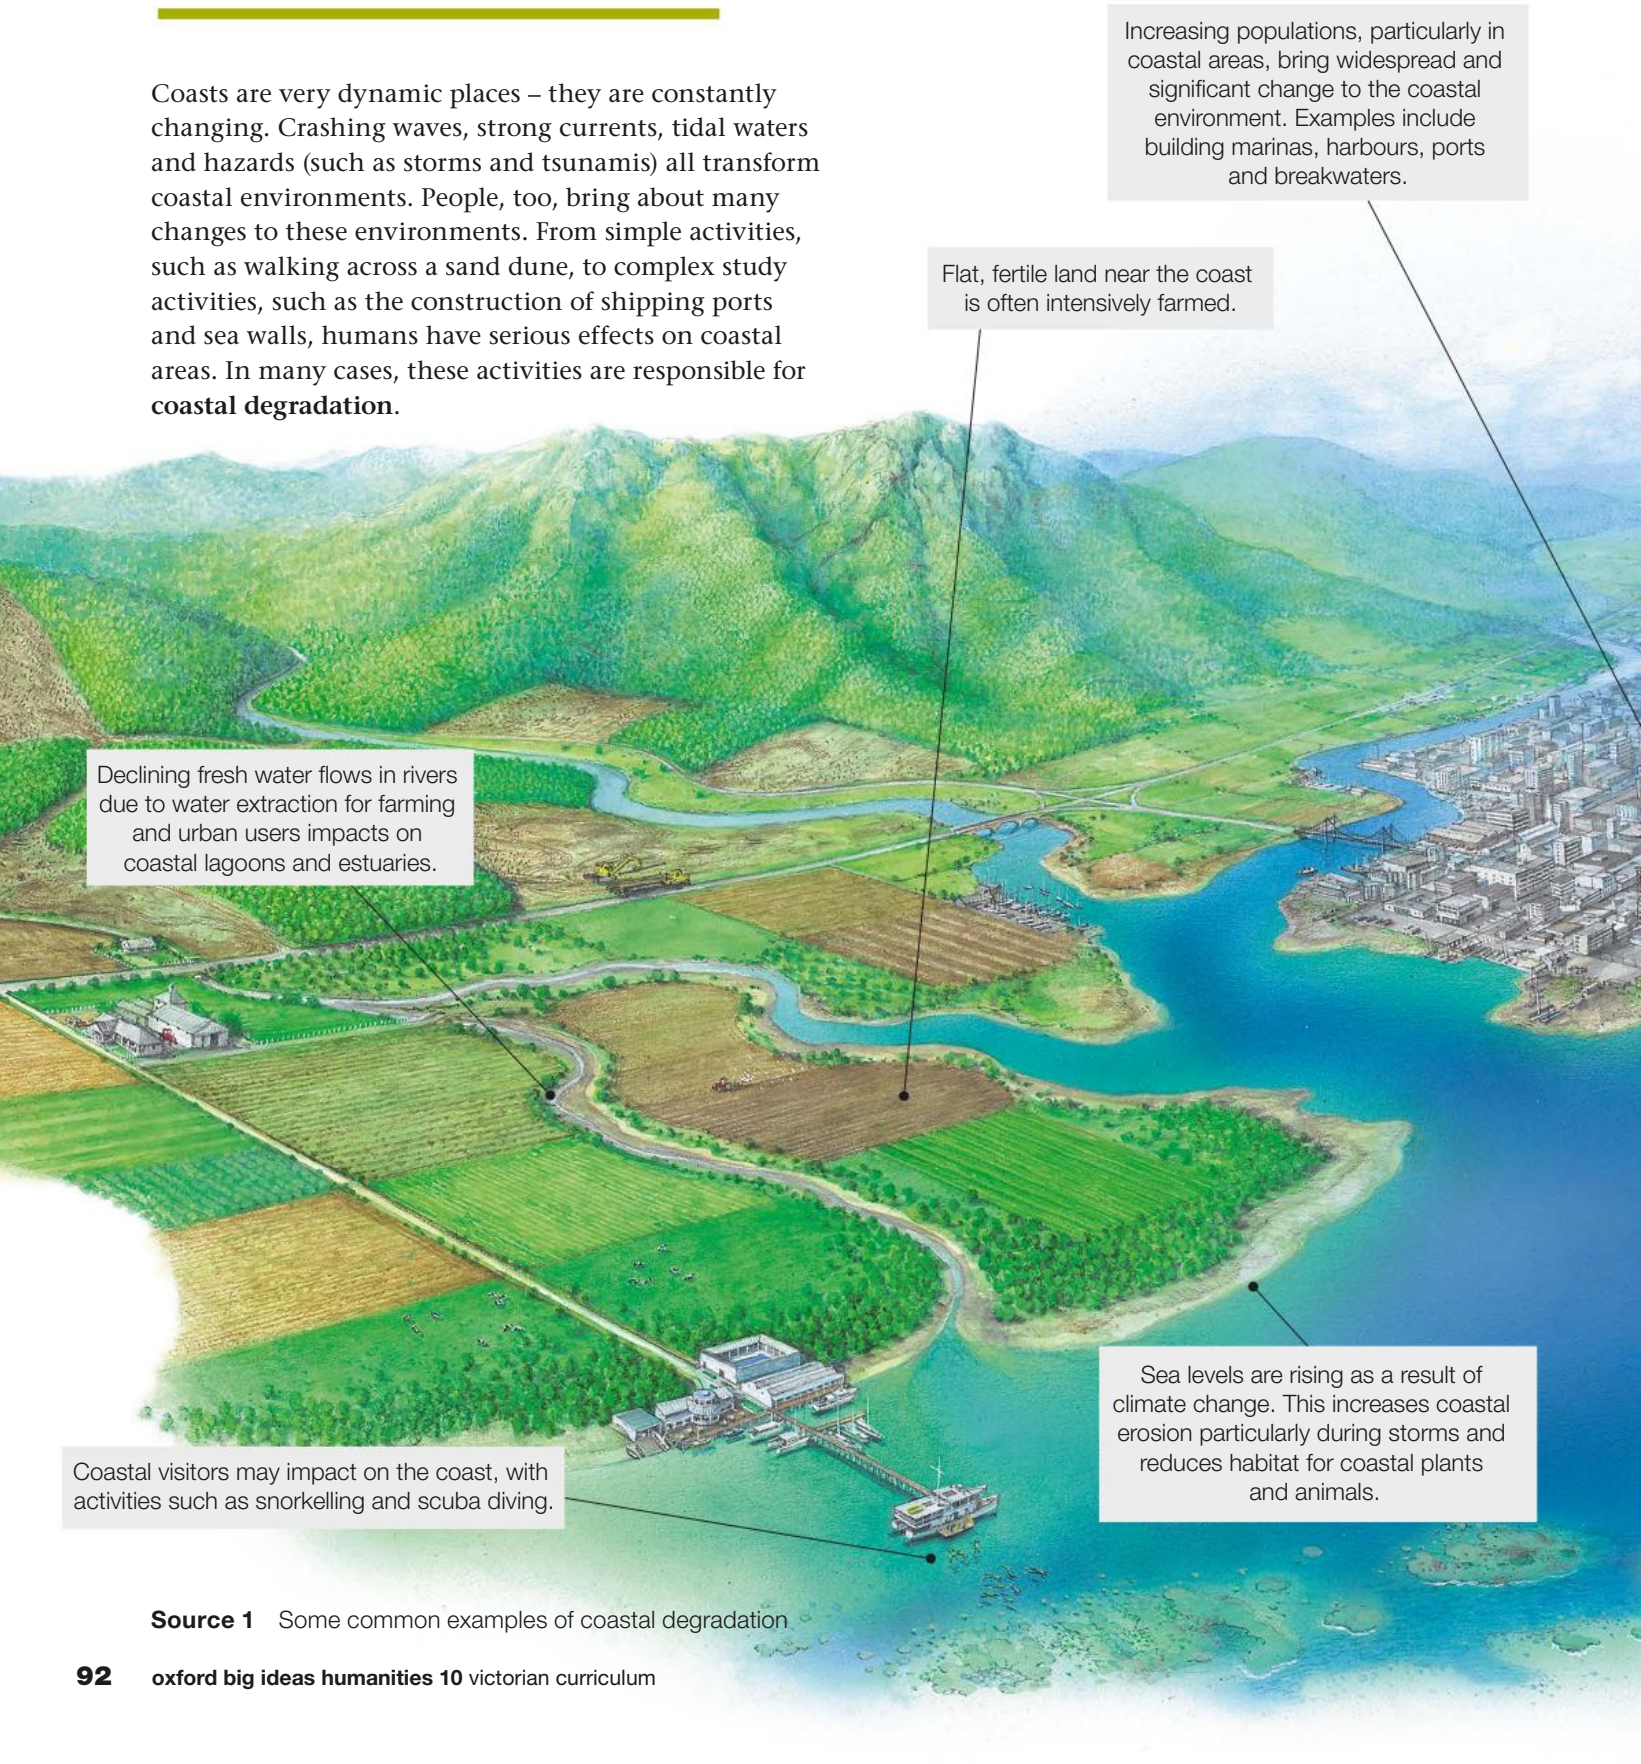

How can geographers help to manage coastal changes?

1 While the impacts of human activities are obvious on this coastline, their root causes are less obvious. What might some of these fundamental causes be?

2 Why do changes at coastal environments differ from place to place?

3.1 Change in coastal environments

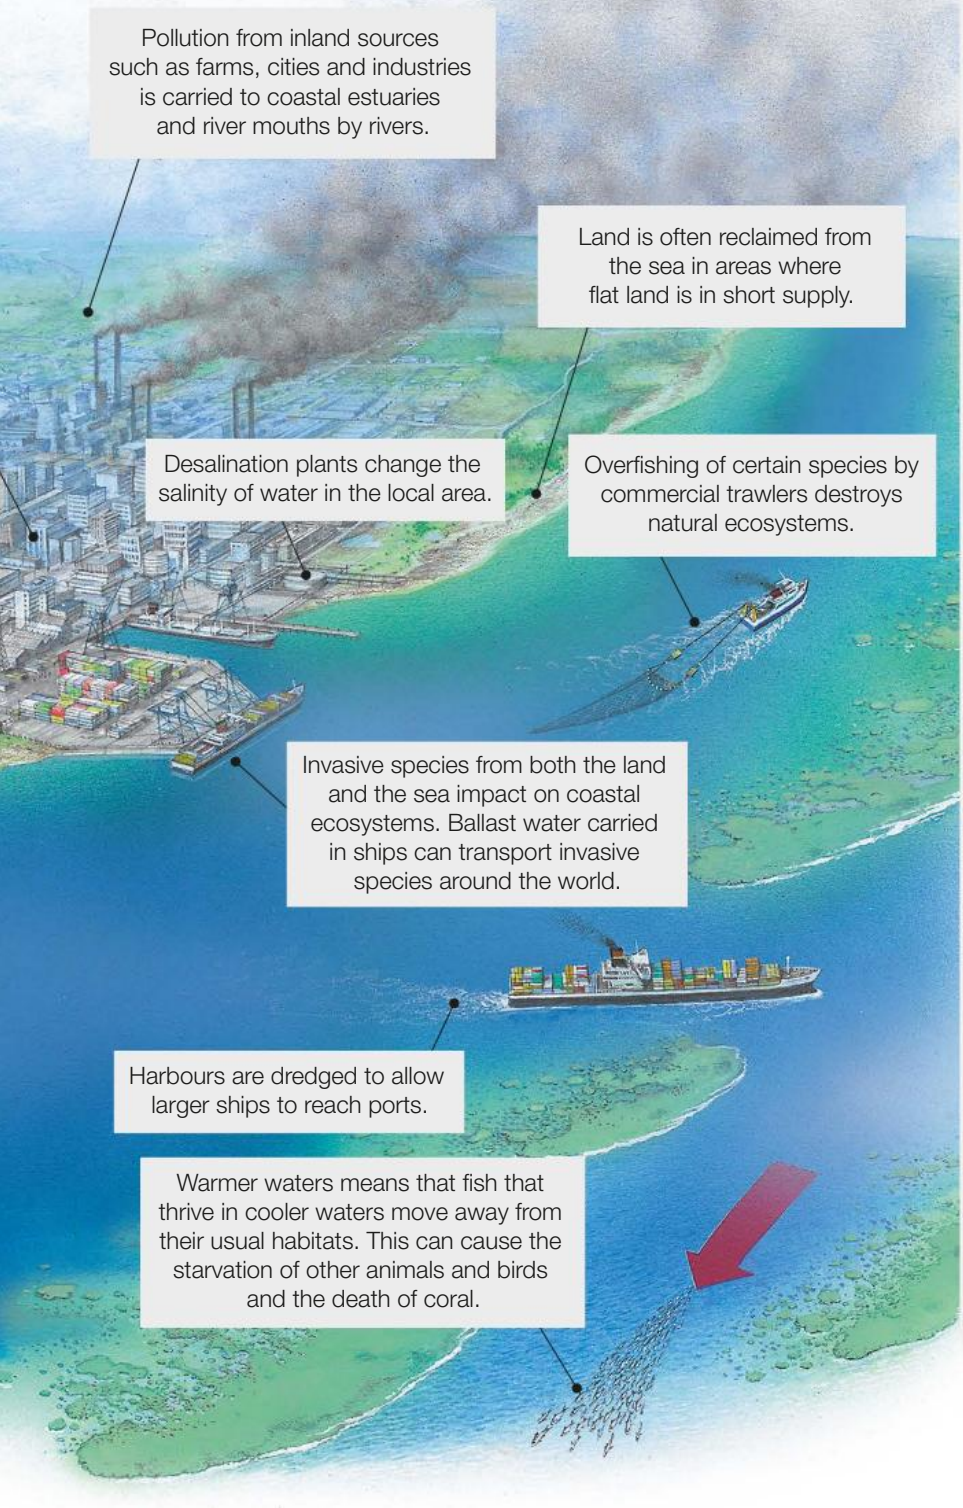

Coasts are very dynamic places – they are constantly changing. Crashing waves, strong currents, tidal waters and hazards (such as storms and tsunamis) all transform coastal environments. People, too, bring about many changes to these environments. From simple activities, such as walking across a sand dune, to complex study activities, such as the construction of shipping ports and sea walls, humans have serious effects on coastal areas. In many cases, these activities are responsible for **coastal degradation**.

Source 1 Some common examples of coastal degradation

Coastal degradation can be observed on many scales. It may be local, like when litter is dropped on a popular holiday beach, or regional, like when an oil spill washes ashore along hundreds of kilometres of coastline. The effects of coastal degradation are varied, and can include the loss of plant and animal species, or the arrival of an invasive species that permanently affects biodiversity in the area. Examples of coastal degradation can include sand dunes being washed into the sea, changing the coastline, or blooms of toxic algae damaging the marine environment. Source 1 provides an overview of some common forms of coastal degradation.

Over the course of this chapter we will be exploring some of the changes that are having the greatest impact on coastal environments. These include climate change, population growth in coastal areas, the loss of coastal biodiversity and marine pollution.

Check your learning 3.1

Remember and understand

1 What are some of the changes currently impacting coastal environments?

2 Are coastal environments close to cities more at risk from degradation than those in remote areas? Give some reasons for your answer.

Apply and analyse

3 The three main drivers of environmental degradation are climate change, population growth and economic growth. Examine Source 1.
   - **a** Classify each of the causes of coastal degradation shown according to one of these three drivers.
   - **b** Are there any changes that could not be classified in this way?
   - **c** Which of the three drivers appears to be responsible for most of the changes shown?
   - **d** Classify each of the changes shown according to whether they are taking place on the local, regional, national, international or global scale.

4 Use the geographical concept of interconnection to describe the links between changes on the land and changes at the coast.

Evaluate and create

5 Select one of the causes of coastal degradation shown in Source 1. Suggest a solution for the problems this creates.

3.2 A dynamic balance

While this chapter focuses primarily on the ways in which human activities bring about changes to coastal environments, it is also important to remember that natural processes are constantly shaping and changing the coast too. Rocks are eroded and material such as sand is transported by the energy of waves, tides and currents, creating a landscape that is constantly evolving. All this change means that coasts are very complex environments to study and understand.

Understanding natural processes in coastal environments

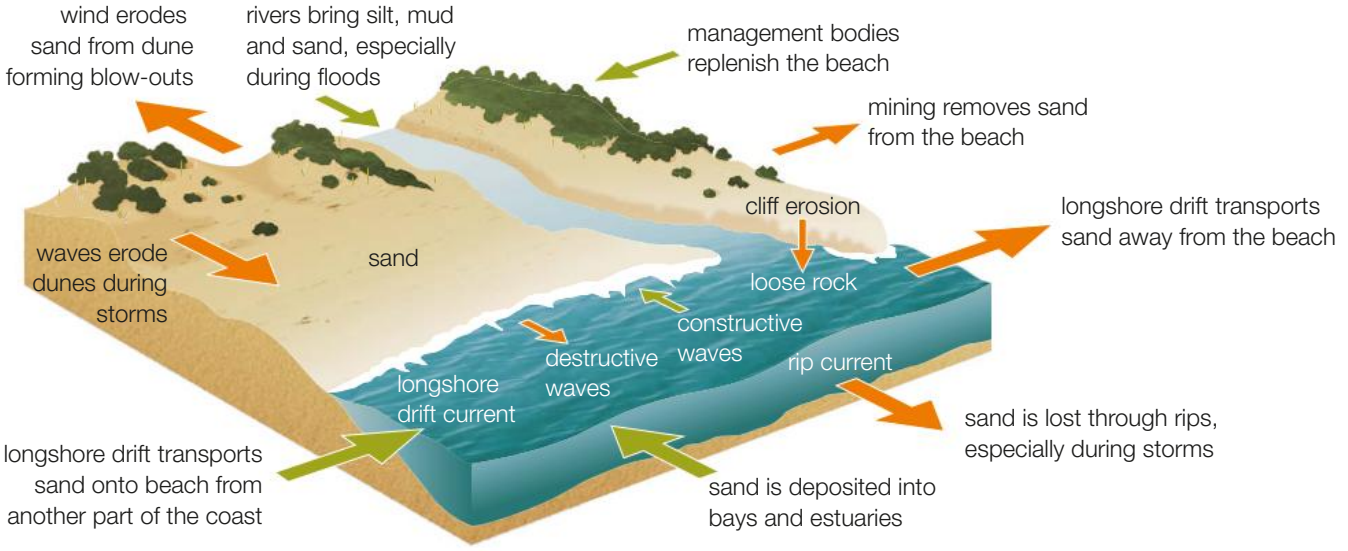

Geographers often use models – such as the systems model – to understand environments, study the relationships between environments, and learn more about the intricate forces that cause changes.

To apply a systems model to a coastline, each individual **landform** is considered to be a separate compartment. Energy such as wind and waves, and matter such as water and sand are studied as they arrive at and leave each compartment. Arriving energy and matter are referred to as inputs and leaving energy and matter are outputs.

Source 2 A range of coastal landforms are evident at Cape Byron, the easternmost point on the Australian mainland.

If the inputs are greater than the outputs, then the coastline and its landforms such as dunes and **spits** increase in size and the coast grows outwards. If the outputs are greater than the inputs, then landforms decrease in size and the coast retreats (see Source 1).

Source 1 How natural processes change coastal environments. Green arrows represent inputs while red arrows represent outputs.

key**concept:** Change

Dynamic equilibrium

Energy inputs on the coast – the waves and wind – often erode and transport matter, particularly sand. When matter is transported, the shape of the beach changes. When coastal landforms are in balance with energy inputs this is known as dynamic equilibrium. In this state, energy inputs are absorbed with no movement of matter, and the shapes of the landforms remain unchanged.

When dynamic equilibrium does not exist, inputs and outputs do not remain in balance, and the landscape changes.

In the case of a storm, energy inputs will not be constant, so erosion and deposits will not be in balance. Matter is eroded and transported offshore and the shape of the beach changes. Once the storm ends and the energy inputs return to 'normal' again, dynamic equilibrium returns and the beach will remain unchanged for as long as the energy inputs remain constant.

For more information on the key concept of change, refer to pages 12–13 of 'The geography toolkit'.

Source 3 In June 2016, a massive storm hit the east coast of Australia, claiming up to 15 metres of the coastline in some places. The owner of this property in the Sydney suburb of Collaroy returned to his home to find his backyard and in-ground swimming pool claimed by the waves. This storm is an example of how the dynamic equilibrium in this environment was disrupted.

Check your learning 3.2

Remember and understand

1 What are the main energy and matter inputs in coastal environments?

Apply and analyse

2 Use the systems model to describe the changes that are taking place in Source 2.

3 Examine Source 3.
- **a** What evidence is there for the movement of sand?
- **b** How has this movement changed the shape and location of the coastline?
- **c** Explain whether this is an example of dynamic equilibrium.

4 Select a coast that you know well (or one that you have visited on a field trip). Describe the energy and matter inputs and outputs in this environment and explain how these have shaped the coastline. For example, a series of sand dunes may have been formed by low energy waves bringing sand from a river mouth.

Evaluate and create

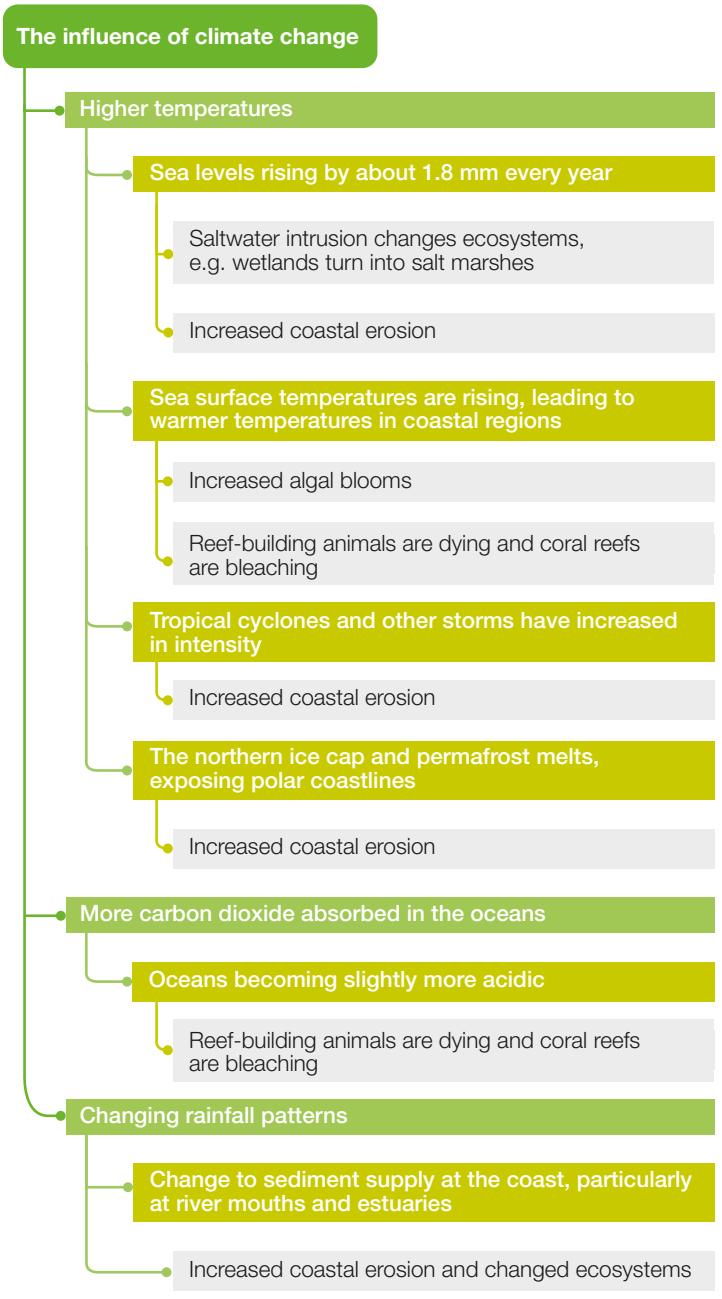

5 While many coastlines were heavily eroded by a 2012 storm on the north-east coast of the United States, others hardly changed.
- **a** Brainstorm some reasons why variations exist in the way coasts are changed.
- **b** Rank your reasons from the one most likely to explain these variations to the one least likely. Justify your rankings.

6 Complete a field sketch of Source 2. On your sketch, label the individual compartments that geographers would study.

3.3 Climate change and coasts

The world's climate is changing. Human activities such as land clearing and fossil fuel burning have led to increased amounts of carbon dioxide in the atmosphere. This is leading to **global warming**. As a result, the Earth's natural ecosystems are changing or adapting to the higher temperatures. Plants and animals that are unable to adapt to the warmer conditions are either moving towards the poles, where conditions are cooler, or facing extinction.

Global warming is also affecting coasts. In fact, coastal systems are undergoing greater change than virtually any other environment. As the interface between the land and the sea, coastal systems face pressures from changes in both of these places. Source 1 summarises the effects of climate change on coastal areas. One of the greatest concerns for Australian coastal areas is the rising of sea levels.

Source 1 The influence of climate change on the coast

Australia's rising seas

It can be difficult to convince people that sea levels are rising. This is because ocean and coastal waters are constantly changing as waves, tides and currents keep them in movement. Also, sea levels are rising very slowly. This doesn't mean that they are not rising, however. In fact, sea levels have been rising for at least a century. Scientists use a combination of tide gauges and new technologies such as satellite altimeters (instruments used to measure altitude) to monitor and measure sea-level changes. These measures show that sea levels have risen by about 1.8 millimetres per year over the last century and by about 3 millimetres per year since the mid 1990s.

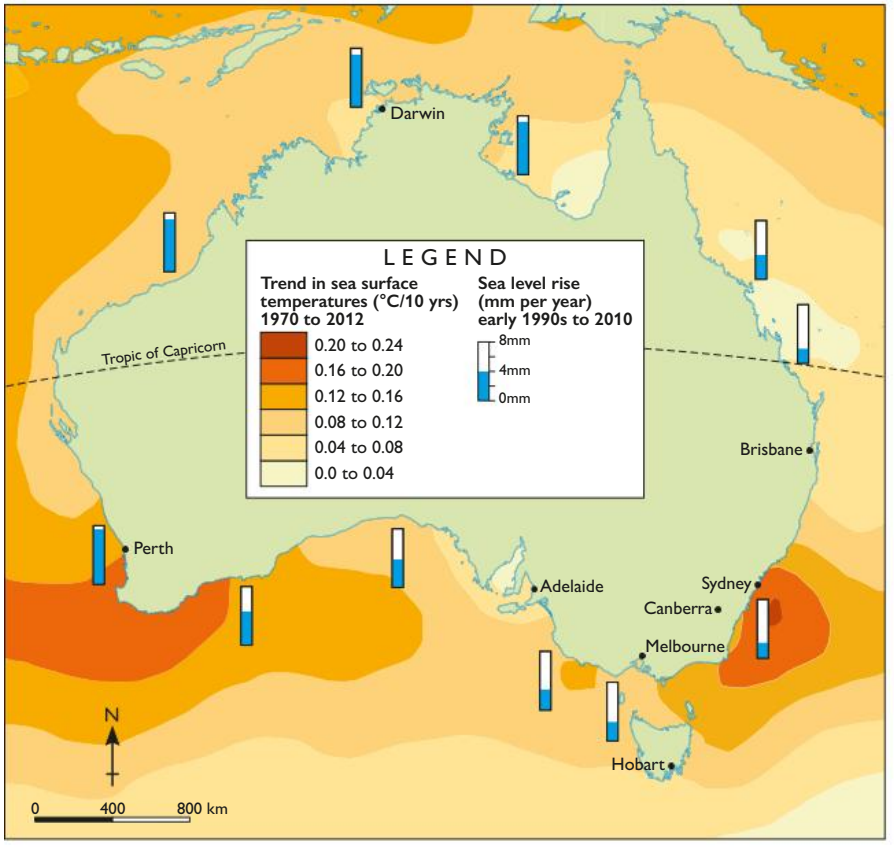

The physical impact of rising seas

An Australian government report in 2011 stated that, 'Sea levels are rising around Australia. A sea-level rise of a metre or more during this century is plausible. It could be less or much more. Between 16000 and 250000 individual homes are potentially at risk of inundation from a 1.1 metre rise in sea level.'

As well as the risk to homes situated on the coastline, rising sea levels are expected to cause:

- an increase in the erosion of beaches, with some beaches expected to disappear completely
- an increase in the incidence of flooding in low-lying coastal areas
- saltwater to enter coastal aquifers, destroying freshwater sources
- an increase in the severity of extreme weather events such as cyclones, bringing with them increased incidences of serious storm damage.

AUSTRALIA: TREND IN SEA SURFACE TEMPERATURES AND SEA LEVEL RISE

Source 2 Source: Oxford University Press

Coastal squeeze

As sea levels rise, important coastal ecosystems such as mangroves and salt marshes respond by retreating inland. However, in many places, sea walls and other coastal structures mean they cannot move and are therefore trapped in a narrowing strip of land (see Source 3). This process is known as coastal squeeze. This has led to healthy salt marshes and mangrove forests that are highly effective natural barriers to erosion being killed off by built structures that, in many cases, are much less effective at controlling erosion.

Source 3 This sea wall in Manche, France, is squeezing the salt marsh (centre) into a narrower strip as sea levels rise.

Check your learning 3.3

Remember and understand

1 What is coastal squeeze? What causes this problem?

2 Why is coastal erosion expected to increase as sea levels continue to rise?

Apply and analyse

3 Examine Source 2.
- **a** Describe the general pattern in sea surface temperature rises around Australia over the period 1970–2012.
- **b** Which regions of Australia experienced the greatest rises in sea levels from the early 1990s to 2010?
- **c** Based on the data provided, are you able to identify any links between sea surface temperature rise and rises in sea level around Australia? Why or why not?

4 Add four boxes to Source 1 to provide additional examples of the impacts that rising sea levels and sea surface temperatures will have on natural and human environments.

5 Visit the OzCoasts website (www.ozcoasts.gov.au) and locate the sea level rise maps section. Use these maps to examine the predicted sea level rise in a capital city or region of your choice. Describe the impacts that a 110-centimetre sea level rise would have.

3.4 The impact of climate change on the Great Barrier Reef

Queensland's Great Barrier Reef is not only one of the world's most beautiful natural treasures; it is also one of its most important. Extending over 2300 kilometres and 14 degrees of latitude, the reef contains over 2900 separate coral reefs and some of the world's most extensive mangrove and seagrass ecosystems. But the combined effects of a changing climate – rising sea temperatures, rising sea levels, **ocean acidification**, and extreme weather events – are causing problems for this remarkable natural environment.

Rising sea temperatures

Studies show that the current temperatures of the Coral Sea are warmer now than at any time over the last 300 years. On average, temperatures are 0.4° Celsius warmer than they were in the late 1800s. As average temperatures rise, warm weather events heat the sea surface to a temperature that coral polyps (the tiny organisms that construct the coral reef) cannot tolerate. The coral polyps feed on algae, but the warmer water temperature causes a build-up of poisons in the algae. In order to survive, the polyps expel the algae on which they feed, as well as some of their own tissue. This process turns the coral white and is known as coral bleaching. Over the short term, bleaching does not kill the coral polyps. However, if sea temperatures remain high over an extended period, the coral polyps eventually starve and the reef will die out.

Rising sea levels

As the climate warms, land ice is melting. For example, the Greenland ice sheet, which covers 80 per cent of Greenland, is melting an average of 195 cubic kilometres per year. The water from this melting ice ends up in our oceans. Rising sea temperatures are also causing the ocean to expand as a result of the warmer water.

In the Coral Sea, sea levels are rising by about 3 millimetres per year. This is expected to have little impact on the coral reefs as they can grow upwards by about 6 millimetres per year. Surrounding ecosystems, however, are likely to be severely affected. As saltwater intrudes further inland, environments such as mangroves and freshwater lakes are expected to change significantly. Low-lying islands are also expected to disappear beneath the rising seas, changing the distribution of nesting birds and turtles.

Source 1 An example of mass coral bleaching on the Great Barrier Reef

Source 2 The Great Barrier Reef islands such as Heron Island are important nesting sites for the endangered loggerhead turtle.

Ocean acidification

Ocean acidification is a term used to describe the change in water chemistry caused when the carbon dioxide we pump into the atmosphere is absorbed into the ocean. The extra carbon dioxide in the water makes it more acidic. Ocean acidification can have dire consequences for a coral reef.

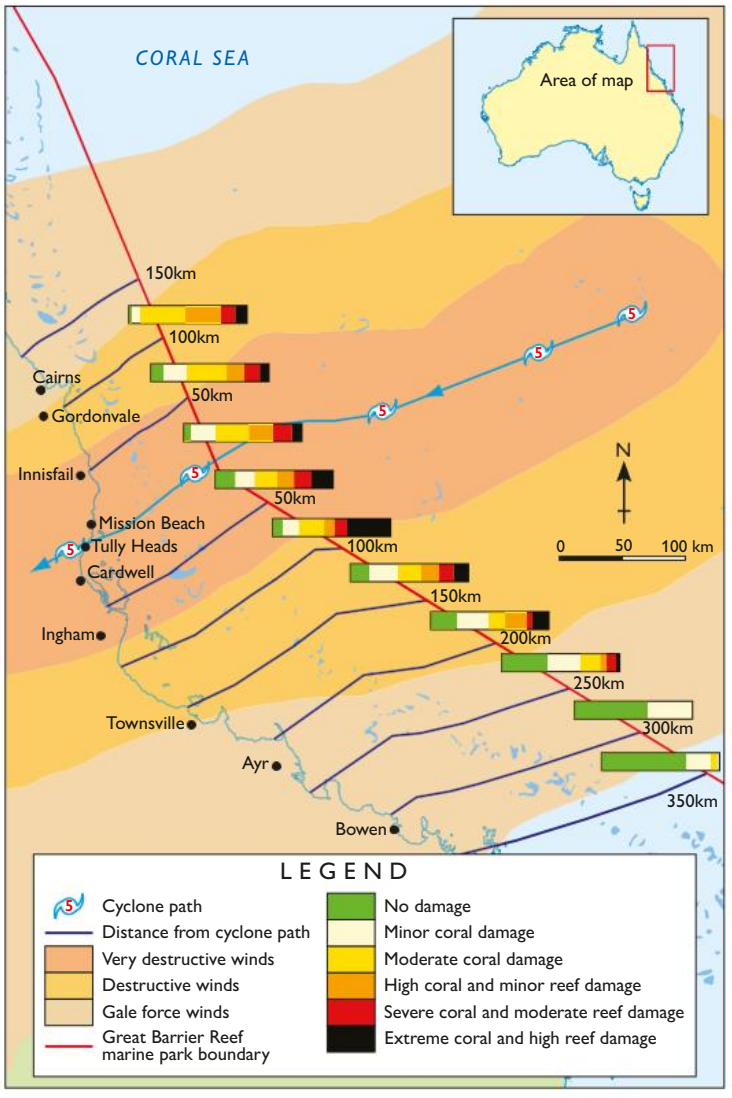

As carbon dioxide is absorbed into the ocean, it reduces the amount of carbonate (a kind of salt) in the water. Marine animals need this carbonate to make their shells and skeletons. Reef-building animals such as coral polyps then use these shells and skeletons to create a reef. With fewer shells and skeletons available, construction of the reef is seriously limited. Over the long term, ocean acidification is expected to be the greatest challenge facing the Great Barrier Reef.

Extreme weather events

Increases in the severity and frequency of flooding and tropical cyclones also pose serious threats to the reef. Flooding brings increased sediment to the reef and this sediment smothers plants. Pesticides and other chemicals are also carried by floodwaters, adding to the levels of pollution in the water around the reef.

Cyclones generate large and powerful waves which damage corals and the reef structure. One of the worst cyclones to hit the reef in recent times was Cyclone Yasi in 2011 (see Source 3). Reefs are able to recover from these natural events but need time to do so. As extreme weather events become more frequent, reefs have less recovery time.

GREAT BARRIER REEF: DAMAGE FROM CYCLONE YASI, FEBRUARY 2011

Source 3 Source: Oxford University Press

Check your learning 3.4

Remember and understand

1 Why are sea levels around the world rising?

2 How do rising sea levels impact on nesting birds and turtles?

Apply and analyse

3 Examine Source 3.

- **a** Describe the track of Cyclone Yasi and the areas in which the winds were most destructive.
- **b** In which areas was reef damage the greatest? Which areas suffered the least damage?
- **c** Describe the relationship between wind speed and reef damage.

Evaluate and create

4 Construct a flow chart or mind map showing the impact of ocean acidification on coral reefs.

5 Rank the four impacts of climate change described here from the one likely to have the greatest impact on the reef to the one likely to have the least impact. Write a paragraph justifying your ranking.

6 Imagine that the Great Barrier Reef disappeared due to the combined effects of climate change. How would this affect the Queensland coast and the Queensland economy?

3.5 The impact of population growth on coasts

About one-quarter of the world's population live within 100 kilometres of the coast. Most of the world's megacities in both the developed and developing world are located on the coast and many of them are growing rapidly. In China, for example, 1000 people a day move to coastal cities from the country's interior. The impact of billions of people in millions of coastal cities, towns, villages and farms has caused one United Nations expert to state that 'humankind is in the process of annihilating coastal and ocean ecosystems.'

The impact of human settlements on coastal areas

The coast has always been an attractive place for human settlement. Coastal regions provide access to food and water, and people have long used boats and ships for transportation. But the growing number of people along the coast, together with increasing levels of trade and movement between settlements have had many detrimental effects on coastal ecosystems:

- Engineering structures such as sea walls, **groynes**, breakwaters, training walls and marinas have hardened the coast and changed natural cycles of **erosion** and **deposition**.
- Changing the natural flow of water by dredging channels, diverting rivers and building dams has altered the amount of fresh water and sediment arriving at the coast, impacting on natural ecosystems and landforms.
- Discharging sewage into the ocean, the run-off of fertilisers from farms and other contaminants entering coastal waters have caused pollution in the oceans.
- Increased numbers of people in coastal areas has led to overfishing of the fish and shellfish. In some places coastal fish stocks have fallen by 90 per cent in the last 30 years.
- Ports are often an entry point for invasive species that bring dramatic changes to coastal ecosystems.
- The presence of large numbers of people on beaches have an impact: people leave litter on beaches, they walk over native plants and impose walkways, they can destroy breeding areas of sea birds and bring predators such as dogs into the environment.

Source 1 The contrast between the natural and built-up environments of Tokyo Bay, Japan. A beach in Tokyo Bay (left), and reclaimed land near the CBD (right).

Continued growth and competition for land

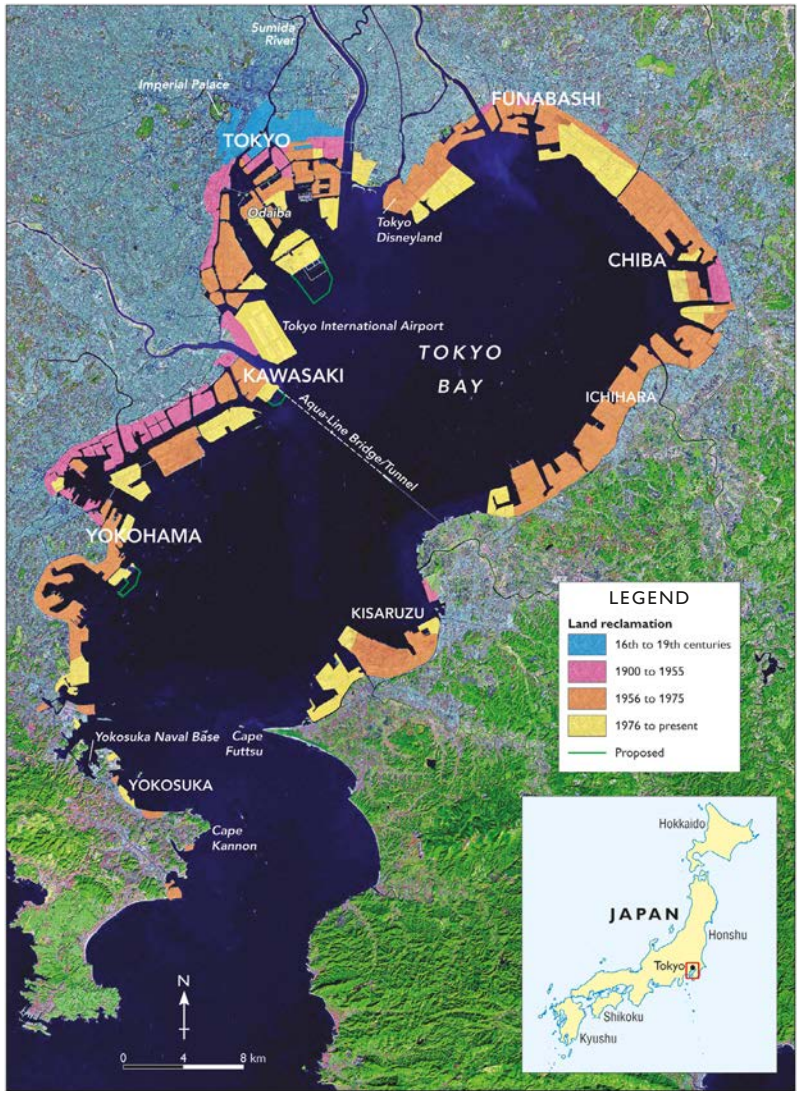

Many coasts have been converted from natural ecosystems to human landscapes. Cities need space to grow and harbours for trade and transport. Mangroves, marshes and **estuaries** have been drained and filled in, sand dunes flattened and built over and communities of coastal plants cleared. In some places, land for expansion has been so scarce that new land has been built in bays and estuaries from rocks, rubbish and silt from the sea bed (known as **land reclamation**).

Case study: Tokyo Bay

The largest example of reclaimed land is Japan's Tokyo Bay. Twenty per cent of the bay has been filled in to create 250 square kilometres of new land. This new land was created around the edge of the bay using urban waste and silt from the bottom of Tokyo Bay. The reclaimed land is now home to some of the world's most expensive real estate including an international airport and Tokyo Disneyland.

In September 2013, Tokyo was selected as the host city for the 2020 Summer Olympic Games. Many of the sporting venues will be built on reclaimed land and this is expected to further increase the property values in the areas surrounding Tokyo Bay.

Check your learning 3.5

Remember and understand

1 What is land reclamation and why is it used?
2 Describe the changes to coastal ecosystems as a result of coastal city growth.

Apply and analyse

3 Use an atlas to research the location of the world's megacities (cities with over 10 million people). How many megacities are coastal? How many of these coastal megacities are on river mouths or estuaries?
4 Why would the impacts described on these pages be particularly serious for small island communities?
5 Would the population impact on coasts be greatest in developing or developed countries? Discuss this with a partner and then with the class.

Evaluate and create

6 Construct an overlay map of Tokyo Bay using Source 2. On the base map show the natural outline of the bay. On the overlay show the total area of reclaimed land. Describe the spatial change over time shown on your map.
7 Use Google Earth to explore the coastline of Tokyo Bay. Estimate the percentage of the coastline that is:
   a heavily modified (for example, reclaimed land)
   b lightly modified (for example, sea walls or groynes constructed)
   c not modified.

3.6 Loss of coastal biodiversity

The number of plant and animal species on a global scale is in decline. The drivers of this wave of extinction are all caused by human activities such as the destruction of habitats, overexploitation of ecosystem services, pollution, climate change and the introduction of invasive species. Recent studies of the four key coastal ecosystems – mangroves, seagrass beds, salt marshes and coral reefs – reveal that all are declining in size and biodiversity.

Mangroves

Mangroves provide a wide range of crucial ecosystem services in many tropical areas, including providing wood, protecting communities from the effects of offshore storms and as a breeding ground for fish and crustaceans. Despite their importance, about one-fifth of the world's mangroves have been lost since 1980, an estimated area of 36 000 square kilometres (see Source 1). Countries such as Kenya, Liberia and Puerto Rico have already lost over 70 per cent of their mangrove forests. Currently, the United Nations estimates that mangrove forests are being cleared at four times the rate of land forests. Mangroves have been cleared to make way for agricultural land, harbours, housing and fish farms.

Source 1 Many mangrove forests, such as here in Malaysia, have been cleared to make way for shrimp farms.

Source 2 Salt marshes protect shorelines from erosion and reduce flooding.

Source 3 The amazing leafy seadragon, threatened by a loss of seagrass near Australia's southern cities.

Seagrass beds

Seagrass beds are an important ecosystem for dugongs and manatees (both large sea mammals) and the leafy seadragon (see Source 3), as well as providing food for hundreds of other species. Seagrass beds are also important for stabilising sediments in the water, absorbing carbon dioxide and protecting against erosion. Over the last 200 years, about 30 per cent of the world's seagrass beds have disappeared, many of them within the last few decades. The main threats to seagrass beds and the biodiversity they support are the dredging of the sea bed, the development of tourist marinas and water pollution from rivers and streams.

Salt marshes

Salt marshes are intertidal habitats, meaning they are above water at low tide and under water at high tide. Salt marshes are essential for healthy fisheries and coasts. They provide food, refuge and a habitat for the offspring of more than 75 per cent of marine species, including shrimp, crab and many fish. Birds also feed on the marshes. Salt marshes protect shorelines from erosion and reduce flooding by slowing and absorbing rainwater (see Source 2). They also help to maintain water quality by filtering runoff and absorbing excess nutrients. Twenty-five per cent of the world's salt marshes have already been lost; many turned into agricultural land for farming.

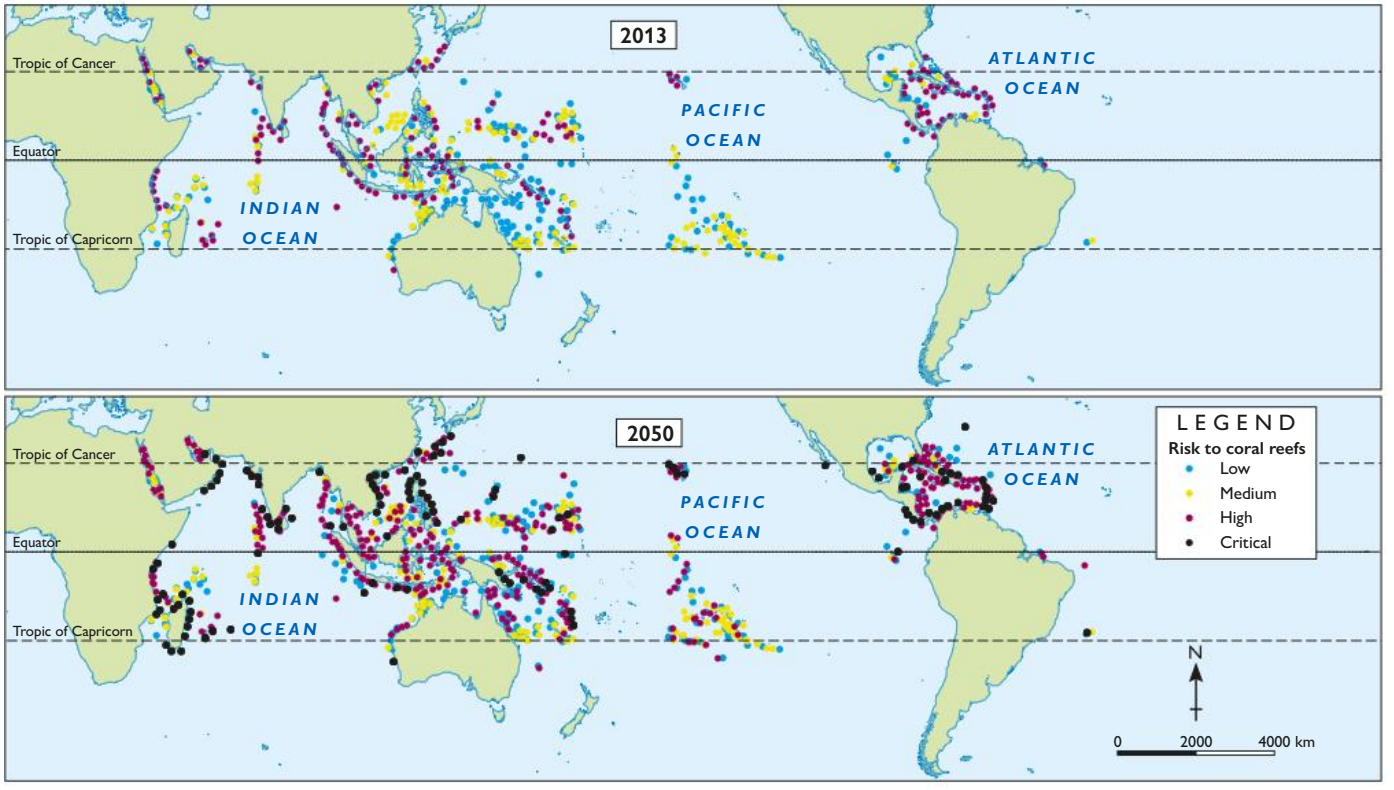

Coral reefs

Coral reefs are home to one-quarter of the world's fish species. The richest area of coral is the western Pacific Ocean. In the 1980s, 66 per cent of the region's reefs were covered in living coral, but by 2004 this had declined to just 4 per cent. In the Caribbean Sea, the amount of living coral fell by one-quarter in a single year.

Up to a billion people rely on the ecosystem services provided by coral reefs, including food, protection from waves and storms and income from reef-based tourism. Despite their importance, the coral reefs are under threat.

As well as the threats from warmer sea temperatures causing coral bleaching, coral reefs are also in danger from human activities such as land-based industries increasing the levels of sediment and pesticides in the ocean, and from invasive species such as the crown-of-thorns starfish.

WORLD: CORAL REEFS AT RISK IN 2013 AND PROJECTED TO BE AT RISK IN 2050

Source 4

Source: Oxford University Press

Check your learning 3.6

Remember and understand

1 What ecosystem services are provided by the four coastal habitats discussed? Classify these as sinks, sources, services or spiritual functions.

Apply and analyse

2 What are the five drivers of biodiversity loss in coastal habitats? Give an example of each of these.

3 Examine Source 4.

- **a** Describe the distribution of the world's coral reefs using the PQE method. For more information on the PQE method refer to page 28 of 'The geography toolkit'.
- **b** Which reefs were most at risk in 2013?
- **c** Which reefs are projected to be at risk by 2050?

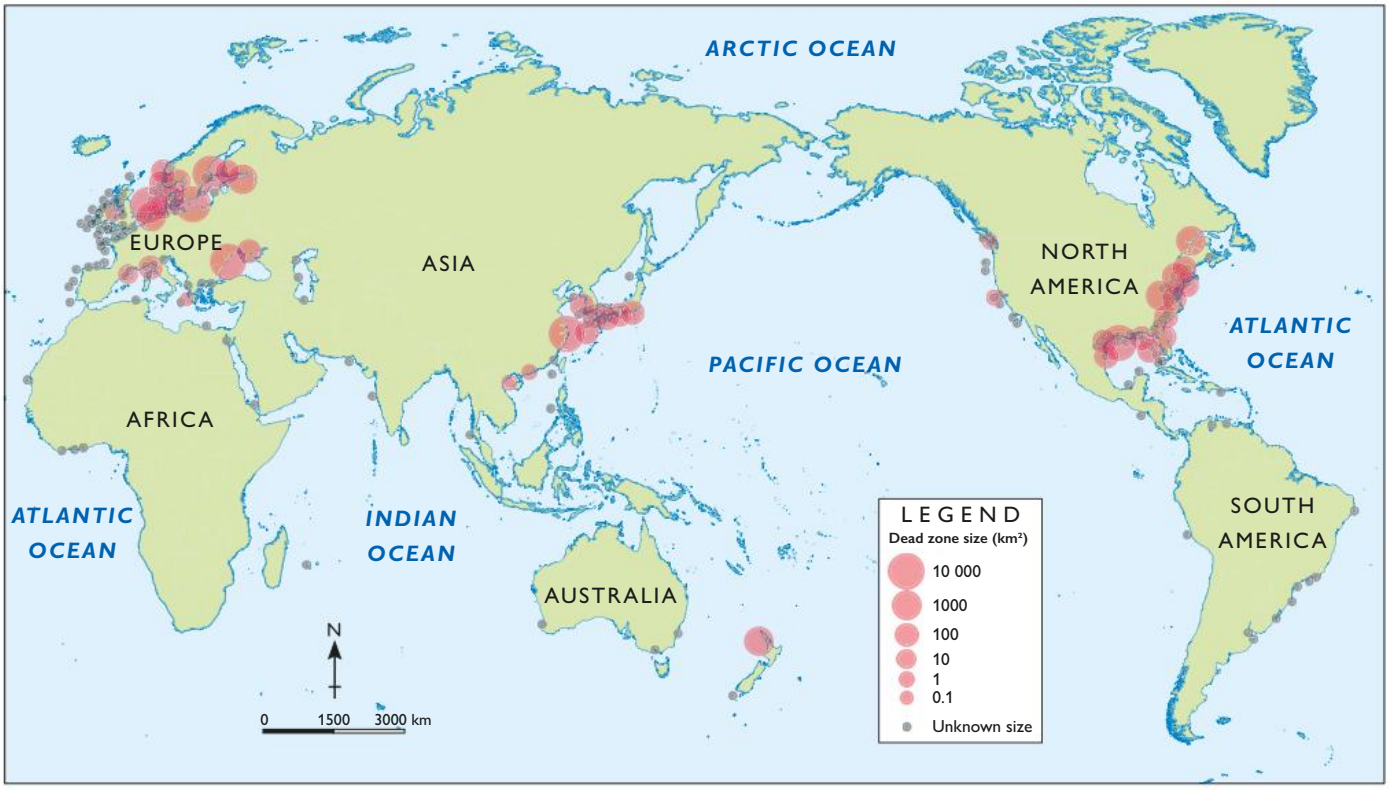

Evaluate and create

4 Sketch Source 1 and shade intact mangroves and disturbed mangroves using two different colours. Label features of the natural and human environments.

5 Research the threats faced by one coastal species in Australia such as the dugong, orange bellied parrot, coastal emu, grey nurse shark, marine turtles or sea snake, and present your findings to the class.

3.7 Coastal and marine pollution

WORLD: LOCATION OF MARINE DEAD ZONES

Source 1

Source: Oxford University Press

A pollutant is any substance released into the environment that has a harmful or negative effect on the natural environment. Coasts are particularly vulnerable to the damaging effects of **pollution** as pollutants released on land and in the sea usually find their way to the coast, carried by rivers, tides, waves and ocean currents.

Sources of coastal pollution

While it might be tempting to think that most coastal pollution comes from people using the coast such as beach-goers and people fishing, this is generally not the case. Rivers carry urban pollutants such as sewage, industrial waste, chemicals and water washed from streets and yards as stormwater to the coast. Rivers also bring pollutants from rural areas such as animal manure, pesticides and fertilisers washed from the land in heavy rain. Deforestation in river catchments also increases the amount of sediment and fresh water carried to the coast. One of the most serious consequences of coastal and marine pollution is the formation of dead zones in the ocean (see Source 1).

Source 2 This bloom of algae, triggered by fertilisers washed from farms, covered beaches in southern China in 2011.

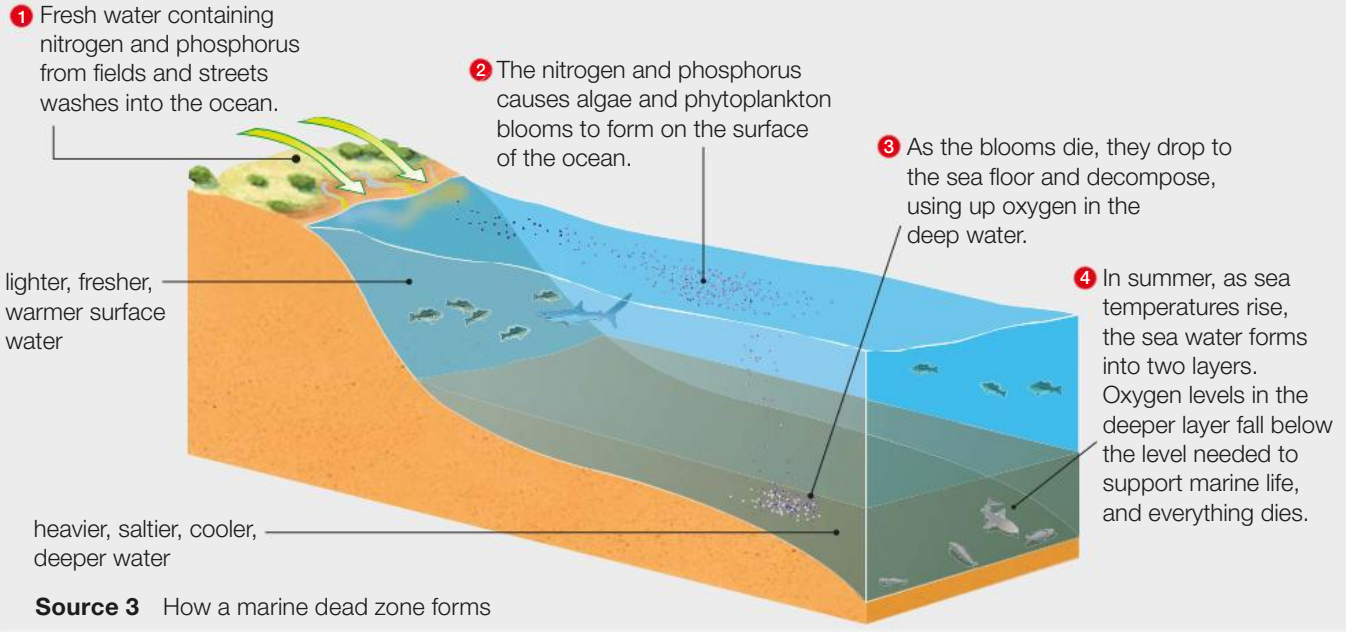

key**concept:** Environment

Marine dead zones

Marine dead zones are areas of fresh water or salt water where oxygen concentration has become too low to support life. Some rivers carry a cocktail of pollutants, all of which arrive at the coast. Waves, tides and currents then carry these pollutants along the coast and out to sea where they can cause great environmental damage. Arguably the most serious damage is the creation of marine dead zones in the ocean, devoid of oxygen and marine life. Dead zones form in summer with the warmer weather conditions encouraging algae blooms which then go on to deplete oxygen levels in deeper seas (see Source 3).

Although the number and size of marine dead zones fluctuate, they are on the increase. In the 1960s, only 39 dead zones were identified, compared with 405 in 2000. Some dead zones are only a few square kilometres in size and last only a few months. The largest dead zones, however, are massive. Dead zones in the Baltic Sea and Gulf of Mexico can be more than 18000 square kilometres in size.

For more information on the key concept of environment, refer to page 8 of 'The geography toolkit'.

Source 3 How a marine dead zone forms

Check your learning 3.7

Remember and understand

1 What is meant by the term 'marine dead zone'?

2 What are the causes of marine dead zones and what are the effects of these zones?

Apply and analyse

3 Examine Source 1.

- **a** Describe the distribution of the world's largest marine dead zones using the PQE method. For more information on the PQE method refer to page 28 of 'The geography toolkit'.
- **b** Describe and account for the relationship between marine dead zones and areas of high population density.

4 Why do dead zones grow and decline throughout the year?

Evaluate and create

5 Marine dead zones can be explored through the geographical concept of environment, but they could also be used as an example of the geographical concept of interconnection. Describe how dead zones relate to interconnection.

6 In small groups, discuss possible solutions to the problem of marine dead zones and present your ideas to the class. You may wish to research the ways in which communities and nations have responded to a large dead zone in the Black Sea as a starting point.

3A rich task

Dunwich's disappearing churches

Dunwich is a small coastal village located in south-eastern England. Its current population is only 100 people, but in the 13th century Dunwich was one of the largest ports in eastern England. With a population of around 3000 people, it was one of England's 10 largest towns. Merchants traded wool, grain, fish, wine and furs across the North Sea to Iceland, the Netherlands and France. Dunwich had eight churches, three chapels and two hospitals.

Storms, tides and longshore drift have all combined to make Dunwich a very different place today. The coastline at Dunwich has receded, on average, 1 metre per year and is now 2 kilometres west of its position in Roman times in the 4th century CE. Buildings that sit on the present-day cliffs were once 2 kilometres inland.

Large storms in 1286 and 1328 swept large areas of the town into the sea. Because there was so much material deposited in the sea, the harbour was blocked by the growth of a large spit. Trade and fishing were ruined and the population declined. By 1347, a quarter of the city had been lost, and the remainder of Dunwich disappeared into the sea over the next few hundred years. Most of the original buildings have disappeared, including all eight churches. The last one disappeared early in the 20th century (see Source 1).

Source 1 The last of Dunwich's old churches photographed in 1908 shortly before it collapsed into the sea.

skilldrill: Data and information

Mapping environmental change using multiple overlays

Creating **overlay maps** is a useful technique for showing and measuring environmental change. To complete a multiple overlay map follow these steps.

Step 1 Construct a base map of the region using the current topographic map. This should be traced rather than drawn freehand to make it as accurate as possible. Include key natural and human features such as the coastline, towns, roads and the extent of the marshes.

Step 2 Add labels such as rivers and town names. Add a north arrow, legend, title, scale and source.

Step 3 On a plastic sheet or piece of tracing paper, construct a map of the same region from the earliest map you have at the same scale. Remember that this map will sit on top of your base map, so features such as rivers that have remained the same should line up.

Step 4 Place the overlay map carefully on top of the base map and use a piece of tape like a hinge along one side to anchor the overlay in place.

Step 5 Add a title to the overlay map that does not cover the one on the base map. A north arrow, legend, scale and source should not be needed as these are the same as for the base map.

Step 6 Repeat steps 3–5 to complete an overlay from another map of the same region from another time. Hinge this at the opposite side of the base map with a piece of sticky tape.

Apply the skill

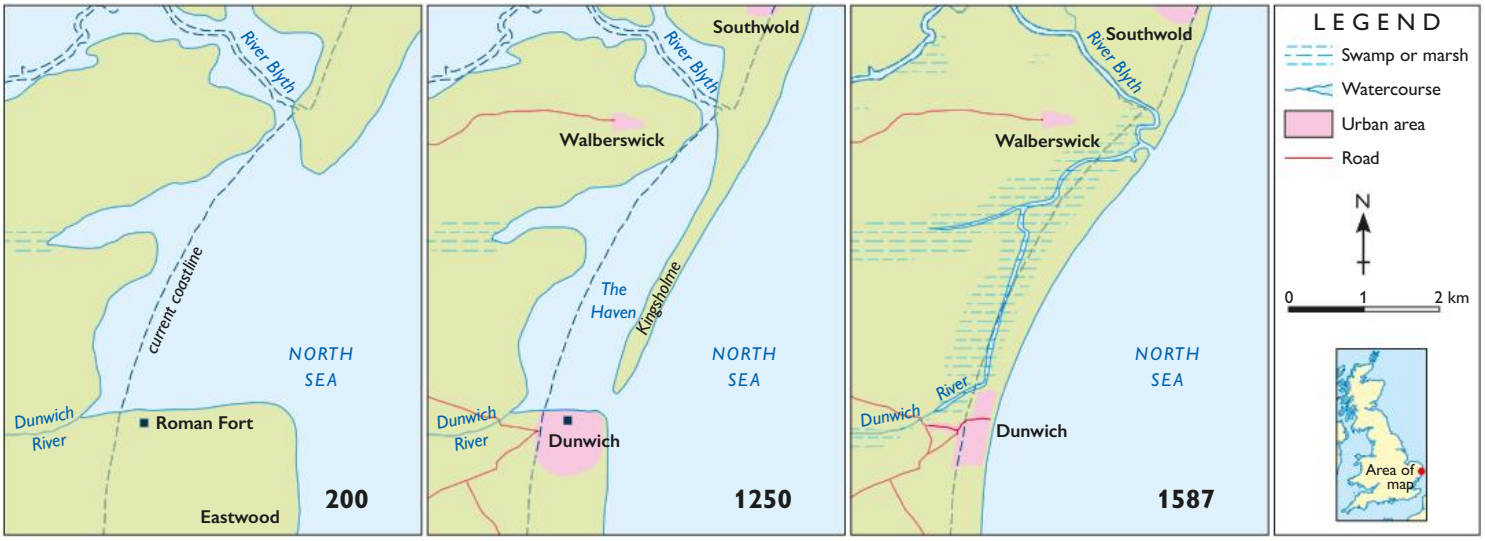

1 Complete a multiple overlay map using the topographic map in Source 3 as the base map, the 200 map as the first overlay and 1587 as the second overlay (both Source 2).

2 Describe the changes that occurred to this coastline between 200 CE and 1587. Was the dominant process during this time erosion or deposition?

3 What other features on the 200 map might help to explain the dominant process that occurred between 200 and 1587?

4 What effects did these changes have on human activities?

DUNWICH: CHANGING COASTLINE

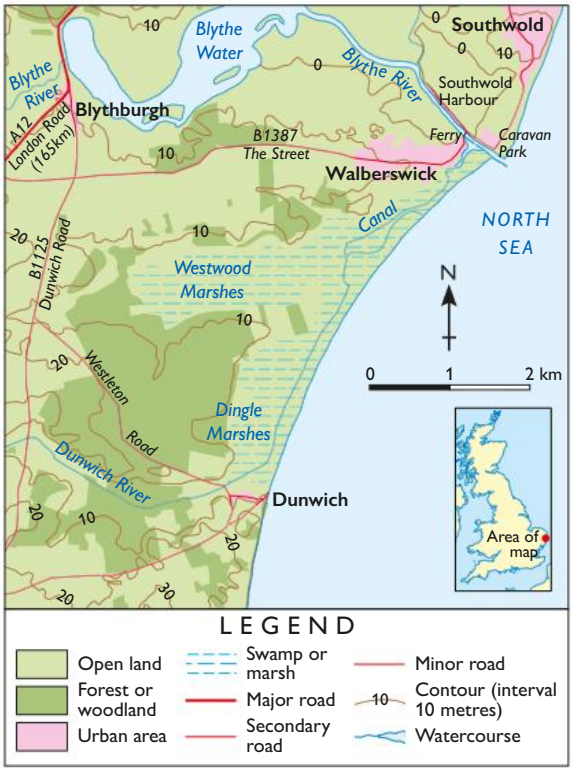

Source 2

Source: Oxford University Press

5 Describe the changes that have occurred to this coastline since 1587. Is the dominant process erosion or deposition?

6 Estimate the area of lost land since 1587. Do this by multiplying the length of this strip of land by its average width.

DUNWICH: TOPOGRAPHIC MAP

Source 3

Source: Oxford University Press

Extend your understanding

Conduct some extra research on the Internet and complete the following tasks.

1 In an effort to stop further erosion of this coastline the local authorities have commissioned a study into possible protection measures. The study reports that there are three main options available to the local community: sea walls, groynes and breakwaters. Which of these measures would you recommend the local authorities adopt to manage erosion on this coastline? Give at least three reasons for your answer.

2 Some members of the local community have campaigned against the hard engineering techniques suggested in the study. They argue that a managed retreat system is the only sustainable option. Conduct research on this approach and decide if you agree with them. Give some reasons to support your decision.

Source 4
The steep face of dunes at Dunwich are the result of continued erosion.

3.8 New ways of managing coasts

Many attempts have been made by people in the past to try to control the natural coastal processes of erosion, transportation and deposition. Unfortunately, due to a poor understanding of these natural processes, attempts have often made problems worse or simply moved them to another part of the coast. In addition, issues have tended to be managed on a local scale without regard for the broader environments that influence the coast such as river catchments and marine ecosystems.

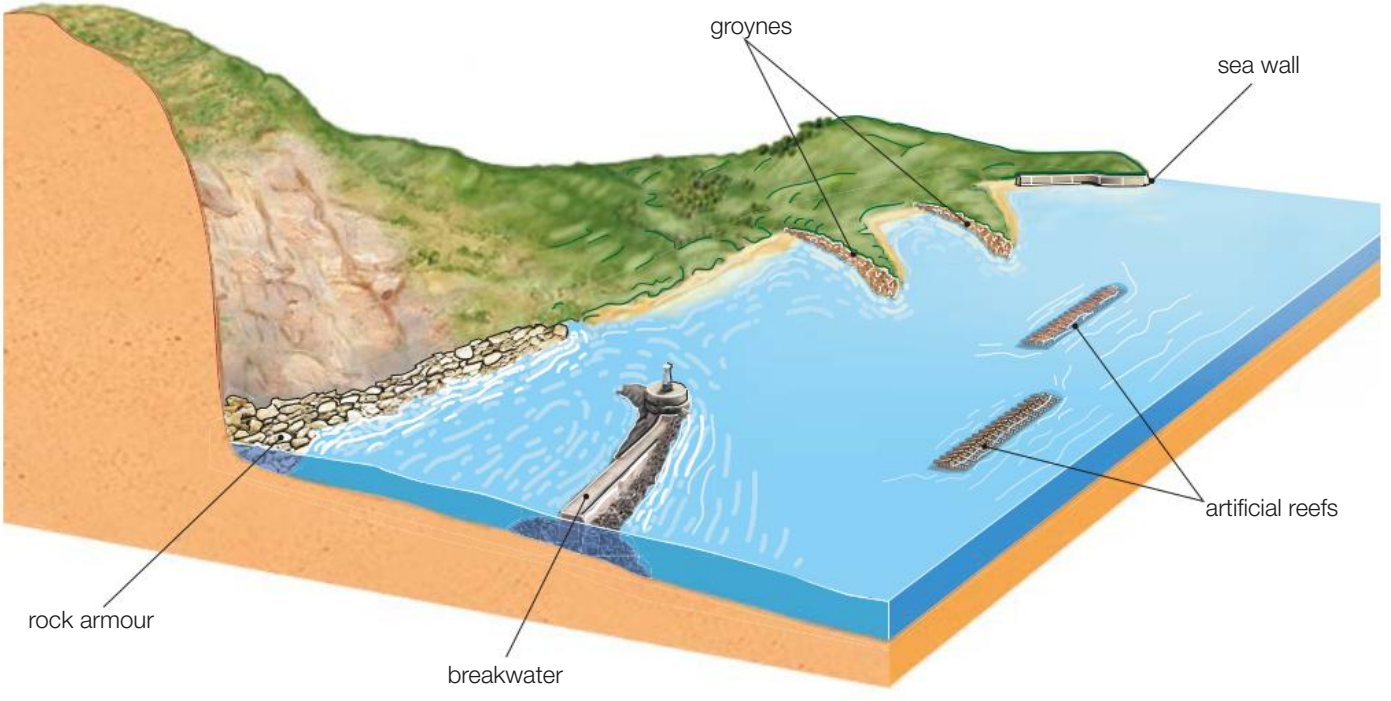

More recently, a greater understanding of natural processes as well as a recognition of the widespread impacts of coastal management has led to new approaches. These include soft engineering (using natural processes), integrated coastal zone management (ICZM), and the protection of coastal ecosystems with special marine reserves.

Managing natural processes: hard vs soft engineering techniques

One of the key principles underpinning effective coastal management is to work with natural processes. In the past, coastal management has tended to use 'hard' engineering. Hard engineering refers to the building of structures such as sea walls, groynes, artificial reefs, rock armour and **breakwaters** to protect coastlines from the erosive effects of waves or to trap sand. The main hard engineering techniques are shown in Source 1.

Many people in coastal areas like these hard options as the results are obvious and immediate. These structures tend to be expensive, however, and to have a high impact on natural environments. In many cases, they also create other problems or simply move the problem further along the coast.

By comparison, soft engineering coastal management techniques use the natural processes of the coast. They are often less expensive than hard

Source 1 A stretch of coastline showing a number of hard engineering techniques commonly used around the world today

engineering options, and are considered to be more sustainable as they have less impact on the natural environment. There are two main types of soft engineering – beach nourishment and managed retreat.

- Beach nourishment replaces beach material such as sand that has been removed by erosion or longshore drift (see Source 2). Beaches are a natural defence against erosion and coastal flooding and are a desirable feature of the landscape for residents and tourists alike. The natural process that eroded the beach in the first place will continue, however, so the beach needs to be nourished again and again.
- Managed retreat involves the relocation of human settlements and hard engineering defences such as sea walls and groynes so that the natural processes of erosion and deposition can take place. In many cases, low-lying areas flood allowing salt marshes, wetlands and mudflats to re-establish themselves in these areas (see Source 3). Over time, these habitats provide a natural defence against further erosion. Unlike many hard engineering techniques, managed retreat can be relatively inexpensive. However, people living in these regions can be unwilling to relocate and need to be compensated for the loss of their properties.

Source 2 In the Netherlands a vast sand peninsula 2 kilometres long and 1 kilometre wide has been constructed. Dubbed the 'sand engine', waves and currents are redistributing the peninsula along the shore where it is expected to nourish the beaches and form sand dunes.

Source 3 Managed retreat at Abbotts Hall Farm in Essex, England, has allowed salt marshes to be re-established.

Check your learning 3.8

Remember and understand

1 What are the main differences between hard and soft engineering techniques?

2 Describe the process that is occurring at Abbotts Hall Farm (see Source 3).

Apply and analyse

3 What is beach nourishment? Outline some of the possible positive and negative environmental impacts of this soft engineering technique.

Evaluate and create

4 Match the hard engineering technique with its function and possible disadvantage.

Technique	Function	Possible disadvantage
Sea wall	Absorbs the energy of waves and allows the build-up of sand to form a beach	Can be difficult and expensive to find and place suitable rocks to form the wall
Groyne	Protects cliffs, land and buildings from erosion and can also lessen the risk of coastal flooding from storm surges	May weaken longshore drift and allow sand to build up – sometimes creating a tombolo
Rock armour	Absorbs the energy of waves and provides a safe harbour for boats	Can ruin the appearance of the beach and be costly to maintain
Breakwater	Traps material carried by longshore drift and allows a beach to be built up	Can be very expensive to build and maintain. The breakwater reflects rather than absorbs wave energy so waves may continue to cause erosion elsewhere.

3.9 Change at Rainbow Beach

Rainbow Beach is a small community located on a massive dune system that runs along the Queensland coast near the southern tip of Fraser Island. Formed over two million years, the dunes are part of one of the world's greatest sand dune complexes that includes Fraser Island – the world's largest sand island. In places, the dune system is 200-metres high and is held in place by large areas of scrub, forest and grasses.

While Aboriginal occupation of the region dates back 5500 years, European settlement began with a sand-mining operation north of the town in the mid 1960s. A road built to reach the sand mine was soon used by tourists to access Fraser Island and the new town of Rainbow Beach (see Source 1). The sand-mining operation finished in 1976 but the population of the small town continued to grow slowly. Now home to about 1000 full-time residents, visitor numbers swell in summer holiday periods as people arrive to use the camping ground as well as several motels and resorts.

The key management issue faced by the region is the erosion of the sand dunes, particularly during storms. This is an example of a potential conflict between natural processes and human activities. Sand dunes naturally change in response to long-term and short-term changes in wind patterns, sand supply and sea levels. The erosion of the foredune at Rainbow Beach (a dune ridge running parallel to the ocean) is a natural event. However, as the erosion is now putting buildings at risk and making the beach unsuitable for recreation activities, some local residents and the Gympie Regional Council are proposing to try to control the erosion.

Source 2 A 2009 storm severely eroded the Rainbow Beach foredune, placing the Surf Life Saving tower in danger of collapse.

A study of the region found that the risk of severe dune erosion at Rainbow Beach is very low but some people are still concerned that during a severe storm important buildings could be lost. The council plans to install large sandbags at the base of the dunes in front of the Surf Life Saving tower, along 260 metres, to slow erosion and protect a new amenity block that has been built on top of the dunes.

Source 1 An oblique aerial photograph of Rainbow Beach, looking south. The foredune and two blowout dunes (known locally as the Carlo Sand Blow and the Little Sand Blow) can be seen to the south of the town.

key**concept:** Place

Coastcare at Rainbow Beach

There are 2000 Coastcare groups in Australia. Each group is made up of volunteers who work with local governments to identify problems and then work together to solve them. At Rainbow Beach, the local group has identified the loss of native vegetation, the trampling of dune vegetation by visitors accessing the beach, sand skiing on the sand blows, coastal erosion, environmental weeds, beach parking and rising sea levels due to climate change as the key issues in the area.

Some of the projects the Coastcare group at Rainbow Beach have undertaken include restoring native plants and removing weeds, protecting the dunes, monitoring bird populations and improving wetland areas.

For more information on the key concept of place, refer to page 6 of 'The geography toolkit'.

Source 3 Rainbow Beach has a very active Coastcare group.

Source 4 A range of management strategies are in place at the main beach in Rainbow Beach. The fencing and walkway direct people to enter the beach on this path, protecting surrounding dunes.

Check your learning 3.9

Remember and understand

1 Describe the natural environment of Rainbow Beach.
2 Describe the human activities bringing about change to this place.
3 What is Coastcare?

Apply and analyse

4 Is the plan to place sandbags at the base of the dunes an example of hard or soft engineering? Give some reasons for your answer.
5 What management strategies can you identify in Sources 3 and 4? What is each strategy designed to achieve and how effective do you think each will be in achieving its aims?
6 What are the similarities and differences between changes at Rainbow Beach and changes at Abbotts Hall Farm in Essex (see Source 3 on page 109)?

Evaluate and create

7 The Little Sand Blow is increasing in size as it moves westward. Construct a flow diagram or field sketch that shows the:
- natural processes responsible for this movement
- human activities that may be contributing to the movement
- impacts of this movement on the environment
- possible responses by the local government and Coastcare group.

3.10 Integrated Coastal Zone Management (ICZM)

In response to the serious issues facing coastal and marine ecosystems, a major United Nations conference held in 1992, called the Earth Summit, proposed a new system for managing coastal environments. Known as Integrated Coastal Zone Management (ICZM) it is now a widespread practice in many coastal nations, such as New Zealand, India, Canada, Bangladesh and the Netherlands.

The United Nations recognises that one of the common issues associated with coastal management is that government departments and interest groups often propose very different solutions to issues depending on their own needs and interests. In most cases, these solutions ignore the needs of other coastal users. The many coastal interest groups include residents, the tourism industry, fisheries, farmers, forestry, manufacturing, mining, waste disposal, marine transportation and real estate developers.

The key to ICZM is that it seeks to pull together the many groups and individuals with an interest in the coast in an integrated way when devising a management plan. The key principles of ICZM are outlined in Source 2. The success of ICZM is then dependent on funding, consistent government priorities and the expertise available to organise and manage large projects.

Eight principles of Integrated Coastal Zone Management

- Involve all relevant governments
- Take a long-term view
- Use a holistic approach
- Consider local conditions
- Work with natural processes
- Get people involved
- Use a range of approaches
- Be prepared to change strategy

Source 2 The eight key principles of Integrated Coastal Zone Management

Source 1 The challenges facing many coastal environments require an integrated approach.

Case study: ICZM in Bangladesh

Each ICZM plan is designed to best address the issues of the country it has been developed for. In Bangladesh, for example, the key issues are rising sea levels that bring saltwater floods to low-lying communities and the impacts of cyclones and storm surges. It is estimated that a one-metre rise in sea level would leave 17 000 square kilometres of land in Bangladesh submerged and 15 million people without a home (see Source 4). It will affect 1 million hectares of farmland and threaten the fresh water supplies of three major cities.

In response to these threats the Bangladeshi government, with the assistance of the World Bank and expertise from the Netherlands, has developed an ICZM strategy that focuses on disaster mitigation. To date 150 000 hectares of mangroves have been replanted and more than 2500 cyclone shelters constructed.

Source 3 A nursery for mangrove trees. These will be used to replace some mangrove areas lost to farming and forestry and help to reduce flooding.

BANGLADESH: PREDICTED IMPACT OF 1-METRE SEA-LEVEL RISE

Source 4 Source: Oxford University Press

Check your learning 3.10

Remember and understand

1 What is ICZM?

2 How and why has ICZM been implemented in Bangladesh?

Apply and analyse

3 Source 3 on page 105 illustrates a significant problem in many coastal areas – marine dead zones. Work with a partner to use the eight key principles of ICZM to suggest how people could manage this issue. For example, using a holistic approach might mean getting farmers to be more careful in their use of fertilisers. Perhaps nutrient levels in streams could be monitored so that farmers could better manage their application of fertiliser, particularly in times of heavy rainfall.

Evaluate and create

4 What do you see as some of the barriers to ICZM principles being adopted in Bangladesh?

5 What do you see as some of the advantages in managing coastal changes using this approach?

3.11 ICZM in the Netherlands

The province of Zeeland in the Netherlands is a large agricultural area that is home to more than 380 000 people (Source 3). Much of the region lies below sea level. The land has been drained and reclaimed, creating new islands that are linked by bridges and tunnels. The area has an intricate series of levees (known as dykes) and dams that hold back the waters of the North Sea and regulate the flow of the rivers to the sea. The province also supports a large fishing industry and is home to the largest national park in the Netherlands.

In Zeeland, ICZM is used to reduce flooding from storm surges. The largest of the flood protection dams, the 9-kilometre-long Oosterscheldekering, links two of the largest islands in Zeeland. The 62 steel doors that make up the barrier can be lowered or raised in response to tides, storms and other sea level changes (see Source 1). For most of the year, seawater can flow freely beneath the dam so that marine ecosystems in the bays and estuaries of the delta can be maintained.

The dam, which was opened in 1986, has been declared one of the Seven Wonders of the Modern World and bears a plaque with the words, 'Here the tide is ruled by the wind, the moon and us (the Dutch).' Any long-term changes in sea level due to climate change will place greater pressure on this region and on these amazing engineering works.

The series of dams, storm surge barriers and bridges have provided many benefits for the people of the Zeeland region. As well as protecting them from storm surges and flooding, large areas of former saltwater estuaries have been converted into freshwater lakes creating a reliable supply of water. The dams and bridges also link together island communities that had been isolated for hundreds of years and the calmer waters of the river mouths and estuaries are safe for shipping and recreational boating.

Source 1 The Oosterscheldekering storm surge barrier in Zeeland

Source 2 An aerial photograph of Zeeland showing a number of dams and storm surge barriers (including Oosterscheldekering)

ZEELAND: TOPOGRAPHIC MAP

Source 3

Source: Oxford University Press

Check your learning 3.11

Remember and understand

1 Why was the Oosterscheldekering constructed?

2 Locate the province of Zeeland in an atlas and describe its location.

Apply and analyse

3 Use the eight key principles of ICZM (see Source 2 on page 112) to comment on the flood protection provided by Oosterscheldekering. For example, how does this barrier take local conditions into account?

4 Examine Sources 2 and 3.

- **a** What factors do you think may be responsible for the large sandbanks forming in the Oosterschelde?
- **b** Identify the different land uses on the island of Schouwen-Duiveland.
- **c** Describe the relief of the island using the contour lines on the map.
- **d** Describe the southern shore of the island.

Evaluate and create

5 Draw a sketch map of the vertical aerial photograph in Source 2. On your map label the key natural and human features of the landscape.

6 The Oosterscheldekering is only one part of a much larger flood protection scheme. Use Google Earth to examine the region and find other examples of flood protection.

3.12 Protecting the coast

An effective way to manage and protect natural environments such as coasts is to give them legal protection. This helps ensure that harmful activities are banned or limited. In Australia, this is achieved mainly through a system of national parks (on land) and marine reserves (in the surrounding seas and oceans).

National parks

Each state and territory of Australia has a large number of special places, both coastal and inland, that the government has decided to protect. These might be as small as a single historic house or beach, or as large as a wilderness or **national park**. Despite the name, virtually all of Australia's more than 550 national parks are the responsibility of the individual state and territory governments.

Although management strategies differ between states, the common ideals are that the land, plants and animals within the parks have protection from activities that threaten their existence and that people should be able to visit these special places. This can lead to problems, as visitors who come to see these areas in their natural beauty may threaten the very environment they are visiting. The managers of the national parks have the task of controlling what visitors do in each park by limiting or restricting certain activities in sensitive areas.

Marine reserves

While national parks protect special places on land, Australia's diverse marine environments also need to be protected. In 2012, the Australian government announced the creation of one of the world's largest marine reserve networks. Around 3.1 million square kilometres of our oceans are now managed mainly for the purposes of biodiversity conservation. This is an area roughly equivalent to the land area of Queensland and the Northern Territory combined.

Managing a marine reserve is particularly challenging because, unlike national parks on land, fences and signs aren't easily erected to limit access to particularly sensitive areas. Instead, marine reserves are divided into zones, and certain activities are allowed, banned or limited in each zone. It is the responsibility of anyone who enters a marine reserve to be aware of the activities permitted within each zone.

Every marine reserve in Australia, except for the Great Barrier Reef which is recognised as a special case, has been assigned a particular management category (see Source 2). These are the same as those adopted in other countries and have been developed by the International Union for the Conservation of Nature (IUCN).

Source 1 Royal National Park is Australia's oldest. Established in 1879, it protects large areas of coastal rainforest and ancient sand dunes.

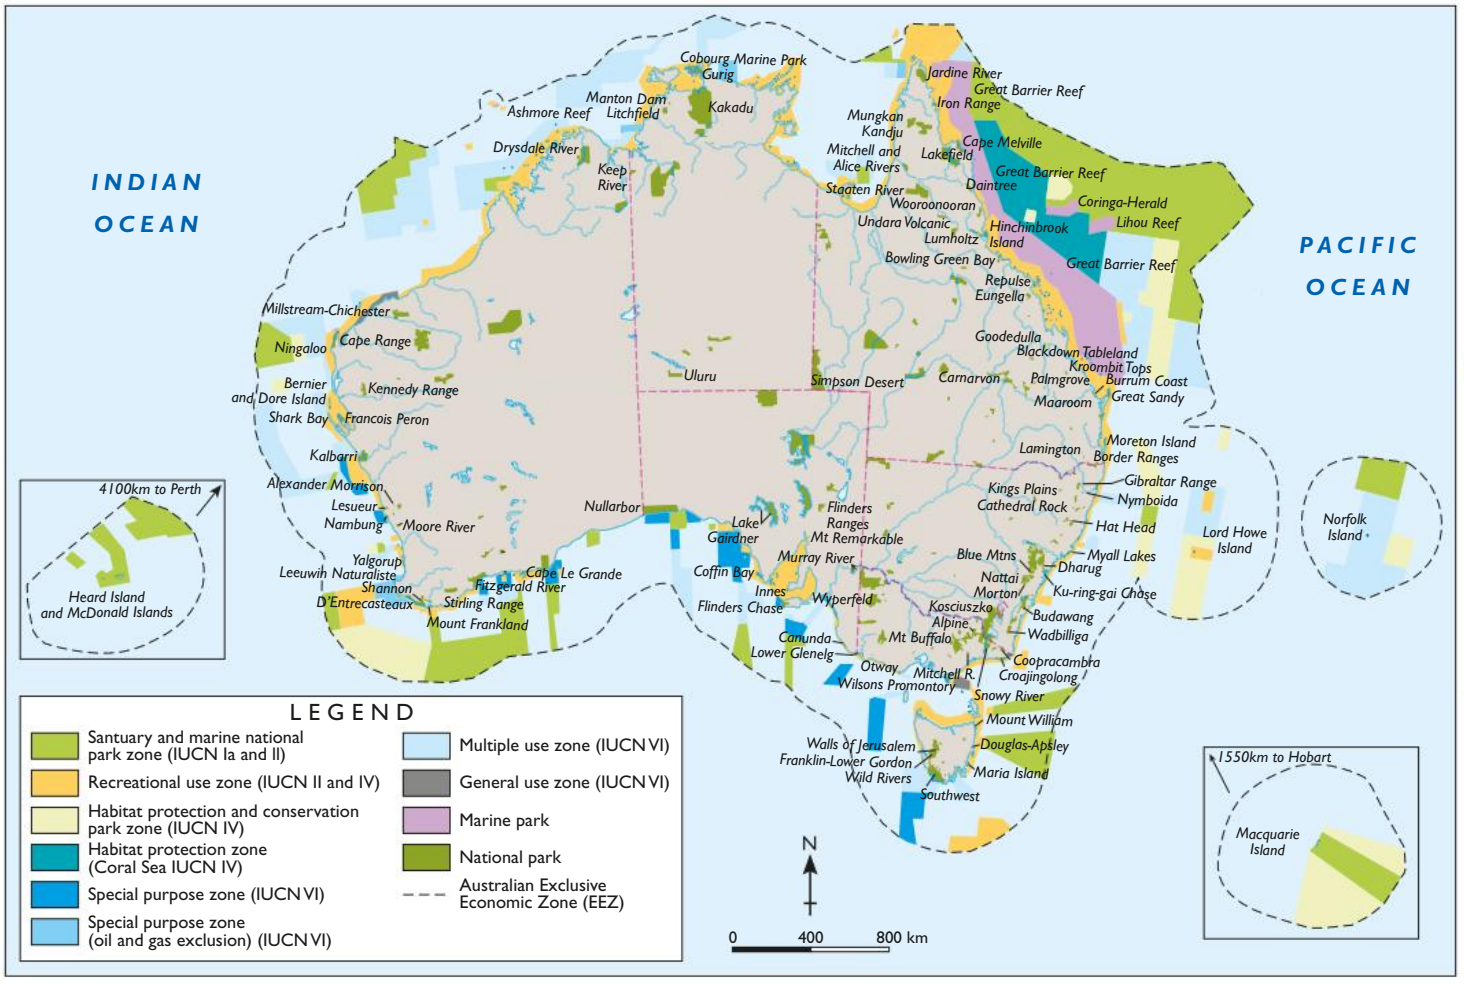

Source 2 The IUCN management categories for the conservation of marine reserves

IUCN number	Name of reserve type	Purpose of the reserve
Ia	Strict nature reserve	Managed primarily for scientific research or environmental monitoring
II	National park	Protected and managed to preserve its natural condition
IV	Habitat/species management area	Managed primarily to ensure the maintenance of habitats or to meet the requirements of specific species
VI	Managed resource protected area	Managed to ensure long-term protection and maintenance of biological diversity with a sustainable flow of natural products and services to meet community needs

Source 3 Freycinet Marine Reserve on Tasmania's east coast includes large areas designated as strict nature reserves due to the biodiversity of the coast's offshore seamounts (undersea mountains) and bird populations.

AUSTRALIA: NATIONAL PARKS AND MARINE RESERVES, 2012

Source 4

Source: Oxford University Press

Check your learning 3.12

Remember and understand

1 In what ways are natural environments protected in Australia?

2 What are the ideals behind the management strategies implemented in national parks?

Apply and analyse

3 Examine Source 4.

- **a** Where are Australia's largest marine reserves located?
- **b** Describe the location of marine reserves in the state in which you live.

4 Examine Source 1, showing a person in a protected coastal area. Describe what they are doing and how this may impact on the natural environment. How could park managers in this area limit these impacts?

Evaluate and create

5 There were many objections to the Australian government announcement in 2012 that millions of square kilometres of ocean were to become marine reserves. In small groups consider which Australian groups would be likely to support this announcement and who would be likely to oppose it. Brainstorm the arguments that each of these groups would use to support their points of view.

6 Source 4 shows the extent of Australia's Exclusive Economic Zone (EEZ). Research this area and find out the benefits for Australia in having such a large EEZ. You may also like to find out about the Timor Gap and how this was created.

3.13 Reducing the impacts of coastal tourism

Tourism is the world's largest industry. It generates more than $US8 trillion a year in income and employs about 220 million people worldwide. Tourism in coastal areas has experienced a surge in recent years, and for many coastal communities it has become the largest contributor to their economy. While tourism has the potential to alleviate poverty and bring better infrastructure such as new roads and public services, it also has the potential to bring about major environmental degradation.

Tourism not only attracts visitors to coastal areas but also locals, who move to the coast for work, providing the goods and services tourists require. Tourism also brings developments such as hotels, jetties, roads, airports and shopping strips, often with minimal or hurried planning. The result is that many coastal tourism hubs are under significant environmental pressure.

The potential negative environmental impacts of tourism are many. Greater numbers of people bring increased pollution and landfill (see Source 1). As ecosystems such as mangroves, wetlands and reefs are removed to make way for hotel developments, there is a subsequent decline in biodiversity and an increased risk of beach loss from erosion and natural disasters.

In addition, an increased demand for fresh water, food (especially seafood), energy and sanitation make tourism a huge consumer of natural resources.

Ecotourism: a way forward?

Ecotourism is one option that coastal tourism operators are using to make their industry more sustainable. It is also a strong marketing tool, appealing to tourists who want more environmentally friendly travel. The International Ecotourism Society (TIES) defines ecotourism as 'responsible travel to natural areas that conserves the environment and improves the wellbeing of local people'. TIES believes that those who implement and participate in ecotourism activities should:

- minimise environmental impacts
- build environmental and cultural awareness and respect
- provide positive experiences for both visitors and hosts
- provide direct financial support for conservation
- provide financial benefits and empowerment for local people
- ensure sensitivity to the host country's political, environmental and social climate.

Source 1 Cruise ships that carry up to 4000 passengers each contribute to the 70 000 tonnes of waste generated annually from tourism in the Caribbean region.

key**concept:** Sustainability

The Penguin Parade

One of Victoria's most popular tourist attractions is the nightly arrival of hundreds of Little Penguins at Summerlands Beach on Phillip Island. This natural event attracts around 1 million visitors per year, more than half of whom are from overseas. As well as a tourist attraction, the Penguin Parade is also an example of minimal impact ecotourism and conservation.

As a non-profit organisation, the Phillip Island Nature Park uses the income generated from the parade to protect, conserve and restore the natural environment of the region. The organisation has become a world expert on the Little Penguins as well as carrying out vital research on seals and seabirds. In order to protect the penguins, rangers undertake large- and small-scale revegetation and habitat restoration programs. As a result, the penguin population climbed from 19 000 in the 1980s to 32 000 in 2013.

Much of the restoration and revegetation work is on the site of a former housing estate located adjacent to the Penguin Parade. Between 1985 and 2010, the Victorian government purchased and removed hundreds of holiday homes, as well as the roads, gardens, power cables and septic tanks that made up the Summerlands Estate. The area is now prime habitat for the penguins. Future plans include moving the visitor centre and car parks so that the land on which they now sit can also be restored to natural habitat.

For more information on the key concept of sustainability, refer to page 10 of 'The geography toolkit'.

Source 2 Raised boardwalks and viewing platforms minimise the environmental impact of visitors to the Penguin Parade and allow penguins to move freely from the ocean to their burrows every evening.

Check your learning 3.13

Remember and understand

1 What is ecotourism?

2 In what ways can the Penguin Parade on Phillip Island be considered to be an example of ecotourism?

Apply and analyse

3 Source 1 shows a cruise ship docking at a Caribbean port. Describe the changes that have been made to the coast as a result of tourism that can be seen in this photo.

4 Compare these changes to those that have occurred at the Penguin Parade.

Evaluate and create

5 Imagine that an international tourism operator has proposed to build a port for cruise ships at Rainbow Beach (see Source 1 on page 110) and that that you have been appointed the company's environmental consultant. Brainstorm the impacts of this development on the natural environment. Use the ecotourism principles provided to make recommendations that minimise these impacts. Prepare a report for the tourism operator with your recommendations. You may like to include a map and sketches in your report.

3.14 Indigenous management of the coast

Prior to European colonisation in 1788, the coastal areas of Australia supported large numbers of Aboriginal and Torres Strait Islander peoples. The coasts provided a reliable source of food both from the sea and the surrounding land.

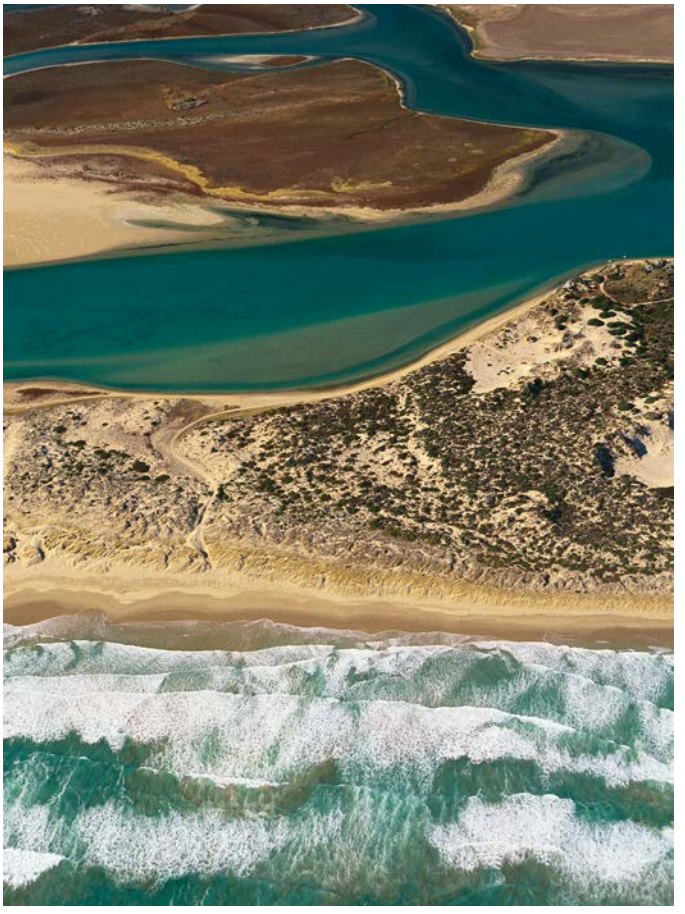

Today, nearly half of all Indigenous Australians live near the coast. Many maintain a close association with the coast through cultural and historic connections, through continued use of coastal resources and by law. In the Northern Territory, for example, Aboriginal communities own and manage approximately 85 per cent of the coastal land.

Coastal places with special significance to Indigenous Australians are under the same environmental threats as other coastal places: from population and economic growth, land use changes, climate change and the arrival of invasive species. Indigenous communities are now working with government to restore lands that are important to them. This joint approach means that factors of Indigenous heritage are taken into account when decisions are made about the use and restoration of degraded areas.

Case study: Indigenous management of the Coorong

> The land and waters is a living body. We the Ngarrindjeri people are a part of its existence. The land and waters must be healthy for the Ngarrindjeri people to be healthy. We are hurting for our Country. The Land is dying, the River is dying, the Kurangk (Coorong) is dying and the Murray Mouth is closing. What does the future hold for us?
>
> Tom Trevorrow, Ngarrindjeri Elder, Camp Coorong, 2002

The region known as the Coorong, where the Murray River reaches the sea, covers an area of 14000 square kilometres. The Coorong was recognised as a Wetland of International Importance and as a breeding ground for many bird and fish species by the Ramsar Convention on Wetlands in 1985. Due to a combination of factors, including water extraction in the Murray–Darling Basin, drought and barrages (dams) built across the Murray

Source 1 An oblique aerial photograph of the Coorong, Lower Lakes (including Lake Alexandrina and Lake Albert) and Murray Mouth region of South Australia

to hold back sea water, the region has become severely degraded. In particular, the waters of the Coorong Lagoon and lakes have become saltier than the sea, wetlands have dried out and acidic soils have become exposed. Another cause of this degradation has been the building of dams that collect water during wet seasons and then release this water during dry seasons. This has disrupted the natural cycle of the Murray River of floods and droughts and had a dramatic effect on the natural ecosystems of the river, particularly at its mouth. In some years, so little water flows through the mouth that it closes, cutting off the lakes of the region from the sea.

The traditional owners of the region, the Ngarrindjeri people, maintain a strong connection with the lands and water of the Coorong. They believe that the health of their nation is closely linked to the environmental health of the region, and that a

freshwater flow that allows plants and animals to thrive must be maintained.

The Ngarrindjeri community through the Ngarrindjeri Regional Authority (NRA) has formed a close relationship with the South Australian Department of Environment, Water and Natural Resources (DEWNR) to deal with short-term crises in the region and to plan for a sustainable future. This has resulted in the adoption of a long-term plan which aims to secure a future for the region as a 'healthy, productive and resilient wetland system that maintains its international importance.' The plan includes a number of specific goals:

- to protect and restore natural habitats
- to restore viable populations of native bird, fish and other animal species. Restoring the natural flow of fresh water to the Coorong and Lower Lakes are seen as a key component of this goal.
- to improve water quality and increase flows through the wetlands. It is proposed, for example, that very salty water be pumped out of the lagoon to the sea.
- to recognise the Ngarrindjeri community's association with the area.

Large areas of dunes, wetlands and farmland have already been replanted using native plant species as the first step in this plan to restore the Coorong area.

COORONG: INDIGENOUS LANDS AND NATIONAL PARKS

Source 2 Source: Oxford University Press

Source 3 South Australian Environment Minister Paul Caica and NRA chairman Tom Trevorrow meet at the Coorong in 2012 to sign a new management agreement for the region.

Remember and understand

1 Why did many Aboriginal and Torres Strait Islander peoples live near the coast in the past?

2 Why are the Ngarrindjeri people particularly concerned about the health of the Coorong ecosystems?

Apply and analyse

3 Use Source 1 to describe the natural environment of the Coorong and Lower Lakes. Include the water and land features that you can identify.

4 Examine Source 2.

- **a** Describe and account for the location of Indigenous lands.
- **b** Describe the locations of the barrages. Why have the barrages been built in these places? How would they change the natural environment of Lake Alexandrina and the Coorong?

Evaluate and create

5 Use the eight key Integrated Coastal Zone Management principles shown in Source 2 on page 112 to devise a strategy to improve the health of the Coorong ecosystem.

6 Research which other wetlands in Australia are listed in the Ramsar Convention.

3B **rich** task

Ningaloo Coast

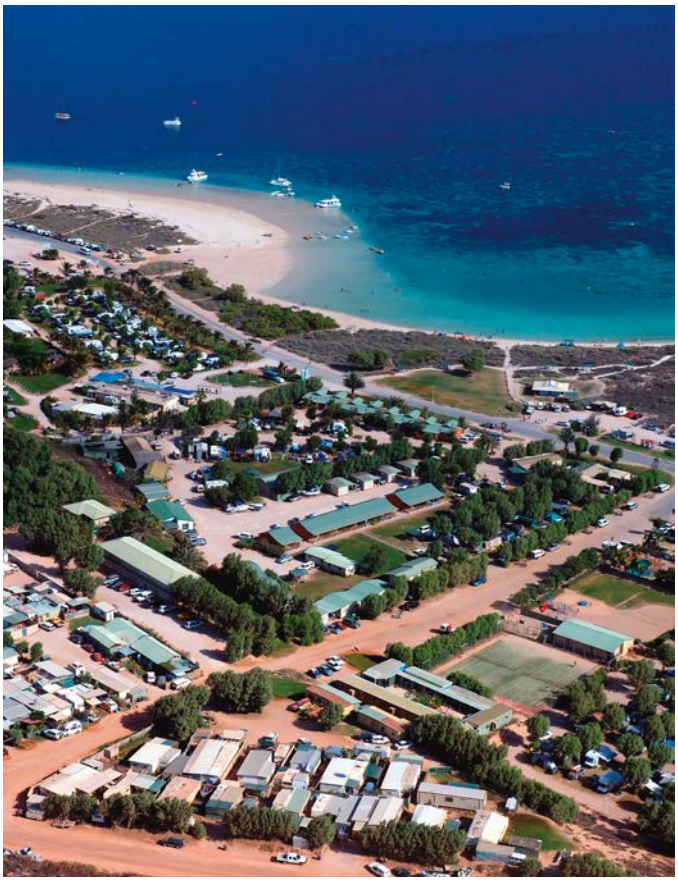

On the north-west tip of Western Australia is one of the world's most spectacular coastal environments. Long white beaches run along the shore, and visitors can swim out from the beach to Australia's longest fringing reef (a reef that lies extremely close to shore). The region has about 300 000 visitors a year, many of them arriving between April and July for a chance to snorkel with whale sharks. The region is also home to dugongs and visited by humpback whales and greenback turtles.

Much of the region is under some form of legal protection as part of the Ningaloo Marine Reserve and Cape Range National Park. It is also Australia's newest World Heritage site, having been added to the World Heritage List in 2011.

Though a remote and relatively pristine area, the Ningaloo Coast faces a number of potential environmental threats. These include:

- oil and gas exploration off the coast
- damage to coral reefs from boat owners anchoring in the fragile reef areas
- illegal fishing
- plastic bags killing turtles and whales by intestinal blockage
- damage to vegetation from off-road driving
- waste disposal and pollution
- increasing level of water consumption
- potential for bushfires
- invasive species (foxes, goats, cats) destroying or attacking native plants and animals.

Other potential issues in the area include a RAAF bombing range south of Cape Range National Park, which may threaten important limestone caves and sinkholes, and livestock from local farms that could damage vegetation if they are not appropriately managed. In addition, the development of oil and gas reserves in offshore basins and shelves could present a future threat to the coast and reef.

Source 1 The small town of Coral Bay is used as a launching point for whale watching and fishing boats.

skill**drill:** Data and information

Analysing complex maps

Complex maps contain more than one set of information. Geographers use complex maps to analyse different features, reveal patterns and explain links between features in a given area. You can analyse a complex map by following these steps.

Step 1 Look carefully at the map and read its title to make sure you understand what is being shown.

Step 2 Examine the map's legend. Complex maps can have more than one part to a legend, and these parts will be represented on the map in different ways. For example, in Source 2 areas of colour are used to show the location of recreational use zones and state marine reserves. Different symbols are also used, to show roads and coastal water boundaries.

Step 3 Train your eyes to look for one set of information at a time. For example, look at solid blocks of colour on the map and work out what they tell you.

Step 4 Move to a different set of information by selecting another symbol or block of colour from the legend. Examine the map to identify this symbol or area of colour.

Step 5 Look for concentrations of the same symbol in areas to see if patterns exist.

Step 6 Note any patterns you can find on the map between different features and locations.

Step 7 Describe the degree to which patterns are connected.

Step 8 Try to suggest reasons for the connection between the two patterns.

Apply the skill

Look at the map of Ningaloo Marine Reserve (Source 2).

1 Find the symbol for multiple use marine zones in the legend then locate these areas on the map. Describe the concentration of these areas.

2 What relationship is there between the multiple use marine zones and the location of recreational use areas?

3 Describe the location of the Ningaloo World Heritage area.

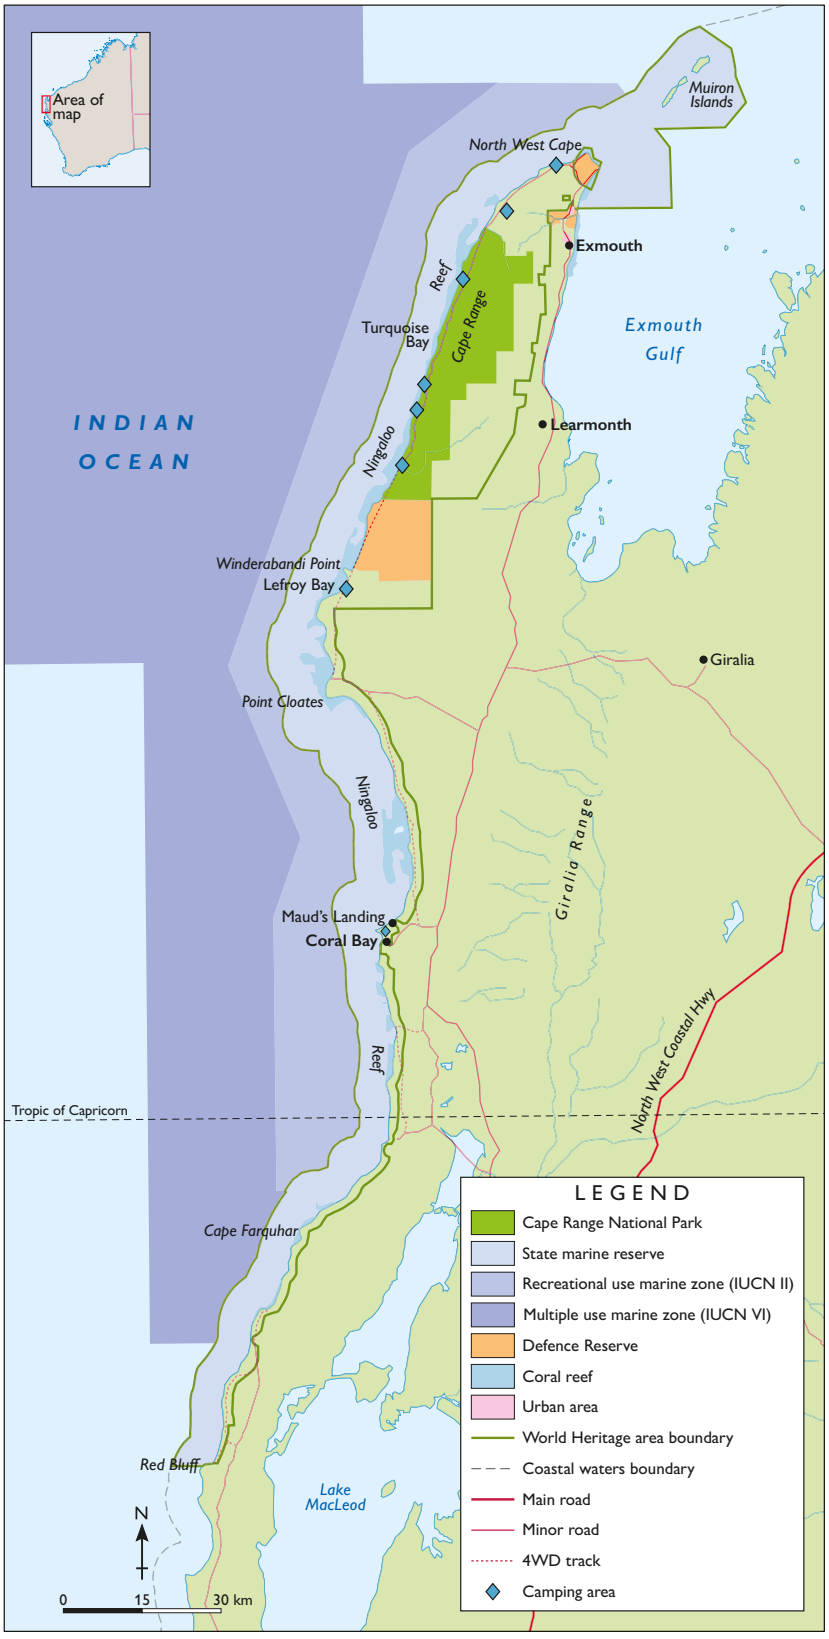

Extend your understanding

Do some further reading on the Internet to complete the following tasks.

1 Research Ningaloo's World Heritage listing.
   - **a** What does World Heritage mean?
   - **b** Why are sites placed on this list?
   - **c** Why was the Ningaloo Coast added to the list?

2 In the early 2000s, a large resort and marina called Coral Coast Resort was planned for the coastal area to the north of Coral Bay known as Maud's Landing. Find out about these plans and why the resort was not built.

NINGALOO: MARINE RESERVE AREAS

3.15 The role of geographers in managing environmental change

Geographers have an important role to play in the management of environmental change. Because geographers draw on knowledge and skills from the natural sciences (such as geology, biology, chemistry and physics), the social sciences (such as psychology, history and economics) and humanities (such as philosophy) they are uniquely placed to see the 'whole picture' when examining environmental change. Geographers can, for example, consider the reasons why people act in a certain way and consider the impacts of these actions on the environment. They can also help to explain why people respond to change in different ways and, most importantly, recommend a course of action that is beneficial to both the natural environment and people.

Fieldwork case study

When examining environmental change such as coastal erosion, geographers often begin by developing a set of geographical questions. The geographer then sets out to answer these questions using a range of geographic tools. One of the most useful tools is fieldwork – visiting the environment being studied and observing it firsthand.

When exploring changes at the coast, geographers use a range of specific techniques. These include constructing cross-sections of dunes, cliffs and other landforms, photographing evidence of change and measuring **longshore drift**. By visiting the same site at regular intervals (for example, once a year) geographers can also observe changes that have occurred between their visits. It may be important to visit the site at different times of the year to observe seasonal changes such as the effects of storm waves during winter or the impacts of holiday-makers during summer. The following case study is an example of the sort of environmental issues that might be explored by a geographer completing fieldwork.

Case study: coastal issues at Old Bar, New South Wales

The small coastal town of Old Bar, located on the mid-north coast of New South Wales, faces a range of environmental changes. The town is located on a dune system within a river delta and is home to around 4000 permanent residents. It also has a large number of visitors, particularly during holiday times. The dunes are eroding rapidly at a rate of up to 1 metre per year and this is threatening homes and infrastructure. Studies have found that the dunes in this area have experienced periods of erosion in the past but that rising sea levels are making the current situation more severe.

Local residents are worried that trail-bike riders on the dunes are causing more damage and that the old site of a sand-mining business, which operated

Source 1 An oblique aerial photograph of Old Bar showing the location of a proposed real estate development

back in the 1980s, is an erosion hot spot. Some are also concerned that a proposed 10-hectare housing estate south of the town will further damage the dunes. Many residents believe that building two artificial reefs at the cost of $10 million would protect the coast from further erosion. However, an expert study recommended that a managed retreat coupled with a sloping sea wall of sand-filled bags and regular beach nourishment was a better option.

Photographs from fieldwork at Old Bar

Source 3 Dune erosion has destroyed some homes and is threatening others.

Source 2 In some places the beach is composed of pebbles as well as sand.

Source 4 Evidence of erosion includes a large Norfolk pine tree which has fallen onto the beach.

Check your learning 3.15

Remember and understand

1 Why is fieldwork an essential tool for geographers?
2 Why are geographers uniquely placed to help describe and manage environmental change?

Apply and analyse

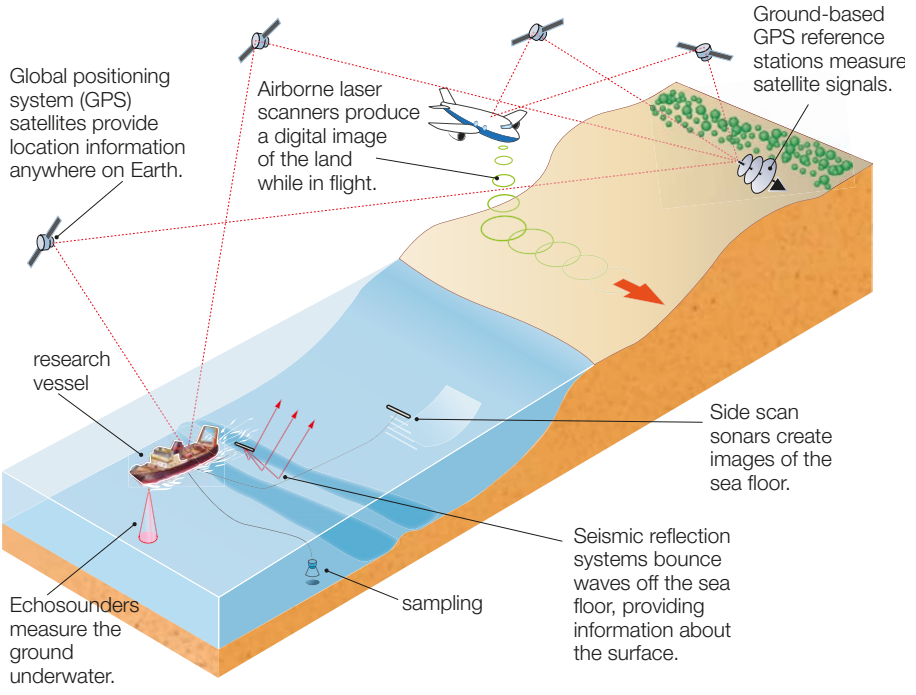

3 Look carefully at the photographs on these pages. Create a series of geographical questions that could be used as the basis of a field trip to Old Bar. You may like to begin your questions with the words 'what', 'where', 'how', 'why', 'what impact' and 'what should'. Share your questions with a partner and then with the class.
4 Why would many residents prefer artificial reefs to be constructed rather than implementing the soft engineering approach of managed retreat?
5 What would be the advantages and disadvantages of sea walls and beach nourishment at Old Bar?

Evaluate and create

6 Read page 37 of 'The geography toolkit' and use the tips on conducting successful fieldwork to design your own fieldwork investigation of Old Bar. Outline the five stages of your inquiry, making sure that you investigate:
   a the causes of coastal erosion
   b the effects of coastal erosion
   c the responses to coastal erosion.

3.16 Using spatial technologies

Geographers use a range of tools to describe and predict environmental change. These tools may be as simple as direct observation or involve measuring and recording the changing width of a beach with a tape measure. Increasingly, however, digital tools are being used to measure change and to help manage dynamic environments such as coasts, forests and farms (see Source 1). These tools rely on the collection of data from sources such as the **global positioning system (GPS)**, aerial photographs, ships and tide meters. The data collected is then analysed by computer programs and made available for use by **geographic information systems (GIS)** and **digital terrain modelling (DTM)** as well as other applications.

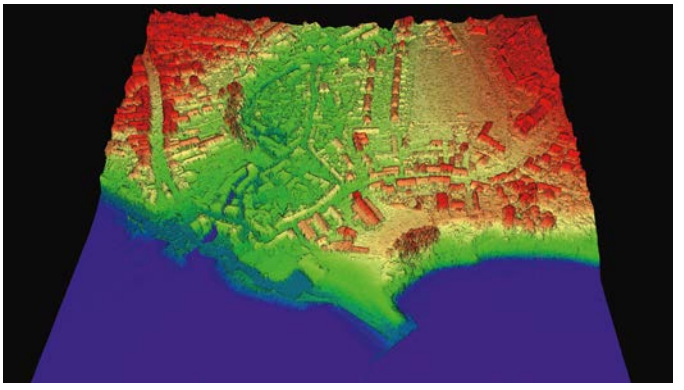

Source 1 Geographers use a range of digital data collection methods.

As more and more coastal communities become concerned about the impacts of rising sea levels due to climate change, there is a greater demand for more advanced methods of monitoring the coastline. This is driving a boom in coastline monitoring through spatial technologies and is making more data and information about coastal changes available to geographers than ever before.

Digital terrain models (DTMs)

A DTM shows the relief (or shape) of the land in three dimensions (see Sources 2 and 3). Much of the data needed to create a DTM is collected from special sensors on satellites. This data is represented as a raster (grid of squares) and manipulated by technicians to form a model of the Earth's surface. These models can help geographers 'see through' features of the environment such as coastal waters and forests to examine the terrain below. They can be used to predict areas at risk from erosion and other hazards, such as coastal flooding. This information can then be used to help manage the environment to limit the effects of these potential hazards and disasters.

Source 2 In this DTM, the height of the land and the depth of the sea are represented by changes in colour.

Source 3 The same data used to create the first DTM has been combined with an aerial photograph to create a more realistic digital representation of the landscape.

key**concept:** Interconnection

Geographic information systems (GIS)

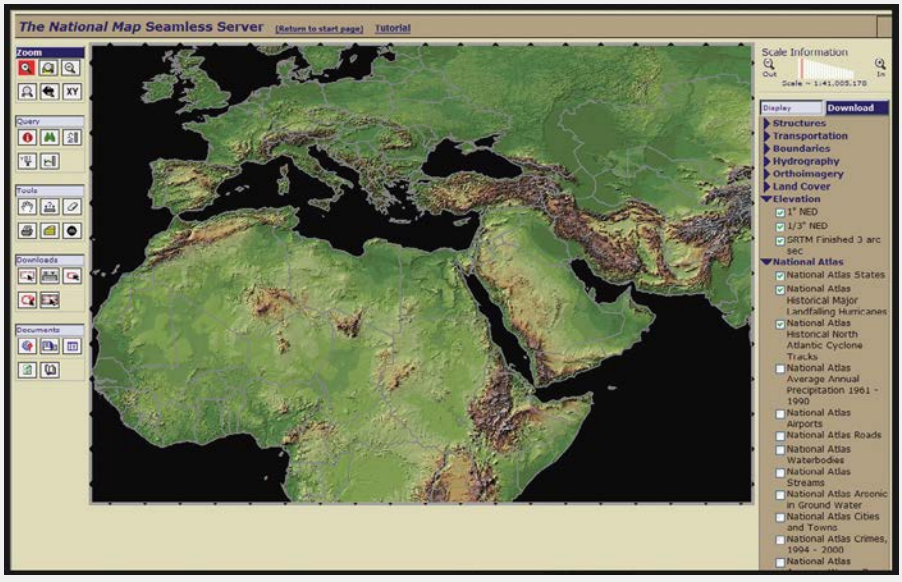

GIS uses digital data to create a series of maps of a particular landscape. Each map focuses on a different aspect of the environment, such as the ocean depth, salinity, roads, settlements and relief. Using a GIS program, the maps are presented as a series of layers which can be switched on and off. This enables geographers to compare different aspects of the environment and look for interconnections between them.

GIS is particularly useful in examining and managing change in coastal environments. It allows geographers to isolate different and competing land uses, to see beyond political and physical boundaries and to measure change over time.

The Netherlands provides a good example of the use of this technology. Every year, the entire 350-kilometre-long Dutch coastline is digitally mapped and measured using methods similar to those shown in Source 1.

The maps and cross-sections produced in this annual survey are compared to the first survey of this kind, undertaken in 1990. Areas of coastal erosion and accretion (growth) are clearly displayed on GIS maps and are used by coastal managers to make changes in coastal defence strategies such as beach nourishment and sea walls.

For more information on the key concept of interconnection, refer to page 9 of 'The geography toolkit'.

Source 4 A GIS map of North Africa and Europe. A range of GIS tools are shown in the left-hand margin and the map layers are available in the right-hand margin. By manipulating these tools and layers, geographers can create their own maps and examine regions in great detail.

Check your learning 3.16

Remember and understand

1 Why do geographers use digital tools?
2 How is data collected to create GIS and DTMs?

Apply and analyse

3 Examine Sources 2 and 3.
   a What evidence is there that this coastline is under threat of erosion?
   b Which of these DTMs would be most useful to an engineer planning the placement of new groynes? Give some reasons for your answer.
   c Who would find these models useful?

Evaluate and create

4 Examine Source 1 on page 124 showing the proposed real estate development site at Old Bar in New South Wales before completing the following tasks.
   a Imagine that the developer at Old Bar has asked you to suggest a range of digital data collection methods to create a GIS that will assist them with their planning. Describe the most relevant data collection methods to use.
   b Now sketch the map layers that you think the developer would most like to see included in the program.

3.17 Understanding spatial variations

Each place on the Earth's surface is unique. In the same way that no two people are exactly alike, natural environments such as forests, glaciers and coasts all differ. The reasons for these variations may be complex, but recognising them is a critical part of understanding why different places have different problems. Geographers examine these differences (also known as **spatial variations**) and use what they find to propose solutions and responses to environmental change and/or issues. It is important to remember that these solutions and responses need to be site-specific. They may work in one place but not work in another. Some environments are also more resilient to change than others.

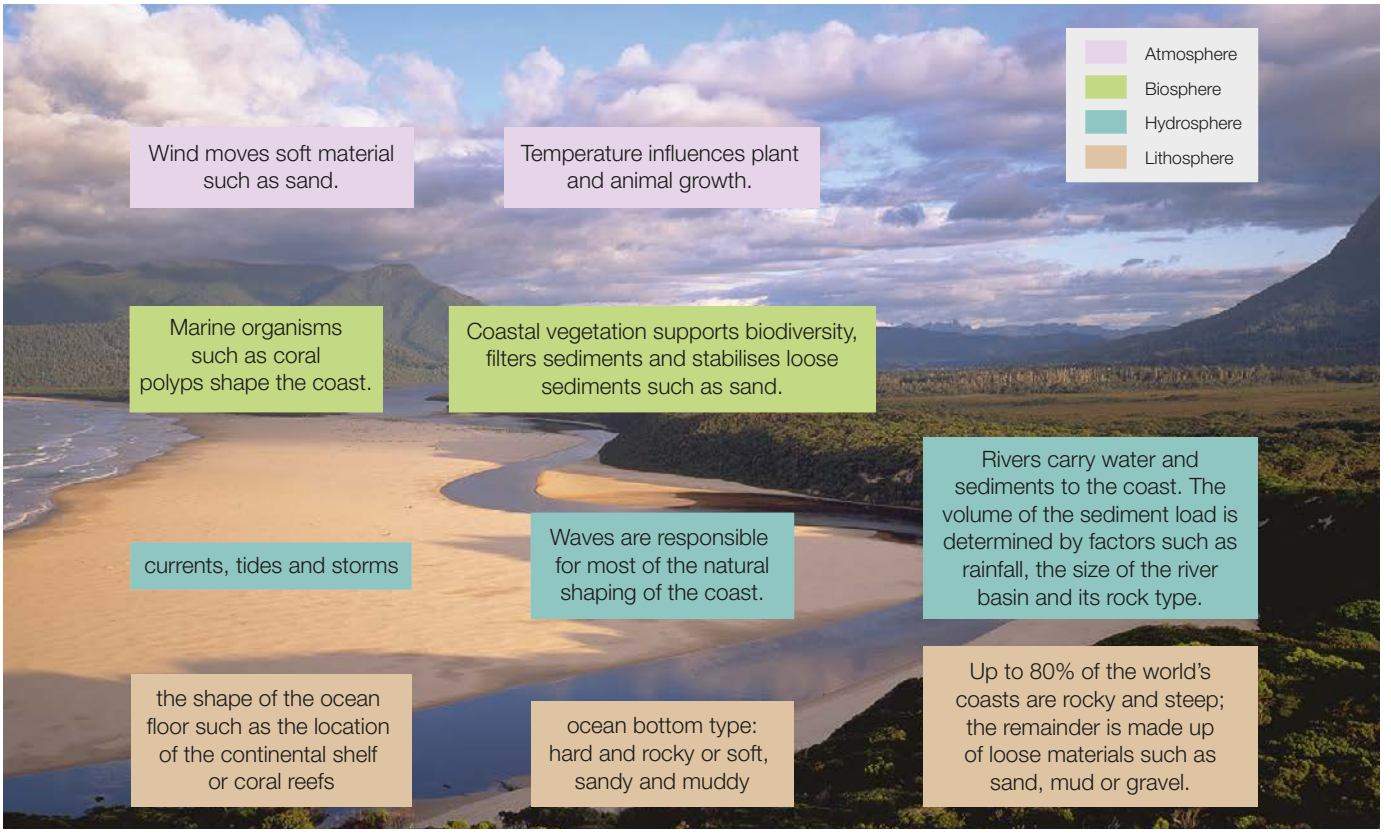

The factors that need to be looked at when considering spatial variations in environments can be divided into two groups – natural factors and human factors.

Natural factors

Geographers often use models to help them understand processes that take place in the natural world. One of these models (known as the four spheres model) is particularly useful when investigating the natural factors that influence spatial variations. The four spheres that interact to form unique landscapes include:

1. the **atmosphere** – all of the gases that surround the Earth
2. the **biosphere** – all living things on Earth (i.e. plants, animals, humans and other organisms)
3. the **hydrosphere** – all of the water on Earth (i.e. in solid, liquid and gaseous forms)
4. the **lithosphere** – the outer rocky layer of Earth (i.e. crust).

Source 1 provides an example of how the four spheres model can be used to investigate and describe how natural factors interact to shape coastal environments.

Source 1 An analysis of an Australian coastal environment using the four spheres model

Source 2 The Gold Coast in Queensland is an example of an anthropogenic coast.

Human factors

People have always been drawn to the coast. Coastal environments provide us with many ecosystem services that we need to live and thrive such as food, shelter, transport, recreation and flat land for building. Areas near the mouths of rivers also provide fresh water and fertile soil. Human influence tends to be concentrated in certain places on the coast where these ecosystem services are most available. In these places, the coastlines are now so altered by human activities that some geographers refer to them as anthropogenic coasts (see Source 3), meaning humans have become the dominant force in these environments.

Source 3

Features of an anthropogenic coast
• Coastal protection constructions such as sea walls
• Cleared vegetation
• Dredged shipping channels
• Mining operations including sand mining and oil drilling
• Fishing and aquaculture
• Coastal agriculture
• Forestry
• Shipbuilding and other industries
• Shipping and port facilities
• Dammed rivers for hydroelectric power generation
• Naval and other defence operations
• Tourism and recreation
• Roads
• Draining coastal wetlands and salt marshes
• Land reclamation
• Cities

Check your learning 3.17

Remember and understand

1 Name the four interconnected spheres that make up the Earth.

2 List four ecosystem services that the coast provides us with.

Apply and analyse

3 Would rocky coasts be more resilient to change than sandy coasts? Give some reasons for your answer.

4 Choose a section of coastline you have visited or know well and describe the natural and human processes that have shaped it.

Evaluate and create

5 In the same way that natural factors can be classified, so too can human factors. One method is to classify them as social, historic, environmental, economic, political or technological (making the acronym SHEEPT). Use this method to classify the human factors listed in Source 3. For more information on the SHEEPT method, refer to page 28 of 'The geography toolkit'.

3.18 Assessing environmental change

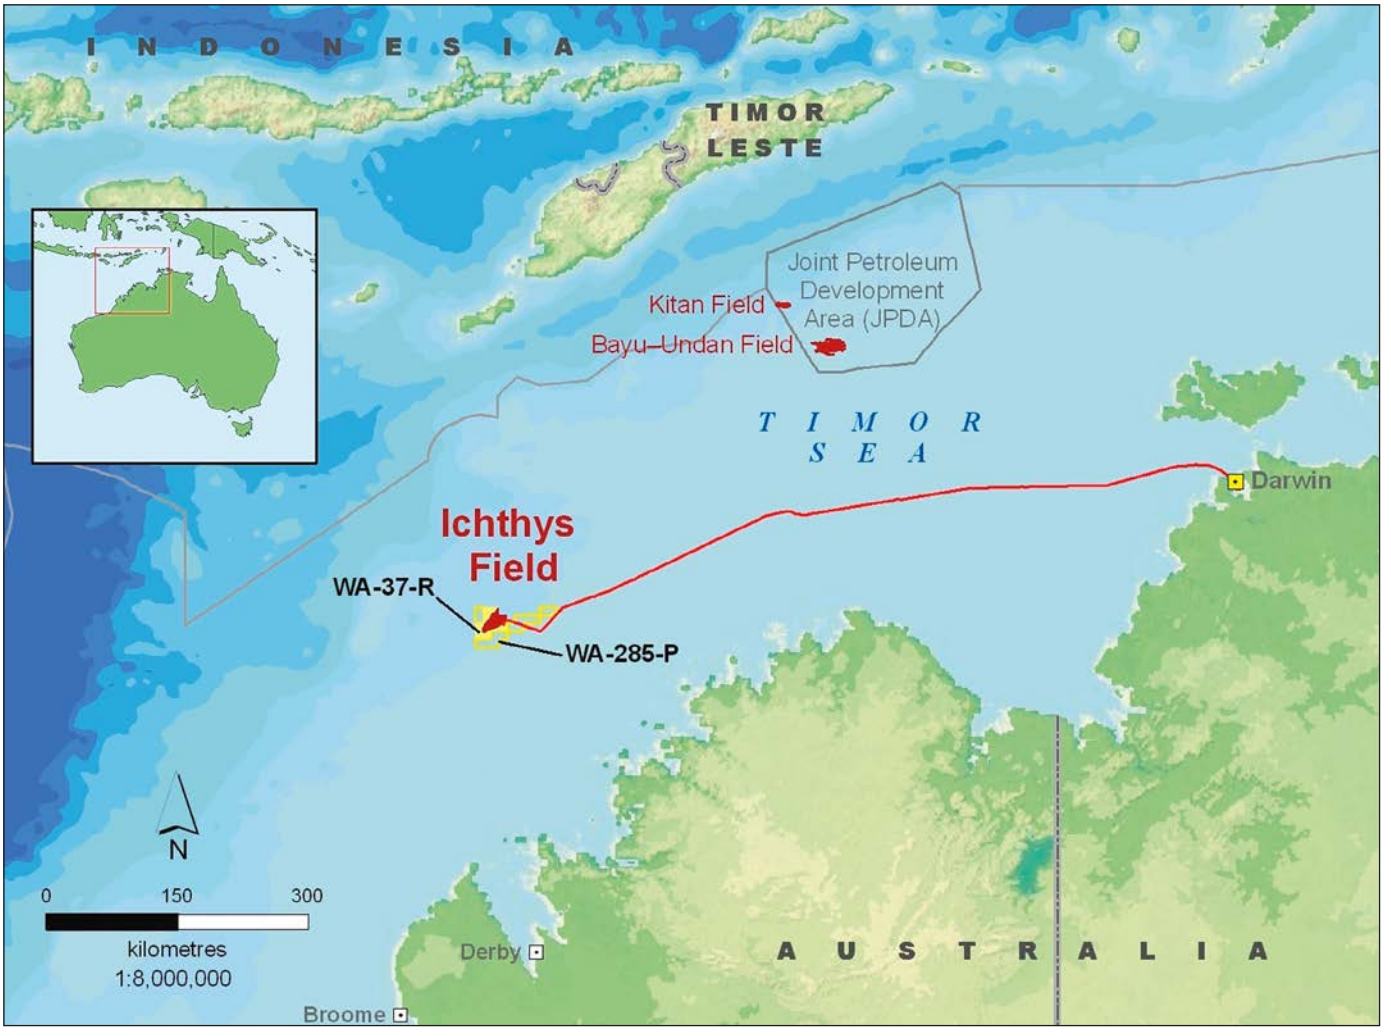

In Australia, and in many other countries, building projects that are likely to impact on the natural environment must go through a process of environmental assessment. This involves a study of the likely impacts of the proposed project on the environment. The resulting document is called an Environmental Impact Statement (EIS) and is generally prepared by a geographer with specialised training.

When completed, the EIS is submitted to the relevant authority, for example the state planning ministry. The state planning ministry then has the authority to stop the project if they feel it has too much impact on the environment. Alternatively, they may request changes to aspects of the project in order to minimise the environmental impacts.

Case study: the Ichthys Project

The Ichthys Project (named after the classical Greek word for 'fish') is the largest oil and gas mining project to be undertaken in the Northern Territory. It is being built by INPEX, a worldwide gas exploration company, and its partners, with construction in the Timor Sea and Darwin. Natural gas, an extremely valuable energy

ICHTHYS PROJECT: LOCATION OF THE PROPOSED OFFSHORE WELLS, PIPELINE AND ONSHORE PLANT

Source 1 Source: AAP

source, will be extracted from beneath the Timor Sea and then transported to Darwin through a pipeline that will be laid on the seabed.

The massive project is set to deliver significant social and economic benefits to Australia, bringing jobs, training, business opportunities, and advancement for the energy industry.

The three stages of the project – the offshore wells, the pipeline and the onshore facilities at Darwin – were all assessed for their environmental impacts before the project was allowed to proceed.

The onshore processing plant is being constructed on Middle Arm Peninsula to the south of Darwin and close to an existing natural gas plant. The following factors were studied as part of the three-year environmental assessment of the project:

- the impact of dredging parts of the harbour and the disposal of the dredged material on corals, sea grass and marine animals such as dolphins, dugongs and turtles. Dredging involves the removal of a large rock shoal by methods such as using explosives (three explosions per day for 57 weeks) or specialised dredges.
- an increase in underwater noise and the impact of this on dolphins which use sound to navigate
- impacts on shore birds and wading birds, particularly from the loss of mudflat habitat and the potential of oil spills
- impacts on fish species including the commercially important barramundi and on crustaceans, especially mud crabs
- the removal of areas of mangrove forest, including plants listed as vulnerable to extinction, and the possible impacts of increased sedimentation on other areas of mangrove
- disposal of waste water, including sewage from the plant and the village built to house up to 3500 construction workers
- air and noise pollution and the effects of these on Darwin residents
- greenhouse gas emissions. The project, when completed, will be the largest emitter of greenhouse gases in the Northern Territory and one of the largest in Australia.

Based on their assessment of the impacts and potential benefits of the project the Northern Territory government allowed it to go ahead, as long as the company made a number of changes to reduce the potential environmental impact and agreed to a range of recommendations. These included:

- monitoring and researching the health of Darwin Harbour for 40 years
- long-term research of coastal dolphins to assist with their conservation
- a $3 million donation to Charles Darwin University to assist in oil and gas research
- an extensive mapping project covering the natural habitats of the Darwin region.

Source 2 A computer-generated image of the completed onshore processing plant near Darwin

Check your learning 3.18

Remember and understand

1 What is an Environmental Impact Statement (EIS) used for?

2 List the potential benefits as well as potential negative impacts of the Ichthys Project.

Apply and analyse

3 Examine Source 1.
   - **a** Estimate the total length of the pipeline.
   - **b** What are some of the potential impacts of the pipeline?

4 Examine Source 2. Describe the changes to the natural environment as shown in this computer-generated image.

5 Why would INPEX agree to the range of recommendations put forward by the Northern Territory government?

Evaluate and create

6 Explain the importance of each of the Northern Territory government's recommendations for the natural environment.

7 Brainstorm with your classmates what cultural, economic and environmental factors a government would need to consider when deciding whether or not to approve a project such as the Ichthys Project.

3.19 Responding to environmental issues

Once an environmental issue has been identified and assessed, it is often necessary to come up with a suitable response. The environmental response must be individually designed for that particular environment. Management responses that are effective in one place may be ineffective or even damaging in other places.

When considering a suitable response to environmental issues, important questions to ask include:

- Does the response deal with the causes of the issue as well as its effects?
- Is the response affordable in both the short and long term?
- Is the response beneficial to all natural environments, or does it just move the problem and perhaps result in greater environmental changes in another place?
- Is the response fair to all of the relevant stakeholders?

Case study: Sierra Leone's disappearing beaches

Sand mining is having a serious environmental impact on the coastal environment in the African nation of Sierra Leone. The capital city, Freetown, is experiencing a population and building boom. The population is growing by about 70000 people per year and there is a growing demand for new housing as well as commercial and industrial buildings. Many of these buildings are made from concrete which requires vast quantities of cheap, good quality sand. Sand-mining operations can involve up to 40 trucks at a time, each with a team of diggers, who shovel sand from a beach. This process is creating changes in both the natural environment, as the sea is able to penetrate further inland, and the human environment. Local residents are being affected as the remaining dunes are eroding rapidly and houses are falling into the sea.

Possible responses

Sierra Leone is trying to build a viable tourism industry to boost the nation's economy but tourist resorts are in danger of losing their beaches. A possible response to this problem would be to declare sand mining illegal and arrest those who continue to take sand from the beaches. Another possible response would be to import sand from other places.

Source 1 Sand mining on Hamilton Beach, Freetown, Sierra Leone

Some of the factors to consider when planning a response to the issue of sand mining in Sierra Leone are:

- Sierra Leone is one of the world's poorest countries. Many people struggle to earn enough money to provide adequate food, shelter and water for their families. Sand mining provides a source of income for hundreds of men and their families.
- As a developing country, levels of technology in industries such as transport and mining are low.
- Coastal areas are often heavily used for many purposes: fishing, residences, tourism, recreation and a source of building materials.
- As dunes disappear, coastal erosion is accelerating and is now up to 6 metres per year in some places.
- Global climate change is expected to raise sea levels on this coast and to increase the number and severity of storms generating large, destructive waves.
- Sierra Leone's police force has not enforced previous bans on sand mining.
- Corrupt local officials accept payments from the construction companies to continue the sand mining.
- The main sources of sand, Hamilton and Lakka beaches, are located within Freetown's urban sprawl (see Source 2).

skill**drill:** Place, space and interconnection

Evaluating possible responses to environmental issues

Complex environmental issues often require complex responses. Geographers can propose possible responses or assess the environmental, economic and social sustainability of responses proposed by governments. Geographers can evaluate possible responses against a set of criteria. For example, the issue of sand mining in Sierra Leone requires an urgent response. If the situation continues, hundreds of people will lose their homes, the tourist industry will collapse and many people will lose their jobs. The area around Freetown will also lose many ecosystem services such as storm protection.

When evaluating possible responses to environmental issues such as the one in Sierra Leone, follow these steps:

Step 1 Read all of the background information carefully and make sure that you understand it. Conduct some additional research on the issue if anything is unclear.

Step 2 In some cases, you may need to suggest your own responses to environmental issues. In other cases, you will evaluate responses suggested by others. For example, in the case of Sierra Leone:

- Response 1 – Declare sand mining illegal and arrest those who continue to take sand from beaches.
- Response 2 – Import sand from other places.

Step 3 Develop a set of criteria to evaluate each of the suggested responses. These criteria should consider all sides of the issue, for example economic viability, environmental sustainability and social justice.

Step 4 Create a table to evaluate each response against each criterion. You may like to use symbols such as:

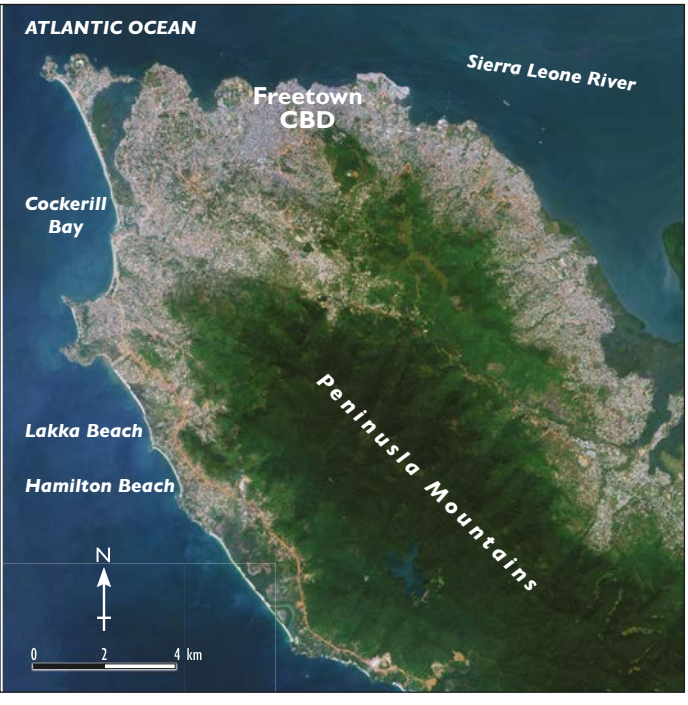

√ – criterion met % – criterion partly met
× – criterion not met ? – unsure.

Step 5 Use the data in your table to select the best response to the issue. You may need to reconsider particular aspects of the response (and make modifications), or combine aspects of more than one response, to come up with the best solution.

Step 6 Based on your evaluation, present your final recommendation. Include maps and diagrams to help describe the proposal and the intended benefits.

Apply the skill

1 Follow the steps to develop a sustainable response to beach sand mining in Sierra Leone.

Source 2 Hamilton and Lakka beaches shown on the edge of Freetown's urban sprawl

Check your learning 3.19

Remember and understand

1 Why is beach sand mining a problem?

2 Why doesn't the Sierra Leone government just ban beach sand mining?

Apply and analyse

3 List the effects of illegal sand mining and rank them from the most to least significant in terms of the severity of environmental impact.

Evaluate and create

4 Beach sand mining also occurs in other countries including Liberia, Morocco, India, Jamaica and New Zealand. Research beach sand mining in one of these places and make a list of the underlying reasons for the practice.

5 Using Source 3 on page 129, identify the human factors that are shaping the coastline of Sierra Leone. How do these differ from those shaping the coastline at Old Bar (see pp. 124–5)?

3C rich task

Gulf of Mexico oil spill

The Gulf of Mexico lies between the United States, Mexico and Cuba and contains one of the world's busiest oilfields. There are almost 4000 active oil wells in the Gulf along with a further 27 000 abandoned wells.

In April 2010, the Deepwater Horizon, an active oil well operated by British Petroleum (BP), exploded and sank to the sea floor, 1500 metres below the surface. Oil gushed from the well for three months while BP and American authorities tried desperately to plug the hole. The results were catastrophic. An oil slick covering 1500 square kilometres started moving towards the American coastline. Thousands of sea birds, fish, dolphins and turtles were covered in oil and died. Other animals along the shoreline such as crabs and molluscs were also badly affected. Local industries such as fishing and tourism collapsed, and many people lost their livelihoods.

skill**drill:** Data and information

Analysing environmental accidents using complex maps

In the case of an environmental accident, the impacts of the accident usually have multiple causes. Geographers try to go beyond the obvious cause (the oil well blew up) to explore other factors that have influenced the course and extent of the impacts. These are generally a combination of natural processes and human activities. Complex maps contain more than one set of information. Geographers use complex maps to analyse different features, reveal patterns and explain links between features in a given area. You can analyse a complex map by following these steps.

Step 1 Look carefully at the map and read its title to make sure you understand what is being shown.

Step 2 Examine the map's legend. Complex maps can have more than one part to a legend, and these parts will be represented on the map in different ways. For example, in Source 1 natural environments are shown using a range of colours and towns and cities with a range of symbols.

Step 3 Train your eyes to look for one set of information at a time. For example, look at solid blocks of colour on the map and work out what they tell you.

Step 4 Move to a different set of information by selecting another symbol or block of colour from the legend. Examine the map to identify the symbol or areas of colour.

Step 5 Look for concentrations of the same symbol in areas to see if patterns exist.

Step 6 Note any patterns you can find on the map between different features and locations.

Step 7 Describe the degree to which patterns are connected.

Step 8 Try to suggest reasons for the connection between the two patterns.

Apply the skill

1 Using Source 1, analyse the causes and effects of the Gulf of Mexico oil spill. Once you have completed your analysis, fill in the table below as a way of organising your results. An example has been done for you.

Geographic factor	Possible contributing feature	Description of feature
Physical environment	Shape of the coastline	The Gulf of Mexico is an extensive broad bay which opens to the Atlantic Ocean and Caribbean Sea in the east.
	Features of the seabed	
	Location of coastal marshes	
Natural processes	Ocean currents in the Gulf	
Demographics	Distribution of towns and cities	
	Location of oil refineries and oil rigs	

GULF OF MEXICO: EXTENT OF OIL SPILL FROM DEEPWATER HORIZON, 2010

Source 1

Source: Oxford University Press

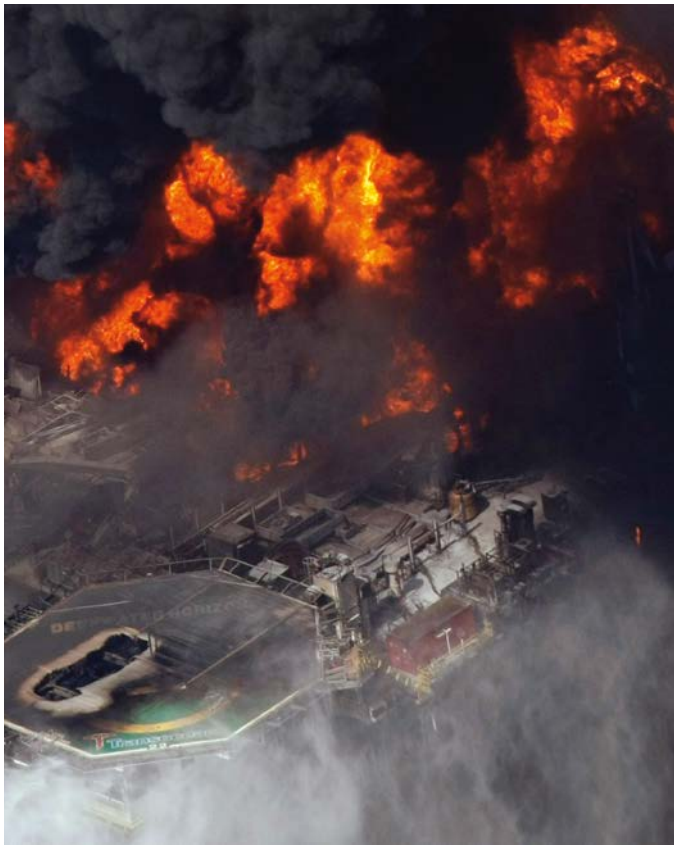

Extend your understanding

In addition to complex maps, geographers use information from a range of additional sources to explain how the impacts of the accident progressed and to look at the longer-term impacts on the environment. Research the Gulf of Mexico oil spill on the Internet before answering the following questions.

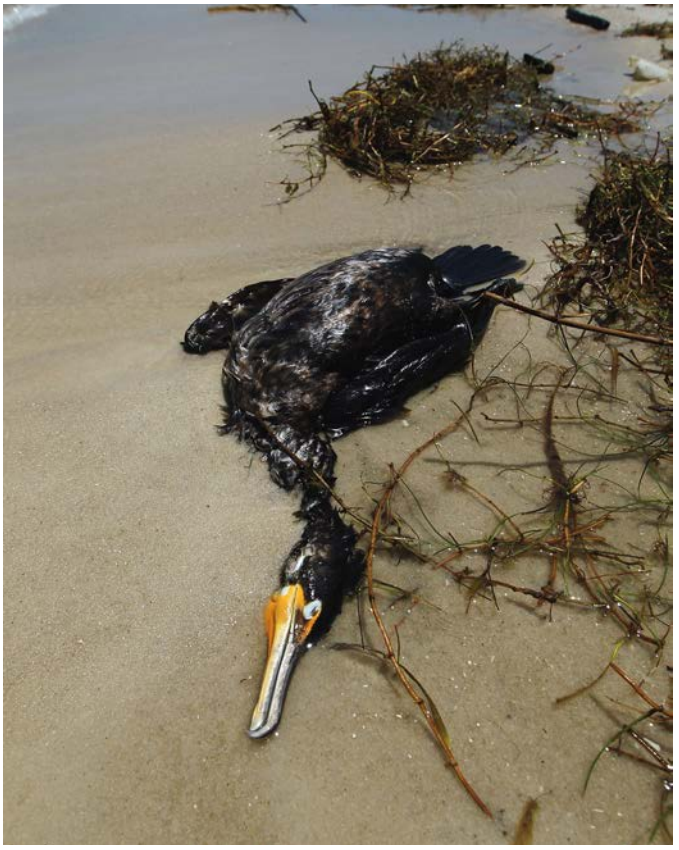

1 Can you identify any contributing factors to the accident that are not shown on Source 1 (for example any economic or technological factors). What was their role in the accident? Add these factors to the table provided.

2 Since 2000 more oil wells have been drilled in much deeper water than in the past. Some experts believe that this was an important factor in this disaster. Why do you think wells are now being drilled in much deeper water?

Contributing factors	Possible contributing feature	Description of feature
Economic factors	Level of development of USA	
	Importance of oil in USA economy	
	Tourism and fishing industries	
Technological factors	Operation of oil refineries and oil rigs	
	Technical failure of oil rig	

Source 2 The fire on the Deepwater Horizon oil platform

Source 3 Marine animal populations in the Gulf of Mexico were devastated by the oil spill in 2010. In total, around 750 million litres of crude oil was released into the gulf affecting fish, dolphins, whales, sea turtles and birds, as well as molluscs across the sea bed.

3 Sources 4 and 5 show some of the community responses and protests to the Gulf of Mexico oil spill. Shortly after the incident in 2010, civil and criminal charges were brought against BP in the American courts.

Conduct research to answer the following questions:

- **a** What kinds of charges were brought against BP in the aftermath of the Gulf of Mexico oil spill in 2010? Who brought these charges against BP?
- **b** How did BP plead in the case?
- **c** How was the case resolved? How was BP penalised and how much did they have to pay?
- **d** Do you consider this amount to be appropriate? Give reasons for your answer.

Source 4 These signs were erected on the front lawn of a home in Grand Isle, Louisiana, shortly after the Gulf of Mexcio oil spill. Each cross represents something that was affected by the oil spill, including many species of fish and other sea creatures.

Source 5 Activists hold signs during a protest in front of the Hale Boggs Federal Building on the first day of the trial over the Deepwater Horizon oil rig spill on 25 February 2013 in New Orleans, Louisiana.

Unit 2 Geographies of human wellbeing

An unequal world

The city of Sao Paulo in Brazil is home to more than 11 million people. Like many cities around the world today, there are huge differences between the way people in some parts of the city live compared with others. The access they have to food and fresh water, the types of houses in which they live, their levels of education, access to health care and levels of employment vary enormously. Geographers are interested in measuring these variations and exploring the reasons why they exist. Studying the links between all of these factors gives geographers an idea of the level of **wellbeing** in different populations. Wellbeing is an overall measure of the ability of human beings to access the things they need in order to live happy and healthy lives.

In this chapter we will explore some of the reasons why these enormous variations in wellbeing exist in different populations around the world and look at some of the many ways in which geographers measure them.

4A

How does wellbeing vary around the world?

1 Compare the standards of housing that you can see in the Paraisópolis favela with housing standards in the region where you live. What are the similarities and differences?

4B

How does wellbeing vary within countries?

1 What variations in living standards can you identify between those living in the favela and those living in the apartment block?

2 Why do you think these variations exist in such a small area?

chapter 4

Source 1 An apartment building with a pool and tennis court shares a fence with one of Sao Paulo's largest favelas (a shanty town or slum), Paraisópolis (meaning 'Paradise City'), home to about 100 000 people. This scene starkly illustrates the inequalities in wellbeing worldwide.

4.1 Defining wellbeing

Geographers define wellbeing as the ability of people to access the things they need in order to live happy, healthy and contented lives. Whether a person is born in a refugee camp in Tanzania, a megacity in China, a rural town in France or a coastal city in Australia, their basic requirements for life are the same. The primary requirements include fresh water, a secure food supply, shelter, clothing, and safety. Once these primary needs have been met, secondary needs, such as good health, the ability to make a decent living and access to education become important in determining an individual's level of wellbeing.

Source 1 China has one of the world's fastest growing economies. However, as in all countries, wealth is unevenly distributed.

The ability to meet these needs varies a great deal within communities, within countries and between countries. Many people around the world struggle simply to find enough food to eat or enough water to drink every day. Other people lack access to good health care or the ability to send their children to school. These experiences lead to a wide range of variations in human wellbeing. Geographers are interested in describing these variations and exploring possible reasons for them. They are also interested in analysing any strategies introduced to improve wellbeing and offering possible responses to resulting problems.

Three of the most important variables that influence levels of wellbeing around the world today are wealth, health and education.

Wealth

Our access to the basic necessities of life (and other wants we may have) are determined largely by our degree of wealth and our ability to earn a living. Wealth is generated by producing and selling things, earning wages from work, making investments or owning assets. If we have enough wealth, we can use it to access a wide variety of goods and services. If we do not, we may struggle to buy things such as food, medicine and tools that we could use to generate more wealth (see Source 1). There are huge variations in wealth across the globe. It is estimated, for example, that the wealthiest one per cent of adults own 40 per cent of the world's assets and that the three richest people in the world are wealthier than the world's 48 poorest countries combined.

Health

Human health is affected by a wide range of factors. Clean air, clean water and a secure supply of nutritious food are all vital but other factors are also important. These include the ability of a community to treat and control the spread of diseases, provide health care when individuals are sick or injured, care for the vulnerable such as babies and the aged, and provide emergency services in times of crisis. Access to health care is vital during natural disasters such as a drought or man-made disasters such as war, which can limit supply of food and water. People living in war-torn countries often struggle to find the basic requirements needed for a healthy life.

Source 2 People in Singapore enjoy one of the world's best healthcare systems. A baby born in Singapore is 45 times more likely to survive their first year of life than a baby born in Afghanistan.

Source 3 In 2013, about 74 per cent of Indian adults could read and write. This compares with a rate of just 12 per cent in 1947. Despite this dramatic improvement, India is home to the world's largest number of illiterates.

Education

Access to a formal education is viewed by many people as the key to improving wellbeing. Being able to read and write gives people access to a greater number of services and provides a range of options that can lead to better jobs, higher wages and improved standards of living. Education also increases people's self-esteem and allows them to have more control over their future.

In many communities, education is difficult to obtain. In many countries, poverty and conflict are the two major reasons why children do not attend school. Education can be especially difficult for girls to obtain, because in many cultures educating boys is seen as more worthwhile. While parents may work hard to send their sons to school, they prefer to have their daughters helping out at home.

Despite these obstacles, rates of schooling and literacy (the ability to read and write) are increasing around the world. In Sub-Saharan Africa, for example, the enrolment rates of children in primary school rose from 58 per cent in 1999 to 76 per cent in 2010. This means that 43 million more children received a primary education in the region by 2010. In wealthy countries, such as Australia, New Zealand and the United States, education is seen as so valuable that it is made compulsory, free and universal.

Check your learning 4.1

Remember and understand

1 Write your own definition for the term 'human wellbeing'.
2 Why is access to education seen by many as the key to improving wellbeing?

Apply and analyse

3 What are some of the ways in which a person's wellbeing could be measured?
4 Describe the contrasts in wealth shown in Source 1.
5 Why do you think survival rates of babies are so poor in Afghanistan? Make a list of possible reasons. Explain why the survival rates of babies are so much better in Singapore.

Evaluate and create

6 Conduct some research and describe wellbeing in Australia. Use the headings of wealth, health and education to guide your description.
7 Which photograph on these pages best shows what wellbeing means to you? Give some reasons for your answer.

4.2 Different views of wellbeing

The way in which we define wellbeing is dependent on a large number of factors. These include our values, beliefs, history, environment, level of education, language and **culture**. People from different environments and cultures often view wellbeing in vastly different ways. For example, owning your own home might be considered a factor that increases wellbeing, but in many Indigenous Australian communities guardianship of the land is considered more important to wellbeing than individual ownership.

Common indicators of wellbeing

Geographers often rely on a range of **quantitative data** to measure and compare levels of wellbeing around the world. Two of the most common measures used today include **Gross Domestic Product (GDP)** and **literacy rates**. These measures are referred to as universal indicators because, while they are not perfect, the data they provide is easily obtained and allows geographers to make basic international comparisons.

Gross Domestic Product (GDP) provides a measure of the total market value (i.e. the monetary value) of all the goods and services produced in a country in a given year. By dividing the GDP of a country by the total number of people living there, the GDP per capita can be calculated. This gives an approximation of the value of goods and services produced per person in the country each year. This data is then used to assess the average productivity and wealth of individuals.

Another universal indicator used to measure and compare wellbeing around the world is literacy rates. Literacy rates give an indication of the number of people in a population who are able to read and write. Data relating to literacy is often used as a measure of educational results in different countries. In general, low levels of literacy and education can impede the economic development of a country and affect wellbeing.

Although universal indicators like GDP and literacy rates are commonly used by geographers, they do not provide an objective and complete picture of the situation. For example, relying only on GDP to measure wellbeing assumes that feelings of wellbeing in a population are based exclusively on how much money people have. In the same way, using only literacy rates assumes that feelings of wellbeing are linked exclusively to people's level of education. From our own experiences we know that it's just not that simple. These quantitative measures do not take into account the many different attitudes and values of people within a population, nor do they give an indication of how satisfied individuals may feel with their place in society. In order to give a more complete picture, a range of additional data – known as **qualitative data** – needs to be taken into account. Qualitative data about wellbeing is often more difficult and time consuming to collect because it is gathered from surveys and interviews.

Source 1 For Indigenous Australians wellbeing is partly determined by connection to the land.

Over the course of this unit we will be looking more closely at a range of different indicators of wellbeing, including one developed by the United Nations known as the **Human Development Index (HDI)**, which combines a range of different measures into one.

Wellbeing for Indigenous Australians

Many Indigenous Australians have a view of wellbeing based on traditional beliefs of inter-relationships between individuals, their community and the land. Wellbeing is achieved when the relationships between these factors work together in harmony. This is often described as a holistic view of wellbeing. Importantly, ill-health will arise and persist when the harmony of these relationships is disrupted.

It can therefore be difficult to measure the wellbeing of Indigenous Australians using only the common universal indicators. The Australian Bureau of Statistics has recently attempted to develop a model that takes into account Indigenous values when considering wellbeing levels. As well as using measures of health, literacy and wealth, this new model includes wellbeing measures related to an individual's connection to their community, ancestry, cultural traditions and identity, land and spirituality.

Case study: Bhutan and Gross National Happiness (GNH)

> It's easy to mine the land and fish the seas and get rich. Yet we believe you cannot have a prosperous nation in the long run that does not conserve its natural environment or take care of the wellbeing of its people, which is being borne out by what is happening to the outside world.
>
> Thakur Singh Powdyel, Bhutan's Minister of Education

Since 1971, the tiny Himalayan country of Bhutan has rejected GDP as the way to measure the wellbeing of its people and instead adopted a measure known as Gross National Happiness (GNH).

While this might seem like nothing more than a good idea, in Bhutan it is taken very seriously. A GNH measure is taken every year as the country's government attempts to move its citizens towards a happier state. The four guiding principles of GNH are equitable social development, cultural preservation, conservation of the environment and promotion of good governance.

Source 2 Since 1971, Gross National Happiness has replaced Gross Domestic Product as a measure of wellbeing in Bhutan.

Children are taught these principles at school along with better environmental practices and basic agriculture. At school, bells have been replaced with soothing music and there are daily meditation sessions. In a recent study that measured happiness in 178 countries, the Bhutanese ranked as the eighth happiest people on the planet. Bhutan was the only country in the top 20 with a low GDP.

Check your learning 4.2

Remember and understand

1 What is Gross Domestic Product (GDP) an indicator of? Why is it often used as a measure of wellbeing?

Apply and analyse

2 How do you think Gross National Happiness would be measured?

3 Why do you think other countries have not adopted Bhutan's measure of GNH?

Evaluate and create

4 What are some important aspects of your own wellbeing? In what ways are they similar or different to the Bhutanese view of wellbeing?

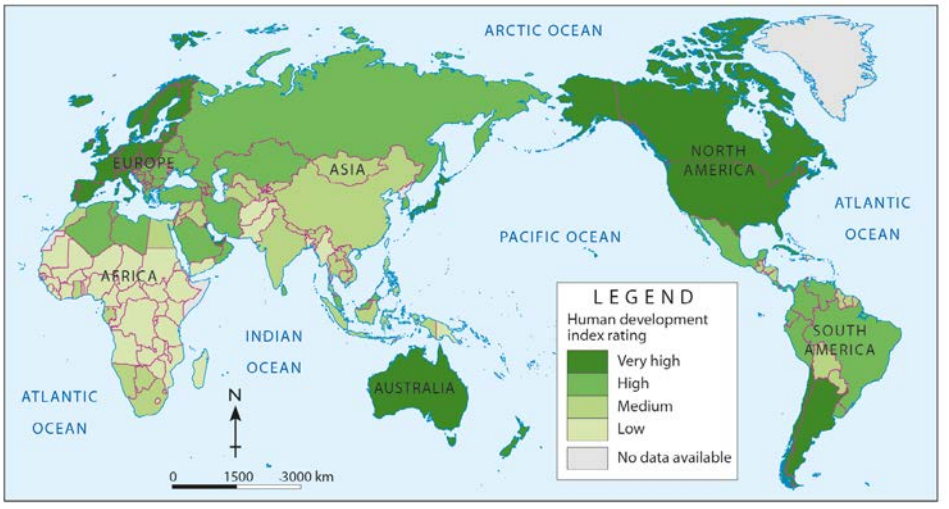

4.3 Mapping wellbeing

Geographers often use a range of maps to explore the spatial patterns in wellbeing within and between countries. Maps can be used to show variations in wellbeing around the world using specific indicators, such as the Human Development Index (HDI) or levels of poverty. By using a range of different mapping techniques, geographers can easily identify if countries with a high proportion of people living in poverty are clustered together or spread across the globe. They can then use this information to make comparisons and draw conclusions about the level of wellbeing in these places.

Choropleth maps

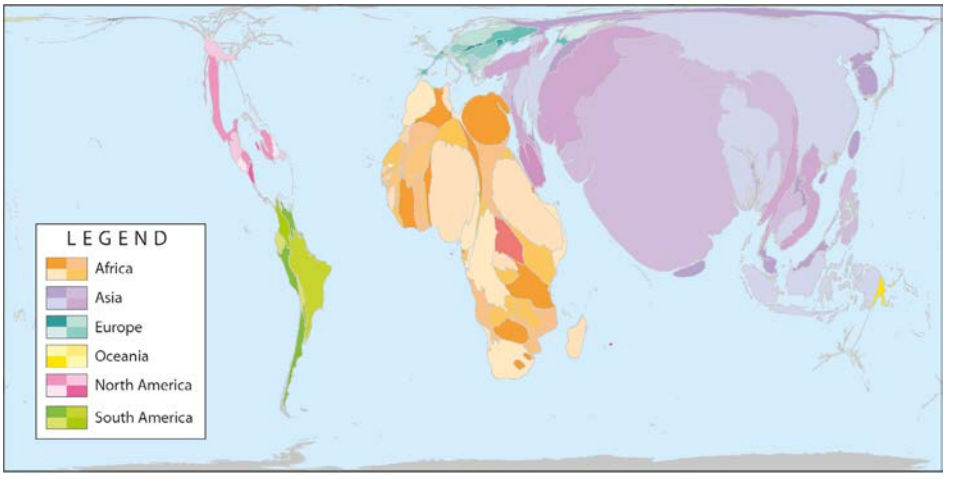

Choropleth maps give a quick impression of a spatial pattern by using dark and light shades of the same or similar colours. Darker shades usually show 'the most' and lighter shades show 'the least'. In Source 1, for example, countries are shaded according to their Human Development Index (HDI) rating. This measure, developed by the United Nations, combines several indicators into a single measure. The world's countries are ranked using indicators of health (**life expectancy**), education (literacy) and income (Gross Domestic Product). This ranking is then used to place the world's countries into four categories ranging from very high HDI to low HDI. The United Nations uses the same measure each year in its annual *Human Development Report* so that a country's scores, rankings and categories are regularly updated.

WORLD: HUMAN DEVELOPMENT INDEX RATINGS

Source 1 Source: Oxford University Press

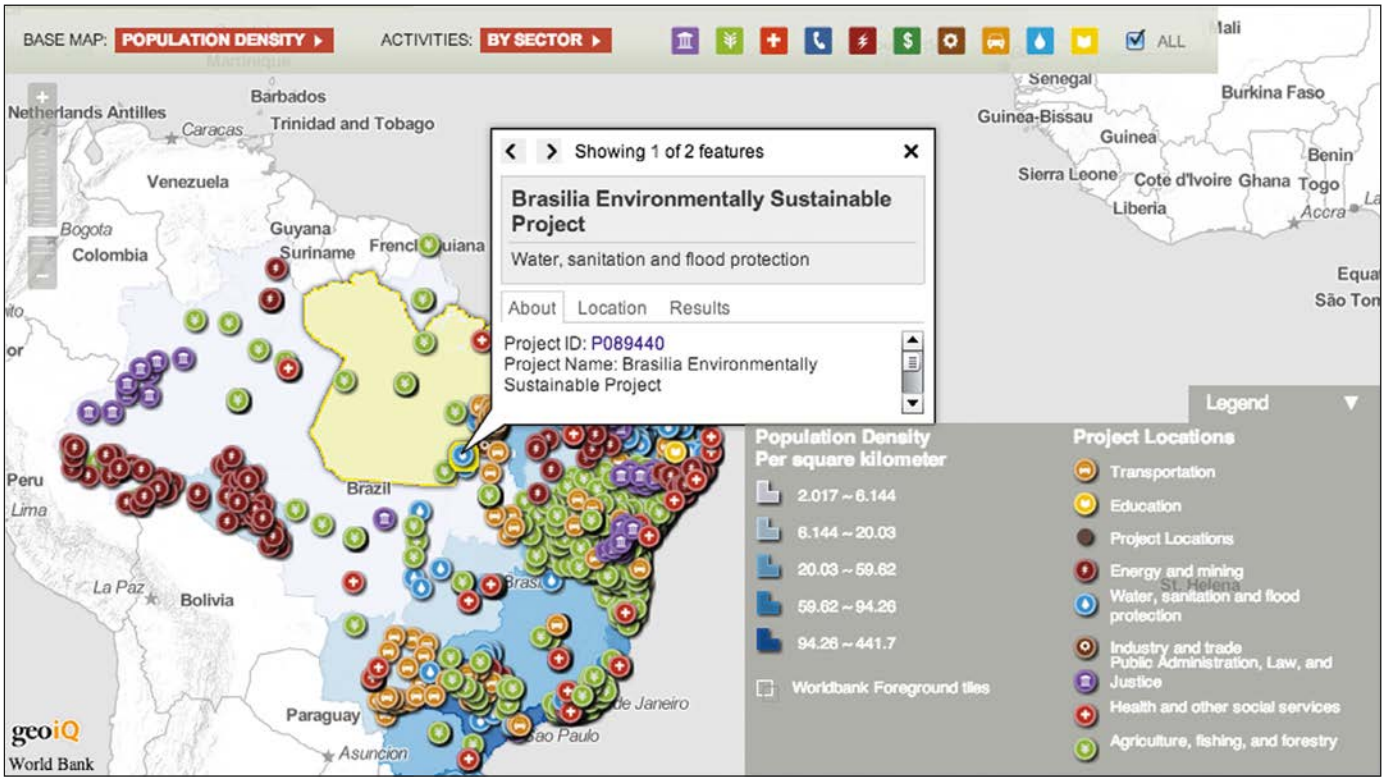

WORLD: PROPORTION OF POPULATION LIVING IN POVERTY

Source 2 Source: Oxford University Press

Cartograms

A **cartogram** is a type of map that displays countries in roughly their correct geographic locations but the size of countries is determined by the variable being mapped. For example, in Source 2, the size of each country is determined by the proportion of the world population that is living in poverty within that country. The larger the country is shown on this map, the greater the number of people living in poverty in that country. The smaller the country is shown on the map, the fewer the number of people living in poverty. The colours are added to the map to divide the world into geographic regions so that different cartograms can be easily compared.

Source 3 Screenshot of a World Bank GIS map showing a range of projects currently being undertaken to improve sustainability and wellbeing in Brazil

GIS maps

Geographic Information System (GIS) maps display data as a series of layers of digital information. Each layer of the map focuses on a different aspect of the environment, such as poverty, population, roads, settlements or land relief. When using a GIS program, geographers can switch layers on and off, allowing them to compare different aspects of the environment and look for interconnections between them. International organisations such as the World Bank are increasingly using GIS technology to map their activities and projects.

Check your learning 4.3

Remember and understand

1 What is the HDI and what is it used for?
2 What is a cartogram?

Apply and analyse

3 Do you think cartograms or choropleth maps are more useful for investigating variations in patterns of wellbeing? Give some reasons for your answer.
4 Describe the patterns of World Bank sponsored projects that you notice in Brazil on the GIS map.

Evaluate and create

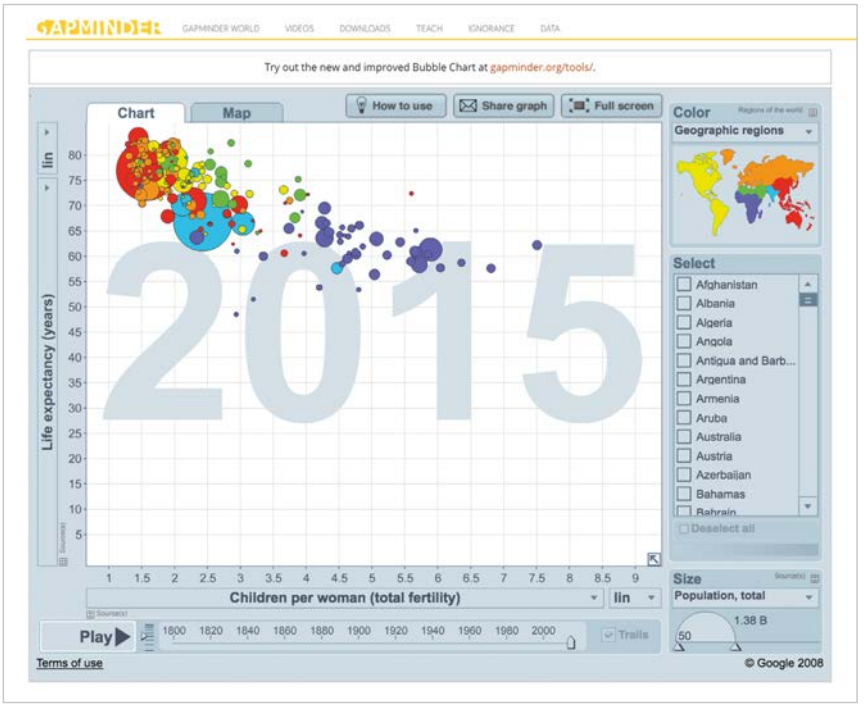

5 Use the 'World statistics' section in your obook to complete this task.
   a In groups of three, each research a different indicator of wellbeing in South America: GDP, literacy rates or life expectancy.
   b With your data, each create a choropleth map for the countries of South America. Use the same colours or shades for all the maps.
   c Place the maps on the classroom wall beside each other so that you can easily compare them. What similarities do you notice? What are some of the key differences?

4.4 Exploring links between wellbeing

Aspects of wellbeing such as health, wealth and education are usually closely related. A change in one aspect of a person's wellbeing usually affects other aspects of their wellbeing. For example, children who attend school tend to have better health than those who do not. Links such as these can be seen at the national scale as well as at the local scale. One of the most useful tools when exploring these links is a special type of graph known as a **scatter plot**.

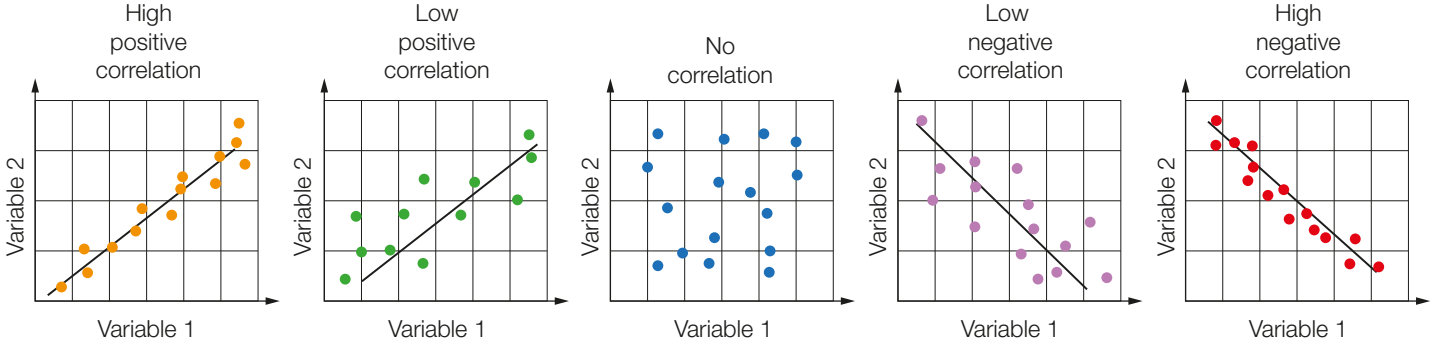

Scatter plots

Scatter plots are similar to line graphs in that they are used to display data plotted against two variables. Scatter plots are used by geographers to show the degree to which one of the variables shown on the graph is related to the other. This relationship is known as the **correlation**. Commonly, scatter graphs show data for a number of countries, each of which is represented by a dot on the graph. When the dots come close to forming a straight line, they are closely related and therefore are said to have a high correlation. When the dots do not come close to forming a straight line, they are not closely related and therefore are said to have a low correlation (see Source 1). When the trend is increasing, the correlation is positive. When the trend is decreasing, the correlation is negative. A trend line is often added to a scatter plot to demonstrate the strength of the relationship between the two variables.

Source 2 This scatter plot taken from the Gapminder website is exploring the correlation between life expectancy and fertility rates (children per woman) worldwide.

Source 1 shows a selection of the most common trends that can be represented on a scatter plot. With the introduction of digital graphing tools it has been possible to add more data to make scatter plots even more useful. Three variables can now be graphed to create a three-dimensional scatter plot. By animating graphs it is also possible to show changes in variables and their correlation over time. In Source 2 the size of each dot is determined by the size of the population of the country. The graph is able to show life expectancy in each country as well as **fertility rates**.

Source 1 Simple scatter plots showing different types of correlation

skill**drill:** Data and information

Constructing scatter plots using Microsoft Excel

You can use a computer program such as Microsoft Excel to construct a scatter plot and show the correlation between two variables. Note: These instructions may vary a little depending on the version of the program you are using.

Step 1 Enter the data into an Excel spreadsheet. The first indicator goes into column A and the second into column B. The data for each country must go into a separate box, known as a cell, on the spreadsheet.

Step 2 Highlight all of the cells containing data.

Step 3 Using the menu at the top of the spreadsheet select insert→scatter→the first scatter plot. This will convert your data into a scatter plot.

Step 4 The vertical axis usually defaults to begin at zero but the correlation is often easier to see if it begins slightly less than the lowest value being graphed. Look at your graph and decide what you would like as the lowest value on the vertical axis. Use layout→axes→primary vertical axis→more primary vertical axis options→change minimum auto to minimum fixed and enter the value you have decided on. Close the menu.

Step 5 Right click on one of the dots on the graph and select add trendline→linear.

Step 6 Use the chart tools menu 'layout' to turn off the gridlines and the legend. Add a title and label the axes.

Apply the skill

1 Use the 'World statistics' section in your obook to find the life expectancy and GDP rates for all the countries of Oceania. With this data construct a scatter plot exploring the links between life expectancy and GDP per person for the countries of Oceania.

Source 3 A scatter plot showing the correlation between life expectancy and GDP per person for South America countries

Check your learning 4.4

Remember and understand

1 What is the purpose of scatter plots?

2 What does the word 'correlation' mean?

Apply and analyse

3 Describe the relationship between life expectancy and children per woman as shown in Source 2. Describe what this means in your own words.

4 Describe the relationship between life expectancy and GDP per person as shown in Source 3. Why do you think this correlation exists?

a Scatter plots often contain one or two countries that do not conform to the general pattern and sit apart from most other countries on the graph. These are called outliers. How many outliers can you identify in Source 2?

b Why do you think these countries do not conform to the general pattern?

Evaluate and create

5 Visit the Gapminder website (www.gapminder.org) and download Gapminder World. Click the play button to see how countries have changed over time. Explore the graphs on this website by selecting different indicators for each axis and watching the ways in which their correlation changes.

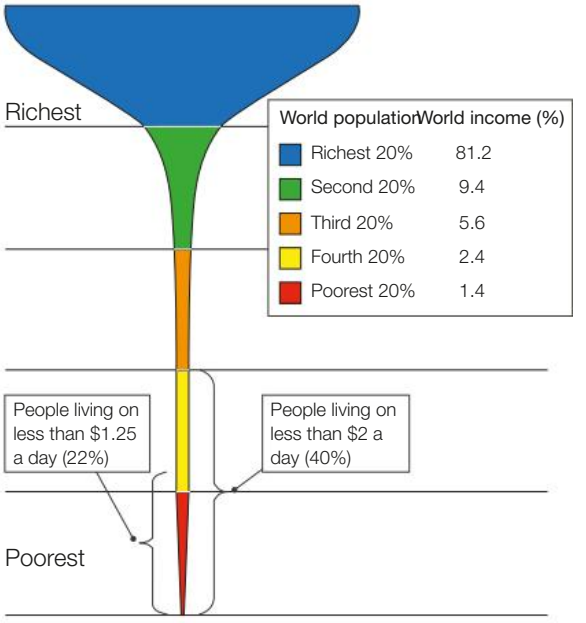

4.5 Contrasts in wealth

By any measure, the world's wealth is unevenly distributed (see Source 2). The richest one per cent of the world's population has approximately the same amount of income as the poorest 56 per cent of the world's population (3.5 billion people). All 10 of the world's poorest countries are in Africa.

Measuring wealth: Gross Domestic Product (GDP)

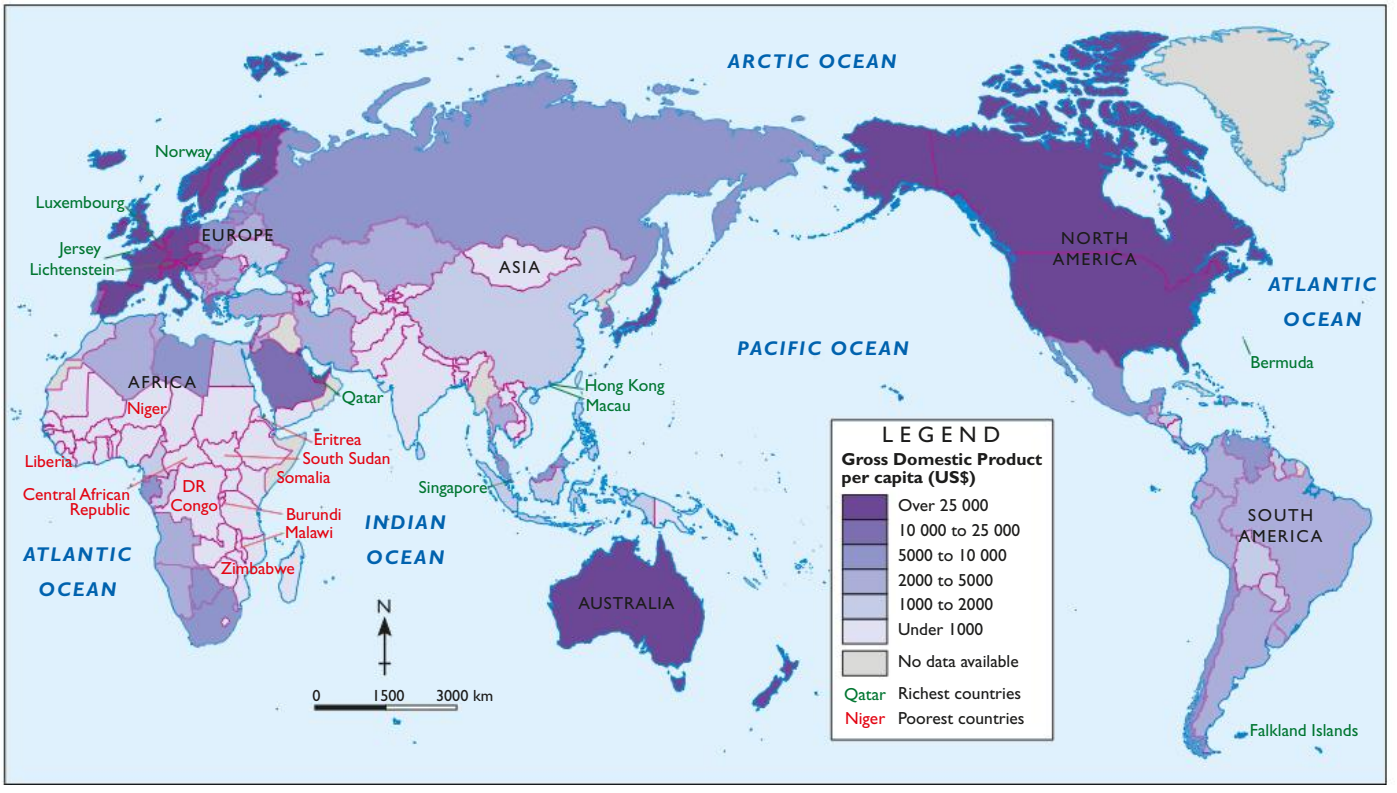

A country's Gross Domestic Product (GDP) is one way to measure wealth. This is done by calculating the size of its economy by adding the total value of all goods and services produced during a year. To make meaningful comparisons between countries, the total GDP is divided by the size of the population to produce a measure known as GDP per capita. Source 1 shows the GDP of countries worldwide, together with a listing of the world's 10 richest countries and the world's 10 poorest countries.

In 2012, the GDP per capita of Qatar, the world's richest country, was $103 900 and the GDP per capita of the Democratic Republic of the Congo, the world's poorest country, was $272. Australia's GDP was $42 000. (All these figures are given in US dollars.)

Source 2 A graph of the world's wealth distribution, 2011, known as the 'champagne glass distribution' because of its shape

WORLD: GROSS DOMESTIC PRODUCT SHOWING RICHEST AND POOREST

Source 1 Source: Oxford University Press

Source 3 Indian and Nepalese window-washers abseil down a skyscraper in Doha, the capital city of Qatar.

Case study: levels of wealth in Qatar

As mentioned, the residents of Qatar are, on average, the wealthiest people on Earth. Its two million people earn an average of US$103 900 each year (compared with the global average of US$12 500). Qatar is a tiny country (slightly smaller than the Sydney metropolitan area) with vast reserves of oil and gas. The wealth generated from developing and exporting these resources has been used to increase the state of wellbeing for many Qatari residents. The country boasts one of the world's best healthcare systems, while water, gas, electricity and even food are partially paid for by the state. The employment opportunities in Qatar attract many migrants from other Middle Eastern countries as well as from South and South-East Asia, particularly India, Nepal and the Philippines. More than half of the population is made up of foreign workers (the highest migration rate in the world).

Check your learning 4.5

Remember and understand

1 Where are the world's ten poorest countries?

2 Examine Source 3. Why do you think these men have travelled from Nepal to Doha to do this work?

Apply and analyse

3 When GDP per capita is calculated, small countries with a low population are often at an advantage over countries with large populations. Explain why this is the case.

4 Examine Source 1. In a carefully worded paragraph, describe the global distribution of wealth using the PQE method. For more information on the PQE method, refer to page 28 of 'The geography toolkit'. Refer to specific regions and countries in your description.

5 Describe the pattern of wealth distribution as shown in Source 1.

Evaluate and create

6 Conduct some extra research on the Internet to complete the following task.

- **a** Brainstorm the factors that might help to explain why global wealth is so unevenly distributed. Why are people in some countries such as Qatar, the USA and Australia wealthy while people in other places are not?
- **b** Try to think of as many reasons as you can and then classify them into groups of factors. Decide on headings for these groups.

4.6 Living in poverty

In 2000, the United Nations set several wellbeing targets that they aimed to meet by 2015. These targets became known as the Millennium Development Goals. The first of these was to eradicate extreme hunger and poverty by halving the proportion of people living on less than US$1.25 a day (known as the 'poverty line'). The 'poverty line' is the estimated minimum income needed per day in a particular country to secure the necessities of life. The target was met five years early, due largely to the economic development of countries with large populations such as Brazil, China and India. This meant that a lot fewer people were living in extreme poverty than in the past. This, of course, is great news but this improvement in wellbeing was not felt in all of the world's countries.

In the countries of Africa that lie south of the Sahara Desert (a region known as Sub-Saharan Africa), almost half of the population lives on less than US$1.25 a day. While this proportion has decreased over the last few decades, it still leaves 420 million people living in absolute poverty. Almost 60 million of these live in the Democratic Republic of the Congo (DRC), the world's poorest country.

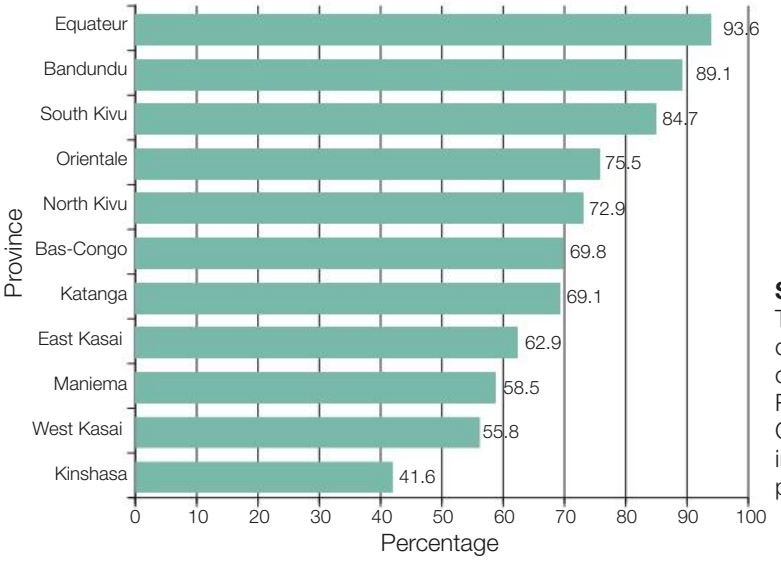

Case study: wellbeing in the Democratic Republic of the Congo

Source 1 Gold mining in the DRC is hard, back-breaking work with little hope of personal gain. For many people in rural areas, however, it provides one of the only opportunities for on-going work. Up to 150 000 mines dot the landscape in the Ituri district of the Orientale province. Gold is seen by many as a road to wealth and worth fighting for. This has resulted in armed conflict in the Ituri district. It is also taking workers away from farming, leaving the country without enough food to feed its people.

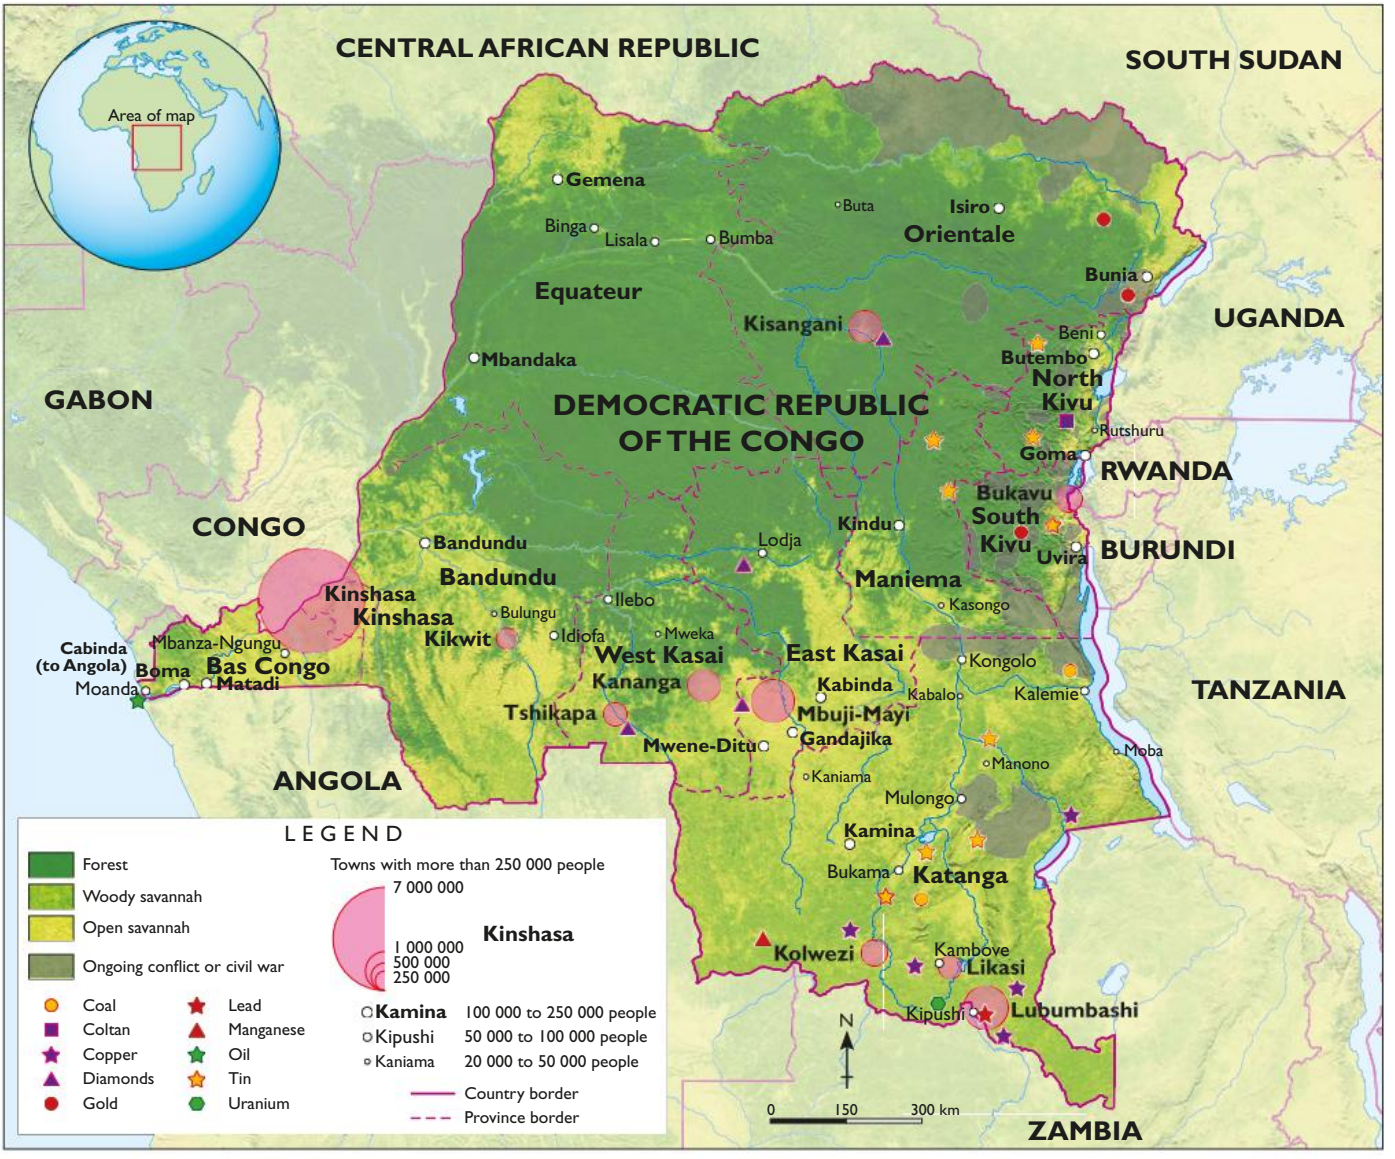

Source 2 The capital of the DRC is Kinshasa. Kinshasa's population is expected to top 10 million within the next year or so when the city will become the world's newest megacity. Migrants from rural areas and a high birth rate have swelled the number of people in the city. Many of the city's residents live in slums such as this one in the city's east.

Source 3 The percentage of the population of the Democratic Republic of the Congo living in poverty, by province, 2005.

DEMOCRATIC REPUBLIC OF THE CONGO

Check your learning 4.6

Remember and understand

1 What is meant by the term 'poverty line'?

2 What are the Millennium Development Goals?

Apply and analyse

3 Use Sources 3 and 4 to examine and describe the relationships in the DRC between:
- **a** conflict and poverty
- **b** mineral deposits and poverty
- **c** city living and poverty.

4 Access the indicators of wealth for Qatar and the DRC in the 'World statistics' section in your obook. Use these to write five statements comparing the wealth of the people living in these countries.

Evaluate and create

5 Trace an outline map of the DRC including the province borders. Use the data in Source 4 to construct a choropleth map of poverty in each province.

6 Describe the pattern of poverty within the DRC using the PQE method. Use the names of specific places in your description.

4.7 Contrasts in health

In some countries, people struggle to obtain the most basic health care services and doctors work in hospitals that are old and poorly equipped. In other countries, hospitals have state-of-the-art facilities and access to the newest treatments and drugs. While it is easy to see how unevenly distributed health services are worldwide, the level of health and its contribution to the wellbeing of a community or country is a complex concept. There are many other variables that can affect the health of people, including diet and other lifestyle factors.

For these reasons, geographers rely on indicators of health such as life expectancy and the infant mortality rates to measure and compare the health of individuals within countries. Other indicators such as the number of doctors per 1000 people and access to reliable water can also be used to examine the reasons why health differs between countries.

Thirst and hunger

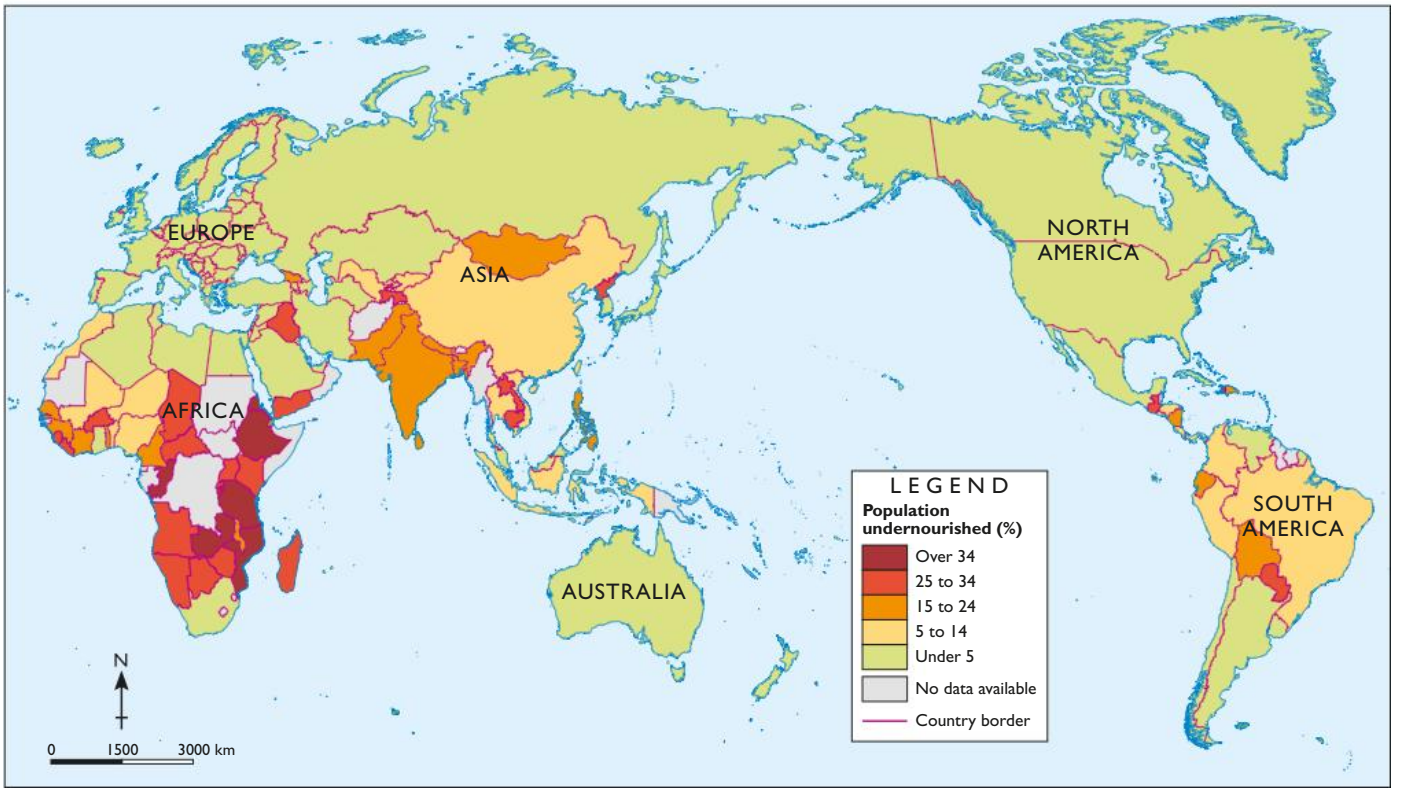

The greatest threat to good health in the world today is hunger. The simplest way to improve the health of people around the world is to provide them all with enough clean water to drink and enough food to eat. One in eight people worldwide are undernourished, making them more susceptible to disease, less productive in their work and more likely to die young. Hunger is often the result of a range of factors including conflict, natural disaster, poverty and environmental degradation.

Dirty water causes health problems as well, including diarrhoea, and carries diseases such as cholera and typhoid. Around 780 million people around the world do not have access to clean water, and 345 million of these live in Africa. The importance of clean water cannot be under-estimated. More than 3.4 million people die each year from diseases caused by dirty water or a lack of sanitation, including thousands of children every day.

Life expectancy

Life expectancy is the average number of years that a person can expect to live. For people in developing

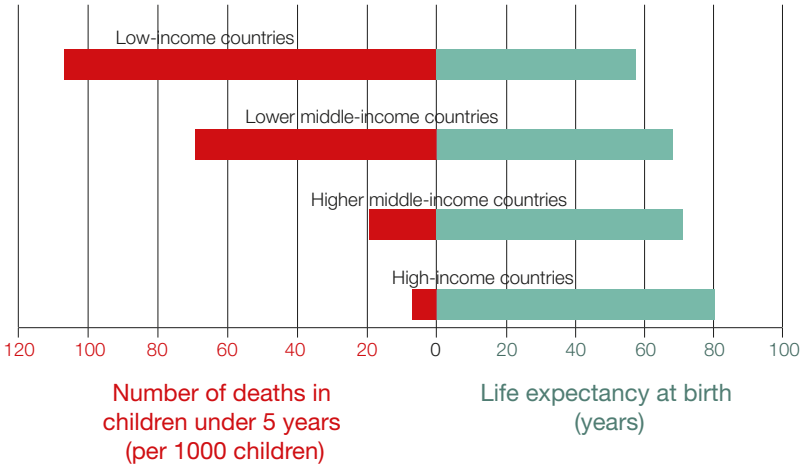

WORLD: HUNGER LEVELS 2012

Source 1

Source: Oxford University Press

countries, life expectancy is generally shorter than for people in developed countries. A child born in Sub-Saharan Africa in 2013, for example, can expect to live for 55 years, while a child born on the same day in the USA can expect to live for 79 years – 24 years longer. The lower life expectancy in Sub-Saharan Africa is due to a wide range of factors including the presence of diseases such as malaria and HIV AIDS, poor water and **food security** and poor access to health care. Source 3 clearly shows the relationship between the wealth of a country and the life expectancy of its citizens.

Source 3 The links between a country's wealth, child deaths and life expectancy

Infant mortality

In the same way that life expectancy varies greatly between the developing and the developed world, **infant mortality** rates (the proportion of children who die in their first year) are also strikingly different (see Source 3). A child born today in Sub-Saharan Africa is 12 times more likely to die in their first year of life than a child born in the USA.

Studies of infant mortality in developing countries have discovered some specific factors that put children at higher levels of risk. Children and their mothers are much more vulnerable in rural areas than in cities. Women in cities tend to give birth in hospitals and health clinics, while women in rural areas often give birth at home without a nurse or doctor present. Children born to educated mothers, even those with only a primary school level of education, also have a higher survival rate. In some regions survival rates can be up to three times greater than for children of uneducated mothers.

Source 2
Mali, a country in West Africa, has one of the highest infant mortality rates in the world. Vaccinations against disease and more clinics for mothers and children are seen as crucial steps in lowering this rate.

Check your learning 4.7

Remember and understand

1 In your own words, explain the links between poverty and indicators of health like life expectancy and infant mortality.

2 What are some of the effects of hunger?

Apply and analyse

3 Examine Source 1.
- **a** In which regions of the world are more than 95 per cent of the population well nourished?
- **b** In which regions of the world are more than 25 per cent undernourished?
- **c** Compare this map with other world maps in this chapter. What links can you find between hunger and other factors such as Gross Domestic Product (Source 1 on page 148) and literacy rates?

4 Using the 'World statistics' section in your obook, compare the life expectancies of people born in two different regions of the world – one developed and one developing. Compare average life expectancy in these regions with infant mortality. What pattern do you notice when comparing these two figures?

Evaluate and create

5 Use information from your own research on the Internet to complete the following task.
- **a** One of the Millennium Development Goals is to reduce the infant mortality rate by two-thirds between 1990 and 2015. By 2010, it had fallen by one-third. Research how this was achieved and suggest changes that could be made to reach the goal by 2015.

4.8 The Sub-Saharan HIV epidemic

One of the most serious health challenges facing individuals and communities in developing countries is the spread of the Human Immunodeficiency Virus (HIV) which can lead to Acquired Immunodeficiency Syndrome (AIDS). HIV is a virus that attacks the body's immune system and makes people highly susceptible to infections. As the body is unable to fight these infections, common illnesses become life-threatening. About 34 million people are living with HIV worldwide. Sixty-nine per cent of these people are in Sub-Saharan Africa where almost one in 20 adults has the virus (see Source 2).

HIV is a contagious disease spread through contact with blood, most commonly through poor health practices such as sharing intravenous needles and having unprotected sex. Tragically, unborn children can contract the virus from their mothers and newborns can contract it through breastfeeding. Over 300 000 children per year become infected with HIV from their mothers. Treating pregnant women who are HIV positive with suitable medicines is seen as the frontline in the battle to reduce and eventually eliminate HIV.

The impacts of HIV/AIDS

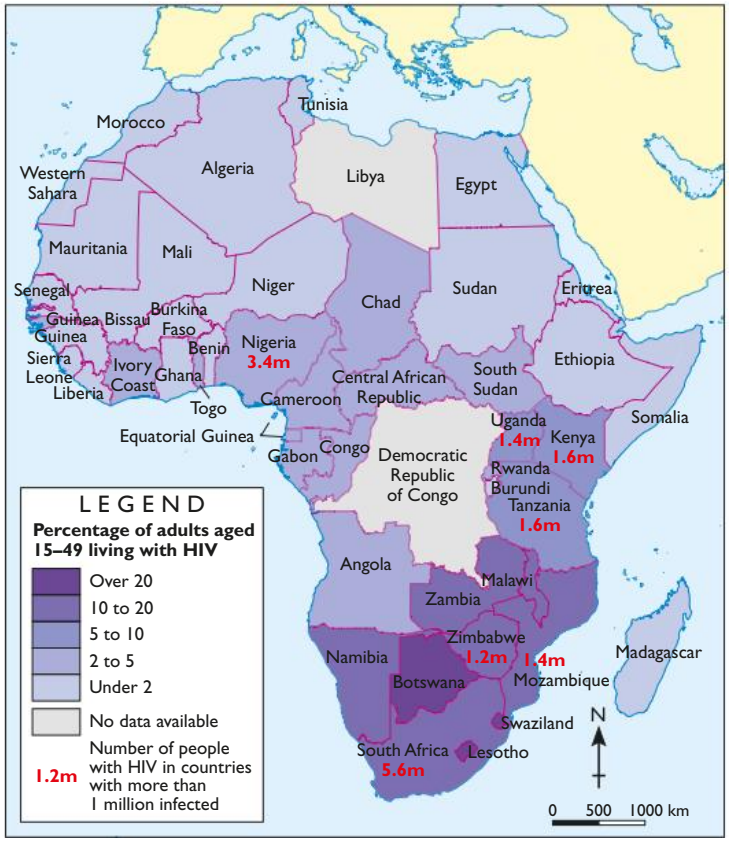

The spread of HIV among populations in Africa is having devastating impacts on communities. These include:

- impacts on population – the loss of life among age groups that would usually be at their most productive; lower life expectancy across the population as a whole; and the slowing of population growth.
- impacts on families and households – the loss of income and cost of caring for infected family members has increased poverty levels; families face discrimination and social stigma; loss of parents has left increasing numbers of orphans and single-parent families or resulted in an increased burden on extended family.
- impacts on food security – the loss of workers on farms has affected productivity leading to reduced farm output and subsequent food shortages.

Source 1 Mourning her eighth child to die from HIV-related illnesses, an 80-year-old Uganda woman is left to care for her surviving three grandchildren.

AFRICA: ADULTS LIVING WITH HIV

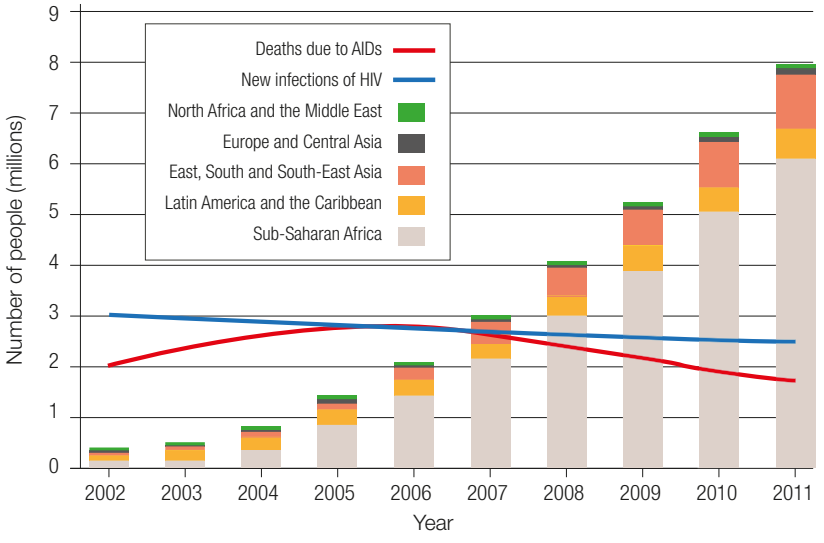

Source 2 Source: Oxford University Press

- impacts on health care – greater demands placed on healthcare systems, with increased strains on doctors, nurses, hospitals and pharmacies often in areas already under stress; the death of healthcare workers; funds needed to treat other diseases are being diverted to treat HIV patients.
- impacts on education – the death of teachers; fall in attendance by children caring for ill parents or replacing them in the workforce; loss of income makes it harder to pay school fees.
- impacts on the economy – the strain on the national economy from increased health costs and a fall in GDP increases income inequalities and poverty; loss of 'human capital' such as skilled and educated young people.

HIV health programs

The United Nations has embarked on an ambitious program to reduce and even eliminate HIV/AIDS. The program is called 'Getting to Zero' and lists as its main targets zero new HIV infections, zero discrimination against those with the virus and zero AIDS-related deaths. There are a large number of projects that have proven effective in reducing HIV, in particular the use of new drugs (known as antiretroviral therapy) for those with the infection. For those without the infection, education programs aimed at preventing future infections have been very effective.

In recent years, the number of people who have been newly infected with the virus has fallen. In Sub-Saharan Africa, for example, new infections fell from a peak of 2.4 million in 2001 to 1.8 million in 2011. Along with this decline has come a fall in the number of people dying from HIV-related illnesses. This is largely due to the greater availability of medicines for low- and middle-income households, particularly in developing countries (see Source 3). Studies show that successful treatment of the virus is often followed by improved economic conditions in these countries.

Source 3 Number of people receiving HIV therapy in low- and middle-wealth regions of the world, 2002–2011

Check your learning 4.8

Remember and understand

1 What is HIV?

2 Examine Source 1. Describe what has happened to her family. What do you think she is feeling? How do you feel about her situation?

Apply and analyse

3 Examine Source 3.

- **a** Describe the general trend in the treatment of HIV on a global scale.
- **b** In which regions of the world has the number of people receiving treatment grown most quickly?
- **c** What do you see as some of the barriers to infected people receiving treatment? How could these barriers be overcome?
- **d** Describe and account for the trend in AIDS deaths in these regions since 2002.

4 Examine Source 2.

- **a** Which country in Africa has the greatest percentage of adults living with HIV?
- **b** Which country has the greatest number of people living with HIV?
- **c** Describe the general pattern of infection as shown on the map.

Evaluate and create

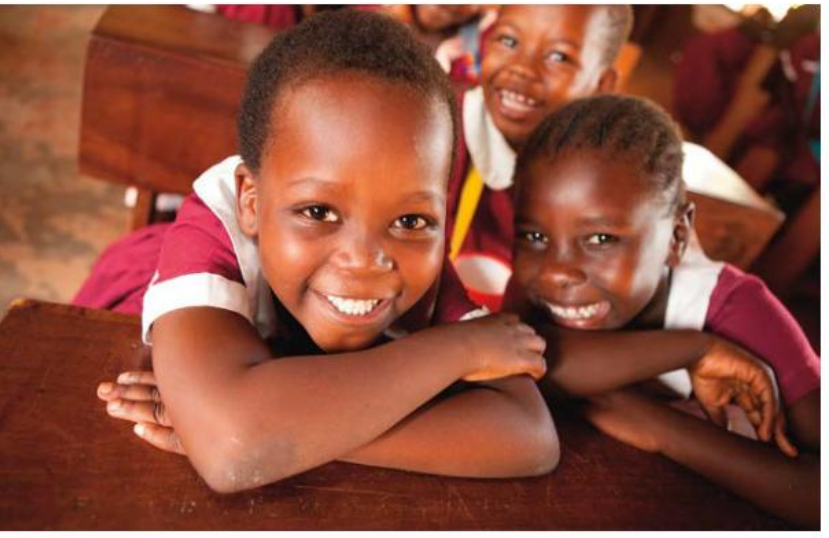

5 Classify the effects of HIV into impacts on individuals, impacts on communities and impacts on nations.

6 Select an African country with high rates of HIV infection as shown in Source 2.

- **a** Refer to the 'World statistics' section in your obook for more information on this country. Use this data to describe other indicators of wellbeing there.
- **b** Use your research skills to investigate the health situation in this country. In your research, focus on rates of HIV infection and find out if they are increasing or decreasing.

4.9 Contrasts in education

Education provides much more than the opportunity to read, write and count. It is seen by many international aid agencies and experts in the field as the key to helping people, communities and nations lift themselves out of poverty. Education provides individuals with opportunities to become more engaged with society, to have a range of skills and tools to better care for themselves and their children, to participate in the workforce and improve their country's economy, to live healthier lives, to combat poverty and to reduce inequalities in wellbeing.

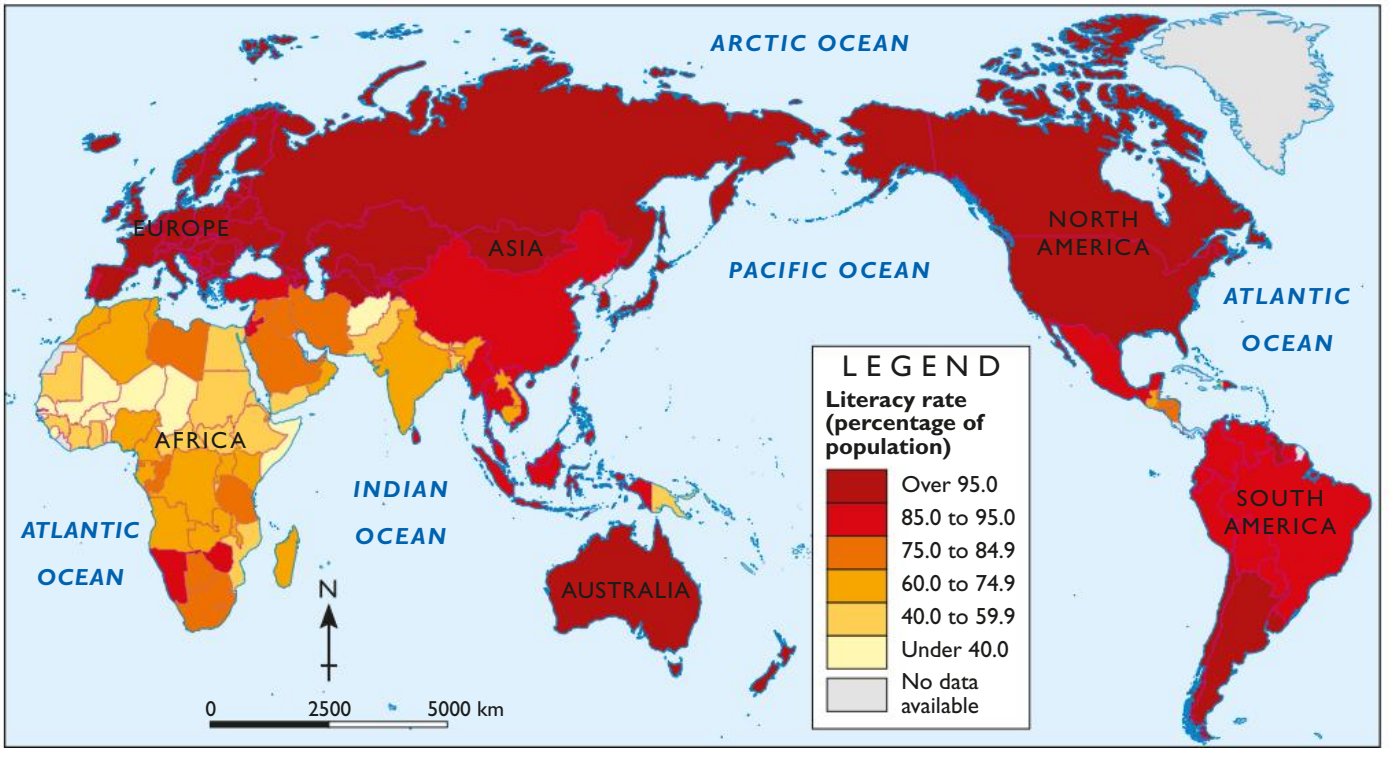

Source 1 Between 1999 and 2010, the percentage of Sub-Saharan African children attending school rose from 58 per cent to 76 per cent. Despite this remarkable improvement, 33 million children receive no schooling.

Literacy rates

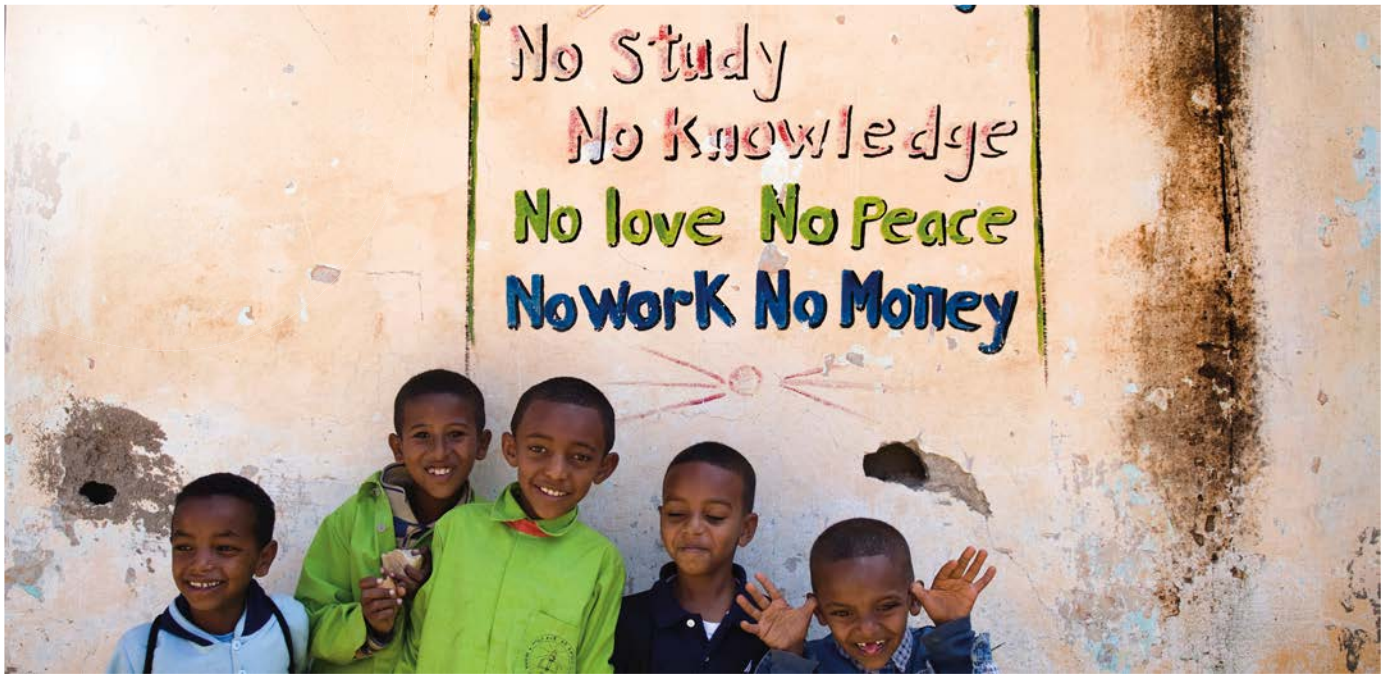

Literacy rates measure the percentage of adults who can read and write and are often used as an indicator of education levels within countries. Literacy rates can be difficult to calculate, however, as many countries do not keep accurate data. It is also important to be aware of potential variations in literacy within countries. In many countries, for example, people in rural areas have lower literacy levels than city dwellers. In other countries, girls are not given the same educational opportunities as boys.

WORLD: LITERACY RATES

Source 2

Source: Oxford University Press

Source 3 Eritrea has one of the world's lowest primary school enrolment rates. This is due to a number of factors, including school fees, poor infrastructure and the role of many children as workers on subsistence farms.

Barriers to successful education

Access to education varies widely across the globe. In developed countries such as Australia, Britain, Germany and France, about 99 per cent of all school-aged children are enrolled in schools. In developing countries such as Mali, Ethiopia and Niger, it is only 90 per cent. While the enrolment rate has improved markedly over the last two decades, a 90 per cent participation rate means that 61 million children of primary school age are not receiving an education. More than half of these children are in Sub-Saharan Africa. A further one-fifth are in South Asia.

There are many factors that determine whether or not a child will attend school. These include:

- system barriers – such as a lack of trained teachers, classrooms and educational materials including books
- attendance barriers – such as school fees, distance to school, poor transport networks and the concern of many parents about the safety of their children. Many children also work to help support their families.
- social barriers – such as variations in language, religion and conflict within countries. Conflict is one of the greatest barriers with children in war-torn nations such as Somalia and Syria much less likely to attend school.

Check your learning 4.9

Remember and understand

1 Why do you think Sub-Saharan African children are less likely to attend school than children in other regions of the world?
2 List three social barriers that may determine whether or not a child attends school.

Apply and analyse

3 Examine Source 3. Who do you think has painted this sign on the school wall? What is the purpose of this sign?
4 Compare Source 2, the world map of literacy levels, with Source 1 on page 148, the world map of Gross Domestic Product. Comment on the relationships you see between these two indicators.
5 What is the literacy rate in Eritrea (refer to the 'World statistics' section in your obook)? Compare this with the literacy rate in Australia. Suggest reasons to account for the differences in literacy between these two countries.

Evaluate and create

6 Which of the barriers to education discussed here do you think would be the most difficult to overcome? Give some reasons for your answer.
7 In a small team, develop some strategies to help communities overcome one or more of the barriers to education. Share your strategies with the class.

4A rich task

Global obesity epidemic

As you have learnt, many people around the globe face chronic food shortages and hunger. However, one of the fastest growing public health crises in many countries is obesity. Once only a problem in **developed countries**, obesity has now spread to **developing nations** such as Mexico, China, India and Brazil. The World Health Organization (WHO) estimates that more than 1.4 billion people in these countries are overweight and 500 million of these are obese.

Excessive body weight and obesity are linked to health problems such as heart disease, stroke, arthritis, diabetes and some cancers. Obesity is a leading cause of premature death in many countries and a huge burden on public health resources. It has become such a serious issue that many experts now describe it as the global obesity epidemic.

Source 1 'Global threat waiting area'

skill**drill:** Place, space and interconnection

Developing geographical questions from media reports

Much of our understanding about events and trends happening around the world comes to us through media reports. These reports can take the form of printed media such as newspapers and magazines, electronic media such as television and radio reports, or new media such as the Internet and mobile phones. News has never been more accessible and plentiful than it is right now. By learning a few simple techniques you can use the news to generate geographical questions to guide your inquiries.

Step 1 Check the source of the news article for reliability and possible bias. Find out who wrote the article and the news organisation that published it. Mainstream media organisations are generally more reliable than smaller ones but this may not always be the case. If possible, use the news company website to investigate possible bias.

Step 2 Work out what type of report you are watching, reading or hearing. Is the information presented being reported as fact or is it an opinion piece? Both are valuable but it is important to know the difference.

Step 3 What is the reporter's main contention or key point? State this in your own words.

Step 4 What information and arguments are used to support the reporter's contention?

Step 5 What evidence does the reporter use to support these arguments? What is the source of this evidence?

Step 6 Look closely at any images or graphics that are included in the report. How do they help to support the reporter's contention and arguments?

Step 7 What further questions does this article raise for you? Good geographical questions open up new lines of inquiry for you to explore. Try using question starters such as 'How many', 'Where does', 'Why does', 'Who is affected', 'What changes does' and 'How should people'.

Apply the skill

1 Use the steps provided to analyse and develop questions about Source 2, 'Obesity epidemic spreads to developing world'.

2 Share your geographical questions with your classmates and build up a class list of questions.

Source 2 Media report 'Obesity epidemic spreads to developing world' from ABC News, 24 July 2012

Obesity epidemic spreads to developing world

The world is getting very fat, very fast and now the obesity epidemic has spread from rich countries to poor and developing countries. It is likely 1 billion people will be obese by 2030.

Fat is being called the new tobacco.

Body weight is not just about vanity, it is about life and death, with obesity increasing the risk of heart disease, type-2 diabetes and some forms of cancer.

So how and why did the problem of obesity explode in places that, not so long ago, counted malnutrition and even famine as major health concerns?

Well it's about increasing wealth, changing diets, genetic programming and aggressive marketing by international food companies.

The most perplexing problem in emerging economies is how they are going to deal with a tidal wave of obesity with relatively scant health resources.

We've canvassed opinion from notable authorities on diet, nutrition and fat issues, and met people in these countries struggling with the consequences of obesity.

It's an eye-opening, sometimes shocking journey.

First stop: Mexico. The biggest killer here is diabetes. In the past 30 years this country has gone from dealing with widespread malnutrition to coping with two thirds of the population growing overweight or obese. One of the main culprits is the super-pervasive spread of soft drinks: Mexicans drink more carbonated beverages per head of population than anyone else in the world. In a country where running water isn't guaranteed and bottled water is expensive, these soft drinks have become a daily dietary staple for everyone from infants to the elderly.

Next is Brazil, where global food giants are moving into every corner of the country, from the big cities to the remote reaches of the Amazon to sell their highly processed products readily and cheaply. Profits and market share are soaring and so is obesity, with another 1 percentage point of Brazil's population joining the ranks of the obese every year.

In India, as incomes have risen so too has weight. But the effects here are even more dramatic than elsewhere because the Indian body type magnifies the effects of obesity. Many have a genetic predisposition to diabetes and heart disease. The situation is so dire that health experts warn a staggering one in two babies born in India today will get type-2 diabetes, delivering future generations the real possibility of widespread disability and early death. India is bracing for an estimated 100 million type-2 diabetes patients.

The final stop on our Globesity tour is China – where the rapid transformation of the economy has been mirrored by massive changes to the consumption of food. Not just the sort of things Chinese are eating but the way they eat. Snacking was a rarity not so long ago. Now it abounds. Thirty years ago the Chinese ate only small amounts of sugar and oil – today they are a big part of the diet and a big part of the reason more and more Chinese are getting bigger and bigger.

Extend your understanding

1 Look closely at Source 1. What point is the cartoonist making about obesity?

2 Select one of the geographic questions from the class analysis of the article, 'Obesity epidemic spreads to developing world'. Use this as a starting point for research into the global obesity epidemic. Report back to the class on what you find during your research.

4.10 Variations in wellbeing within India

Within every country, access to wealth, health care and education varies between states or regions, between different ethnic groups and between rural and urban populations. In the same way that they can compare the wellbeing of one country with another, geographers can also take a detailed look within a country to investigate the variations in wellbeing that exist.

India is a vast, complex and dynamic nation. Its population currently stands at more than 1.2 billion and is growing by about 16 million people a year. It is estimated that India will overtake China as the world's most populous nation by 2030, a position it is unlikely to lose for centuries. As with all nations, there are tremendous variations in wellbeing within India. At one end of society, there are hundreds of millions of poor, subsistence farmers growing just enough food to feed their families. At the other end, there are around 164 000 entrepreneurs and business people classed as super-rich. This means they have investable assets worth more than US$1 million each.

India also has one of the world's largest middle classes, estimated to be about 250 million people.

India is divided up into many different states and union territories. Source 1 shows the range of rankings for these states and territories under the Human Development Index (HDI).

By looking at two states in particular, Kerala and Chhattisgarh, the states with India's highest and lowest rankings in human development respectively, we can see the great contrasts in wellbeing that exist within India.

INDIA: HUMAN DEVELOPMENT INDEX FOR DIFFERENT STATES, 2008

Source 1 Source: Oxford University Press

Source 2 Wellbeing indicators for the states of Kerala and Chhattisgarh, and India (total)

Indicator	Kerala	Chhattisgarh	India
People living in poverty	15%	40.9%	27.5%
Under 5 mortality rate	16.3/1000	90.3/1000	74.3/1000
Underweight children	22.9%	47.1%	42.5%
Literacy rate	93.9%	71%	72%
Houses with no toilet	4.3%	72.9%	49.2%

Wellbeing in Kerala

The south-west state of Kerala is ranked as the having the highest HDI in India. The state has the lowest level of poverty, the highest literacy rates, the lowest population growth rates and the fastest economic growth in the country. In many ways, the state compares favourably with wellbeing in many developed countries.

There are several factors responsible for this comparatively high level of wellbeing. More than 2.5 million people from the state live and work in the countries of the Persian Gulf such as Qatar (see Source 3 on page 149) and each year they send home a combined income of US$6.81 billion. This means their families can afford education and health services. The state was also one of the first to change its laws

so that individual farmers can own land, increasing their incentives to make a profit. Fertile soils and a favourable climate also help to boost agricultural production (see Source 3). Tourism is Kerala's biggest industry, with its attractive backwaters (a chain of lagoons and lakes) and sandy beaches making it popular with tourists.

Wellbeing in Chhattisgarh

The north-east state of Chhattisgarh is ranked as having the lowest HDI in India. The state is two-thirds rural and relatively undeveloped, though it is rich in minerals and has good electricity, steel and cement industries. Forty-five per cent of the population is made up of tribal groups and ethnic minorities, often living in remote forested areas. It has one of the highest rates of poverty and the greatest percentage of undernourished children in the country and high population growth. Schools experience very high dropout rates in Chhattisgarh, particularly in rural areas where children are often needed to work on family farms. People living in the more remote areas of the state often have difficulty accessing opportunities to improve wellbeing such as government aid and medical services. Chhattisgarh has also had its share of social unrest. A large part of Chhattisgarh is under the control of a group known as the Naxalites (see Source 4). This conflict has disrupted economic and social progress in the area.

Source 3 A busy market in Kerala. Markets such as this allow people in the city to get fresh food from rural areas quickly and easily.

Source 4 An armed Naxalite rebel rides past a boy carrying a bow and arrow in the Indian state of Chhattisgarh.

Check your learning 4.10

Remember and understand

1 Make a list of the various factors affecting wellbeing across India.

2 Make a list of the reasons that make it difficult to improve wellbeing in Chhattisgarh.

Apply and analyse

3 Examine Source 1. Describe the pattern of wellbeing in India according to the Human Development Index. Use the names of specific states as well as compass directions in your description.

4 Why are there large variations in wellbeing within India? Use the examples of Kerala and Chhattisgarh in your response.

Evaluate and create

5 Use Source 2 to construct a multiple bar graph contrasting wellbeing in Kerala, Chhattisgarh and India (total). Describe the pattern evident in your completed graph.

4.11 India's rural–urban divide

India has the largest number of people living in poverty in the world. With almost half a billion people living below the poverty line of US$1.25 a day, the country is home to one-third of the world's poor. This poverty is unevenly spread across the country, with significant inequalities in wellbeing between rural and urban areas. People in rural areas are almost twice as likely to be living below the poverty line than people living in urban areas.

As India embarks on a path of economic and social change this gap is narrowing, but there is still some way to go before equality is attained. Source 1 shows some of the key indicators of the rural–urban divide or what some researchers have called 'A Tale of Two Indias'.

Wellbeing in rural India

India is largely a nation of farmers and rural villagers; well over half of the population lives in settlements of no more than 5000 people. For many of these people, life is hard and standards of living are low when compared to people living in urban areas. Indian rural poverty is the result of a range of factors that differ from place to place. These include low food production levels leading to malnutrition; poor infrastructure such as roads, electricity and communication networks; ineffective safety-net programs such as job schemes; and poor access to financial resources such as bank loans and credit. Farmers are also at the mercy of nature. Droughts, floods and widespread land degradation have all contributed to rural poverty.

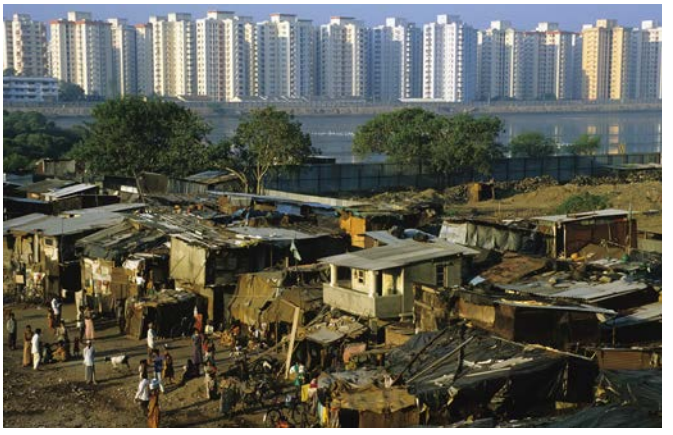

Poverty is greatest among minority ethnic groups (particularly in degraded forest areas) and marginalised classes of people such as Dalits (also known as untouchables) who make up the lowest class in Indian society according to the Hindu caste system. In communities where coastal fishing is the main source of food, poverty is increasing because overfishing and marine degradation have greatly reduced fish stocks.

Source 1 Differences in wellbeing between urban and rural India

Key wellbeing indicator	Urban India	Rural India
Population size	402 314 697	818 485 662
Average years of education	7.65	3.94
Total spending per month	1984 rupees	1054 rupees
Improved drinking water access	96%	84%
Improved sanitation access	54%	21%
Skilled medical staff present at birth	76%	44%
Underweight children under 5	33%	46%
Living below poverty line	26%	42%

Source 2 A young girl collecting dried cow dung to be used as cooking fuel in a rural village in the state of Uttar Pradesh. The state is home to more rural poor than any other in India.

Source 3 New apartments rise above an urban slum in Mumbai, India's largest city.

Wellbeing in urban India

India is home to some of the world's largest and fastest growing cities. The country has 46 cities of more than 1 million people and three of the world's megacities (i.e. Kolkata, Mumbai and Delhi). Those living in urban areas have greater access to health care which has led to fewer infant deaths and better health in early childhood. Children in urban areas on average also spend more time at school, and achieve a higher level of education. These cities are home to much of the nation's wealth as new opportunities in service industries such as banking and information technology have emerged. These opportunities have led to a growing middle class which has in turn led to improved infrastructure in the cities.

key**concept:** Place

India's urban slums

Many people in India respond to the inequalities in wellbeing between rural and urban areas by moving from the countryside to the city. Millions of Indians from rural areas have poured into the country's booming cities hoping to leave poverty behind as they seek a better life in the city. The reality for many, however, is that they exchange rural poverty for urban poverty (see Source 3).

For geographers this relates to the concept of place as these people establish new homes in new areas. The new arrivals from the countryside often take up residence in slum areas on land that is considered unsuitable for ordinary housing, often because it is swampy or prone to landslides. Indian cities now contain some of the world's largest slums. Residents build their own homes out of discarded materials and live with the constant fear of eviction as they have no legal right to be there.

Many Indian cities are struggling to provide their citizens with the infrastructure needed for wellbeing such as fresh water, sanitation, reliable access to electricity, schools, roads and hospitals. But it is not all bad news. Packed with people determined to improve their lives and their communities, many slums have become so well established that their infrastructure is often close to the standard in other parts of the city, and usually better than in rural areas.

The biggest struggle for many slum areas, however, is the provision of adequate sanitation. Most homes in the slums do not have a toilet, and the toilets that do exist are often an open pit shared by hundreds of people. While many amenities are often organised and run by the slum dwellers themselves, they rely on city authorities to provide proper sewage disposal. Because the slums are considered to be illegal settlements, authorities are reluctant to invest in sanitation for them.

For more information on the key concept of place, refer to page 6 of 'The geography toolkit'.

Source 4 Access to amenities in slum and non-slum urban households across a selection of Indian cities

City	Tap water		Toilet		Electricity		Mobile phone	
(Percentage of households)	Slum	Non-slum	Slum	Non-slum	Slum	Non-slum	Slum	Non-slum
Ahmedabad	86.2	86.6	61.3	94.6	91.5	98.9	48.8	63.1
Bangalore	84.3	80.2	86.8	97.8	96.6	98.4	71.0	66.5
Chennai	78.2	83.7	91.0	97.4	98.4	99.3	70.0	59.2
Delhi	86.7	89.9	50.6	95.8	97.8	99.6	66.1	63.4
Kolkata	90.8	87.0	92.0	96.2	95.5	96.5	70.1	63.5
Greater Mumbai	96.1	97.3	32.8	75.1	95.6	98.3	76.6	53.5
Pune	98.8	98.4	35.8	90.6	96.2	98.9	73.4	62.0

Check your learning 4.11

Remember and understand

1 Describe the differences in wellbeing between urban and rural areas in India.

Apply and analyse

2 Examine Source 4. Do the levels of amenities available in the slum and non-slum areas of these Indian cities surprise you? What health or safety issues might be a concern for residents with limited access to some of these amenities?

Evaluate and create

3 Conduct further research on the Internet to complete the following tasks.

- **a** Compare the inequalities in wellbeing between urban non-slum India, urban slum India and rural India. Write a short report on your findings.
- **b** Complete an annotated sketch of Source 3. On your sketch label any inequalities in wellbeing that you can identify.

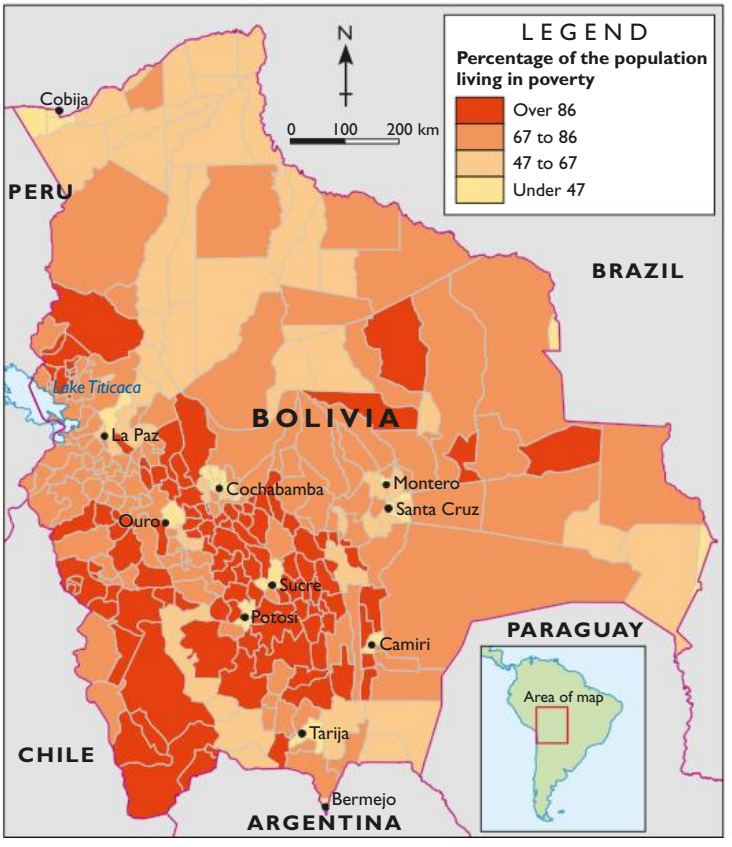

4.12 Wellbeing in Bolivia

By most measures, Bolivia has one of the lowest levels of wellbeing in South America. In the 2012 United Nations Human Development Report, Bolivia is ranked at number 108 in the world in terms of the Human Development Index (HDI). This places Bolivia in a group of countries described as having medium human development. Even so, 60 per cent of Bolivians live below the poverty line, and more than half of these people are described as living in extreme poverty.

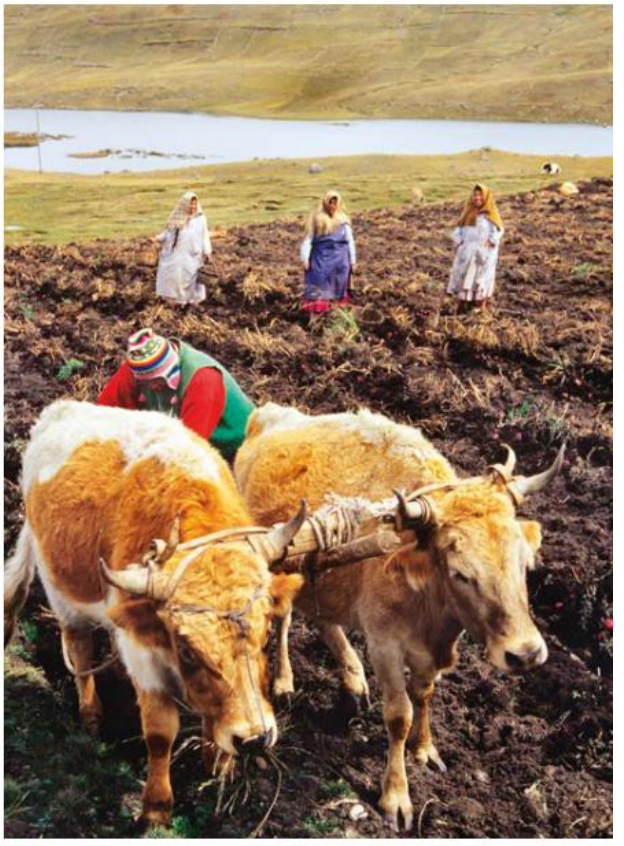

Patterns of poverty

Taking a more detailed look at Bolivia's poor, it becomes clear that people in some areas are more likely to be living in poverty than in other areas. As in India, poverty tends to be concentrated in rural areas, where two-thirds of the population is in extreme poverty. In these areas people grow just enough food to feed themselves and their families, with little left to sell. Poverty is also higher among the Indigenous population. Source 1 shows the percentage of the population in each region of Bolivia living below the poverty line.

BOLIVIA: POPULATION LIVING BELOW THE POVERTY LINE

Source 1 Source: Oxford University Press

Source 2 In rural Bolivia there tends to be low levels of technology, poor infrastructure such as roads, a lack of job opportunities, and less access to services such as schools, doctors and sanitation than in the nation's urban centres.

This poverty is due to a number of factors, including different levels of employment and availability of resources, varying quality of infrastructure such as roads, schools, hospitals and electricity and high levels of land degradation.

One of the ways in which Bolivians have responded to poverty is to migrate. The most common migration tends to be from rural areas to cities. This has led to a booming urban population and some of South America's largest slums.

Many Bolivians also choose to leave their country and move to other countries, particularly Argentina. About one-quarter of all people born in Bolivia now live in another country. Today, Argentina is home to more than 1 million Bolivians.

Source 3 Around one in five Bolivian children do not complete primary school.

Education

Bolivia spends almost one-quarter of its national income on education. This is one of the highest rates of education spending in Latin America. Despite this, about 1 million Bolivian adults are illiterate and approximately one in five children never complete primary school.

Most of the children who do not attend school live in rural areas where they are needed to work with their parents to help support their families. The result of this is that rural children do not gain the education and skills that could help pull their families out of poverty. Many Indigenous children also drop out of school due to language difficulties. They grow up speaking their Indigenous language but when they attend school all the classes are taught in Spanish.

Health

Many Bolivians face chronic health problems linked to food insecurity. Farm productivity in Bolivia is among the lowest in South America and is still declining in some regions. This is due to a wide range of environmental problems including land degradation, regular flooding and droughts, outdated farming technology and a lack of investment.

Poor harvests have led to widespread malnutrition and almost 5 million people struggle to meet their daily food requirements. Pregnant women and young children are the hardest hit by malnutrition, resulting in underweight children and iron deficiencies. Infant mortality rates are falling as health care gradually improves but they are still the highest in South America.

Rates of diseases such as tuberculosis, malaria and yellow fever are high. This can further lower farm productivity as ill farmers and workers are less able to work to produce food. HIV/AIDS rates are relatively low but increasing.

Source 4 These two boys are among the lucky few Bolivians in rural areas who have access to an improved water source.

Improvements to wellbeing

The Bolivian people and government are working hard to improve their wellbeing. The country has experienced times of political uncertainty and corrupt government but is now in a period of stability. This has encouraged aid organisations such as the World Bank and UNICEF to support the government in its efforts to implement reforms designed to improve wellbeing.

Helping the disadvantaged

Small **non-government organisations (NGOs)** are also making a difference in Bolivia. One example of this is the Foundation for Sustainable Development (FSD) that works with local community organisations in Cochabamba, a city in central Bolivia. FSD volunteers and interns help these organisations to improve health and education services, particularly for disadvantaged groups such as the rural poor, Indigenous people and women. Some examples of the initiatives supported by FSD include a literature and reading group for children and programs to combat malnutrition by training adults in health and cleanliness, nutrition, agriculture and microfinance.

Source 5 An example of an NGO project in Bolivia aimed at improving wellbeing through access to clean drinking water

key**concept:** Scale

Life in Bolivia's cities

Variations in wellbeing can be observed at a range of scales including at the global, national, regional and local scale. An example of a global variation is the classifying of countries according to their level of economic development (see Source 1 on page 148). National and regional variations can be seen in the map of poverty in Bolivia (Source 1). Local variations are those that occur in small areas such as individual suburbs and cities.

La Paz, Bolivia's capital city, has a population of about 2 364 000. The highest capital in the world, La Paz is a spectacular city sitting within a canyon on the Altiplano (also known as the Andean Plateau). Tall, modern office buildings crowd the city centre, while vast urban slums cling precariously to the mountain slopes on the city's edges (see Source 6). These slums are home to up to 1 million people, many of them migrants from the poverty-stricken countryside. About 42 per cent of La Paz's population lives below the poverty line.

Source 6 La Paz valley showing the houses of the poor built on the hillsides and the central business district below

For more information on the key concept of scale, refer to page 11 of 'The geography toolkit'.

skill**drill:** Data and information

Creating multiple-line graphs

Multiple-line graphs are useful tools because they allow geographers to observe and compare changes in data over time. This enables geographers to more easily identify trends and changes in different sets of data gathered in different locations.

Step 1 Construct a set of axes. The years are placed on the horizontal *x*-axis. The years must be evenly spaced out; for example 1 centimetre for every five years. The data being graphed is placed on the vertical *y*-axis and should extend slightly higher than the highest figure being graphed. Once again, the scale must be even; for example 1 centimetre for every 10.

Step 2 Plot the first set of data with a series of small neat dots and join these with a smooth coloured line. Add a label at the end of the line describing the indicator you have graphed.

Step 3 Repeat step 2 for the remaining sets of data. Use a different colour for each line.

Step 4 Add a title and label each axis.

Apply the skill

1 Construct a multiple-line graph to show the changes in wellbeing in Bolivia between 1970 and 2010 using the selected key indicators listed in Source 7.

Source 7 Changes in wellbeing in Bolivia between 1970 and 2010 using selected key indicators

Key indicator	1970	1975	1976	1980	1985	1990	1992	1995	2000	2005	2010
Adult literacy (%)	—	—	63	—	—	—	79	—	86	—	91
Infant mortality rate per 1000 people	141	123	—	108	97	82	—	70	59	49	40
Life expectancy at birth	45	48	—	52	56	59	—	61	63	65	66
Urban population with clean water (%)	—	—	—	—	—	92	—	93	94	95	96
Rural population with clean water (%)	—	—	—	—	—	43	—	48	55	62	69
Urban population with sanitation (%)	—	—	—	—	—	28	—	30	31	33	35
Rural population with sanitation (%)	—	—	—	—	—	6	—	7	8	9	10

Check your learning 4.12

Remember and understand

1 Use the data in Source 7 to comment on the level of wellbeing in Bolivia from 1970 to 2010.

2 What are NGOs and what role do they play in Bolivia?

3 Why do people move from the countryside to the cities of Bolivia? What impact does this migration have on cities?

Apply and analyse

4 Examine the multiple-line graph you constructed in the skilldrill.

- **a** What general trend do you observe in this graph?
- **b** Comment on the inequalities in rural and urban wellbeing shown in your graph.
- **c** Comment on the usefulness of a multiple-line graph for showing the links between sets of data.

5 Examine Source 1.

- **a** Describe the pattern of poverty at the national scale.
- **b** Suggest a reason to explain the pattern you have described.

Evaluate and create

6 Use the photographs on these pages to describe inequalities in wellbeing in Bolivia. Which photograph best shows these inequalities? Write a caption for the photo you have chosen that briefly describes the situation.

7 Research one indicator, such as education, that contributes to Bolivia's level of wellbeing. Prepare an infographic that explains how it affects the wellbeing of the Bolivian people.

4.13 Wellbeing in Australia

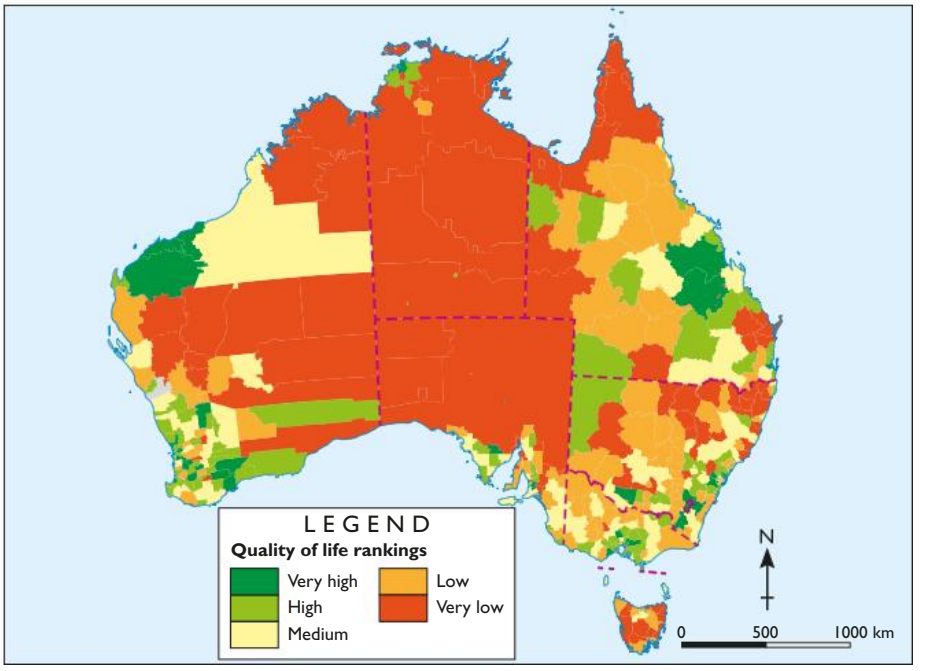

Each year, the United Nations releases a ranking of countries around the world in terms of their development. This is known as the Human Development Index (HDI). The HDI gives an indication of whether a country is developed, still developing, or underdeveloped based on a range of factors such as life expectancy, education levels, literacy rates, and income levels per capita. It also is a good indicator of the wellbeing of people in certain countries.

In 2015, Australia was ranked 2 out of 188 countries on the Human Development Index. Norway was the only country in the world that rated higher.

Despite the high levels of wealth and wellbeing in Australia nationally, there are still many variations between specific regions, cities, towns and suburbs across our country. Some places may have excellent access to hospitals, schools and recreation facilities together with low levels of crime and poverty. Other places may have poor access to these services as well as higher levels of crime and poverty. Variations in these types of things can be difficult to measure at a local or regional scale because indicators like life expectancy and literacy rates are almost always measured at the national scale.

There are other sources of information, however, that can help geographers measure wellbeing at the regional and local scale. One of these sources is known as the census. In Australia, a census is carried out every five years. Every Australian citizen is asked to provide answers to a series of questions on a whole range of topics. The census gives us a great deal of information about life across Australia, such as the areas with the highest and lowest quality of life (see Source 1).

AUSTRALIA: QUALITY OF LIFE RANKINGS BASED ON CENSUS DATA

Source 1

Source: Oxford University Press

A quality of life study

In 2014, the Bankwest Curtin Economics Centre (based at Curtin University in Western Australia) released a study of poverty and disadvantage in Australia. Titled 'Falling Through the Cracks', the study used census data and other research to examine levels of poverty across Australia. It also included an analysis of the groups of Australians most likely to be living in poverty and the geographic locations of these groups.

In this study, households and individuals that receive less than half the average Australian yearly income are defined as living in poverty. It is worth noting that this definition is very different from measurements used in other countries. Using this definition, the researchers found that 12.9% of Australians, around 2.8 million people, are living in poverty.

Spatial variations in wellbeing

The study also found that there were significant differences in the rates of poverty and disadvantage across Australia. The highest rates of income poverty were found in Sydney. Here the rate was about 15 per cent of all residents. The lowest rates of income poverty were in Canberra (see Source 2). Here the rate was around eight per cent of all residents.

When the researchers examined rates of unemployment across Australia, they found other spatial variations in wellbeing. Remote communities in the Northern Territory, Queensland and New South

Source 2 The Bankwest Curtin Economics Centre study found the suburbs of Canberra have the lowest rates of poverty and disadvantage in Australia.

Source 3 Remote communities in the Northern Territory and Queensland were found to have the highest rates of unemployment and educational disadvantage in Australia.

Wales had the highest rates of unemployment (see Source 3), while the ACT and the inner suburbs of our large capital cities, like Melbourne and Sydney, had the lowest rates.

The rural–urban divide

The Bankwest Curtin Economics Centre study, and many others like it, found that people living in rural areas in Australia have lower levels of wellbeing than people living in urban areas. This pattern is repeated in other developed countries around the world. Studies of health statistics in Australia show that the further away from a major city you live, the less healthy you are likely to be. For example, in rural areas:

- rates of hospitalisation for serious injury or illness are higher
- there are fewer doctors for every 1000 people
- smoking rates and alcohol consumption are higher
- rates of death and serious injury from workplace and road accidents are higher.

Check your learning 4.13

Remember and understand

1 Why is it more difficult to measure, rank and map variations in wellbeing at the local and regional level?

2 List three health concerns that are more serious for Australians living in rural areas than for those living in urban areas.

Apply and analyse

3 Examine Source 1.

- **a** Which regions of Australia have the highest quality of life?
- **b** Which regions of Australia have the lowest quality of life?
- **c** In a carefully worded paragraph, describe the distribution of regions in Australia according to their quality of life rankings using the PQE method. For more information on the PQE method, refer to page 28 of 'The geography toolkit'. Refer to specific towns, cities, regions and states in your description.

4 What barriers do you think exist that make it difficult to improve wellbeing in rural and regional areas of Australia? What could be done to improve wellbeing in these areas?

Evaluate and create

5 Access the 'Falling Through the Cracks' study on the Bankwest Curtin Economics Centre website before completing the following tasks. A link is provided on your obook.

- **a** Read the section of the report titled 'Geography of disadvantage' and write a short paragraph summarising the findings.
- **b** Are the reasons for the inequalities between rural and urban populations in Australia similar or different to those in India? Give some reasons for your answer.

4.14 Wellbeing in Indigenous Australian communities

By most measures there are significant differences in wellbeing between Indigenous and non-Indigenous communities around Australia. Indigenous children are twice as likely to be born underweight and twice as likely to die before their fifth birthday than non-Indigenous children. They are also less likely to attend pre-school and much less likely to reach minimum standards in literacy and numeracy while at school. Although almost nine out of every 10 non-Indigenous young adults complete Year 12, it is closer to five out of 10 for Indigenous young adults. The pattern is similar with employment. Only 46 per cent of Indigenous adults are in employment, compared to 72 per cent of their non-Indigenous counterparts. Perhaps the most alarming statistic is that an Indigenous boy born this year can expect to live 11.5 years less than a non-Indigenous boy. For girls, the figure is 9.7 years.

Closing the gap

In 2008, the Australian Prime Minister, Kevin Rudd, apologised to Aboriginal and Torres Strait Islander people affected by the official government policies that separated Indigenous children from their families, a group known as the Stolen Generation. As part of this apology, Prime Minister Rudd also gave a promise 'to close the gap between Indigenous and non-Indigenous Australians on life expectancy, educational achievement and employment opportunities.'

The government's targets were to:

- close the gap in life-expectancy by 2031
- halve the gap in mortality rates for Indigenous children under five by 2018
- ensure access to early childhood education for all Indigenous four-year-olds in remote communities by 2013
- halve the gap in reading, writing and numeracy achievements for Indigenous children by 2018
- halve the gap in Indigenous Year 12 achievement by 2020
- halve the gap in employment outcomes between Indigenous and non-Indigenous Australians by 2018.

By 2013, the early childhood education target had been met and progress had been made in the other areas. However, progress is generally slower than is needed to meet all targets by their set dates. The gap is closing, but slowly.

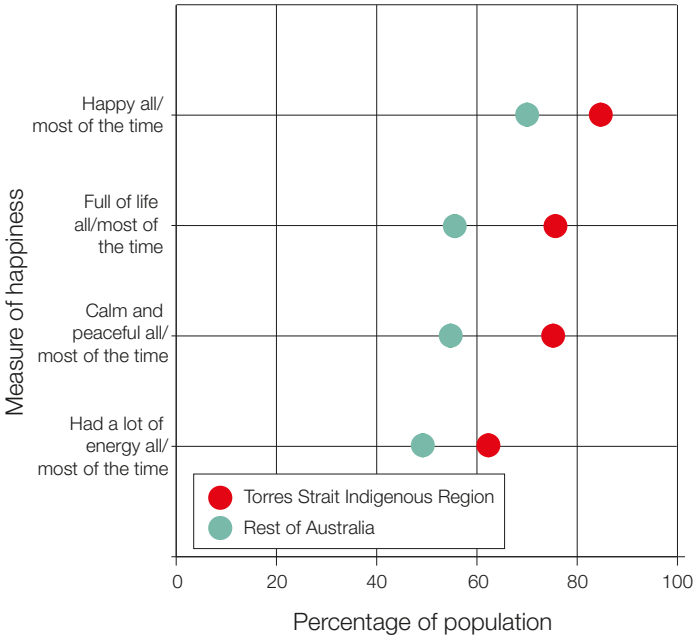

Source 1
Ntaria school in Hermannsburg, outside Alice Springs in the Northern Territory. Increased government funding has allowed remote schools to offer longer pre-school programs. This has resulted in improved literacy and numeracy as well as improved health as the children are also given healthy lunches.

Measuring happiness

Although statistical indicators such as life expectancy and literacy rates paint a grim picture of low levels of wellbeing among Indigenous Australians, other measures tell a different story. The Australian Bureau of Statistics (ABS) has begun to ask people to assess their own wellbeing by asking questions about their levels of happiness and satisfaction with life in the National Aboriginal and Torres Strait Islander Social Survey (NATSISS). The data collected reveals some interesting trends. Torres Strait Islanders, for example, are much more likely to report feeling happy, full of life, calm and peaceful and having lots of energy than individuals in the broader Australian community (see Source 2).

The NATSISS revealed variations in levels of happiness between different regions. The NATSISS results showed that 79 per cent of Indigenous adults living in these remote areas reported feeling happy some or most of the time. This compares with only 68 per cent of Indigenous adults living in Australia's major cities reporting feeling happy. However, in virtually all other measures, such as school attendance, literacy, health, disease and employment, the most disadvantaged Indigenous communities were those in remote areas. Access to health care, education and employment opportunities are often more limited in remote areas than they are in regional centres and major cities.

Source 2 Results from the National Aboriginal and Torres Strait Islander Social Survey (NATSISS), 2008

Source 3 Happiness among Indigenous Australians in remote areas is higher for those involved in cultural activities than for those who rarely or never attend cultural events.

Check your learning 4.14

Remember and understand

1 Summarise life expectancy rates between Indigenous and non-Indigenous Australians.

Apply and analyse

2 Examine Source 2. Write a short paragraph contrasting the levels of happiness between Torres Strait Islanders and the rest of Australia.

3 The 'closing the gap' targets rely on quantitative measures to measure their progress. Why do you think these measures are used rather than qualitative measures (such as levels of happiness and satisfaction)?

Evaluate and create

4 Conduct some further reading on the Internet and complete these tasks.

- **a** Why do you think people are happier if they are engaged in cultural and community activities?
- **b** Design and conduct a survey that questions people about their level of happiness and the factors that affect their happiness. Include questions about their involvement in cultural and community activities. Write a report on your results in which you outline what makes people happy.

4B rich task

Investigating wellbeing at the local scale

Most studies of wellbeing focus on differences and variations between nations. But there are also variations at the local scale. In this broadsheet you will learn how to use census data to collect and map information about wellbeing in your local area. Based on your completed research and maps, you will then explore some possible reasons for the variations in wellbeing at the local scale.

skill**drill:** Data and information

Collecting and mapping census data

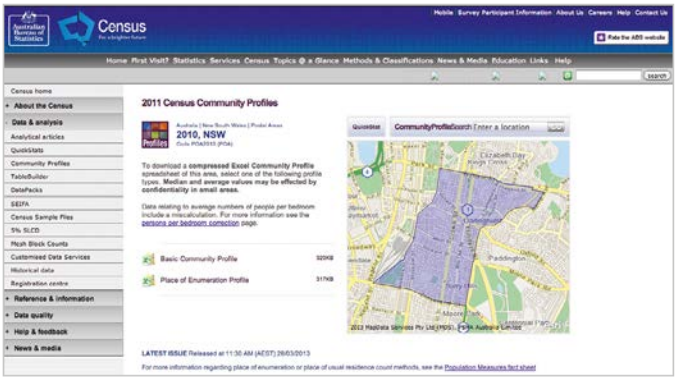

A census is held in Australia every five years and the results are processed and published by the Australian Bureau of Statistics (ABS). Geographers often use this information to map data and trends across an area. You can collect data about your local area and map it by following these steps.

Step 1 Access the ABS website at www.abs.gov.au. Click on the 'Census' tab at the top of the home page. Then select the 'Data & Analysis' tab on the left, then 'Community Profiles'.

Step 2 This page allows you to access the census data at a wide range of scales, including at the local level. A useful way of working at the local scale for this study is by using postcodes. To access the data for your suburb, enter your four-digit postcode in the 'Community Profiles Search' tool. If more than one option is displayed, choose POA. Click 'Go'.

Step 3 This should open a map of your postcode and allow you to choose one of two spreadsheets. Select 'Basic Community Profile' and open or save this spreadsheet.

Step 4 Use the tabs at the bottom of the spreadsheet to access the 'List of Tables'. This will give you a breakdown of the kind of information available. Select a category you would like to map.

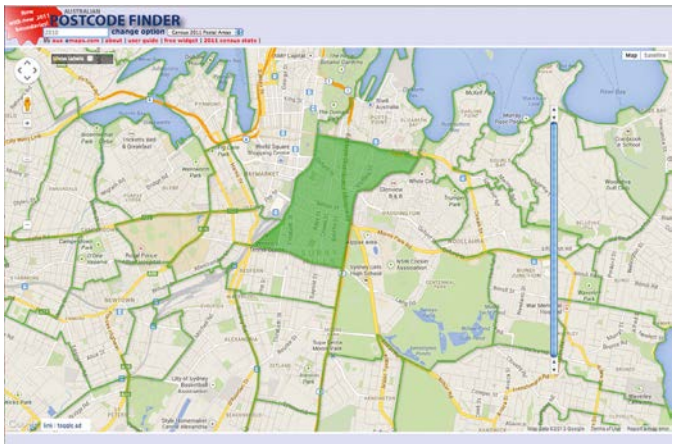

Source 2 A screenshot of the postcode map on the Australian Bureau of Statistics Census website

Source 1 There are significant variations in wellbeing in Central Sydney.

Step 5 Click on the category you have decided and record the data for your suburb. Access the same data for your neighbouring postcodes by typing the area or postcode in the field above the map. You can find out what your neighbouring postcodes are by using the interactive map at the Australian Postcode Finder website (see Source 3). Simply enter your four-digit postcode into the search tool at the top of the page and it will zoom into this area. Click on the neighbouring postal areas to find their postcodes and then use the ABS website to access and record data for these postcodes.

Source 3 A screenshot from the Postcode Finder website

Step 6 Once you have collected the data you can map it by constructing a choropleth map. Print out a map of your area. You can use one you have or print the one from the ABS site. Trace a copy showing only the postcode boundaries.

Step 7 Use the data collected from the census to construct a choropleth legend for your map. Divide your data into four or five categories. Use darker shades of a colour for higher values and lighter shades for lower values. For example, your suburb might have fewer people per household (if that was what you chose to map) than the neighbouring suburb. So, you would colour your suburb a lighter shade and your neighbouring suburb a darker shade.

Step 8 Shade your map according to the legend you created in Step 7.

Step 9 Complete your map with BOLTSS.

Apply the skill

1 Complete a choropleth map of variations in median household income in your local area (include at least six suburbs) by collecting information from the ABS website. You can find this data under table B02, *Median Household Income*. Follow the steps to gather your data and map the information.

2 Describe the pattern shown on your completed map.

Extend your understanding

1 Explore and evaluate possible reasons for the variations shown on your map. These will vary from place to place, but here are some possibilities:
- distance from the centre of a large city
- presence of employment opportunities such as factories and shopping centres
- presence of higher educational opportunities such as universities
- presence of transport networks such as railway stations and major roads
- presence of large, shared accommodation areas such as aged-care facilities or school hostels
- presence of geographic features such as a coastline or large park.

Use your knowledge of the local area and street directory maps to evaluate these possible reasons.

2 Collect information from the ABS site and analyse variations in another indicator of wellbeing. Do this for the same suburbs you investigated earlier. You could choose to analyse the number of motor vehicles per dwelling, highest year of schooling completed or percentage of people unemployed.

3 You can also use the census data to explore levels of wellbeing in communities that are not located close to each other. Follow Step 1 in the skilldrill to access the census data and then enter the names of communities in the 'Communities Profiles Search' tool. There may be a few options given as the ABS collects data at a range of scales. The Local Government Area (LGA) is a useful scale when comparing suburbs or country towns but you can compare wellbeing at many scales.

a Use the Quick Stats to compare wellbeing in Halls Creek, Ku-ring-gai and the LGA in which you live.

b What have you learnt about variations in wellbeing within Australia?

c What are the advantages and disadvantages in using census data to describe and compare wellbeing?

Unit 2 Geographies of human wellbeing

Inequalities in wellbeing

There are many reasons for the inequalities in wellbeing that exist between countries. The environment and climate can make a difference, affecting access to fresh water and the ability to grow food. The presence of natural resources such as oil and minerals is also an important source of wealth for countries that influences levels of wellbeing.

The political, economic and social organisation of a country can also have a big impact on its wellbeing. Important factors include the make up of the population, the levels of gender equality and access to technology. One of the most significant factors affecting wellbeing, however, is conflict.

In 2011, fighting between rebels and government troops in Syria broke out destroying more than half of the country's hospitals as well as other vital infrastructure such as roads, electricity, communication networks and factories. All of these factors have resulted in enormous inequalities in wellbeing.

5A

How does the natural environment cause inequality?

1 Refugee camps are often located in regions close to national borders where it can be difficult to maintain a high level of wellbeing. What does Source 1 tell you about the natural environment of this place?

5B

How do human activities cause inequality?

1 Which organisation has responded to the plight of Syria's refugees in this photograph? What assistance does this woman need to help her maintain her wellbeing and that of her children?

2 What problems will she face when the conflict in Syria comes to an end?

chapter 5

Source 1 A Syrian refugee carries her infant with her to wash the family clothes at Zaatari refugee camp in Jordan. She is one of more than 4 million Syrians who have fled the country as the result of a bloody civil war.

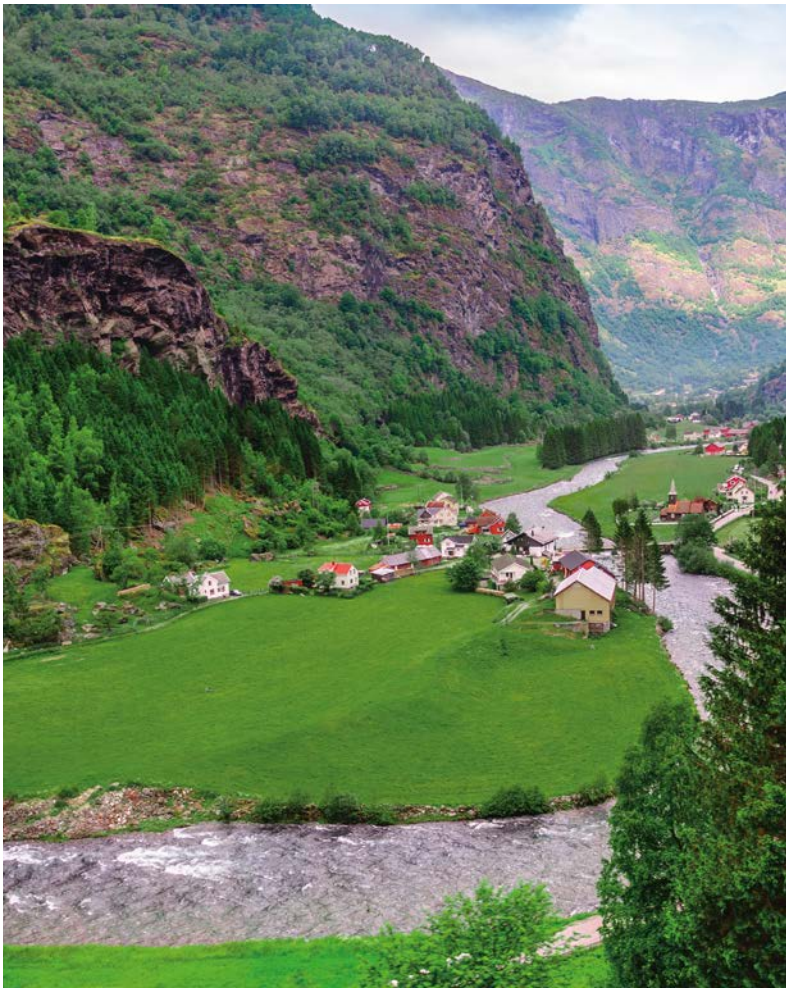

5.1 Why wellbeing varies

As you have learnt, wellbeing varies a great deal within and between countries. The factors behind these variations are complex but can be broken up into five main groups: environmental, social, economic, historic and political.

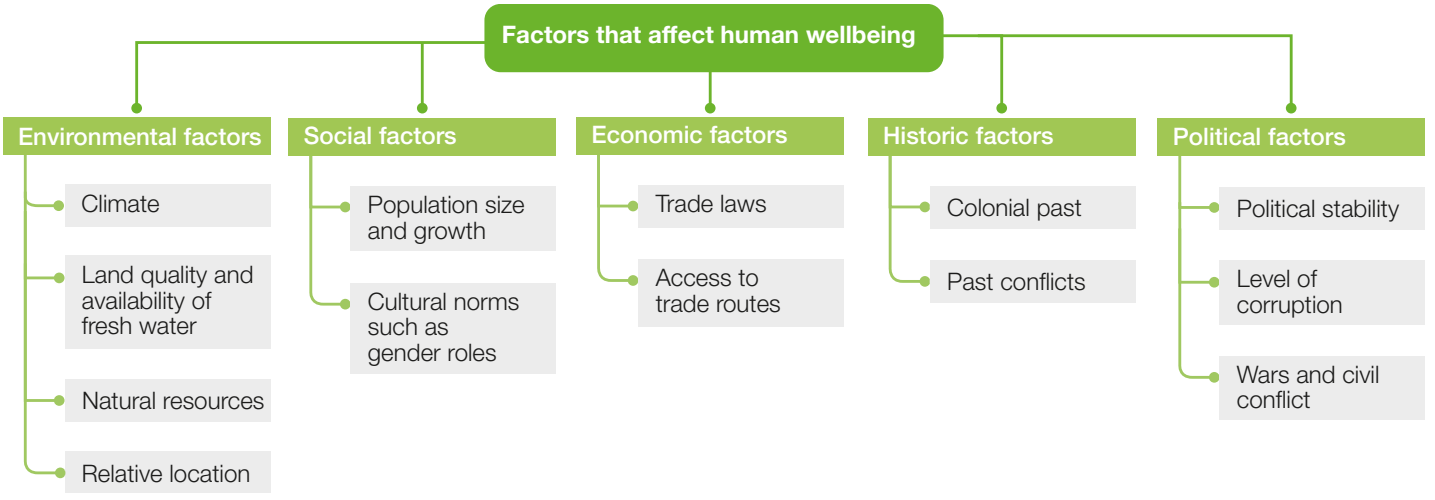

Environmental factors that affect wellbeing include the suitability of the land for agriculture, the climate and whether there are any natural resources present in the landscape. In some places, good growing conditions ensure that food is plentiful and minerals in the ground bring wealth and industry. In other places, poor soils or unreliable rainfall are the key factors that limit people's wellbeing.

Social, economic, historic and political factors are all examples of human factors. Human factors that affect wellbeing include things like population size, cultural norms, laws and rules regulating business and trade, historical events, political systems and wars. In some places, long periods of stability have allowed for great improvements in living conditions. In other places, the wellbeing of people has been affected by ongoing conflict and decades of corruption and persecution. In these cases, people's access to resources such as water, food and health care is limited, affecting their quality of life.

Every region and country around the world has its own unique set of inter-related factors that determine the wellbeing of the people who live there. The key factors that determine a country's level of wellbeing are outlined in Source 1.

Source 2 Norway regularly tops the world ranking in the annual Human Development Index.

Source 1 Factors that affect human wellbeing

keyconcept: Place

The two Koreas: a study in wellbeing

The Korean Peninsula is shared by two countries – South Korea and the Democratic People's Republic of Korea (more commonly known as North Korea). Due to their proximity to each other they have similar climates, soils, topography and mineral resources. And yet South Korea is rated as the country with the 12th highest level of wellbeing in the world, while North Korea is 63 places lower at 75th. South Koreans live, on average, 10 years longer and have a gross domestic product (GDP) 18 times higher than their northern counterparts.

These differences cannot be explained by differences in resources but in the ways in which these countries are governed and their resources managed. South Korea is a democracy with a market-driven economy. It has a strong economy with high exports and imports, is highly industrialised with a large urban population and is technologically advanced. South Korea also has relatively low levels of corruption and a free media.

North Korea is a totalitarian state, meaning there is only one political party and no elections. It has little to do with the rest of the world and the economy is strictly controlled by the central government. The population is still largely rural and farming methods are technologically backwards. The North Korean government places a great emphasis on having a strong military and up to one-third of the country's budget goes towards maintaining it. North Korea also has very high levels of corruption and no freedom of the press.

For more information on the key concept of place, refer to page 6 of 'The geography toolkit'.

Source 3 The Korean Peninsula at night

Check your learning 5.1

Remember and understand

1 What are some of the environmental factors that influence wellbeing? Explain the influence that each of these may have on an individual's wellbeing.

Apply and analyse

2 Using Source 2, describe the environmental factors that help to explain Norway's high levels of wellbeing.

3 Using Source 1, explain why Australia has high levels of wellbeing.

4 Examine Source 3. Describe the pattern shown in this **satellite photograph** and explain it in relation to wellbeing.

Evaluate and create

5 Conduct some further research on the Internet to complete the following tasks.

- **a** 'Levels of human wellbeing are mainly the result of human factors rather than natural ones.' Evaluate this statement with reference to some specific examples and discuss your thoughts in small groups of three or four.
- **b** Find and research examples similar to the Korean Peninsula, where neighbouring countries have very different levels of wellbeing – for example Haiti and the Dominican Republic. Outline the reasons for this with reference to the five factors discussed in Source 1. Present your findings in table format.

5.2 Environmental factors and wellbeing

The natural environment provides us with the necessities of life – fresh air, fresh water and food. However, there are wide variations in the availability of these vital resources around the world. Climate also affects the suitability of the environment for sustaining wellbeing.

Variations in water and food security

The most important environmental factors are those that provide us with a reliable supply of clean water and the resources required to grow food. Clean water is provided by regular rainfall and is usually carried along rivers where it is accessed by communities in villages, towns and cities. Fresh water is also used by farmers to irrigate their crops in the production of food.

Because there are natural variations in rainfall, temperature, soil fertility and river flows, food and **water security** vary widely. To get the best crops farmers rely on fertile soils, warm temperatures and other important ecosystem services such as insects and birds to pollinate plants and control pests. The products of human ingenuity such as water pipelines and dams, fertilisers and greenhouses have overcome many of the limitations set by these natural variations but they are costly to build and maintain. The growth in the world's population, particularly in the last 50 years, has placed a strain on the ability of the environment to provide food and water security.

In some places the land has become degraded by human activities such as overgrazing and the unsustainable use of water. This is now affecting the food and water security of millions of people (see Source 1).

Source 1 This girl in Chad sets out from her village on her daily walk to collect water. She lives in the Sahel on the southern fringe of the Sahara Desert where wellbeing is threatened by unreliable rains, infertile soil and a rapidly expanding population.

Case study: food security in India

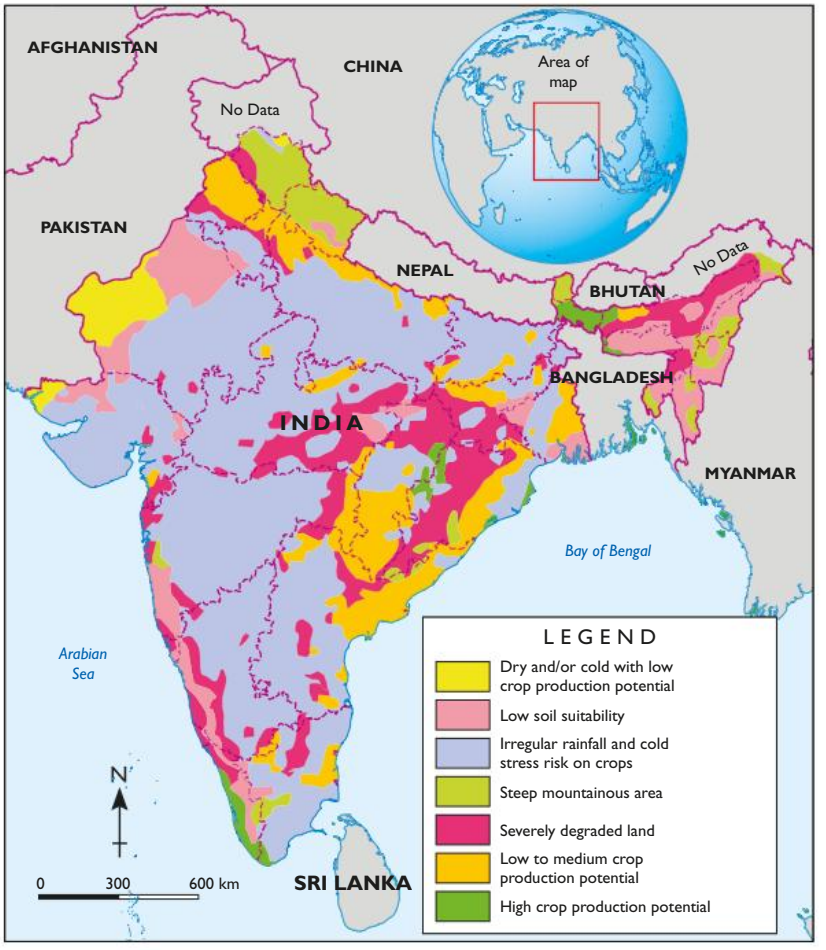

In some environments, the inability to grow enough food to meet the needs of the population has a major impact on wellbeing. India has a population of about 1.2 billion but across much of the country, environmental conditions are unsuitable for growing food.

These environmental conditions, together with a lack of agricultural technology and poor irrigation, have led to frequent famines. In 2013, a severe drought in the western Indian state of Maharashtra became the worst the region had experienced in four decades. As reservoirs ran out of water, farmers were unable to produce food. Shortages meant people went without.

In the late 19th century, India experienced its worst famines, resulting in the starvation and deaths of millions of rural Indians. These days, India can import food such as rice and grains when food supplies are threatened. However, the imported food is more expensive and the price increases still lead to severe hardship for India's poor.

Source 2 shows some of the major environmental conditions and the effects they have on food production throughout India.

INDIA: MAJOR ENVIRONMENTAL CONSTRAINTS ON FOOD PRODUCTION

Source 2 Source: Oxford University Press

Check your learning 5.2

Remember and understand

1 Which natural resources are important in providing food and water security?

2 How does the uneven distribution of resources help to explain variations in human wellbeing?

Apply and analyse

3 Compare Source 2 with Source 1 on page 160. Can you find evidence that certain environmental constraints on food production have led to lower levels of human development? Use the names of specific states in your answer.

4 Compare Source 1 with Source 2 on page 176. Describe and account for the differences you can observe in these sources. How might the environmental conditions you see help to explain the differences in wellbeing between these two nations?

Evaluate and create

5 Complete some further research on the Internet to do the following task.

a Since 1993 a World Water Day has been celebrated by the United Nations to bring attention to an aspect of fresh water supply. Investigate how World Water Day has been used to bring attention to the issue of food security.

b Present your findings by writing a 250-word report or by summarising the most important details in table format.

5.3 The influence of climate

On a global scale, climate has largely determined where people have lived. Areas that are too cold, too hot or too dry have tended to be sparsely populated, while those with mild temperatures and reliable rainfall have tended to be more densely populated.

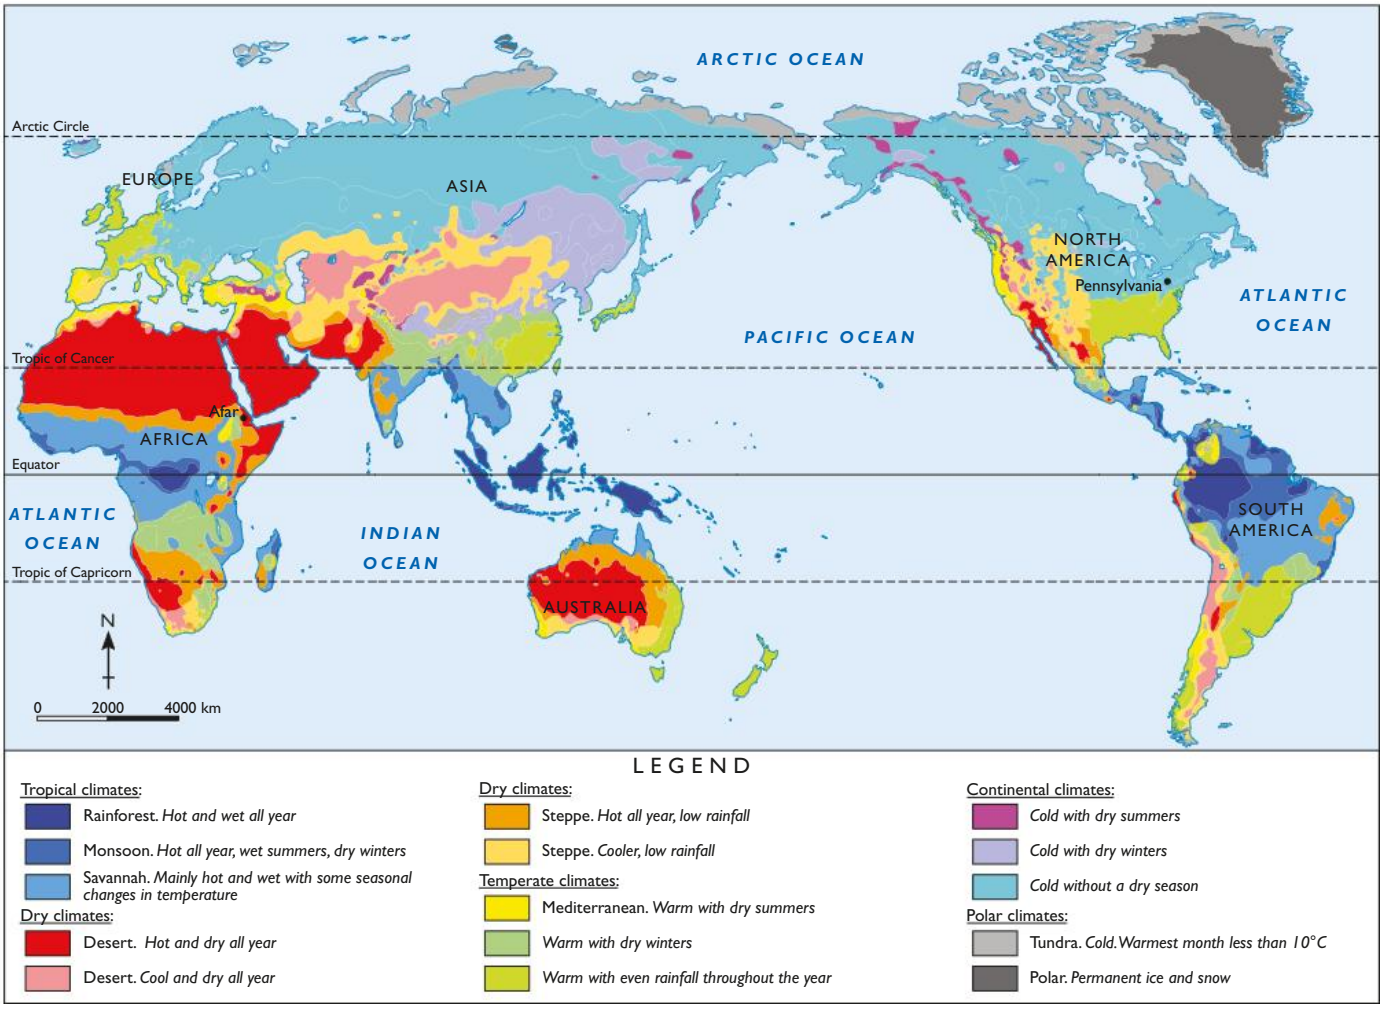

As the world's population has increased, however, more and more people have moved into marginal climate regions that were previously considered unsuitable for farming and settlement. By using technology such as irrigation in dry places, these marginal regions have been transformed to support human populations.

Researchers have developed two theories based on these trends in an attempt to explain how climate affects wellbeing.

Theories of how climate affects wellbeing

Theory 1 – Human wellbeing is highest in regions where the climate is neither too extreme nor too comfortable. Supporters of this theory believe that populations living in regions where the challenges presented by climates are not too severe or too comfortable lead to advances in technology that improve wellbeing overall. According to this theory, people in rainforest climates where rainfall and temperature are both perfect for growing crops have lower levels of development because there are few major challenges to their survival and no incentive to change. By comparison, people living in climates that present

WORLD: CLIMATE ZONES

Source 1 Source: Oxford University Press

Source 2 Farming for food usually requires reliable rainfall and mild temperatures such as here in Pennsylvania, north-east USA.

Source 3 In Afar, northern Ethiopia, people are nomadic and live from livestock farming. Girls are responsible for herding sheep, goats and camels to the pastures while men provide protection.

a number of mid-range challenges will have higher levels of development because they are encouraged to solve these challenges through innovation.

Theory 2 – People who live in marginal climate regions have lower levels of wellbeing because of the difficulties faced in growing enough food or finding enough fresh water. These activities take so much time and effort, for example spending hours each day collecting water from the nearest water source, that there is no time left to develop ways to move beyond simple survival. Supporters of this theory point to desert regions in Northern Africa and Central Asia as evidence to support their case.

Check your learning 5.3

Remember and understand

1 Why are human populations clustered in certain areas rather than evenly distributed across the world?

2 Use Sources 2 and 3 to describe the very different climates of Afar and Pennsylvania.

Apply and analyse

3 Use the data in the 'World statistics' section in your obook to compare levels of wellbeing in Ethiopia and the USA. To what extent do you believe these differences are due to climatic differences?

4 Why are more people moving to areas that have previously been considered unsuitable for human habitation? Which factors do you think would be most important to drive people to move to an inhospitable area?

Evaluate and create

5 Copy and complete the following table in your notebook. Use the world map at the back of this book together with the data in the 'World statistics' section in your obook to complete column 2.

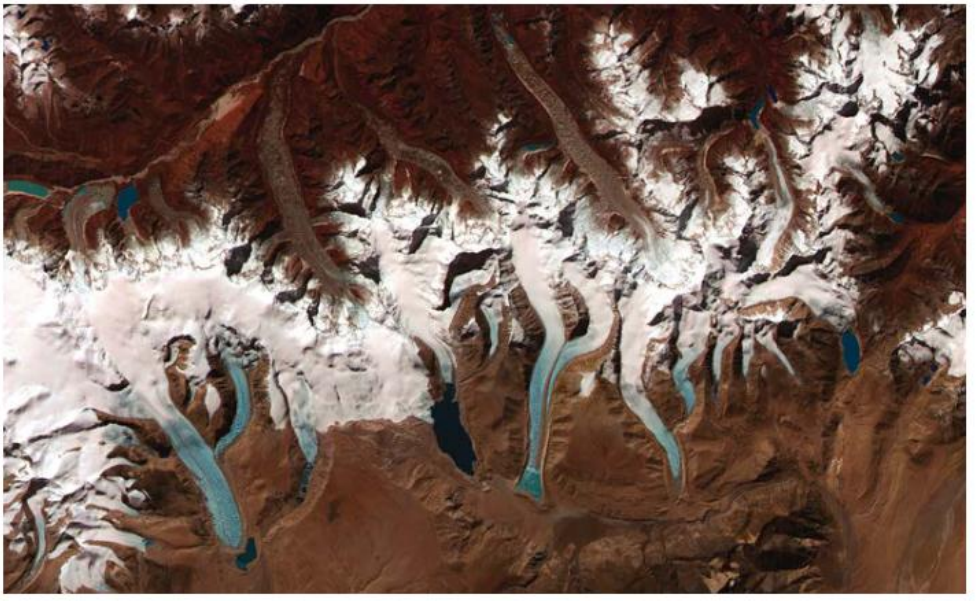

Then use Source 1 to complete column 3.

Region	HDI ranking 2012	Main climate zone
Northern Africa: Morocco	130	Desert, Mediterranean
Southern Africa: South Africa		
North America: Canada		
South America: Brazil		
Oceania: Australia		
Europe: Germany		
Central Asia: Mongolia		
North Asia: Russia		
South Asia: Pakistan		
South-East Asia: Indonesia		

6 Use the information you have collected in this table to evaluate the theory that levels of wellbeing are highest in regions where the climate is neither too extreme nor too comfortable.

5.4 The influence of climate change

Many regions of the world have seen a dramatic improvement in human wellbeing over the last few decades. Infant survival, literacy rates and life expectancy have all increased. **Climate change**, however, threatens to stall and even reverse many of the gains made in these areas. The main threats from climate change are the greater risks posed to people's health from rising temperatures and the expected fall in food production which may, in turn, lead to lower levels of food security.

Source 1 A NASA satellite image of glaciers in the Himalayas. The lakes at the end of each glacier are increasing in size as the glaciers reduce in size. This means that less water is stored in the glaciers themselves.

Health threats

The most direct consequence of rising temperatures is more frequent heatwaves and more cases of associated heat stress. Heatwaves are already Australia's deadliest natural disaster, with older people in urban areas most at risk. In 2009, during a heatwave that hit south-east Australia, there were more than 400 heat-related deaths in Melbourne and Adelaide alone. Researchers expect the death toll from heatwaves in Australia to increase fourfold by 2050. Increasing temperatures bring other threats too, with more frequent extreme weather events such as bushfires, droughts, cyclones and floods.

The other major health concern with rising temperatures, and potentially the most catastrophic, is the spread of serious diseases such as malaria and dengue fever. Rising temperatures create suitable living environments for disease-carrying mosquitoes in areas that were previously too cold. Some research estimates that 300 million more people will be affected by malaria by 2080 as a result. In recent years, the numbers of people dying from malaria has been decreasing, thanks to better preventative measures and greater access to treatment. But increasing numbers of victims could overwhelm health systems in poorer countries where they are less able to prepare and recover from health epidemics.

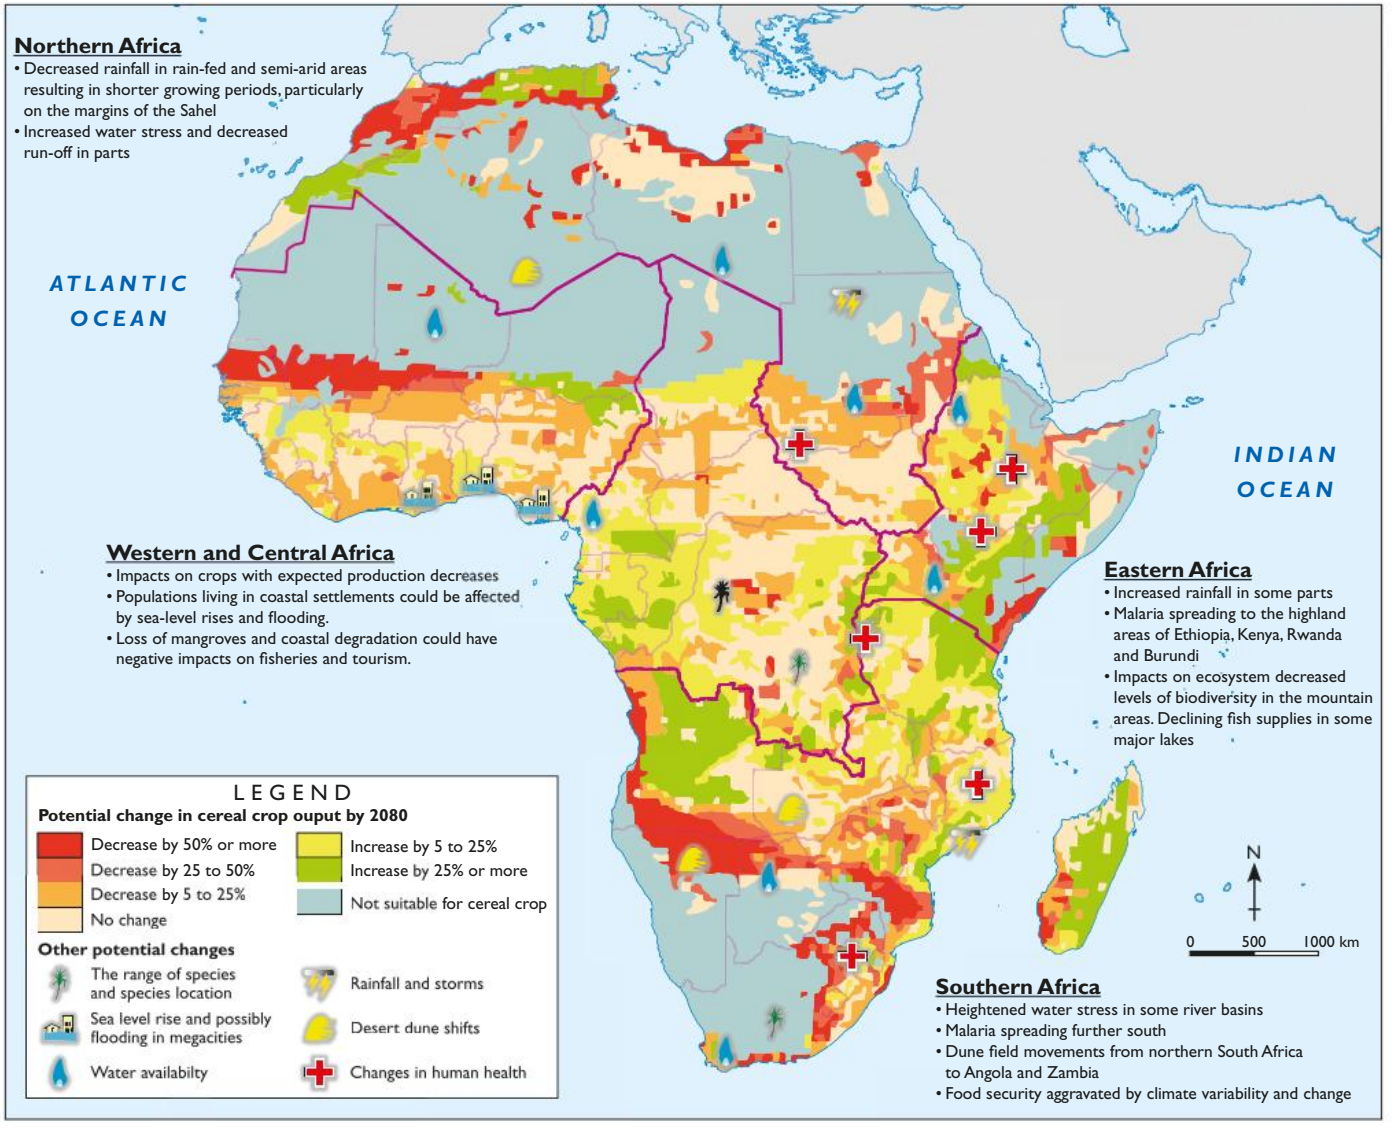

Food security threats

As temperatures rise and rainfall patterns change so will growing conditions. This will affect food security as communities in some regions become unable to produce enough food. Farming areas that are already in dry, warm regions, such as areas surrounding the Sahara and Kalahari deserts in Africa, are expected to see a massive reduction in food production (see Source 2). Worldwide, reductions in grain production are also expected, at a time when world population figures continue to grow. This will send prices for grains higher, making it increasingly difficult for the poor to feed themselves.

The impacts on food security will also be multiplied by changes in water supply. The glaciers of the Himalayas and the Andes supply water to over a billion people in cities and on farms. As the glaciers disappear, the water supply for these people will become less reliable, reducing the ability of farmers to use this supply to irrigate their crops (see Source 1).

Farmland in coastal regions will also be affected. Rising sea levels are expected to flood low-lying land making it unsuitable for farming and causing salt water to intrude further inland.

Remember and understand

1 List the ways in which rising temperatures threaten people's health.

2 Name two climatic factors that threaten food security.

3 Why should we be worried about the melting of glaciers?

Apply and analyse

4 Examine Source 2.

- **a** Which areas of Africa are likely to see the greatest reduction in cereal crop output by 2080?
- **b** Which areas are likely to see an increase in cereal crop output?
- **c** What might this mean for the distribution of populations in Africa?
- **d** What might this mean for food security?

Evaluate and create

5 Conduct some further research on the Internet before completing the following task.

- **a** Which of the effects of climate change shown in Source 2 do you consider to be the greatest threat to wellbeing? Give some reasons for your answer, supporting your argument with data gathered from at least two secondary sources.

5.5 The influence of natural resources on inequality

Natural resources include a country's mineral, petroleum, timber and hydropower reserves along with any other resources that can be used commercially to improve the wealth of the country and the wellbeing of the country's population. Fossil fuels such as oil, and minerals such as iron ore, copper and diamonds are often in demand around the world. The money raised from the sale of these resources can then be used to improve wellbeing. This is what has happened in the oil-rich nations of the Middle East who now enjoy very high levels of wellbeing.

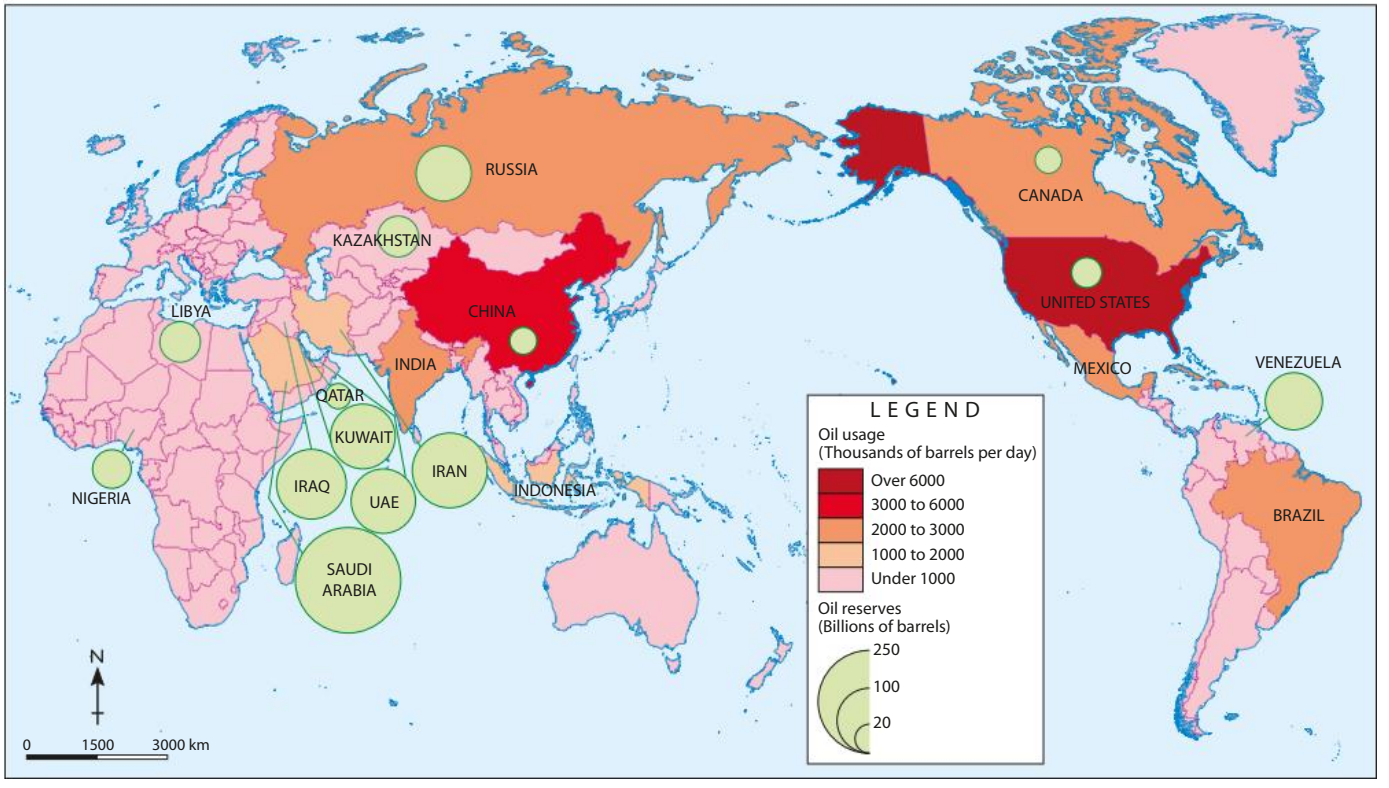

Variations in mineral wealth

Throughout human history, different minerals have provided people with the means to increase their wellbeing. Ancient people used bronze and iron to make tools and weapons with which they could hunt large prey and increase their food security. In today's world, oil is a vital commodity. It is used by billions of people for transport, manufacturing, heating and cooking. Oil is found in only a few places on Earth, but often in vast quantities.

Those countries that have reserves of oil are able to mine, refine and sell it to those who do not, thereby giving them an opportunity to generate wealth and increase their wellbeing. Source 1 shows the distribution of oil reserves throughout the world using proportional circles to show the oil reserves available to each country. You can see from this map that the majority of oil reserves are concentrated in a relatively small number of countries. The colour of each country in Source 1 indicates how much oil it uses. If a country needs oil but does not have any oil reserves, they have to buy it from a country that does.

Natural resources are considered of such high value that throughout history, access to them has been a common cause of conflict between countries.

WORLD: THE LOCATION OF OIL AND THE RATE OF OIL USE

key**concept:** Interconnection

Natural resources and colonisation

As Western nations developed and their populations grew in the 16th and 17th centuries, their need for resources increased beyond what could be provided within their national borders. European powers such as Spain, England, Portugal and the Netherlands sent explorers out to the unknown regions of the world in the hope of finding resources and riches that they could use. They colonised vast areas of the Americas, Africa and the Pacific, often taking the wealth of the countries they colonised to increase their own wellbeing. In many cases, this had devastating results for the Indigenous people in these colonies.

Millions were taken as slaves or put to work extracting minerals and other natural resources from the ground. Countless others were killed in conflicts or died from Western diseases against which they had no natural immunity. Valuable resources such as timber and minerals were taken, and the Indigenous social and political systems were destroyed.

Some people would argue that a form of colonisation still continues today, as companies from wealthy countries develop and sell the resources of poorer nations. Thanks to profits from oil, Nigeria now has Africa's second-largest economy. Much of this wealth comes from multinational companies such as Royal Dutch Shell extracting Nigeria's oil. Shell currently produces 21 per cent of Nigeria's exported oil.

For those living near Shell's oil plants in the Niger Delta, there have been more negatives than positives as a result of the oil industry. Oil spills, loss of agricultural land and environmental degradation have left those in surrounding villages poorer than ever.

For more information on the key concept of interconnection, refer to page 9 of 'The geography toolkit'.

Source 2 Royal Dutch Shell's oil plant in Bonny, Nigeria. Shell began operations in Nigeria in 1937. Today more than 1000 Nigerian wells operated by Shell produce more than 600 000 barrels of oil a day, virtually all of it exported.

Remember and understand

1 What do individuals and communities use oil for?
2 How can natural resources influence a country's wellbeing?

Apply and analyse

3 Examine Source 1.
   - **a** Which 10 countries have the world's largest oil reserves?
   - **b** Use the data in the 'World statistics' section of your obook to order the 10 countries with the largest oil reserves according to their Human Development Index (HDI) rankings.
   - **c** Can you see a direct relationship between large reserves of oil and high levels of wellbeing as shown by the HDI rankings? Write a paragraph describing this relationship.
   - **d** Discuss why access to important natural resources such as oil does not always lead to improved levels of wellbeing.

4 What is colonisation? How does this help to explain variations in human wellbeing?

Evaluate and create

5 Conduct some further research on the Internet before completing the following tasks.
   - **a** Use Google Earth to explore the town of Bonny in Nigeria.
   - **b** Find the location of the photograph in Source 2.
   - **c** Comment on the variations in buildings in this town and the conclusions that can be drawn about relative wealth and wellbeing.
   - **d** Use the ruler function to estimate the size of the oil and gas plant.
   - **e** What evidence can you find of environmental change as a result of this plant?

5.6 The influence of location on inequality

Differences in human wellbeing cannot be explained by variations in climate and the distribution of natural resources alone. While control over reserves of natural resources was the main source of wealth and power hundreds of years ago, it tends to be less of a factor in today's world. In our increasingly globalised world, vast quantities of goods, services, people, finances and ideas move quickly between countries. As a result, countries with few natural resources can increase their wellbeing by engaging in these flows of goods and services.

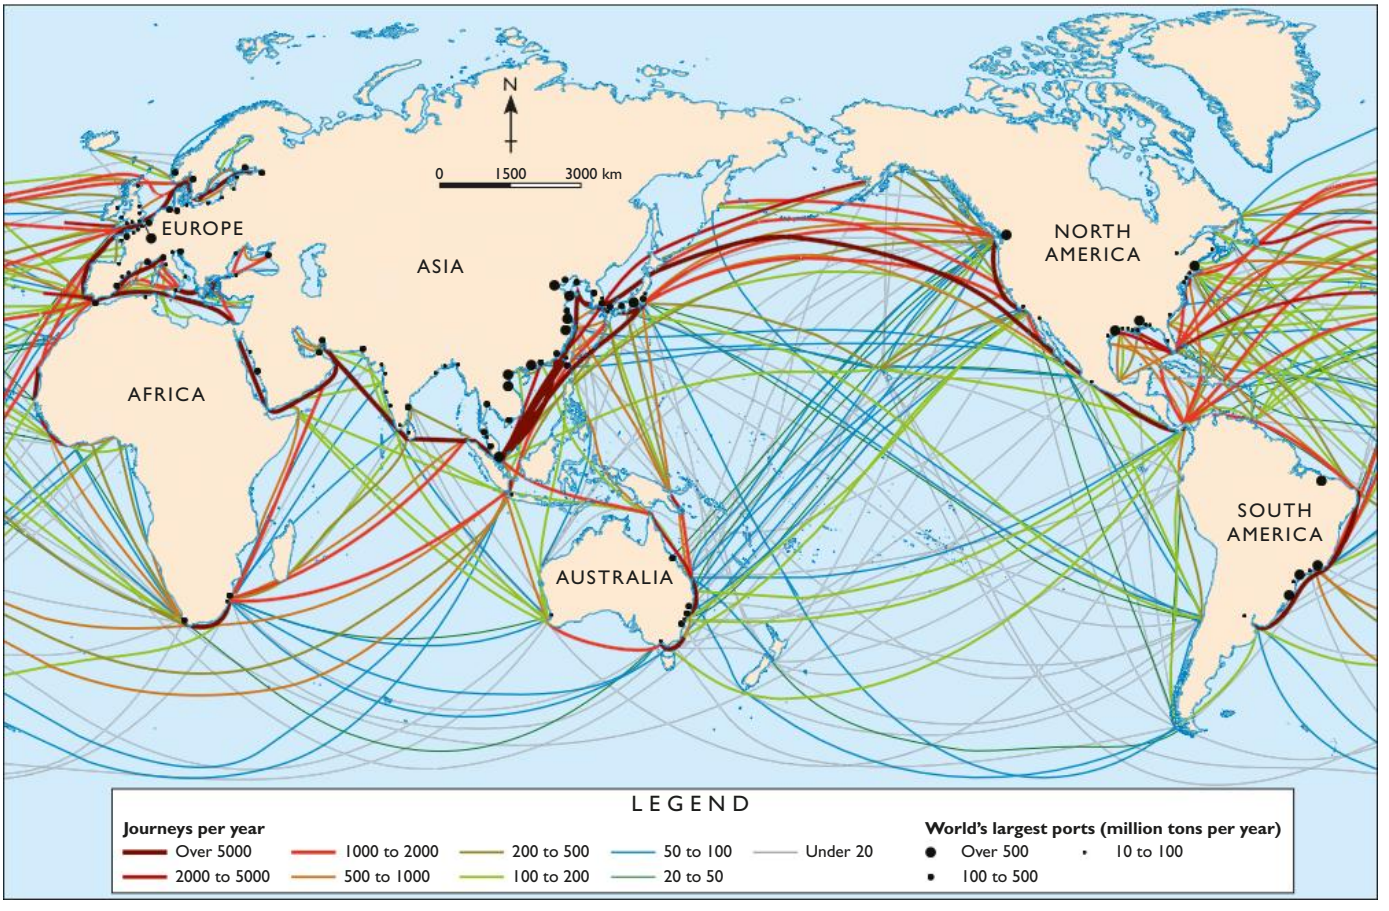

Some of the highest levels of wellbeing are enjoyed by people living in places without the natural resources such as large areas of land suitable for agriculture or vast mineral reserves. For these people, their location and ability to trade are the key to their wellbeing.

Access to trade routes

All of the world's great empires were built partly on their ability to transport goods and people. Large volumes of goods were usually transported by water. Ancient Egyptians used the Nile River, the Greeks and Romans used the Mediterranean Sea, and the British used the oceans of the world for trade. Countries and empires with ports close to major shipping routes had a natural advantage.

Little has changed in the ways goods are transported today. The United States, for example, has been able to maintain high levels of wellbeing for centuries through its ability to trade from large ports on its west, east and south coasts. China, one of the world's fastest growing

WORLD: MAIN SHIPPING ROUTES AND LARGEST CONTAINER PORTS

economies, is the world's largest exporter and second largest importer. Six of the world's eight busiest ports are located in China and an estimated 121 million shipping containers pass through them every year. China is using trade from its many ports as a way to improve the wellbeing of hundreds of millions of its citizens.

key**concept:** Interconnection

Singapore and the importance of location

Singapore is one of the world's smallest countries with few natural resources. Most of the land area is used for urban development, so little remains for food production; there are no significant rivers and no mineral reserves. And yet, Singapore has one of the world's highest levels of wellbeing with an average life expectancy of over 84 years and one of the world's highest levels of GDP per person. Singapore's wealth is based largely on its geographic location at the tip of the Malay Peninsula.

Ships moving between the world's major exporters and importers have used the port of Singapore as a trading centre for hundreds of years. The Port of Singapore is connected through shipping to more than 600 ports in 123 countries around the world, making it the 'gateway to Asia'. This central location has enabled Singapore to thrive in other global industries. Singapore also imports raw materials which it turns into valuable commodities such as electronic and telecommunication goods for export. Lastly, the country is home to major oil refineries and other mineral treatment plants and is a major centre of finance.

Source 2 An oblique aerial photograph showing part of the Port of Singapore

For more information on the key concept of interconnection, refer to page 9 of 'The geography toolkit'.

Check your learning 5.6

Remember and understand

1 How does Singapore's location help to explain the high levels of wellbeing there?
2 How can countries with little in the way of natural resources work to improve their wellbeing?

Apply and analyse

3 Use the 'World statistics' section in your obook to describe overall levels of wellbeing in Singapore.
4 Examine Source 1.
   a Describe the location of the busiest shipping routes.
   b Design the course of a container ship that travels from Beijing, around the world, and back to Beijing following the busiest shipping routes. Use an atlas to make a list of the ports and countries where your ship would dock.
   c Use the 'World statistics' section in your obook to explore the levels of wellbeing in the countries where your ship would dock.
   d What does this map tell you about the advantages of coastal nations in accessing trade?
   e How does this map help to explain the high levels of wellbeing in the USA, China and Singapore?

Evaluate and create

5 Conduct some further research on the Internet before completing the following task.
   a In small groups, brainstorm all the ways in which location influences a country's wellbeing. Source some images that illustrate your ideas and create a PowerPoint presentation explaining these links.

5A rich task

Prisoners of geography

The movement of goods and produce by sea puts cities situated on ports and trade routes at a distinct advantage when it comes to improving levels of wellbeing. Singapore and Hong Kong, for example, are rated as having levels of development that place them in the world's top 20 nations. Both are small islands with few natural resources but their location on major shipping routes and large natural harbours have allowed them to build thriving economies.

Source 1 Niger, one of the world's poorest nations, lies 600 kilometres from the nearest ocean. Virtually all goods and people must enter and leave the country by road. Less than 4000 kilometres of road in the country is paved.

Other nations find their geographical location puts them at a distinct disadvantage. Wellbeing in landlocked nations such as Mongolia, Afghanistan, Niger, Ethiopia and Bolivia is hindered by a lack of access to the sea. Virtually all goods into and out of these places must travel by land, making them significantly more expensive.

This situation is compounded if goods must travel through neighbouring countries with poor transport infrastructure, corruption or conflict. A United Nations study revealed that landlocked countries do worse than their maritime neighbours in each aspect of the HDI ranking – income, life expectancy and education.

skill**drill:** Data and information

Calculating a wellbeing index

A wellbeing index is a valuable tool that can be used to rank a group of countries being studied for example, by placing them in order from the country with the highest wellbeing to the one with the lowest. Follow these steps to develop a wellbeing index for some of the world's landlocked countries.

Step 1 Draw up a grid with 10 columns using the headings set out below (these are your key indicators) and a row for each country you are ranking. This could be done on paper or using a spreadsheet in Microsoft Excel. Using a world map as a guide, list your countries in the first column. Select a range of landlocked countries from different continents for an even spread.

Country	Infant mortality rate	% below poverty line	Life expectancy	GDP per capita	Access to clean water	Literacy rate	Total	Average	Final rank
Bolivia									
Mongolia									
Niger									

Step 2 Rank the countries from the lowest infant mortality rate to the one with the highest. For example if you have 20 countries the highest score would be 20 and the lowest would be 1. If two or more countries have the same infant mortality rate, they score the same ranking. Record these rankings in the column headed 'Infant mortality rate'. For those countries where the data is unavailable do not include them in the ranking.

Step 3 Repeat this step for the 'Percentage of the population living below the poverty line' (column 3).

Step 4 Repeat this step for 'Life expectancy' (column 4) but this time, the highest life expectancy scores 1 and the lowest scores 20.

Step 5 Repeat for 'GDP per capita' where the highest is ranked 1 (column 5).

Step 6 Repeat for 'Access to clean water' where the highest is ranked 1 (column 6).

Step 7 Repeat for 'Literacy rate' where highest is ranked 1 (column 7).

Step 8 Add the total score for each country and record this in column 8.

Step 9 Calculate the average score for each country. Divide each country's total score by the number of indicators for which they have valid data. Record this average score in column 9.

Step 10 Rank the countries based on these average scores. The country with the lowest average score will be the first ranked country. Record these ranks in the final column. You have now completed a wellbeing index of countries based on these six indicators.

Apply the skill

1 Calculate a wellbeing index for 20 of the world's landlocked countries (see Source 2).

2 Comment on the level of wellbeing of people living in landlocked countries based on your wellbeing index.

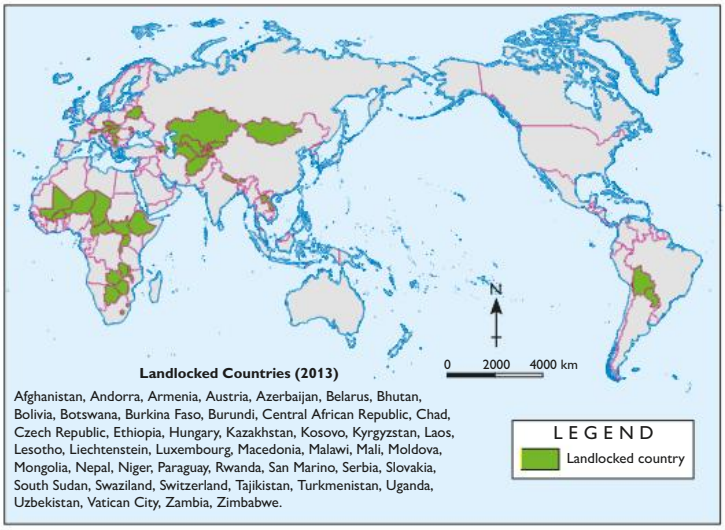

3 Examine the 'World statistics' section in your obook. List the 10 countries in the world with the lowest HDI rankings. How many of these are landlocked countries?

Extend your understanding

1 Calculate a wellbeing index for the countries of South America. How do the two landlocked countries score on your index?

2 Bolivia has no coastline but maintains a navy of approximately 5000 sailors (see Source 3). Research the history of Bolivia's access to the Pacific Ocean to find out why this country has a navy.

5.7 Human factors and wellbeing

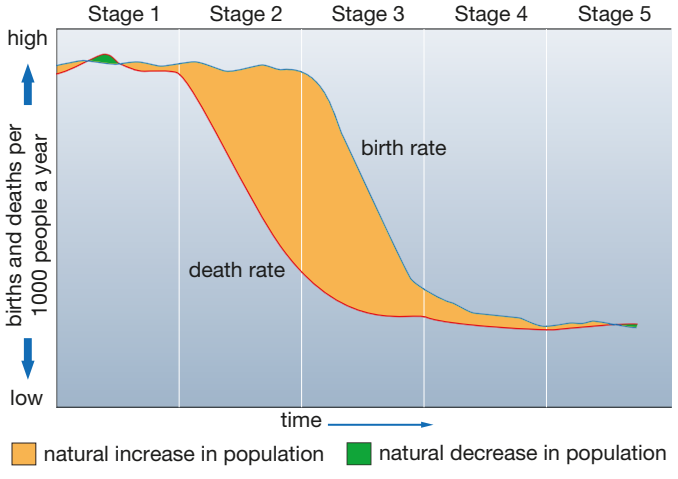

In section 5A, you learnt about some of the ways in which the natural environment can influence human wellbeing and result in inequalities between countries. In this section, we will concentrate on the human factors that affect wellbeing. These human factors are a combination of different social, economic, historical and political factors. Changes in the size of populations, inequalities between different groups in society, political instability and conflict are all examples of human factors that affect wellbeing.

Demographics and changes in population

The number of people living in a country is always changing. In some countries the population is growing rapidly and in others it is declining. The rate at which populations change is largely related to changes in wellbeing.

Demographics is a term used by geographers to describe the quantifiable statistics of a population (or smaller groups within it). Looking at statistical data on population can help to identify trends in population patterns and predict future trends that could affect wellbeing within a country.

Countries tend to pass through a series of stages in terms of population change. By observing these changes in many countries over a long period, geographers were able to develop the **demographic transition model** (Source 1).

Source 1 The demographic transition model

Looking at population trends

Many developing countries around the world today, particularly in Africa and Asia, are currently in stage two according to the demographic transition model. Death rates have fallen dramatically as better health care, sanitation and the provision of fresh water have improved the health and life expectancy of millions of people. Improvements have also been made in the care offered to women giving birth and of their newly born children. Millions more babies are now surviving into adulthood as a result of these improvements.

While these improvements have led to people enjoying longer, healthier lives, they have also created a problem. In these countries, there is currently a gap (or lag) between the fall in the death rate and a fall in the birth rate, so populations are growing rapidly (see Source 1). As a result, the population of Africa, for example, is expected to double in the next 40 years to more than 2 billion.

In contrast, many developed countries in regions such as North America and Western Europe have reached stages four and five in their demographic transition. Birth rates have now fallen to such an extent that some of these countries are facing an overall

Source 2 The population of Nigeria increases by 2.6 per cent per year. Already home to 170 million people, its population is predicted to exceed 400 million by 2050. The population of its capital, Lagos, is expected to triple to over 30 million inhabitants in the same time period.

decline in their populations. The reasons for this fall differs between countries but there are some common factors. A general improvement in living conditions, high use of contraception and other family planning methods, high rates of education and work participation amongst females and a movement from rural living to large cities all seem to be contributing factors to the falling birth rates.

Case study: China's one-child policy

Perhaps the most famous attempt by a country to reduce its birth rate has been China's 'one-child policy'. Introduced in 1979, its aim was to reduce the rate of population growth in the world's most populous country. Couples in China were encouraged to have only one child, although the policy was unevenly applied across the country. One-child families were given better access to education, health care, jobs and houses while those that had more children were fined and lost access to important social services.

The policy has been successful in reducing China's growth rate and has likely resulted in 300 million fewer births since it was implemented in 1979. But there have also been a range of unintended consequences which are now causing concern.

In China, people prefer to have sons rather than daughters, as boys traditionally support their parents in their old age. As parents could only have one child, many were ensuring that this was a boy. In some cases, this involved using an ultrasound machine to determine the sex of the foetus, and aborting the pregnancy if it was a girl. In other cases, baby girls were abandoned or sent to orphanages. This has led to a large imbalance between the sexes in some parts of China with 13 males born to every 10 females.

China's one-child policy began to be formally phased out in 2015.

Source 3 A mother in Shaoyang plays with her son in front of a family planning poster.

Check your learning 5.7

Remember and understand

1. Why can it be useful to analyse statistical data on population?
2. Why have death rates fallen in many developing countries over recent times?

Apply and analyse

3. In what ways would the demographic transition model be useful for geographers studying population trends?
4. Use the 'World statistics' section in your obook to find the birth and death rates for Australia, Afghanistan, Italy and Timor-Leste (East Timor).
   a. Which of these countries would you describe as having a rapidly expanding population, which is relatively stable and which has a declining population? Explain your answers.
   b. In which stage of demographic transition is each of these countries? What challenges do planners in Italy and Timor-Leste face?
5. What was China's one-child policy designed to do? Describe its results in terms of the demographic transition model.

Evaluate and create

6. Conduct some further research before completing the following task.
   a. What messages do you think are being communicated on the billboard shown in Source 3? Do some extra research to investigate the issues surrounding family planning in China and its impacts on Chinese people. Share your research in groups of three or four and summarise your findings.

5.8 Changes in population structure

Population structure is a term used to describe the different groups in society that together make up the total population. Geographers often identify groups according to their age and sex. One of the most useful tools that geographers use to study a country's population structure is called a **population pyramid**. Population pyramids graph the population of a country in age segments (shown in the central axis). Males and females are shown separately – males are always shown on the left of the pyramid and females on the right.

How population affects wellbeing

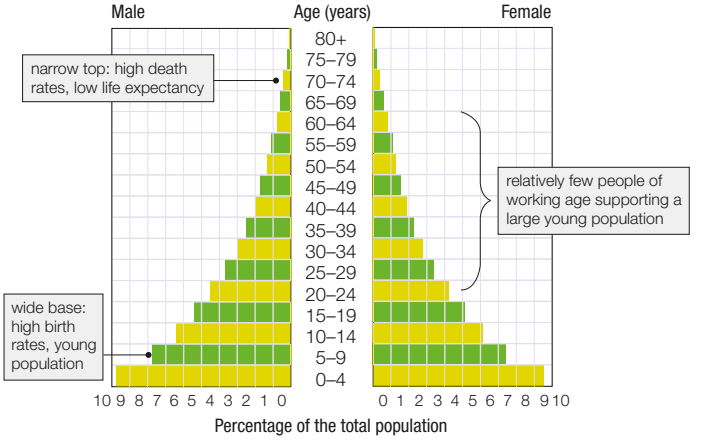

Population pyramids help geographers to identify trends in populations. The overall shape of the pyramid can indicate whether a country's population is growing, contracting or remaining relatively stable. Countries with a rapidly growing population tend to have pyramids that are wide at their base and narrow at their top (Source 2).

Countries with a population that is growing slowly have a different shaped pyramid (Source 3). The base is much narrower because birth rates and fertility rates are lower. In these countries, much of the population is of working age.

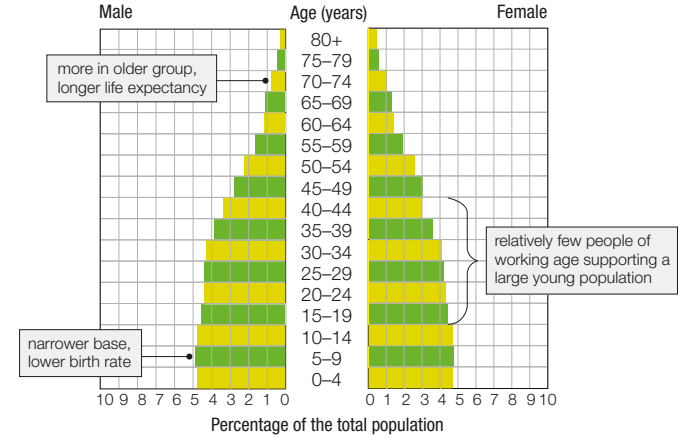

Countries with a declining population tend to have a population pyramid that looks like an inverted pyramid (Source 4). In these countries, the birth rate is low so the base of the pyramid is very narrow. There is usually a large group of people over 60 years of age as life expectancy is high and death rates are low.

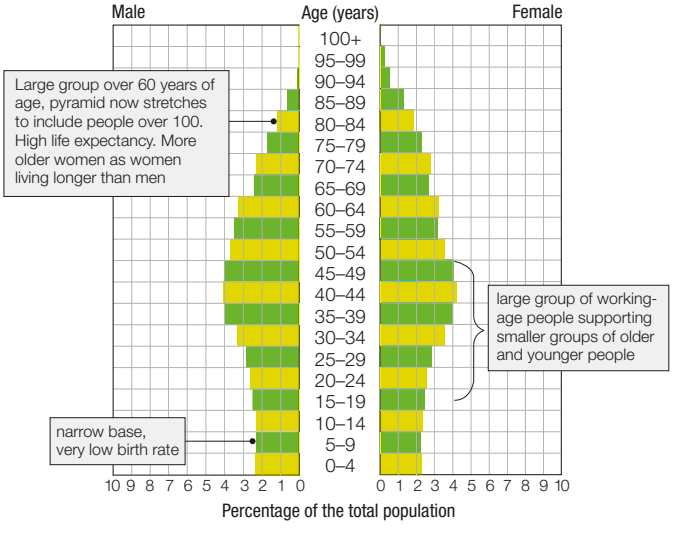

Source 1 The population of Italy is ageing and declining due to a very low birth rate.

Source 2 The population pyramid for Niger, an example of a rapidly growing population

Source 3 The population pyramid for Indonesia, an example of a slowly growing population

Source 4 The population pyramid for Italy. An example of a declining population

skill**drill:** Data and information

Constructing a population pyramid

You can construct your own population pyramid by following these steps. Population pyramids are fairly simple to construct but accuracy is very important so take your time. For more information on population pyramids, refer to page 23 of 'The geography toolkit'.

Step 1 Draw the horizontal axis (the *x*-axis) which will show the percentage of the population. Leave a gap in the centre similar to the population pyramids shown in Sources 1–3. Your age ranges will go in this space.

Step 2 Add the scale 0 to 10 on each side, working from the centre outwards. Label your *x*-axis 'Percentage of the total population'.

Step 3 Add the centre axes (the *y*-axes) as per the population graph in Source 2. Label the *y*-axes 'Age (years)'. Remember that males are always shown on the left and females on the right, label the left side 'Male' and the right side 'Female'.

Step 4 Mark the scale on the *y*-axes. You will need to allow for 20 rows.

Step 5 Add the labels for each age group span in the centre space. Start with 0–4 at the bottom and increase in intervals of four years until you reach 100+.

Step 6 Transfer information from your data set onto your population pyramid. Draw bars in for each age group's data. Use a ruler and sharp pencil. Make sure that each bar is exactly the same width.

Age	Males (%)	Females (%)
0–4	3.3	3.2
5–9	3.3	3.1
10–14	3.1	2.9
15–19	3.2	3.0
20–24	3.6	3.4
25–29	3.7	3.7
30–34	3.7	3.7
35–39	3.3	3.3
40–44	3.5	3.5
45–49	3.3	3.3
50–54	3.2	3.3
55–59	3.0	3.1
60–64	2.7	2.8
65–69	2.4	2.5
70–74	1.8	1.8
75–79	1.3	1.4
80–84	0.8	1.1
85+	0.6	1.2

Source 5 The population of Australia, 2015

Step 7 Lightly shade each bar using two alternating colours so the graph is easy to read. Add a title.

Apply the skill

1 Construct a population pyramid for Australia in 2015 using the data from Source 5.

2 Add three labels to your Australian population pyramid, similar in style to those on the three population pyramids shown in Sources 2–4 describing three key features of the structure of Australia's population.

Check your learning 5.8

Remember and understand

1 Describe the appearance of a population pyramid for a rapidly growing population.

2 Which of the population pyramids shown on these pages represents the most rapidly growing population?

Apply and analyse

3 Use the 'World statistics' section in your obook to list the fertility rates in Niger (Source 2), Indonesia (Source 3), Italy (Source 4) and Australia. What link can you make between the shape of the pyramids of these countries and their fertility rates?

Evaluate and create

4 Using the four population pyramids (Italy, Niger, Indonesia and Australia) as a guide, match each country with its current position in the demographic transition model (Source 1 on page 190).

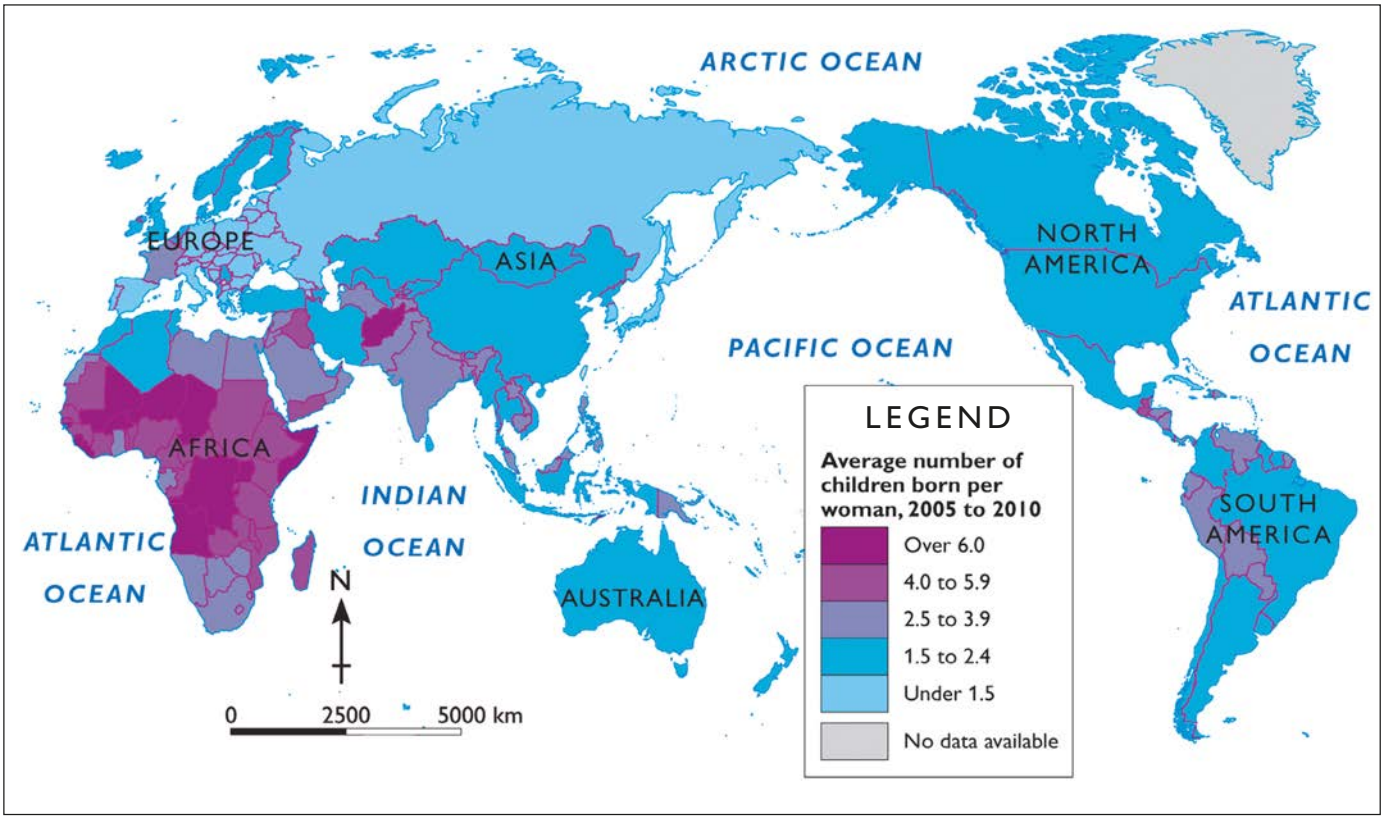

5.9 Population growth and inequalities in wellbeing

> The countries in which poverty levels are the highest are generally those that have the most rapid increases in population and the highest fertility levels.
>
> United Nations Population Fund

The populations of most countries around the world are increasing. In some countries, such as Australia and the United States, the population is growing slowly, and in other countries, such as Niger and Uganda, it is growing rapidly. Populations grow when the number of arrivals from births and immigration is greater than the number of departures from deaths and emigration. In most cases, the growth of a country's population is largely determined by the **fertility rate**.

Many people living in countries with a rapidly growing population experience difficulties accessing vital services. These include access to education, food, safe drinking water, electricity, communications and transportation. Access to health services such as hospitals, doctors and medicines is also much lower than in countries with slowly growing or declining populations. Infant mortality and maternal mortality (mothers dying due to pregnancy or childbirth problems) are also much higher in rapidly growing populations. This is largely because many births in these countries are not attended by health professionals.

WORLD: TOTAL FERTILITY RATE

Source 1

Source: Oxford University Press

Gender inequality and fertility rates

> Gender inequality fuels population growth. Where women are denied full legal, social and economic rights, such as education, secure livelihoods, property ownership and credit, they are forced to rely on childbearing for survival, status and security.
>
> Lakshmi Puri, Assistant Secretary-General of UN Women, 2011

Many researchers believe that the lower status of women, particularly in developing countries, contributes to higher fertility rates as women with lower levels of education tend to have more babies. In turn, higher fertility and larger families make it even more difficult for women to attend school or to participate in the workforce and in government.

Inequality between women and men is both a cause of inequality in wellbeing and one of its effects. Societies in which women have a lower status in education, employment and government tend to have lower levels of wellbeing than those with less or no gender discrimination.

Source 2 Niger is the only country in the world where the average number of children born to each woman (known as the fertility rate) is greater than seven. Of the 15 countries with the highest fertility rates, 14 are in Sub-Saharan Africa. The other country is Afghanistan.

Source 3 The adult literacy rate for Yemen is 43 per cent for females and 79 per cent for males.

Check your learning 5.9

Remember and understand

1. What is meant by maternal mortality?
2. What might be a cause of higher rates of infant and maternal mortality in countries with rapidly growing populations?
3. What is the fertility rate in Australia? Name three other countries with a similar fertility rate.
4. Explain the links between gender inequality and population growth in your own words.
5. What sort of services are difficult to access in countries with rapidly growing populations?

Apply and analyse

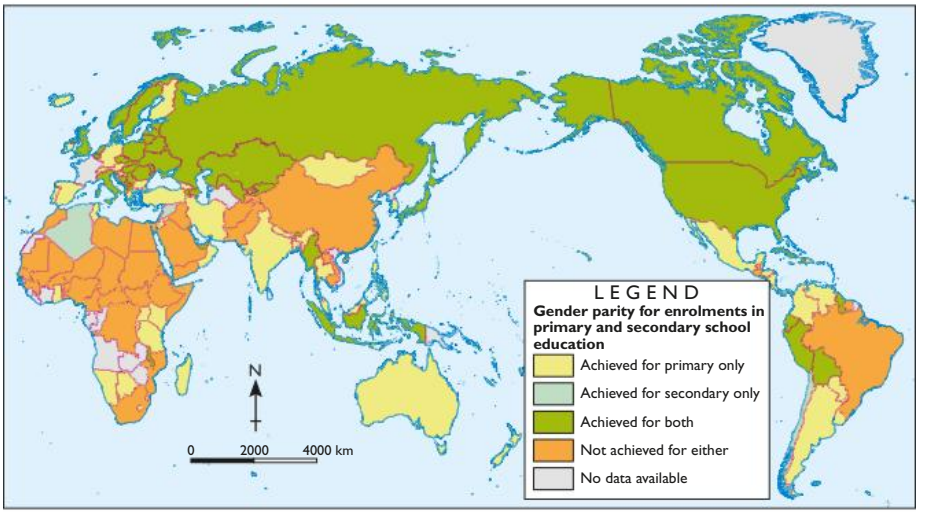

6. Examine Source 3.
   - **a** Estimate the proportion of girls and boys in this school in Yemen.
   - **b** How does this help to explain the gap in literacy levels between males and females in Yemen?
7. Examine Source 1.
   - **a** Use the PQE method to describe the pattern shown on this map. For more information on the PQE method, refer to page 28 of 'The geography toolkit'.
   - **b** Compare this map to the world maps showing the proportion of population living in poverty (Source 2 on page 144), GDP per capita (Source 1 on page 148), hunger levels (Source 1 on page 152) and literacy rates (Source 2 on page 156). For each map write a one-sentence summary of the similarities that you notice.
   - **c** Based on the summaries you have written, what is the most significant link between fertility rates and human wellbeing?

5.10 Gender and inequalities in wellbeing

Throughout much of the world today there are **gender inequalities**. For example, if you are a woman, you are more likely to be living in poverty and unable to read or write. You are more likely to be a refugee and subject to gender-based violence. You are also less likely to be in government, to be employed or to own property.

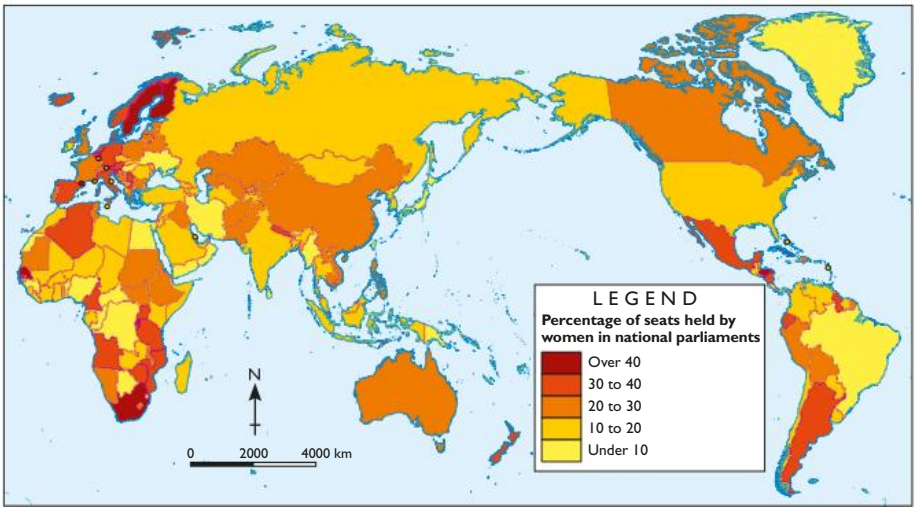

As we have learnt, there are certain key indicators that can be used to measure wellbeing. Three important ways to assess gender equality in a country are by measuring women's participation in education, the workforce and government. It is these three things that are essential to raising the status of women and providing opportunities for better jobs, higher levels of wealth and female-friendly government policies.

WORLD: GENDER PARITY FOR ENROLMENTS IN PRIMARY AND SECONDARY EDUCATION

Source 1 Source: Oxford University Press

WORLD: PERCENTAGE OF WOMEN IN NATIONAL GOVERNMENTS

Source 2 Source: Oxford University Press

Gender inequality in education

In many countries around the world, boys outnumber girls in schools particularly at secondary school level (see Source 1). The gap is wide throughout South Asia, for example, where the number of girls attending secondary schools is low compared to boys – only 75 girls for every 100 boys. This gap is a reflection of gender-based discrimination in societies where sons are often considered more important than daughters. Poverty also has an effect on this inequality. In India, for example, girls from poorer families who do attend school at all, attend inferior schools that teach nothing more than basic literacy and numeracy. Higher levels of schooling cost money and poor families are more willing to invest in their sons than their daughters.

Gender inequality in government

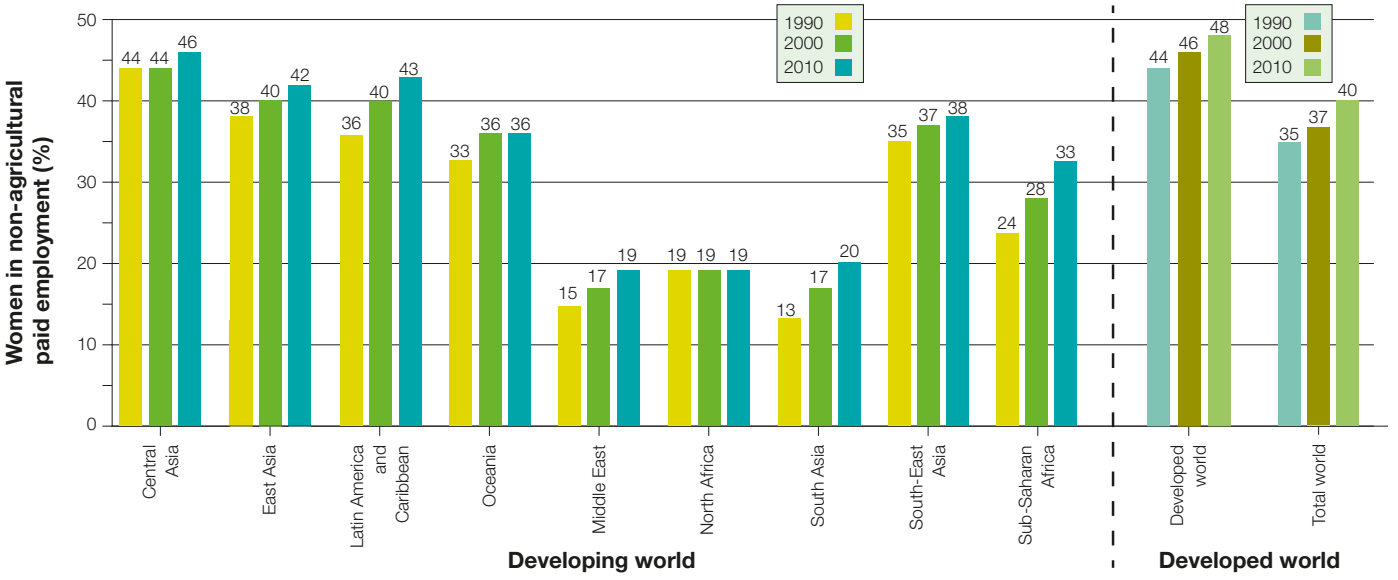

In every country of the world, less than half of the representatives in national parliaments are women (see Source 2). Globally, women make up only 18 per cent of the world's elected officials. The Scandinavian countries and Iceland have the highest number of women in government, with Spain, South Africa and Argentina also having better than average numbers. Low levels of representation in government can make

çit difficult for gender equality laws such as universal education to be discussed and enacted.

Gender inequality and job opportunities

Women own about 1 per cent of the world's resources and earn one-tenth of the world's income. In many places around the world their participation rates in the paid workforce are much lower than men's (see Source 3). The Middle East and North Africa have the lowest levels of female participation in the workforce. Even in the developed world, where women's participation is high, women tend to earn less than men and occupy lower-level positions.

In many of the places where women have low participation rates in the paid workforce, they are instead doing unpaid agricultural work. Approximately 60 per cent of women in developing countries work in farming. These women work long hours every day on family farms that produce just enough food to support their families. They also perform most of the domestic chores such as collecting wood and water, caring for children and preparing food.

Source 3 Percentage of employees in non-agricultural employment who are women

Check your learning 5.10

Remember and understand

1 Define the term 'gender inequality' in your own words.

Apply and analyse

2 Examine Source 1.

- **a** In which regions of the world has parity (equal numbers) of male and female students been achieved for both primary and secondary education?
- **b** Use the map in Source 1 on page 194 showing fertility rates to comment on the fertility rates in the regions you listed in (**a**).
- **c** What relationships can you see between education parity and fertility?

3 Use the sources provided to compare the regions of Europe and Sub-Saharan Africa in terms of:

- **a** parity in education
- **b** women in non-agricultural employment (note: Europe is included as part of the 'Developed world')
- **c** the percentage of women in government.

Evaluate and create

4 Conduct some further reading before completing the following tasks.

- **a** Research gender equality and inequality in Australia. Focus on issues such as employment, wage levels, number of seats in parliament and education.
- **b** Present your findings as a written report. Remember to acknowledge the sources of the data you use in your report.

5.11 Technology and inequalities in wellbeing

Technology is a very broad term used to describe a range of different tools, machinery, techniques and systems to solve a problem or achieve a goal. From the times of earliest human societies, people have strived to find new and better ways of growing food, accessing water, treating medical problems and improving sanitation. All of these technological developments were designed to improve wellbeing. Over the last 200 years, there have been many significant advances in technology that have fundamentally changed the way we live and work. These advances have had enormous impacts on societies. Some of the biggest changes occurred during the Agricultural Revolution of the 18th century and the Industrial Revolution of the 19th century.

These revolutions, however, were concentrated in Europe and the United States and their impacts were greatest in the parts of the world now known as the developed world. The people of Europe may have been living with the benefits of these revolutions for generations but in many Asian and African countries, they are still using farming methods not seen on Europe's farms for hundreds of years.

Case study: differences in dairy farming technology

Differences in the availability and use of technology between the developed world and the developing world can be seen clearly in these examples of dairy farming in Laos and New Zealand.

The woman shown in Source 1 is a farmer in Laos. She is bringing her herd of four cows to a small shed leaning against her house. She will spend the next hour or so milking the cows by hand into a bucket. This will provide enough milk for her family to be able to make their evening and morning meals. The cows will stay in the shed overnight and be milked in the early morning. During the day they will be able to wander across the countryside but will be accompanied by one of the children of the family whose daily task is to make sure the cows are fed, keeping the child out of school. Their droppings will be collected and used for fertiliser, fuel for the cooking fire or mixed with straw and used for mud bricks. On some days, the larger cow will be used to plough the family rice field, pulling a plough through the mud.

The farm in Source 2 is also a dairy farm. The family ride motorbikes to herd the cows into a mechanised milking shed. Suction cups are attached to the cows' udders and the milk is pumped into large storage tanks ready for collection by a refrigerated milk tanker later in the day. Because the milking is mechanised, the farmer and one other worker are able to milk 1200 cows twice a day, producing much more milk than the farmer and his family can consume. The milk is sold to the local dairy factory where it is treated and used to supply the needs of the people in towns and cities throughout the South Island of New Zealand.

Source 2 A dairy farm in New Zealand, 2012

Information and communications technology (ICT) and wellbeing

Technology is always moving forward. We are currently experiencing a kind of information revolution in which the growth and spread of ideas and knowledge is occurring much more rapidly than at any time in the past. To a large degree this is being fuelled by advances in information and communications technologies (ICT).

ICT has the potential to improve the wellbeing of people throughout the world. Already, the information revolution has made it easier for businesses on opposite sides of the world to work with each other. It has also allowed Western companies to access cheaper labour in developing countries by outsourcing jobs overseas. The outsourcing of jobs in call centres and IT services, for example, has provided new employment opportunities and increased wellbeing in countries such as India and the Philippines. The spread and influence of the information revolution throughout the world, though, remains uneven (Source 3).

WORLD: INTERNET USE AND POPULATION

Check your learning 5.11

Remember and understand

1 What is technology?
2 In which areas do humans seek to improve wellbeing through the use of technology?
3 How has the outsourcing of jobs by Western countries improved wellbeing in India and the Philippines?

Apply and analyse

4 Compare Sources 1 and 2.
   a Comment on the levels of technology used by dairy farmers in these two places.
   b Use the 'World statistics' section in your obook to compare levels of wellbeing in these two countries.
5 Examine Source 3.
   a Describe the general pattern of Internet use on this map.
   b Compare this map to Source 1 on page 144 showing HDI rankings around the world. What links do you notice between the HDI rankings and Internet traffic?
   c How would you account for these links?

5.12 Politics and inequalities in wellbeing

Politics is a term used to describe all of the activities associated with governing a country or region. Thomas Jefferson (1743–1826), third President of the United States and principal author of the Declaration of Independence, was a gifted politician. According to Jefferson, good governments were those that protected the rights of individuals, encouraged economic freedom, promoted happiness and listened to the will of the people. Although Jefferson died almost 200 years ago, his beliefs still hold true. Governments wield enormous power over their citizens. Some are good, while others are bad. Regardless of this, they are all responsible for influencing levels of wellbeing among their citizens.

Source 1 In some countries, such as South Sudan, children are forced into conflict and become child soldiers. Some groups, including Amnesty International, argue that 'the right to refuse to kill' should be added to the list of basic human rights.

The Universal Declaration of Human Rights

On 10 December 1948, the United Nations General Assembly adopted the Universal Declaration of Human Rights. After World War II, the newly formed United Nations decided to set an international agreement of basic human rights that should be made available to all. The idea was that those in power would be responsible for ensuring that the human rights of their citizens were protected to the best of their government's ability.

This was the first time in history that the nations of the world had listed the basic human rights to which all human beings are entitled. The Declaration now underpins many laws to protect basic human rights all around the world. These rights include:

- the right to equality, life, freedom, security, equality before the law, a fair public hearing, be presumed innocent until proven guilty, move freely, seek asylum in another country, marriage, family, own property, freedom of opinion, peaceful assembly, free elections, social security, desirable work, rest, adequate living standards, education and to share in scientific advancements
- freedom from discrimination, slavery, torture, arbitrary arrest, interference with privacy, religious persecution, state or personal interference in the above rights.

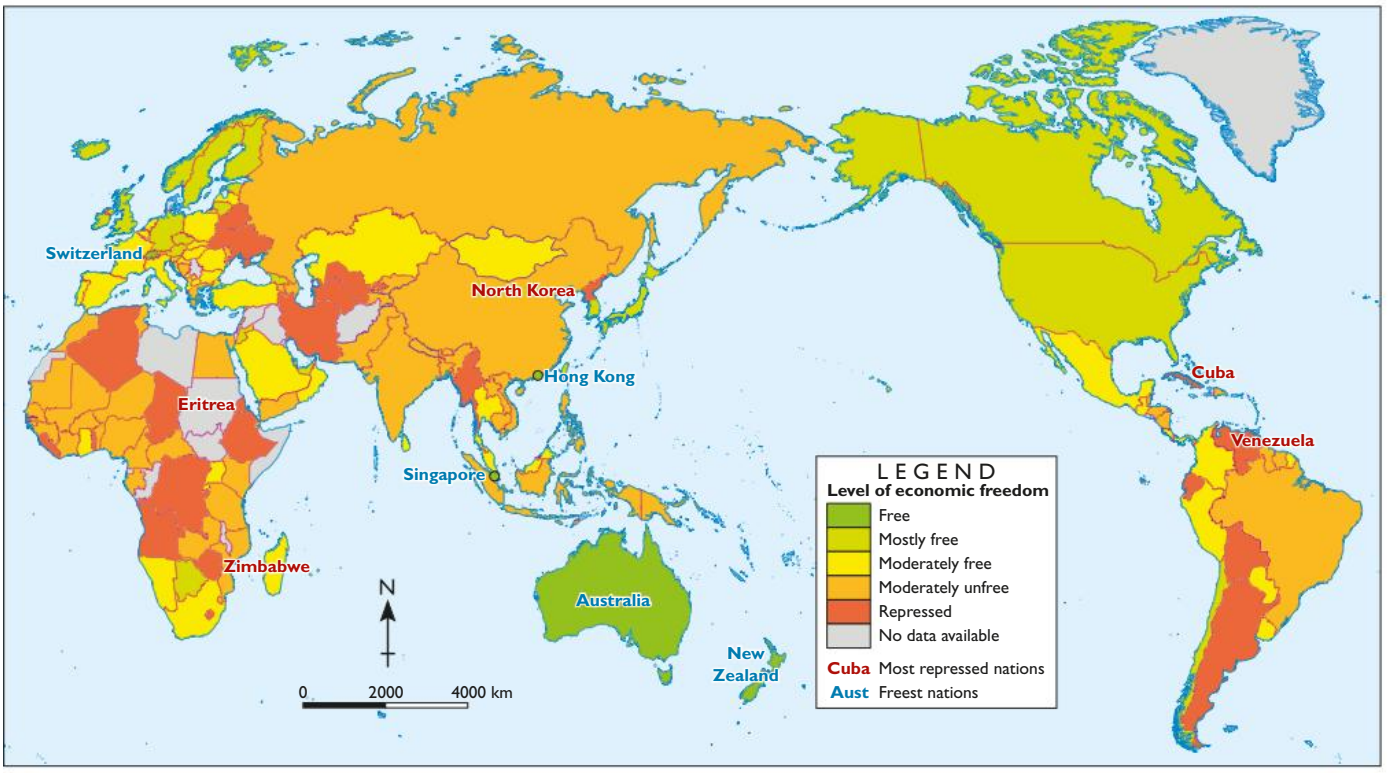

Government corruption

Many researchers believe that the abuse of political power is the leading cause of poverty and inequality in the world today. In particular, they point to the corruption that exists in many developing nations where those in power use their position for their own benefit rather than the benefit of the country.

Source 2 ranks the countries of the world according to the level of economic freedom. This data is compiled by scoring nations on various indicators including the level of corruption, labour freedoms and property rights.

Government corruption usually leads to the repression or punishment of any individual or group that speaks out against the government. In some cases,

WORLD: LEVELS OF ECONOMIC FREEDOM

Source 2

Source: Oxford University Press

Source 3 North Korea is one of the world's most repressed nations. It is very difficult to access data for North Korea but it is estimated that more than one-quarter of North Koreans live below the poverty line. Despite this, it is believed that up to one-third of the annual budget is spent on the military under a policy known as 'songun' or putting the military first.

the struggle between different political groups within a country can result in civil war and ongoing conflict, an example of this is the current civil war in Syria. Along with environmental degradation, corruption and conflict are the two factors most likely to halt or reverse upward trends in improved wellbeing, affecting people's health, education and economic activity.

Check your learning 5.12

Remember and understand

1 Describe Jefferson's idea of good government.

2 How can corruption and conflict within a country affect the wellbeing of its people?

Apply and analyse

3 In which regions of the world are people most repressed?

4 In which regions are people most free from repression?

5 Access the full list of rights and freedom outlined in the Universal Declaration of Human Rights online. Discuss with a partner how it would influence wellbeing if these rights were adopted as law in every country in the world.

Evaluate and create

6 Using Source 2 and an atlas, select four countries from each level of the five levels of economic freedom. Use the 'World statistics' section in your obook to research the HDI ranking of each of these 20 countries. Construct a scatter plot comparing the level of economic freedom in each country with its HDI ranking. Describe the pattern shown.

5.13 Conflict and wellbeing

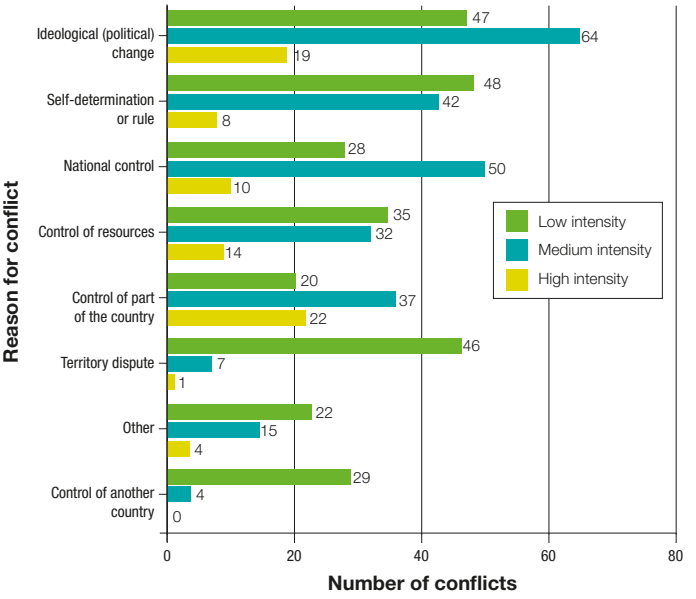

Wars and civil conflicts are complex events. There is rarely, if ever, a single factor that causes them. An intricate set of social, historic and physical factors lie behind one group of people or nation attacking another. The costs of war are immense both in terms of human life and economic resources. For a country to go to war there must be enormous perceived benefits to the winner of that war. Often these benefits are resources that will impact positively on the wellbeing of the victorious party. These may include oil, areas of desirable land, or access to water.

Why conflicts happen

Countries go to war for many reasons. They may see the opportunity to gain more land or more valuable resources, or they may want to remove a potential security threat. They may go to war for religious reasons, or to fight a rival ethnic group.

Source 2 shows the reasons for the 396 conflicts recorded in 2012 by the Department of Political Science at the University of Heidelberg, Germany. In their annual report on global conflict, the university also classifies conflict as peaceful disputes over politics or borders (low intensity), conflicts involving infrequent fighting (medium intensity) and conflicts involving constant fighting (high intensity).

Studies consistently show that few conflicts are fought solely over natural resources. Indeed, of the 396 conflicts in 2012, only six were considered to be fought purely on this basis. And yet, about 40 per cent of all civil wars in the last 60 years have partially involved struggles for control of natural resources, including at least 18 violent conflicts since 1990. Many of these are in Sub-Saharan Africa where rebel soldiers loyal to different warlords fight to gain control of valuable mineral resources. Income earned from mining these resources is used to fund further fighting, often for other reasons such as the control of part of the country or attacks on neighbouring countries.

Source 2 The major causes of conflict in 2012 worldwide

Source 1 The Rwandan genocide which resulted in more than half a million deaths and the displacement of millions more was fought, in part, over the control of land, a valuable resource in this densely populated region of central Africa.

Case study: water wars

One of the most valuable resources in many parts of the world today is fresh water. Disputes over its control have occurred for thousands of years and many analysts believe that this will accelerate in the future as water resources become scarcer and populations continue to grow. Water wars follow the trends of most disputes over resources: they tend to be within, rather than between, countries, and the tension over the resource is usually not the only cause of the conflict.

In recent times, there have been conflicts over the water resources of the Aral Sea in central Asia, the Tigris, Euphrates and Jordan rivers in the Middle East and the Nile and Okavango rivers in Africa. There is also ongoing tension between Pakistan and India, partially over the the rivers in the Kashmir that feed into the Indus River basin. The Arab–Israeli War in 1967 (also known as the Six-Day War) was fought, in part, for control of the Golan Heights, an important water source for both Israel and its neighbour Syria. The area was seized by Israel at the end of the war and the Golan Heights now supplies one-third of the nation's water. The Darfur conflict in Sudan, which started in 2003, is sometimes called the 'world's first climate change war', as different ethnic and religious groups fight for control of dwindling water resources.

Source 3 India and Pakistan have fought sporadically for control of the territory of Kashmir since 1947. Part of the dispute is over the water that flows from India into Pakistan – a valuable resource in this region. Pakistan accuses India of diverting much of this water before it reaches Pakistan. India denies this.

Check your learning 5.13

Remember and understand

1 What were the three most common reasons for armed conflict in 2012?

2 Why do some analysts believe that more wars in the future will be fought over water?

Apply and analyse

3 Examine Source 2.
- **a** Add up the total number of reasons for war shown here.
- **b** Explain why this number is higher than the total number of conflicts (396).
- **c** High intensity conflicts were most commonly fought for what reason? Give some possible explanations for this.
- **d** Estimate what percentage of conflicts involved a battle for resources.

4 Use an atlas to describe the course of the Indus River. Where is the river's source? How does this help to explain the six-decades-long tension between India and Pakistan?

5 Use an atlas to describe the course of the Okavango River. How might this help to explain ongoing tension between Namibia and Botswana?

6 Examine Source 3. How has conflict impacted on the wellbeing of these people?

Evaluate and create

7 Conduct some further Internet research before completing this task.
- **a** Prepare a short speech examining the statement, 'Scarcity leads to conflict'. Provide evidence from these pages and your own research to agree or disagree with this statement.

5.14 The lasting impacts of conflict

Conflict at any scale and any intensity almost always has wide-ranging and long-term impacts on human wellbeing. Countries can take decades to recover from the impacts of war, preventing people from accessing opportunities to improve their wellbeing. Source 1 lists some of the common effects of high-intensity conflicts.

Source 1 Impacts of conflict at the personal, local, regional and national scales

Impacts at the personal scale:
- reduced quality of life
- reduced ability to makes choices about lifestyle
- loss of life
- impact on personal dignity and human rights
- impact on health and a reduced ability to access appropriate care
- loss of connection to other people in other regions
- individuals forced to fight
- targeted attacks on schools reduce the opportunity to have an education
- greater incidence of sexual violence.

Impacts at local and regional scales:
- decreased access to land, leading to food insecurity
- collapse of systems such as transport, food supply and local government
- fewer job opportunities
- breakdown in transport and communication networks
- displaced people put stress on infrastructure such as water and health systems in neighbouring places
- unsustainable use of natural resources to fund the conflict
- loss of productivity due to labour shortages.

Impacts at the national scale:
- environmental degredation, e.g. forest clearing and landmines
- food insecurity and dependency on aid
- refugees flee to other countries
- decline in national economy and less public spending as money is spent on conflict
- neighbouring nations often increase their military spending
- less spending on education (21 developing countries spend more on arms than on education)
- military spending results in less financial aid for developing countries.

Source 2 Girls prepare to sleep in an NGO shelter in Gulu, Uganda. There are about 20 000 night commuters that sleep in Gulu town every night, some walking hours from their home villages. They do this to escape the lasting impacts of conflict. The girls are afraid of being abducted by the Lord's Resistance Army (a militant group of rebels fighting for control of Uganda). The Lord's Resistance Army has been accused of widespread human rights violations including murder, mutilation and child sex slavery.

Case study: landmines

Landmines are explosive devices that are triggered by a weight pressing on them – most commonly from someone stepping on them or a vehicle driving over them. Placed during wartime, landmines are used to destroy enemy vehicles, kill enemy soldiers and make roads and other areas impassable.

But the impacts that landmines can have on a country's wellbeing last long after the end of the war. Landmines kill and injure civilians and livestock, not only during the conflict but long after it has finished. Landmines also contribute to land degradation and can significantly limit the areas that can be used for farming.

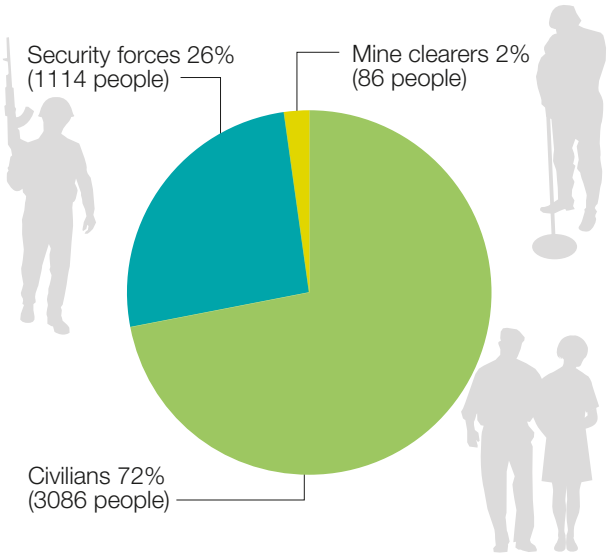

The Landmine and Cluster Munitions Monitor (an organisation that carries out research and monitoring into the consequences of landmines) estimates that 59 countries are affected by landmines and that there are more than 4000 casualties a year as a result of landmines exploding (see Source 4). In 2011, for example, 1320 people were killed by landmines and 2907 were injured. Approximately one-third of these victims were children.

The countries with the most landmines are those currently involved in conflict such as Iraq and Afghanistan and in recent conflicts such as Angola, Somalia and Bosnia-Herzegovina. However, older conflicts have also left terrible marks on some countries. Cambodia still has up to 10 million landmines from the Cambodian Civil War and the border wars which followed in the 1970s. It now has one of the highest rates of physical disability of any country in the world (see Source 3). Egypt also has an estimated 23 million unexploded landmines, relics from World War II and conflicts with Israel in the 1960s and 1970s.

While landmines can be located with metal detectors and defused, this is a costly, dangerous and technically advanced task. A mine can be purchased on the black market for US$3 but may cost US$1000 to remove.

3 Access the latest annual report of the Landmine and Cluster Munitions Monitor.
   - **a** Which countries used landmines in the last year? Map these countries on an outline world map.
   - **b** What advances were made in clearing landmines?
   - **c** Where does Australia rank in terms of the size of its landmine stockpile?

4 Which impacts of conflict listed in Source 1 could apply to landmines?
5 Why are children often the group most impacted by war?

Evaluate and create

6 Conduct some further Internet research before completing this task.
   - **a** Construct a flow diagram showing how impacts at the personal scale can become impacts at the national scale and vice versa.

5.15 War in Darfur

Darfur is a **semi-arid** and **arid** region of western Sudan in northern Africa. It borders the countries of Chad, the Central African Republic and the world's newest country, South Sudan (which gained its independence from Sudan in 2011). Sudan has been in a state of almost continual conflict since it was granted independence from Britain in 1956. The most recent conflict (commonly referred to as the War in Darfur) began in 2003 when several armed rebel groups attacked Sudanese army units, police stations and a military airfield after accusing the government of favouring Sudanese Arabs and suppressing non-Arab Sudanese.

The government army, along with an armed Arab group, the Janjaweed (literally 'evil men on horseback') responded by attacking unarmed civilians in the Darfur region. Targets of the attacks tended to be non-Arab Sudanese of black African descent, most of whom were poor subsistence farmers. Hundreds of villages were bombed with military aircraft before the Janjaweed attacked, slaughtering and raping tens of thousands of people and laying waste to huge areas of farmland. Some claim that the Janjaweed attacks were not random but targeted at particular ethnic groups.

An estimated 2.7 million people – one-third of Darfur's total population – fled the conflict to other parts of Sudan and to Chad. This created a second crisis, as malnutrition and disease soon swept through the temporary camps of the refugees, killing thousands of people. It is difficult to know exactly how many people died as a result of the War in Darfur but estimates place the number at about 300000.

The underlying reasons for this conflict are complex and interconnected. In Darfur, communities feel separated and isolated by differing religious beliefs and ethnic backgrounds, a lack of involvement in the political process and poverty. Distrust and hatred of other groups often boils over into conflict. In addition to these reasons, some analysts also believe that the War in Darfur is a fight for dwindling resources, particularly water and arable land.

Source 1 An oblique aerial photograph of the burned-out village of Gaz Amir in eastern Chad. The village was destroyed in 2007 in revenge attacks after attacks by the Janjaweed.

Source 2 The victims of the War in Darfur in a refugee camp in eastern Chad

key**concept:** Interconnection

The world's first climate change war?

A United Nations study in 2007 found that changing rainfall patterns and desertification in the region was forcing people to move south into areas where they came into conflict with communities of differing ethnic and religious backgrounds. The report found that climate change was creating 'unavoidable pressure on people through migration, displacement, food insecurity and impoverishment, possibly ending in conflict.' It also stated that this could trigger other wars in Africa. Other experts point to the long-running political and ethnic tensions along with a rapid increase in the number of guns as the main causes of the conflict.

Source 3 shows the movement of the 400 mm isohyet (a line drawn on a map, which connects places that receive the same amount of rainfall and separates places that receive different amounts of rainfall). Here, this line joins together all places that received 400 mm of rain in a year. Places north of this line in Sudan receive less than 400 mm of rainfall a year, making farming very difficult.

For more information on the key concept of sustainability, refer to page 10 of 'The geography toolkit'.

SUDAN: THE CHANGING LOCATION OF THE 400 MM ISOHYET

Source 3 Source: Oxford University Press

Check your learning 5.15

Remember and understand

1 Name the two resources thought to be a contributing cause of the War in Darfur.

2 List the various factors that have contributed to conflict in Sudan since it was granted independence.

Apply and analyse

3 Look up the location of Sudan in an atlas. Write a short paragraph describing the location of Sudan.

4 Examine Source 3.

- **a** Describe the pattern of land cover in Sudan.
- **b** Describe the change in rainfall patterns between 1929 and 2003 using the PQE method. For more information on the PQE method, refer to page 28 of 'The geography toolkit'.
- **c** Estimate how much more of the country received less than 400 millimetres of rain per year in 2003 compared with 1929.
- **d** Explain how this change may have helped to trigger the War in Darfur.

5 Locate the Darfur region in Source 2 on page 183. (showing predicted changes in cereal crop output by 2080). What is the predicted change for the Dafur region? How might this fuel future conflicts in the region?

Evaluate and create

6 Divide into small groups and discuss how this conflict is likely to have affected the wellbeing of individuals and communities in both Sudan and Chad. Summarise your findings and present them in a table. Use the column headings 'Effects on the wellbeing of individuals' and 'Effects on the wellbeing of communities'.

5.16 Conflict and refugees

During periods of armed conflict, many people are forced to leave their homes and seek safety elsewhere. If they cross into another country they are referred to as **refugees**. If they remain within their home country but away from where they live, they are referred to as **internally displaced persons (IDP)**.

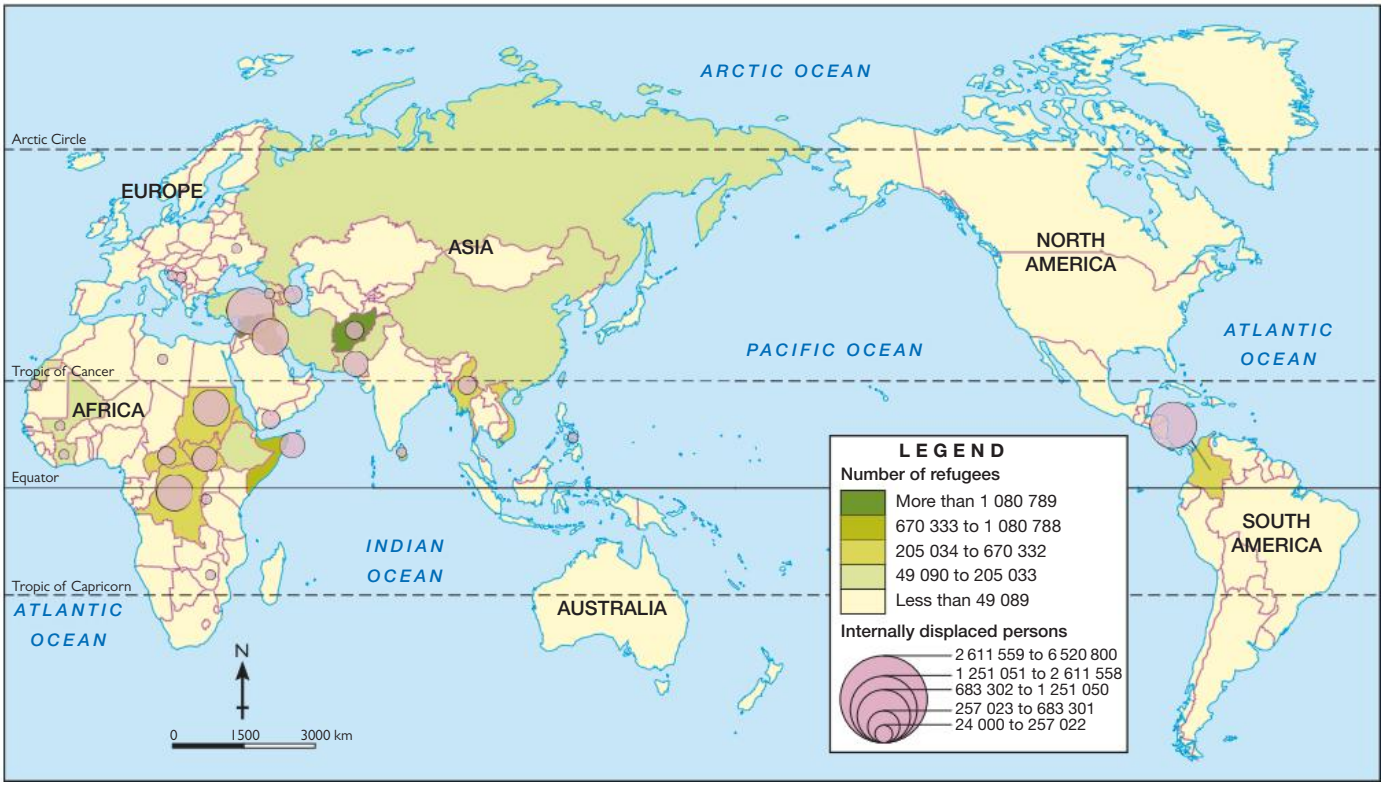

The number of refugees and IDPs around the world changes constantly depending on the number of places involved in conflicts. In 2011, about 37 million people were forced to leave home because they feared for their safety. More than 26 million of these were IDPs. Almost half of all refugees are in Asia, whereas most IDPs are in Sub-Saharan Africa and South America. Colombia alone accounts for almost one-fifth of the world's IDPs (see Source 1).

The wellbeing of refugees

Life as a refugee is hard. Many refugees have witnessed or been victims of persecution, torture or sexual violence. As most refugees flee from one developing country to another, they often find that the country to which they have fled is unwilling or unable to offer them much assistance. In many cases they are forced to live in temporary camps set up by refugee agencies such as the United Nations and International Red Cross. These camps are often in places where access to essential services such as a reliable water supply, food security, sanitation and health care is very limited.

The United National High Commission on Refugees (UNHCR) sets minimum standards for refugees living in camps. Not all refugee camps are able to meet these very basic standards (see Source 2).

WORLD: REFUGEES AND INTERNALLY DISPLACED PERSONS IN MID-2014

Case study: life in Dadaab refugee camp

Dadaab refugee camp in Kenya is located approximately 100 kilometres from the Kenya–Somalia border. It is one of the world's largest refugee camps, housing more than 350000 refugees, most fleeing conflict in nearby Somalia.

Source 3 Women collect drinking water at Dadaab refugee camp in Kenya.

Source 4 A Somali woman prepares food for her family in a makeshift shelter.

Check your learning 5.16

Remember and understand

1 What is the difference between a refugee and an internally displaced person (IDP)?

2 Why are living conditions often poor in refugee camps?

Apply and analyse

3 Use Sources 3 and 4 to describe wellbeing in Dadaab refugee camp, Kenya.

4 Examine Source 1.

- **a** Use the PQE method to describe the distribution of refugees on a global scale. For more information on the PQE method refer to page 28 of 'The geography toolkit'.
- **b** Approximately how many refugees and IDPs are in each of the six countries listed in Source 2?

5 Examine Source 2.

- **a** Compare living conditions between refugee camps in Asia and Africa.
- **b** Using evidence from the table, which refugee camp do you think has the worst living conditions?
- **c** Describe the variations between camps with regard to toilet facilities.

Evaluate and create

6 Construct a scatter plot comparing Gross Domestic Product per capita and kilocalories per person within refugee camps in the six countries listed in Source 2. Describe and account for the pattern shown in your completed graph. GDP per capita data is available in the 'World statistics' section in your obook.

5B rich task

Demographic change in Japan

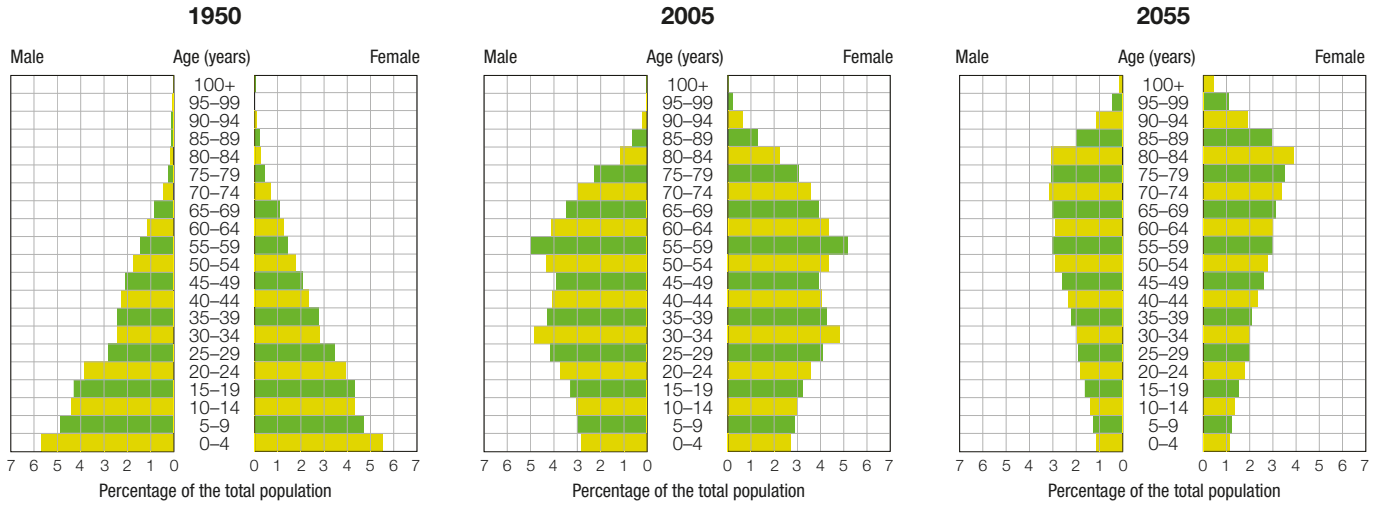

The population of Japan has undergone significant change over the last 60 years. In 1950, 7 per cent of all Japanese people were over the age of 60 and life expectancy was 59 years. By 2010, more than one-quarter were over 60 and life expectancy was the highest in the world at more than 83 years.

Source 1 Until her death on 1 April 2015, Misao Okawa was officially the oldest woman in the world. She was born on 5 March 1898 and was 117 years old at the time of her death. Only five other people in the world have ever lived as long.

There are many factors responsible for these changes. At the end of World War II, returning soldiers were keen to marry and start families. The result was a baby boom where the birth rate rose dramatically for about five years. When this group started working, in the 1970s and 1980s, they brought about an economic transformation that made Japan one of the world's wealthiest countries. This wealth was used to improve wellbeing and has improved life expectancy.

The other important demographic change has been a fall in the birth rate. Japanese families are now amongst the world's smallest. This has led to an overall decline in the size of the population. The population currently sits at around 126 million. Researchers estimate that the population will fall to 95 million by 2050. This has obvious implications for the economy and for the care of the growing elderly population.

skill**drill:** Data and information

Constructing a multiple line graph

Multiple line graphs are useful tools for displaying and comparing a range of data. They are constructed in much the same way as normal line graphs but extra lines are added to show the trends in multiple data. Follow these steps to construct a multiple line graph:

Step 1 Construct a set of axes. As line graphs usually show change over time, the years are commonly placed on the horizontal axis (*x*-axis). Using an even scale, such as one centimetre for every 10 years, divide and label the *x*-axis. Now draw the vertical axis (*y*-axis). Ensure that the *y*-axis has a scale that suits all the data that you are plotting and will fit the highest number in the data set.

Step 2 Plot the first set of data using a neat, coloured dot. Join these dots with a neat line, using the same colour. At the end of the line, write the title of the data. Alternatively, use a legend.

Step 3 Repeat step 2 for each set of data. Use different colours for each line.

Step 4 Give your completed graph a title.

Apply the skill

1 Construct a multiple line graph showing the changes in life expectancy, total population and the percentage of the population aged over 60 in Japan between 1950 and 2010.

2 Describe the patterns shown in your completed graph.

3 How are these changes reflected in the three population pyramids?

4 Construct a multiple line graph showing the changes in birth and death rates between 1953 and 2008.

5 Compare your completed graph with the demographic transition model in Source 1 on page 190. Which stage of demographic transition is Japan currently in?

Extend your understanding

1 Japan is not the only country with a declining and ageing population. Examine Source 5 showing world population growth and describe the location of those countries with –1.0 to 0 per cent growth.

2 Select one of these countries (other than Japan). Research the structure of the population of this country. A useful starting point is the CIA World Factbook, available online.

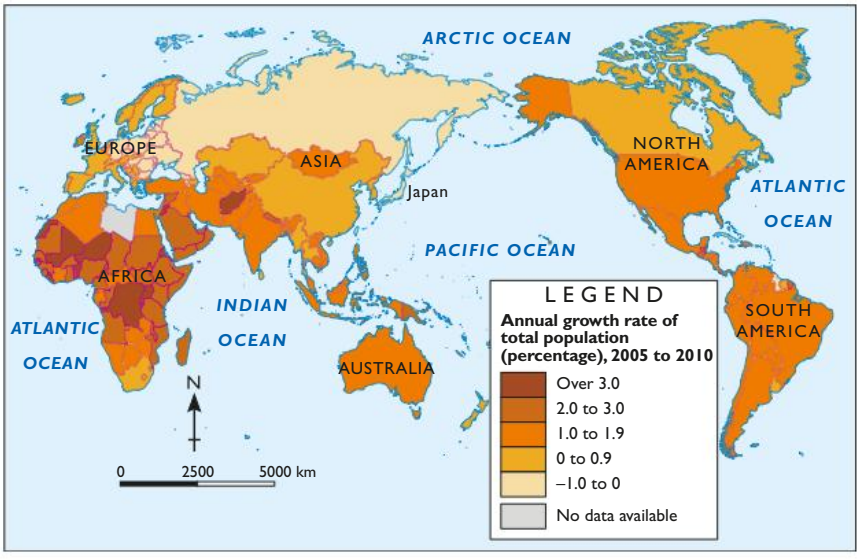

3 What are some of the similarities and differences between your chosen country and Japan in terms of:

a fertility

b population over 60 years of age

c the reasons for population change.

Unit 2 Geographies of human wellbeing

Improving wellbeing

All over the world, the wellbeing of millions of people is slowly improving. From local projects to global initiatives, inequalities between rich and poor in many areas are being addressed.

Since 2000, around 600 million of the world's poor have moved above the poverty line, more than 1 billion have gained access to safe drinking water, millions of girls have attended school for the first time, millions more babies have survived beyond their first year of life, and the rates of infection for deadly diseases have all fallen. These improvements are due to the hard work of many different organisations and agencies – from small not-for-profit groups to huge multi-national non-government organisations. Thanks to the financial support of government grants, contributions from the business community, and donations from ordinary citizens, these organisations are able to continue their work improving levels of human wellbeing for those who need it most.

6A

How can we improve wellbeing?

1 How might training in crop development help the women in Source 1 to improve their wellbeing?

2 What do you know about the United Nations Millennium Development Goals? What questions could you ask to help you find out more?

6B

Who is working to improve wellbeing?

1 Have you heard of any groups that are working to improve wellbeing in Australia? What about improving wellbeing on the global scale?

2 In 2013, the Australian government budgeted $5 billion of aid to overseas countries. Brainstorm ways that this aid could improve wellbeing in a country such as India.

chapter 6

6.1 Improving wellbeing

At a meeting of the United Nations (UN) in 2015, representatives of all 193 member countries present agreed to a set of goals designed to end poverty, protect the planet from unsustainable development, and ensure that all people on Earth enjoy a high level of wellbeing by 2030.

The Sustainable Development Goals (2015–2030)

A total of 17 goals, known as the **Sustainable Development Goals (SDGs)**, were created and agreed to by all (see Source 1). Of these 17 goals, seven relate specifically to reducing inequalities in human wellbeing. These are listed below:

- Goal 1: End poverty in all its forms, everywhere
- Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture
- Goal 3: Ensure healthy lives and promote wellbeing for all at all ages
- Goal 4: Ensure inclusive and quality education for all and promote lifelong learning
- Goal 5: Achieve gender equality and empower all women and girls
- Goal 6: Ensure access to water and sanitation for all
- Goal 10: Reduce inequality within and among countries.

The Millennium Development Goals (1990–2015)

While many of these SDGs might seem almost impossible to achieve, the United Nations has a track record of success in this area. Between 1990 and 2015 the UN ran a project known as the **Millennium Development Goals (MDGs)**. Over the 15 years of the Millennium Development Goals, much was achieved. Perhaps the greatest achievement of the MDGs was the reduction in the rate of people living in extreme poverty. In 1990, nearly half of the population in the world's developing regions was living on less than $1.25 a day. By 2015 this rate had fallen to 14 per cent, meaning that more than a billion people had been lifted out of poverty during this time.

Source 1 The 17 Sustainable Development Goals agreed on by the United Nations in 2015.

Progress towards achieving the MDGs was tracked using 60 indicators of wellbeing (see Source 2). Many countries, including Australia, use these goals and the SDGs as a framework for allocating funds to their overseas aid programs.

Check your learning 6.1

Remember and understand

1 What were the aims behind the creation of the Sustainable Development Goals?

2 What do countries like Australia use these goals for?

Apply and analyse

3 Examine Source 2 summarising the final progress towards the MDGs in 2015.

- **a** Which targets were the closest to being achieved?
- **b** Which targets were the furthest from being achieved?
- **c** Why do you think this is?
- **d** How did Oceania and Southern Asia compare in their progress?

Evaluate and create

4 Use the Internet to complete these tasks:

- **a** Using a series of boxes and arrows explain how three or more of the SDGs are linked to each other.
- **b** Compare the 8 MDGs with the 17 SDGs. What new goals have been added by the United Nations? Why do you think these have been added?

Source 2

A chart summarising the final progress towards the United Nations Millennium Development Goals in 2015

Millennium Development Goals: 2015 Progress Chart

United Nations Member States gathered together at the start of the new millennium to shape a broad vision to fight poverty and combat numerous issues hampering development progress. The vision was translated into eight Millennium Development Goals and has remained the world's overarching development framework for the past 15 years. This framework, set to expire in 2015, includes time-bound goals, targets and indicators to monitor progress on extreme poverty and hunger, education, gender equality, child survival, health, environmental sustainability and global partnerships.

This chart presents the final assessment of progress towards selected key targets relating to each goal. The assessment provides two types of information: progress trends and levels of development, which are based on information available as of June 2015. The colour shows progress made towards the target and the text in the box shows the present level of development. For most indicators, 2015 projections are used to assess progress; for a few indicators that do not have 2015 data or projections, the latest available data of 2013 or 2014 are used.

Goals and Targets	Africa		Asia				Oceania	Latin America and the Caribbean	Caucasus and Central Asia
	Northern	Sub-Saharan	Eastern	South-Eastern	Southern	Western			
GOAL 1 | Eradicate extreme poverty and hunger									
Reduce extreme poverty by half	low poverty	very high poverty	low poverty	moderate poverty	high poverty	low poverty	–	low poverty	low poverty
Productive and decent employment	large deficit	very large deficit	moderate deficit	large deficit	large deficit	large deficit	very large deficit	moderate deficit	small deficit
Reduce hunger by half	low hunger	high hunger	moderate hunger	moderate hunger	high hunger	moderate hunger	moderate hunger	moderate hunger	moderate hunger
GOAL 2 | Achieve universal primary education									
Universal primary schooling	high enrolment	moderate enrolment	high enrolment	high enrolment	high enrolment	high enrolment	high enrolment	high enrolment	high enrolment
GOAL 3 | Promote gender equality and empower women									
Equal girls' enrolment in primary school	close to parity	close to parity	parity	parity	parity	close to parity	close to parity	parity	parity
Women's share of paid employment	low share	medium share	high share	medium share	low share	low share	medium share	high share	high share
Women's equal representation in national parliaments	moderate representation	moderate representation	moderate representation	low representation	low representation	low representation	very low representation	moderate representation	low representation
GOAL 4 | Reduce child mortality									
Reduce mortality of under-five-year-olds by two thirds	low mortality	high mortality	low mortality	low mortality	moderate mortality	low mortality	moderate mortality	low mortality	low mortality
GOAL 5 | Improve maternal health									
Reduce maternal mortality by three quarters	low mortality	high mortality	low mortality	moderate mortality	moderate mortality	low mortality	moderate mortality	low mortality	low mortality
Access to reproductive health	moderate access	low access	high access	moderate access	moderate access	moderate access	low access	high access	moderate access
GOAL 6 | Combat HIV/AIDS, malaria and other diseases									
Halt and begin to reverse the spread of HIV/AIDS	low incidence	high incidence	low incidence	low incidence	low incidence	low incidence	low incidence	low incidence	low incidence
Halt and reverse the spread of tuberculosis	low mortality	high mortality	low mortality	moderate mortality	moderate mortality	low mortality	moderate mortality	low mortality	moderate mortality
GOAL 7 | Ensure environmental sustainability									
Halve proportion of population without improved drinking water	high coverage	low coverage	high coverage	high coverage	high coverage	high coverage	low coverage	high coverage	moderate coverage
Halve proportion of population without sanitation	moderate coverage	very low coverage	moderate coverage	low coverage	very low coverage	high coverage	very low coverage	moderate coverage	high coverage
Improve the lives of slum-dwellers	low proportion of slum-dwellers	very high proportion of slum-dwellers	moderate proportion of slum-dwellers	moderate proportion of slum-dwellers	moderate proportion of slum-dwellers	moderate proportion of slum-dwellers	moderate proportion of slum-dwellers	moderate proportion of slum-dwellers	–
GOAL 8 | Develop a global partnership for development									
Internet users	moderate usage	low usage	high usage	moderate usage	low usage	high usage	low usage	high usage	high usage

The progress chart operates on two levels. The text in each box indicates the present level of development. The colours show progress made towards the target according to the legend below:

- Target met or excellent progress.
- Good progress.
- Fair progress.
- Poor progress or deterioration.
- Missing or insufficient data.

For the regional groupings and country data, see *mdgs.un.org*. Country experiences in each region may differ significantly from the regional average. Due to new data and revised methodologies, this Progress Chart is not comparable with previous versions.

6.2 Improving wellbeing for women and children

The Millennium Development Goals have a strong emphasis on improving the wellbeing of women and children. Women and children are particularly at risk from the effects of poverty as their status in many societies is lower than that of men. On top of that, giving birth in developing countries comes with high risks of health complications and death. Improving maternal health and reducing child mortality are two key millennium goals.

Fertility rates in the developing world

Fertility rates are higher in the developing world than in the developed world. Source 1 on page 194 shows that fertility rates are particularly high in Africa, the Middle East and South Asia, where the birth rate ranges from three to over six children per woman.

Source 1 Two boys return from the fields in the west African nation of Cape Verde.

There are many reasons why women in these countries have so many children. These reasons generally relate to the woman's culture, history, religion, status and beliefs. In many cultures, children are seen as a household's greatest asset. Children perform important tasks such as fetching water, collecting firewood and working in the fields. They are also a form of security, as children are often expected to look after their parents when they get old and become unable to look after themselves.

Another possible reason why women in developing nations have a high fertility rate is that they are aware that not all of their children will survive into adulthood. **Child mortality rates** are particularly high in Africa, with the worst levels recorded in Mali (106 deaths per 1000 births), Somalia (101) and the Central African Republic (95). The highest rate of deaths in the world is 119 deaths per 1000 births in Afghanistan. Australia records only 4.5 deaths for every 1000 children born.

Lack of access to contraception is another possible reason behind high fertility rates in the developing world. Research shows that up to 200 million women worldwide would delay or prevent pregnancy if they could, but they are not able to use or access effective contraception.

Family planning

One way of improving maternal health and reducing child mortality is to actually reduce the number of times a woman goes through childbirth. This is referred to as family planning. Fewer children means more resources for those children who are born, leading to improved health (see Source 2). In countries where the central government develops a program of family planning – often with external aid and help from non-government organisations (NGOs) – a falling birth rate has tended to follow.

While talking about reproduction has long been a taboo subject in some societies, these barriers are gradually being broken down. At thousands of clinics across the developing world, mothers are educated

Some of the key benefits of effective family planning

- Smaller families mean better health and education for each child.
- Higher rates of condom use reduce the likelihood of individuals contracting HIV and AIDS.
- Average income increases as smaller families share their income between fewer people.
- Women with fewer children have greater education and employment outcomes.
- Smaller families have higher rates of infant survival and healthier, better nourished children.
- Fewer pregnancies mean fewer deaths due to pregnancy and birth complications and fewer unsafe abortions.
- The cost of social services is reduced, particularly the cost of health care and infrastructure such as water provision and schools.

Source 2 The benefits of family planning

about proper infant nutrition, babies are weighed and immunised, women are counselled about having their first babies later and then spacing subsequent births further apart, and contraceptive options are provided. Educating women about using condoms has been particularly important, as their use can also stop the spread of diseases such as HIV/AIDS.

Check your learning 6.2

Remember and understand

1 What is family planning?
2 In what ways does family planning help to improve human wellbeing?

Apply and analyse

3 Examine Source 3. It shows a family planning clinic in Kenya set up by Marie Stopes International. Use the Internet to research this organisation. What do they do? In which regions and nations are they most active? What are some of their success stories?
4 Write a paragraph explaining how an effective family planning program can help to reduce infant deaths in a country.

Evaluate and create

5 Use the key concept of scale to think about the benefits of family planning shown in Source 2. Categorise these benefits in order from the personal scale to the global scale.
6 Classify the reasons why families are larger in poorer nations than in richer nations using the SHEEPT method. For more information on the SHEEPT method refer to page 28 of 'The geography toolkit'.
7 Use the Gapminder website to explore the link between contraceptive use and income.

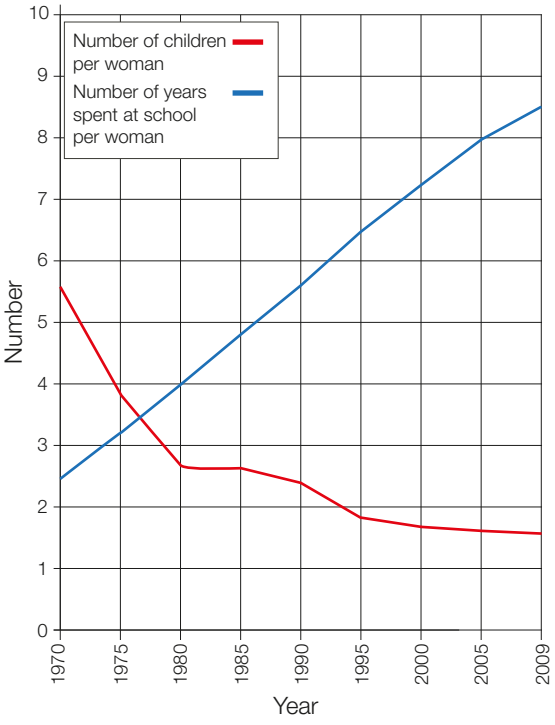

Source 3 A family planning clinic in a busy Kenyan marketplace

6.3 Improving access to education

> Education has shaped my life and the history of my country. I grew up in a society ravaged by war and mired in poverty. Schools had been destroyed. My classes were held in the open under a tree. We had no desks, chairs or other basic necessities. The Republic of Korea was on its knees, but education enabled the country to stand tall again … Even in the worst circumstances, education helps to give children confidence to face the future. As Secretary-General of the United Nations, I want every child, without exception, to have the same opportunity that I had.
>
> Ban Ki-Moon, Secretary-General of the United Nations, 2012

One of the United Nations' goals is to improve the political profile of education around the world. In fact, the United Nations Secretary-General Ban Ki-Moon has personally led the Global Education First Initiative. Launched in September 2012, the initiative includes, among other aims, the Educate-a-Child program. This program seeks to get all children into schools and bring high quality learning to children who have no access to formal schooling. This is seen as the key factor to improving the living conditions and future wellbeing of millions of children.

Source 1 Education levels and fertility rates for women in China aged between 15 and 44 years

The benefits of education

Many social researchers believe that the key to improving human wellbeing around the world, particularly in poorer communities, is to improve participation rates in education. Their studies show that education allows individuals to break the cycle of poverty and live healthier, longer lives.

The benefits to society are multiplied when girls are able to access an education at the same rate and level as boys. Studies show that mothers who have attended school have a lowered risk of their babies falling victim to infant mortality, have fewer children and earn more than mothers who are less educated. Children born to these women are 50 per cent more likely to live past the age of five and have much lower rates of HIV infection than children born to less educated mothers.

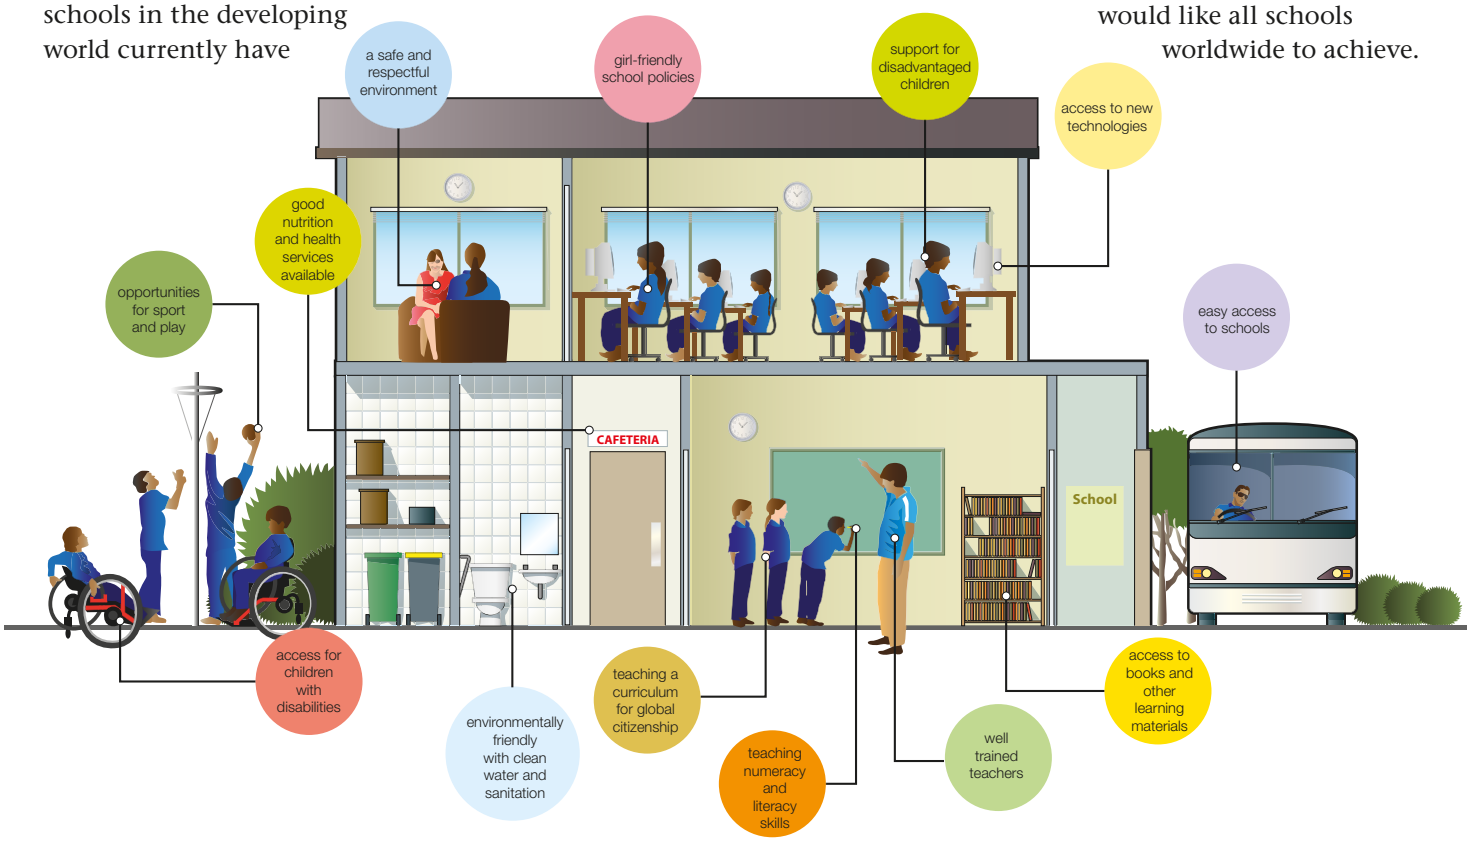

Over the past 40 years the Chinese government has made a real effort to get more children into education for longer periods. This push has included increasing the education levels of girls. Educating girls has had many benefits for Chinese society. Educated women generally want smaller families and make better use of reproductive health and family planning services to achieve their desired family size (see Source 1). Educated women contribute more to the economy and help increase economic growth. With China's booming economy, China now has 68 per cent of women in paid employment. This is a higher rate than Australia (which has 59 per cent).

Source 2 A Chinese government poster from the 1970s encourages girls to 'Learn science and build the country'.

Successful schools

As well as getting all children into schools, the United Nations Global Education First Initiative is also interested in improving the standard of schooling that children receive and creating a positive school environment. Too many schools in the developing world currently have poorly trained teachers and not enough books or other resources to teach with. Too many children are also going to school hungry, which is affecting their ability to learn. Source 3 shows the standards and features that the United Nations would like all schools worldwide to achieve.

Source 3 The main features of successful schools according to the United Nations Global Education First Initiative

Check your learning 6.3

Remember and understand

1 What are some of the links between education and wellbeing?

2 Explain why educating girls can help to improve wellbeing for everyone in a community.

Apply and analyse

3 'Education provides much more than the opportunity to read, write and count.' Explain this statement using examples from Source 3.

4 Examine Source 1.

- **a** Describe the change in the education of women in China between 1970 and 2009.
- **b** How is this linked to the poster in Source 2?
- **c** How has the fertility rate changed in the same period?
- **d** How is this linked to the one-child policy implemented over the same period?

Evaluate and create

5 Using Source 3 as a guide, design a poster that promotes one of the advantages of gaining an education.

6 Mahatma Gandhi, a leader of the Indian nationalist movement in the early 20th century, once said 'Educate one man, you educate one person, but educate a woman and you educate a whole civilisation'. What do you think he meant by this? Do you agree? Write a paragraph outlining your thoughts.

6.4 Improving wellbeing in Australia

Australia has one of the highest levels of wellbeing in the world. In the 2013 United Nations Human Development Report, Australia was ranked as having the second highest HDI in the world behind Norway. Australians can expect to go to school for longer and to live longer, healthier lives than virtually any other nationality. While data such as this is welcome news regarding our position in the world, it can hide the inequalities that exist within our nation.

There are significant variations in wellbeing, for example, between rural and urban Australia and between Indigenous and non-Indigenous Australians. A number of government and non-government groups are working to reduce these variations.

Inequalities in health

Studies show that there are significant differences in the health of different groups of Australians. People from poorer households are less likely to be physically active, to visit a dentist or medical specialist, or to have a medical test such as a skin cancer check or mammogram to detect breast cancer. They are more likely to smoke and to be obese or overweight. As well as inequalities due to income, studies have also found health inequalities relating to location, ethnicity and age. Source 1 shows some of the health inequalities that exist between Australia's states and territories.

Inequalities in education

There are similar trends in education to those exhibited in health areas. Children from poorer households are less likely to attend early childhood education and less likely to go to university than children from wealthier

Source 3 Health inequalities between states in Australia.

households. They also have less access to information technology such as broadband Internet, particularly in rural and remote regions. Students in rural areas generally have a more restricted choice of subjects to study and are less likely to finish high school.

The rural–urban divide

In many areas of wellbeing in Australia there is a rural–urban divide. There are fewer education and employment opportunities in rural areas and less access to health services and medical care. People in rural areas are more likely to suffer from chronic health conditions such as diabetes and heart disease and die earlier than those living in towns and cities. They are also at a higher risk of injury from work and car accidents.

Reducing inequality

Governments have tried to reduce these inequalities in wellbeing in Australia in two main ways:

- Targeted programs that focus on a particular problem or issue. For example, campaigns to reduce smoking or to encourage people to have health checks.
- General programs to maintain and lift the wellbeing of the entire community. The National Disability Insurance Scheme and Medicare which ensure people can access care regardless of their financial situation are examples of these.

Case study: Rural Health Education Foundation

There are many people working in a range of fields to improve wellbeing in Australia. One of these groups was the non-profit organisation the Rural Health Education Foundation (RHEF). In a similar way to the Royal Flying Doctor Service, the RHEF aimed to use modern technology to reduce the gap between rural and urban health.

The mission of the RHEF was to 'improve the health outcomes of people in remote and rural Australia by providing quality accessible health education to health professionals and their communities'. The foundation, which was funded by government and private donations, produced and broadcast health education programs on its own free-to-air digital TV network called the Rural Health Channel, which could be accessed by 250000 households across Australia.

Programs covered a wide range of topics of importance to people living in remote and rural regions such as Indigenous eye disease, tropical diseases and farming health hazards. Doctors and other health professionals could access the programs easily and therefore stay up to date with current advances in medicine.

Source 2 A RHEF film-making team

The RHEF ceased operating in 2014 due to the withdrawal of government funding. All RHEF-produced programs are available as podcasts, on DVD and online.

Check your learning 6.4

Remember and understand

1 In what ways do people in rural areas have lower levels of wellbeing than people in urban areas?
2 What did the Rural Health Education Foundation do to help reduce these inequalities?

Apply and analyse

3 Examine Source 1.
   a List the seven statistics that are significantly lower or higher than the national average.
   b Describe the results of this survey for your home state or territory.

Evaluate and create

4 Rank the states and territories of Australia from those that performed best in the health survey in Source 1 to those that performed worst.
5 One of the difficulties for governments in reducing inequalities in wellbeing is being able to evaluate the effectiveness of individual programs. How could the effectiveness of the RHEF TV channel be evaluated?
6 Access RHEF online and list the programs available on the Rural Health Channel. Watch one of the programs available online and write a brief review, outlining how useful you think it would be for the target audience.

6.5 Improving the wellbeing of Indigenous Australians

As you have learnt, studies show that the wellbeing of Aboriginal and Torres Strait Islander Australians is well below that of other Australians. A United Nations official described the standard of health in Indigenous communities in Australia in some respects as being worse than in developing countries. A range of government and non-government groups are working to close the gap between Indigenous and non-Indigenous Australians in a range of important areas.

Improvements in health

Chronic diseases such as heart attacks and diabetes are responsible for about 70 per cent of the health gap between Indigenous and non-Indigenous Australians. The Federal government, in partnership with local health services, is working to:

- encourage Indigenous people to have regular health checks
- train health workers in the techniques of managing chronic diseases such as diabetes and arthritis. This includes giving advice on such things as the health benefits of increased physical activity and stopping smoking (see Source 1).
- make medicines and treatments more affordable to Indigenous patients
- increase the number of Indigenous Australians working in the health sector
- build more hospitals and health centres in Indigenous communities
- improve the quality and range of foods available in the shops in Indigenous communities
- provide mobile health facilities that visit remote communities and target dental, eye and ear problems
- change the type of fuel sold in many remote petrol stations to make it unsuitable for sniffing to reduce the rates of this type of substance abuse
- improve the mental health of Indigenous people. One initiative is called Link Up and helps Indigenous people trace and contact those family members who were forced to move as part of the Stolen Generation
- increase participation of Indigenous children in sport and recreation

Source 1 Rates of smoking for Indigenous Australians are twice that of non-Indigenous Australians. Anti-smoking campaigns aim to reduce these rates. Similar campaigns aim to reduce alcohol use during pregnancy.

- strengthen cultural ties within communities through the support of language and the arts
- upgrade and maintain airstrips in remote communities to provide better access to emergency health care.

The responses outlined here are targeted at improving the health of Indigenous Australians. There are also responses aimed at the other six key areas that are seen as vital to closing the gap between Indigenous and non-Indigenous Australians: early childhood, schooling, healthy homes, economic participation, safe communities and leadership.

Case study: Cathy Freeman Foundation

Responses to wellbeing issues often involve a partnership between governments and non-government organisations (NGOs). One such response is the work being done by the Cathy Freeman Foundation to improve the wellbeing of children on Palm Island. Olympic champion Freeman established the foundation in 2007 to help address some of the key problems facing this remote Indigenous community. These problems include high unemployment, low literacy and life expectancy rates and very high rates of ear disease and hearing loss. As nearly two-thirds of the population is under the age of 20, the foundation focuses on education, particularly reducing the truancy rate which can be as high as 55 per cent.

Source 2 Cathy Freeman helps Craig Evers ride his new bike on Palm Island. The bike was donated by the Cathy Freeman Foundation.

Key components of the foundation's strategy are public recognition of children who attend school and achieve good outcomes, sport and recreation programs that encourage children to attend school, increased numbers of teacher's aides, school camps to the mainland for those children who attend school regularly, and scholarships to students to attend private schools in mainland Queensland. The foundation has had great success in reducing truancy, improving literacy levels and improving the future employment prospects of hundreds of Indigenous children.

Check your learning 6.5

Remember and understand

1 Explain what the Cathy Freeman Foundation is doing to improve the wellbeing of Palm Islanders.

2 What did a United Nations official have to say about Indigenous health in Australia? Why do you think he made this comment?

Apply and analyse

3 Select one of the strategies aimed to improve the health of Indigenous Australians and explain:
   - **a** the aims of the strategy
   - **b** how the effectiveness of the strategy could be measured.

4 Cathy Freeman is not the first celebrity to become involved in projects aimed at improving wellbeing. Angelina Jolie, Bob Geldof and Bono are other well-known examples. Why do you think celebrities often become involved in this type of work?

5 Use an atlas to describe the location of Palm Island. Describe how the location of this community may help explain the high rates of unemployment.

Evaluate and create

6 Visit the Cathy Freeman Foundation website. Prepare a report on one of the five programs that are helping to improve wellbeing.

7 Design a poster that encourages children on Palm Island to attend school.

6A rich task

The wellbeing of refugees in Australia

Many refugees and asylum seekers arrive in Australia after fleeing conflict, violence or persecution in their home countries. They have often had long journeys to get here, and potentially spent years in refugee camps waiting to be resettled in another country. Some also make the dangerous journey to Australia by boat.

Refugees and asylum seekers often have low levels of wellbeing. The process of fleeing their home country and waiting for resettlement has prevented them from receiving full health care and education. They may have suffered trauma in their home countries, and may experience culture shock on their arrival in Australia.

Listed below are some facts and figures about immigration levels to Australia including refugee and asylum seeker arrivals.

- According to the United Nations High Commissioner for Refugees (UNHCR), at the end of 2011 an estimated 42.5 million people worldwide were considered forcibly displaced due to conflict and persecution, including 15.2 million refugees, 895 000 asylum seekers and 26.4 million internally displaced people.
- In 2011–2012, 7379 people who arrived by boat lodged applications to be considered as refugees in Australia. Once they have been determined to be refugees they can then apply for a permanent visa to remain here. The top four countries of origin were Afghanistan (3179), Iran (1553), Sri Lanka (825) and Pakistan (618). 4766 visas were granted in the same year, many of these to refugees who had arrived several years earlier.
- In 2011, Australia received 3 per cent of asylum applications made to the world's developed countries. The USA received 17 per cent and France 12 per cent.

Source 1 This photo taken on 27 June 2012 (provided by Australian Maritime Safety Authority) shows a boat bound for Australia carrying around 150 suspected asylum seekers. Shortly after the image was taken the vessel sank at sea about 24 kilometres off the coast of Christmas Island. Most passengers of the boat were rescued, but one body was recovered.

Issues of wellbeing for refugees arriving in Australia include:

- difficulty accessing appropriate health care and other public services. Language barriers also often require the use of interpreters
- many newly arrived refugees lack family and friends in Australia and face isolation in their new communities
- before coming to Australia, many refugees have lived for years with only limited access to food, both in terms of amount and variety, leading to poor nutrition.

skill**drill:** Data and information

Constructing an infographic

An infographic is a method of presenting complex information using graphics such as pictures, maps and graphs so that it can be interpreted quickly and easily by an audience. Infographics are often used by groups in society to make a point about a current event or situation. Source 2 is an infographic created by the Australian community action group GetUp!. It is intended to show that the number of refugee arrivals in Australia are the result of conflicts rather than changes in government policy in relation to refugees.

Step 1 Decide on the issue that you are presenting in your infographic and the point you wish to make about it.

Step 2 Research the issue you are presenting. Look for information that supports your point of view. As with all information, check that it is reliable. If using the Internet, for example, information from government (.gov), educational institutions (.edu) and organisations (.org) tends to be more reliable than information from commercial sites (.com).

Step 3 Think carefully about how your information can be presented as images rather than as numbers or complex lists. Look at the infographic in Source 2 and other infographics online for some ideas. Simple pictures tend to work better than complex ones.

Step 4 Think carefully about how you are going to set the information out on the page. Remember that people tend to read infographics in the same way they read a book – left to right and top to bottom. Some infographics use the idea of a journey to present their information and join together key pieces of information with roads, railway tracks or arrows.

Step 5 Put all of this together neatly. You may like to use an online program such as 'infogr.am' or 'easel.ly' to create your infographic. Alternatively, you can use coloured markers, print outs of images, paper and glue.

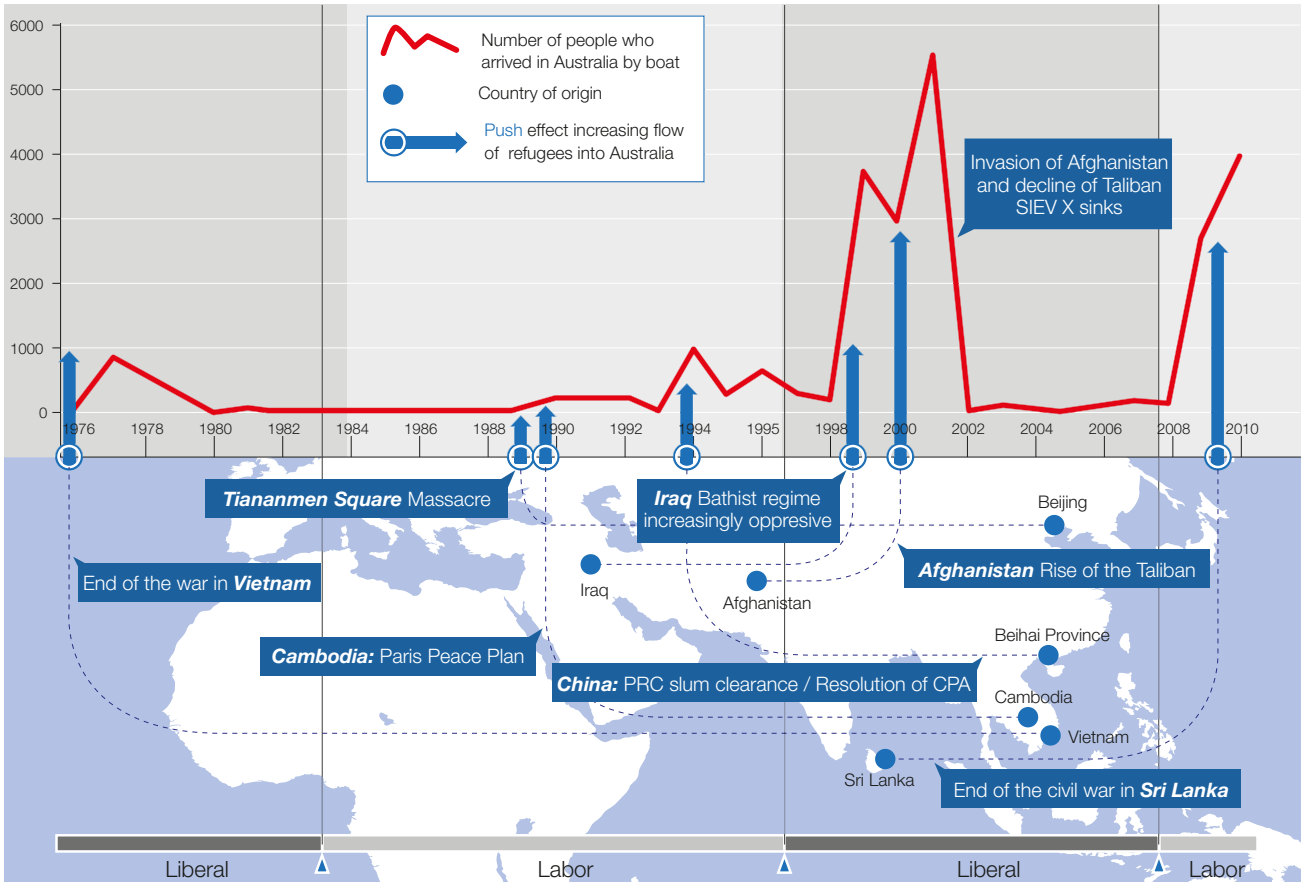

Apply the skill

1 Design and present an infographic using the facts and figures provided on the number of refugee arrivals to Australia from different parts of the world. You can do your own research or just use the figures presented here.

2 When completed, look closely at your classmate's infographics. Which techniques used by others did you find best presented the data in a visual way?

Extend your understanding

1 Research the numbers of asylum seekers in Australia's regional processing centres on Christmas Island, Nauru and Manus Island in Papua New Guinea. Find out how long they have been seeking asylum and where they have come from. Present this information using infographic techniques.

6.6 Organisations working to improve wellbeing

As we have learnt, the United Nations (UN) has a huge interest in improving wellbeing across the globe with its Millennium Development Goals. But the United Nations does not work alone. It works with individual governments and not-for-profit organisations, each of which set their own goals and develops their own programs. In this section, we will investigate the work of the UN and a range of other organisations working to improve wellbeing.

The role of the United Nations

The United Nations was founded at the end of World War II in 1945, to encourage countries to work together and maintain peace. Since that time it has grown into a vast organisation with multiple agencies working towards the key goals of 'maintaining international peace and security, developing friendly relations among nations and promoting social progress, better living standards and human rights'.

Source 1 UN peacekeepers pass groups of people fleeing conflict in the Democratic Republic of the Congo.

The United Nations has 193 member countries. These countries provide the funding to operate the UN's agencies and programs. Four key areas for the United Nations are peace and security, development, human rights and humanitarian aid.

Peace and security

The United Nations has continued with its initial aim of promoting peace and security among the nations of the world. It provides assistance in areas such as disarmament, mine clearance, counter-terrorism and peacekeeping forces as well as encouraging nations and communities in conflict to work towards a peaceful resolution.

Development

United Nations programs throughout the developing world are aimed at reducing poverty and improving the wellbeing of billions of people. In terms of promoting economic development, the UN works with countries to promote trade between countries and to build stable governments.

Source 2 The United Nations works to provide free universal education, particularly among groups who have found this difficult to access. This includes the young girls of Pakistan.

Human rights

The United Nations seeks to uphold the values of the Universal Declaration of Human Rights throughout the world. Since the creation of the Universal Declaration of Human Rights in 1948, the UN has adopted several further declarations. These include conventions aimed at ending discrimination against women (in 1979) and further protecting the rights of children (in 1989). In 2006, the rights of Indigenous people were described in a further declaration. This aims to allow Indigenous groups to protect and strengthen their cultural identity.

The United Nations works towards ending violence against children, human trafficking, and the use of sexual violence as a weapon of war. It also promotes the freedom of Indigenous people to determine their own futures. The United Nations believes that every child has the right to an education.

Humanitarian aid

In those regions where food security is an issue, the United Nations works to improve farm productivity and provide food in times of famine. It also provides refuge for millions of people fleeing conflict in refugee camps and aid to those suffering from the impacts of disasters.

Check your learning 6.6

Remember and understand

1 What was the initial aim of the United Nations?
2 What types of discrimination is the United Nations now dedicated to eliminating?

Apply and analyse

3 Conduct research to find out more about the World Food Programme and answer the following questions:
   - **a** Which areas received assistance from the World Food Programme in 2013? How many malnourished children received special nutritional support in 2013?
   - **b** Which countries received emergency support in the past year? What was the cause of the emergency?
   - **c** Who are the top five donor countries that support the World Food Programme?

Evaluate and create

4 Using Source 1 as a starting point, do some further research on UN peacekeepers in the Democratic Republic of the Congo and write a short news article about their role.

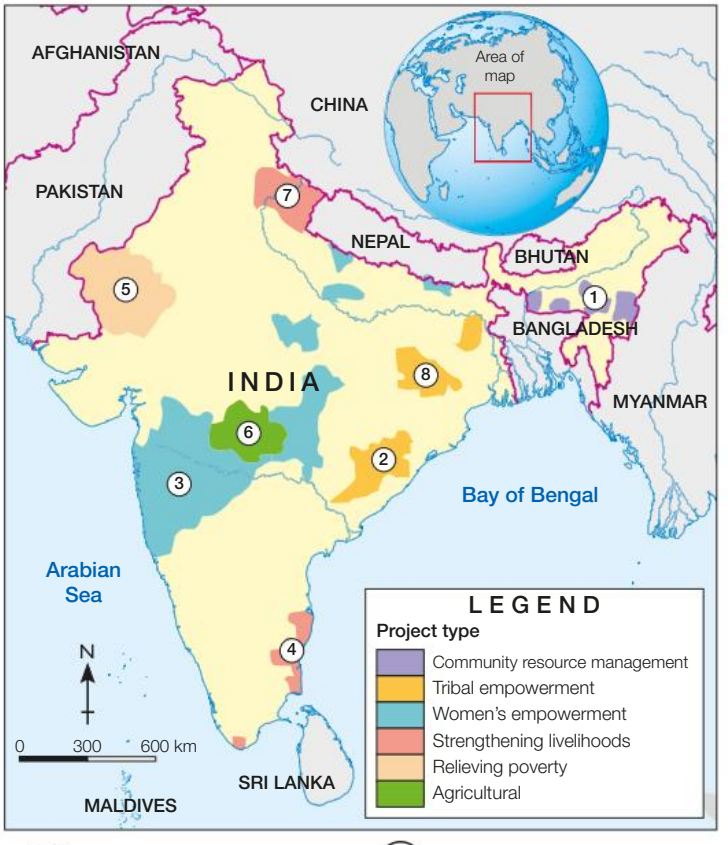

Source 3 The World Food Programme provides aid to almost 100 million people a year in over 70 countries.

6.7 IFAD: Helping to improve wellbeing in India

The International Fund for Agricultural Development (IFAD) is an agency of the United Nations. It was created in the mid-1970s in response to a number of famines across Africa. The goal of the agency is 'to empower poor rural women and men in developing countries to achieve higher incomes and improved food security.' IFAD are active in poor rural communities throughout the world, particularly in the Asia–Pacific, Africa, Latin America and Caribbean regions.

IFAD's work in India is focused on groups identified as being the most disadvantaged among the nation's rural poor – women, tribal groups, small farmers, landless people and unemployed youth. There are currently several IFAD sponsored projects in operation across India directly benefiting more than 4 million households (see Source 1).

INDIA: LOCATION OF IFAD'S PROJECTS

1 This project aims to change farming practices in the hilly region of north-eastern India to increase food security (see the key concept box 'Farming in north-eastern India').

2 This project aims to reduce rural poverty particularly among tribal groups by providing micro-loans (small loans to encourage small-scale business ventures among the poor so they can become self-supporting and improve their wellbeing) and investments in new farming projects.

3 These vast projects, helping more than 1.2 million households, aim to increase the status of women through self-help groups and financial assistance, often in the form of microloans.

4 Coastal communities in this area are still trying to recover from the effects of the 2004 Boxing Day tsunami. This project is designed to aid this recovery.

5 In this harsh, arid landscape poverty is often the result of water and food insecurity. Projects in this region aim to provide jobs outside of farming to people so they are less affected by variations in rainfall.

6 Severe food insecurity and extreme poverty are being addressed by changing farming methods and moving to more sustainable practices such as organic farming, water conservation and fruit and vegetable production.

7 This project is promoting changes in farming methods along with new job opportunities in rural tourism.

8 One of the nation's most disadvantaged tribal groups is being assisted to develop systems of local self-government, increase rural productivity, manage resources more sustainably and develop alternative sources of employment.

Source 1

Source: International Fund for Agricultural Development (IFAD)

key**concept:** Sustainability

Farming in north-eastern India

Food insecurity in the hilly regions of north-eastern India has recently increased as the result of a growing population combined with unsustainable farming practices. Traditionally, farmers in this region used slash-and-burn farming techniques where a patch of forest was cut down, burned and used until the soil became infertile. The farmer would then move to a fresh patch of forest. But as the population increased, this sort of farming resulted in huge losses of forest, soil erosion and a fall in food production. Widespread food and water insecurity followed.

IFAD encouraged farmers to terrace their hillsides and protect their forests (see Source 3). This is a much more sustainable approach to farming. Soil erosion and forest clearing both fell dramatically resulting in a wide range of improved wellbeing outcomes for hundreds of thousands of people. The changes achieved better food security from crops, increased fish populations in the streams and rivers of the forests and more varied diets for the farmers. As the terraced farms require less labour to maintain, a wider range of jobs have been developed, incomes have increased, children are more likely to attend school and infant mortality rates have fallen.

For more information on the key concept of sustainability, refer to page 10 of 'The geography toolkit'.

Source 2 IFAD works to improve the lives of people in poor rural areas such as this woman in India.

Check your learning 6.7

Remember and understand

1 What is IFAD and what does it aim to do?
2 What particular groups are the most disadvantaged in India?

Apply and analyse

3 Describe the ways in which IFAD aims to reduce rural poverty by increasing food security.
4 Explain how the agricultural technique of terracing can help improve human wellbeing.

Evaluate and create

5 Construct an **overlay map** of India to explore the relationship between levels of wellbeing there and the location of IFAD projects. Use the HDI map of India in Source 1 on page 160 as a base map and the data in Source 1 as the overlay. When you have completed your overlay map, describe the relationship between HDI and IFAD projects.

6.8 The government and foreign aid

In the 2015–2016 budget, the Australian government provided about $4 billion in overseas aid. Most of Australia's aid is spent on countries in the Asia–Pacific region, particularly Indonesia, Papua New Guinea and the small island nations in the Pacific.

Aid is given to poorer countries to improve the lives of those living in poverty and to make the countries in the Asia–Pacific region more stable. Not only does this aid help improve wellbeing in the region, it also supports Australia's economic and security interests by helping to build stronger, healthier countries in our region.

Aid is also given to countries outside the Asia–Pacific region when there is a humanitarian disaster such as famine or war. Source 1 shows the top 25 recipients of aid from Australia in 2015–2016.

Source 1 Where we give aid – top 25 recipients 2015–2016

Country	Australian ODA $(million) (2015–16)	Human Development Index value 2015
Papua New Guinea	554.5	0.505
Indonesia	375.7	0.684
Solomon Islands	175.9	0.566
Pacific Regional Programs	120.0	—
Sub-Saharan Africa	95.9	0.475 (average)
Timor-Leste	95.3	0.595
Vietnam	89.6	0.666
Cambodia	89.0	0.555
Afghanistan	84.6	0.465
Philippines	83.0	0.668
East Asia Regional Programs	66.0	—
Myanmar	62.8	0.536
Vanuatu	60.5	0.594
Bangladesh	59.8	0.57
Fiji	57.8	0.727
Pakistan	55.7	0.538

Nepal	31.4	0.548
Tonga	30.2	0.602
Sri Lanka	28.9	0.757
Kiribati	27.9	0.59

What does foreign aid do?

Aid is delivered to these countries in a number of ways.

- Money is given to aid organisations such as World Vision that do work at the community level.
- Emergency aid, such as that provided after the Asian tsunami, is often provided in the form of food supplies, fresh water and medical teams.
- The Australian government works with other governments to assist in the delivery of important services such as policing and hospitals.

The sorts of aid programs that receive funding from the government are wide-ranging. There are programs that are directly improving the health of communities and saving lives. These include providing safe water and sanitation where it is not available, maternal and child health services and disease prevention (see Source 2).

Source 2 These women are registering their children for health checks at an Australian-funded clinic in East Timor.

Source 3
Australia provides funding for schools throughout the Asia–Pacific region including here in Laos.

Source 4
This organic farm in the Philippines is supported by Australian aid.

Source 5
An Australian electoral officer helps the Solomon Islands police force provide security in a general election.

Source 6
A Queensland Fire and Rescue team inspect an earthquake-damaged building in Padang, Indonesia.

There are programs that address inequalities by increasing access to education, helping people with disabilities and empowering women (see Source 3).

There are programs that support sustainable economic development, improve food security and employment and reduce the negative impacts of environmental change (see Source 4).

There are programs that help other governments to improve their security, justice and human rights (see Source 5).

There are also humanitarian aid and disaster response programs for communities impacted by crisis situations and natural disasters (see Source 6).

Check your learning 6.8

Remember and understand

1 Why does Australia provide aid to overseas communities and countries?

2 Name three concerns that are addressed by aid programs.

Apply and analyse

3 Why do you think that the Australian government does not simply send money to the leaders of each country?

4 Select one of the photographs showing Australian aid at work. Imagine that you are one of the people receiving assistance. Describe the ways in which the aid you receive has improved your wellbeing.

Evaluate and create

5 Construct a scatter plot using the data provided in Source 1. It shows the amount of aid given to each country and the HDI value for each of these countries. Use your completed scatter plot to test the theory that Australia gives the most aid to the poorest countries.

6 Construct a choropleth map of the top 25 recipients of Australian aid. Use your completed map to test the theory that Australia gives more aid to countries in our region than to countries further away.

6.9 The role of NGOs

While governments are important sources of aid that help to improve wellbeing, there are also hundreds of **non-government organisations (NGOs)** with a similar aim. NGOs range from vast international groups such as World Vision and the Red Cross to very small NGOs with only a few members working to make a difference in a single community. What NGOs do have in common, however, is that they are non-profit organisations, meaning all their money goes to support their work, and they all depend on donations from governments or private individuals and companies to fund their work.

Here we look at two organisations:

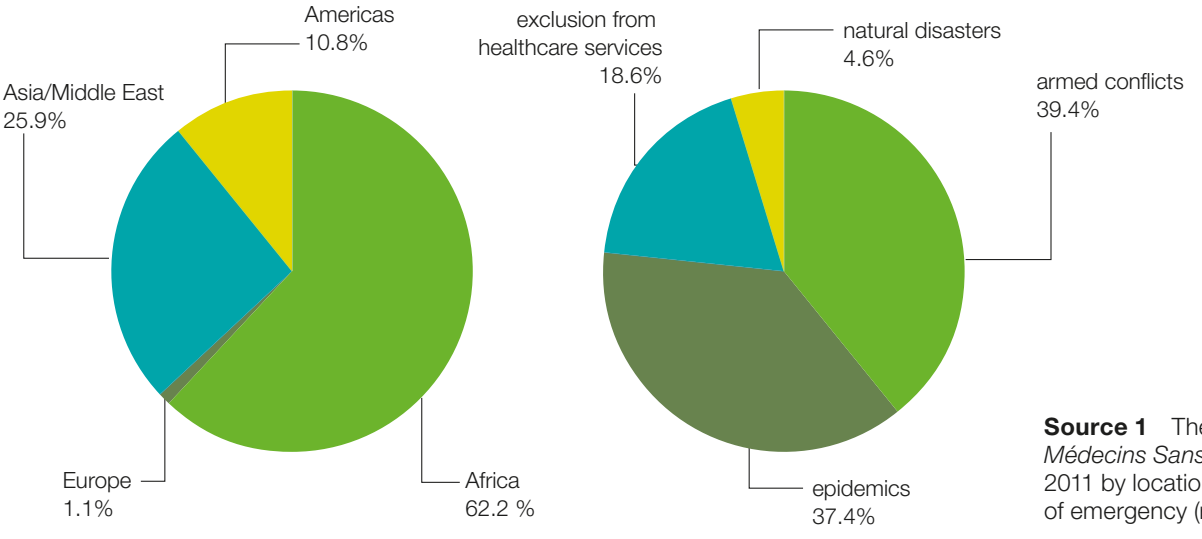

- *Médecins Sans Frontières* – an organisation that responds to emergency situations with medical assistance
- Bangladesh Rural Advancement Committee – an organisation that works to reduce the causes of inequalities in wellbeing around the world.

Médecins Sans Frontières (Doctors Without Borders)

Médecins Sans Frontières (MSF) was founded by 13 French doctors in 1971 to deliver 'emergency aid to people affected by armed conflict, epidemics, exclusion from health care and natural disasters'. They are currently active in 68 countries, many of them with unstable governments. In 2011, MSF took part in 436 programs, of these 271 were in Africa (see Source 2). MSF believes strongly in drawing attention to human rights violations and the lack of adequate responses to emergencies by governments in the areas in which they work. This does not always make them popular and means that virtually all of their funding must come from individual donations rather than from governments.

Source 2 Top 10 countries with the largest MSF programs, 2014

	Country	Type of emergency
1	South Sudan	Armed conflict, refugees
2	Democratic Republic of the Congo	Armed conflict, epidemic (malaria)
3	Central African Republic	Armed conflict, refugees
4	Haiti	Natural disaster, epidemic (cholera)
5	Sierra Leone	Epidemic (ebola)
6	Afghanistan	Post conflict, emergency health
7	Niger	Hunger, epidemic (malaria)
8	Liberia	Epidemic (ebola)
9	Ethiopia	Armed conflict, refugees, epidemic (tuberculosis)
10	Iraq	Post conflict, refugees

Source 3 MSF volunteers often work in dangerous conditions.

Source 4 BRAC works to improve opportunities for women in Bangladesh and throughout the world. This volunteer is training local women to act as nurses and health advocates for their villages.

Bangladesh Rural Advancement Committee (BRAC)

The Bangladesh Rural Advancement Committee (BRAC) was founded in 1972 to alleviate poverty by providing micro-credit to the poor of Bangladesh. Micro-credit allows the poor to access small loans – as small as $20 – to allow individuals to finance projects such as machinery repair, hiring a new labourer, purchasing a sewing machine or shoe-repair kit so that they can start their own small businesses. The loan is then repaid with minimum interest.

From these small beginnings, BRAC is now the world's largest NGO. It has over 100 000 employees and helps to improve the wellbeing of around 126 million people, mainly in Bangladesh but also in 10 other countries in Asia and Africa. In addition to offering micro-loans, BRAC now also provides education to millions of children, public health programs aimed at reducing child mortality, services for the disabled, disaster relief and Internet connections to thousands of rural communities.

Check your learning 6.9

Remember and understand

1 What are the aims of *Médecins Sans Frontières* (MSF)? Why do they receive very little funding from governments?

2 What is micro-credit and what does it provide to the poor?

Apply and analyse

3 Examine Source 2.

- **a** Which of the countries listed is the odd one out in terms of its location?
- **b** Select one of the top 10 countries supported by MSF. Use the 'World statistics' section in your obook to prepare a report on wellbeing levels in this country.
- **c** Suggest how MSF could help address some of the wellbeing issues in this country.
- **d** Visit the MSF website and use the international activity report page to research the type of assistance given by MSF in this country.
- **e** Share your findings with your classmates and compare the assistance given by MSF in the country you chose with countries that others chose.

4 Visit the BRAC website. Use the 'Where we work' tab to explore the countries in which BRAC is active and the types of assistance they provide in each country. Summarise your findings and present them in table format.

6B rich task

Charity

Many NGOs, including those you have learnt about in this chapter, are funded by donations from individuals and private companies. Donations vary from place to place depending on a wide range of variables including income. Of course, giving money to help other people is only one type of charity. Many people also give their time as volunteers. This can be of great assistance to others and can help to increase their level of wellbeing. Most of the doctors who work with MSF, for example, donate their time to work in areas where they are needed.

Source 2 shows the percentage of the population who donate money to charity in 20 selected countries.

Source 1 One of the world's largest charity organisations was started by Microsoft founder Bill Gates, one of the world's wealthiest men. The Bill and Melinda Gates Foundation has donated more than $25 billion to improve the wellbeing of people around the world. In this photograph Bill and Melinda Gates are chatting to Tatomkhulu-Xhosa, a South African man who is living with tuberculosis.

skill**drill:** Data and information

Creating proportional circles maps

A proportional circles map is able to show the differences in the size or extent of various factors within a country or region graphically. This allows the data to be represented visually and understood quickly. A proportional circles map is commonly used to represent figures including imports, exports, or population. To draw a proportional circles map use the following steps. You will need a ruler and a compass.

Step 1 On an outline map of the world locate each of the places you wish to include in your proportional scale and mark them with a small dot.

Step 2 Choose an appropriate scale range for your map. If you were looking at population figures of big cities, for example, you might choose a scale that goes up by 500 000 people each time. Keep your data within a scale of five different values, so that you end up with a maximum of five different sized circles.

Step 3 Construct a scale on a horizontal line that is relatively short (about 5 cm), or the circles will become too big. Do this by dividing the scale into even values, starting at 0 and placing line markers every 2.5 or 5 mm. For example, at 2.5 mm mark 500 000, at 5 mm mark 1 000 000, and so on.

Step 4 Place the point of your compass on the horizontal line at 0 and the pencil of your compass on the horizontal line at the first marker point on your scale. Use the compass to draw a circle. This will be the radius size of the proportional circle for your first value.

Step 5 Create a legend for your map and draw a circle for your first value following Step 4. Enter the value next to the circle.

Step 6 Repeat steps 4 and 5 until you have circles for all your values entered into your legend.

Step 7 Now map your data. Set the compass to the radius size that matches the appropriate value. Draw the proportional circle on the map at the spot you marked in Step 1.

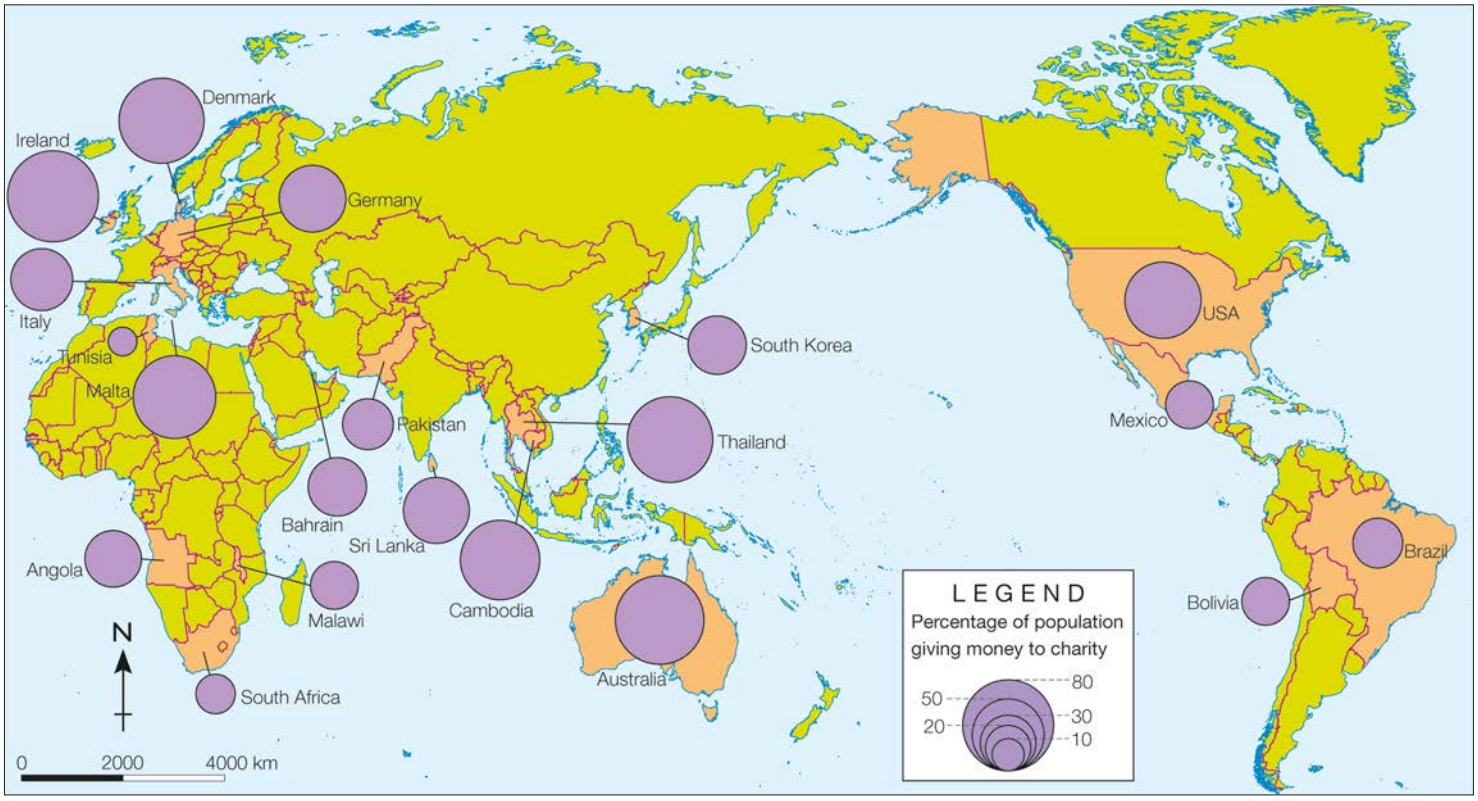

Step 7 Repeat these steps for the remaining dots on your map. As you draw your map you may find that some circles overlap. Label each circle with the name of the city.

Step 8 Complete your map with BOLTSS.

Apply the skill

1 Create a proportional circles map using the data provided in Source 1 on page 230 relating to the amount of aid given to countries by the Australian government in 2015–2016.

WORLD: CHARITABLE GIVING INDEX

Source 2

Concepts and skills

The history toolkit

History is the study of the past. Historians seek to piece together accurate pictures of what life was like in days gone by. They also look for patterns – what has remained the same, what has changed, and why.

Historians follow a process of **historical inquiry** in order to better understand the past. They ask questions, form opinions and theories, locate and analyse **sources**, and use **evidence** to develop an informed explanation about the past. Oral accounts, documents, **artefacts** and archaeological finds form the basis of research and investigation in history.

This year you will be looking at events that took place from 1918 to the present day and how these events influenced modern-day Australia. By conducting historical inquiries into important world events such as World War II, historians show how aspects of our past have shaped the modern world.

7A
What are the historical concepts?

7B
What are the historical skills?

chapter 7

Source 1 This World War II propaganda image by wartime artist W. Krogman shows the bombing of the German city of Cologne by RAF Lancaster bombers. Although propaganda images were often factually inaccurate, they served to rally public support for the war and boost civilian morale by portraying the military successes of the Allied Forces.

7C

What are the career opportunities for historians?

7.1 Historical concepts

Historians use seven concepts to help them investigate and understand the past. At times you will use several of these concepts at once; at other times you may focus on just one. As you learn to apply each concept, you will begin to think like a historian. The seven key concepts in history are:

- **perspectives**
- **continuity and change**
- **cause and effect**
- **evidence**
- **empathy**
- **significance**
- **contestability.**

Perspectives

The concept of perspectives is an important part of any historical inquiry. A person's perspective is their point of view – the position from which they see and understand events going on in the world around them. People often have different points of view (or perspectives) about particular events, historical figures, civilisations or artefacts depending on their age, gender, social position and their beliefs and values. Just like anyone else, historians have perspectives, that can influence their interpretation of the past and the way in which they write about it. Regardless of their own perspectives (and what they may think about something personally), historians must try to understand the different values and beliefs that shaped and affected the lives of people who lived in the past.

The fall of Saigon marked the end of the Vietnam War in 1975. The government of South Vietnam (supported by the USA, Australia and other anti-communist countries) was defeated by forces in North Vietnam (supported by China and other communist countries). The end of the war led to the reunification of North and South Vietnam under a communist government. Vietnamese people in the South who had supported US and Australian troops were regarded as traitors by the new government. In the years after the war, millions were captured and sent to 're-education camps' where they were tortured or abused. It is estimated that around 165 000 people died in these camps.

From 1975 onwards, well over 1 million refugees fled Vietnam. Many escaped on foot to neighbouring countries where they were housed in camps. Others chose to escape by boat, attempting a dangerous sea crossing to reach safety. The first refugees from Vietnam to arrive by boat (known as '**boat people**') in Australia landed in Darwin in April 1976.

Source 1 Boat people fleeing Vietnam after the fall of Saigon and the end of the Vietnam War

The concept of perspectives is very useful when interpreting the complex issues such as the mass migration of Vietnamese boat people after the war. From the perspective of the boat people themselves, there was no other option but to leave. The risks of travelling by boat to other countries presented better odds of survival than staying in Vietnam. From the perspective of those refugees waiting in camps, boat people were often seen as queue jumpers who refused to apply for asylum through the proper legal channels. From the perspective of the Australian government at the time, Vietnamese refugees were seen as a responsibility. Because of the role Australia had played in the conflict, the government (supported by large sections of the Australian public) felt obligated to help those who had helped us.

Continuity and change

Historians recognise that over time some things stay the same, while others change. This concept is referred to as continuity and change. Examples of continuity and change can be seen across every civilisation at any given period of time.

Historians refer to aspects of the past that stay the same over time as continuities. They refer to aspects of the past that do not stay the same over time as changes. Continuities and change can be identified within a certain civilisation and over short periods of time. They can also be identified across different civilisations and much longer periods of time.

The use of **propaganda** in Australia during World Wars I and II provides some good opportunities to look at continuity and change. During both world wars, propaganda was used to encourage people to support the Australian war effort by enlisting to fight. Propaganda posters not only encouraged people to act, but also reminded those already serving in the war that their efforts were important to all Australians. Sources 2 and 3 are examples of recruitment posters from World War I and World War II. The objective of both posters (i.e. to recruit new soldiers), and the techniques used to meet that objective, are very similar. Both sources use images of mateship and honour to encourage men to enlist. They both also attach a sense of shame and disloyalty to the idea of not enlisting. All of these shared similarities are examples of continuity.

Many changes can also be observed in the way propaganda was used in Australia during World War I and World War II. For example, Germans and Turks were demonised in Australian propaganda campaigns during World War I, but during World War II it was the Japanese who were most often demonised. This is largely because the Germans and Turks were seen as our main enemies during World War I and the Japanese were seen as our main enemy during World War II. The most obvious change, however, was linked to the introduction of new forms of mass communication between the wars. During World War I, the vast majority of propaganda took the form of posters that were displayed on the street and in workplaces. Although printed posters were still important during World War II, a far greater percentage of propaganda at that time was delivered in the form of moving pictures known as newsreels. Newsreels, shown in cinemas around Australia, served to boost morale of Australians at home and focus the country's anger on the enemy.

Another aspect of change was that during World War II, news delivered on the radio and short newsreels shown before feature films in cinemas encouraged people to think and act in particular ways. This was viewed as a technique for maintaining morale.

Source 2 An Australian pro-conscription poster from World War I

Source 3 An Australian pro-conscription poster from World War II

Cause and effect

The concept of cause and effect is used by historians to identify chains of events and developments, both in the short term and in the long term. Cause and effect aims to identify, examine and analyse the reasons why events have occurred and the resulting consequences or outcomes. It helps to think of cause and effect as the 'why' and 'what' of history.

Sometimes the link between cause and effect is very clear. For example, heavy rain over many weeks (cause) leads to flooding (effect) and the destruction of crops (effect). However, often this link is not quite so obvious. Generally, there are many causes (reasons) that lead to an event or action. There can also be many effects (outcomes). Sometimes the effects are simple to identify, while in other cases they are more difficult to predict and may not even become obvious until long after the event.

At the end of World War I, when the **League of Nations** forced Germany to accept the terms of the **Treaty of Versailles**, the aim of the league was not just to punish Germany but also to make sure that Germany was too weak to ever pose a threat to European peace again. However, many historians now agree that it had the opposite effect. It is generally accepted that the Treaty of Versailles caused such extensive economic suffering in Germany that it contributed to the rise of the Nazi party and the start of World War II.

Historians were able to reach this conclusion by using the concept of cause and effect. Germany's defeat in World War I led the leaders of the Allied forces to come together to decide the terms of the German surrender and agree on **reparations** to be paid by Germany as compensation. These terms were all outlined in the Treaty of Versailles (cause). They resulted in a range of effects – some short-term, others long-term. Short-term effects included:

- feelings of humiliation and anger among the German people
- severe economic difficulties and instability led to hyperinflation (extreme price rises) and Germany's currency became almost worthless for a time (see Source 4)
- high unemployment
- unstable government
- the scapegoating of groups such as the Jews and communists for the country's economic problems.
- Long-term effects included:
- the rise of Adolf Hitler and the election of the Nazi Party to government in Germany with promises to restore Germany to its former glory
- the start of World War II as Germany moved to 'reclaim' territories it had lost in Europe at the end of World War I
- the formulation of 'the Final Solution' which included a plan to exterminate all Jews living in Europe (an event known as the **Holocaust**).

Source 4 Hyperinflation was one of many short-term effects in Germany brought about by the Treaty of Versailles. For a time, the prices of goods such as food and heating oil increased so rapidly that money became worthless. These men are baling up billions of German Marks to be burned for heat.

Evidence

Evidence is the information gathered from historical sources. The concept of evidence is an essential part of historical inquiry. Evidence can come from many different sources; for example, interviews and accounts from people who lived at the time, letters, diaries, films, maps, newspapers, buildings, paintings, photographs, song lyrics, nursery rhymes, clothing, photographs and even cartoons. But how do we use these sources to piece together the story of the past? We can make an educated guess (called a **hypothesis**) and then look for evidence to support it.

Evidence can be gathered from two types of sources:

primary sources – objects created or written at the time being investigated; for example, during an event or very soon after. Examples of primary sources include official documents, such as laws and treaties; personal documents, such as diaries and letters; photographs or films; and documentaries. These original, firsthand accounts are analysed by historians to answer questions about the past.

secondary sources – accounts about the past that were created after the time being investigated and which often use or refer to primary sources and present a particular interpretation. Examples of secondary sources include writings of historians, encyclopaedia entries, documentaries, history textbooks, films, illustrations, reconstructions and websites.

Historians do not always agree on evidence, even when it comes from the same source. They often have different opinions or points of view. This is why historians are constantly searching for new sources of evidence. They rely on a range of different sources to help them gain a more complete picture of the past.

Source 5 This photograph was taken in a London Underground station during the ***Blitz*** in December 1940. The Blitz was a time when Germany was carrying out nightly air bombing raids on cities across Britain. Train stations and tunnels in London were converted to air raid shelters after the attacks started on the city and many residents were forced to take shelter there each night. Primary sources such as this are very useful to historians because they provide a wealth of evidence about the conditions experienced by civilians during this time.

Source 6 Winston Churchill's Britain at War Experience was a temporary museum that operated in London from 2010 to 2012. The aim of the museum was to recreate the experience of daily life in London during World War II. The museum featured a reconstruction of a London Underground air raid shelter. Here, visitors could experience huddling together to the terrifying sounds of bombs falling above, just as civilians did during the Blitz. Secondary sources such as this reconstruction rely heavily on evidence from primary sources in order to be as historically accurate as possible.

Empathy

The concept of empathy helps us to understand the impact of past events on particular individuals or groups. This includes an appreciation of the circumstances they faced and the motivations, values and attitudes behind their actions. Put another way, empathy is the ability to 'walk in someone else's shoes' – to be aware of and sensitive to others' feelings, thoughts and experiences.

Empathising brings history to life. It connects us as human beings regardless of how much time has passed. Consider the experiences of many mixed-race and Aboriginal children who were forcibly removed from their families by federal and state government agencies from around 1908 to the 1970s and placed under the care of state-run institutions or white families. These children are now referred to as the **Stolen Generations**. It isn't difficult to empathise with the victims of these policies. Just imagine how terrifying and upsetting it would be to never see your family again. This will give you some idea of what it must have been like for these children and their parents.

The concept of historical empathy, however, encourages us to view events from all sides and not to judge past events by today's standards. It requires us to look objectively at the attitudes and social norms that were common during the period being studied in order to understand the motives and actions of the different people involved. It may not come naturally, but historical empathy requires you to put yourself in the position of the politicians and government officials who enforced these policies. There were many reasons given at the time to justify the actions of the government and the public. It is essential to understand that white Australian customs, language and laws at this time were believed to be far superior to Aboriginal customs. Many Australians discriminated against Indigenous Australians on the basis of race and did not recognise them as citizens. By removing Indigenous children from their families, teaching them English, exposing them to Christianity and making them attend school, many government officials thought they were giving these children a better chance at a successful life in Australia. For this reason, many white Australians believed it would be better for children of mixed race to grow up in white families and become productive members of society.

Empathising does not excuse the actions of people from the past, but it does help us to gain a more complete understanding and appreciation of the factors that motivated them. In 2008, then Prime Minister Kevin Rudd delivered an official apology to members of the Stolen Generations who suffered as a result of official government policies. The apology came about because of a broad change in attitude towards Indigenous Australians and a growing respect for their traditional cultures and customs, but much work remains to be done in the areas of Indigenous rights and freedoms.

Homes Are Sought For These Children

A GROUP OF TINY HALF-CASTE AND QUADROON CHILDREN at the Darwin half-caste home. The Minister for the Interior (Mr Perkins) recently appealed to charitable organisations in Melbourne and Sydney to find homes for the children and rescue them from becoming outcasts.

I like the little girl in centre of group, but if taken by anyone else any of the others would do, as long as they are black

Source 7 This newspaper clipping from 1934 is seeking homes for mixed-race Aboriginal children taken from their families. Children such as this later became known as the Stolen Generations.

Significance

The concept of significance relates to the importance assigned to aspects of the past. This includes people, events, developments, discoveries, movements and historical sites. History is full of so many important events, significant people and interesting places that we could never study all of them. Instead, we need to make a judgement about which of these is worthy of study. In order to determine if a person, event, development, discovery, movement or site is historically significant, historians may ask the following questions:

- How important was this to people who lived at that time?
- How many people were affected?
- To what degree were people's lives affected?
- How widespread and long-lasting were the effects?
- Can the effects still be felt today?

When thinking about events that are historically significant, it can be tempting to choose global incidents – like world wars – that involved many countries and resulted in wide-scale death and destruction. There is no denying that these types of events are of major significance – in only a few short years they can change the course of history forever. However, a range of other events can be just as significant, even though they may take place over a much longer period of time and not be as obvious. Take the arrival of television in Australia. The first mainstream television broadcast in Australia took place on 16 September 1956 in Sydney. At this time, less than 10 per cent of the population had a television in their home. By 1978, 64 per cent of homes in Melbourne and 70 per cent of homes in Sydney had television. By 2000, 99 per cent of all Australian homes had a television – with most having more than one. Although this change took place slowly over a longer period of time, it is very significant.

Increasing rates of television viewing since 1956 have had many wide-ranging impacts on Australian society. For example, the spread of television led to a massive increase in the cultural influence of the United States in Australia in the second-half of the 20th century. For the first time, people across Australia were exposed to (and influenced by) American views and attitudes on a nightly basis. In the early 1960s, at least 80 per cent of all Australian television content was sourced from the United States. These American programs consistently topped the ratings. Regulations were later brought in to ensure a certain level of Australian content on television. Today Australian law requires 55 per cent of free-to-air shows to be produced in Australia. The majority of the remaining 45 per cent continues to be produced in the USA. In fact, popular American shows are now fast tracked from the United States so that Australians can watch them only hours after they have screened in the United States. Today, these programs have a significant impact on Australian popular culture and identity, influencing everything from language and music to politics and law.

Source 8 From the time of its introduction to Australia in 1956, television has had a significant impact on Australian society and culture.

Source 9 Popular television shows from the United States that are watched in Australia have a significant influence on our views and attitudes.

Contestability

The concept of contestability relates to explanations or interpretations of past events that are open to debate. Historians around the world often have access to very different sources. Artefacts, such as jewellery and weapons, may have been damaged, or artworks may be incomplete. Written records may contain errors, or might have been changed after they were written. Some records may even have been completely destroyed. This can lead historians to draw different conclusions about what they are seeing. Even historians studying the same sources can sometimes come to very different conclusions about what the evidence is telling them. This is one of the exciting things about history – it is open to debate. There is often no right answer, and historians are always seeking a more complete understanding of the past. For example, there is an ongoing public debate in Australia about how to interpret and represent Australian history since white settlement, particularly with reference to the impact of colonisation on Indigenous Australians.

The growth of the Aboriginal rights movement since the 1970s prompted a new wave of historians to argue that 'official' Australian history since British settlement had largely ignored the stories of hundreds of thousands of Indigenous Australians who had suffered as a result of European colonisation. Historians such as Manning Clark and Henry Reynolds wanted to correct the imbalance in the history books and acknowledge the murders, injustices and racial policies that had dominated the relationship between Europeans and Indigenous peoples since colonisation.

Other historians resisted this new approach to Australian history arguing that it was too negative and obscured the achievements of white Australia.

Source 10 These Indigenous Australians, covered in traditional body paint, are shown taking part in a street protest against the Australian Bicentennial (200th anniversary) celebrations held in 1988. Many Indigenous Australians regard the arrival of British settlers as a day to be mourned rather than celebrated. Many historians today disagree with each other on the interpretation of events in the history of Australia since British colonisation (particularly relating to the impact that settlement had on Aboriginal and Torres Strait Islander peoples). This debate is known as the history wars.

Historians such as Geoffrey Blainey and Keith Windschuttle contest the extent of the harm inflicted on Indigenous Australians by white settlers on the frontier. On occasions they have accused other historians of falsifying evidence relating to the level of violence committed towards Aboriginal people, particularly in Tasmania. They also contest the extent of frontier violence against Aboriginals presented by Clark and Reynolds.

The public debate over the interpretation of events in Australia's history since British settlement is ongoing. Today, it is referred to as the history wars. Historians on both sides of the debate have undertaken significant archival and fieldwork research in order to present evidence to support their hypotheses. In many cases, however, historians on opposing sides of the argument have questioned the research methodology used and contest the findings.

Check your learning 7.1

Remember and understand

1 What is the difference between a primary and secondary source? Give an example of each type of source.

2 Which historical concept would be most helpful to historians attempting to understand the factors that led to certain Indigenous Australian children being taken from their families by force during the 20th century? Explain your response.

3 Historians in Australia have developed two competing interpretations of the experiences of Indigenous Australians since British settlement. What is this debate commonly referred to? Which historical concept is this an example of?

4 In your own words, define the concept of perspectives. Why is it a useful tool for historians? Why did different people in Australian society have different perspectives on the arrival of Vietnamese boat people in the 1970s?

Apply and analyse

5 Look again at the types of questions historians ask to decide if events, discoveries, people or sites are historically significant. For example:

- how important was it to people who lived at that time?
- how many people were affected by it?
- to what degree were people's lives affected by it?
- how widespread and long-lasting were its effects?
- can its effects still be felt today?

Use each of these questions to determine the historical significance of the following:

- the signing of the Treaty of Versailles at the end of World War I
- the release of the worldwide hit *Wrecking Ball* by Miley Cyrus in 2013
- the arrival of Vietnamese immigrants to Australia after the Vietnam War
- the introduction of television to Australia in 1956.

a Place the events in order from most to least significant, providing a justification for each.

b Compare your responses with other members of your class. Did you all draw the same conclusions?

6 Examine Source 10 and complete the following tasks.

a When was this source taken and what are these people shown doing?

b How might the perspectives of these people differ from the perspective of the Australian government when it comes to the Australian Bicentennial celebrations? Explain your response.

c Explain how the historical concept of empathy is useful when conducting a historical inquiry into the colonisation of Australia by the British?

Evaluate and create

7 Conduct additional Internet research to create a flow chart that shows the causes and effects (both short-term and long-term) of World War II on Australian society.

8 Use a selection of new examples and images to create a poster or audiovisual presentation that briefly explains all seven of the historical concepts discussed in this section.

7.2 Historical skills

History has been described as the study of 'who we are and why we are the way we are'. Historians examine the past and try to explain what they find. Like detectives at the scene of a crime, they follow a process of historical inquiry – they pose questions, locate and analyse sources, use evidence from these sources to develop an informed explanation about the past, and then communicate their findings.

To conduct a historical inquiry, historians need a range of skills. By studying history you will gradually master each of these skills. Some of them you will find easy to master, others may take a little longer. As you develop each new skill you will have gained another important tool for understanding and explaining events and people that have shaped our world.

Source 1 The five categories of skills used in a historical inquiry

Chronology, terms and concepts	• Use chronological sequencing to demonstrate the relationship between events and developments in different periods and places • Use historical terms and concepts
Historical questions and research	• Identify and select different kinds of questions about the past to inform historical inquiry • Evaluate and enhance these questions • Identify and locate relevant sources, using ICT and other methods
Analysis and use of sources	• Identify the origin, purpose and context of primary and secondary sources • Process and synthesise information from a range of sources for use as evidence in a historical argument • Evaluate the reliability and usefulness of primary and secondary sources
Perspectives and interpretations	• Identify and analyse the perspectives of people from the past • Identify and analyse different historical interpretations (including your own)
Explanation and communication	• Develop texts, particularly descriptions and discussions that use evidence from a range of sources that are referenced • Select and use a range of communication forms (oral, graphic, written) and digital technologies

You will now be familiar with many of these skills from your studies in junior history. This year you will revisit each of the skills and learn to apply them more effectively. Each of the skills you will be learning are organised into five broad categories (see Source 1). Each category represents the stages of a historical inquiry and contains a number of more specific skills that you will be practising.

It might help you to think of each of these skills as individual tools in your toolkit. For some historical inquiries, you may only need to use one tool; for others, you may need to use all of them.

Source 2 Historical skills help you to be a detective of the past.

7.3 Chronology, terms and concepts

Use chronological sequencing to demonstrate the relationship between events

One of the most helpful things historians can do to get a better understanding of the past is to organise events according to the order in which they happened. This is known as **chronology**. Chronology can help us organise things that happened over a small period of time, like a day or week, or large periods of time, like hundreds of thousands of years. We can also use chronology to look at events that happened in one place or society, or compare events across many different places and societies.

Chronology allows us to develop an ordered sense of time. Once events have been ordered chronologically, we are able to use a range of historical concepts such as cause and effect, significance, and continuity and change to analyse them in detail.

skill**drill:** Chronology

Creating a timeline

Timelines are used by historians to sequence time and order important events chronologically. They help divide large sections of time into smaller periods so that events can be arranged in the correct order.

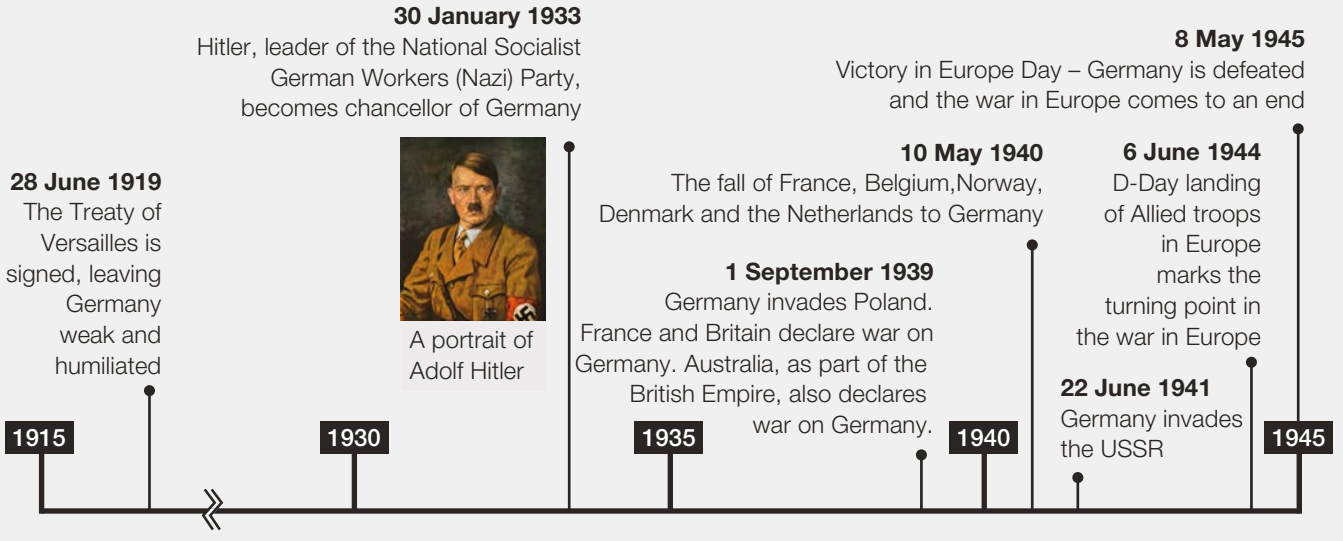

Timelines can look quite different, but essentially they all work in the same way. There are some basic steps you need to follow when constructing timelines.

Step 1 Work out the length of time you want to represent on your timeline, then divide it evenly into suitable blocks of time – in this case, 50 years. A timeline showing what you did yesterday might be divided into hours; one showing key events in the 19th century might be divided into decades.

Step 2 To represent a large span of time, you may need to break your timeline into sections using a jagged line. This shows that a section of time has been left out and will ensure that your timeline will fit on the page!

Step 3 Mark specific dates into the timeline. These dates need to be accurately plotted so that they appear in chronological order. A full date with day and month can be added for particularly significant events if this is appropriate.

Step 4 Provide a brief description of the dates plotted on the timeline, describing the events that took place. Include a picture and caption if appropriate.

Source 1 A simple timeline of some key events from World War II

Use historical terms and concepts

Just like scientists and mathematicians, historians share a common language. They use historical terms and concepts to clarify what they are talking about and share their findings. Source 2 lists and defines some important historical terms you will come across during your study of the modern world and Australia.

Source 2 Some useful historical terms you will encounter while learning about the modern world and Australia

Term	Definition
appeasement	a policy adopted by Britain and France towards Germany from the mid-1930s until 1939; the policy was designed to avoid a second world war by granting certain allowances to Hitler and the Nazi government
communism	an economic system in which the means of production (e.g. factories, farms and machinery) are publicly owned (by the state) and goods are distributed equally according to need, as opposed to privately owned and controlled systems such as capitalism
democracy	a political system based around the idea that the citizens of a society should have control over the way in which they are governed
genocide	the deliberate and systematic (planned) mass killing of people based on their race, ethnicity, religion or culture
globalisation	the increasing connectedness of economic and financial systems in countries around the world; globalisation refers to a number of changes that are taking place to decrease the importance of national barriers to the production and trade of goods and services
Holocaust, the	the deliberate and systematic (planned) mass murder of Jews and other 'undesirables' by the Nazis during World War II (*see also Shoah*)
immigration	the act of entering and settling permanently in a country or region to which a person is not native
imperialism	the process of gaining and maintaining control over other countries, regions or territories for economic or strategic (military) reasons
propaganda	information or material that attempts to influence the behaviour or opinions of people within a society; propaganda can take many forms (e.g. posters, flyers, advertising campaigns, films) and is designed to promote a particular cause or course of action and/or damage the cause of an enemy
referendum	(in Australian history) a national vote of the people on actions proposed by the government; any proposed changes to the Australian Constitution must be put to a vote in a referendum
Third Reich	a term used to describe the German state from 1933 to 1945 when it was under the rule of Adolf Hitler and the Nazi Party
White Australia policy	a term used to describe a series of government policies introduced after Federation in 1901 that prevented 'non-white' immigrants from settling in Australia, favouring instead those from certain European nations (especially Britain); these policies were progressively overturned between 1949 and 1973

Check your learning 7.3

Apply and analyse

1 Why do you think history has been described as the study of 'who we are and why we are the way we are'? Do you think this is an accurate description?

2 In your own words, define the term 'chronology'? Why is it an important skill for historians?

3 Name one of the most useful tools for organising significant historical events into chronological order.

Evaluate and create

4 Choose a significant issue or event that interests you that took place between 1918 and the present. Conduct some Internet research and create a timeline of events related to the issue or event you have chosen. Some events you might like to examine include:

- the struggle for civil rights in the United States
- World War II
- the introduction of television in Australia.

a Your timeline should include at least six entries related to the issue or event. Each entry must include the date and a brief description.

b Include images of video links for at least two of the entries on your timeline.

c Present your timeline electronically or as a poster.

7.4 Historical questions and research

Identify and select different kinds of questions about the past to inform a historical inquiry

Historians begin any historical inquiry by asking big questions. From these big questions, historians develop a **hypothesis** (theory) about who, what, where and why certain events took place. These questions then help to frame the process of inquiry and act as a guide for the collection of evidence.

The photograph in Source 1 shows a group of women working in a factory, assembling the wing of an aeroplane. Women workers on the home front were essential during World War II to maintain the supply of weapons and other goods to the men on the battlelines.

Source 1 Using sources such as this, historians can begin to develop a range of closed and open questions to frame a historical inquiry.

skill**drill:** Chronology

Generating questions to inform a historical inquiry

Look closely at Source 1. This photograph could provide an interesting starting point for a historical inquiry into the roles of women during World War II. To start your inquiry, think of some questions that begin with the words 'what', 'where', 'how', 'when' and 'why'.

For example, questions such as those listed below help to guide the research process:

- What are the people in the photograph doing?
- Who are they?
- What are they building and what might it be used for?

By asking these kinds of questions (known as closed questions), you will often discover a range of facts to follow up on. This is a good start. However, in addition to asking closed questions, it is important that you ask more complex questions (known as open-ended questions). Open-ended questions such as 'What were working conditions like for these people?' and 'What effects did increasing numbers of women in the workforce have on society?' will often open up exciting new areas for you to explore.

Apply the skill

1 Based on what you have read and seen, generate two closed and two open questions of your own that will help guide an inquiry into the women on the home front in Australia during World War II.

2 Once you have generated your inquiry questions, identify the information you will need to answer these questions and where you might be able to locate it.

3 Are there any questions for which you have not been able to find reliable evidence or answers? What reasons might there be for this?

Identify and locate relevant sources, using ICT and other methods

Sources provide information for historians. They can take many different forms, from historical artefacts to written records in books or online. Some examples of sources include human remains, coins, cave paintings, textbooks, journals, online databases, newspapers, letters, cartoons and diaries.

Locating a range of relevant sources is a valuable skill which usually involves a number of different search methods, such as:

- checking catalogues at your school and local library
- using online search engines such as Google, Yahoo and Bing
- visiting museum and government websites
- looking at newspaper and magazine archives
- contacting local historical societies
- interviewing older family members about the past, and examining family antiques and keepsakes.

Using ICT to locate relevant sources

Although printed books and newspapers are valuable sources of information, most research today is conducted online. In order to ensure that sources gathered online are accurate, reliable and relevant, a number of guidelines should be followed:

Source 2 Some common domain names and their characteristics

Domain name	Description
.edu	The site is linked to an educational institution such as a university or school. These sites are generally very reliable.
.gov	The site is linked to a government department or institution. These sites are generally very reliable.
.net	This site is linked to a commercial organisation or network provider. Anyone is able to purchase this domain name and generally there is no one to regulate the information posted on the site. As a result, these sites may be unreliable.
.org	This site is linked to an organisation. Generally, these organisations are not for profit (e.g. Greenpeace, World Vision International, British Museum). If the organisation is reputable and can be contacted, it generally means that the information provided has been checked and verified by that organisation. You need to be aware of any special interests that the organisation may represent (e.g. particular religious, commercial or political interests) as this may influence what they have to say on a particular issue. If you are unsure about the reliability of information found on a website with this domain name, check with your teacher or librarian.
.com	This site is linked to a commercially based operation and is likely to be promoting certain products or services. These domain names can be purchased by anyone, so the content should be carefully checked and verified using another, more reliable source.

Source 3 Most research today is conducted online.

- Search engines such as Google are useful research tools, but much of the material on these sites is not reliable and may contain inaccuracies, false and misleading information or material that is out of date. When using search engines like Google or Yahoo, be sure to define your search using keywords. Your librarian is a good person to ask for help and information. Most schools will also have a website devoted to providing information about developing good research skills.
- A reliable way of searching for sources is to use sites linked to government departments, reputable companies, museums, universities and educational institutions. A quick way of telling if a site is reputable is to look at the domain name in the URL (Internet address). Some of the most common domain names are listed in Source 2 along with some information about their reliability.
- Avoid blogs posted by unknown individuals. If you happen to find information relevant to your investigation on a blog or social media site, always verify it by using a more reliable source.
- Never cut and paste information from the Internet straight into your own work. Taking someone else's work, ideas or words and using them as if they were your own is called plagiarism and can have very serious consequences.

Recording relevant sources

As you identify and locate relevant sources, it is essential that you record details to include in your list of references or bibliography.

When citing (mentioning) a book in a bibliography, include the following, in this order, if available:

1 author surname(s) and initial(s)
2 year of publication
3 title of book (in italics)
4 edition (if relevant)
5 publisher
6 place of publication
7 page number(s).

Example:

Easton, M., Carrodus, G., Delany, T., Smith, R., 2016, *Oxford Big Ideas Humanities 10 Victorian Curriculum*, Oxford University Press, Melbourne, pp. 18–19.

When citing an online source in a bibliography, include the following information, if available:

1 author surname(s) and initial(s) or organisation name
2 year of publication or date of web page (last update)
3 title of document enclosed in quotation marks
4 date of posting
5 organisation name (if different from above)
6 date you accessed the site
7 URL or web address enclosed in angle brackets <…>.

Examples:

Australia's War 1939–1945, 'All in – Indigenous service', accessed 24 March 2016, <http://www.ww2australia.gov.au/allin/indigenous.html>.

Foley, Robert T, 2011, 'Blitzkrieg', BBC History, accessed 2 April 2016, <http://www.bbc.co.uk/history/worldwars/wwtwo/blitzkrieg_01.shtml>.

Check your learning 7.4

Remember and understand

1 List three different examples of sources. Next to each example, write where it can be found.

Apply and analyse

2 Copy the table below and use it to list two advantages and two disadvantages of using the different search methods shown.

Search methods	Advantages	Disadvantages
Using a library catalogue		
Conducting an Internet search		
Interviewing an older family member		

3 Examine the following sites. Decide whether you think they are reliable and provide reasons why.

a Australian War Memorial
www.awm.gov.au/atwar/ww2

b Microsoft
www.microsoft.com

c Griffith University
www.griffith.edu.au

d World War II Tours
www.worldwar2tours.com

Evaluate and create

4 Create a poster or class wiki providing tips on good research techniques. Share it with other students in your year level or post it on your school intranet.

7.5 Analysis and use of sources

Identify the origin, purpose and context of primary and secondary sources

As explained earlier, historians use two types of sources to gather evidence about the past:

- primary sources – objects created or written at the time being investigated; for example, during an event or very soon after
- secondary sources – accounts about the past that were created after the time being investigated and which often use or refer to primary sources and present a particular interpretation.

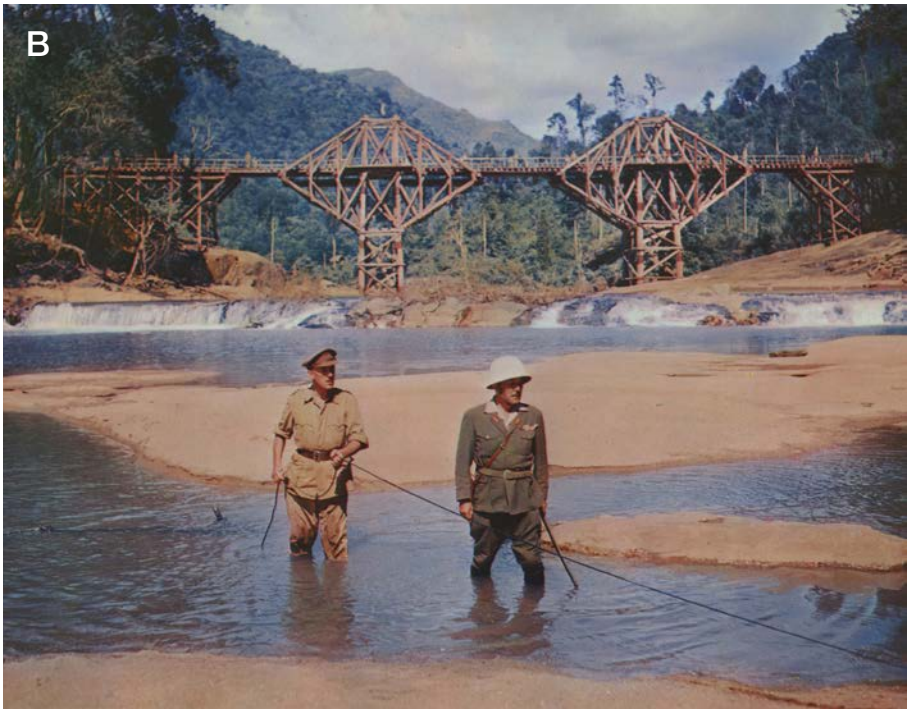

Understanding the origin, purpose and context of primary and secondary sources

Both primary and secondary sources are useful, but it is important to understand:

- where they came from (origin)
- why they were created (purpose)
- the historical setting in which they were created (context).

These factors are important because they provide clues about the perspective of the person who made the source, as well as the attitudes and beliefs that were common at that time. All sources are influenced by the author's own point of view. In some cases the author may even have been paid (or forced) to write in a particular way or to ignore certain facts. This is referred to as **bias** and is often aimed at persuading the reader to agree with the author's point of view. This is why historians must carefully analyse and evaluate all of the sources they use.

Source 1 The origin and purpose of these primary (A) and secondary (B) sources are very different, even though they are both related to the building of the Burma Railway by Allied **prisoners of war (POWs)** during World War II (under orders from Japanese forces).

(A) This aerial photograph, taken on 5 February 1945 of a bridge built as part of the Burma Railway over the River Kwai in Thailand, is a primary source. So is the bridge itself. The construction of the bridge started in October 1942 and it was completed by late October 1943. Sixteen thousand Allied POWs (including 2815 Australians) and 100 000 imprisoned slave labourers of Chinese, South Indian, Malay, Burmese, Japanese and Dutch–Indonesian origin lost their lives during the bridge's construction.

(B) This photograph, taken on location in Sri Lanka during the filming of the 1957 British–American war film *The Bridge on the River Kwai*, is a secondary source. The popular film (which is also a secondary source) won seven Academy Awards (including Best Picture). It gave a largely fictional account of events that took place during the construction of the bridge during World War II.

Analysing sources by asking 'who', 'what', 'when' and 'why' questions will help you identify the origin and purpose of the sources. For example:

- Who wrote, produced or made the source?
  - Is the creator's personal perspective obvious in the source?
  - Is the creator a member of a particular group, religion or organisation?
- What type of source is it?
  - Was the source created at the time of the event or afterwards?
- When was the source written, produced or made?
  - How old is the source?
  - Is it an eyewitness account or is it written by someone at a later date?
  - Is the source complete?
- Why was it written or produced?
  - Was it designed to entertain, persuade or argue a point of view?
  - Does the creator have anything to gain personally from the source?
  - What other events may have been happening at the time and might have influenced the author or source?

Process and synthesise information from a range of sources as evidence

By this stage of your historical inquiry, you will have collected a variety of different sources and types of information. Now it is time to process and synthesise the most relevant information to use as evidence to support your hypothesis. There are a number of ways to organise large amounts of information so that you can decide quickly and easily which sources provide the most useful, relevant and reliable evidence.

Using graphic organisers to help you process and synthesise information

Graphic organisers are very useful tools for collecting, comparing and selecting suitable resources that you have located. A decision-making chart like Source 2 can help you do this.

Source 2 A decision-making chart showing an example of how you might process, compare and select sources

Research topic: What were the experiences of Allied prisoners of war during the construction of the Burma Railway?			
Hypothesis: That Allied prisoners of war were treated so harshly that they died in their thousands.			
Source 1: 'Changi' ABC website	Pros: • The entry is has some great primary sources • The entry is written by a reputable organisation – the ABC – and was developed to accompany a TV documentary on the subject	Category of source: Secondary source – special interest webpage	Reference information: http://www.abc.net.au/changi/history/burma.htm (Accessed 24 February 2013)
	Cons: • Not detailed enough • The website is focused mainly on conditions at the prisoner of war (POW) camp known as Changi. Only a pretty small section of the article talks specifically about the Burma Railway		
Source 2:	Pros:	Category of source:	Reference information:
	Cons:		
Source 3:	Pros:	Category of source:	Reference information:
	Cons:		
Recommended sources in order of relevance/usefulness: 1 2 3			

Analysing propaganda posters

Propaganda is information or material that attempts to influence the behaviour or opinions of people within a society. Propaganda can take many forms, such as posters, flyers, advertising campaigns and films, and use many different techniques to get its message across. Regardless of the forms it takes, all propaganda is designed with the same goal in mind – to influence people's thoughts and actions by promoting a particular idea or course of action. Very often, propaganda is also designed to damage the reputation or cause of an enemy.

Throughout World War II, many forms of propaganda were used. One of the most common was the poster. Propaganda posters can tell us a great deal about the time period being studied. Although they do not always present the truth, they can provide historians with great insights into opinions and attitudes that were popular at the time. The most effective propaganda poster uses a range of techniques to convey its message simply and directly.

The text 'Germany awake!' calls the viewer to action. It suggests that Germany has been sleeping and that it is now time for action.

The strong use of red grabs the audience's attention and is associated with the greatness of the German Empire.

Red was also the colour of the National Socialist (Nazi) Party.

The swastika became a symbol of Nazi strength and racial superiority in the 1930s and 1940s in Europe.

The eagle is a traditional symbol of German strength and power. Its strength is emphasised by being large and central.

In the background, a large crowd of people all show their support for this message by raising their right arms in the air (the Nazi salute).

The text 'Vote list: 2 National Socialists' instructs people to vote for the National Socialist (Nazi) Party and tells them how to use the ballot paper.

Source 3 A sample analysis of a National Socialist (Nazi) propaganda poster from 1934, *Germany awake!*

When asked to analyse a propaganda poster, follow these steps:

Step 1 Look for evidence of a range of visual techniques.

Propaganda posters use a range of techniques to grab the attention of viewers and get their message across quickly and effectively. These include:

- **colours** – often a combination of bright, bold colours (or dark, menacing colours) are used to convey a message, grab the viewer's attention and/or provoke some kind of emotional response
- **images and symbols** – a range of different images and symbols are used to convey the message and/or identify people and countries. It is common for flags, logos and animals to be used to represent countries. For example, Source 3 proudly displays the symbols of the German eagle and the swastika to represent German strength and unity. It is also common for enemies to be represented using racist or derogatory imagery.
- **text** – most often, a clear and simple message accompanies a propaganda poster. This is often a call to action or a warning of some kind. For example, Source 3 declares 'Germany awake! Vote List: 2 National Socialists'

Source 4 An Australian propaganda poster from 1942, *He's coming south* (AWM ARTV09225)

Step 2 Ask a range of questions to analyse the intended message and audience of the poster.

Once you have identified the main visual techniques being used, it is time to think more deeply about what the poster is trying to achieve. You can do this by asking a range of questions such as:

- Who is the intended audience? Who was the poster made for?
- What is the historical context of the poster? What year was it produced in?
- What is the purpose of the poster? What is the intended message? What is it trying to get people to do?
- Is it effective at getting its message across to the audience? Why/why not?

Source 3 has been done as an example.

Apply the skill

1 Use the steps provided to analyse the propaganda poster in Source 4.

2 List the similarities and differences between Source 3 and Source 4. Which do you think is more effective at achieving its goal? Provide reasons for your answer.

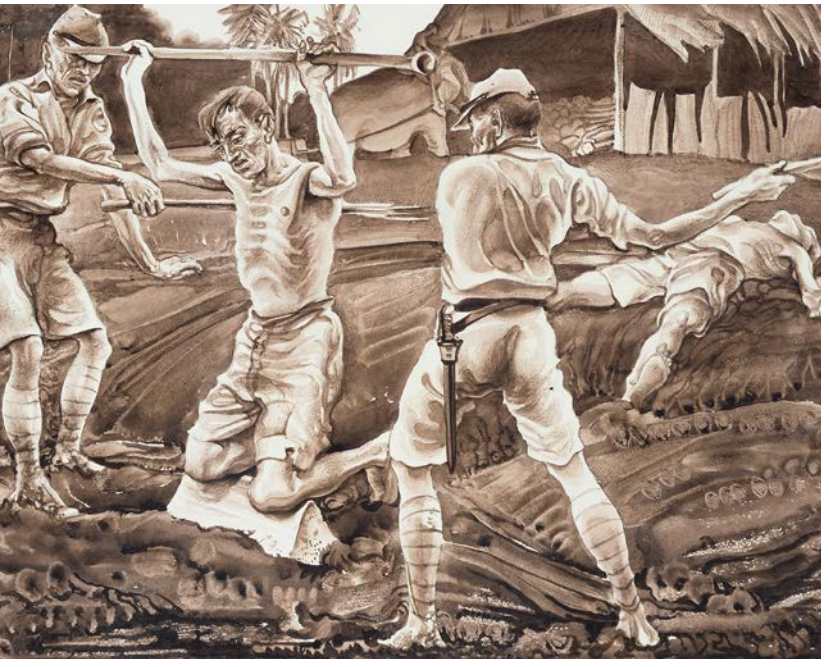

Evaluate the reliability and usefulness of sources

A useful source, whether primary or secondary, is one that will add to your understanding of a historical inquiry. The source needs to be relevant to your investigation and must also be reliable. The conclusions you draw about the sources you have found will determine their usefulness. In many cases, this means separating fact from opinion. A fact is something that can be proved and verified by more than one source; for example, the year in which an event took place. An opinion is the view or belief of a person or persons. Opinions are generally based on interpretations of facts, but are more subjective. The use of words such as 'might', 'could', 'believe', 'think' and 'suggests' all indicate that an opinion is being expressed, but it is not always that simple to separate fact from opinion. More often than not, you will need to conduct research to determine this. For example, without research it would not be possible to identify which of the following statements is fact, and which is opinion:

- Fact: The crossing over the River Kwai in Kanchanaburi, Thailand, was built by Allied prisoners of war and slave labourers under orders from the Japanese army during World War II.
- Opinion: The 1957 film *The Bridge on the River Kwai* accurately portrays the type of harsh treatment received by British prisoners of war at the hands of the Japanese during the construction of the Burma Railway.

The following questions will help you determine the reliability and usefulness of a source you are researching:

- Is it balanced or does it present one point of view (in other words, is it biased)?
- Does it provide information that is supported and reinforced by evidence from other sources?
- Does it provide factual information or opinion?
- Does it provide enough information and sufficient detail to help me answer the inquiry question?

Source 5 An illustration by Murray Griffin, a prisoner who was held at the Changi POW camp in Singapore, created in 1946. It depicts the kinds of punishments given to British and Australian prisoners of war by the Japanese during the construction of the Burma Railway. Griffin sought to make records of events and conditions based on the testimony of surviving POWs.

Check your learning 7.5

Remember and understand

1 Which of the following are examples of primary sources?

- **a** Source 5 – an illustration by Murray Griffin, a prisoner at Changi
- **b** Source 1 on page 259 – a photograph of two Australian prisoners of war outside a hut at Changi.

Give a reason for your answer.

2 Provide two reasons why graphic organisers are useful tools when processing and synthesising information from a range of different sources.

Apply and analyse

3 Give two reasons why it is important to know the origin and purpose of every source used in a historical inquiry.

4 What words indicate that a writer is expressing an opinion rather than a fact? If none of these words are present in a written source, what is the best way to identify it as fact or opinion?

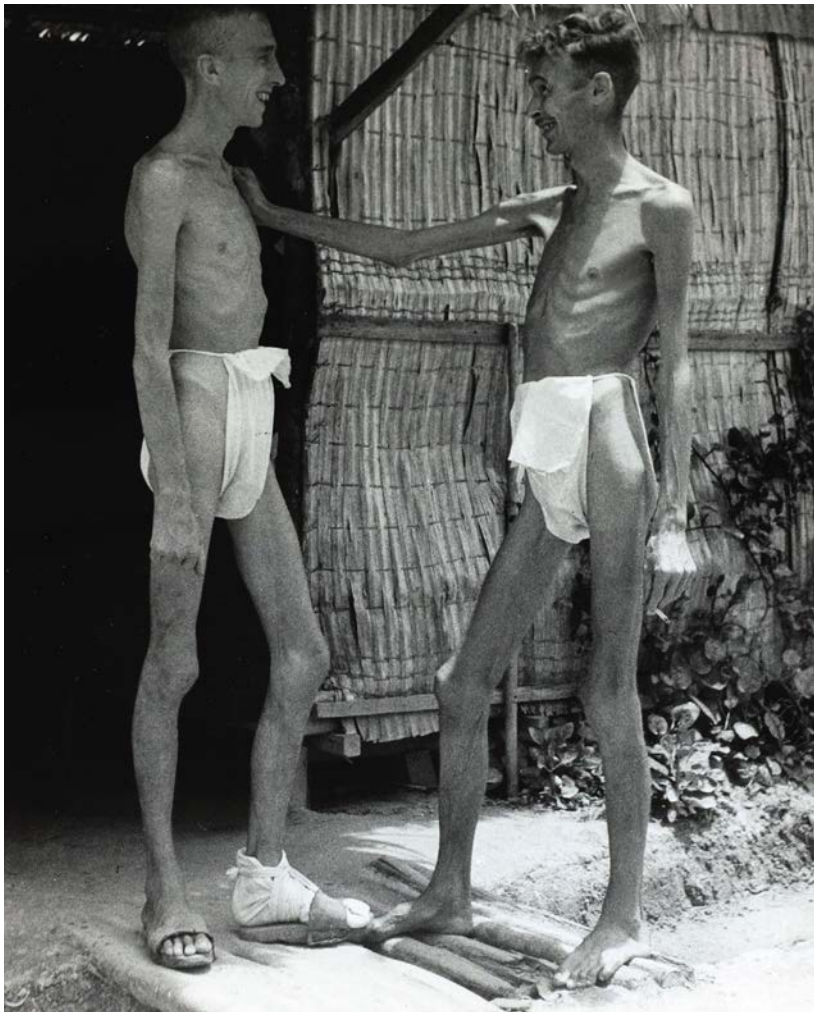

Evaluate and create

5 Conduct an online search to locate other graphic organisers that may be useful to help you process and synthesise information from a range of sources as evidence. Some graphic organisers of use to you may include KWL charts, fishbone diagrams and PMI charts. Once you have examined other types of graphic organisers, make a decision about which ones you think are most useful to you.

7.6 Perspectives and interpretations

Identify and analyse perspectives and interpretations from the past

Primary and secondary sources reflect and represent many different points of view, attitudes and values. These may include personal, social, political, economic or religious points of view. For example, an extract from an affidavit by former Gunner (soldier) Reginald Melbourne to the Australian War Crimes Registry, provides the following description of conditions in Changi, a notorious prisoner of war (POW) camp run by the Japanese:

Source 1 This photograph shows two Australian prisoners of war outside one of the huts at Changi POW camp in Singapore, just after the camp was liberated in 1945.

Source 2

> After capture I was taken to Changi Camp, where I was with approximately 12000 men, employed clearing the bombed area, also well sinking. Work was from 6 to 6, food was half a cup of cooked rice per man per day.
>
> From Changi I was marched with 500 men to Duckatinor Hills. Here we were employed clearing after bombing runs, building roads and hill levelling. Food supplies were as at Changi.
>
> Whilst working at the river camp I witnessed a guard (known as the Black Snake) bash Gnr Jack Francis with a heavy stick many times and finally brutally kicked him in the stomach and about the head. Francis died a few days later.
>
> I was severely beaten by the Black Snake with a heavy bamboo. He knocked me down several times, then kicked me. I vomited frequently following the bashing was unfit to work and generally was much knocked about. I was finally operated upon by Col. Dunlop for a damaged bladder and internal injury.

Extract from an affidavit (sworn statement) by former Gunner (Gnr) Reginald Melbourne to the Australian War Crimes Registry recorded on 2 January 1948

This account is one of many that help historians form opinions about how the Japanese treated prisoners of war during World War II. Many other sources also provide evidence on different aspects of conditions for POWs and their Japanese captors during World War II, from the perspectives of POWs themselves, Japanese soldiers, Japanese government and military officials and social observers at the time. It is only when we consider the full range of different perspectives revealed through all of the available sources that we can begin to form a complete picture of their experiences – one that is both accurate and reliable.

7.7 Explanation and communication

Develop texts, particularly descriptions and explanations that use evidence from a range of sources that are referenced

Historical writing requires you to describe and explain events using evidence from a range of sources. You will often be required to outline the significance of a past event while providing reasons for the event and referring to relevant evidence. As you have learned, different types of sources need to be used to ensure that historical writing presents a balanced view and is supported by reliable evidence.

The two most common and useful text types you will be expected to use this year are descriptions and explanations.

Writing descriptions

The purpose of descriptions is to give clear information about people, places or objects at particular moments in time. They focus on the main characteristics or features of particular people or things. They 'paint a picture' in words for readers to increase their understanding.

Descriptions must be well planned. Use the structure in Source 1 or ask your teacher to provide you with a template. Descriptions must always follow a set structure, and events must be organised in chronological order.

Source 1

Structure of a description	
Introduction	Introduces the subject. States the name of the person or event. Outlines why the topic is important.
Body	Provides details about the person or event (including dates and important facts). Information must be organised in paragraphs, with a new paragraph for each detail. Quotations and descriptive words should be used where relevant.
Conclusion (optional)	Revisits the most important details and provides a concluding statement.

Writing explanations

The purpose of explanations is to tell how or why something happened. They provide the reader with a greater understanding of the causes and effects of past events. Use the structure in Source 2 or ask your teacher to provide you with a template. Explanations must be clear and factual. They should not contain opinions or emotional language. There must be supporting evidence from a variety of sources for each point made. These sources must be acknowledged in a bibliography using the correct referencing format.

All historical writing needs to be acknowledged. At the end of your writing you must always include a full reference list or bibliography. This list shows your readers the range of different sources of evidence you used and where they can be found. For detailed information on this refer to the skill 'Identify and locate relevant sources, using ICT and other methods', which was covered earlier.

Source 2

Structure of an explanation	
Introduction	Clearly states the main idea or aim. Briefly outlines the reason/s why an event occurred and its effect/s.
Body	Each idea must be supported by evidence. There should also be some analysis of the evidence to explain its significance or importance. Information must be organised in paragraphs, with a new paragraph for each detail. Language should be precise and not contain emotional words. Personal opinions (e.g. 'I' or 'my') should be avoided.
Conclusion (optional)	Provides a short and clear overview of the main ideas presented in the body. States a conclusion drawn from the evidence.

Source 3 Audiovisual presentations are a good way of presenting the findings of your historical inquiry because they draw together all of the information you have collected and – if delivered well – can engage your audience.

Select and use a range of communication forms (oral, graphic, written) and digital technologies

The final stage of any historical inquiry is the presentation of your findings. This is one of the most important aspects of your inquiry because it draws together all of the sources, evidence and findings of your investigation.

There are a number of ways to effectively and impressively communicate your findings. For example:

- oral – speeches, class presentations, re-enactments, interviews and role plays
- graphic – posters, cartoons, graphic organisers and models
- written – descriptions, explanations, class newspapers, scripts, letters and diaries
- digital – audiovisual presentations, websites, films, blogs, wikis and apps (see Source 3).

All of these communication forms can add colour and life to the presentation of historical information.

Check your learning 7.7

Remember and understand

1 Historical sources always reflect the perspective of their writer. Give two examples of factors that may influence a writer's point of view or perspective.

2 What is the purpose of a description? How is this different from the purpose of an explanation?

Apply and analyse

3 Your teacher has asked you to provide a written report on the experiences of Australian POWs during World War II. Would it be more appropriate to write a description or an explanation? Explain your choice.

4 Source 2 on page 259 is an extract from an affidavit (sworn statement) by former Gunner (Gnr) Reginald Melbourne to the Australian War Crimes Registry. It was recorded on 2 January 1948.

Do you think this piece of statement presents a balanced and reliable description of conditions for Australian POWs held in Changi Camp? Why/why not?

Evaluate and create

5 Imagine that all members of your class have been asked to present an audiovisual presentation on the short- and long-term effects of **internment** on Australian POWs held at Changi.

Your teacher has asked each member of the audience to create a peer evaluation form that can be used to assess each presentation. Create five assessment criteria to be included on the form that can be used to assess the most important aspects of each presentation. Present your five assessment criteria in order of importance.

7.8 Careers in history

There are a wide range of jobs and careers linked to the study of history. Because many aspects of society, culture and technology change so quickly these days, the need to preserve stories and artefacts from the past has become more important than ever. An appreciation of events from the past can help members of a community or citizens of a nation avoid repeating costly mistakes (such as wars) and make better plans for the future.

Today, there is a wide range of career opportunities available for students of history (see Source 1). Some of these jobs relate to the study and preservation of our heritage, while others involve communicating and sharing aspects of our history.

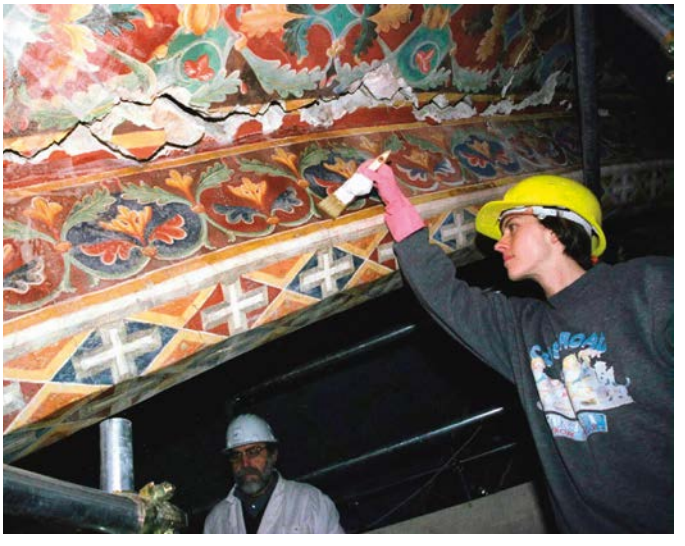

Source 1 Studying history can lead to many interesting and exciting career paths.

Valuing and preserving our heritage	Communicating and sharing history	Related opportunities
Collections manager	History consultant	Journalist
Art historian	Museum education officer	Architect
Ethnographer	Genealogist	Policy researcher
Heritage planner	Researcher	Novelist
Art restorer	Archaeologist	Public relations officer
Antique dealer	Documentary film maker	Lawyer
Social historian	Multimedia designer	University lecturer
Auctioneer	Tourism officer	Foreign affairs

Valuing and preserving our heritage

Historic preservation is an important field of history that seeks to preserve and protect artefacts, buildings, and other objects of historical significance. Older and rarer artefacts that are in good condition are generally considered to be more significant historically, and therefore more valuable. Unfortunately, however, the older an artefact is, the higher the chances that it has been damaged or changed in some way – for example, ancient buildings and monuments can be damaged through constant exposure to pollution or extreme environmental events (see Source 2). Likewise, delicate objects such as fine pottery can chip when being handled or moved and priceless works of art can be damaged through exposure to certain types of light and levels of moisture in the air.

Historians work in a wide range of interesting and important roles when it comes to valuing and preserving our heritage. As well as those who specialise in the preservation of books and paper, metals, ivory, artworks, textiles and stained glass, there is a new and growing career path for historians that involves digital preservation. In addition to physical artefacts such as stone, wood, paper, silk and bamboo that record our history, a large quantity of historical information today only exists in digital forms. You might not immediately think of emails, blogs, wikis, social networking websites and online photo albums as historical artefacts, but these items will tell the stories of modern society in the same way that stone tablets did in ancient times. With digital media it is easier to create content and keep it up-to-date, but this content is continually changing. This creates many challenges in the preservation of this content so that it can be studied in the future.

Source 2 Art restorers work in the Papal Basilica of St. Francis of Assisi in the town of Assisi, Italy. The basilica (church) is one of the most important religious buildings in Italy and has been a UNESCO World Heritage site since 2000. These art restorers are busy repairing damage caused by two earthquakes that hit Assisi in 1997, damaging the basilica.

Communicating and sharing history

In addition to historians who preserve our heritage, there are those who work in exciting careers communicating the past and sharing our traditions with other people.

Career profile: Lucy Bracey – Associate Historian with Way Back When Consulting Historians

Lucy Bracey works as an Associate Historian for Way Back When Consulting Historians – a small company of professional historians who produce histories for a range of clients from individuals and small community groups to large organisations. Anyone who has a story they want researched and recorded (or something from the past that they consider worth preserving) can approach Way Back When and take advantage of their expertise.

Lucy helps her clients by researching their histories and communicating their stories in interesting and meaningful ways. Depending on the wishes of the client, these histories can be presented in many different formats – book, digital story, website, radio program, exhibition, heritage report or iBook.

Lucy uses a wide range of historical skills in her day-to-day work. She conducts research in archives and libraries, tracing primary and secondary sources of evidence to answer key inquiry questions. For Lucy, being a historian is like being a time detective – finding out all about how people lived, what they did and who they were.

Lucy's job as an Associate Historian offers her lots of variety and the opportunity to work on a range of interesting projects. This means she never gets bored. From one week to the next, Lucy can be working at home, in the office or out on the road. Lucy likes travelling to different places and meeting interesting people. She also enjoys seeing a range of historical artefacts and investigating historical collections and archives people have assembled. She appreciates meeting weird and wonderful people at local historical societies in sleepy Victorian towns and is motivated by the prospect of uncovering all sorts of hidden treasures!

Related opportunities

History graduates are also sought after in many other fields including law, politics and foreign affairs because they know how to find and analyse information. Most importantly, the study of history encourages us to test assumptions and support statements and opinions with evidence. The ability to sift through large amounts of information and work out what is important in the detail is essential in these professions.

Check your learning 7.8

Remember and understand

1. Why is historical preservation such an important area of history?
2. A new and growing career path for historians today involves digital preservation. In your own words, define what this involves and why it is important.

Apply and analyse

3. Lucy Bracey works as an Associate Historian for Way Back When Consulting Historians. What types of activities does her job involve?
4. Why might a community group or organisation want Way Back When to research and record its history?

Evaluate and create

5. Learn more about the services offered by Way Back When Consulting Historians by visiting their website.
   - **a** In a short written report, summarise the type of work they do and name at least two of their former clients.
   - **b** Are you a member of any clubs or organisations that you think might be interested in having their histories recorded by Way Back When? If so, what format do you think would be most appropriate: written, oral or digital? Explain your choice.

Introduction to Australia at war (1939–1945)

The years from 1918 to the present have been some of the most turbulent and significant in human history. The world has changed more over the last century than it has during any other period. The signing of peace treaties (such as the **Treaty of Versailles**) after the end of World War I in 1918 forced members of the defeated Central Powers, such as the German Empire, Ottoman Empire and Austria–Hungary, to admit fault for causing the war and agree to pay reparations (compensation) to the Allied powers. Once-great empires were broken up and new countries such as Czechoslovakia, Yugoslavia, Lithuania, Latvia and Estonia were created in their place. Members of the Allied powers, such as Britain, France, Italy and the United States, dominated negotiations leading up to the signing of the Treaty of Versailles. At this time, Britain, France and Russia controlled vast empires around the world, making them the most powerful nations on Earth.

8A

What events defined the years between World War I and World War II?

8B

What were the key events of World War II?

chapter 8

Source 1 The Roll of Honour at the Australian War Memorial in Canberra records and commemorates members of the Australian armed forces who have died during or as a result of war service. More than 100 000 Australians died serving in World War I (1914–1918) and World War II (1939–1945). Families and friends remember their sacrifice by placing poppies in the roll next to their names.

8C

What was the significance of World War II?

Australia at war (1914–1945)

This unit is **mandatory**:

- World War II (1939–1945)

It must be completed by all students.

8.1 The aftermath of World War I

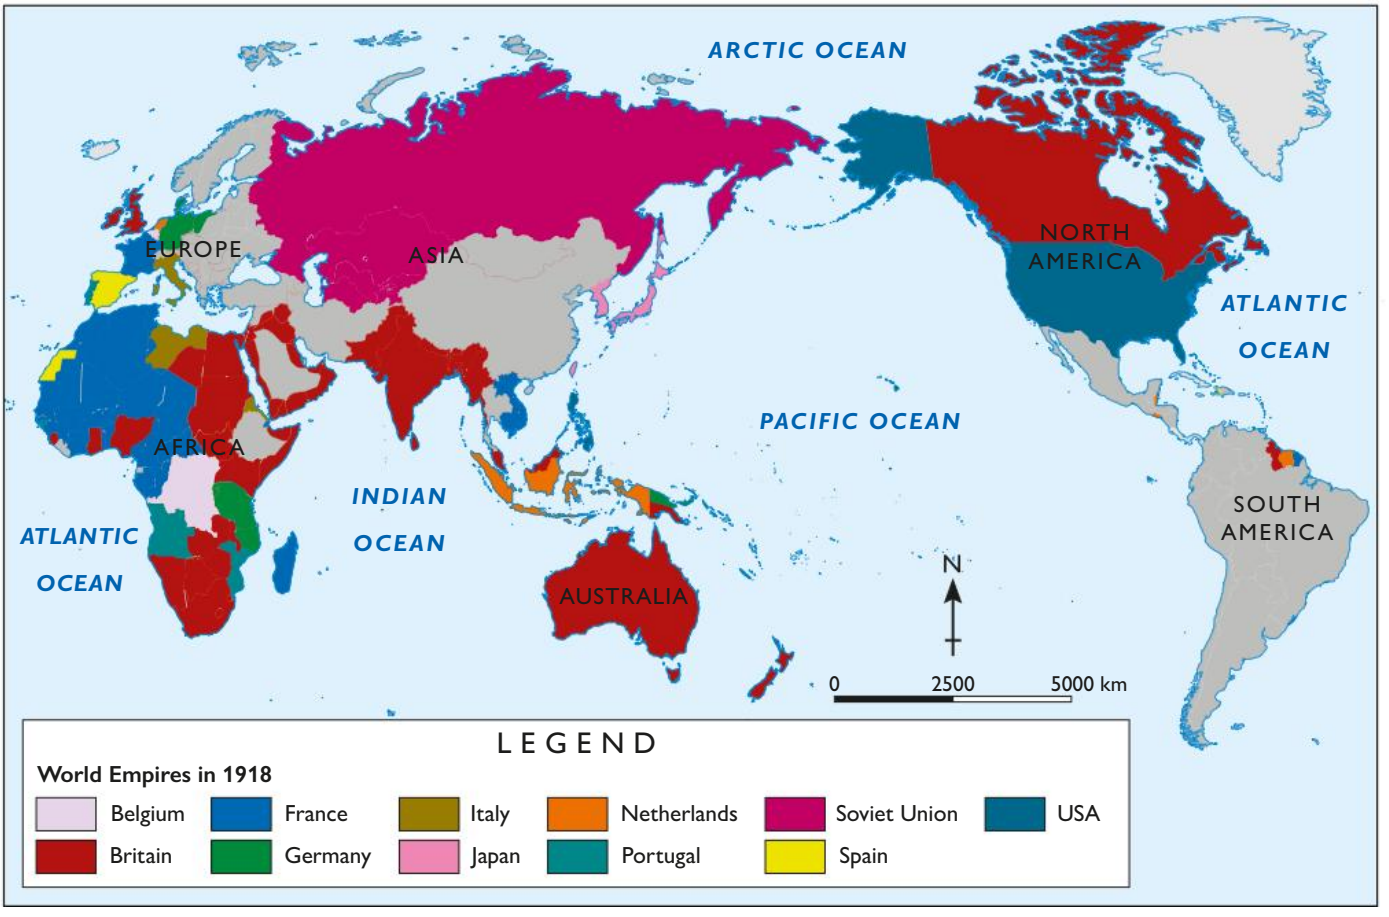

In Unit 1 – Australia at war (1914–1945) you will learn more about the political situation in Europe at the end of World War I as well as some of the social and economic factors (such as the **Great Depression**) that led to the outbreak of World War II in 1939, just 20 years after the signing of the **Treaty of Versailles**. This period became known as the interwar years.

World War II was fought from 1939 until 1945. It took global conflict to new levels and was responsible for the deaths of around 60 million people, including the deaths of around 6 million Jews at the hands of the Nazis during the **Holocaust**.

By the end of World War II in 1945, Europe was in ruins and crippled financially after years of fighting.

In the years after the war, the map of Europe and the world was redrawn. Germany was divided into two separate countries, Russia took control over a number of countries in Eastern Europe such as Estonia, Latvia and Lithuania, and a number of colonies controlled by the Japanese, Dutch, French and British empires all declared their independence. It was during this time that the USA and the Soviet Union emerged as the new 'superpowers' of the post-war world. With their opposing political and economic ideologies, the communist Soviet Union and the capitalist USA become bitter political and military rivals, involved in a **Cold War** that lasted from 1947 through to the early 1990s. Although no direct military action broke out

WORLD: GLOBAL EMPIRES POST-WORLD WAR I

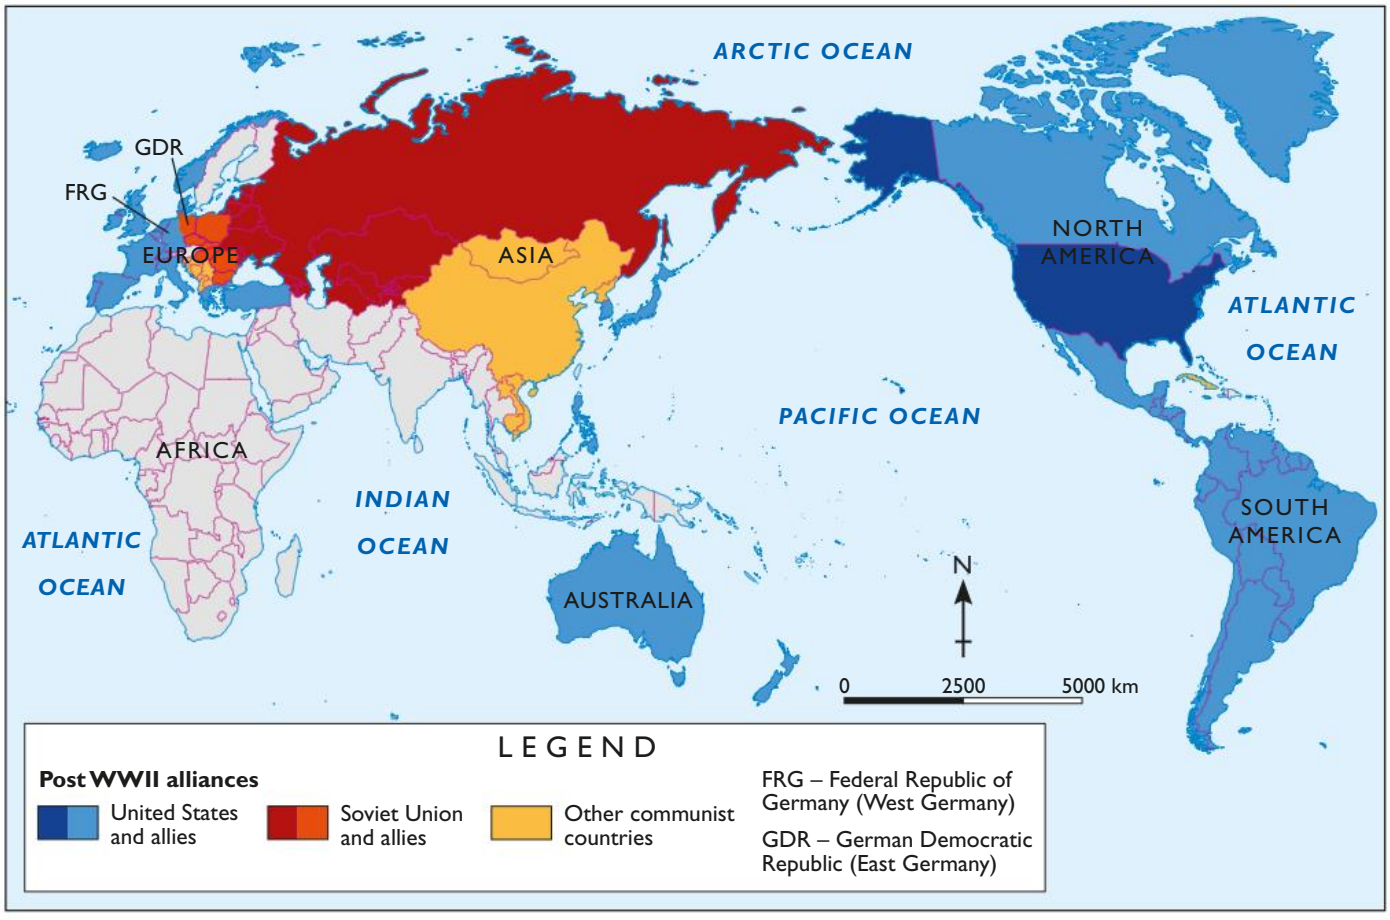

Source 1

Source: Oxford University Press

during this time, the tension and paranoia of the Cold War years effectively split the world into two opposing regions of influence (see Source 2).

The events that took place during this period continue to influence the modern world in many ways – and Australia's place in it.

WORLD: USA AND SOVIET UNION AND ALLIES POST-WORLD WAR II

Source 2

Source: Oxford University Press

Check your learning 8.1

Remember and understand

1 How does Source 1 help to explain why Great Britain, France and Russia emerged as some of the most powerful nations on Earth after the end of World War I?

2 What was the Cold War? How long did it last for?

3 List two reasons why the British and French empires lost some of their power after World War II.

Apply and analyse

4 Examine Source 2. Using an atlas, list all of the countries shown in orange on the map. Many of these countries had strong ties and alliances with the Soviet Union during the Cold War.

a Why do you think this was the case?

b Research one of these countries more closely. What did they gain through their alliance with the Soviet Union? What did they have to offer in return?

5 At the end of World War II, the government of Australia chose to continue building a strong alliance with the government of the United States of America. Why do you think they did this? How might an alliance like this benefit Australia?

8.2 The Treaty of Versailles

The Great War (as World War I is also known) left many countries across Europe devastated. Many historians regard it as the first 'total war', meaning that nations dedicated all available resources (both military and civilian) to the war effort and suffered casualties at a level never experienced before. Over 8 million soldiers and sailors lost their lives during the war and a similar number of civilians died as a result of fighting, starvation and disease. A further 21 million people were wounded. Almost immediately after the end of the war was declared in 1918, the world was hit by a deadly flu pandemic (called the Spanish influenza). The pandemic lasted for about a year and resulted in the deaths of over 30 million people, most of them between 20 and 40 years of age.

The Treaty of Versailles

In January 1919, the victorious nations of World War I met at the Paris Peace Conference in France to come up with a plan for rebuilding Europe and ensuring ongoing peace in the future. The leaders of 32 countries attended the conference, but negotiations were dominated by the leaders of four major powers:

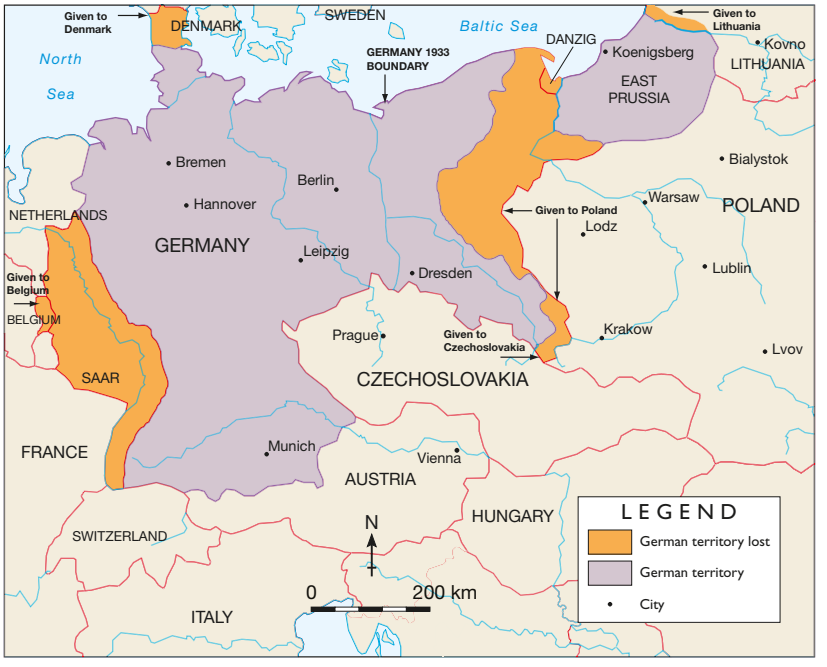

- Prime Minister David Lloyd George of Britain
- Prime Minister Georges Clemenceau of France
- President Woodrow Wilson of the USA
- Prime Minister Vittorio Orlando of Italy.

The French had suffered greatly during World War I, and wanted revenge and compensation for the damage done to their country. Clemenceau wanted to weaken Germany so it would never be able to take up arms again. President Wilson, on the other hand, wanted to achieve lasting peace with a treaty that punished Germany, but not so harshly that they would one day want their own revenge.

Source 1 French Prime Minister Georges Clemenceau (left), American President Woodrow Wilson (centre) and British Prime Minister David Lloyd George (right) greet the crowd after signing the Treaty of Versailles on 28 June 1919

GERMANY: TERRITORIAL LOSSES AFTER THE SIGNING OF THE TREATY OF VERSAILLES, 1919

Source 2 Source: Oxford University Press

After months of negotiations, the Treaty of Versailles was signed on 28 June 1919. While large sections of the German public were opposed to the terms of the treaty, German representatives at the negotiations knew that if they did not sign, Allied troops would invade Germany. With Germany's army in ruins, Germany would be powerless to stop them.

The terms of the Treaty of Versailles

As part of the Treaty of Versailles, Germany was required to surrender large sections of its territory (see Source 2) and all of its overseas **colonies** (including the former German New Guinea which was given to Australia).

Under the terms of the Treaty of Versailles, Germany was required to limit its army to 100 000 men who were mostly volunteers. It was also prohibited from possessing an air force, tanks, submarines or heavy artillery. Germany was required to accept full responsibility for starting the war and forced to pay **reparations** (compensation) to the Allies. It was agreed that Germany should pay an amount close to £7 billion British pounds (the current equivalent of around $526 billion Australian dollars).

Germany's allies in the war were also punished by the treaty. For example, Austria–Hungary was also required to pay reparations to the Allies, and the empire was broken up. The borders of Austria and Hungary were redrawn and the territory lost was used to create the new nations of Czechoslovakia and Yugoslavia.

Establishment of the League of Nations

The **League of Nations** was an international organisation formed at the Paris Peace Conference in 1919 to maintain world peace and prevent the outbreak of future wars by encouraging nations to negotiate with each other rather than engage in military conflicts. To help ensure its success, the League of Nations had the power to order countries in conflict to discuss their differences at an assembly of member countries. At these hearings, aggressors could be warned, punished with economic sanctions or threatened with military action. Forty-two countries (including Australia) joined the League of Nations. At its peak in 1935, there were 58 member countries. Although the idea for the League of Nations had been suggested by US President Wilson, the USA did not join the League. This was largely due to the reluctance of the American people to get involved in European affairs. Although the League of Nations had some early successes, it ultimately failed in its principal mission of preventing the outbreak of future wars.

Source 3 This cartoon, by Australian political cartoonist Will Dyson, was published in 1920. It is highly critical of the harsh terms of the Treaty of Versailles. It shows the French Prime Minister Georges Clemenceau (together with Woodrow Wilson and David Lloyd George) leaving the Paris Peace Conference. Clemenceau, known as 'The Tiger', says 'Curious! I seem to hear a child weeping'. The child shown represents the '1940 class' – the German children of the 1920s who will become 'cannon fodder' (soldiers likely to die) by 1940 when the next war starts.

Check your learning 8.2

Remember and understand

1 The Treaty of Versailles was signed on 28 June 1919.
   - **a** Summarise the restrictions placed on Germany by the Treaty of Versailles in terms of territory, the military and finance.
   - **b** Why did the German people oppose many of the terms outlined in the treaty?
   - **c** If so many Germans opposed the treaty, why did German representatives at the Paris Peace Conference sign it?

2 Summarise the different positions taken by the French Prime Minister and the US President at the Paris Peace Conference with regards to how Germany should be treated.

3 What was the League of Nations and why was it created?

Apply and analyse

4 Examine Source 3 and complete the following tasks.
   - **a** Name the three men shown in the cartoon. Why has the cartoonist chosen to show one man more prominently than the others?
   - **b** Who is the child supposed to represent?
   - **c** Why do you think the child is shown naked?
   - **d** What comment is the cartoonist making in this source?

8.3 The Roaring Twenties

Although Germany suffered a severe economic downturn during the 1920s (as it struggled to meet the terms set out in the Treaty of Versailles), this decade was a time of great economic prosperity in many other parts of the world, including the USA, Britain, France and Australia. Economic prosperity, together with a new hope and optimism brought about by the end of war, resulted in a wide range of social changes and technological advances during this decade – hence the term 'the Roaring Twenties'.

During the 1920s, the production of cars and consumer goods (such as household appliances) rose dramatically. Automated methods of mass production, using machinery and assembly lines, meant that large volumes of cars and a wide range of goods could be produced more quickly and efficiently. As a result, these items were no longer luxury products that could only be bought by the rich. For the first time since the war, people had regular work and money to spend. Advertising campaigns encouraged ordinary people to buy these new labour-saving appliances, with toasters, vacuum cleaners (see Source 1) and refrigerators in high demand.

During the 1920s in Australia, electric lighting was installed in many homes for the first time, although many did not have power points. Electrical appliances such as vacuum cleaners, fridges and irons became available in the 1920s, but their use did not become widespread until the 1940s. Cars were mostly imported from overseas until Ford and General Motors established themselves in Australia in 1925. In 1921, there were just under 100 000 cars registered in Australia. By 1939, this had risen to over 560 000. By comparison, there were 26 201 400 passenger cars registered in the United States by 1939.

Another influential innovation of the time was the radio, which became the first mass broadcasting medium. The advertising industry grew rapidly as companies began to deliver their sales pitches over the airwaves to families who gathered nightly around the radio. Radio also helped bring in the Jazz Age of the 1920s. Originating in black communities in New Orleans around the turn of the century, jazz became an international phenomenon thanks to radio broadcasts. Australia's first radio station, using the call-sign 2SB, went to air on 23 November 1923. It was later renamed 2BL then 702 ABC.

Source 1 An advertisement for Electrolux vacuum cleaners from the 1920s

The Hollywood motion-picture industry also emerged during the 1920s. Silent films had been popular for some years, but in 1927 the first 'talking picture' (or 'talkie') was released. *The Jazz Singer* was the first motion picture to feature synchronised sound and spoken words. It revolutionised the film industry. By 1930, over 100 million Americans were going to the movies every week. Actors and actresses like Charlie Chaplin, Greta Garbo and Rudolf Valentino became the first 'movie stars' and were recognised all over the world.

Fashion in the 1920s celebrated youth and freedom. Women in particular saw changes in the way they could present themselves publically. A boyish 'flapper' style became popular, with daringly short skirts (showing the knees), and waistlines slung low on the hip (see Source 2). Women covered their short cropped hair

under tight bell-shaped hats. For the first time, flappers danced, smoked and drank alcohol in public. They also went out without chaperones (adults who supervised young unmarried women during social events), flaunting their disregard for more traditional codes of behaviour. This behaviour outraged more conservative elements of Australian society and churches called for a return to traditional family values. In many ways, flappers were rebelling against the social expectations that had been placed upon them during the war and shaking off traditional expectations of women that were common at the time.

During the war the range and variety of jobs available to women had grown. For the first time in the 1920s, many girls leaving high school now expected to work. Pay rates for women, however, were still half those of men. Male-dominated trade unions argued that if they supported females, they would be putting the hard-working men of Australia out of work. The government was also generally opposed to the working ambitions of women. There was still a common perception that a woman's primary responsibility was to maintain the home and raise children.

The 1920s may have been a time of prosperity for non-Indigenous Australians, but many Indigenous people suffered hardship and turmoil from government policies of **protection** and **assimilation**. This involved the forced segregation of Indigenous Australians on **missions** and **reserves**, and the forced removal of children from their families.

Remember and understand

1 What types of changes took place during the 1920s that led to the use of the term 'Roaring Twenties'?
2 Was the economic prosperity of the 'Roaring Twenties' experienced by all nations around the world? Why/why not?
3 What was the name given to films that featured synchronised sound and spoken words? What effect did these movies have on the film industry?

Apply and analyse

4 The 1920s saw the rapid growth of the automobile industry. What effects do you think this growth had on people's everyday lives (and on society in general) at this time? Draw up a cause and effect flowchart.
5 Examine Source 1 and complete the following tasks.
   a In what ways would the availability of this product have changed the lives of ordinary people at the time?
   b Compare this source with a modern advertisement for a vacuum cleaner. Identify as many similarities and differences between the two advertisements as you can.
6 Examine Source 2 and complete the following tasks.
   a Describe the appearance of a typical 'flapper'. In what ways did this style of dress differ from more traditional women's fashions?
   b Why was the behaviour of many 'flappers' considered by some to be outrageous at the time? Why do you think they chose to act in this way?

Evaluate and create

7 Conduct some research into the major technological innovations of the 1920s. Create a cartoon that highlights the major changes and advances brought about by the availability of new technologies.

8.4 The Great Depression

In the late 1920s, the world economy began to slow. Work became harder to find and companies that were producing large quantities of consumer goods could no longer find people to buy them. Quickly, prices for mass-produced consumer goods and agricultural staples (such as crops, timber and wool) dropped worldwide, and unemployment began to rise in many industrialised nations. It is possible that these problems may have been overcome had they not been followed by the collapse of the New York stock exchange in 1929. The combination of these events plunged the world into a period of severe economic downturn and hardship known as the Great Depression.

Throughout the 1920s, the New York stock market had been a popular place for people to invest their money because shares could be bought on credit (i.e. using borrowed money) and sold for a profit when the prices of the shares rose. By the late 1920s, so many investors were involved in this type of trading that share prices became inflated and were pushed to unreasonable highs. When a number of shareholders began to lose confidence in the market and sell their shares, prices fell rapidly and the market crashed. Many investors, stockbrokers and business owners lost everything.

As confidence in the economy evaporated, businesses closed down and unemployment grew. Workers lost their jobs or their wages were severely slashed. As a result, they bought less, which then led to further cutbacks in production and jobs. Governments seemed powerless to stop their economies spiralling out of control and poverty spread.

Source 1 A family living in a shanty town in Sydney during the Great Depression

Australia and the Great Depression

During the 1930s, the Australian economy was heavily dependent on overseas countries, particularly Great Britain. When the American economy collapsed in 1929, two-thirds of world trading ceased. Almost overnight, almost 50 000 Australians found themselves unemployed. By 1932, around 32 per cent of all Australians were out of work.

The Great Depression's impact on Australian society was devastating. Without jobs or a steady income, many people lost their homes and were forced to live in substandard housing. Shanty towns, built from discarded materials on waste ground, sprang up on the edges of major cities.

Many men took to the roads in search of jobs such as fruit picking or cattle mustering. Often, children and women became the main breadwinners, as they were cheaper to employ. Soup kitchens and charity groups did their best to feed the starving and destitute, but many went without. Soldiers who had returned home to Australia after fighting in the war a decade earlier were often hit the hardest. Many were still recovering from the traumas of their wartime experiences. Without work, families broke down and many ex-soldiers became homeless. During this time, the suicide rate among returned solders increased dramatically.

The susso

The government provided relief to the unemployed in the form of sustenance payments – more commonly known as the 'susso'. By 1932, more than 60 000 people depended on the susso merely to survive. It was only granted to the truly destitute; those who had been unemployed for a sustained period of time, and had no assets or savings. The susso was given in the form of food rations (such as bread and potatoes) or coupons. It became the subject of a popular children's rhyme from the time (see Source 3).

Source 2 A line of men receiving food handouts during the Great Depression in Australia in the 1930s

Source 3

We're on the susso now,
We can't afford a cow,
We live in a tent,
We pay no rent,
We're on the susso now.

A contemporary Australian children's rhyme from the Great Depression

Source 4

People were forced into all sorts of tricks and expediencies to survive, all sorts of shabby and humiliating compromises. In thousands and thousands of homes, fathers deserted the family and went on the track (became itinerant workers), or perhaps took to drink. Grown sons sat in the kitchen day after day, playing cards, studying the horses, and trying to scrounge enough for a three-penny bet, or engaged in petty crime … mothers cohabited with male boarders who were in work and might support the family, daughters attempted some amateur prostitution and children were in trouble with the police.

A survivor of the Great Depression reflects on the hardship in *Weevils in the Flour: an oral record of the 1930s depression in Australia*, Wendy Lowenstein, 1998

Check your learning 8.4

Remember and understand

1 How did the collapse of the New York stock exchange affect the world economy at the end of the 1920s?
2 Why did events overseas affect jobs in Australia?
3 Explain what the 'susso' was and who qualified to receive it.
4 Who was hit the hardest by the Great Depression in Australian society? Why do you think this was the case?

Apply and analyse

5 Look carefully at Source 1. What evidence does the source provide about the circumstances faced by typical Australians during the Great Depression?
6 Read Source 4 carefully. What exactly do you think the author means by the 'shabby and humiliating compromises' people were being forced to make?

8.5 Key events of World War II

Although World War I had been called 'the war to end all wars', by 1939, just 20 years after the signing of the Treaty of Versailles, the world was once again at war. The nature and scale of this war was unlike anything that the world had ever seen. It took global conflict and 'total war' to new levels and was responsible for the deaths of around 60 million people – both civilian and military. Britain was among the first nations to introduce strategies to support a 'total war' effort. These included **conscription**, the rationing of food and supplies, and the introduction of a range of policies designed to encourage the British people to join the war effort (see Source 2).

Learning about the many issues and events of World War II in detail can sometimes be a bit overwhelming. The following tables provide a quick reference to some of the main content you will be expected to learn about in *Unit 1 Australia at war (1914–1945)*. They can be used as a reference to help you navigate the content more easily, a summary of key points or a tool to help you identify connections between significant events.

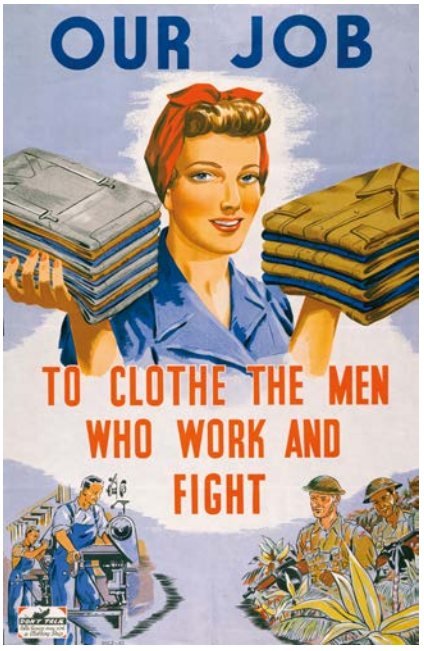

Source 2 During World War II, nations on both sides used propaganda campaigns to rally public support for the war and influence people's behaviour. This propaganda poster produced in Britain from 1939 to 1945 was designed to encourage British military personnel and civilians to unite against Germany behind their wartime Prime Minister Winston Churchill.

Source 1 Adolf Hitler and the Nazi Party rose to power in Germany during the 1930s by rallying the support of the German people. Hitler was a charismatic and gifted public speaker who promised to restore Germany's reputation as a strong and proud nation after the economic hardships of the post-World War I era.

An overview of the causes of World War II, why men enlisted and where Australians fought		
Causes of World War II	Topic 9.2	• A combination of short- and long-term factors contributing to the outbreak of conflict in 1939, including German resentment of terms in the Treaty of Versailles, economic depression, weakness of the League of Nations and unchecked acts of aggression by Germany and Japan in the 1930s • Rise of Adolf Hitler and the National Socialist (Nazi) Party in Germany • The actions of the Nazi government in the 1930s (including re-arming and regaining territories lost after WWI breach the terms of the Treaty of Versailles) • Invasion of Poland in September 1939, causing Britain and France to declare war
Why Australians enlisted to fight	Topic 9.10	• Initially Australians were less enthusiastic to enlist (after the experiences of WWI), but numbers increased significantly after Germany's invasion of France in 1940. • Surge in recruitment after the fall of Singapore to the Japanese in 1942 when Australians felt more directly under threat
Where Australians fought	Topic 9.4 Topic 9.6	• Major campaigns involving Australian forces: Europe (Greece 1940–41), the Middle East (Syria and Lebanon 1941), Africa (Libya and Egypt 1941–1942), South East Asia (Malaya and Singapore 1942), Battle of the Coral Sea 1942, New Guinea 1942, Guadalcanal (South-west Pacific) 1942

The scope and nature of warfare during World War II		
The changing scope and nature of warfare	Topic 9.4	• Aircraft and long-range tanks are used for the first time in a German invasion tactic known as *Blitzkrieg* (a term meaning 'lightning war'); German forces invade France despite French 'super-trenches' known as the Maginot Line; bombing of civilians in strategic cities such as London • Code-breaking technology used to influence outcomes of battles
Where World War II was fought	Topic 9.4 Topic 9.6	• The war in Europe 1939–1945: fighting took place in Western Europe, North Africa, the Middle East, Eastern Europe and the Soviet Union. • The war in the Pacific 1941–1945: Allies opposed Japanese invasions in the Pacific region with fighting taking place in Singapore, Midway Islands, Coral Sea, and Papua New Guinea.
The Holocaust	Topic 9.8	• The deliberate and systematic persecution of Jews and other minority groups by the Nazi government in Germany in the lead-up to war, and in Nazi-occupied territories throughout World War II • Deaths in Nazi labour camps, systematic killings in concentration camps by means of poison gas and mass shootings.
Atomic bombings of Hiroshima and Nagasaki	Topic 9.9	• Allied campaigns in the Pacific recapture many Pacific Islands taken by Japan. Allies eventually push the Japanese back to Japan's 'Home Islands'. Heavy Japanese casualties and bombing of Japanese cities fail to force a Japanese surrender. • The first atomic bomb is dropped on Hiroshima on 6 August 1945 followed by a second bomb dropped on Nagasaki on 9 August. Both cities are devastated and Japan formally surrenders.

Source 3 Australian women played an important role during the war, filling jobs at home left empty by men fighting overseas. This propaganda poster produced in 1943 by the Australian government emphasises the importance of work being done by women in clothing factories to support men working and fighting overseas.

Significant events and experiences of Australians during World War II

Significant events	Topic 9.4 Topic 9.6	**In Europe** The Battle of France • In May 1940, Germany invades the Netherlands, Belgium and France using *Blitzkrieg* tactics. • On 22 June 1940, France surrenders to Germany. The Battle of Britain • After Germany invades France, it turns its attention to defeating Britain. • From July–October 1940, Germany launches a large-scale air attack on the UK targeting key industrial cities (a period known as the *Blitz*). • Germany fails to achieve its objective. Operation Barbarossa • On 22 June 1941, Axis powers (Germany, Italy and Japan) invade the Soviet Union. More than 3 million troops, 3600 tanks and 4300 aircraft take part in the campaign, making it the largest military operation in human history. It resulted in huge casualties. • The Axis powers won many battles but ultimately failed to take the capital Moscow, because of harsh winter and fierce resistance by Russian troops. **In the Pacific** The Fall of Singapore • On 15 February 1942, Singapore surrendered to the Japanese. Around 130 000 Allied troops (including 22 000 Australians) were taken as prisoners of war. The Kokoda campaign • In 1942, Japanese forces launch an assault to seize Port Moresby, a possible base of attack on Australia, via the Kokoda Trail. • A small force of soldiers from Australia's local militia and army reinforcements fight a series of battles in difficult conditions, forcing the Japanese to withdraw.
Prisoners of war	Topic 9.11	• Over 8000 Australian prisoners in Europe, and over 22 000 Australians captured in South-East Asia, mainly after the fall of Singapore • Forced labour and poor treatment in prison camps led to a high death rate of prisoners captured by the Japanese.
Participation of women	Topic 9.12	• Australian women were encouraged to join the armed services after 1940; the majority joined auxiliary forces that operated on the home front. • Women were still not permitted to take combat roles or serve overseas, with the exception of nurses.
Participation of Aboriginal and Torres Strait Islander Peoples	Topic 9.13	• During WWII, restrictions for Indigenous Australian volunteers were officially lifted or unofficially relaxed. • An estimated 3000 Indigenous Australians served in the armed forces. • On their return, many Indigenous soldiers found they were not eligible for soldier resettlement schemes that were offered to white Australians.

Impact of World War II on the Australian home front		
Specific military attacks on Australia	Topic 9.6	• Bombing of Darwin on 19 February 1942 and towns in northern Australia until November 1943 • Direct attack on an Australian ship (HMAS *Kuttabul)* in Sydney Harbour by a Japanese midget submarine on 31 May 1942 resulting in the deaths of 19 Australian sailors
Conscription	Topic 9.10	• Conscription for overseas military service in the Pacific was introduced in 1943 with little opposition, as Australians felt the real threat of Japanese invasion.
Use of government propaganda	Topic 9.12	• A range of propaganda produced by the Australian government was used throughout the war. It was designed to encourage Australians to enlist in armed forces, work and save for the war effort and unite against a common enemy. For the first time, propaganda posters, radio and newspaper campaigns were supported by the use of cinema newsreels.
The changing role of women	Topic 9.12	• Some women served in the armed forces, and over 60 000 women served in auxiliary services on the home front. • With so many Australian servicemen deployed overseas, the work of women in the auxiliary services and civilian groups (such as the Women's Land Army) was increasingly important. • An increase in employment for women was crucial for Australia's war economy. After the war, women were expected to return to traditional roles, which happened for the most part.
The treatment of 'enemy aliens'	Topic 9.12	• Some Australians of German and Italian heritage living in Australia were thought to pose a threat to national security. These people were declared 'enemy aliens' and detained in internment camps. • All people of Japanese heritage living in Australia during the war were thought to pose a risk and were sent to internment camps.
War-time controls and censorship	Topic 9.12	• The *National Security Act 1939* gave the Australian government greater powers, including powers of censorship, the detention of 'enemy aliens', the banning of groups opposed to war, and other war-time controls.

Remember and understand

1 World War I was known as the 'war to end all wars'. Was this an accurate description?

2 What kinds of strategies did governments around the world introduce during World War II to support a 'total war' effort?

3 How many people died during the course of World War II? Were they all soldiers?

Apply and analyse

4 Examine Sources 2 and 3 and complete the following tasks.
   - **a** What are these posters examples of and who were they produced by?
   - **b** What is the goal of each poster? What types of techniques are used to achieve these goals?
   - **c** Which poster do you feel is more successful at achieving its desired goal? Justify your point of view.

5 How do you think asking women to give up their war jobs and go back to traditional roles would have affected the growing women's movement and why?

Evaluate and create

6 Conduct some research into the *National Security Act 1939*. In a short paragraph, summarise what the Act was designed to achieve and what powers it granted the government of the time. Based on your research, do you think the government was justified in its decision to pass the Act? Why or why not?

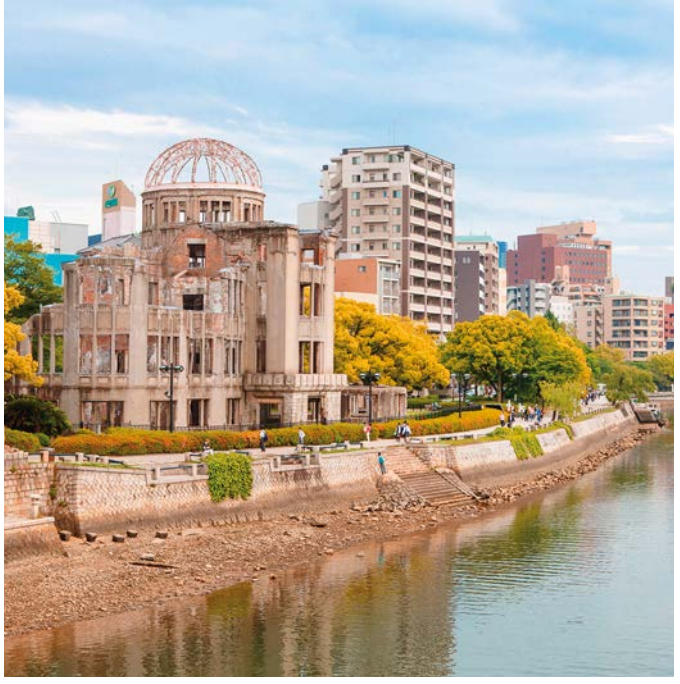

8.6 The significance of World War II

The events of World War II remain some of the most significant in human history and have influenced almost every aspect of the modern world. World War II ended with Japan's surrender after the dropping of atomic bombs on Hiroshima and Nagasaki (see Source 1). By the end of the war, many European cities lay in ruins and the traditional imperial powers of Britain and France were severely weakened. In the years immediately following the end of the war, the economic and political power of the USA and Soviet Union increased dramatically, filling the gap left by Britain and France. Over the coming decades, these two nations would become the world's new superpowers ushering in a new era in world politics.

In addition to a shift in world powers, World War II was responsible for many other significant effects in the short- and long-term – both in Australia and around the world.

An overview of the significance of World War II in Australia		
Impact of the war on returned soldiers and civilians	Topic 9.14	• Nearly 600 000 Australians served overseas during WWII, with around 250 000 still serving in the Pacific and Europe when the war ended. Although there were fewer deaths in comparison to WWI, more than 20 000 returned servicemen suffered from the long-term effects of the brutal treatment they received from the Japanese as prisoners of war. • The government continued to support war veterans with medical care, pensions, home loans, training and education and employment assistance.
Changing relationship of Australia with other countries after World War II	Topic 9.14	• The experiences of World War II altered the average Australian's view of their place in the world. Australia's relationship with Britain changed after the fall of Singapore. It caused the Australian government to build strategic relationships with other nations closer to home and form a partnership with the United States for extra military support in the Pacific region. • One million American servicemen came to Australia in the immediate post-war period, beginning a 'cultural invasion' of American cinema, music, language and popular culture in the decades after WWII. • The mass migration of people from Europe to Australia after WWII changed the nature of Australian society and influenced its relationships with the rest of the world. The arrival of immigrants from a wide range of countries ultimately led to the end of the discriminatory laws of the **White Australia policy** and the birth of **multicultural** Australia.

An overview of the significance of World War II around the world		
Shift in world powers	Topic 10.1 Topic 10.2	• WWII left the old powers of Europe (such as France, Britain and Germany) broke and in ruins. • Old empires started to break up post-WWII as former colonies saw a chance to claim independence. • New world powers emerged in the form of the USA and the Soviet Union. • Germany was divided into a capitalist West and the communist East. • The United Nations (UN) was formed with the goal of preventing future wars (see Source 3). • The Universal Declaration of Human Rights was adopted by the UN in 1948.
Mass migration of refugees	Topic 9.8 Topic 9.14	• Millions of Europeans were left homeless after WWII and many were looking for a fresh start in a new country. • The nation of Israel was formed in the Middle East to provide a home for Jews displaced by the war and who had survived the horrors of the **Holocaust** (see Source 2).
Nature of future warfare	Topic 10.1	• The atomic bomb was unlike any other weapon used in human history. Its capacity to cause death and destruction on a massive scale would change the world forever. The threat of nuclear attack loomed large over the post-WWII world and fuelled the Cold War that lasted until the early 1990s.
Growth of US cultural influence	Topic 9.14	• As the US emerged as a new superpower, its cultural influence grew and spread across the world through modes of mass communication like film, music and television.

Source 1 The atomic bombing of the Japanese city of Hiroshima on 6 August 1945 was one of the most significant events of World War II. The only building left standing in the centre of the city was the Hiroshima Prefectural Industrial Promotion Hall. The ruin, now known as the Hiroshima Peace Memorial (shown above in 2015), commemorates the people who were killed in the atomic bombing. More than 70 000 people were killed instantly, and another 70 000 suffered fatal injuries from the radiation.

Source 2 The State of Israel was founded in 1948 to provide a homeland for Jews who had survived the horrors of the Holocaust in Europe during World War II. Today, many young Israelis travel to visit the concentration camps in order to honour relatives who were murdered during World War II.

Source 3 The United Nations (UN) was formed on 24 October 1945 as a direct result of World War II. The primary goal of the UN was to prevent another world war from ever breaking out. Today, there are 193 member states. They meet regularly in the UN Headquarters in New York.

Source 4 Australia's relationships with nations around the world changed dramatically as a result of World War II. In the immediate post-war period, American cinema, music and popular culture influenced a generation of young Australians. This trend continues to this day.

Check your learning 8.6

Remember and understand

1. Why was the State of Israel created after World War II? What event influenced this event?
2. How many Australians served overseas during World War II? How did the government try to support these returning soldiers?
3. How did Australia's relationships with other world nations change after World War II?

Unit 1 Australia at war (1914–1945)

World War II (1939–1945)

Although World War I had been called 'the war to end all wars', only 20 years after it ended the world was again plunged into war. World War II was fought from 1939 to 1945 in almost every part of the world. Battles were fought in Europe, Russia, the Middle East, northern Africa, Asia and the Pacific – even the city of Darwin in Australia was bombed.

Although the official numbers of those killed and wounded are impossible to confirm, it is clear that World War II was responsible for a devastating loss of life. Historians estimate that around 22 million soldiers died in battle and 38 million civilians were killed. Among the dead were around 6 million Jews murdered by Nazi forces under the command of German dictator Adolf Hitler. This systematic persecution and murder of Jews became known as the **Holocaust**. It remains one of the most significant events of World War II.

9A

What were the causes of World War II and what course did it take?

1 There were both short- and long-term factors and events that can be seen as causes of World War II. Make some predictions about what some of these might have been based on what you already know.

9B

What were some of the most significant events of World War II?

1 Historians believe that the Auschwitz Concentration Camp (see Source 1) was the site of around 1 million murders during World War II in an event known as the Holocaust. As a group, discuss what you already know about the Holocaust. Why do you think it is regarded as one of the most significant events of World War II?

chapter 9

Source 1 The railway tracks leading to the main gates at Auschwitz–Birkenau Concentration Camp in Poland. During World War II, concentration and extermination camps such as this were built by the Nazis all over Europe to detain and murder Jews and other minority groups.

9C

How did World War II affect the lives of Australians and Australia's international relationships?

1 World War II had a significant impact on people at home in Australia, especially women. How and why do you think this was the case?

9.1 World War II: a timeline

30 January 1933
Hitler becomes Chancellor of Germany leading the National Socialist German Workers Party (better known as the Nazi Party).

9–10 November 1938
A series of attacks take place on Jewish homes, businesses and synagogues across Germany and Austria. The attacks become known as *Kristallnacht* (Night of the Broken Glass).

A Jewish-owned shopfront after *Kristallnacht*

1919 | 1933 | 1938 | 1939 | 1940 | 1941

1919
The Paris Peace Conference is held and the Treaty of Versailles is signed, leaving Germany humiliated.

Signing of the Treaty of Versailles in 1919

1 September 1939
Germany attacks Poland and German troops cross the border, causing Britain and France to declare war on Germany. All countries in the British Empire, including Australia, also declare war on Germany.

1940
France, Belgium, Norway, Denmark, the Netherlands fall to Germany; Dunkirk evacuation.

4 How do you think the Paris Peace Conference may have contributed to the beginning of World War II?
5 What event initiated the Pacific war?
6 Using the timeline, calculate how long the Pacific war lasted.

9.2 Causes of World War II

Only 20 years after the end of World War I, Europe was once again at war. At the time, many people blamed the outbreak of World War II on those who had negotiated the terms of peace at the end of World War I. In particular, they blamed the treaty that Germany was forced to sign – the Treaty of Versailles. The reality was more complex than that, with many short- and long-term factors contributing to the outbreak of conflict in 1939.

The Paris Peace Conference and the Treaty of Versailles

Immediately after World War I ended in 1918, members of the victorious Allied powers (Britain, France, the USA and Italy) met at the Palace of Versailles just outside Paris to negotiate the terms of surrender for the defeated central powers (Germany, Austria–Hungary, the Ottoman Empire and Bulgaria) and agreed on a set of penalties. After months of tense negotiations, the Treaty of Versailles was signed. It imposed a series of harsh terms on Germany (see Source 1).

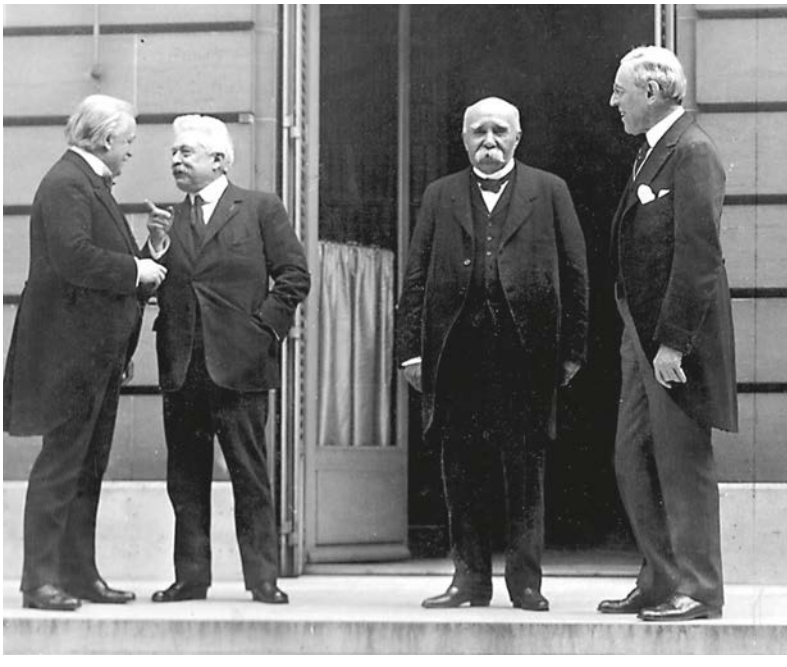

Source 1 Key outcomes of the Treaty of Versailles

- Article 231 (known as the 'War guilt clause') blamed Germany and its allies for starting World War I and declared that Germany was responsible to pay for 'loss and damages' – the payments Germany had to make were called **reparations**.
- Germany's army was limited to 100 000 men; conscription (compulsory military service) was banned, the German air force was disbanded, and the production of weapons and ammunitions in German factories was limited.
- German territory was given to neighbouring nations such as France, Denmark, Belgium, Poland – other German-controlled areas were reclaimed in order to create the country of Czechoslovakia (see Source 3) and Italy was also given two small areas.
- German colonies were divided between the Allies – this included Australia, which claimed German New Guinea and Nauru.
- The League of Nations was established – an organisation formed with the aim of preventing another war and maintaining world peace by settling disputes between nations through negotiation.

The terms of the Treaty of Versailles were devastating for Germany, both politically and economically. The terms created a weak and unstable economy in Germany with mass unemployment and severe rates of inflation (price rises). Over time this led to a sense of resentment and bitterness among the German people. Many of them felt that they had been unfairly treated. This resentment was exploited by a number of German politicians during the 1920s and 1930s.

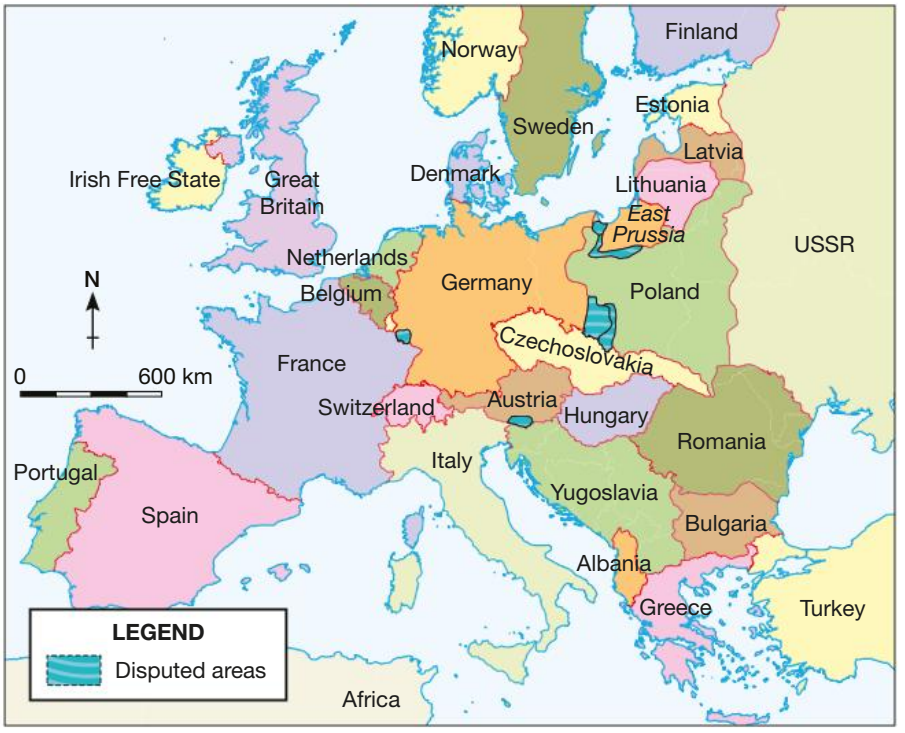

The Paris Peace Conference alienated some of the Allies. Italy was outraged that it received few benefits for joining the Allies.

The conference also sowed the seeds for war in the Pacific. Japan was permitted to keep Chinese territory it had seized from Germany during the war. However, Japan unsuccessfully tried to introduce a 'racial equality' clause to the Treaty of Versailles. The clause was opposed by Britain and Australia in particular. Japan's failure to ensure its equality with the other powers contributed to the breakdown in Japan's relations with the West, and the rise of Japanese **nationalism** and **militarism.**

EUROPE: BORDERS AFTER THE TREATY OF VERSAILLES

Source 3

Source: Oxford University Press

Source 4 A German housewife using millions of *Deutschmarks* to light her stove. During the **hyperinflation** of 1923, bank notes were worth so little that it was more useful to burn them than spend them.

The Great Depression and the rise of dictatorships

At the end of World War I in 1918, Germany had been defeated and Kaiser Wilhelm II – the emperor of Germany – stood down. A new democratic government, known as the Weimar Republic, took power in the Kaiser's place. Even though the new government had no choice in the matter, many Germans blamed it for agreeing to the terms of the Treaty of Versailles. As a result, it was very unpopular with the people.

The new government also had serious economic problems to deal with. In 1929, a stock market crash in New York triggered a period of severe economic hardship that lasted until the late 1930s. This was known as **the Great Depression**. Germany was one of the worst affected nations during this time, suffering mass unemployment, record price rises and a fall in the standard of living. Workers went on strike, German currency depreciated in value, and the economy suffered as foreign investors moved their money out of Germany.

key concept: Significance

The League of Nations

The League of Nations was established as part of the Treaty of Versailles in 1919. The league was the brainchild of US President Woodrow Wilson. The idea was that the league would settle disputes between nations through negotiation, with the aim of preventing another world war. Only as a last resort would troops be used to settle a dispute.

One major weakness of the scheme was that the USA did not join the league. Although a US president had proposed the idea, the US Congress refused to join. Wilson's party, the Democrats, was defeated at the 1920 election. It seemed that a majority of Americans wanted to maintain a neutral position and not be caught up in world affairs.

The League of Nations had no armed forces of its own, and little power to force members to comply with its decisions. It had some minor successes in the 1920s, such as resolving territorial disputes between some countries in Europe, but it failed in its central aim of preventing another world war. By 1939, Japan, Germany, Italy and the USSR had all left the organisation.

Despite its failure, the League of Nations is still considered to be significant in history because it laid the foundations for the formation of the United Nations at the end of World War II.

For more information on the key concept of significance, refer to page 245 in 'The history toolkit'.

As a result of these tough economic and political conditions, a number of political movements and ideologies became popular in Europe and Asia, including **communism**, **fascism** and **militarism**. These movements emphasised strict government control and military power and were quick to take hold in countries such as the Soviet Union, Italy, Japan and Germany. Although these countries were very different, they shared a few common features:

- the importance of the state over the individual
- support for a strong central leader
- public displays of power and authority, such as parades and rallies (see Source 6)
- a reliance on **propaganda** campaigns to promote the views of the party and suppress opposition
- a belief in the importance of national pride
- an ambition to increase the size of their territories
- the need for force in the struggle against foreign enemies.

The Nazi Party

One such group that formed in Germany in 1921 was the National Socialist German Workers' Party – better known as the Nazi Party. It's founder, Adolf Hitler, had fought with the German army in World War I and, like most Germans, resented the restrictions placed on Germany by the Treaty of Versailles.

Nazism was characterised by the strong and charismatic leadership of Adolf Hitler, supported by a small, powerful inner circle of people. Its ideology was built on German nationalism, anti-communism, **antisemitism** (hostility towards Jews), and the idea that ethnic Germans were racially superior to all other races. Nazis also believed in the 'stab-in-the-back myth'. This was the idea that Germany was not defeated in World War I, but was betrayed by socialists and Jews on the home front.

The Nazi Party attempted to seize power in 1923 in Munich in an uprising known as the 'Beer Hall Putsch'.

Source 5 Nazi propaganda posters showing the swastika and the eagle (both symbols of the Third Reich)

This uprising failed, and the ringleaders, including Hitler, received short prison sentences. After this incident, Hitler was determined to win power legally at the ballot box. In November 1932, the Nazi Party received 37.3 per cent of votes, more than any other party but not a majority. In 1933 Hitler was appointed Chancellor of Germany after negotiating a deal with other leaders.

The Third Reich

After coming to power, Hitler began putting his beliefs into practice. The period of his rule became known as the Third Reich. During this time there was little or no personal freedom. People were encouraged to report on friends, neighbours and even family members suspected of disloyalty to the regime. Propaganda and large well-organised rallies were used to convince citizens of the legitimacy of the regime and to silence critics. Punishments were severe and often involved torture and **internment** in concentration camps. Jews were the primary targets of Nazi persecution. Writers, artists, playwrights, university professors and others traditionally associated with free thinking were also targets of Nazi persecution.

Ceremonies, uniforms, symbols, marches, music and rallies were used by the Nazis to create a sense of belonging and show strength. There was a particular attempt to gain the support of young people through organisations such as Hitler Youth. The huge Nuremberg rallies held in the 1930s played an important role in gaining popular support for the Third Reich (see Source 6).

9.3 Significant individual: Adolf Hitler

For generations, the name Adolf Hitler has been linked with the idea of 'evil'. What is often forgotten is that Hitler exploited democratic processes in Germany to seize unparalleled power and impose his ideology on the world.

Early life

Hitler was born in the Austrian village of Braunau in 1889. He was very close to his mother Klara but is said to have had a bad relationship with his father, who died when Hitler was 13. Hitler showed early academic promise in primary school but dropped out of secondary school at 16 and went to Vienna to become an artist.

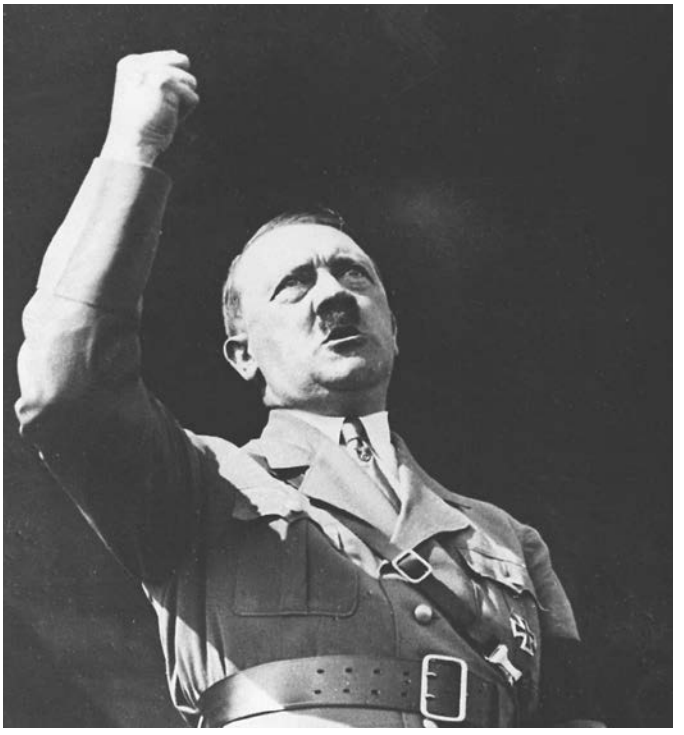

During his time in Vienna, Hitler was a drifter. He was twice rejected by the Academy of Fine Arts. Historians debate whether Hitler already held antisemitic views before he moved to Vienna, or whether his experiences there caused him to look for others to blame and inspired his hatred of Jewish people.

During World War I

Despite his Austrian birth and his father's position in the Austrian public service, Hitler became a strong believer in German nationalism. He evaded conscription into the Austro–Hungarian army by travelling across the border to Munich, where he enlisted in the German army in 1914. Hitler served as a message runner on the Western Front, a job that was considered 'safe'. Nevertheless, he was wounded in October 1918, and was in hospital at the time of the armistice (ceasefire). He passionately opposed the armistice and believed that Germany should never have surrendered. This influenced his later ideology. During the war, Hitler's superiors thought he lacked leadership skills, so he was never promoted beyond the rank of corporal.

Key influences and ideas

Hitler was influenced by a number of competing ideologies, such as German nationalism, ideas of 'racial purity', anti-communism and, arguably most importantly, by antisemitism.

Source 1 Hitler held crowds mesmerised for hours with his speeches.

Antisemitism (hostility towards and persecution of Jews) existed in German society, and in other European countries, long before the Nazi Party came to power in 1933. In fact, antisemitism can be traced back as far as the ancient world.

Hitler's political career began in 1919 when he joined the German Workers' Party (DAP), a small group of extreme nationalists and antisemites who saw their role as trying to convince the German people that Jews were primarily responsible for Germany's plight.

In July 1921, he took over the leadership of the party, by then renamed the National Socialist German Workers' Party (or Nazi Party).

The Nazis wanted to make Germany great again after its defeat in World War I. As part of this goal, they used pseudoscientific theories about race that have since been discredited. These theories divided the human race into a hierarchy of distinct racial groups. The nationalist movement and the pseudoscientific **eugenics** movement (see 'Unit 9.8 The Holocaust' on pages 306–11) influenced their thinking. The Nazis believed that 'Aryan' Germans were a 'master race' destined to rule the world. Jews were seen as the single most dangerous threat to this plan because of their supposed racial differences, economic power and social values.

The Nazis used antisemitic propaganda to influence the German public. Jews everywhere were portrayed as acting as a single unit. Antisemitism was emphasised as a 'racial' prejudice rather than a religious one. In order to achieve their 'Aryan' society, other races considered by the Nazis to be 'weak' or 'polluting' were to be removed from society. In addition to the Jews, these groups included Slavs and Sinti/Roma people (Gypsies), as well as non-racial groups such as those with disabilities, Jehovah's Witnesses and homosexuals. While Nazi persecution of these groups was widespread, Jews in particular were made a scapegoat for many of Germany's problems.

Rise to power

The Nazi Party's first attempt to seize power in 1923 was a disaster. Hitler was charged with treason (betrayal of country), but received friendly treatment from the court. In his defence he claimed honourable and nationalistic motives. The judge allowed Hitler to discuss his ideas in court with few restrictions. He eventually served only eight months in prison enjoying many privileges such as daily visits from friends and family, and no forced labour. Hitler used this time to write *Mein Kampf*, a book outlining his ideology, experiences and plans for the Nazi Party.

On his release from jail, Hitler decided that the Nazis should try to gain power by exploiting the political system rather than attacking it. His party gained a small number of seats in the Reichstag (the German legislative assembly) during the 1920s, but it was the Great Depression that gave the party its real opportunity. By 1932 the Nazi Party was the largest single party in the Reichstag. Hitler was appointed Chancellor of Germany in January 1933 by President Hindenburg (see Source 2). After Hindenburg's death in 1934, Hitler combined the roles of Chancellor and President, making himself the *Führer* (supreme ruler) of Germany. Hitler's government then began implementing many of the plans and policies described in *Mein Kampf*. These included the expansion of the military, expansion of Germany's borders, systematic persecution of the Jewish community, and compulsory sterilisation for many Jewish and Sinti/Roma people, as well as those with disabilities.

Source 2 Hitler is sworn in as the new Chancellor in January 1933, taking over from President Hindenburg (right)

For the first three years of the war, Hitler's popularity remained strong. However, in 1942 Germany suffered severe military losses and German cities were regularly bombed by the Allies. Some Germans began to turn against Hitler. There were at least 17 recorded assassination attempts against him and many more were rumoured to have occurred. Hitler gradually withdrew from public life and directed operations from his underground 'bunker' in Berlin. Hitler took his own life as the Soviet Army overran Berlin on 30 April 1945.

9.4 The course of the war in Europe

Appeasement

Immediately after coming to power in 1933, Hitler started to violate the terms of the Treaty of Versailles. He began increasing the size of the military, reintroduced conscription in Germany, re-established the German *Luftwaffe* (air force), and increased the production of weapons and ammunition.

One of Hitler's aims in the 1930s was to regain the territories taken from Germany under the Treaty of Versailles in 1919. Under the terms of the treaty, the Rhineland (a region in western Germany) had been made into a demilitarised zone. Although Germany had political control of this area, it was not allowed to base any troops there. In 1936, however, Hitler ordered that German troops enter the Rhineland.

The British and French response to these events was largely to tolerate them, known as a policy of **appeasement**. Britain and France followed this policy because:

- they believed that giving in to Hitler's demands would avoid another war
- neither France nor Britain could afford to go to war as the economies of both countries were in the grip of the Great Depression
- many people believed that the Treaty of Versailles was too harsh on Germany and some believed that Hitler's actions were justified.

In 1938, Hitler went a step further by annexing (taking control over) Austria (see Source 2). Once again, France and Britain did not react. In the same year, Hitler demanded that the Sudetenland region (part of the newly formed country of Czechoslovakia) be returned to Germany. The Sudetenland had a population of around three million ethnic Germans. Hitler used this fact to justify his claims to the region. In September 1938, representatives from Britain, France, Italy and Germany met in Munich (see Source 1). They agreed to return Sudetenland to Germany (see Source 3). In return, Hitler agreed not to make any further claims over disputed territory in Europe. Despite these assurances, Germany invaded the rest of Czechoslovakia in March 1939.

However, when Hitler began demanding the return of territories in Poland later that same year, Britain formed an alliance with Poland to guarantee the latter's security and independence. On 1 September 1939, Germany invaded Poland and the policy of appeasement was abandoned. France and Britain (including British colonies and dominions such as Australia) declared war on Germany in September 1939.

Initial German success

The invasion of Poland, launched on 1 September 1939, was the first example of what became known as ***Blitzkrieg*** ('lightning war') tactics. *Blitzkrieg* tactics involved the use of coordinated air and land forces to quickly overrun the enemy, followed by slower-moving ground forces, often using horse-drawn transport, which 'mopped up' the shattered defenders and occupied their territory.

Despite the British and French commitment to support Poland, the speed of the German advance made it virtually impossible for either power to offer practical military support. By the end of September, Poland was divided between Nazi Germany and the Soviet Union, with which Hitler had signed a pact in August.

The 'Phoney War'

The period after the German invasion of Poland in September 1939, is known as the 'Phoney War'. Although Germany, France and Britain were officially at war from October 1939 up until April 1940 there were no major battles. There were some sea battles, but Britain and France did not attack Germany on land; instead the British built up their strength and prepared to defend France against German attack. The Phoney War ended in April 1940, when Germany attacked and defeated Denmark and Norway.

For the first two years of the war, Nazi Germany and its allies enjoyed considerable military success. In a series of military campaigns, they used new tactics and equipment to establish an empire that stretched from the English Channel to the Soviet Union; from Norway to the African countries of Algeria and Libya.

The Battle of France

In May 1940, Germany invaded the Low Countries (Belgium, the Netherlands and Luxembourg) and France using *Blitzkrieg* tactics. Despite outnumbering the Germans, the Allied forces were unable to deal with the speed of the German attack. The British government evacuated 338 000 British and French troops from the port of Dunkirk, in northern France (see Source 5). On 22 June 1940, France surrendered (see Source 6), although some military units outside of France rejected the surrender and continued fighting Germany as the Free French Forces.

Source 6 Adolf Hitler at the Eiffel Tower following the fall of France in 1940

The Siege of Tobruk

Italy entered the war on Germany's side in June 1940. Its leader, Benito Mussolini, planned to conquer Egypt from the Italian territory of Libya. However, Australian troops led a British counterattack into Libya, capturing Bardia, Tobruk and Benghazi early in 1941. Hitler sent General Rommel, one of his most experienced officers, with German forces to support the Italians in Libya. Rommel drove the British back into Egypt, although a force of Australian and British troops held on to Tobruk. German propaganda described these men as 'rats', a name that was embraced by the Australian troops as a compliment. The 'Rats of Tobruk', as they became known, proved very aggressive and successful, despite primitive conditions and a complete lack of air support (see Source 9). Royal Australian Navy ships braved enemy air attack to bring in supplies and evacuate the wounded. By September 1941 most of the Australians had been replaced by Polish troops. Rommel did capture Tobruk in June 1942.

The Battle of Britain

Germany turned its attention to defeating Britain. The plan for an invasion required the *Luftwaffe* to destroy Britain's air force, before a combined land and sea assault could be launched. If the Royal Air Force could be destroyed, the *Luftwaffe* could prevent the Royal Navy from interfering with a German invasion fleet. Facing stiff resistance, Germany eventually changed its tactics to focus on bombing Britain's industrial cities, a period of the war known as the ***Blitz***. The Royal Air Force, which included around 100 Australians, was extremely successful in resisting the German attacks from July 1940 to May 1941. By then, Germany was focused on the invasion of Russia, and the threat to Britain had passed.

Operation Barbarossa

The peak of the campaign by the Axis powers (Germany, Italy and Japan) in Europe was the *Blitzkrieg* invasion of the Soviet Union (USSR), which began in June 1941. Code-named Operation Barbarossa, it is still the largest military operation – in terms of manpower, area covered and casualties – in human history. The Axis force was made up of more than three million troops, 3600 tanks and 4300 aircraft.

In 1939, Germany and the Soviet Union had signed a pact, agreeing not to attack each other. Germany's invasion of the USSR in 1941 broke this agreement. There were several reasons for the invasion. Hitler had long argued that the large landmass of Eastern Europe was to provide *Lebensraum* ('living space') for ethnic Germans, and would provide useful resources for the war effort. The motivations were also ideological. The Nazis hated communism and considered Russia's Slavic peoples to be racially inferior to Germans.

Despite the fact that Hitler had outlined a plan to invade the Soviet Union in his book, *Mein Kampf*, the Soviets were still caught unprepared for the invasion. Germany won several major battles and captured huge areas of territory, while the Soviet army was forced to retreat. By November 1941, German forces were within striking distance of Moscow, the Soviet capital.

However, the German forces were unable to capture Moscow. They were unprepared for the severity of the Soviet winter and were met by stubborn resistance

Source 10 German troops were defeated as much by the weather as by the Russian troops on the Eastern Front in 1941–42.

(see Source 10). When the winter of 1941–42 ended and the Germans could manoeuvre again, Hitler directed his forces to southern Russia and its oilfields. Their advance eventually came to a halt at Stalingrad (now known as Volgograd) in September 1942, in a battle that would become one of the bloodiest in history. The German army eventually surrendered at Stalingrad in February 1943. Nevertheless, the Nazi forces still occupied a great area of the USSR, and their control extended over most of continental Europe.

6 Create a diagram or flowchart to explain how *Blitzkrieg* tactics worked. Why do you think they were so effective?
7 During the Battle of Britain, British fighter pilots were instructed to shoot down German sea rescue planes if they thought those planes were being used for surveillance purposes. According to the Geneva Convention – an agreement signed in 1929, outlining the basic standards of war – this was a crime.
   a In pairs, conduct research on the Internet into the Geneva Convention and make a list of the rights protected under it.
   b With your partner, discuss whether shooting down rescue planes is acceptable conduct when your nation is fighting for its survival.
   c Compare your responses with others in your class. Do you all agree?

9.5 The end of the war in Europe

The tide of war turns in Europe

By 1943, the German *Blitzkrieg* tactics had lost the element of surprise and their wartime success had peaked (see Source 1). That year, Britain, the British dominions (including Australia), the USA, the Soviet Union and the Free French Forces formed an alliance to force Germany and its allies into an unconditional surrender.

From 1943, the Soviet army won a series of battles against Germany. By 1945, Germany had been forced out of most of Eastern Europe, with Soviet troops occupying Russia, Poland, Romania, Czechoslovakia and the Baltic States. The Russians continued their advance into Germany, and reached the German capital, Berlin, in April.

Source 2 American troops storming a beach at Normandy, France, on D-Day

EUROPE AND NORTH AFRICA: THE HEIGHT OF AXIS POWER 1942

Source 1

Source: Oxford University Press

In Western Europe, the Allies began major bombing campaigns on Germany from 1942, initially focusing on destroying German airfields but later bombing industrial cities. This campaign failed to significantly affect German morale or industries, and on its own could not win the war. The Allies developed a plan to invade France. On 6 June 1944, around 160 000 Allied troops landed on the beaches of Normandy, in northern France. This operation, known as 'D-Day', led to the liberation of France in August 1944 (see Source 2).

The defeat of Germany

In September 1944, Allied ground troops invaded Germany from the west. The Allies continued bombing major German cities, including Berlin. In April, the Soviets encircled Berlin and launched a final assault. Hitler remained in Berlin, to direct the defence of the city from his underground bunker. Although most of Berlin's population was forced to take part in the fighting, the Soviets seized Berlin after a week of fighting in the streets. Hitler committed suicide on 30 April (see Source 3), and Germany officially surrendered on 7 May 1945.

key**concept:** Contestability

Conflicting reports surrounding Hitler's death

In the years following the defeat of Germany in World War II, there were many reports about Hitler's death and what was done with his body. Numerous conflicting accounts of what actually happened were published in the days and months following the event.

Some reports claimed that Hitler had committed suicide with his wife Eva Braun and that, afterwards, their bodies were burnt. Some reports claimed that the bodies had been buried and were recovered by Soviet troops when Berlin fell and shipped back to Russia. Other reports claimed that Hitler's body was never found at all.

While there was little evidence to support the idea that Hitler had escaped, many alleged sightings of him were reported all around the world in the years following the war. In addition to these reports, the FBI kept detailed records on Hitler for 30 years after the war, and is rumoured to have fully investigated any report that alleged he was still alive.

For more information on the key concept of contestability, refer to page 246 in 'The history toolkit'.

News Chronicle

LATE LONDON EDITION

HITLER DEAD

Doenitz, new Fuehrer, says: We fight on

WEHRMACHT ORDERED TO MAINTAIN DISCIPLINE

HITLER IS DEAD—THE SECOND DICTATOR TO DIE WITHIN THREE DAYS. HIS DEATH WAS ANNOUNCED LAST NIGHT BY HAMBURG RADIO. IN A PROCLAMATION BY ADMIRAL DOENITZ, WHO NOW BECOMES THE NEW FUEHRER. THIS IS THE TEXT OF THE PROCLAMATION:

"It is reported from the Fuehrer's Headquarters that our Fuehrer, Adolf Hitler, has fallen this afternoon at his command post in the Reich Chancellery, fighting to the last breath against Bolshevism and for Germany. On April 30 the Fuehrer appointed Grand Admiral Doenitz as his successor. Our new Fuehrer will speak to the German people."

Admiral Doenitz then went to the microphone to announce that the battle will go on. These are his words:

"German men and women, soldiers of the German Wehrmacht, our Fuehrer, Adolf Hitler, has fallen. In deepest sorrow and reverence the German people bows. He recognised the terrible danger of Bolshevism at an early date and dedicated his existence to this struggle.

"The end of this, his struggles and of his unswerving strength path of life, is marked by his heroic death in the capital of the Reich.

"FIGHT AGAINST BOLSHEVISM"

"His life was one single service for Germany. His action in fighting against the Bolshevist menace was regarded beyond that for Europe and the entire civilised world.

"The Fuehrer has appointed me his successor. Conscious of this responsibility, I am taking over the leadership of the German people in this grave hour of destiny.

"My first task is to save German people from annihilation by the advancing Bolshevist enemy. The military struggle is being carried on by us soldiers. Deployment and fighting of my troops is being conducted by the British and the Americans, we shall have to continue to defend ourselves against them as best we can as long as they hinder us in our battle against the advancing Bolshevists, who want to destroy the German people, but must be further the spread of Bolshevism in Europe.

"REMAIN AT YOUR POSTS"

"The fighting achievements of the German people in this war and the suffering of the homeland are unparalleled in our history.

"For all that I need your help. Create for your commanders, by your work, the best conditions for carrying on arms and munitions.

"Your supreme duty lies daily at his post. Only thus shall we be able to mitigate the sufferings which the coming period will bring to each one of us and to prevent the worst.

"If we do what is in our power God will not forsake us after so much suffering and sacrifice."

Admiral Doenitz then named the Order of the Day: "German Wehrmacht—my comrades. The Fuehrer has fallen. He has called me to lead the German people in this hour. Before his death he has made me General Admiral and appointed me successor. I have a great task before me and I am conscious of the responsibility which I undertake in the hour of the greatest distress of the German people.

"I have a great task before me and I am conscious of the responsibility which I undertake in the hour of the greatest distress of the German people.

"I will have to see that the German people from the ruins of the battle shall live on as a decent community. I know that you, soldiers of the German Wehrmacht, will fight for this aim as long as your leaders and the conditions of battle demand it. I know that I can count on you and your obedience as I could count on the oath of allegiance you swore to the Fuehrer. I promise you everything that I consider necessary to lead the struggle to victory. I will not hesitate to use any means to end the war which is not waged by soldiers alone but by the whole German nation and children.

"The oath of allegiance you swore to the Fuehrer now applies to each one of you. Without Fuehrer, Germany would be destroyed. Without unity and obedience to the last soldier there will be no peace. The life of our people is at stake.

"SHIRKERS ARE TRAITORS"

"Adherence and obedience—those are duties which you have to perform. Whoever acts against the orders of his superiors and refuses to obey, whoever shirks his duty is a coward and traitor, for he brings death or slavery to the German women and children.

"The oath of allegiance you swore to the Fuehrer now applies to each one of you. Without Fuehrer, Germany would be destroyed. Without unity and obedience to the last soldier there will be no peace. The life of our people is at stake.

"German soldiers, do your duty. The life of our people is at stake."

Admiral Doenitz then announced the creation of the new Government of Hitler's death was true. First Dr. Goebbels, who was appointed Chancellor, and Martin Bormann, Party leader, declared that the Fuehrer had handed over the leadership of the Party to them.

9.6 The course of the war in Asia and the Pacific

Background to Japan's involvement in World War II

Compared to many countries in the Asia–Pacific region during the early 1900s, Japan was a powerful, independent and nationalistic country with a strong army. Unlike many other Asian countries, however, Japan had very limited access to natural resources such as oil, coal, rubber and iron ore for steel production. Instead, it relied on other countries such as China and the USA for these.

Japan had supported the Allies (Britain, France and Russia) during World War I, but it was disappointed by the terms of the Treaty of Versailles in 1919. Although Japan was permitted to keep Chinese territory it had seized from Germany during the war, in the years after the war Western powers such as the USA began to limit Japan's influence there.

The Great Depression of the 1930s caused massive unemployment and major social problems in Japan. This led to a military takeover of the government. The military rulers of Japan took a far more aggressive approach to solving their economic problems. Throughout the inter-war period, Japanese politics was dominated by nationalist and militarist movements. Out of these movements came the idea of a 'Greater East Asian Co-prosperity Sphere'. This was the idea that East Asia could exist free of Western influence. It proposed that Japan act as the leader of a bloc of Asian and Pacific nations working together. In reality though, it was designed to allow Japan greater influence and access to oil and rubber resources in neighbouring countries. In 1936, Japan signed an agreement with Germany known as the Anti-Comintern Pact. The following year, Japan invaded China (see Source 1). Finally, in 1940, Japan signed the Tripartite Pact, which cemented the alliance of the Axis powers (Germany, Italy and Japan).

Despite the fact that Japan's invasion of China was in 1937 and the signing of these pacts took place before the war, these events are generally considered to be part of World War II. However, the event that has come to symbolise Japan's entry into World War II is the attack on Pearl Harbor.

CHINA: JAPANESE OCCUPIED TERRITORIES AT THE START OF WORLD WAR II

Source 1 Source: Oxford University Press

Source 2 The bombing of Pearl Harbor on 7 December 1941

Japan's attack on Pearl Harbor

When World War II began in Europe, the attention of Britain, France, the USA and even Australia was diverted away from Japan. Despite evidence of Japanese aggression, there was still a belief that the Japanese did not pose a significant threat.

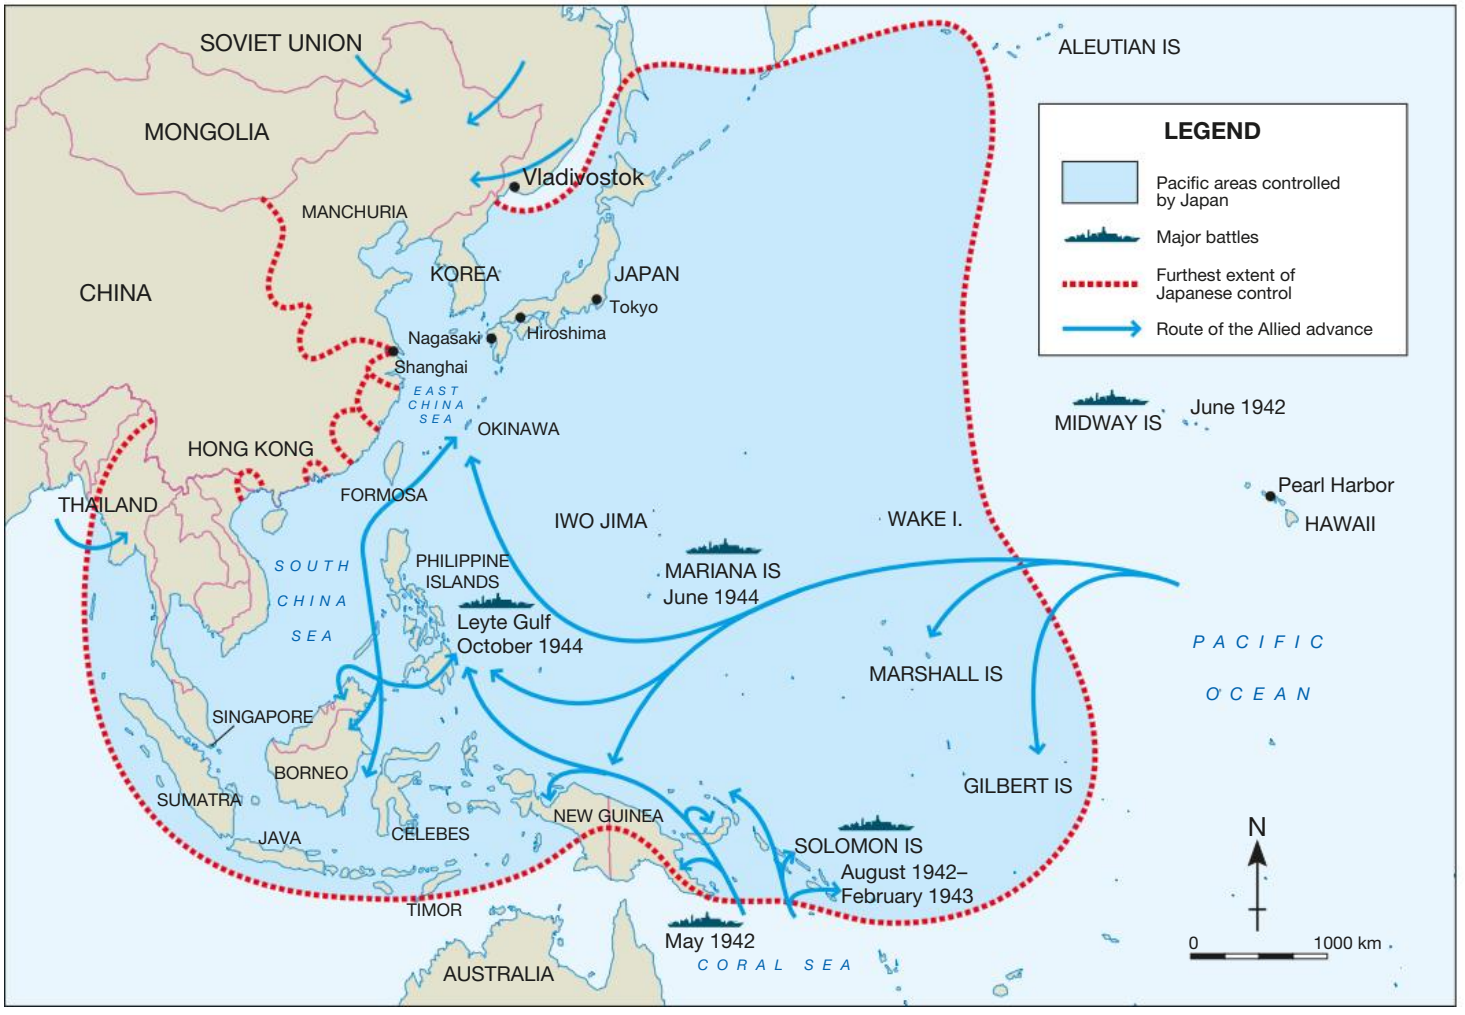

The attack on the American naval base at Pearl Harbor, Hawaii, on 7 December 1941 changed this (see Source 2). It alerted the Allies to the nature of the Japanese threat. Japan hoped to destroy America's Pacific fleet, as a preventative strike to stop American interference in the Pacific. While the attack on Pearl Harbor seemed to be successful, the damage inflicted on the American fleet was less than originally thought. Rather than preventing American intervention, the attack caused the USA, Australia and the Netherlands to declare war on Japan. Germany (an ally of Japan) declared war on the USA. This brought the USA into the European war.

War in the Pacific

For the first two years of the war, Japan appeared to have the upper hand. Following the attack on Pearl Harbor, Japanese forces quickly occupied Malaya, Singapore, Hong Kong, the Philippines, Guam and Wake Island. Malaya was attacked by the Japanese for its rubber resources, quinine was taken from Java and Borneo was raided for its oil – all resources that were much needed for battle.

Japan also conquered Burma in the west, and pushed south through French Indochina (Vietnam, Cambodia and Laos) and the Dutch East Indies to reach Australia's doorstep in New Guinea (see Source 3). Britain and the USA had seriously underestimated Japan's military ability. This, together with the element of surprise and the imaginative use of combined naval and air forces by the Japanese, gave Japan an early advantage.

ASIA AND THE PACIFIC: THE JAPANESE EMPIRE IN 1942

Source 3

Source: Oxford University Press

The fall of Singapore

Singapore surrendered to the Japanese on 15 February 1942, and more than 130 000 allied troops, including 15 000 Australians, became Japanese prisoners of war. Controversially, a small number of soldiers, including the Australian commander Gordon Bennett, escaped on ships to avoid capture. The fall of Singapore caused great concern in Australia. Singapore had been regarded as almost impossible to invade, and strong British presence there prior to 1942 had meant that Australia felt protected. The defeat of the British base in Singapore meant that there was nothing to stop the Japanese advance into Australia. Australia's leaders realised that they could no longer depend on Britain, and that they needed new allies against Japan.

Source 4

> I make it quite clear that Australia looks to America, free of any pangs as to our traditional links of kinship with the United Kingdom … We know the problems that the United Kingdom faces. We know the constant threat of invasion … but we know too that Australia can go, and Britain can still hold on … We are therefore determined that Australia shall not go, and we shall exert all our energies towards the shaping of a plan, with the United States as its keystone, which will give our country confidence of being able to hold out until the tide of battle swings against the enemy.
>
> Australian Prime Minister John Curtin, quoted in the Melbourne *Herald*, 27 December 1941

Source 5 A propaganda poster used to rally Australian support following the Japanese attack on Darwin (AWM ARTV09225)

The Battle for northern Australia

The fall of Singapore brought the war much closer to Australia than had ever been anticipated. From December 1941, there began an evacuation of women and children from Darwin and surrounding areas in fear of a Japanese attack. On 19 February 1942, Japan launched an assault on Darwin (see Source 6). Officially, around 250 people were killed, although the real death toll continues to be debated. Most other Australians were unaware of the seriousness of the attack. The government played down the bombing and the number of deaths. A Royal Commission into the events surrounding the attack revealed that some people, including members of the defence forces, had panicked under fire. There were also stories that some people had looted bombed buildings or simply fled the city.

By November 1943, Darwin had suffered 64 air raids. Other towns in the Northern Territory, Queensland and Western Australia were also struck. In total, there were 97 airborne attacks on northern Australia and approximately 900 Allied troops and civilians were killed. Several ships and almost 80 aircraft were lost. Many people felt that the bombing of Darwin was the beginning of a full-scale invasion of Australia, but whether this is the case or not remains a controversial topic.

War comes to Sydney Harbour

On 31 May 1942, three Japanese midget submarines, launched from a group of five larger submarines further out to sea, entered Sydney Harbour. The submarines sank a ferry carrying military personnel. Twenty-one people were killed before Australian forces sank the submarines. A week later, two larger submarines surfaced off the coast at Bondi, shelling several Sydney suburbs and the nearby city of Newcastle. While little damage was done, the appearance of Japanese vessels emphasised to Australians that the war was now much closer to home.

Turning points

In March 1942, Japanese forces established bases on mainland New Guinea, with the objective of capturing Port Moresby. From there, they could launch regular bomber raids against northern Australia. With this threat looming, Prime Minister Curtin agreed to place all Australian forces under the command of the American General Douglas MacArthur, formerly the commander of the US-controlled Philippines. While American forces were assembling in Australia, and the battle-hardened soldiers of the Second AIF were returning to defend Australia, it was left to inexperienced Australian militia units to stop the Japanese advance to Port Moresby.

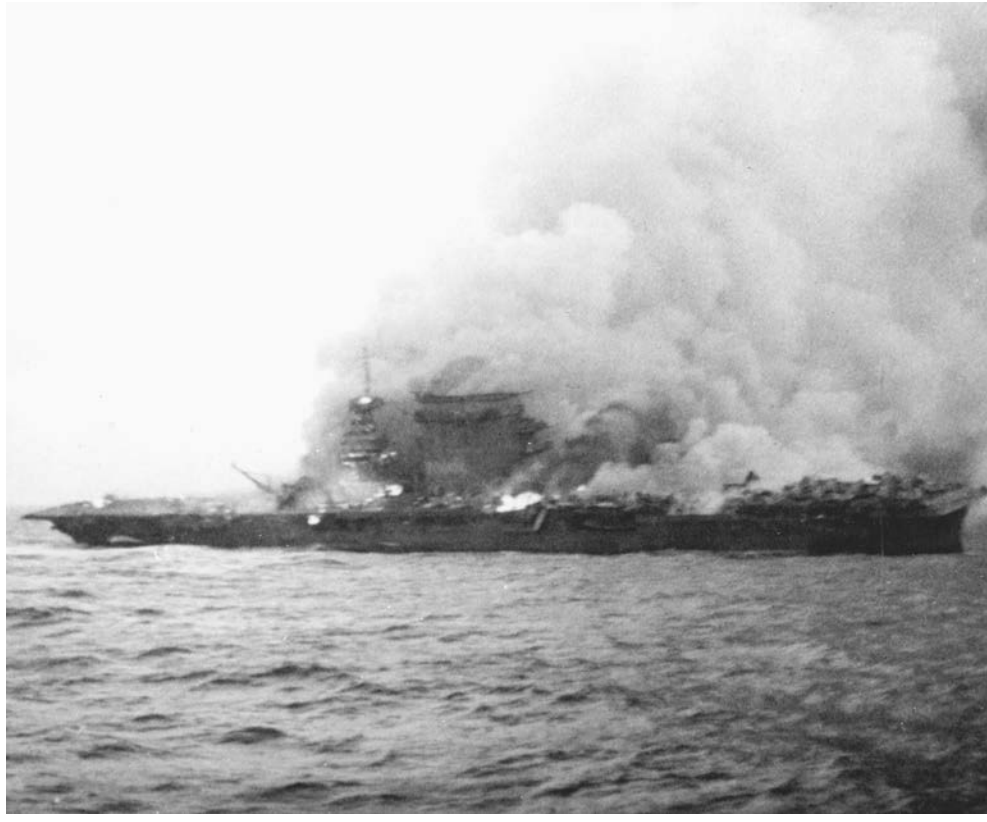

Several battles are identified as key turning points in the Asia–Pacific war zone. At sea the most significant were the Battle of the Coral Sea and the Battle of Midway. Both involved the navies of the USA and Australia in cooperative ventures.

The Battle of the Coral Sea (4–8 May 1942) was fought off the north-east coast of Queensland, just south of New Guinea. Although the Allies suffered a number of casualties (see Source 7), it prevented the Japanese from launching a sea-based assault on Port Moresby. This forced them to make a land-based assault via the Kokoda Trail.

In the Battle of Midway (4–7 June 1942) Japanese naval forces attempted to lure several US aircraft carriers into a trap to capture the strategically important Midway Islands. US code-breakers intercepted Japanese communications. The US Navy destroyed four Japanese aircraft carriers and more than 200 aircraft, severely weakening the Japanese war machine. The USA would use this weakness to prevent supply ships taking war materials, such as oil, munitions and food to Japanese forces in the region. Historians have described the Battle of Midway as 'the most stunning and decisive blow in the history of naval warfare'.

The Kokoda campaign

Japanese forces occupied parts of the north-east of New Guinea in early 1942. As the Japanese navy was halted at the Battle of the Coral Sea, Japan's only option to seize Port Moresby seemed to be an overland assault through dense jungle along a narrow path known as the Kokoda Trail.

The Kokoda Trail (sometimes called the Kokoda Track) is a roughly 96-kilometre-long narrow path in New Guinea, connecting Port Moresby to the village of Kokoda (see Source 8). Surrounded by steep mountains and jungle, the trail was frequently a river of sticky mud, and it was extremely slippery.

PAPUA NEW GUINEA: THE KOKODA TRAIL

Source 8

Source: Oxford University Press

As the risk of a Japanese attack on Port Moresby increased, a military force had to be assembled. Because most Australian troops had been fighting for more than two years in Africa and the Middle East, or had been captured as prisoners of war in the fall of Singapore, a new group of soldiers had to be assembled. Military leaders gathered a group of volunteers from the Citizen's Military Forces (CMF) and local Papuan soldiers. They became known as Maroubra Force. These troops were young, inexperienced and underprepared for frontline combat. They received little training in jungle warfare, and were equipped with old, outdated weapons. By mid-1942, however, more experienced officers were sent to support the young soldiers.

Some units were kept around Port Moresby in reserve, while a smaller force was posted to the village of Kokoda in July 1942. They were sent to defend the airfield there. It took eight days and nights to reach Kokoda, with the troops arriving on 15 July.

The first clash of the Kokoda campaign occurred on 23 July, when a small Australian platoon slowed the Japanese advance across the Kumusi River, before falling back to Kokoda. On 29 July, 80 men defended Kokoda against a Japanese attack, suffering heavy casualties as they engaged in hand-to-hand fighting. The next morning, they retreated further along the trail to the village of Deniki. They suffered heavy casualties attempting to retake Kokoda on 8 August, as well as during the retreat along the trail. This retreat was followed by a two-week break in the fighting, when the survivors met with reserves from Port Moresby and prepared to defend the trail at Isurava.

The Battle of Isurava was a major turning point in the Kokoda campaign. Maroubra Force defended the trail valiantly, but was outnumbered and suffered heavy casualties on the first day of battle. At Isurava, however, the first substantial reinforcements from the AIF began to arrive, providing a vital boost for the depleted Maroubra Force. The battle lasted four days, before the Australians had to retreat further, mounting small-scale delaying actions along the way. Further battles took place at Mission Ridge and Imita Ridge, before the Japanese troops began to run out of supplies and their advance stalled. In October, Australian troops launched a counterattack along the trail, gradually forcing the Japanese back. By 2 November, Kokoda was back in Allied hands. Months of hard fighting lay ahead before the Allies could shift the Japanese from their bases at Buna and Gona.

Approximately 625 Australians were killed fighting along the Kokoda Trail, while at least 16000 were wounded. More than 4000 also suffered from serious illnesses such as malaria. In the immediate aftermath of the campaign, members of Maroubra Force were hailed

as 'the men who saved Australia'. The campaign also had an immediate impact on the organisation of both the American and Australian armies. The Australian troops on the trail had been poorly supplied because of the unreliability of air drops. Both the Australian and American militaries developed new techniques for dropping supplies after their experiences at Kokoda.

The drive to Japan

With increased US involvement in the Pacific, Japan became drawn into a war of attrition, meaning that both sides attempted to wear each other down to the point of collapse (even though forces and supplies were depleted). Under pressure to replace its depleted forces, particularly after the disastrous Battle of Midway, Japan threw inexperienced recruits into the frontlines. Japan's war industries could not keep up with demand for replacement ships and aircraft. Japan gradually lost the resources to undertake major offensives. With Japan on the back foot, the Allies made two successful counterattacks in 1943.

For the remainder of the war, Australia's role changed. The involvement of the Australian military was decreased, and more emphasis was placed on moving Australians into war-related industries and production. Australia's task was often seen as providing other nations with the food and resources needed to defeat Japan and Germany. Despite this, many Australians continued to be involved overseas.

By late 1944, American B-29 bombers had bases from which they could strike Japan's home islands. These raids were highly effective because most Japanese buildings, made of paper and wood, burned easily. On 8 March 1945, a single raid on Tokyo killed 83 000 people, mainly civilians. As US forces got closer to mainland Japan, they found that the Japanese defence was becoming tougher and more desperate. Japanese Kamikaze pilots would carry out suicide missions, crashing their planes into US ships. The US government, in an attempt to bring the war to a swift end, began to consider new options, including the use of nuclear weapons (discussed in section 9B).

9.7 Significant individuals: wartime leaders

During times of war, political and military leaders assume more prominent roles than they do during peacetime. As a result, they are often held responsible for the success or failure of wars.

Initially, these leaders decide whether to declare war or remain neutral. They also decide how many troops to commit. They are also ultimately responsible for the actions of their troops, including the responsibility for upholding the laws of warfare. In World War II, the Allied leaders had monumental decisions to make, and had to accept the consequences of their actions. The political and military leaders discussed here are among the most significant individuals of the Allied forces.

President of the United States – Harry Truman

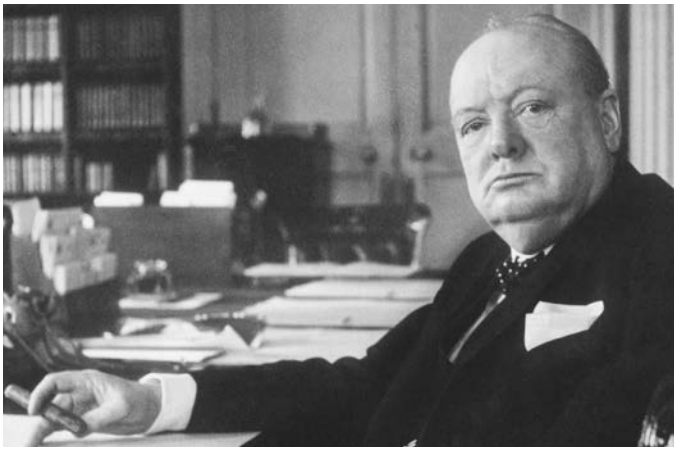

Franklin D Roosevelt was President of the USA for most of the war. When Roosevelt died on 12 April 1945, Truman became President. It was only then that Truman was briefed on the ultra-secret Manhattan Project – the research and development plan for the atomic bomb. In July 1945, Truman joined the other Allied leaders for the Potsdam Conference. While there, he was informed that the atomic bomb had been successfully tested. At Potsdam, the Allied leaders agreed on the terms of surrender to be offered to Japan. When Japan rejected these terms, Truman authorised atomic strikes on the Japanese cities of Hiroshima and Nagasaki. These bombings forced Japan to unconditionally surrender. Despite the consequences of the bombings, Truman never publicly regretted his decision, and said that 'under the same circumstances, I would do it again'.

Source 1 Harry Truman

Prime Minister of Great Britain – Winston Churchill

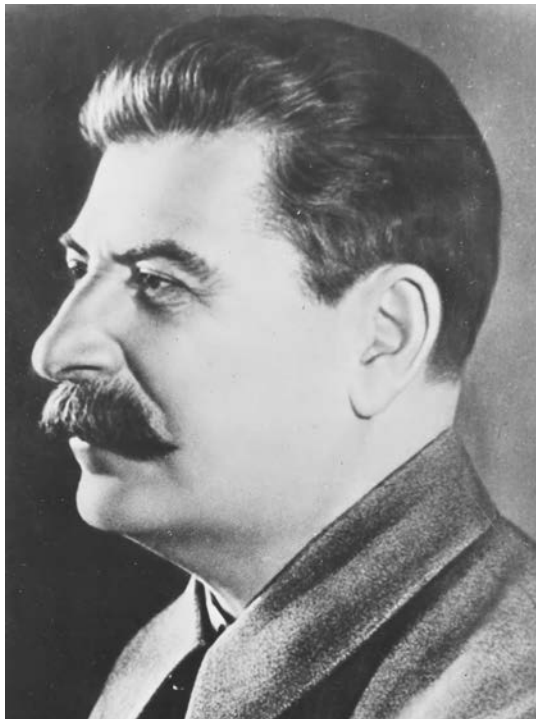

Churchill had been involved in politics since 1900, and was military strategist behind the disastrous Dardanelles campaign (including the Australian attack at Gallipoli) during World War I. He held several different positions between the wars, and became a vocal critic of the policy of appeasement during the late 1930s. He was appointed to the War Cabinet by Prime Minister Neville Chamberlain on the day Britain declared war on Germany, and became Prime Minister in May 1940. Churchill's main contribution to the war effort was to maintain the morale of the British people through his rhetoric and charisma, steering the nation through the Battle of Britain, the Blitz and the D-Day landings. Despite his popularity as a wartime leader, he was defeated in the 1945 elections. He served a second term as British prime minister between 1950 and 1955.

Source 2 Winston Churchill

Premier of the Soviet Union – Joseph Stalin

Stalin joined the Bolsheviks (a militant communist organisation) in 1903, and became the organisation's main operative in his home region of Georgia. When the Bolshevik Revolution installed a communist government in Russia in 1917, Stalin became an increasingly important political figure. By World War II, Stalin was the Premier and undisputed leader of the Soviet Union. He signed a non-aggression pact with Nazi Germany in 1939, which also divided Eastern Europe into German and Soviet spheres of influence, but then Germany invaded the Soviet Union in 1941, starting the war on the Eastern Front. Stalin proved to be a ruthless negotiator at the wartime and post-war conferences, and laid the groundwork for the 'Sovietisation' of Eastern Europe and the Cold War.

Source 3 Joseph Stalin

French General – Charles De Gaulle

Charles de Gaulle held no official government role.
When World War II broke out, he was a colonel in the French army. When his unit achieved a rare victory during the Battle of France, the French Prime Minister, Paul Reynaud, appointed de Gaulle to his War Cabinet. In this role, de Gaulle argued against surrendering to Germany. When France surrendered, de Gaulle rejected the decision and fled to Britain to continue fighting. De Gaulle frequently clashed with the other Allied leaders. Despite this, he proved a charismatic and intelligent leader. His Free French Forces continued to grow, and eventually merged with the French Army of Africa in 1943. By the time of the D-Day landings, Free French Forces numbered 400 000 men. They played a significant part in the liberation of France, and de Gaulle assumed the role of Prime Minister of the Provisional Republic of France from 1944 to 1946.

   c Analyse his importance after World War II.

9A rich task

The Kokoda campaign

The Kokoda campaign was arguably the most significant military campaign in Australia's history. Although it is generally accepted that Japan did not plan to invade mainland Australia during World War II, this was a real fear at the time. Given the limited information available to them, the soldiers of Maroubra Force believed they were fighting the 'battle to save Australia'. Had the soldiers of Maroubra Force not held back the Japanese advance in New Guinea, the war in the Pacific would have gone on for much longer, and cost even more lives.

The campaign is made even more incredible by the conditions in which it was fought. Sources 2 and 3 provide an insight into the experiences of soldiers on the Kokoda Trail.

Source 2

They'd wish they were down with Satan, instead of this hell on earth,

Straining, sweating, swearing, climbing the mountain side,

'Just five minutes to the top'; my God how that fellow lied,

Splashing through mud and water, stumbling every yard

One falls by the wayside when the going is extra hard

Extract from 'The Crossing of the Owen Stanley Range', by Private H McLaren

Source 3

You are trying to survive, shirt torn, arse out of your pants, whiskers a mile long, hungry and a continuous line of stretchers with wounded carried by 'Fuzzy-Wuzzies' doing a marvellous job. Some days you carry your boots because there's no skin on your feet …

Private Laurie Howson, 39th Battalion, diary entry

Despite the significance of the Kokoda campaign in World War II, the Gallipoli campaign of World War I is usually remembered as Australia's proudest battle. Over time, Gallipoli and Anzac Day have become the main focus of public commemoration and remembrance. Some historians and critics now argue that Kokoda would be a more appropriate focus of national commemoration than Gallipoli. They suggest that the Kokoda campaign was fought in defence of Australia, whereas Gallipoli was an invasion of a foreign nation that posed no threat to Australia. Some people also argue that the 'Kokoda spirit' is more relevant to modern Australia than the 'Anzac spirit'.

skill**drill:** Historical significance

Writing a historical discussion

Historical discussions present different opinions about particular historical questions or issues. Follow these steps to write your own historical discussion.

Step 1 Consider evidence from a range of sources, and outline different possible interpretations of that evidence.

- Consider various primary sources – such as newspapers, photographs or political and legal documents from the period being studied.
- Also consider the ideas of other historians, presented in secondary sources such as textbooks and websites.

Step 2 You need to mention in your writing where information is coming from. Some examples of how you can do this include:

- 'According to the historian Peter Williams …'
- 'The depiction of Australian soldiers' experiences in Alister Grierson's film *Kokoda: 39th Battalion* shows that …'

Step 3 Conclude with your own point of view on the question or issue.

Source 4 Summary of the structure of a written discussion

Introduction	• Introduces the topic, question or issue • Outlines why the topic, question or issue is important
Main body	• A series of paragraphs that outline different arguments or opinions about the topic, question or issue • Each opinion or argument that is presented should also refer to the evidence which supports it
Conclusion	• Sums up the issue and gives the writer's opinion

Step 4 Include a bibliography that references all sources used in the discussion. When citing a book in a bibliography, include the following information, in this order:

- Author surname(s) and initial(s)
- Year of publication
- Title of book (in italics)
- Edition (if relevant)
- Publisher
- Place of publication
- Page number(s)

Example:

Braga, S, 2004, *Kokoda Commander: The Life of Major-General 'Tubby' Allen*, Oxford University Press, pp 83–84.

When citing an online source in a bibliography, include the following information, if available:

- Author surname(s) and initial(s) or organisation name
- Year of publication or date of web page (last update)
- Title of document (article) enclosed in quotation marks
- Organisation name (if different from above)
- Date you accessed the site
- URL or web address enclosed in angle brackets

Example:

James, K, 2009, 'The track: a historical desktop study of the Kokoda Track', *Department of Environment, Water, Heritage and the Arts*, accessed 10 July 2016 <http://www.environment.gov.au/heritage/publications/pubs/awm-kokoda-report.pdf>

Apply the skill

1 Write a 500-word historical discussion on the following topic:

'Kokoda was Australia's most successful and significant military campaign and should be commemorated as such.'

Use the information and sources in this section together with your own research to locate a range of primary and secondary sources of information which provide evidence about the significance of Kokoda. Make sure you include a bibliography that references all your sources using the conventions outlined above.

Extend your understanding

1 What was significant about the units that made up Maroubra Force at the start of the Kokoda campaign?

2 Use the sources in this section as well as information you have located through research to write a paragraph describing the conditions in which the soldiers fought along the Kokoda Trail.

3 Research the 'Fuzzy-Wuzzies' mentioned by Private Howson in Source 3.

a What role did they play in the Kokoda campaign?

b Has the contribution of the Papua New Guineans to the campaign been officially recognised?

c Imagine you have been asked by the Australian government to design a new war memorial for the Papua New Guineans. Design a plan for an appropriate memorial, considering: appropriate symbols, where your memorial will be built, the materials you would use, and the message you want your memorial to send.

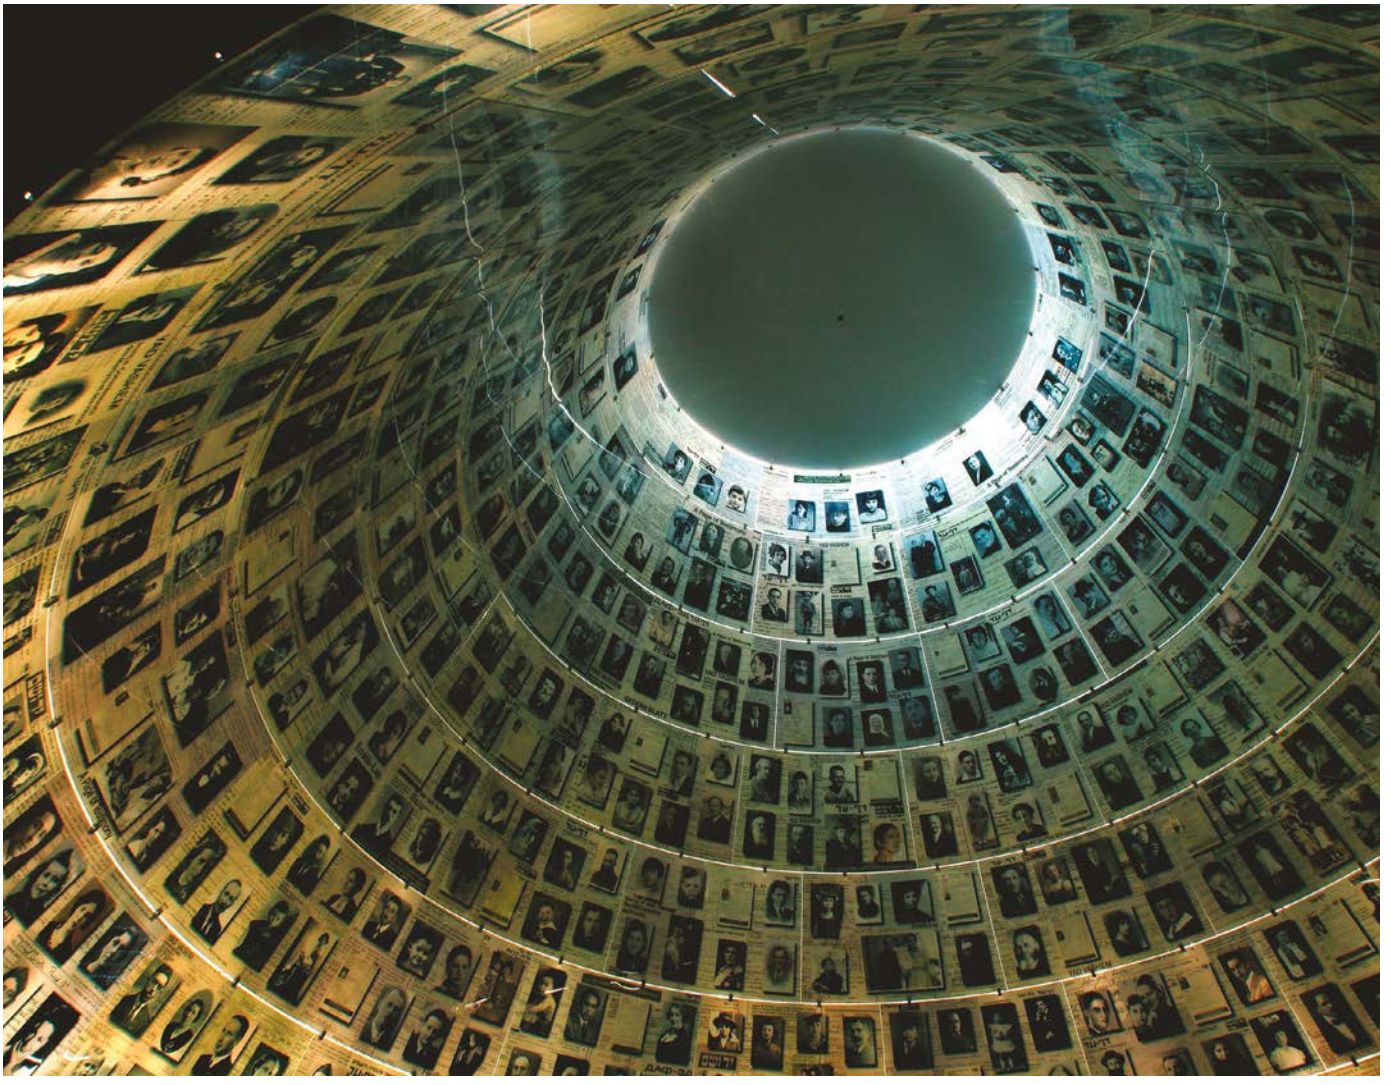

9.8 The Holocaust

In 1933, it is estimated that the Jewish population of Europe stood at around 11 million. By the end of the war in 1945, it is estimated that more than six million Jews had died at the hands of the Nazis. To put this into perspective, more than half of all European Jews were killed. This systematic, government-endorsed persecution and murder of Jews took place throughout the Nazi-occupied territories under the command of Adolf Hitler. It is among the most brutal and destructive policies of the 20th century, and is referred to as the **Holocaust**. Hundreds of thousands of German military and civilian personnel were involved in the mass murder. Millions more collaborated or accepted these events without protest. The word 'Holocaust' is of Greek origin and means 'sacrificed by fire' or 'burnt'. Out of respect for the dead, Jewish communities today use the Hebrew word *Shoah* instead, meaning 'catastrophe'.

Beginnings of the Holocaust

The origins of the Holocaust can be traced back further than Adolf Hitler's lifetime. Antisemitism has its origins in the ancient world, and was rife throughout Europe in the Middle Ages.

In the 1880s, the eugenics movement became popular. Eugenics, a practice that aimed to 'improve'

Source 1 The conical-shaped Hall of Names in the Holocaust History Museum in the Yad Vashem Holocaust complex in Israel – the Hall of Names shows around 600 portraits of Jewish Holocaust victims

Source 2 Nazi storm troopers (also known as brownshirts) outside a Jewish business, directing people to shop elsewhere, 1933

the human gene pool by controlling the types of people giving birth to children, was taught as a subject at many universities. For a time, eugenics was supported by people like Winston Churchill, and was government policy in countries such as the United States. By the 1930s the popularity of the eugenics movement was declining, but the Nazi Party's policies were heavily influenced by its ideas.

Hitler outlined the development of his antisemitism and even some of his proposed policies towards Jews in his book *Mein Kampf*. Many of these beliefs were borrowed from the eugenics movement. He declared that 'the personification of the devil as the symbol of all evil assumes the living shape of the Jew'. *Mein Kampf* also outlined Hitler's hatred of communism, and his belief that Germany would have to expand east to provide Lebensraum ('living space') for ethnic Germans. The seeds of Hitler's cruel and murderous policies were present in his ideology at least a decade before he became Chancellor of Germany in 1933.

Within months of coming to power, Hitler also introduced a law that allowed the compulsory sterilisation of people with mental or physical disabilities. In other words, anyone who was disabled (a broad definition of 'disabled' was used, ranging from schizophrenia, to deafness, to alcoholism) could be legally forced to have an operation to ensure they could not have children. More than 400000 people were sterilised and around 5000 died as a result of these operations. Another 70000 were killed under a related euthanasia program.

Antisemitism and eugenics eventually combined in Germany's racial policies. As well as violence against Jews and boycotts of Jewish businesses (see Source 2), the government refused to grant German citizenship to Jews and sought to remove all Jews from the government, the legal professions and universities. Laws limited the number of Jewish students allowed in public schools, banned Jews from many public places, expelled Jewish officers from the army, and transferred ownership of many Jewish businesses to non-Jewish Germans.

As Hitler's policies began to take hold, many Jews (and Germans) refused to believe the reality of what was taking place around them. Some, including the famous scientist Albert Einstein, left Germany. Others believed that they would be protected because they were German citizens. By the time the reality dawned, they had been stripped of their citizenship and, often, the avenues of escape had been closed to them.

In 1938 there was a wave of violence directed against Jewish synagogues, businesses and houses across Germany. It was known as *Kristallnacht* or the 'Night of Broken Glass'. While there is no doubt that this was organised by the Nazis, Hitler claimed that it was a spontaneous attack by German people, and that it showed the depth of anti-Jewish feeling. The Nazi regime was widely criticised in the international press as a result of *Kristallnacht*.

Source 3 A cloth Star of David badge that Jews were required to wear in public – the word 'Jude' means 'Jew' in German

Spread of antisemitism and the formation of ghettos

Soon after the invasion of Poland in 1939, **ghettos** were set up in Nazi-occupied territories, such as Poland, Hungary and the Soviet Union. Ghettos were small areas of larger cities that were used to isolate Jews from the rest of the population. They were bricked off or encircled with barbed wire to stop people from escaping. Over the course of the war, many Jewish people were rounded up and forced to leave their homes

Source 4 A Jewish youth selling Star of David armbands in Warsaw

and move into ghettos. One of the largest ghettos was in Warsaw, Poland (see Source 5). Conditions inside the ghetto were extremely brutal. It was very crowded and there was often no running water, or toilet facilities. Jews were often not allowed to leave the ghetto and had to depend on the few rations provided by the Nazis. One survivor described the Warsaw ghetto as 'a prison without a roof'. Approximately 800 000 Jews died in the ghettos from malnutrition, disease and forced labour. Others were murdered outright by shooting.

Although the principal victims of the Holocaust were European Jews, Nazi policies also targeted other segments of society, such as Sinta and Romani peoples (often referred to as Gypsies) as well as homosexuals and people with physical or intellectual disabilities. Between 200 000 and 500 000 Sinta and Romani peoples alone were killed by the Nazis. These criminal actions were later labelled **genocide** – the deliberate attempt to wipe out a religious, racial or ethnic group. Nazi occupation policies, particularly in Eastern and Central Europe, were also brutal. In Poland and the Soviet Union, for instance, they resulted in the deaths of millions of civilians.

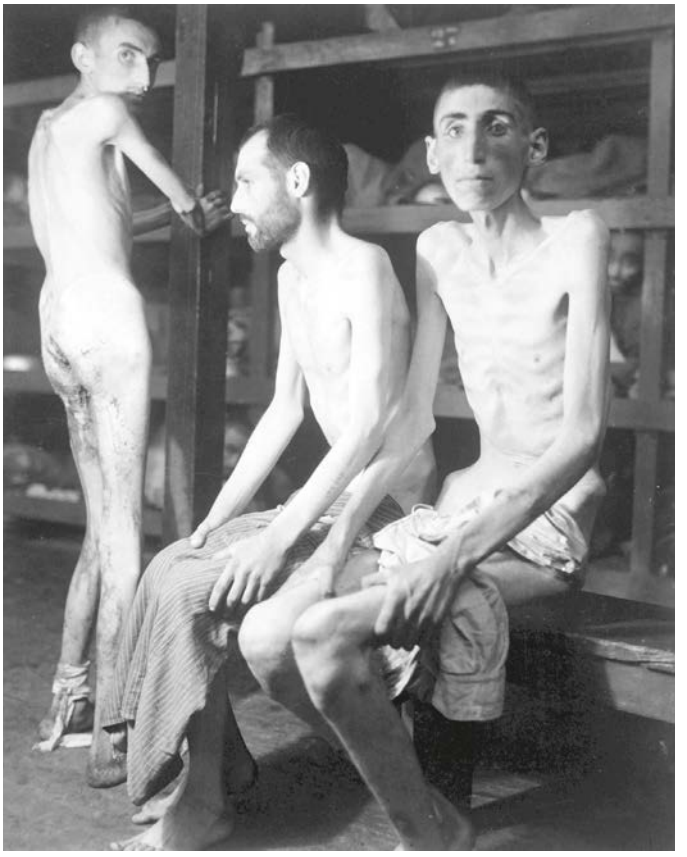

Source 5 The clearing of Jews from the Warsaw ghetto in Poland in 1943. Towards the end of the war, German troops cleared ghettos and transported those living in them to concentration camps either to work or to be killed.

Concentration camps

In addition to the formation of ghettos in large cities to confine Jews and other 'undesirables', the Nazi government used existing concentration camps in Germany and built many new camps throughout the occupied territories, mostly in Poland. The exact number of concentration camps is not known; however, it is generally accepted that there were between 2000 and 8000 camps.

The camps varied in character. Some were forced labour camps where inmates were compelled to do hard physical labour such as mining and road building under harsh conditions (see Source 6). Others were prisoner of war camps where Allied soldiers were held and often tortured in order to reveal secret information. Still others functioned as extermination camps designed for the sole purpose of murdering. Many camps, however, served a combination of these functions. The best known and largest of these camps was Auschwitz–Birkenau, where inmates considered unsuitable for forced labour were gassed and their bodies burnt in crematoria (giant ovens – see Source 7). More than one million Jews alone were murdered at Auschwitz.

Source 6 Russian, Polish and Dutch slave labourers interned at the Buchenwald concentration camp had an average weight of 75 kilograms each before entering camp. Eleven months later, when this photograph was taken, their average weight had dropped to 31 kilograms.

Source 7 Crematoria where the remains of people killed at Buchenwald concentration camp were cremated

Mass shootings

With the invasion of the Soviet Union in June 1941, Nazi policy towards the Jews began to move into its most extreme phase. Between the start of the invasion and early 1943, roughly 1.6 million eastern European Jews were executed in mass killing campaigns that were conducted by members of the *Einsatzgruppen* (mobile killing squads). Local collaborators, the SS (Hitler's elite forces) and some members of the *Wehrmacht* (German armed forces) also participated in this extermination. The process generally involved rounding up the members of a local Jewish community and executing them in an area close to their homes. On 29–30 September 1941 at Babi Yar, near the city of Kiev, 33 771 Jews were executed. This phase of the Holocaust was the most public, and rumours of executions began to spread in the occupied areas and in Germany itself.

The 'Final Solution'

In January 1942, at a meeting in the city of Wannsee near Berlin, leading Nazi officials identified a process to achieve a 'final solution to the Jewish question'. The aim was to eliminate the estimated 11 million European Jews. This 'Final Solution' combined forced deportation and transportation of Jews to labour camps before extermination.

Historians generally agree that around 3 million Jews were killed in concentration and extermination camps, while another 3 million died in other violent or oppressive circumstances outside the camps. All 6 million deaths were a result of Nazi extermination policies. Many other non-Jewish inmates died of maltreatment, disease and starvation.

Source 8 Polish prisoners dig graves for their fellow prisoners after a mass execution by the Nazis, 1941

The Holocaust's legacy

More than 6 million of Europe's 11 million Jews were killed in a deliberate campaign of extermination during the Holocaust. Some survivors endured slave labour in the various camps. Many others hid or were protected by sympathetic non-Jews. There were also those who took up arms against the Nazis, such as the Jewish Combat Organisation whose members led uprisings in some of the major ghettos.

After the war, many European Jews migrated to other countries, including Australia, where they have established vibrant new communities. After enduring the horrors of the Holocaust, many Jews wished to join their fellow Jews who were already living in their ancient homeland. So, in November 1947, the United Nations endorsed the establishment of an independent Jewish state in what became known as Israel (see Unit 9.14). Israel declared its independence in May 1948.

The horrors of the mass murders and other atrocities committed by the Nazis shocked people all around the world. After World War II, the nations of the world were determined to prevent such grave crimes from ever happening again or, at least, ensuring that people committing such crimes would not go unpunished. The facts and lessons of these events are commemorated in Holocaust museums that have been established in many countries, while memoirs and films communicate the Jewish experience of the *Shoah* to the world. New international treaties on human rights, the humane treatment of civilians in times of war, sanctuary for refugees and the elimination of racial discrimination have come into effect since the events of the Holocaust. These treaties, such as the Declaration of Human Rights, recognise the inherent dignity and equal and inalienable rights of all members of the human race as the foundation of freedom, justice and peace in the world.

Source 9 These are the tracks along which trains took people to their death at the Auschwitz–Birkenau concentration camp in Oswiecim, Poland.

Remember and understand

1 What does the word 'Holocaust' mean? What term do Jewish communities use to refer to the Holocaust?
2 What was the eugenics movement? How popular was it?
3 What were some of the laws implemented during Nazi Germany to persecute Jews?
4 Apart from Jews who else was persecuted by the Nazis?
5 Explain the difference between concentration camps and extermination camps.
6 What was the 'Final Solution' and how was it carried out?
7 Why do some sources say that there were six million victims of the Holocaust, and some say 11 million?
8 What are some of the ways in which people have ensured that the events of the Holocaust will not be forgotten?

Apply and analyse

9 Hitler outlined his antisemitic attitudes in his book *Mein Kampf*, and introduced antisemitic policies after coming to power in 1933. Why do you think that so few Jews fled Germany before it was too late?

Evaluate and create

10 Some Holocaust survivors who spent time in the Auschwitz–Birkenau camp have said that the people who were sent to the gas chambers were the 'lucky ones'. Conduct some research into the conditions faced by Auschwitz prisoners. Why do you think survivors have made these types of statements?

9.9 The atomic bombings

In addition to the horrific events of the Holocaust, the dropping of the atomic bombs on the Japanese cities of Hiroshima and Nagasaki, which effectively ended the war, is remembered as one of most significant events of World War II.

The development of more sophisticated technology in World War II culminated in the invention of the atomic bomb. In spite of the horrific bombing raids experienced in Europe during the war, the use of nuclear weapons remains a symbol of the terrifying force and destructive effects of war. The use of the two bombs that successfully ended the war also marked the beginning of the Cold War and the ever-present threat of nuclear destruction.

The Potsdam Declaration

Following the end of the war in Europe, the Allies turned their attention to the war in the Pacific – with the goal of forcing Japan to surrender. At the Potsdam Conference in July 1945, the Allied leaders issued the Potsdam Declaration to Japan. This was an ultimatum, threatening that if Japan did not unconditionally surrender it would face 'prompt and utter destruction'.

The Manhattan Project

The Manhattan Project was the name given to the research program that developed the first atomic bomb. It had its origins in a letter from two of the world's leading physicists, Leo Szilard and Albert Einstein, that was sent to President Franklin D Roosevelt in 1939. The letter outlined their fears that Nazi Germany was beginning research into atomic bombs, and recommended that the USA should begin its own nuclear program. Roosevelt accepted their proposal, and began funding secret research into atomic energy. In 1942, the research program was placed under the command of the American military, and became the Manhattan Project.

Even before the USA entered World War II, it was dedicating huge resources to the Manhattan Project. By 1944, approximately 129000 people were working on the Manhattan Project, including scientists, construction workers and military personnel. Included was a physicist named Robert Oppenheimer (see Source 1) who became known as the 'father of the atomic bomb' for his role in the project.

After three years of using their research to develop a weapon, members of the Manhattan Project tested the first atomic bomb on 16 July 1945, in New Mexico. This test was codenamed 'Trinity'.

Source 1 Robert Oppenheimer and General Leslie Groves examine the wreckage of the tower and shack that held the first nuclear weapon, 11 September 1945

The Trinity test was extremely successful. At the time it was the largest man-made explosion in history. The shock wave made by the explosion was felt up to 160 kilometres away. The test observers immediately contacted President Harry Truman, who was at the Potsdam Conference, and told him that they had been successful. The following month, two other atomic bombs developed by the Manhattan Project were dropped on Hiroshima (on 6 August 1945) and Nagasaki (on 9 August 1945), Japan, in what history would record as the last major acts of World War II.

The Japan campaign

In mid-1945, Japan was losing the war in the Pacific. America had recaptured the Mariana Islands and the Philippines, and Japan was running out of resources.

The Japan campaign began with a series of minor air raids. These raids soon developed into a major strategic firebombing campaign in late 1944, which involved dropping large numbers of small bombs designed to start fires. The change to firebombing tactics resulted in devastating attacks on 67 Japanese cities, killing as many as 500000 people. Despite the damage and the huge civilian death toll, the Japanese military refused to surrender.

America therefore continued to push towards the Japanese Home Islands (the islands that the Allies had decided would be the extent of Japan's territory after the

Source 2 US marines watch a phosphorous shell attack on the Japanese in the Battle of Okinawa

Source 3 'Little Boy' – the atomic bomb that destroyed almost 70 per cent of Hiroshima in August 1945

war). Two major land battles, at Iwo Jima and Okinawa, revealed how fierce Japan's defence of the Home Islands would be. Both islands were heavily fortified and fiercely defended. Around 6800 American troops and approximately 21 000 Japanese soldiers were killed at Iwo Jima. The Battle of Okinawa (see Source 2) was the bloodiest in the Pacific, with 50 000 Americans wounded, and 12 000 killed. Approximately 95 000 Japanese soldiers were killed, including many who committed suicide rather than surrender. It is unknown how many civilians were killed in the American invasion of Okinawa, but estimates vary from 42 000 to 150 000.

Despite the immense loss of life on both sides at Iwo Jima and Okinawa, the American commanders in the Pacific continued preparations for Operation Downfall, the plan to invade Japan. The Soviet Union also prepared to enter the war in the Pacific, planning to declare war on Japan and invade the Japanese-occupied region of Manchuria on 9 August. However, these commanders were not aware of the Manhattan Project. Japan's rejection of the Potsdam Declaration in July 1945 caused President Truman to authorise the atomic bombings of Japanese cities, hoping that it would force Japan to surrender and save millions of lives that might be lost in Operation Downfall.

The bombing of Hiroshima and Nagasaki

On 6 August 1945, an atomic bomb nicknamed 'Little Boy' was dropped on the city of Hiroshima (see Source 3). Hiroshima was chosen because it was a large, urban, industrial city that also served as a military storage area and an assembly point for troops. No one knew how much damage the bomb would do, so Hiroshima was one of the few major cities not targeted by the American firebombing campaign. In that way the damage caused by the bomb could be more easily observed.

The bombing occurred at 8.15 on a Monday morning in Hiroshima. The city's residents had been given no warning of the atomic bombing. The bomb's immediate impact was incredible. Approximately 80 000 people, or 30 per cent of Hiroshima's population, were killed, and another 70 000 were injured. Roughly 69 per cent of the city's buildings were completely destroyed. The long-term effects of the bombing were even worse. People suffered from burns, radiation, cancer and many other side effects. The exact figures are disputed, but the total number of deaths caused by the bomb by the end of 1945 was between 90 000 and 160 000. By 1950, around 200 000 people had died because of side effects from the bomb.

After the bombing of Hiroshima, President Truman released a statement saying that a new weapon had been used, and that 'if they [the Japanese government] do not now accept our terms, they may expect a rain of ruin from the air'. On the same day, the Soviet Union declared war on Japan and invaded the Manchuria region. However, the Japanese government still did not respond to the Potsdam Declaration. On 9 August, a second atomic bomb was dropped on the port city of Nagasaki.

The bomb's impact on Nagasaki was just as devastating as it was on Hiroshima. Between 40 000 and 75 000 people were killed by the immediate effects of the bomb, and a further 74 000 were injured. By the end of 1945, at least 80 000 were dead because of the bomb's long-term effects.

keyconcept: Empathy

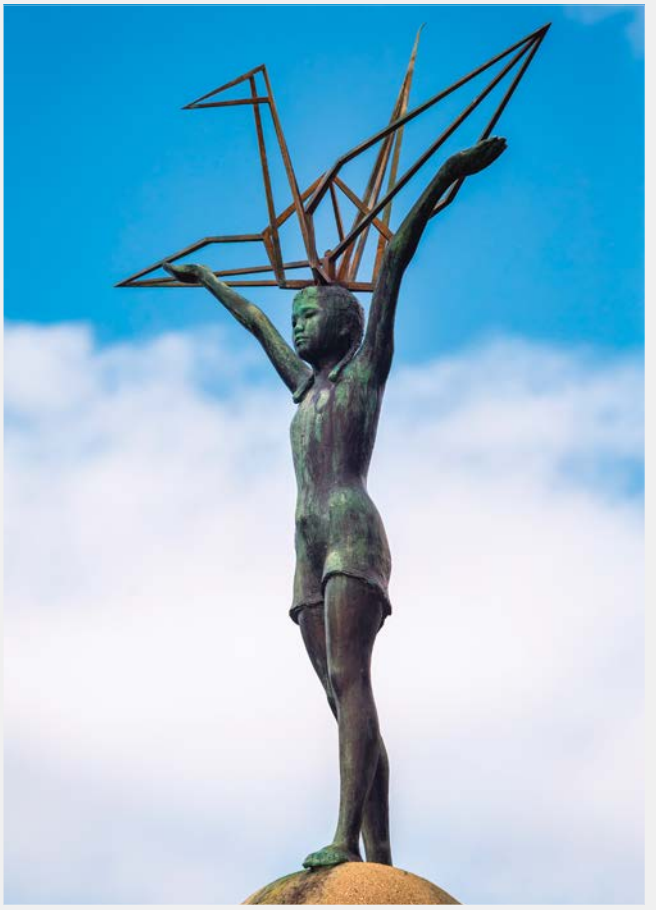

The story of Sadako Sasaki

Sadako Sasaki is one of the most famous victims of the atomic bombings in Japan during World War II. She was only two when the atomic bomb was dropped on her home city of Hiroshima. She survived the explosion, but began to develop symptoms nearly a decade after the bombing. In November 1954, Sasaki developed swelling on her neck, and purple spots on her legs. She was diagnosed with leukaemia, and hospitalised in February 1955.

While in hospital, she was visited by a friend who taught her to fold paper to make origami cranes. There is a Japanese tradition that folding 1000 paper cranes brings good luck and grants the person who folds them one wish. Sasaki attempted to fold 1000 cranes, but died in October 1955 before she could complete her task. Her friends and family finished the cranes, and built a memorial to Sasaki, and all the children who were affected by the bombings.

Sasaki's story is just one of tens of thousands of victims of the atomic bombings. Her story puts a human face on the suffering of the victims, and helps to ensure that the victims are not considered simply as statistics.

For more information on the key concept of empathy, refer to page 244 of 'The history toolkit'.

Source 4 Statue of Sadako Sasaki holding a crane in the Peace Memorial Park in Hiroshima

Japan surrenders

Japan was shocked and devastated by the two atomic bombings and the declaration of war by the Soviet Union. Although the Japanese military commanders wanted to continue fighting the war, Emperor Hirohito ordered his government to surrender.

On 14 August the Japanese government notified the Allies that it would accept the terms of the Potsdam Declaration, provided the Emperor retained full sovereignty of Japan (the right to rule independently and free of foreign influence). That night, members of the Japanese military attempted to overthrow the government and remove Emperor Hirohito from power. They were unsuccessful. On 15 August 1945, Hirohito's surrender speech was broadcast on Japanese radio, marking the end of World War II. The formal declaration of surrender was signed on 2 September, and the Allies occupied Japan from that date until 1952.

Debate about the bombings

Immediately after World War II ended, most Americans supported the use of the atomic bombs to force Japan to surrender. Disturbing images of maimed survivors were censored in the USA, and many people were so used to anti-Japanese propaganda that they felt little empathy for the victims of the bombings. Since then, however, there have been fierce debates over whether the atomic bombings were justified or necessary to win the war.

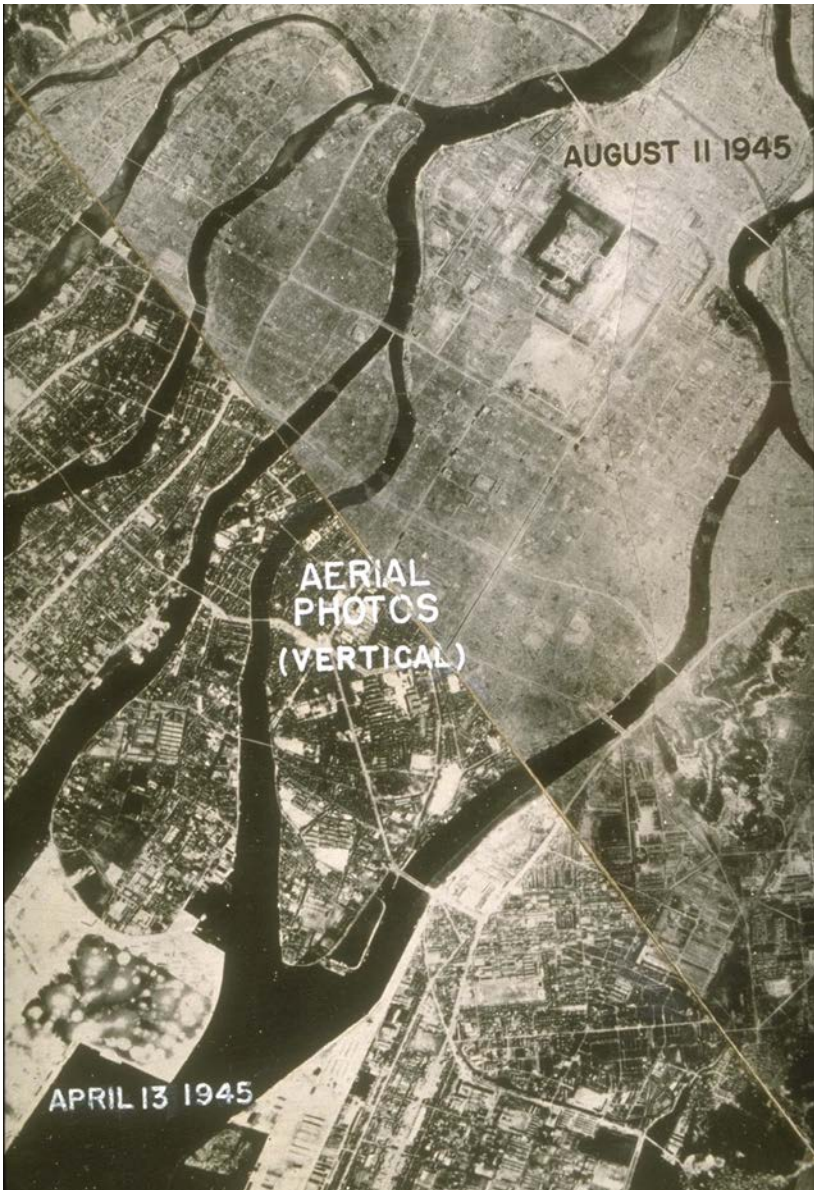

Some argue that the bombings saved millions of lives by preventing the need for an invasion of the Japanese Home Islands. The ferocity with which Japanese soldiers fought at Iwo Jima and Okinawa made this a popular view among American soldiers and their families. Other supporters of the decision to use the atomic bombs say that Japan's 'never surrender' warrior culture meant that, without the bombings, Japan would not have surrendered. Another argument is that the atomic bombings were the inevitable result of both sides

engaging in total war. At the time, many people believed that it would not be practical to spend $2 billion on the Manhattan Project, and then decide not to use the atomic bombs created to save American lives.

Some critics of the bombings argue that the surprise bombing of civilians with nuclear weapons was fundamentally and morally wrong. Others argue that the bombings constituted war crimes, or crimes against humanity. In a 2003 interview, Robert McNamara, who was the US Secretary of Defence from 1961 to 1968, recalled General Curtis LeMay, who was involved in planning the bombings, telling him 'if we'd lost the war, we'd all have been prosecuted as war criminals'.

Remember and understand

1. What were some of the reasons for the choice of Hiroshima as the target for the first atomic bombing?
2. Who sent the letter to President Roosevelt that kick-started the Manhattan Project? What were the two main points of the letter?
3. What was Operation Downfall? Why was it never fully carried out?

Evaluate and create

4. Outline some of the arguments for and against the atomic bombings of Hiroshima and Nagasaki in World War II. Do you believe the bombings were justified?
5. Collect a series of images and quotations to create a PowerPoint presentation showing the impact of the atomic bombings of Hiroshima or Nagasaki. You should consider both the short-term and long-term effects of the bombings.

9B rich task

Antisemitism in Nazi Germany

There is considerable evidence that shows the nature and complexity of the experiences of those who were subjected to antisemitism in Nazi Germany, before, during and at the end of World War II.

Evidence includes the many laws passed in Germany during the 1930s. Once the war started, the Nazis took photographs in the ghettos and in concentration and extermination camps. Then, when the camps were liberated by the Allies in May 1945, there were more photographs taken and views recorded by those who liberated the camps. The soldiers were shocked at what they found. Still later, as Holocaust survivors began to readjust to life after the trauma, many of them documented their experiences and feelings.

Source 1 Buchenwald prisoners liberated by the US army in April 1945

Source 2

I hated the brutality, the sadism, and the insanity of Nazism. I just couldn't stand by and see people destroyed. I did what I could, what I had to do, what my conscience told me I must do. That's all there is to it. Really, nothing more.

Oskar Schindler, German Industrialist who saved many Jews

Source 3

When people came to gas chamber, they had a soldier going around and said, 'Women here, men here. Undress. Take shower.' They told them, 'You're going to a camp. Going to work. Tie shoes together. And make sure your children tie their shoes together. Because when you come out, you don't so much spend time look for your shoes and your clothes.' All a lie. They were not thinking about it that they will be dead in another fifteen minutes.

Holocaust survivor Sigmund Boraks

Source 4

A Jew cannot be a citizen of the Reich. He cannot exercise the right to vote; he cannot hold public office … Marriages between Jews and nationals of German or kindred blood are forbidden … Jews are forbidden to display the Reich and national flag or the national colours.

Selected points from the Nuremberg Laws, a series of antisemitic laws put in place in Germany by the Nazis

Source 5

I feel the urge to present to you a true report of the recent riots, plundering and destruction of Jewish property [on *Kristallnacht*]. Despite what the official Nazi account says, the German people have nothing whatever to do with these riots and burnings. The police supplied SA men with axes, house-breaking tools and ladders … the mob worked under the leadership of [Hitler's] SA men.

Anonymous letter from a German civil servant to the British Consul, 1938

skill**drill:** Historical sources as evidence

Evaluating the reliability and usefulness of sources

Historians use a range of sources to make speculations, develop insights or draw conclusions about the thoughts and actions of people in the past, including letters, diaries, photographs, artworks, legislation, buildings and clothing as well as reminiscences about an event, even if they were not recorded until many years later. Being able to evaluate the reliability and usefulness of different sources is one of the most important, and perhaps most difficult, historical skills you need to master. The first thing to understand is that these terms (reliable and useful) are not interchangeable: a source can be both unreliable and useful at the same time, or reliable and not useful at the same time!

Step 1 Evaluating reliability

To determine the reliability of a source, you need to identify whether it is **biased**. Bias means having an unbalanced or one-sided opinion. Bias is found in secondary and primary sources. It is natural for people to show their opinion when they write something. To recognise bias in a source, think about:

- who wrote/created it
- when it was written/created
- why it was written/created
- whether the source distorts the facts
- whether the source gives or shows one side of the story, or whether it is balanced
- whether the views expressed in the source can be verified.

You can then come to a conclusion about whether the source is biased. Make sure you give specific reasons for your conclusion. You need to explain how and why a source is biased, and how this bias affects its reliability. The more biased the source, the less reliable it is, *but* remember that sources are never completely reliable nor unreliable.

Step 2 Evaluating usefulness

Some historical sources are more useful than others. But sources are not simply useful or not useful in their own right. They are useful or not useful depending on what you wish to find out from them.

Just because a source is biased does not automatically mean that it is not useful. It may be extremely useful if you are investigating the opinions of a particular group at a particular time. However, if you are investigating 'the facts' of an event, a biased source may be much less useful. For example, anti-Jewish propaganda during World War II may be very useful when considering Nazi attitudes towards Jews in the 20th century, but not much use as evidence that there were some Germans who did not support the Nazi's antisemitic policies. To make a conclusion about whether a source is 'useful', you need to be very clear about *what* you want to use the source for.

Use the following steps to evaluate a source's usefulness:

- Be clear about what historical question you are investigating.
- Identify whether the source is biased/reliable using the process above.
- Look at what the source is telling/showing you and compare it to what you need/would like to know. Remember to consider both explicit (clear) and implicit (hidden) messages.
- Ask yourself: what are the uses of this source to answer my historical question?
- Ask yourself: what are the problems of using this source to answer my historical question?
- Make a final judgement about the source's usefulness for your purposes.

Apply the skill

1 Analyse each of the sources provided in this section. Then, using the process outlined above:
   - **a** evaluate each source's reliability.
   - **b** evaluate how useful each source would be in explaining Nazi attitudes towards Jews.
   - **c** evaluate how useful each source would be as evidence that not all Germans supported the Nazi's antisemitic policies.

2 For each source, be sure to explain how you reached your conclusions.

Extend your understanding

1 Conduct research into some of the main concentration camps that were built by the Nazis in Germany and its occupied territories. For each camp, take notes on the following:
   - name of the camp
   - location
   - when it was built
   - its main purpose (that is, as a holding place; forced labour; extermination)
   - the years in which it operated
   - estimated number of Jews killed in the camp.

2 See if you can locate the story of a person who survived the camp, and summarise some of their main experiences. If possible, try and also find some images, drawings or photographs of some aspect of the camp.

3 Create a PowerPoint presentation that highlights your findings.

9.10 Australia's commitment to the war

When Britain declared war on Germany in September 1939, Australia gave its full support to the declaration. Only a few hours after Britain declared war on Germany, the Australian Prime Minister, Robert Menzies, made a radio broadcast to the nation.

Source 1

> Fellow Australians,
> It is my melancholy duty to inform you officially, that in consequence of a persistence by Germany in her invasion of Poland, Great Britain has declared war upon her and that, as a result, Australia is also at war. No harder task can fall to the lot of a democratic leader than to make such an announcement.
>
> From a speech made by Prime Minister Robert Gordon Menzies, 3 September 1939

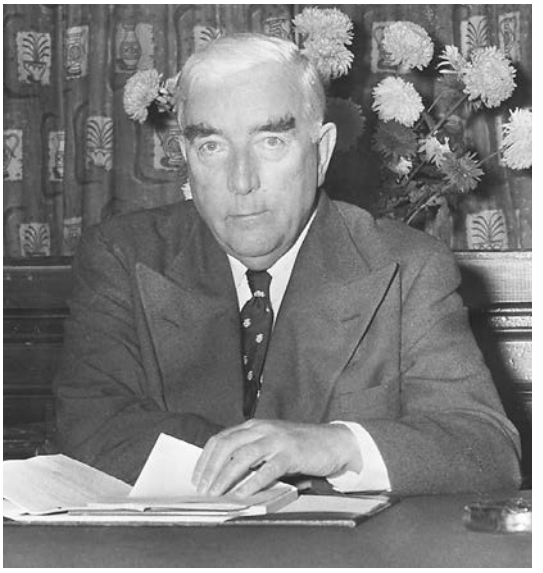

Despite the declaration of war, Menzies was initially reluctant to commit Australian troops to fight in Europe. Australia's military was in a depleted state, and Menzies wanted to ensure that Australia could defend itself at home if required. The first Australian Imperial Force (AIF) had been disbanded after World War I. In 1939, the army consisted of around 3000 professional soldiers, and a voluntary **militia** (non-professional soldiers) called the Citizen Military Force (CMF). The CMF could only serve in defence of Australia. These units were mainly equipped with weapons brought home from World War I by the first AIF.

Despite his doubts, Menzies authorised the creation of a second AIF in September 1939. The Australian Government had promised 20000 soldiers for the British war effort, but initially struggled to fulfil this commitment. Soldiers in the AIF were paid less than those in the CMF, and AIF wages were even lower than the dole. As a result, many members of the CMF were reluctant to transfer to the AIF. The Royal Australian Air Force (RAAF) was also much more attractive to many Australians, because it seemed more exciting and offered higher wages. It took three months to fill the 6th Division of the AIF, in contrast to the three weeks it took to raise 20000 men at the start of World War I.

The fall of France in 1940 changed Australia's perception of the war. Recruitment rates surged, three new divisions of the AIF were formed, and the government began to pour money into war-related industries. From 1940 to 1942, the AIF served mainly in Libya, Greece, Crete, Syria, Egypt and Malaya. The Australian air force and navy also served in a number of significant battles during this time.

Source 2 Second AIF recruitment poster (AWM ARTV06723)

Source 3 Robert Gordon Menzies (1894–1978), Prime Minister of Australia when World War II was declared

Conscription was still a matter of great debate in Australia at the start of World War II. When conscription was introduced in October 1939, it only required unmarried men aged 21 to report for three months' militia training and service in the CMF. They could also choose only to serve in Australia or its territories. This mild form of conscription did not cause too much outrage among Australians in 1939. Soon after, in 1942, however, all men aged 18–35 and single men aged 35–45 became eligible to be conscripted into the CMF. These conscripts, despite being given the derogatory nickname 'Chocos', performed admirably under incredibly difficult conditions in the Kokoda and Milne Bay campaigns. (Choco was short for 'chocolate soldier' because militia were thought to 'melt' in the heat of battle.)

From September 1939 until December 1941, Australia gave full support to the European war but Australians at home felt little impact from the war. This changed dramatically with the bombing of Pearl Harbor and the fall of Singapore.

After John Curtin was elected Prime Minister in 1941 and Japan entered the war, Australia's experience of the war changed as the whole population mobilised to support the war effort. Women were encouraged to enter the workforce; industry and the production of goods and equipment became regulated by the government; and coastal defences were extended and reinforced. With the fall of Singapore, Australia was directly under threat for the first time.

On 8 December 1941, the Prime Minister, John Curtin, addressed the nation.

Source 4

> Men and women of Australia, we are at war with Japan. That has happened because, in the first instance, Japanese naval and air forces launched an unprovoked attack on British and United States territory; because our vital interests are imperilled and because the rights of free people in the whole Pacific are assailed. As a result, the Australian Government this afternoon took the necessary steps which will mean that a state of war exists between Australia and Japan. Tomorrow, in common with the United Kingdom, the United States of America and the Netherlands East Indies governments, the Australian Government will formally and solemnly declare the state of war it has striven so sincerely and strenuously to avoid.
>
> John Curtin, Declaration of war on Japan; excerpt from ABC radio broadcast of the Prime Minister's address to the nation, 8 December 1941

Source 5 Soldiers of the Second AIF leaving Australia to serve in the war, January 1940 – their helmets show their enlistment numbers and the cases on their chests hold their gas masks (AWM 011141)

The war actually reached Australia's shores in February 1942, when Japanese fighter and bomber planes launched a series of bomb attacks across northern Australia. The most serious was the bombing of Darwin on 19 February (see Source 6 on page 299). The Prime Minister declared that Australia was now in a state of 'total war'.

Check your learning 9.10

Remember and understand

1 Why was Prime Minister Menzies initially reluctant to commit Australian troops to fight in Europe?
2 What were some of the reasons the AIF initially struggled to fulfil its commitment of supplying 20 000 soldiers to support British troops in Europe? What event boosted recruitment?
3 Why were conscripted members of the CMF nicknamed 'Chocos'?

Apply and analyse

4 What do Menzies' words (see Source 1) tell us about the relationship between Britain and Australia in 1939?
5 How and why did Australia increase its commitment to the war after 1941? Refer to Source 4 in your answer.

9.11 Australian experiences of the war abroad

Source 1 Australian Army Rising Sun Badges like this one from 1942 were issued to soldiers of the AIF during World War II. They helped identify Australians fighting abroad.

In the early years of World War II, Australia's contribution to the war effort closely mirrored that of World War I. Roughly 550000 Australian men served overseas in the armed forces out of a total population of seven million. Australian servicemen fought in campaigns in Europe, the Middle East and the Pacific.

In 1941, Australian ground forces were stationed in North Africa, Greece, Crete and Syria as part of the wider imperial commitments. Royal Australian Air Force (RAAF) pilots and crew also played a major role in the Allied bombing campaigns over Germany, where 6500 died.

The bombing of Pearl Harbor and the fall of Singapore increased the level of Australia's involvement. From 1942, the majority of Australian forces were deployed in the South-West Pacific area – in New Guinea, the Dutch East Indies (now Indonesia) and the Pacific Islands.

In 1943, conscription into the armed forces in Australia's overseas territories including New Guinea and the Solomon Islands was introduced with little opposition. Because of the real threat of Japanese invasion, the issue of conscription was much less divisive than it had been during World War I.

In Australia, as with the other nations involved in World War II, 'total war' meant that both servicemen and civilians became part of the war effort. From early 1942, when the war came close to Australia's shores, all aspects of the Australian economy were focused on the war effort. 'Luxury' industries such as furniture making were disbanded, and men involved in 'critical' war-related industries were not allowed to enlist. The USA made Australia its main base for the South-West Pacific meaning that up to one million American servicemen were based in Australia. The economy was geared to meet the needs of these soldiers as well as supporting the Australian forces and maintaining the war effort.

Prisoners of war

Australian service personnel were captured by the enemy in all the major areas of war. Roughly 8184 Australians were held as prisoners of war (POWs) in German and Italian camps. Of these, 269 died. These men were mostly captured in Greece and North Africa, while many members of the RAAF had been shot down in bombing raids over Germany and captured there. Most Australian POWs in Europe were imprisoned in purpose-built POW camps under decent conditions. Nine Australians were, however, among a group of 168 Allied pilots shot down over France and imprisoned in the Buchenwald concentration camp.

By far the highest number of Australian POWs were captured by the Japanese in the Pacific (see Source 2). Between January and March 1942, more than 22000 Australian service personnel were captured by Japanese forces in the region, with 15000 captured in Malaya and Singapore alone. By 1945, more than 8000 had died. The significantly higher rate of deaths among POWs captured by the Japanese can be attributed to Japan's attitude towards prisoners. Japanese military culture, shaped by

Source 2 Australian POWs in a Japanese prison camp at the end of the war (AWM 019199)

traditional values, meant that the Japanese treated enemy prisoners poorly. Japan refused to follow the terms of the **Geneva Convention**, an international agreement on the treatment of captured civilians and military personnel.

At camps in Ambon in Indonesia and Rabaul in Papua New Guinea, conditions were so appalling that more than half those captured died, and hundreds of Australian prisoners were massacred. POWs were also killed in tragic accidents. In 1942, 1053 Australian POWs were killed while being transported from New Guinea to Japanese-occupied China. The Japanese ship they were on was torpedoed and sunk by an American submarine unaware that the ship was carrying ally POWs.

The Japanese also made use of POWs as forced labour, most notably on the Burma Railway. Along with British, Dutch and American prisoners, 13000 Australian POWs were used as forced labour to build the Thailand–Burma railway line, which was to supply the Japanese campaign. About 2800 Australians died from malnutrition, mistreatment and disease.

key**concept:** Significance

Edward (Weary) Dunlop

Among Australia's prisoners of war there were many remarkable stories of heroism and resilience. One of the most notable was the story of Edward (Weary) Dunlop, a Melbourne doctor who was captured by the Japanese in Java in 1942. Dunlop was sent to work on the Burma Railway where he often put his own life on the line to care for sick and wounded soldiers. He also stood up to the Japanese on behalf of those unfit for work. For this reason he is remembered as a significant Australian.

For more information on the key concept of significance, refer to page 245 in 'The history toolkit'.

Source 3

> … thousands of us starved, scourged, racked with malaria, dysentery, beri beri, pellagra and the stinking tropical ulcers that ate a leg to the bone in a matter of days, and always Weary Dunlop and his fellow MOs [medical officers] stood up for us, were beaten, scorned, derided, and beaten again.

3 What is the Geneva Convention?

Apply and analyse

4 Why do you think there was minimal opposition to the introduction of conscription in World War II when the same issue caused such controversy and division during World War I?

Evaluate and create

5 Conduct some further research into Edward (Weary) Dunlop and write a short biography that provides details about his early life, his experiences and actions during World War II, and his life after World War II including the work he undertook to help former prisoners of war.

9.12 Life on the home front

When Australian Prime Minister Robert Menzies committed Australia to the war in 1939, the direct threat to the Australian mainland was fairly low. The war was mostly seen as a European conflict. However, when the threat of a Japanese invasion of Australia became a reality in 1941, the Australian war effort had a serious impact on the lives of ordinary Australians at home.

National Security Act

One of the first steps towards 'total war' taken by the Australian Government was the National Security Act. This Act, passed on 8 September 1939, introduced laws that gave the federal government greater powers to respond to the threat of war. It allowed newspapers and the media to be censored, and legalised the detention of so-called 'enemy aliens' – for example, Germans and Italians living in Australia. It also meant that groups who opposed the war, such as the Communist Party of Australia and Jehovah's Witnesses, were banned.

Censorship and propaganda

During the war years, the Australian government believed that strict **censorship** was necessary to maintain national security and boost public morale. The Department of Information was responsible for its administration. All forms of media, such as newspapers and radio broadcasts, were subject to controls that limited what they could report. For example, when Japanese forces bombed Darwin in 1942, the extent of damage, the scale of the attack and the loss of life were downplayed in newspapers and on radio.

Similarly, when Australian and US soldiers brawled in the so-called 'Battle of Brisbane' on 26 November 1942, the death of one Australian and the injury to others was censored because the event was seen as threatening US–Australian relations.

In addition to this, the Department of Information censored mail (see Source 2) and monitored phone calls to ensure that military information relating to troop movements and locations was not communicated to the enemy.

In addition to censoring information during the war, the Australian government also relied heavily on **propaganda**. Propaganda is information designed to influence the ideas and attitudes of a group of people by presenting only one side of an argument. Throughout World War II propaganda was used to encourage Australians to support the war in different ways: enlist to fight; work in certain industries; support certain causes. Most importantly propaganda was used to unite Australians against a common enemy. Propaganda did this by encouraging an emotional response from people. Anger, fear and a sense of national pride were all strong motivations.

Source 1 A campaign poster urging civilians in Australia not to gossip (AWM ARTV02497)

Source 2 Mail being censored (AWM 139316)

Source 3 Italian POWs at Liverpool Prisoner of War and Internment Camp, New South Wales, during World War II (AWM 123706)

Censorship and propaganda were used together during the war to ensure that Australians were sympathetic to significant changes being made to laws and government policies.

Internment

During World War II, the Australian government took steps against people living in Australia who they believed threatened national security. Initially, this included the **internment** (detaining people in special camps) of Germans and Italians living in Australia who were believed to be pro-Nazi or pro-fascist (see Source 3). When war with Japan began, all Japanese who lived in Australia were also interned. Approximately 7000 'enemy aliens', many of whom had lived peacefully and innocently in Australia for decades, were interned in camps around the country.

Everyday life

Although the people of northern Australia suffered numerous air attacks from the Japanese, the lives of most Australians further south were not dramatically affected by the actual fighting of World War II. However, their lives were influenced in other ways, including the types of work they were allowed to perform. The government gave priority to industries such as manufacturing (for war materials such as aircraft and munitions) and agriculture (which was vital for food supplies).

In 1942, the federal government established the Directorate of Manpower to control the workforce. This allowed the government to force people to work in particular jobs or industries. In a way, this was similar to conscription – only for industry service rather than military service.

Other government policies influenced many aspects of Australian life during the war years. The fear of air raids, for example, led to the introduction of blackouts, which plunged major cities into darkness. Streetlights were switched off, car headlights reduced to narrow beams, and houses were required to have blackout curtains to prevent light showing in the street (see Source 4). Failure to comply could result in fines.

The wartime government also imposed many other restrictions. It reduced hotel and bar trading hours and set maximum prices for restaurants. In 1942, the government brought in national identity cards that included personal details and listed the industry an individual worked in. Daylight saving was introduced to save power, and annual leave entitlements were cut back.

Rationing

As the war dragged on, the supply of many basic goods and products was limited. Restrictions on trading ships coming to Australia and the need to dedicate supplies of food and products to the war effort overseas meant that there were shortages of food and clothing for many ordinary Australians. In order to ensure that available supplies were distributed evenly, the Australian government introduced a **rationing** system in May 1942. Products such as butter, milk, eggs, meat, tea, shoes and clothes were all rationed. Alcoholic drinks were also rationed and people were encouraged to restrict travel unless it was absolutely necessary.

The government issued civilians with ration books containing coupons, which had to be presented when paying for certain goods (see Source 5). Pregnant women and families with young children were given extra rations.

During the war, some items simply could not be produced, such as pyjamas, lawnmowers and children's toys. Recycling was encouraged and depots were set up for scrap metal, cloth and rubber. People were also urged to grow their own food to supplement rationing. Vegetable patches appeared in front gardens and many families kept chickens in the backyard. Australians responded imaginatively to wartime rationing. Newspapers and magazines such as the *Women's Weekly* offered advice to housewives about how to cope with the shortages. This included handy hints for cooking, or advice about how to paint seams on the backs of their legs to look as if they were wearing stockings. Women were encouraged to avoid buying new items, by repairing and patching clothes for as long as possible.

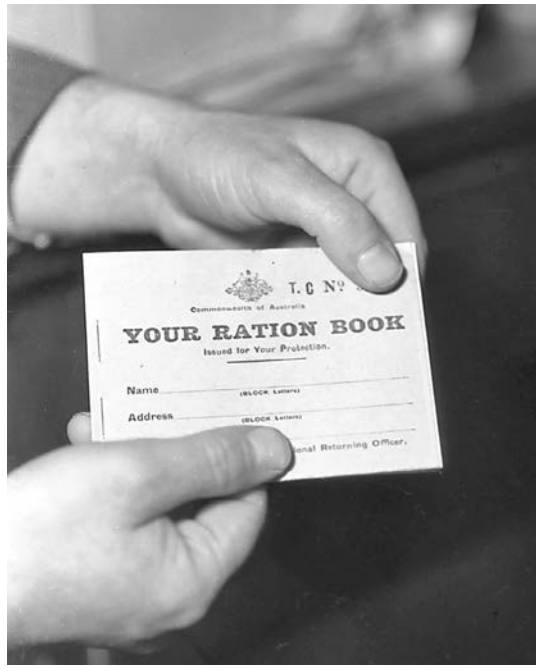

Men on the home front

Almost three-quarters of a million Australians (mostly men) enlisted in the Second AIF during World War II. However, a great many more men and women were engaged in the war economy. Many men were not allowed to enlist in the armed forces because they worked in **reserved occupations**, such as farming and manufacturing (see Source 6). Men were needed at home to construct vital wartime infrastructure and military buildings, such as ports, aerodromes, bridges and barracks, and also to make war equipment and munitions. The Allied Works Council was set up in 1942 to oversee such projects. As part of this program, the Civil Construction Corps was established. The corps, while a civilian organisation, was run with military-style discipline. By mid-1943, more than 50000 men served in the corps, which was mostly made up of labourers, carpenters and truck drivers.

Men who were unable to enlist because of age, health or their positions in reserved professions also joined the Volunteer Defence Force. Members of this force, including many veterans of World War I, were trained to protect against enemy attack on the home front. The Volunteer Air Observers Corps monitored the sky for potential air raids. Air-raid wardens made sure that everyone followed blackout procedures and participated in evacuation drills.

Source 4 Preparing for the night-time blackout

Source 5 Ration coupons entitled civilians to certain goods.

Source 6 These men are shown producing munitions during World War II. Jobs such as these were known as reserved occupations because they were essential to the war effort.

Women's role in the war

Australian women had a very broad range of duties and responsibilities during World War II. The needs of the armed forces, the war economy and the deployment of many men overseas created new types of work possibilities. Before World War II, Australian women were not permitted to serve in the military. Most working women were employed in factories, shops or in family businesses. It was expected that women would resign from their employment once they had children. Although the number of women entering the workforce between 1939 and 1945 only increased by about 5 per cent, the types of jobs they were involved in changed dramatically.

At the start of World War II, women on the home front were encouraged to take the sorts of roles that they had held during World War I. They were expected to knit and sew, pack parcels, raise money, encourage enlistment and maintain the home.

This changed as the war came closer to Australia. From late 1940, women were not only permitted but were encouraged to join the services (see Source 7). Around 35 000 women served in the army, making up around 5 per cent of the entire force. The Women's Auxiliary Australian Air Force (WAAAF) established in October 1940 was quickly followed by the women's army and navy forces. Women were not sent overseas to fight, but were trained in many of the home-front tasks so that more servicemen could be freed up to join the overseas forces.

Source 7 Recruitment poster to attract women into the services (AWM ARTV00332)

By the end of the war, the WAAAF was made up of 18 500 women; the Australian Women's Army Service (AWAS) had 24 000 women (see Source 8); and the Women's Royal Australian Naval Service (WRANS) boasted 2000. Most commonly, women's roles in the armed forces were clerical. However, some were involved in traditional men's roles, as signallers, truck and ambulance drivers, intelligence officers, wireless telegraphers or aircraft ground staff (see Source 9). Despite their new skills women were still not permitted to take on combat roles or serve outside Australia. The exception to this was the nurses who served in most areas where Australian troops were sent.

Even if women did not enlist in the Auxiliary Forces, it was argued that increasing women's employment would enable more men to enter military service. However, the understanding was that their employment was only for the duration of the war. Women entered new areas of work, acting as tram conductors, and taxi and truck drivers. As the war progressed, Australian women worked increasingly in war industries, such as manufacturing munitions and military equipment. Under Manpower regulations, women could be deployed in occupations that suited their skills. A woman trained as a florist could be compelled to work in a factory because of her skills with wire; a dancer could be sent to work on a farm because she was agile and physically fit. By mid-1943, nearly 200 000 women were employed in roles that would assist the war effort. They were paid roughly two-thirds of men's pay rates.

As the war continued, and conscription called up more and more men, many farms were suffering from a shortage of workers. The Women's Land Army was set up to distribute female labour to farms and orchards to keep food production going (see Source 10). Around 3000 women were members of the Land Army.

Source 8 Australian Women's Army Service mechanics

Source 9 Female plane-maintenance workers

Volunteer groups such as the Australian Women's National League continued to take on the more traditional tasks for the war effort, such as knitting socks for the troops, preparing Red Cross food parcels, and raising money for soldiers' families. Other volunteers completed training in emergency services such as first aid and ambulance driving in case of air raids.

At the end of the war there was a general expectation that women would return to domestic duties in the home and that the returned soldiers would be welcomed back into the workforce. This is mostly what happened, but there were some women, especially single women, who remained in their jobs.

It is often argued that women were forced out of the workforce and back to a dull domestic existence at the end of the war. There is some truth in this, but there is also evidence that many women wanted to return to traditional roles. Many who had had boring and unfulfilling jobs during the war were glad to be rid of them. Others who had put off marriage and childbearing during the war were delighted to return to domesticity and begin raising their families.

Remember and understand

1. What were some of the ways the National Security Act allowed the Australian government to respond to the threat of war?
2. What was the 'Battle of Brisbane' and why were details about it censored?
3. What were some of the items that were rationed in Australia?
4. What kinds of jobs did women do in the services and the general economy during World War II?
5. What were some of the other restrictions placed on the lives of Australian citizens by the Australian government during World War II?

Evaluate and create

6. Write a role play based around some of the issues women faced at the end of World War II. Adopt the roles of the following two characters:
   - A woman who has been working as a meteorologist during the war. She is single and has been earning a good wage during the war. She has also enjoyed the work and the independence. She does not see why she should now be forced to leave the workforce.
   - A man who has recently returned from the war and is keen to begin work as an accountant with his previous employer. Unfortunately, there are no vacancies at the accounting firm, because all available roles are filled by well-qualified women.

   Each person must speak at least five times during the role play and support their arguments for and against the sacking of women and the re-employment of men in the workforce after the war.

9.13 Indigenous Australians at war

It is impossible to know how many Indigenous Australians served during World War II. At the start of the war, the AIF officially only accepted Aborigines who were of 'substantially European descent'. However, the RAAF accepted Aborigines from the outset, and many Indigenous Australians joined the AIF by claiming to be another nationality. Due to the early shortage of recruits, many recruiters also accepted Aboriginal volunteers, despite official restrictions. Reg Saunders became the first Aboriginal commissioned officer in the Australian army in 1944. After the bombing of Darwin, the restrictions on Aborigines joining the AIF were relaxed. A small number of Torres Strait Islanders were also recruited into the United States army. It is estimated that around 3000 Aboriginal and Torres Strait Islander soldiers served in the armed forces during World War II, but the number who enlisted under another nationality was probably much higher.

In addition to the regular army, a number of Indigenous Australians served in Special Forces. The Torres Strait Light Infantry was formed in 1941 to defend the strategically important Torres Strait area. In 1941, anthropologist and soldier Donald Thomson was authorised to organise and lead the Northern Territory Special Reconnaissance Unit. This unit contained 51 Aborigines and five white Australians. They lived off the land while they patrolled the coastline of northern Australia. In the event of a Japanese invasion, they were to conduct a guerrilla campaign from behind enemy lines using traditional Aboriginal weapons.

Source 1 Indigenous soldiers on parade in 1940 (AWM P02140.004)

The Aboriginal soldiers in these units were not formally enlisted in the army, and received goods such as tobacco rather than monetary pay until 1992, when back-pay and medals were awarded.

Other Indigenous Australians were also employed by the army in a variety of roles. Aborigines worked on farms and in butcheries; built roads and airfields; were construction workers, truck drivers and general labourers. They also filled more specialised roles, such as salvaging downed aircraft and organising munitions stockpiles. Many Aboriginal women were also involved in these roles, as well as joining organisations such as the Australian Women's Army Service. Despite their important work, pay rates remained low for Indigenous workers. The RAAF briefly increased wages for Aboriginal workers, but was pressured to lower them again by the civilian government.

Indigenous Australians made a huge contribution to the war effort. By 1944, almost every able-bodied male Torres Strait Islander had enlisted. This meant that, as a proportion of its population, no other community in the world voluntarily contributed as many men to the war effort.

There seems to have been remarkably little racism or tension between Indigenous and non-Indigenous Australians in the army. When they returned to civilian life, however, many Aboriginal veterans faced the same discrimination they had left behind before the war. Many were banned from Returned and Services League (RSL) Clubs except on Anzac Day. Most Indigenous Australians were not given the opportunity to use the skills they had learnt during the war when they returned home. Len Waters, who joined the RAAF in 1942 and flew 95 missions, dreamed of becoming a civilian pilot after the war. Waters was forced to return to his pre-war occupation as a shearer.

One ex-soldier, Tommy Lyons who had served at Tobruk said on his return: 'In the army you had your mates and you were treated as equal, but back here you were treated like dogs.'

Source 2 Informal group portrait of members of the 2/18th Australian Field Workshop, which included Indigenous and non-Indigenous soldiers: Alick Jackomos (centre front row), a Greek Australian, worked for Aboriginal rights and was one of the founders of the Aboriginal Advancement League after the war (AWM P00898.001)

4 In pairs, discuss how significant you think Reg Saunders' promotion to become the first Aboriginal commissioned officer was. Why do you think it took until 1944 for an Aboriginal soldier to get promoted to officer rank? Compare your responses with other pairs.

9.14 Australia's international relationships

Although Australia did not experience the levels of war damage of many of its allies and was never occupied by enemy forces, the conflict had a number of important consequences. It fundamentally altered Australia's relationship with Britain and the USA. The legacies of World War II also laid the foundations for great economic and social change in the second half of the 20th century.

Australia and the USA

In 1939, Australia's Prime Minister Robert Menzies had committed Australia to a war in support of the British Empire. By 1945, though, the world had changed markedly. Britain had entered the conflict as one of the world's greatest powers. The countries of the empire cooperated to confront Nazi aggression in Europe. However, as the conflict expanded into a global one, the strains of war took their toll. In confronting Nazi Germany, Britain became dependent on the financial, military and economic support of the USA.

As the war continued, Britain's resources were reduced, and the nation found it increasingly difficult to defend itself and fight Germany and Italy in Europe and North Africa. Britain could only send limited resources to Asia, when the war expanded into the Asia–Pacific region. When Japan struck, Britain experienced its greatest wartime defeat with the fall of Singapore in 1942.

To address this changing situation, Prime Minister John Curtin moved Australian troops from the Middle East to Australia, against the advice of the British government. This was a practical, short-term solution to a major strategic problem. The long-term consequence was the realisation that Australia could no longer rely on Britain to defend it. Australia now focused on a strategic relationship with the USA. As a result of this new arrangement, Curtin placed Australian forces under the control of the broader US military campaign in the Pacific.

American General Douglas MacArthur would also establish his base for the south-west Pacific campaign in Australia (see Source 1). Until this point, Australia's foreign policy had largely been determined by the needs of the British Empire. This relationship with the USA was an important step in establishing an independent Australia and continues to have an important bearing on Australian foreign policy decisions.

Source 1 Australian Prime Minister John Curtin welcomes General Douglas MacArthur to Australia, 1942

Domestic changes

The social and economic implications of the war were also far-reaching for Australia. Wartime industries had encouraged the growth of manufacturing and services. For the first time in the nation's history, farming ceased to be the major area of economic activity. Food processing and canning, an increase in steel production, and the manufacture of consumer goods such as washing machines and refrigerators all expanded during and after World War II. The first Holden car rolled off the assembly line at Fisherman's Bend, Victoria, on 29 November 1948, and cost the equivalent of two years' wages for the average worker – £675 ($1350).

The presence of almost one million American service personnel in Australia during the war also had a significant cultural impact. For some Australian women these men would become boyfriends or husbands. The influence of American cinema, language and culture made its first major inroads in Australia during this

period. Australians had mixed feelings about this cultural 'invasion'. On one level, many feared the loss of Australian culture and traditions. On the other hand, for many younger Australians there was a fascination with American music, dress and slang.

The experiences of the war years also reshaped the role of Australian governments in people's lives and cemented the place of the federal parliament as the most significant of the three tiers of government in the nation. In order to fight the war, the federal government had significantly expanded the scope of its activities. Income taxation and its spending were now centrally controlled, and the banking system was regulated by government. The Australian public placed greater reliance and expectations on the government to successfully manage the economy and social issues.

The experience of war and the death of roughly 39 000 Australian service personnel and civilians also shaped Australia's future. The commemoration of the 1939–45 fallen was incorporated into commemorations of World War I. Local communities recognised the sacrifice of the more recent deaths by extending and expanding the monuments originally constructed to remember the dead of the 1914–18 conflict, ironically described as 'the war to end all wars'.

Source 4 US sailors and soldiers on their arrival in Australia quickly made friends wherever they went, and were received with hospitality.

Source 5 Immigrants arrived from all corners of Europe as part of the 'Populate or perish' campaign.

Post-war migration

After World War II, many Australians felt that they had only narrowly avoided a Japanese invasion. The government, under the new Prime Minister Ben Chifley, decided that Australia needed to increase its population to protect itself from the threat of foreign invasion. The slogan 'Populate or perish' was coined by the Immigration Minister, Arthur Calwell, to promote this new immigration policy. The 'Populate or perish' campaign initially focused on encouraging British migrants, but this failed to increase the population enough. For the first time, Australia began to actively seek migrants from continental Europe (see Source 5).

The war had caused somewhere between 11 and 20 million refugees in Europe. Many of these refugees, including Holocaust survivors and people who had fled the Soviet occupation of Eastern European nations, were housed in Displaced Persons (DP) Camps. These camps were initially organised by the armies of various nations, but were gradually taken over by the United Nations. They provided shelter, nutrition and basic health care for the refugees. A more permanent solution had to be found, however. Around six million refugees were returned to their own countries by the end of 1945, but a huge number of refugees still faced persecution in their homelands and remained in the DP Camps. In 1947, around 850000 refugees were still living in DP Camps in Europe. The International Refugee Organization (IRO) was founded by the United Nations in 1946 to find homes for these people.

In 1947, desperate to increase its population, Australia reached an agreement with the IRO to resettle 12000 refugees a year. These 'new Australians', as they came to be called, were accepted on the condition that they agreed to work in government-selected jobs. Australia eventually exceeded its commitment to the IRO, and resettled approximately 180000 refugees.

As well as refugees, the government sought to encourage people from southern and central Europe to migrate to Australia. In the 20 years after the end of World War II, almost two million people migrated to Australia. The influx of migrants from non-English speaking nations, as well as the belief that Australia's security was linked to its population size, changed Australia's migration policy. The dictation test, which had been used to effectively exclude migrants on the basis of race, was abolished in 1958. This led to Australia accepting refugees throughout the rest of the 20th century, including those from the Middle East and Vietnam; and, eventually, to accepting Asian migration.

World War II was the catalyst to change Australia's migration policies and Australia's relationships with the rest of the world.

Foundation of the United Nations

The **League of Nations**, which had been set up after World War I to provide an international forum to promote peace, had clearly failed. The first step towards establishing its replacement was the Declaration of the United Nations. Even while World War II was still in progress, plans were underway to create a new international body.

The **United Nations** officially came into existence in 1945, with 51 nations as founding members. The first major meeting to prepare the Charter of the United Nations was held in San Francisco in April 1945 (see Source 6). Australia's delegate, the then Minister for External Affairs, Herbert 'Doc' Evatt, played a key role in drafting the charter of the United Nations. The Charter outlined the role of the United Nations as an international organisation to prevent war. It also included provisions for the United Nations to aid refugees, support economic reconstruction after the war, and protect human rights.

Evatt argued that larger powers, such as the USA and the Soviet Union, should not dominate the system, and that smaller nations, such as Australia, had an important role to play. Evatt was involved in negotiating the establishment of the State of Israel, one of the first initiatives of the United Nations. He also played a key role in the drafting of the United Nations Declaration of Human Rights in 1948.

Evatt went on to become one of the first presidents of the United Nations General Assembly, the UN's main organisational structure. Other elements of the United Nations (such as the Security Council, the World Health Organization (WHO), the World Bank, the International Atomic Energy Commission (IAEC), the International Court of Justice, and the United Nations Education, Scientific and Cultural Organization (UNESCO)) all have their origins in the foundation of the United Nations and continue to play a significant part in world affairs.

Australian wartime propaganda posters

Throughout the course of World War II, a range of propaganda was used in Australia in order to encourage Australians to think and act in particular ways. Propaganda came in many different forms, including newspapers, radio, posters and other forms of mass communication (such as the short newsreels shown before feature films in cinemas).

Source 1 Recruitment poster 1942

skill**drill:** Historical sources as evidence

Analysing propaganda posters

Propaganda is anything that has been deliberately created to influence an audience's beliefs or actions. Even though the word propaganda has a negative connotation today, it is only information – a tool – and is neither good nor bad. It can provide historians with lots of information about the period being investigated. However, it needs to be very carefully analysed and evaluated. Use the following steps to guide your analysis of a propaganda poster.

Step 1 Establish the intended audience – who the producer of the poster intended to influence.

Step 2 Check the context of the poster. Consider:

- other events that may have been happening at the time and might have influenced the producer of the poster
- the political environment at the time the poster was created
- the common prejudices and social norms that existed at the time, which may have influenced the producer of the poster.

Step 3 Check the message that is being conveyed. Consider:

- the main images on the poster and what they seem to suggest or represent
- any text written on the poster – what it says or whether the message is direct or suggestive
- the persuasive techniques used – these can include: emotional appeals; generalisations; stereotypes; name calling (direct or indirect); repetition; social disapproval (that is, a suggestion that if the viewer acts in a different way to what is being promoted in the poster they will be rejected or made fun of by their friends or loved ones).

Step 4 Establish the intended effect on the audience – what the producer of the poster hopes the audience will think/do/feel.

Apply the skill

An example of the way in which propaganda can be analysed is provided in Source 2.

1 Look carefully at Source 1 and analyse it using the steps above as a guide.

2 Write a short paragraph comparing and contrasting Sources 1 and 2 in terms of audience, message, intended effect and purpose.

Countries to the north of Australia are shown flying Japanese flag – they are darkly coloured to illustrate the threat of invasion moving closer and closer to Australia's shores..

The call to action is in capital letters on a bright red background to draw people's attention – 'Bar the Gates' creates an image of Australia as a place that needs to be locked up in order to keep it safe.

The goal of peace is highlighted at the bottom of the poster (close to the call to action) so that the viewer associates peace with the production of Beauforts.

The use of emotive language such as 'menace' is designed to shock and scare viewers.

Australian ships close to Japanese territories are shown in flames and sinking in order to generate an emotional response (such as anger or grief) in the viewer.

The central image of Australia surrounded by Japanese submarines and aircraft is designed to unsettle people and convince them that the threat of invasion is real – the dark blue circle makes Australia appear as though it is a target on a dart board.

Australians are shown peacefully enjoying sports and working on farms – 'the Australian way of life'.

Source 2 An Australian propaganda poster produced by the Department of Aircraft Production (Beaufort Division) in 1942 – 'Beauforts' were the first all-metal aircraft built in Australia

Extend your understanding

1 What forms does propaganda take today that were not available during World War II? (For example, Twitter, Facebook, etc.)

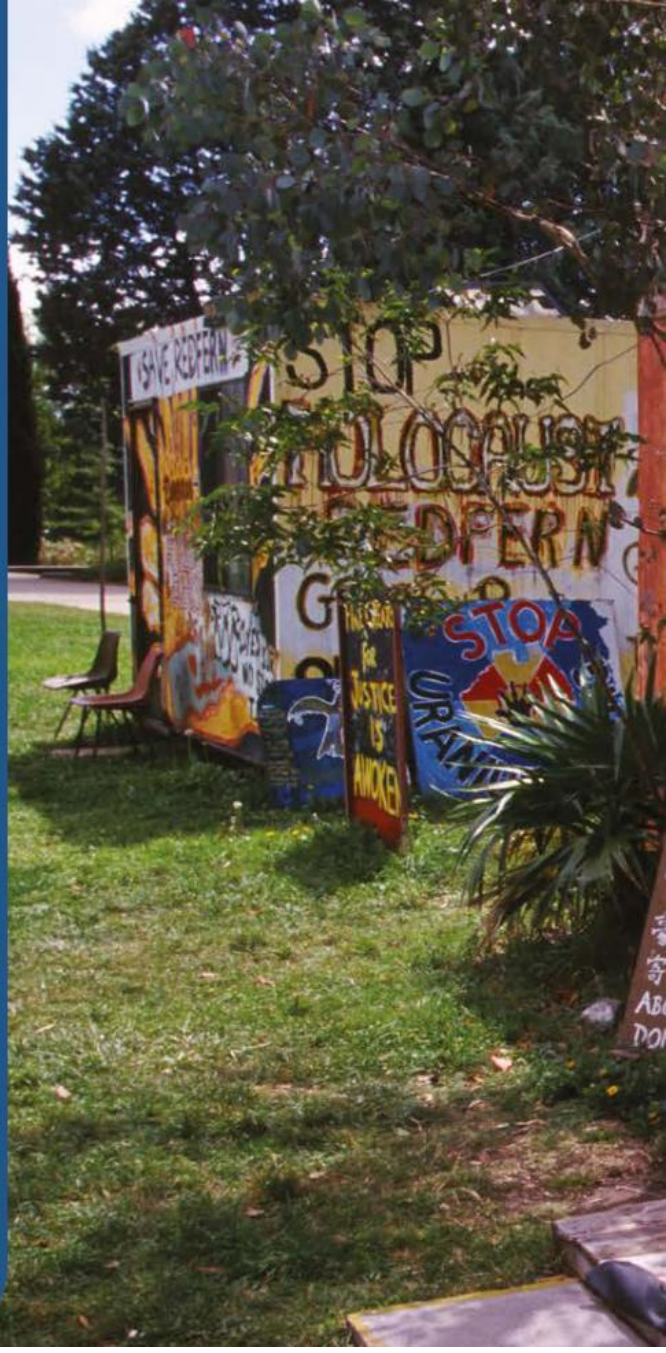

2 It is often assumed that propaganda contains false or untrue information. This is not always the case. Consider, for example, the many advertisements produced by the government to influence people to quit smoking. These can be defined as propaganda, given that they are an attempt to influence people's opinions and behaviour. Locate an example of modern-day propaganda, and analyse it using the steps outlined above.

Unit 2 Rights and freedoms (1945–the present)

Introduction to rights and freedoms

The 20th century was a century of social change. Key events of World War II – such as the Holocaust – had highlighted the inequalities that existed around the world. They were such extreme examples of discrimination and persecution that the horror of them prompted many individuals around the world to stand up and demand freedom and equal rights for all. The United Nations formed out of the ashes of World War II and the Universal Declaration of Human Rights was adopted.

In Australia, an Aboriginal rights movement emerged from the 1930s onwards – celebrating major victories in the 1960s – as Aboriginal people achieved equal citizenship and were entitled to vote in federal elections for the first time.

10A

How did the outcomes of World War II shape the modern world?

10B

In what ways have people fought for rights and freedoms since 1945?

Source 1 The Aboriginal Tent Embassy on the lawns of Old Parliament House in Canberra was established in 1972 to protest against the Australian government's refusal to recognise Aboriginal land rights. Today, it still stands as a reminder of the struggle for Aboriginal rights and freedoms.

Rights and freedoms (1945–the present)

This unit is **mandatory**:

- Rights and freedoms.

It must be completed by all students.

10.1 The effects of World War II on the modern world

The aftermath of World War II in Europe

After World War II, Germany was divided into four zones of occupation (see Source 1). Each sector was occupied and administered by the armed forces of one of the Allied powers. Britain, France, the Soviet Union and the United States all controlled separate parts of the country and the capital city of Berlin was also divided in this way.

After the war it became clear that the communist government of the Soviet Union was keen to expand its authority in the region. It set out to achieve this by influencing the governments of a number of countries in central and eastern Europe that the Russian Army had liberated during the German retreat in the final days of the war. These countries became Soviet 'satellite states' meaning that although they were officially independent, they were heavily influenced by the Russian government and military. Russian satellite states included Poland, Bulgaria, Hungary, Czechoslovakia, Romania and Albania. The nation of Yugoslavia formed at the end of World War I also emerged from World War II as an independent communist state allied with the Soviet Union.

GERMANY: BRITISH, AMERICAN, FRENCH AND SOVIET OCCUPATION ZONES AFTER WORLD WAR II

Source 1 Source: Oxford University Press

The division of Germany

In 1949 the British, French and American occupation zones in Germany were combined to create a new country called the Federal Republic of Germany (or West Germany). That same year, the Soviet zone was officially renamed the German Democratic Republic (or East Germany). A patrolled border fence was erected between East and West Germany and people living in the Soviet occupation zone at this time were no longer permitted to leave. From this time onwards, the border between Soviet-controlled countries in Eastern Europe and democratic countries in Western Europe became divided by what British Prime Minister Winston Churchill described as the 'Iron Curtain' (see Source 2).

Although Berlin lay behind the Iron Curtain, the western half of the city was still under Western control. It effectively became an island of democracy surrounded by a sea of communism. In fact, from June 1948 until May 1949, the only way to get food and supplies into West Berlin was by plane – an event known as the Berlin blockade.

The start of the Cold War

By the time World War II ended in 1945, it was becoming clear that the balance of power around the world was shifting. The once great imperial powers of Britain and France had been devastated by the war and struggled to rebuild their cities and economies. In their place, two **superpowers** emerged – the United States of America (USA) and the Union of Soviet Socialist Republics (USSR).

Although the USA and USSR had worked as allies against the Axis powers during the war, they actually shared a deep mistrust of one another, mainly because the two countries were founded on such different ideological approaches (see Source 3):

- The USA was founded on democratic principles and its economy was based on the system of capitalism.
- The USSR was founded on socialist principles and its economy was based on the system of communism.

From 1946 to 1991, the fierce lack of trust between the USA and USSR fuelled many diplomatic disputes. Although no actual fighting ever took place, relations between the two superpowers over this period were so frosty that the situation became known as the **Cold War**.

CENTRAL EUROPE: THE IRON CURTAIN IN THE POST-WAR PERIOD

Source 2 Source: Oxford University Press

Source 3 A comparison of key features of capitalism and communism

	Capitalism	Communism
Government control	• Multi-party democracies with voting rights for citizens • Freedom of speech and protest • Belief that government should not interfere in the economy any more than necessary	• Single-party control • Belief that the government should control the economy for the benefit of all citizens
Competition	• Competition is healthy and encourages individuals to be the best they can be.	• Competition pits people against each other. Working together for the common good is seen as the best way to motivate people.
Profit	• Profits are considered fair reward for owners of business • Different wages and salaries for different jobs is considered fair and encourages people to aim higher.	• Profits kept in the hands of a few private business owners is seen as the exploitation of the workers. • Collectives should distribute profits evenly

Source 4 Protecting yourself during the early years of the Cold War in the USA meant taking out insurance not only against natural disasters but also against the threat of a nuclear attack by the USSR.

The Cold War period was characterised by propaganda campaigns, international spying, and fierce public competition over sporting events such as the Olympic Games. Of greatest concern, however, was competition between the USA and USSR to possess the largest armies and nuclear weapons stockpiles. This competition was known as the international **arms race**.

While all of these issues dominated world affairs during the Cold War, the international arms race became a key global concern because it presented the very real threat of a nuclear war.

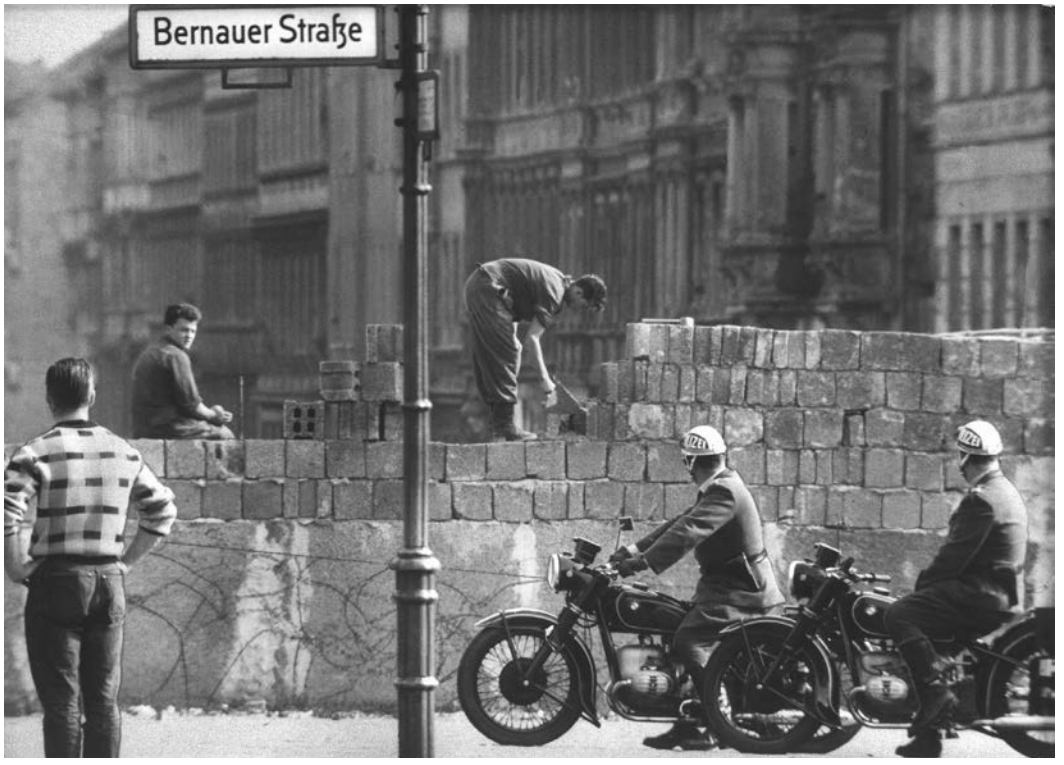

The Truman Doctrine and the Marshall Plan

By 1947, the USA had become increasingly concerned about the growing power of the USSR. In March 1947, US President Harry Truman told the American Congress that it was America's job to contain the spread of communism. This became known as the Truman Doctrine.

Truman believed that communism took hold when people faced financial hardship. In order to limit the spread of communism across Europe, the United States offered financial aid to European countries that had been badly affected by the war. This program was called the Marshall Plan and involved the distribution of around $13 billion worth of US aid designed to get the economies of Europe going again. Food, machinery and many other things were shipped to democratic countries in Europe. The Soviet Union and its allies were also offered aid, but did not accept. The Premier of the USSR, Joseph Stalin, saw this as an attempt by the USA to dominate Europe by making it dependent on American handouts.

Berlin: a city divided

In the decades following the division of Germany, the differences between life in the communist East and capitalist West became very obvious. West Germany's economy grew rapidly and the standard of living there increased greatly. By comparison, personal freedoms in East Germany were severely limited and the economy struggled. As a result, around 3 million people left East Germany for West Germany between 1949 and 1961 despite attempts by the Russians to stop this. Most of these people were able to leave the East by crossing into West Berlin. This situation was humiliating for the government of East Germany, so on 13 August 1961 (one day after around 4000 East Germans had crossed into West Berlin), a temporary barbed wire fence was erected to stop people from leaving the East. This was soon replaced by a heavily-guarded concrete wall that entirely surrounded West Berlin, known as the Berlin Wall (see Source 5). The division of Germany remained in place until 1990 when the country was reunified. Over that time, the Berlin Wall became the most enduring symbol of the Cold War in Europe.

Source 5 Workers constructing the Berlin Wall in 1960. The wall became an enduring symbol of the Cold War in Europe.

Growing tensions between the USA and the USSR

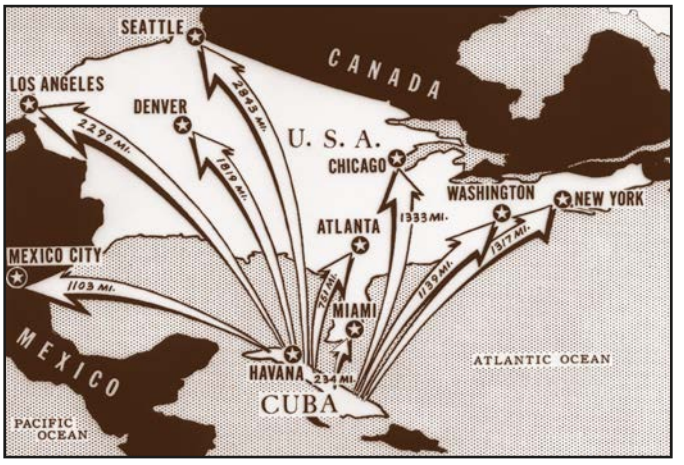

The Cuban Missile Crisis

One of the most serious and potentially dangerous events of the Cold War was a confrontation between the USSR and the USA that took place in October 1962. Known as the Cuban Missile Crisis, this event was the closest the world has ever come to an outright nuclear war. Today it is remembered as one of the defining events of the Cold War.

In 1959, a communist rebel named Fidel Castro came to power in Cuba, overthrowing the government of Fulgencio Batista (a corrupt leader who was supported by the US government). Soon after coming to power, Castro brought most Cuban industries under state control and nationalised American-owned companies. This meant that private companies and assets became the property of the Cuban government. As a result, many investors in the USA (including the US government) lost commercial investments they had in Cuba. In retaliation against this move, the American government halted all aid to Cuba and stopped importing Cuban sugar. This was very damaging to Cuba's economy as sugar was its primary export. Castro asked the USSR for help, and in 1960, the USSR signed an agreement to buy 1 million tonnes of Cuban sugar every year.

This alliance with the USSR made the USA very nervous. In April 1961, the CIA (a US government spying agency) helped a group of Cuban anti-communists to invade Cuba with the goal of overthrowing Castro. The invasion failed and was a public embarrassment for the USA.

In September 1961, Castro asked Russia for weapons to defend Cuba against any future US attacks. About a year later, photographs of Cuba taken by American spy planes revealed Soviet nuclear missiles under construction at various sites in Cuba. These sites brought every city and town in the USA within range of Soviet nuclear missiles (see Source 6). President John F. Kennedy made a televised announcement to the

Source 6 Distances of major US cities from Cuba

American people on 22 October 1962 that they were under threat. He also proclaimed that any nuclear missile launched from Cuba would be regarded as an attack on the US by the USSR, and demanded that the Soviets remove all weapons from Cuba.

For a few days in late October, US naval ships formed a blockade of Cuba to prevent additional Russian missiles and equipment from reaching the island, and Soviet field commanders in Cuba were prepared to use nuclear weapons to defend the island if the USA invaded. It seemed very likely that there would be a war between the USA and the USSR.

Luckily, President Kennedy and Premier Khrushchev were able to reach an agreement whereby the Soviets removed their missiles from Cuba in exchange for a commitment by the USA not to invade Cuba.

The space race

Another key element of Cold War rivalry between the USA and the USSR was space exploration. This was seen as necessary for national security and became a public symbol of technological superiority. In many ways, the 'space race' became a way for the two superpowers to compete without direct military conflict.

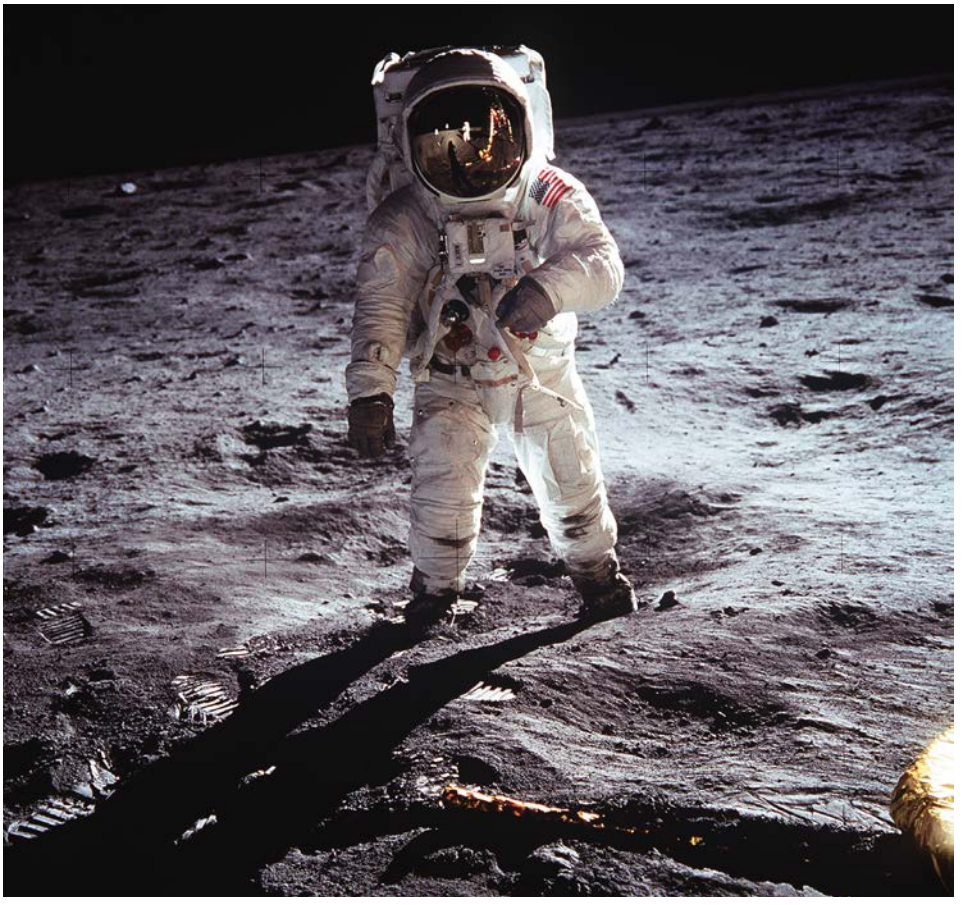

The space race became particularly serious when the USSR successfully launched a satellite, called *Sputnik 1*, in October 1957. Ten days later, they launched a second satellite called *Sputnik 2* – this time with a dog inside it. The dog, named Laika, survived the flight and was the first animal to orbit the Earth. This caused huge concern in the USA, where it was felt that American superiority in terms of education and technology was being threatened.

The following year, the USA sent a satellite into space and established the National Aeronautics and Space Administration (NASA) to coordinate and plan its future space program. Once again, the Russians moved ahead of the Americans in the space race by successfully sending the first manned flight into space in April 1961. This triggered a pledge from President Kennedy in May 1961 that the USA would be the first nation to land a man on the moon. This goal was achieved by *Apollo 11* on 20 July 1969 (see Source 7).

The end of the Cold War

In addition to the enormous costs of the international arms race, the economies of both nations were strained by the high cost of the space race. Throughout the 1980s, the Soviet Union was also fighting an expensive and frustrating war in Afghanistan. When the reformist politician Mikhail Gorbachev came to power in 1985, he was determined to end the Cold War and to bring economic and political reform to the Soviet Union. He initiated dramatic agreements with the United States, which involved both nations agreeing to reduce the amount of money and energy they were investing in the arms race. He also took steps to introduce more democratic political processes across the Soviet Union.

These initiatives rapidly improved relations between the United States and the USSR, ultimately bringing an end to the Cold War. What Gorbachev failed to anticipate, however, was that without the Communist

Source 7 Astronaut Buzz Aldrin was part of the first space mission to land men on the moon – *Apollo 11*.

Source 8 The fall of the Berlin Wall in November 1989 came to symbolise the triumph of democracy and the end of the Cold War.

Party and Soviet Army maintaining complete control of all the Soviet satellite states, the Soviet Union would soon break apart. Attempted political reforms at home left the Soviet Union unwilling to defend challenges to its authority in many countries across Eastern Europe. During 1989 and 1990, the Berlin Wall came down and Germany was reunified. Elsewhere in Eastern Europe, borders opened and free elections were held that ousted communist regimes. In August 1991, Gorbachev resigned as leader of the Soviet Union. By October of that year, 10 Soviet republics had declared their independence and the Soviet Union collapsed. With stunning speed, the Iron Curtain was lifted and the Cold War came to an end.

Remember and understand

1 Define the following terms in your own words:
   - **a** the international arms race
   - **b** the space race
   - **c** the Cold War.

2 Why did the East German government build a wall around the Western part of Berlin?

3 What was the Cuban Missile Crisis and why is it regarded as such a significant historical event?

Apply and analyse

4 Why do you think Churchill referred to the border between East and West Europe as the 'Iron Curtain'?

5 Why was the USA so concerned about the relationship between Cuba and the USSR? Do you believe their fears were justified?

Evaluate and create

6 Examine Source 7 carefully and complete the following tasks.
   - **a** Conduct research online to determine why this source was produced, who produced it, and when it was published.
   - **b** Do you think this source is an example of propaganda? Justify your response.

10.2 The struggle for rights and freedoms since 1945

The 20th century was an era of social change. The events of World War II highlighted the inequalities that existed around the world. The **Holocaust** was such a horrific example of discrimination and persecution that it prompted many individuals around the world to stand up and demand freedom and equal rights for all.

The formation of the United Nations

Immediately following the end of World War II, the **United Nations (UN)** formed with the goal of preventing future wars. A few years later in 1948, a document outlining a set of rights to which all human beings are entitled was released. The **Universal Declaration of Human Rights**, as it was known, was the first international declaration of its kind. It marked a new era of international cooperation and outlined a vision for the post-war world.

The UN was officially formed at the end of World War II in 1945, during a meeting of 50 nations in San Francisco. All nations present at the conference signed the Charter of the United Nations, which set out the purpose and rules of operation of the UN. The key goals of the UN were to prevent war and ensure the wellbeing and freedom of all peoples.

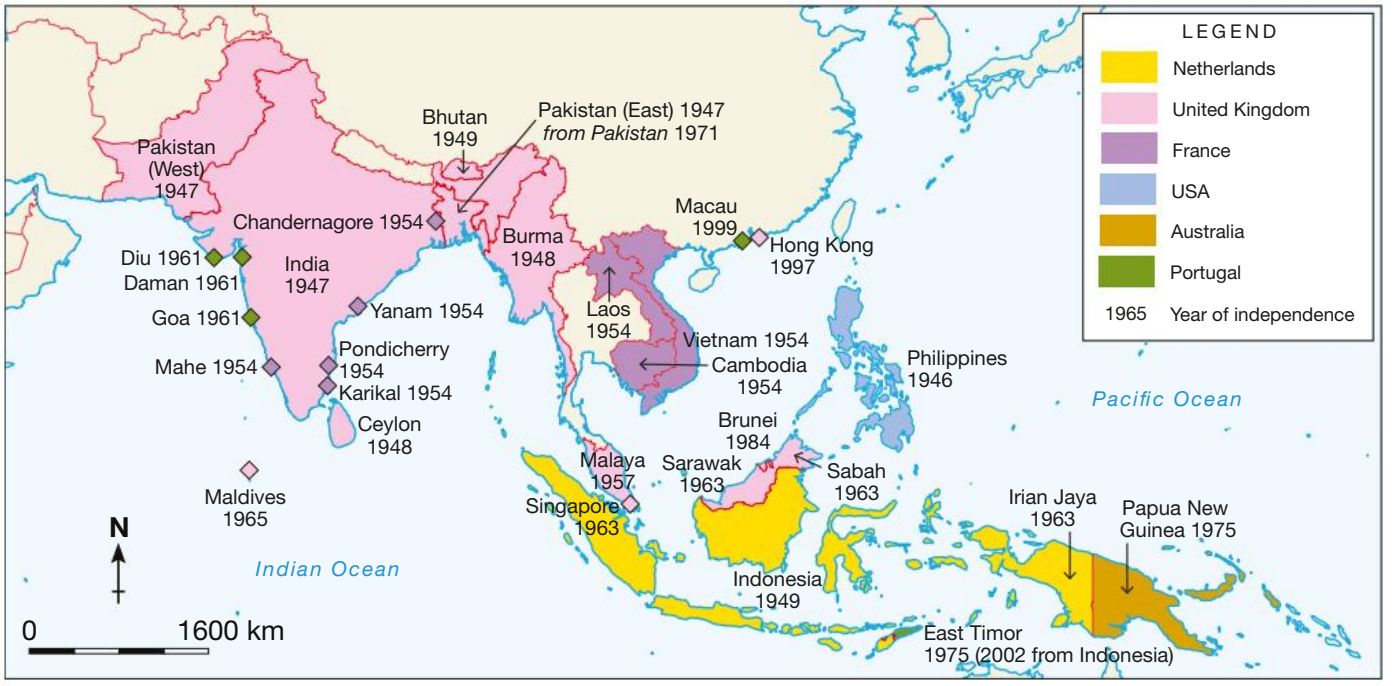

Structure of the United Nations

The structure of the United Nations is based around its charter. The United Nations Charter consists of 111 articles that, together, explain how the United Nations works.

Source 1 Flags outside the current United Nations building in New York

ASIA–PACIFIC REGION: THE INDEPENDENCE MOVEMENT AFTER WORLD WAR II

Source 2

Source: Oxford University Press

The Charter established five separate branches of the United Nations:

1. The General Assembly – The General Assembly discusses and makes decisions about issues of international peace and security. All members of the United Nations are represented in the General Assembly.
2. The Security Council – This consists of five permanent members (USA, USSR, Britain, China and France) and six non-permanent members. The Security Council has the task of maintaining peace and security at an international level. The Security Council can recommend the use of a blockade or other financial imposition on any country that decides to break international law. If these do not work, then the Security Council can call on the United Nations to use military force.
3. The Economic and Social Council – The main task of this branch is to promote and improve the economic and social wellbeing of those living in the member states.
4. The International Court of Justice (ICJ) – The ICJ is the main judicial body of the United Nations.
5. The Secretariat – This is the body that runs the United Nations. The Secretary-General is the chief administrative officer of the United Nations.

The main involvement of the UN in modern conflicts has been to supply peacekeeping forces. The UN Peacekeeping Forces may only be deployed when both parties involved in a conflict accept their presence. There are two types of peacekeeping operations – unarmed observer groups and lightly armed military forces. Military forces are only allowed to use their weapons for self-defence.

The United Nations was not only formed to promote security around the world but to also promote the wellbeing and freedom of all peoples. The defeat of Germany and the freeing of Jewish prisoners from concentration camps by Allied soldiers brought the full horrors of the Holocaust to the attention of the world. There was global agreement that such a thing should never be allowed to happen again.

One of the first actions of the United Nations was to draft a declaration of human rights. The declaration was ratified in 1948. Article 1 of the declaration stated that 'all human beings are born free and equal in dignity and rights'.

The struggle for rights and freedoms

A number of movements around the world were formed to fight for the recognition of a range of rights and

freedoms. These can be grouped broadly into three categories:

- Independence movements – In the immediate post-war period, a number of former colonies around the world fought for their independence from their imperial masters.
- Racial equality movements – Around the world, traditional views and established laws based on racial difference were challenged. In the United States, African Americans (together with other disadvantaged cultural and ethnic groups) set out to remove all forms of social and legal discrimination based on race. A similar movement in Australia campaigned for equal rights for Indigenous Australians and the repeal of laws which deprived Indigenous Australians of civil liberties. In the 1960s, two major victories were celebrated in Australia. For the first time, Aboriginal people achieved equal citizenship and were entitled to vote in federal elections. The 1960s also marked the beginning of a determined attempt to achieve land rights for Aboriginal and Torres Strait Islander peoples in Australia.
- Gender equality movements – Across the Western world in countries like Australia, the United States and Britain, women campaigned for equality at all levels of society.

Together, these movements brought about enormous social and political changes that influenced the modern world. Many of these rights are taken for granted by people today, but the struggle for the acceptance and recognition of many of these rights took enormous courage and determination.

Independence movements

The post-war period saw a wave of different groups start to demand their human rights. Countries under the control of the old empires saw their chance to fight for self-rule. Other groups who were disadvantaged in society because of their race or sex also started to demand equal rights around this time and organised into movements to bring about change.

The immediate post-war years saw a wave of **decolonisation** sweep across the world. Once-powerful empires (such as Britain, France, the Netherlands and Spain) that had been weakened by the war faced growing opposition from those living under colonial rule. Over a few years, European powers were forced to withdraw from their colonies and recognise their independence (see Source 2). The process of decolonisation began in India and Pakistan, both countries gaining independence from British rule in 1947. From here, the movement swept across Asia, with Indonesia breaking away from the Netherlands in 1949 and France giving up control of Vietnam in 1954. This desire for self-rule later swept across other parts of the world. By the early 1980s old colonial countries throughout Africa, Asia and the Caribbean had all gained their independence.

Racial equality movements

During this period, people in many Western societies questioned old attitudes, beliefs and ways of doing things. Traditional attitudes towards racial and ethnic groups within society were challenged by a range of grassroots organisations and social movements that raised awareness about inequality. These groups fought hard for the acceptance and recognition of a range of basic human rights. Over time, these movements brought about change by changing attitudes and gaining support from the broad population. Many of these organisations are still active today as the struggle for personal freedoms and democratic rights continues. The following tables highlight some significant events and ideas that influenced the struggle for rights and freedoms in the United States and Australia.

Source 3 Dr Martin Luther King, Jr after the March on Washington in 1963

An overview of the struggle for rights and freedoms by African Americans		
Civil rights movements and actions	Topic 11.6 Topic 11.7 Topic 11.8	• The Universal Declaration of Human Rights is passed by the United Nations in 1948 • **Segregation** (separation of blacks and whites) is widespread in the southern states of the USA • In 1954 (in *Brown vs the Board of Education*) the US Supreme Court rules segregation in US schools to be unconstitutional (illegal) • The case of Emmett Till in 1955, (in which a 14-year-old African-American boy was murdered for talking to a white woman) brings national attention to the issue of race relations in the USA • In 1955, Rosa Parks refuses to give her seat to a white woman on an Alabama bus • In 1957, nine African American students try to enrol at the all-white Little Rock Central High School, Arkansas. The US army is sent in to enforce their right to attend the school. • Early 1960s, a mixed group of African Americans and white Americans ride buses throughout the Southern States testing the end of segregation. Known as the Freedom Riders, the group exposes that many southern states are ignoring the ruling of the Supreme Court. • The March on Washington in 1963 sees around 250 000 people travel to the US capital to hear Martin Luther King, Jr. (leader of the African-American civil rights movements) give his famous 'I have a dream' speech (see Source 3).

An overview of the struggle for rights and freedoms by Indigenous Australians		
How Indigenous Australians were disadvantaged	Topic 11.2	• In the first Australian census after Australian Federation in 1901, Indigenous Australians were not counted. • An **assimilation** policy was introduced in 1937 – Aboriginal people of mixed race were to be assimilated into white society. • Segregationist practices until the 1960s excluded Indigenous Australians from mixing with white people and from holding certain jobs. • **Stolen Generations** – from the late 19th century until the 1970s Indigenous children were removed from their families to be brought up in 'white' families or state-run institutions
Indigenous rights movements and actions	Topic 11.3 Topic 11.9	• Indigenous Australians boycott sesquicentenary (150th anniversary) of British settlement in 1938 and instead hold a Day of Mourning. An address is given by Jack Patten, President of the Aborigines Progressive Association. • Australian Freedom Riders take a bus journey through rural NSW to protest segregation
Significant Indigenous Australians	Topic 11.4 Topic 11.5 Topic 11.11	• Jack Patten, leader of the Aborigines Progressive Association (NSW) • William Cooper, leader of the Australian Aborigines League (Vic) • Albert Namatjira, Aboriginal artist • Doug Nicholls, VFL player for Carlton and Fitzroy • Eddie Gilbert, cricketer • Charles Perkins, leader of the Freedom Riders • Lowitja O'Donoghue, founding chairperson of the Aboriginal and Torres Strait Islander Commission (ATSIC) and Order of Australia recipient
Indigenous land rights	Topic 11.9 Topic 11.10	• The Wave Hill walk-off, 1966 – Indigenous pastoral workers demand equal pay and a return of traditional lands. This was the first land rights claim. • 1971 – the Aboriginal flag was designed • 1972 – Aboriginal Tent Embassy established on the grounds of parliament in 1972 (see Source 4) • 1992 – Eddie Mabo wins native title to family land on Murray Island. This decision was followed by the *Native Title Act* in 1993. • 1996 – the Wik decision allows for native title on land under pastoral lease. The Native Title Amendment Bill in 1997 effectively overturns native title.
Changes to government attitudes	Topic 11.9 Topic 11.12 Topic 11.13	• 1967 Referendum gets a 'yes' to count Indigenous Australians in the census. This would lead to Indigenous Australians also getting full voting rights. • In Prime Minister Keating's Redfern Park speech in 1992, Keating acknowledged past injustices towards Indigenous Australians. • In 2008, Prime Minister Rudd says sorry to the Stolen Generations

Source 4 Protesters outside the Aboriginal Tent Embassy

Gender equality movements

The other major movement of the period was the struggle for gender equality. Across the Western world, including countries like Australia, women campaigned hard for equality. Although by 1920 all Australian women (with the exception of Indigenous women) had the right to vote and run for parliament, they were a long way from enjoying equal status with men in other areas of Australian society. Despite entering the workforce during World War II, after the war many women were expected to return to their duties as mothers and homemakers. Married women were prohibited from holding permanent government positions and women generally were expected to give up their jobs to men returning from the war. Those who chose to continue working faced discrimination in the form of unequal employment opportunities and lower pay.

Over time, rising female participation in the workforce, social changes and technological advances all contributed to rapid changes in the roles of women in Australia. By the late 1950s, women were demanding equal pay for their work and attempting to overturn the widely held belief that it was a man's role to act as financial provider. In 1969, the Conciliation and Arbitration Commission ruled that men and women working in Australia should be paid equally.

The 1970s saw the emergence of women's liberation movements, inspired by figures such as Germaine Greer (a prominent feminist writer and thinker). Greer's book *The Female Eunuch* (published in 1970) asserted that women were enslaved within society by discrimination and commonly accepted values of male superiority. Greer argued that women should strive to break free of these conditions and that the male domination of society must be fought (see Source 5). Feminists achieved some notable successes in these years, including the passing of the *Maternity Leave Act 1973* and the *Sex Discrimination Act 1975* (South Australia). These pieces of legislation protected a woman's right by law to maternity leave and protected people against being victimised for complaining about discrimination.

With the introduction of the federal *Sex Discrimination Act* in 1984, and the appointment of the first Sex Discrimination Commissioner, Pamela O'Neil, sex-based discrimination in most areas of Australian life became illegal. Despite these gains, feminists continued to combat sex-based prejudice and discrimination in Australian society. They targeted issues such as sexist language and attitudes, as well as the depiction of women in the media as second-class citizens and/or sexual objects. Gender equality activists have also continued to campaign for equal pay and recognition in the workforce. Even today, women still do not enjoy the same levels of income as men across many sectors of the workforce.

1. In what year was the United Nations officially formed and what are its key goals?
2. In what year did India achieve independence from British rule?
3. By what year were all Australian women legally able to vote and run for parliament?

Apply and analyse

4. Conduct some brief research on the federal *Sex Discrimination Act* passed in 1984. What did the Act outlaw? How did the introduction of the Act change conditions for women living in Australia?
5. In your own words, define the term 'decolonisation'. Where did this first take place and what were the reasons for this change?

Unit 2 Rights and freedoms (1945–the present)

Rights and freedoms

Indigenous Australians have lived in Australia for at least 40 000 years. The arrival of Europeans in 1788 resulted in significant changes to their traditional customs and ways of life. Colonial governments and communities formally and informally discriminated against Aboriginal people. Federation in 1901 made the exclusion of Aboriginal people from Australian society even more pronounced.

Despite this discrimination, an Aboriginal rights movement emerged from the 1930s and celebrated major victories in the 1960s, as Aboriginal people gained equal citizenship and were entitled to vote in federal elections for the first time.

By the 1990s, the reconciliation movement was in full swing.

A formal apology to the **Stolen Generations** was sought, but it was not until the Rudd Government in 2008 that it was finally delivered.

11A

How have Indigenous peoples in Australia struggled for rights and freedoms?

1 Make a list of examples of discrimination against Indigenous Australians since Europeans colonised Australia in 1788.

11B

How have African Americans and Indigenous peoples in Australia achieved change?

1 The 1960s civil rights movement in the United States was very influential for Indigenous Australians. Discuss the similarities and differences between the experiences of African Americans and Indigenous Australians.

Source 1 Indigenous Australians have struggled to have their rights and freedoms recognised under Australian law since the British established a colony here in 1788. This march for Aboriginal rights took place in Canberra in 2008.

11C

How do activists continue the struggle for civil rights and freedoms?

1 Indigenous Australians continue to experience less favourable circumstances compared to non-Indigenous Australians. What do you think could be done in order to ensure true equality of opportunity for Indigenous Australians today?

11.1 Rights and freedoms: a timeline

Freedom Riders outside their bus

1938
Australia's sesquicentenary (150th anniversary) celebrated around Australia. Aboriginal leaders in Melbourne and Sydney hold 'Day of Mourning' events and call for citizenship rights.

1961
American Freedom Riders travel on racially mixed buses in the southern United States to challenge segregation laws.

1965
Australia's Freedom Riders discover de facto segregation throughout country NSW while touring the regions on a 'fact finding' mission.

1975
The Whitlam Government returns 3300 square kilometres of land to the Gurindji people – a beginning to land rights for Aboriginal people in Australia

4 In what ways do you think the American Freedom Riders might have inspired and influenced the Australian Freedom Riders?
5 Using the timeline, calculate how long the Aboriginal and Torres Strait Islander Commission (ATSIC) existed for.

11.2 Background to the struggle for Indigenous rights

When British explorers and settlers arrived on the east coast of Australia in 1788, they did not understand the Indigenous population. The British looked for signs of permanent residence, and could find none, so they didn't negotiate any treaties. They also looked for evidence of farming, and could find none, so they proclaimed Australia *terra nullius* – a Latin term that literally translates as 'nobody's land'.

Source 1 Aboriginal children at the Catholic Little Flower Mission in Arltunga, Northern Territory, *c.* 1946

The negative effects of European settlement on Indigenous Australians that had started in 1788 continued with the policies of Australian colonial and state governments in the late 19th and early 20th centuries. The expansion of British colonial settlements into established Aboriginal lands destroyed traditional ways of life. High numbers of Indigenous Australian premature deaths were the result of violence and disease. By the time of **Federation** in 1901, European settlements dominated most of the continent.

Aboriginal and Torres Strait Islander cultures were not officially recognised, and public policy was dominated by ideas of **segregation** (separating blacks from whites) and **assimilation** (integrating blacks into white society). Both of these ideas were based on the assumption that Aboriginal people were inferior to Europeans.

Aboriginal Protection Boards

Before Federation in 1901, Aboriginal Protection Boards were established in the colonies around Australia to 'manage' Aboriginal populations. After Federation, these boards became the responsibility of state governments. Removing children was the core work of these boards. The new Commonwealth took no responsibility for the wellbeing of this significant minority. Chief **Protectors** were appointed to watch over the Aboriginal people in each state and oversee what many thought to be a 'dying race' of people.

Aboriginal **reserves** and **missions** were established by governments and religious organisations across Australia to support the assimilation policy (see Source 1). But most agree that the real reason for these missions was segregation – to keep blacks away from white society. For many Aboriginal and Torres Strait Islander peoples these institutions meant separation from families and communities, isolation and loss of culture, identity and control.

The situation at Federation

When the Australian colonies federated in 1901, Aboriginal and Torres Strait Islander peoples remained politically and legally marginalised. Many of the rights extended to the citizens of the new Commonwealth of Australia were denied to the original inhabitants. A number of Acts passed by the new Commonwealth Parliament specifically excluded them. They were not entitled to vote in federal elections unless previously registered to vote in their state. They did not receive the basic wage and they were not eligible for aged and invalid pensions. Travel restrictions were often enforced on them. They were excluded from military training

and Aboriginal mothers did not receive the baby bonus that was given to non-Indigenous mothers. When a **census** was held, Aborigines were not counted as members of the Australian population.

Western Australian Senator Alexander Matheson was one of the strongest opponents of Aboriginal people being given the right to vote (see Source 2).

After Federation, state governments and religious organisations continued to dominate Aboriginal policy. The new Commonwealth government took no responsibility for the wellbeing of this significant minority. The common trend to assimilation underpinned work by authorities in each state; however, insufficient resources meant that often work was simply neglected. Assimilation did guide two key areas of work – the Christian missions and the removal of mixed-race Aboriginal children.

Source 2

> We must take steps to prevent any Aboriginal from acquiring the right to vote. Surely it is absolutely repugnant to the greater number of the people of the Commonwealth that an Aboriginal man or Aboriginal lubra or gin [woman] – a horrible, degraded, dirty creature – should have the same rights that we have decided to give to our wives and daughters … The honourable gentleman fails to recognise that we have taken this country from the blacks, and made it a white man's country, and intend to keep it a white man's country, so that there is no earthly use in the honourable gentleman saying that 100 years ago this was a black man's country … We are aware of the fact that it is very regrettable, and the only consolation we have is that they are gradually dying out.
>
> Western Australian Senator Alexander Matheson, Commonwealth Parliamentary Debates, Senate, 22 May, 1901

Controlled by colour

The 'assimilation policy' was officially adopted at the Aboriginal Welfare Conference of Commonwealth and State Authorities in 1937. Aboriginal people of mixed race were to be assimilated into white society whether they wanted to be or not. This was a new form of control. If these people were not going to simply 'die out' then all efforts should be directed to ensuring that mixed-race Aborigines, in particular, could be integrated (see Sources 3 and 4). The removal of Aboriginal children continued and new powers were given to 'Welfare' officials to judge whether children were 'progressing'.

Source 3

> The destiny of the natives of aboriginal origin, but not of the full blood, lies in their ultimate absorption … with a view to their taking their place in the white community on an equal footing with the whites.
>
> From a conference paper from the Aboriginal Welfare Conference of Commonwealth and State Authorities in 1937

New government resources were aimed at changing the ways that Aboriginal people lived. Traditional camps were demolished and additional assistance was given to missions to 'do the job'. Jackson's Track in Gippsland, Victoria, was a 'dry' sawmill settlement occupied by many Aboriginal families – including the family of Lionel Rose, Australia's first boxing world champion.

Daryl Tonkin, who married an Aboriginal woman and settled at Jackson's Track, recalls the idyllic life of those living there in his book *Jackson's Track*. However, from the 1940s, government and church officials began putting pressure on the Aboriginal elders to move their families to somewhere more 'civilised'. 'Welfare' would visit frequently, and in 1961 the community was dismantled (see Sources 4 and 5).

Source 4

> It wasn't long before people at the Track found out what the authorities had decided to do. The church people came around to all the camps and explained how they had the welfare of the blackfellas in mind and that they truly felt this was the best thing for them. They said the good people of the church had worked together to build some housing for the blackfellas and that in one week a truck would be out to fetch them.

Homes Are Sought For These Children

A GROUP OF TINY HALF-CASTE AND QUADROON CHILDREN at the Darwin half-caste home. The Minister for the Interior (Mr Perkins) recently appealed to charitable organisations in Melbourne and Sydney to find homes for the children and rescue them from becoming outcasts.

Source 6 A newspaper article seeking homes for children of mixed race

Tonkin explains a few pages later that the promised 'houses' were actually tents and that a number of previously employed, teetotaller Aboriginal men began drinking for the first time in their lives to escape the boredom and depression of their new lives away from 'the Track'.

Segregation

Another effective means of controlling Aboriginal people was to prevent them from fully participating in society. 'Colour bars' – bans that prevented Aboriginal people from entering clubs, pubs, restaurants, theatres, public swimming pools or using public transport – resulted in a form of **apartheid**. Aboriginal people were also prohibited from working particular jobs – including working in post offices – and were expected to work for much less money. For the first 30 years after Federation, this segregation was applied quite consistently across the states and territories of Australia.

Despite assimilation being the official policy of the government, the practice of segregation continued until the 1960s. Separate sections in theatres, separate wards in hospitals, and denial of school enrolment to Aboriginal children were common. Aboriginal rights activists in the 1960s had plenty of evidence that obvious discrimination continued across Australia.

The Stolen Generations

From the late 1800s to the 1970s many thousands of Aboriginal children were forcibly removed from their families and placed into state care or placed with white families. These children, now referred to as the **Stolen Generations**, faced ongoing emotional and social difficulties because of their removal from their families.

In most states, it was believed that if mixed-race Aboriginal children could be brought up in a 'white' community, their Aboriginality could be overcome and their 'white' attributes would shine through. These children were taken from their families and raised in missions or with white families (see Source 6). Unfortunately, these children often ended up being rejected by both the Aboriginal and European communities.

Full-blooded Aboriginal children were also removed from their families and put into state-run institutions where they were prepared for unskilled and semi-skilled work. For example, the Cootamundra Girls' Home in New South Wales trained girls to be domestic servants.

The *Bringing Them Home* report

The Human Rights and Equal Opportunity Commission collated the stories of the Stolen Generations for the Commonwealth Parliament in 1997. Their report, entitled *Bringing Them Home*, revealed the hurt felt by the many Australians who were affected by this policy (see Source 7).

Source 7

> Most of us girls were thinking white in the head but were feeling black inside. We weren't black or white. We were a very lonely, lost and sad displaced group of people. We were taught to think and act like a white person, but we didn't know how to think and act like an Aboriginal. We didn't know anything about our culture.

> We were completely brainwashed to think only like a white person. When they went to mix in white society, they found they were not accepted [because] they were Aboriginal. When they went and mixed with Aborigines, some found they couldn't identify with them either, because they had too much white ways in them. So that they were neither black nor white. They were simply a lost generation of children. I know. I was one of them.
>
> Extract from *Bringing Them Home: Report of the National Inquiry into the Separation of Aboriginal and Torres Strait Islander Children from Their Families April 1997*, Human Rights and Equal Opportunity Commission

The extent to which mixed-race Aboriginal and Torres Strait Islander children were forcibly removed from their families has recently been a subject of debate. Some historians and commentators question whether there is enough common ground in the experiences of the removed children for them to be thought of as a single group. For example, the removal of children to attend secondary schooling, unavailable in many remote locations, might not be considered in the same way as the removal of whole families of children without justification. Other justifications dominated discussions when *Bringing Them Home* was released. These included 'child protection', beliefs that Australia's Indigenous people would 'die out', and a desire to 'civilise' Indigenous children through their assimilation into white society. However, the report dealt with many of these questions by making comparisons with non-Indigenous children removed from their families (see Source 8).

Source 8

> In contrast with the removal of non-Indigenous children, proof of 'neglect' was not always required before an Indigenous child could be removed. Their Aboriginality would suffice. Therefore, while some removals might be 'justifiable' after the event as being in the child's best interests, they often did not need to be justified at the time.
>
> Extract from *Bringing Them Home*, page 9

Proof that children were being neglected was not the main motive behind the forcible removal of Aboriginal children from their families. More often, it was the desire of European settlers to civilise or 'breed out' Aboriginality. Dr Cecil Cook, Chief Protector of the Northern Territory between the years of 1927 and 1939, was perhaps the most famous government official involved in the removal of Aboriginal children during this period. His views were that part-Aboriginal women should be elevated 'to white standard with a view to their absorption by mating into the white population'. This argument was used as motivation to remove thousands of Aboriginal children from their families.

Source 9 Marita Ah Chee was taken from her family to Garden Point Mission on Melvin Island in 1947. After 13 years she came back to work as a nanny in Alice Springs and her Aboriginal mother, having heard through the nuns that she was in Alice Springs, went 'doorknocking' until mother and daughter were finally reunited after 15 years.

Remember and understand

1. List some of the main ways in which Indigenous people were discriminated against in Australia from 1788 to the 1960s.
2. Describe the policy of assimilation.
3. What happened to the Jackson's Track community?
4. What does the term 'Stolen Generations' refer to?

Apply and analyse

5. Research the *Bringing Them Home* report. What was its purpose? What contribution to Australian history do you think it has made?

Evaluate and create

6. In your opinion, what was the greatest impact that the European settlers had on Indigenous Australians? Could this impact have been lessened if the policy of *terra nullius* had not been applied when Australia was colonised? Explain your point of view in a 200-word written response citing at least two historical sources.

11.3 Indigenous protests during the 19th and 20th centuries

Despite the many discriminatory policies of Australian colonial and state governments in the late 19th and early 20th centuries, Indigenous Australians made repeated attempts to have their traditions and rights recognised.

Many of the people who would go on to become important figures in the struggle for Indigenous **civil rights** came from the Aboriginal reserves and missions that had been set up by Aboriginal Protection Boards.

key**concept:** Significance

The Cummeragunja Station: birthplace of a movement?

Cummeragunja Aboriginal Station was established in 1881 on the New South Wales side of the Murray River. It was set on 1800 acres of land not far from the Maloga Mission, which is where many of the original inhabitants came from. It was in the heart of the Yorta Yorta Nation, not far from Corowa where colonial leaders would meet 12 years later to plan for a 'new' Australian Commonwealth. Originally, the Aboriginal residents managed Cummeragunja Station with little interference from the government. It was a productive farm and was home to many Aboriginal families when neighbouring Maloga Mission closed down some years later.

For a time, the school at Cummeragunja Station allowed Aboriginal children to continue studying well beyond the legislated three years. The outcome of this was that in the early part of the century, a number of future Aboriginal leaders acquired knowledge and skills that would later support their efforts to bring greater rights and freedoms to their people. Jack Patten (see '11.4 Significant individual: Jack Patten') attended primary school there, Doug Nicholls attended the school until he turned 14, and William Cooper was one of many leaders to take advantage of adult literacy classes.

William Cooper, who had spent most of his life fighting for justice for the Yorta Yorta people from his home at Cummeragunja, eventually left in 1933. He moved to Footscray in Melbourne at the age of 72 in order to qualify for the aged pension. From his new home in Footscray, he joined together with many other Cummeragunja exiles – forming the Australian Aborigines League. Exiles who joined this league included Doug Nicholls, Margaret Tucker and Thomas Shadrach James, who had been one of the schoolteachers at Cummeragunja decades before.

In 1939, Cummeragunja was again the focus of the national Aboriginal Rights movement as more than 200 Aboriginal people walked off the mission and crossed the river to Victoria to protest against poor treatment and conditions. This was the first ever mass strike of Aboriginal people in Australia.

For more information on the key concept of significance, refer to page 245 of 'The history toolkit'.

Source 1 William Cooper (left) and his family in 1936 – his cousin, Margaret Tucker, is standing next to him

The first protests

When the centenary (100th anniversary) of British colonisation in Australia was celebrated in 1888, little attention was paid to Aboriginal and Torres Strait Islander peoples. All colonies except South Australia proclaimed 'Anniversary Day' a public holiday in order to allow people to celebrate the European settlement.

Indigenous Australians boycotted celebrations, but very few people of European descent noticed. Indigenous people were excluded from public life and largely ignored. When the sesquicentenary (150th anniversary) of British settlement took place in 1938, organised groups of Indigenous Australians decided to use it as a chance to protest for their rights. They referred to the celebrations as a Day of Mourning and Protest (see Source 2).

The Australian Aborigines League (in Victoria) and the Aborigines Progressive Association (in New South Wales) had been involved in previous petitions seeking civil rights for Indigenous Australians. They refused to participate in the re-enactment of the First Fleet's landing at Farm Cove in Sydney, which was the focus of white celebrations. Instead, the Indigenous groups planned a protest march from the Sydney Town Hall.

After they were refused permission to meet at the Town Hall, they decided to march to the Australian Hall in Elizabeth Street instead. Even though this was to be a meeting of only Indigenous Australians, they were refused entry to the Australian Hall through the front door and were forced to enter through a rear door. The meeting was the first really effective all-Indigenous civil rights meeting in Australian history.

key**concept:** Significance

The Day of Mourning and Protest

The Day of Mourning and Protest is remembered as one of the most historically significant events in the struggle for Indigenous civil rights in Australia. A **manifesto** (written declaration) titled *Aborigines Claim Citizen Rights* was distributed at the meeting. The manifesto opened with a declaration that 'This festival of 150 years of so-called "progress" in Australia commemorates also 150 years of misery and degradation imposed on the original native inhabitants by white invaders of this country'. It was a powerful statement that introduced white Australians to an alternative view of their history. One of the protesters at the meeting, Jack Patten, delivered an address that marked a turning point in the fight for acceptance by Indigenous Australians (see Source 2 on the next page). Patten would go on to be one of the most significant figures in this struggle.

For more information on the key concept of significance, refer to page 245 of 'The history toolkit'.

Remember and understand

1 Describe the action taken by the Australian Aborigines League (in Victoria) and the Aborigines Progressive Association (in New South Wales) on 26 January 1938.

2 What event was to be the focus of white celebrations for Australia's sesquicentenary? Who refused to participate in this event?

Apply and analyse

3 Why do you think Cummeragunja Aboriginal Station produced so many important leaders of the civil rights movement in Australia?

Evaluate and create

4 Conduct some additional research to complete the following task.

a Choose one of the following individuals who (at some point) lived on Cummeragunja Aboriginal Station:

- Doug Nicholls
- Margaret Tucker
- William Cooper
- Thomas Shadrach James.

b Create a short biography outlining some interesting facts about this person's early life and provide a summary of their key achievements in the struggle for civil rights by Indigenous Australians.

11.4 Significant individual: Jack Patten

Jack Patten (born John Thomas Patten) was an Indigenous Australian civil rights activist and journalist. He is regarded by many historians as one of the most significant individuals to contribute to the fight for rights and freedoms of Indigenous Australians.

Early life

Jack Patten was born on 28 March 1905 at Cummeragunja Mission in the Yorta Yorta Nation, near Moama on the New South Wales side of the Murray River. He was the eldest of six children to John James Patten, a blacksmith and police tracker, and his wife Christina Mary, a local farmer's daughter.

After he attended high school in West Wyalong, New South Wales, he won a scholarship and tried to join the navy to continue his education. He was rejected because of his race. Patten then took on a number of labouring jobs and joined a boxing troupe that travelled around Australia. On these travels, and on subsequent journeys around Australia, he developed a very clear picture of the issues facing Aboriginal people.

Political awakening

Patten moved with his family to Salt Pan Creek, Sydney, in 1929. At this Depression-era camp he joined a group of dispossessed Aboriginal people who were already beginning to organise themselves into a political movement. Patten would speak about Aboriginal citizenship and equality on Sundays in the Domain in Sydney and, in 1938, published the first Aboriginal newspaper, *The Australian Abo Call* (see Source 1).

With his political partner, William Ferguson, Patten founded the Aborigines Progressive Association in 1937, and worked with the Australian Aborigines League to coordinate the first Aboriginal Day of Mourning in Sydney on 26 January 1938. Five days later, Patten and the other Aboriginal leaders met with Prime Minister Joseph Lyons and presented their 10-point plan for citizens' rights.

Representing 80,000 Australian Aborigines

The Australian

ABO CALL

THE VOICE OF THE ABORIGINES

EDITED BY J. T. PATTEN

We ask for Education, Opportunity, and Full Citizen Rights

No. 1. MONTHLY, 3d. APRIL, 1938.

To all Aborigines!

"The Abo Call" is our own paper.

It has been established to present the case for Aborigines, from the point of view of the Aborigines themselves.

This paper has nothing to do with missionaries, or anthropologists, or with anybody who looks down on Aborigines as an "inferior" race.

We are NOT an inferior race, we have merely been refused the chance of education that whites receive. "The Abo Call" will show that we do want to go back to the Stone Age.

Representing 60,000 Full Bloods and 20,000 Half-castes in Australia, we raise our voice to ask for Education, Equal Opportunity, and Full Citizen Rights.

"The Abo Call" will be published once a month. Price 3d.

The Editor asks all Aborigines and Half-castes to support the paper, by buying it and also by acting as agents for sale to white friends and supporters.

Please send postal note when ordering copies.

Address all letters to:—

J. T. Patten, "The Abo Call", Box 1924 KK, General Post Office, Sydney, N.S.W.

AT THE CONFERENCE OF 26th JANUARY.

EASTER MEETING

SELECT COMMITTEE

MR. BRUNNER'S PROMISE

PACKSADDLE

Source 1 The front cover of the newspaper *The Australian Abo Call – The Voice of the Aborigines*

Source 2

> On this day the white people are rejoicing, but we, as Aborigines, have no reason to rejoice on Australia's 150th birthday. Our purpose in meeting today is to bring home to the white people of Australia the frightful conditions in which the native Aborigines of this continent live. This land belonged to our forefathers 150 years ago, but today we are pushed further and further into the background.
>
> The Aborigines Progressive Association has been formed to put before the white people the fact that Aborigines throughout Australia are literally being starved to death. We refuse to be pushed into the background. We have decided to make ourselves heard. White men pretend that the Australian Aboriginal is a low type, who cannot be bettered. Our reply to that is, 'Give us the chance!'

> We do not wish to be left behind in Australia's march to progress. We ask for full citizen rights, including old-age pensions, maternity bonus, relief work when unemployed, and the right to a full Australian education for our children. We do not wish to be herded like cattle and treated as a special class. As regards the Aborigines Protection Board of New South Wales, white people in the cities do not realise the terrible conditions of slavery under which our people live in the outback districts.
>
> I have unanswerable evidence that women of our race are forced to work in return for rations, without other payment. Is this not slavery? Do white Australians realise that there is actual slavery in this fair progressive Commonwealth? Yet such is the case. We are looking in vain to white people to help us by charity. We must do something ourselves to draw public attention to our plight. That is why this Conference is held, to discuss ways and means of arousing the conscience of white Australians, who have us in their power but have hitherto refused to help us.
>
> Address delivered by Jack Patten, the President of the Aborigines Progressive Association, on the Day of Mourning (26 January 1938)

In 1939, Patten responded to a call from his relatives at Cummeragunja to help support their struggle against management. Patten and his brother George were arrested for inciting the Aborigines to leave the reserve. He was then labelled a Nazi agent by the Sydney press. Once released from jail, Patten won another long battle as he convinced the government to overturn a ban preventing Aborigines from enlisting in the armed forces. Until then, Aborigines needed to lie about their aboriginality to be accepted. Patten was finally able to enlist and served in the Middle East with the 6th Division. He was wounded in 1942, and retired from active service. He returned to work in northern Australia, helping construct infrastructure as part of the effort to protect the area from invasion.

Stolen children

After the war, when Patten was clearing land where his family had settled in northern New South Wales, six of his own children were taken from him by the Aboriginal Protection Board. Patten was unable to secure the release of his five daughters, who were trained as domestic servants in Cootamundra, but he was able to find and release his son, John. Together they fled back to Cummeragunja.

His final years

Suffering depression from his war experience, Patten left his family and made a living as a labourer in Melbourne. He continued to be a powerful advocate for Indigenous issues, and spoke out against British atomic weapons testing at Maralinga in South Australia.

Patten was killed in a motor accident in Fitzroy in 1957. Unlike many of his contemporaries, he was not returned to a final resting place at Cummeragunja. He was buried at Fawkner Cemetery in an unmarked grave. That grave remains in much the same condition today.

   - **a** What were some of the main concerns he was addressing?
   - **b** What was he asking for on behalf of Australia's Indigenous population?
6. Write a short paragraph of 150 words explaining Jack Patten's main contribution to the Indigenous civil rights movement.

Evaluate and create

7. Create an entry for Jack Patten in a 'Biography of Great Australians'. Think about his most significant achievements and key biographical information that you want to draw attention to.

11.5 Indigenous achievements and contributions during the 19th and 20th centuries

Source 1 Painting by Albert Namatjira, *Blue Haze over James Range*

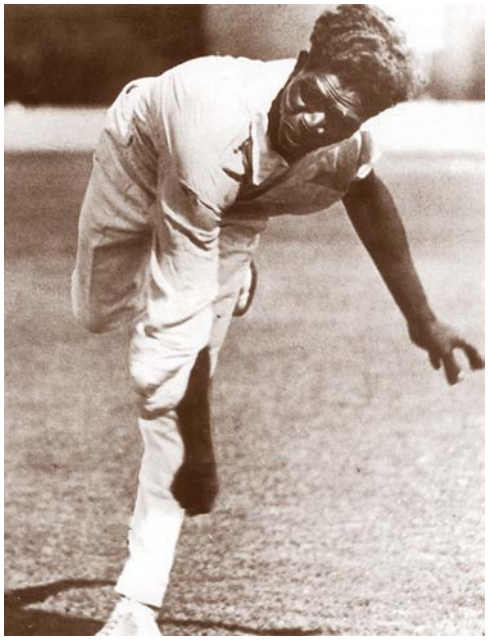

Despite the official government discrimination and control that affected most aspects of their lives, Aborigines and Torres Strait Islanders participated in and contributed to Australian society in many ways during the 19th and 20th centuries. They were employed on cattle stations and other farms, and in other industries including fishing and timber milling. Despite discrimination and bans, many Indigenous Australians also fought in World War I and World War II. The period between these wars was particularly significant for Indigenous Australians, as it was during this time that many began to excel in areas of public life such as art and sport.

Achievements in art

In Melbourne in 1938, an Aboriginal artist by the name of Albert Namatjira held his first exhibition of European-style paintings. Namatjira was an Arrernte man living at the Hermannsburg Mission in southern central Northern Territory at the time. Over the next decade he sold hundreds of paintings and is still regarded as one of our most influential artists (see Source 1).

Source 2 Albert Namatjira

Source 3 Aboriginal test cricketer Eddie Gilbert

Achievements in sport

During this period, a number of outstanding Indigenous athletes achieved some significant successes in the field of sport. Sir Doug Nicholls, from the Cummeragunja mission in southern New South Wales, was first recruited by the Carlton Football Club and then went on to play for the Fitzroy Football Club in 1932. He was also eventually selected to play for Victoria in State of Origin football. Nicholls was a pioneering campaigner for reconciliation and was also the first Aboriginal person to receive a knighthood and the first to serve as a governor general.

In Queensland, Indigenous cricketer Eddie Gilbert had been taken from his home as a three-year-old. He grew up on the Barambah Aboriginal Reserve, north of Brisbane, where he learned to play cricket. With a flexible wrist, he was able to generate a fearsome pace in his bowling (see Source 3). He dismissed Don Bradman for a duck in a Sheffield Shield game in 1931. Bradman later described the balls he faced from Gilbert as the quickest of his career.

Living on a reserve, Gilbert had to receive written permission to leave every time he was to play first-class cricket. In the end, he played 23 first-class matches for Queensland, but was never selected for Australia. However, there were calls for his inclusion when Australia was being defeated by England during the 'Bodyline' series of 1932–33, but this did not happen. Gilbert received belated recognition of his achievements in 2008 when a statue commemorating him was unveiled at Brisbane's Allan Border Field.

Contributions to military service

Another key contribution by Aboriginal people was in war. In both world wars, Aboriginal men saw active service. This was in spite of the fact that in World War I, Aboriginal men were barred from enlisting until 1917, at which point part-Aboriginals were accepted. At least 500 still managed to serve.

In 1940, after the outbreak of war in Europe and the Pacific, William Cooper, an Aboriginal Rights activist who had lost a son in World War I, wrote to the prime minister urging him to introduce citizenship rights for Aboriginal people. To Cooper, this was a sensible request that would help Australia's war effort. Cooper's attempt was not successful. However, Jack Patten, another Aboriginal activist, successfully lobbied for Aboriginal enlistment bans to be lifted. The creation of the *Commonwealth Electoral (War-time) Act* (1940) even gave Aboriginal servicemen a vote – but only for the duration of the war and six months afterwards.

Check your learning 11.5

Remember and understand

1. What is significant about Albert Namatjira's career?
2. What did Sir Doug Nicholls achieve during his lifetime?
3. What barriers did Eddie Gilbert face as an Aboriginal cricketer?
4. Who was responsible for allowing Indigenous Australians to enlist in the armed forces?

Evaluate and create

5. 'Australia has missed out on identifying significant talent because of government policies.' Create a written response of around 250 words in support of this statement. Use Sir Doug Nicholls, Albert Namatjira and Eddie Gilbert as examples to support your argument.

11.6 The Universal Declaration of Human Rights

The *terra nullius* ruling made by Sir Richard Bourke in 1835 meant that Indigenous Australians were not legally able to sell or acquire land. This ruling placed Aboriginal and Torres Strait Islander peoples at a legal disadvantage that also affected other aspects of their lives. By the time Australia celebrated 150 years of British settlement in 1938, it was difficult for Indigenous Australians to identify any positive outcomes from British settlement. It would only be after Australia's championing of the Universal Declaration of Human Rights in 1948 that attention gradually turned towards the situation and status of Aboriginal and Torres Strait Islander peoples.

The legacy of World War II

Millions of people were massacred during World War II. Many millions more never saw their families or homes again as a result of the destruction. During the war, many world leaders started to develop an ambitious, global response to these atrocities. The commitment to form the United Nations, a 'world government' of sorts, was designed to ensure that such events would never happen again. Part of this work involved establishing a set of international laws and treaties to protect people. Immediately after the end of World War II, the United Nations was formed and work started on formalising a set of basic human rights.

Source 1 Attorney General Herbert 'Doc' Evatt

Australia's role

Because of the horrors brought about by World War II there was enthusiasm to begin the work of protecting certain human rights by law. Leaders of emerging powers, including Australia's Attorney General, Herbert 'Doc' Evatt (see Source 1), convinced traditional powers such as Britain and France that the General Assembly must be seen to take a leading role in the development of laws to protect human rights. The world could not afford to be caught up in another catastrophe such as World War II. Evatt was General Secretary of the United Nations in 1948 and 1949, during which time he led the drafting of the Universal Declaration of Human Rights. This landmark document has 30 articles and has informed many international and national treaties and covenants (agreements) relating to rights (some of which are outlined in Source 2). Most significantly, the declaration held that human rights are inalienable – meaning that they cannot be taken away from any one of us regardless of age, race, gender, religion, language or nationality.

Source 2

Article 1
All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

Article 2
Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.

Article 3
Everyone has the right to life, liberty and security of person.

Article 4
No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

Article 5
No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

Article 6
Everyone has the right to recognition everywhere as a person before the law.

The first six articles of the Universal Declaration of Human Rights, 1948

Evatt was supported by many other leaders including Eleanor Roosevelt, a US delegate and the widow of former US President Franklin D Roosevelt. Eleanor Roosevelt's speech to the United Nations General Assembly on 2 December 1948 impressed upon the world the need for action. Eight days later, the Universal Declaration of Human Rights was ratified (endorsed) by the United Nations General Assembly.

The start of civil rights

Many historians argue that the Declaration of Human Rights set the scene for the civil rights struggles that would take place around the world in the coming decades. Germany was a developed economy with a functioning democracy before World War I, and yet, in less than a generation, it had become a fascist dictatorship where only the rights of certain people were protected. The fear was that unless action was taken in other places around the world to protect the human rights enshrined in the declaration, the same situation could once again develop elsewhere in the world.

The Australian context

Developments that took place in Australia from the 1960s can be seen as related to changes that were happening in a wider global context. Although Australia played a key role in arguing for the declaration on the world stage, the White Australia policy was still in force and was responsible for restricting the types of people arriving in Australia based on race and ethnicity.

At this time, there was only limited legal and public recognition of the rights of Aboriginal and Torres Strait Islanders. The acceptance of the rights contained in the Universal Declaration gave great encouragement to not only Indigenous Australians (see Source 3), but many other peoples whose access to basic human rights had been denied through war, conquest and colonisation.

Source 3 William Onus, President of the Australian Aborigines League, speaks at a meeting in the Domain, Sydney, 1949

Check your learning 11.6

Remember and understand

1 Why was it agreed a Universal Declaration of Human Rights was needed?
2 Who was General Secretary of the United Nations when the declaration was developed?
3 Who spoke in support of the declaration on 2 December 1948?
4 Which policy did Australia maintain despite the fact that it was against the spirit of the declaration?
5 What role did 'Doc' Evatt play in the creation of the Universal Declaration of Human Rights?

Apply and analyse

6 Even though Australia had been involved in the development of the Universal Declaration of Human Rights, Australian government policy failed to reflect the principles within it. Explain how this was so.

Evaluate and create

7 Did Senator Alexander Matheson's comments (see Source 2 on page 355) support the need for the creation of a Universal Declaration of Human Rights?

11A rich task

The Stolen Generations

At different times during the last 200 years a range of laws, practices and policies in Australia have resulted in the forcible removal of Indigenous children from their families. Analysis of relevant primary sources reveals there were a range of justifications and motives for this tragic and unjust practice that had serious and long-term effects. The *Bringing Them Home* report has now ensured that the perspectives and stories of members of the Stolen Generations can be heard and understood by members of the Australian public.

In 1937, government representatives from each state and territory (except Tasmania) attended the first Commonwealth and State 'Aboriginal Welfare' Conference to discuss Indigenous issues. This was the first time such discussions were held at a national level. Source 1 is an extract from comments made by a Chief Protector at the conference.

Source 1

If the coloured people of this country are to be absorbed into the general community they must be thoroughly fit and educated to at least the extent of the three R's. If they can read, write and count, and know what wages they should get, and how to enter into an agreement with an employer, that is all that should be necessary. Once that is accomplished there is no reason in the world why these coloured people should not be absorbed into the community. To achieve this end, however, we must have charge of the children at the age of six years; it is useless to wait until they are twelve or thirteen years of age. You cannot change a native after he has reached the age of puberty, but before that it is possible to mould him … In Western Australia we have power under the act to take any child from its mother at any stage of its life, no matter whether the mother be legally married or not … Although the children were illegitimate, the mothers were greatly attached to them, and did not wish to be parted from them. I adopted the practice of allowing the mothers to go to the institution with the children until they satisfied themselves that they were properly looked after. The mothers were then usually content to leave them there, and some eventually forgot all about them.

Are we going to have a population of 1,000,000 blacks in the Commonwealth, or are we going to merge them into our white community and eventually forget that there ever were any aborigines in Australia?

Extract from A O Neville, Chief Protector of Aborigines in Western Australia; taken from a speech delivered in 1937

Source 2

It was winter 1957, seven o'clock in the morning. The sun was up and the sounds of birds drifted down into our small kitchen. My brother Lenny was sitting on the floor, eating toast; my brothers Murray and David and I, rubbing our eyes in a state of half sleep, were waiting for mum to smear Vegemite on our bread before we dressed for school. A routine day in the Simon household.

Someone rapped loudly on the door. My mother didn't answer it. We hadn't heard anyone come up the path. The knocking got louder, and finally my mother, who was reluctant to answer any callers when my father wasn't home, opened the door and exchanged words with three people. We strained to hear what they were saying. Three men then entered the room.

A man in a suit ordered my mother to pick up Lenny and give him to me. My mother started to scream. One of the policemen bent down and picked up my brother and handed him to me. My mother screamed and sobbed hysterically but the men took no notice, and forced my brothers and me into a car.

My mother ran out onto the road, fell on her knees and belted her fists into the bitumen as she screamed. We looked back as the car drove off to see her hammering her fists into the road, the tears streaming down her face …

An extract from the account of Bill Simon, an Aboriginal man who was forcibly removed from his family when he was 10 years old

Source 3 Crowds march down Bourke Street in Melbourne to mark Sorry Day on 26 May 2007. The first National Sorry Day was held on 26 May 1998 – one year after the tabling of the report *Bringing Them Home*, which was the result of an inquiry into the forced removal of Aboriginal and Torres Strait Islander children, known as 'The Stolen Generations'.

skill**drill:** Continuity and change

Identify and analyse the perspectives of people from the past

Primary and secondary sources reflect and represent many different perspectives, points of view, attitudes and values. People who create sources are influenced by their gender, age, family and cultural background, education, religion, values and political beliefs, their life experiences and the time in which they live. It is the historian's job to make sure that they consider a range of perspectives in their investigations, allowing more voices to be heard and a more complete picture to be formed. Identifying and analysing the perspectives of different people is a very important historical skill. To do this, you need to understand the social, cultural and emotional contexts and factors that shaped people's lives and actions in the past.

Follow these steps when practising this skill:

Step 1 Identify a historical issue around which there may be different opinions or interpretations.

Step 2 List the various groups and people who may have been involved in or affected by this issue.

Step 3 Identify the role or position of these people and/or groups in society.

Step 4 Locate primary sources that provide evidence about the point of view these people and/or groups had on the issue.

Step 5 Analyse each source, using the following questions as a guide:

- Why was the source written or produced?
- Who was the intended audience of the source? Was it meant for one person's eyes, or for the public? How does that affect the source?
- What was the author's message or argument? What ideas were they trying to get across? Is the message explicit (obvious), or are there implicit (subtle) messages as well? What can the author's choice of words tell you? What about the silences – what does the author choose *not* to talk about?
- How does the author try to get the message across? For example, do they give a detached, balanced account, or is it biased for or against the issue?
- Compared to what we face today, what relevant circumstances and experiences were different for the author of the source in the past? (Some examples might include religion, economy, family life, technology, etc). How do you think these factors and experiences influenced their thoughts and actions?

Apply the skill

1 Read Sources 1 and 2 and follow each of the steps outlined above to identify and analyse the perspectives of A O Neville and Bill Simon. Pay particular attention to the questions provided in Step 5 and make sure you consider these questions when analysing both of the written sources.

Extend your understanding

1 Look again at your list of individuals and/or groups involved in or affected by the practice of forcibly removing Indigenous children from their families and communities. Of these groups and individuals, whose perspectives are *not* represented within the three sources provided?

2 Conduct some research to locate additional primary source documents that help to illustrate the perspectives of these other groups or individuals. Identify and analyse these new perspectives, using the steps provided.

11.7 The US civil rights movement

Source 1 Martin Luther King Jnr waves to the crowd gathered for the March on Washington in 1963 in support of civil rights for African Americans

During the 1960s, the struggle for civil rights for African Americans gained worldwide attention. A series of events and significant individuals in the US civil rights movement would go on to inspire and influence civil rights campaigners in Australia. We will now explore some of these key events.

During World War II, considerable numbers of African Americans left the former slave-owning states in the south to work in war industries in California, Michigan and Pennsylvania. These states offered a better quality of life and more equality than the southern states. After the war, in 1948, **segregation** of black and white soldiers in the US army was officially abolished. Many African-American men had served in the war and many had died for their country. It was felt that they could no longer be denied their rightful place in their country and armed services.

In the southern states, segregation of the races had been legally enforced since the American Civil War ended in 1865. Following the action taken in the US

Source 2 A separate waiting area for African Americans at a bus station in the USA

army, the US Supreme Court began to rule against segregation generally. In 1954, the Supreme Court ruled that segregation in US schools was unconstitutional – meaning that it was illegal under US law. This ruling became famous as the *Brown vs the Board of Education* ruling. Although the Supreme Court found that segregation in schools was illegal, state governments, particularly in the south, continued to resist federal intervention.

The case of Emmett Till

In August 1955, a 14-year-old African-American boy called Emmett Till was murdered near the town of Money in Mississippi. He had been brutally beaten and shot after being accused of flirting with a white woman. His body was dumped in the Tallahatchie River. Before the funeral in his home city of Chicago, Till's mother displayed his body in an open casket. She wanted the world to see the brutality of his murder. The white men accused of his murder were found not guilty in a trial conducted before an all-white jury in Mississippi.

The two men charged later admitted to the murder in a magazine interview, knowing they could not be tried twice for the same crime. The death of Emmett Till became a major turning point for the civil rights movement. The 1957 *Civil Rights Act* came from the momentum generated by the Emmett Till case. The Act aimed to ensure that all African Americans could exercise their right to vote, as well as providing resources for ongoing monitoring of civil rights abuses. It also called for a government report on race relations.

The Emmett Till case became a symbol for the civil rights movement across the United States. Authors used the case in many books to challenge public racism, and in 1962 the famous musician Bob Dylan recorded a song called 'The Death of Emmett Till'. Till's death was a tragedy that inspired thousands to change American society.

Bus boycotts and segregation

At roughly the same time, African Americans across the country began to assert their demands for equality in a number of different ways. In 1955, Rosa Parks was arrested in Montgomery, Alabama, after refusing to give up her seat at the front of a bus for a white passenger. The arrest resulted in a boycott of the Montgomery bus service by African-American passengers, beginning in December 1955. One year later, the boycott ended when the City of Montgomery was ordered by the US Supreme Court to stop segregating black and white passengers on its bus services. This victory inspired further efforts to end segregation in America.

Source 3 Emmett Till's mother at his funeral in 1955

Source 4 Rosa Parks is fingerprinted following her arrest.

In 1957, nine African-American students tried to enrol in the all-white Little Rock Central High School in the state of Arkansas. Despite the 1954 Supreme Court ruling banning segregation of black and white children in schools, the Arkansas governor used armed officers to prevent the nine students from entering the school. They also had to face a white crowd threatening to hang them. President Dwight Eisenhower intervened, sending in the US army to allow the African-American students to enter the high school they were legally entitled to attend (see Source 5).

President John F Kennedy's inaugural address in 1961 inspired many African Americans. Among these was Mississippi student James Meredith who exercised his democratic right by attempting to enrol in the Oxford Campus of the University of Mississippi. This action prompted riots at the campus and threats from the **Ku Klux Klan**. The Ku Klux Klan is a group of white Protestants who have historically been opposed to rights for people of colour, Catholics, Jews and immigrants. The organisation has been responsible for many hate crimes. Eventually, President Kennedy was forced to bring in the US Marshals and the Mississippi National Guard to control the crowd. Two people were killed and hundreds of soldiers and protesters were injured. Despite these violent protests, James Meredith was eventually enrolled.

The Freedom Riders

The US Freedom Riders was a group of activists who wanted to test the effect of the US Supreme Court's 1960 decision to end racial discrimination on public transport. The first group of Freedom Riders (seven African Americans and six white Americans) boarded public buses from Washington to the southern states of Virginia, North and South Carolina, Georgia, Alabama, Mississippi and Louisiana. The riders' strategy was a simple one. They would sit side by side, black and white, and at least one black rider would sit in the front section, previously reserved for 'white' passengers. They ate in restaurants together and ignored segregation signs when using toilets and drinking fountains.

The Freedom Riders' journeys were interrupted by frequent mob attacks – usually organised by the Ku Klux Klan – and arrests by southern law enforcement officers on various charges. Once in jail, the riders would sing freedom songs as a continued protest and,

Source 5 The Little Rock Nine entering Little Rock Central High School under the protection of the US army

in some cases, were released simply because the police could not stand the singing. When the county jails were full, a number of Freedom Riders were transferred to the Mississippi State Penitentiary, put into maximum-security units and denied many basic rights.

The riders also faced difficulty seeking medical treatment after their frequent beatings by the mobs and law enforcement officers. This racist brutality was one of the reasons that many other Freedom Riders joined the campaign over the course of the summer of 1961. After pressure from Dr Martin Luther King Jnr and other leading activists, Attorney General Robert Kennedy intervened. In September 1961, he insisted that states comply with federal desegregation laws.

Source 6 Freedom Riders sitting on board an interstate bus escorted by Mississippi National Guardsmen (a reserve military force of the US army)

These victories resulted largely from the courage of ordinary US citizens, brave enough to participate in the civil rights struggle. They also helped to make leaders such as Martin Luther King household names. King went on to be acknowledged as the main leader of the American civil rights movement (see 11.8 Significant individual: Dr Martin Luther King Jnr).

In 1963, King led the March on Washington, which was attended by 250 000 people, many of whom demanded an end to segregation. King redefined the rights movement. While the US Supreme Court had delivered a legal plan for desegregation, King's famous 'I have a dream' speech delivered at the March on Washington was a moral plan for change.

After President Kennedy's assassination in November 1963, President Lyndon Johnson accepted the challenge that Martin Luther King's success had created. On 2 July 1964, the US Congress enacted the *Civil Rights Act*, which outlawed discrimination based on race or gender. It was landmark legislation, but the challenge of changing racist attitudes among members of the general public still remained.

11.8 Significant individual: Dr Martin Luther King Jnr

Martin Luther King Jnr was born in Atlanta, Georgia, in 1929. As a student he engaged in civil rights debates and followed the peaceful resistance methods of Mahatma Gandhi with interest. By 1954, King was pastor of the Dexter Avenue Baptist Church in Montgomery, Alabama.

After Rosa Parks was arrested for not giving up her bus seat to a white man, King became a leader of the Montgomery Bus Boycott, a significant and successful protest against segregation. King was arrested during this protest and his house was attacked. He used his success with the bus boycott to help establish the Southern Christian Leadership Conference, which became one of the most important groups of the growing civil rights movement.

Source 1 Dr Martin Luther King Jnr

King's book about the Montgomery Bus Boycott, *Stride toward Freedom,* gave direction to the civil rights movement. It inspired protests against segregation across the USA, including the sit-in at a Woolworth's lunch counter by black students and, more famously, the Freedom Riders. King also lobbied candidates for the 1960 presidential election and achieved significant political influence, despite many trying to accuse him of being a communist. The Director of the FBI, J Edgar Hoover, was particularly opposed to King, and used his influence to try and undermine him.

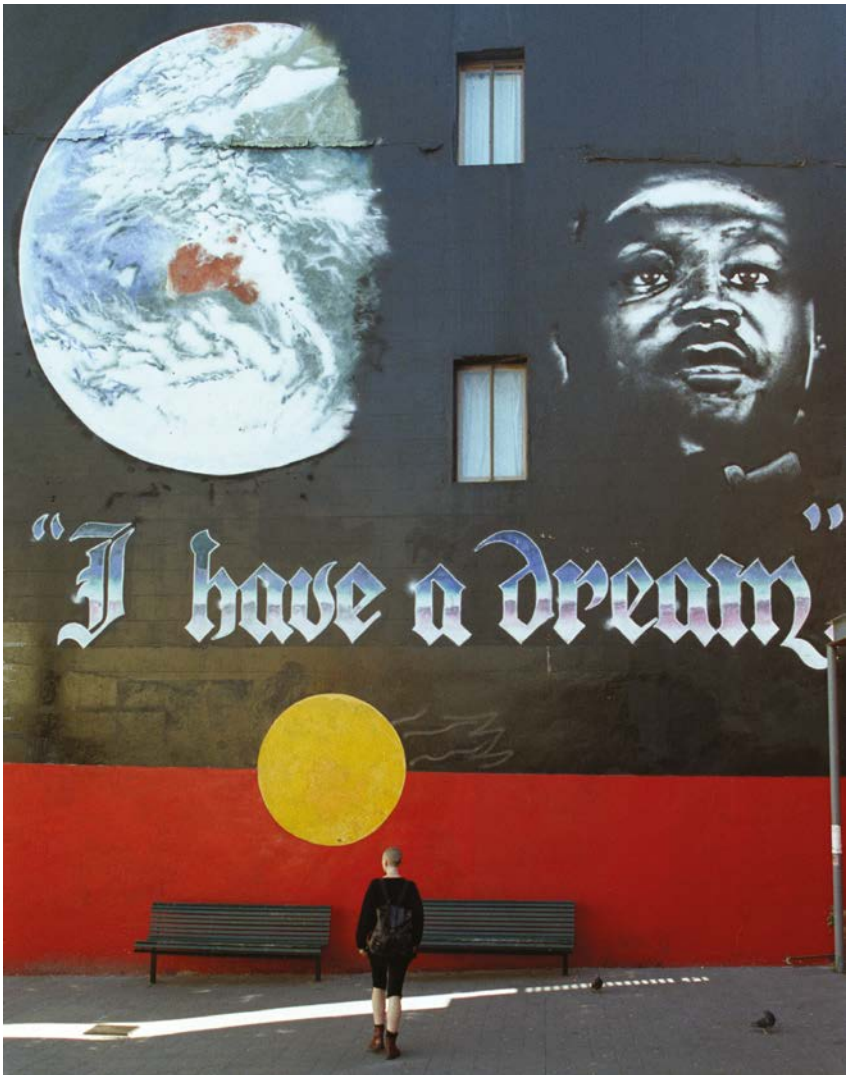

King's major impact was delivering his 'I have a dream' speech at the March on Washington rally on 28 August 1963. King was awarded the Nobel Peace Prize for his work towards ending segregation in 1964, the same year that the US Congress passed the *Civil Rights Act*.

The *Civil Rights Act* was a turning point in race relations in the USA, but King felt there was still much to achieve. He worked to establish support among the poor African Americans in the north. Although equality may have been guaranteed by federal law, social and economic equality still had to be fought for. King also led opposition to the Vietnam War, arguing, 'we have been repeatedly faced with the cruel irony of watching Negro and white boys on TV screens as they kill and die together for a nation that has been unable to seat them in the same schools'.

King was campaigning for striking garbage workers in Memphis, Tennessee, when he was assassinated on 4 April 1968 at the age of 39. The assassin was a white man, James Earl Ray, who was arrested in London two months later, on his way to white-dominated Rhodesia (now known as Zimbabwe). President Johnson declared 7 April a national day of mourning.

After campaigning by activists, including singer Stevie Wonder, President Ronald Reagan created a public holiday for King in 1986. By 2000, every American state recognised the third Monday of January as Martin Luther King Day and a public holiday.

King's dream, as he explained in Washington in 1963, was that 'One day this nation will rise up and live out the true meaning of its creed: "We hold these truths to be self-evident: that all men are created equal."' King's legacy of non-violent resistance became an ongoing inspiration, not only for the American civil rights movement, but also Australia's. King's reputation was international, and activists such as Charles Perkins and the Australian Freedom Riders looked to him for inspiration.

5. What actions and beliefs of King's do you think would inspire Indigenous Australians and their supporters?
6. Why was King such a significant figure in the US civil rights movement?

11.9 Australia's civil rights movement

Australia's Aboriginal rights leaders in the 1960s inherited a movement that had evolved from the Day of Mourning protests a generation before. The success of the US civil rights movement also inspired many non-Indigenous Australians to fight for greater equality for Aborigines.

By the 1960s, Indigenous Australians had a life expectancy almost 20 years less than non-Indigenous Australians. In 1959, the government agreed to provide welfare payments to Aborigines under the *Social Services Act*, though the Act required that these payments be paid to a third party. In 1962, all Aborigines and Torres Strait Islanders were given the right to vote in federal elections. In 1968, they achieved equal pay with other Australians. Unfortunately this had some unintended consequences. Until that time, most Aboriginal workers had only been receiving half the minimum wage paid to white Australians. In some areas, particularly in farming communities, some Aborigines were sacked because their bosses could not afford to pay the higher wages.

Despite these legislative changes, racist attitudes towards Aborigines were still prominent in society. As in the United States, the small steps of some brave individuals created a momentum for genuine change.

Source 1 Vincent Lingiari

The Wave Hill walk-off

Arguably, one of the most significant turning points in the struggle for Indigenous rights was the Wave Hill Station walk-off. The walk-off on 23 August 1966 was initially in response to the British Vestey Company's refusal to pay the Gurindji farm workers wages of $25.00 per week. The Commonwealth had granted 'equal pay' to Aboriginal workers a year earlier, but there was little evidence that companies were complying with the new law, and the Wave Hill workers chose to take a stand.

The walk-off highlighted the entrenched discrimination that existed in Australian society. But it also brought attention to the issue that would become central to Aboriginal claims for the next two generations – land rights.

Vincent Lingiari, who entered public life dramatically when he led the Gurindji people in the walk-off, quickly ensured that this protest had a more fundamental goal – returning traditional lands. Lingiari and other Gurindji leaders petitioned the Governor General in 1967, arguing that morally the land was theirs and should be returned to them. This claim was refused by the Governor General.

In 1971, a song called 'The Gurindji Blues' was written and released by white folk artist Ted Egan. It was created in response to the Wave Hill walk-off. The lyrics of the song supported the fight for acceptance of the Gurindji people. It features the voice of Galarrwuy Yunupingu and is introduced by Vincent Lingiari.

Although the song received very little radio play due to racist attitudes of the time, it continued the battle for recognition of the rights of the Gurindji people.

The walk-off finally ended in 1973, and in 1975 one of the decisive moments in Indigenous Australian history took place. Prime Minister Gough Whitlam symbolically poured earth into Vincent Lingiari's hand as he handed over 3300 square kilometres of land to the Gurindji people (see Source 2). The *Aboriginal Land Rights* (Northern Territory) *Act 1976* granted the Gurindji and other Aboriginal tribes in the Northern Territory title to some of their traditional land. For the

first time, a specific group of Aboriginal and Torres Strait Islander peoples had recognition of their connection to their land.

The story of the Wave Hill struggle has become a part of Australian popular culture. Indigenous singer Kev Carmody and white singer Paul Kelly wrote the song 'From Little Things Big Things Grow' as a tribute to the pioneering campaign of Vincent Lingiari.

Source 2 Lingiari and Gough Whitlam, 1975

The Australian Freedom Riders

The Australian Freedom Riders who toured regional New South Wales in early 1965 had a similar agenda to their American Freedom Rider comrades. The tour began as a fact-finding mission by a group officially known as Student Action for Aborigines, and ended as a genuine protest against segregation across Australia. The students were mostly non-Aboriginal and had been involved in organised protests in Sydney. Many of them probably did not know what to expect.

The Freedom Riders were led by a man called Charles Perkins. Perkins modelled the Australian rides on the 1961 American Freedom Rides. He took a bus into parts of rural New South Wales where racist attitudes were most prominent. The Australian Freedom Riders left Sydney on 12 February 1965 and headed initially for Wellington and Gularambone (see Source 3).

Walgett and Moree

In Walgett, Aborigines were banned from entering the town's Returned and Services League (RSL) Club. This 'home' of the Anzac spirit was a symbolic target for the Freedom Riders who protested outside the club (see Source 4). The actions of the Freedom Riders angered some in the town and their bus was run off the road as they left.

In Moree, Aborigines were banned from swimming in the council swimming pool. The Freedom Riders staged protests at the Town Hall and the local swimming pool – ensuring that Aboriginal children could enter the swimming pool alongside their non-Aboriginal peers. Again, the Freedom Riders were attacked by up to 500 locals and were forced to leave town. By this stage, the Freedom Rides were being followed closely by journalists (including television reporters), and as a result their protests were known countrywide.

NEW SOUTH WALES: THE ROUTE TAKEN BY THE AUSTRALIAN FREEDOM RIDERS

Source 3 Source: Oxford University Press

Source 4 Freedom Riders protesting outside the RSL Club in Walgett

While the Australian Freedom Rides did not stop these racist actions, they highlighted the practice to millions of urban Australians who were not aware that this type of discrimination was common in many Australian country towns. The media coverage they attracted helped develop a movement for further change. As Australians moved towards a referendum to include Aboriginal people in the **census** and enable the Commonwealth to deliver direct services to Aboriginal people, the media played an important role in the Indigenous rights campaign.

The 1967 referendum

In 1967, the Liberal government of Harold Holt had rejected the land rights claim of the Gurindji people at Wave Hill in the Northern Territory. However, recognising that there were inequalities to address, Holt called a **referendum** seeking authority to count Aborigines in the Australian census that same year. The referendum would also allow the federal government to legislate for Aboriginal and Torres Strait Islander peoples rather than leaving this to different state governments.

All major political parties supported the proposal. The referendum was the most successful ever passed, with more than 90 per cent of Australians agreeing to the proposal (see Source 6). (However, the 'Yes' vote was closer to 80 per cent in Queensland and far lower in some rural areas.) In Australian political history, this was an extraordinary result. Between 1901 and 2011 there have been 44 referendums, of which only eight have been carried.

As in all referendums, campaigns were organised and leaders mobilised to explain the reasons for and against change (see Source 5). By 1967, 87 per cent of households owned a television, so in addition to the traditional poster and newspaper campaigns of previous referendums, voters could actually watch the debate take place on their televisions.

During the lead-up to the referendum, both major political parties publicly endorsed the 'Yes' case and the Federal Council for the Advancement of Aborigines and Torres Strait Islanders (FCAATSI) arranged a number of public actions in Canberra and the capital cities to promote the cause. The churches were also big supporters.

One of the main issues of discrepancy was the confusion that was created by having different state laws. Indigenous Australians, who were acting within the law in New South Wales, could be arrested for doing the same thing in Queensland. Others voted 'Yes' because there was a view that resources for Aboriginal people, including welfare, would be more readily available if delivered by the Commonwealth. A more conservative argument related to the inclusion of Aboriginal people in the census – people simply thought it was fair that Aboriginal people be counted as human beings in the Commonwealth of Australia.

Contrary to popular belief, this referendum did not 'give Aborigines the vote'. That right had already been granted in all states by an Act of Parliament in 1962. In fact, between 8000 and 10000 Aboriginal people voted in the referendum.

Many Indigenous leaders today question the success of the referendum in changing attitudes. Mick Dodson, an Indigenous leader and member of the Yawuru people of north-west Australia, expressed concerns that when native title was being debated in federal parliament in the late 1990s, few Aboriginal leaders were even consulted – even after 30 years of public land rights campaigns.

   c some of your key experiences, for example in the Moree baths.

11.10 Land rights: a continuing struggle

The Indigenous struggle for land rights has a long and important history in Australia. Throughout the 19th century, the 'frontiers' of British settlement continued to expand onto Aboriginal land almost without restriction. The concept of *terra nullius* established at the time of British settlement, and reinforced by the declaration of Governor Bourke in 1835, ensured that there would be no recognition of Aboriginal rights to land. Early farmers leased large amounts of land, including traditional Aboriginal land, from the Crown (British government) and white occupation of the land equated to ownership.

However, there is some evidence that this situation was challenged from time to time. From the 1840s onwards, the British Colonial Office wanted the Australian colonies to give formal recognition to native title and to grant rights for Aborigines to share rural lands. Farmers and their allies rejected this. In the 1870s, Indigenous groups in parts of New South Wales petitioned for their right to own farming land.

The challenges faced by Aboriginal and Torres Strait Islander peoples were immense. The 1970s offered some hope for activists. The Whitlam Government was elected in 1972 and announced **self-determination** as the framework for Aboriginal Affairs policy. This introduced the idea that Aboriginal people were best placed to determine what happened to them and their lands. This approach put an end to applications for mining licences on Commonwealth Aboriginal Reserves – but only for a short time. In 1976, after Gough Whitlam had left office, the Fraser Government passed the *Aboriginal Land Rights Act*, which officially granted land title to the Gurindji and other tribes in the Northern Territory. This represented the beginning of a powerful shift in the Indigenous rights movement.

Source 1 The Tent Embassy in 1972

While these power shifts provided some hope to Aboriginal people, Indigenous leaders knew they still had a long way to go. State governments continued to negotiate directly with mining companies to grant leases without consulting traditional land owners. The civil rights movement and land rights campaigns of the 1960s and 1970s laid the basis for great change, but many issues remained unresolved.

Tent embassy

Before Whitlam's election, an Aboriginal Tent Embassy was established on the lawn in front of the Australian Parliament in 1972 (see Source 1), where it has remained in order to keep the issue of Aboriginal rights in the public eye.

The embassy was erected in response to the slow progress being made on Aboriginal land rights. The 1967 referendum had delivered administrative responsibility for Aboriginal and Torres Strait Islander

peoples to the Commonwealth, but many felt that there still needed to be an acknowledgement of traditional ownership. In particular, radical 'black' groups, such as 'Black Power', considered militancy to be the next step. For a short time, an Australian branch of the Black Panthers (a militant activist group based in the United States) operated in Melbourne and Sydney.

Key figures of the embassy, including Roberta (Bobbi) Sykes, Gary Foley and Michael Anderson, established the Tent Embassy in the middle of the night on Australia Day in 1972. As well as highlighting significant symbolic goals, the embassy leaders had a list of practical demands that they wanted to negotiate. These included:

- legal and title rights to land currently being mined
- the preservation of all sacred sites
- compensation for lands not returnable – a $6 billion down payment plus an annual percentage of gross national income.

The demands were rejected and the police removed the tents and arrested a number of activists.

Over the next five years, the embassy was erected, demolished and re-erected several times until Charles Perkins negotiated its temporary removal on the promise of action on land rights. In that time, a number of commitments by the Commonwealth led many to believe that progress was being made. Whitlam established a significant bureaucracy to support Aboriginal welfare and land rights claims and Fraser passed the *Aboriginal Land Rights Act 1976*.

The Tent Embassy was re-established on the grounds of Old Parliament House in 1992, where it continues to remind the nation of the ongoing issues relating to reconciliation.

Source 2 The Tent Embassy was re-established in 1992 and remains in place today.

keyconcept: Significance

The Aboriginal flag

In 1971, Aboriginal artist Harold Thomas designed the Aboriginal flag. The colours of the flag have been interpreted in different ways. The black is seen as either representing Aboriginal people or the night sky. The red is seen as either representing the red earth or the Aboriginal blood that was shed when the Europeans arrived. The yellow is usually interpreted as representing the sun.

The flag is one of the most significant symbols of Aboriginal rights because it is so powerful visually and provides a single banner under which all Aboriginal nations can unite. The flag was flown when the Tent Embassy was set up in Canberra on 26 January 1972. The embassy sought to draw attention to wrongs carried out against Aboriginal people and air their grievances. It did so successfully. One of its placards linked it to land rights, reading: 'White Australia you are living on stolen land'.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

Source 3 The Aboriginal flag

Mabo decision and *Native Title Act*

In June 1992, a group of Torres Strait Islander people led by activist Eddie Mabo won a historic land rights case in the High Court of Australia. The judgment meant that the Islanders had a right to their traditional land because they had been the original owners before European settlement. The court ruled that **native title** may apply to all claims to land that had not been sold or given away; in other words, **Crown land** (land considered to belong to the state). The ruling stated that 'there may be other areas of Australia where an Aboriginal people maintaining their identity and their customs are entitled to enjoy their native title'.

In December 1993, the government passed the *Native Title Act* to place the *Mabo* decision in Australian law. The *Native Title Act* also addressed some concerns of non-Indigenous Australians who felt their ownership of property could be challenged as a result – it confirmed land ownership for those who had purchased property. It also declared that future native title claimants must prove that Indigenous people had an unbroken link with the land in question. The federal government established a National Native Title Tribunal and developed a research process that was necessary before a native title application could be made. This was done to reassure groups such as landowners and miners who feared that their titles or claims might be taken from them.

key concept: Significance

Eddie Mabo

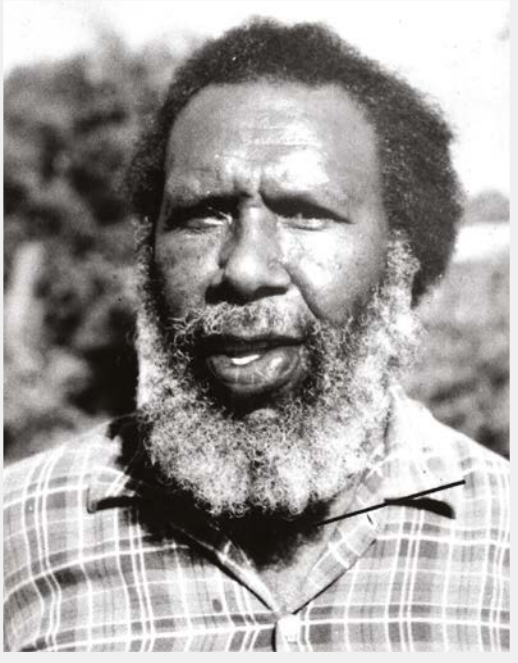

Eddie Koiki Mabo was a Torres Strait Islander born in 1936 on Mer Island (known as Murray Island in the Torres Strait). His mother died shortly after his birth and he was adopted by his mother's brother, Benny Mabo, and his wife.

Mabo learned from a young age that he would inherit his father Benny's land and he knew exactly where the boundaries were by looking at land features, trees and rocks. After breaking Island law as a teenager, Eddie was exiled and it was many years before he returned to his land.

On the mainland, he worked on pearling boats and on the railways. He became involved in the trade union movement and began speaking out for Aboriginal people. A few years after marrying Bonita Neehow at 23, he secured a job as a gardener at James Cook University in Townsville, where he began to read and attend lectures.

When the 1981 Land Rights Conference was held at James Cook University, Eddie Mabo made an important speech about his ownership of land on Mer Island. He was immediately encouraged to test his ownership claims in the courts. When he told the people of Mer Island they were very supportive, and a 10-year legal battle began with Eddie as the leader. In particular, the Mer Islanders were challenging the legal concept of *terra nullius*.

The case was known as *Mabo v Queensland* and, in the course of proceedings, officials of the Queensland Supreme Court visited Mer Island to clarify details of Mabo's claim. He was able to show the judges (and the media) exactly where his land started and finished.

Source 4 Eddie Mabo on Mer Island

The legal battle took a toll on Eddie Mabo's health. In 1991, he became ill and in January 1992 he died of cancer. The High Court of Australia ruled in favour of Mabo five months later. His name has become linked with the most important legal judgment for Indigenous Australians in the 20th century. When his body was reburied on Mer Island after his grave in Townsville had been vandalised, he was given a chief's ceremony, which had not been seen in the islands for 80 years.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

The Wik decision

In 1996, the question of native title on pastoral leases was raised and investigated in the High Court of Australia in the Wik case. Pastoral leases are unique to Australia as they allow publicly owned land to be used by farmers and graziers but do not grant them sole tenure. As these leases account for 42 per cent of the Australian land mass, it was a major issue in the land rights campaigns.

The Wik people of Cape York argued in court that native title could exist alongside a current or defunct pastoral lease. The court agreed but stressed that where pastoralists' rights and Indigenous rights were in conflict, the rights of the pastoralist would prevail. The court pointed out that pastoralists had the exclusive right to pasture but not exclusive rights to the possession of land.

Because of criticism and concern expressed by pastoralists and conservative leaders, the Howard Government introduced a Native Title Amendment Bill in 1997. This legislation effectively extinguished native title, not only on pastoral land but also on most other Crown land. The United Nations Committee for the Elimination of Racial Discrimination demanded that Australia explain its stance. Australia was the first Western nation to have to explain its human rights position to this UN committee.

Remember and understand

1. Who was prime minister when the *Aboriginal Land Rights Act* was introduced in 1976? What did this Act mean for Indigenous people?
2. When was the Tent Embassy first established?
3. What was the purpose of the Tent Embassy? List the key demands.
4. Where was Eddie Mabo's traditional land?
5. What was the High Court's ruling in the Wik case?
6. What do the colours on the Aboriginal flag symbolise?

Evaluate and create

7. The Mabo case represents one of the most significant moments in Australian history. Explain why this is so.
8. Research the Torres Strait Islander flag and its history. Prepare a brief presentation for the class using PowerPoint or Prezi. Be sure to explain the origins of the flag, the symbolism in the design, and any significant individuals who had a role in the development of the flag, up to its final acceptance as a flag of Australia.

11.11 Towards reconciliation

The concept of **reconciliation** is best understood as a continuing process and not a single event. It is the way in which Indigenous and non-Indigenous Australians can come together and share common goals as unified Australians. The acceptance of the 1967 referendum, a bipartisan commitment to land rights in the mid-1970s and the passage of the *Aboriginal Land Rights Act 1976* saw the Gurundji people achieve land recognition. These events were seen as steps towards genuine reconciliation.

These small successes paved the way for more organised and consistent efforts to acknowledge the wrongs committed by governments and individuals against Aboriginal and Torres Strait Islander peoples in the past.

ATSIC and Indigenous rights movements

The Hawke Government established the Aboriginal and Torres Strait Islander Commission (ATSIC) in March 1990. ATSIC was an elected body selected by Indigenous Australians. It was designed to be an organisation through which all Indigenous peoples could be formally involved in government processes. It was also seen as a first step towards Aboriginal self-determination – that is, Aboriginal people taking control of their own affairs.

ATSIC was to have both representative and executive roles, with 35 regional offices and a budget. The Hawke Government saw it as an important vehicle for managing Aboriginal affairs.

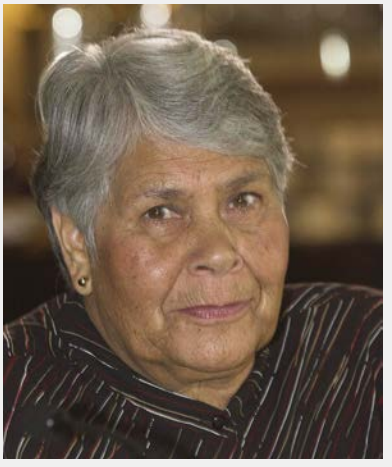

The *Aboriginal and Torres Strait Islander Commission Act 1989* was passed by the Parliament in early November. Its objectives were designed to ensure full participation by Aboriginal people in decision making:

- to ensure maximum participation of Aboriginal and Torres Strait Islander peoples in government policy formulation and implementation
- to promote Indigenous self-management and self-sufficiency
- to further Indigenous economic, social and cultural development

key concept: Significance

Lowitja O'Donoghue

Lowitja O'Donoghue, who was born in 1932, was taken away from her mother at the age of two and did not see her again for 33 years. She never knew her father, who was white and of Irish descent. O'Donoghue grew up away from her community in Indulkana, South Australia (Granite Downs Station). She struggled to become a nurse after winning admission to the nursing school at the Royal Adelaide Hospital, where she was the first Indigenous Australian to qualify. She worked as a public servant in Aboriginal Affairs, first in South Australia and then for the Commonwealth. Since that time, she has been involved in various senior positions, gaining a voice for the Indigenous people of Australia. She was the founding chairperson of ATSIC and co-chairperson of the Australian Citizen's Parliament.

Source 1 Lowitja O'Donoghue

For her work, she was awarded an Order of Australia in 1976, when she became the first Indigenous woman to receive this award. She became a Commander of the Order of the British Empire in 1983. In 1984, she was named Australian of the Year. In 1992, at the launch of the United Nations International Year of Indigenous People, O'Donoghue was the first Australian Aboriginal person to address the UN General Assembly. Since then, she has been further honoured by awards of the Companion of the Order of Australia in 1999 and the Papal Award (Dame of the Order of St Gregory) in 2005. Prime Minister Kevin Rudd stood with O'Donoghue beside him as he made the nation's apology on Sorry Day, 13 February 2008.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

Source 2 Aboriginal people protesting against the abolition of ATSIC

- to ensure coordination of Commonwealth, state, territory and local government policy affecting Indigenous people.

By the early 2000s, however, criticism was growing in regard to what was seen as a lack of achievements by ATSIC for Aboriginal communities. Some felt that there were problems due to the structure of ATSIC and that the Western democratic process did not sit easily with traditional Indigenous values, where family group relationships are most important.

Lowitja O'Donoghue, first chairperson of ATSIC (see Source 1), described the problems this way: 'You elect your own mob [and they] vote for funding for their own mob rather than those who have the greater need … What I've always said is, "We're dealing here with taxpayers' money. This is a white fella organisation, not a black fella one. And so we've got to operate in a different way." That's the dilemma.'

But ATSIC was also constrained in regard to its funding. In 2003–04, ATSIC only received 46 per cent of the total budgeted Commonwealth expenditure for Indigenous affairs. ATSIC was not given responsibility for the areas of health care, social security or education. This severely limited what ATSIC could achieve.

In its last few years, the majority of ATSIC's budget was spent on economic development programs, including the Community Development Employment Project (CDEP) scheme. Supporters saw it as providing genuine work for young Indigenous people who chose to live in traditional communities. Others were concerned that it could never deliver the skills training and economic benefits that it set out to.

Following continued concerns over mismanagement and funding discrepancies, ATSIC was abolished in 2004 by the Howard Government. The CDEP continued to operate, although a number of CDEP programs were abolished in 2007 as part of the Howard Government's 'intervention'.

11B rich task

Charles Perkins: a significant individual

In 1965, Charles Perkins was the first Aboriginal person to graduate from an Australian university, receiving a Bachelor of Arts from the University of Sydney. A former professional soccer player with a charismatic personality, he became one of the most important Australian Aboriginal activists and leaders. His involvement in the Australian Freedom Ride through New South Wales in the 1960s played a significant role in bringing to attention the racial discrimination that was so rife in rural Australia.

Source 1 Charles Perkins as a Commonwealth Public Servant in 1974

skill**drill:** Historical significance

Create and deliver an audiovisual presentation

It is likely that as part of your school work, you have already created many PowerPoint presentations. You may have also tried out some other audiovisual presentation software, such as Prezi, which is freely available on the Internet. Whichever program you choose, it is important to use it effectively, and avoid the common problems of these types of presentations. Use the following steps to help you avoid these typical problems.

Step 1 Design your presentation

- Plan your presentation carefully so it has a clear beginning, middle and end.
- Make sure you present the content in clear, concise bullet-point form, *not* huge slabs of information in paragraph form.
- Do not just fill up your PowerPoint with heaps of random pictures that are only loosely related to the content. Include visuals that relate to the content on that particular slide. Make sure each visual is accompanied by a caption that explains why it is relevant to the presentation.
- A common mistake is to have objects and texts moving on the screen in a way that distracts the audience. Use graphics, sound, video, animations and transitions *only* if they add value to the point being made, not just because you think it will look good.
- Use a design that ensures your audience can clearly see and read the slides. Make sure there is enough contrast between the text colour and the background colour on the slide, and make sure your font size is large enough.

Step 2 Deliver your presentation

- When delivering an audiovisual presentation to an audience, do not merely stand up and read out the text on each slide. Rather, talk in a way that develops and expands upon the points on each slide. Carefully plan in advance what you are going to talk about during each slide. Record this plan on cue cards, and refer to these cue cards during your speech to remind you of what to say.
- Remember: one thing at a time. At any moment, what is on the screen should be the thing that you are talking about. Your audience will quickly read every

slide as soon as it is displayed. If there are four points on the slide, they'll have read all four points while you are still talking about the first point. Plan your presentation so just one new point is displayed at any given moment. Click to go to the next point only when you are ready to talk about that next point.

- Speak clearly – not too fast, not too slow. Vary your tone and pitch to make your presentation more interesting.
- Make eye contact with different members of your audience. Do *not* just look down at your cue cards.

Apply the skill

1 Prepare and deliver an audiovisual presentation about Charles Perkins and his role in achieving change for Indigenous people in Australia.

Use the following questions to guide you:

a What was Perkins' childhood like and how did this motivate him with regard to his later activism?

b What were some of his sporting and academic achievements?

c What was the Australian Freedom Ride and what was Perkins' role in it?

d How was he influenced by the American Freedom Riders?

e What were some key features of his political career in the years after the Freedom Ride?

2 Your presentation should be well researched and based on relevant and reliable sources. For detailed information on this skill, refer to Section 7.4 of 'The history toolkit'.

Extend your understanding

1 As you listen to the presentations of your classmates, complete a peer assessment. Use Source 2 as a guide. You could create a pro forma and ask your teacher to photocopy several copies so that you can complete one for each presentation you listen to.

2 Give each classmate your completed peer assessment. Collect the peer assessments that your classmates completed as they listened to your presentation. Read their feedback, and then complete a short self-assessment by responding to the following questions:

a What did I do well in terms of my presentation design?

b What could I improve in terms of my presentation design?

c What did I do well in terms of my oral presentation?

d What could I improve in terms of my oral presentation?

Source 2 Peer assessment form

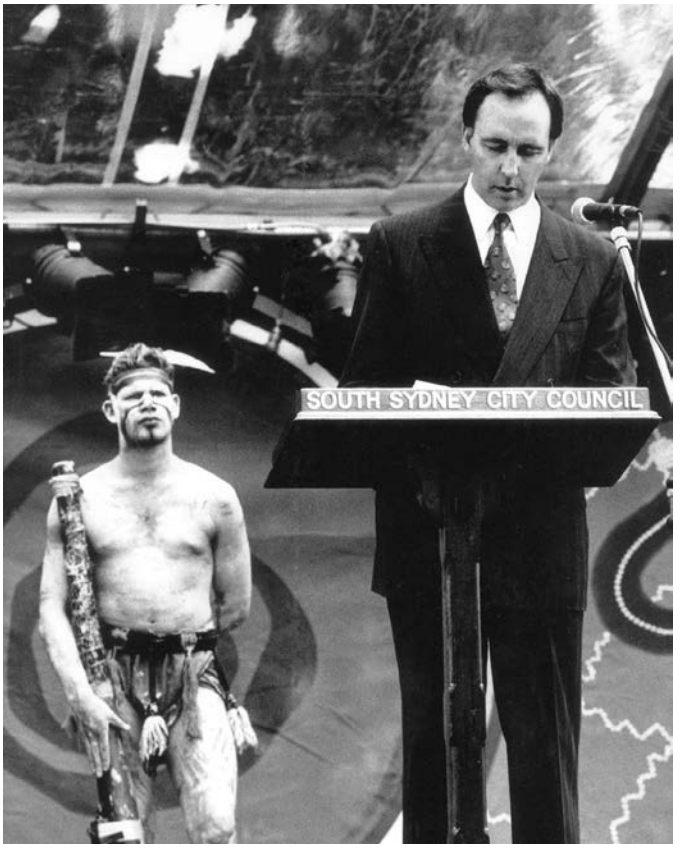

Name of presenter:	*Name of person completing peer assessment:*
Component of presentation:	*What did the presenter do well in this regard?*

Oral presentation	

11.12 Two speeches, two perspectives

Civil rights remains a divisive and contentious issue for some people to this day. This division, and the different positions taken by political parties in Australia over the years are clearly reflected in two major speeches made by two different prime ministers in Australia during the 1990s.

The Redfern Park speech

Six months after the Mabo decision – in December 1992 – Prime Minister Paul Keating launched Australia into what the United Nations had declared the 'International Year of the World's Indigenous People'. Keating spoke to a mainly Indigenous audience in the Sydney suburb of Redfern (see Source 1). Keating's speech is now seen as one of the most significant delivered by an Australian prime minister on Indigenous issues. It challenged Australians to imagine what it would have been like if they had experienced such injustices. It kept the reconciliation debate alive by keeping the issue in the public eye.

Source 1 Paul Keating giving his Redfern Park speech in December 1992

It was historic because it was the first time an Australian prime minister had publicly acknowledged the injustices Indigenous people had experienced because of past policies. The speech was written by one of Keating's main speechwriters, Don Watson. In 2007, Radio National listeners voted the Redfern Park speech as the third most unforgettable speech in history, behind those of Martin Luther King and Jesus.

Official recognition

Perhaps the most powerful moment of the speech was when Keating said: 'Recognition that it was we who did the dispossessing. We took the traditional lands and smashed the traditional way of life. We brought the diseases. The alcohol. We committed the murders. We took the children from their mothers. We practised discrimination and exclusion.'

They were the words many Aboriginal and Torres Strait Islander peoples never thought they would hear from an Australian prime minister.

It was thought the Redfern Park speech heralded a major breakthrough on the path to reconciliation by honestly recognising the injustices of Australia's past.

Rejection of an official apology

In 1997, Prime Minister John Howard rejected the idea that an official apology to Indigenous people was needed. During his term as prime minister, John Howard made it clear that no apology would be made to Australia's Indigenous people for the past actions of non-Indigenous people or to groups such as the Stolen Generations.

Contrary to this view, a groundswell of opinion saw state premiers offering such apologies. Queensland started the process with a parliamentary apology on 26 May 1997. Western Australia followed on 27 May, South Australia on 28 May, the ACT on 17 June, New South Wales on 18 June, Tasmania on 13 August, Victoria on 17 August and the Northern Territory on 28 October 2001.

Source 2 John Howard's speech at the Reconciliation Convention upset some delegates who responded by turning their backs on him.

The federal government, however, did speak of reconciliation. On 26 August 1999, John Howard said that Parliament expressed '… its deep and sincere regret that Indigenous Australians suffered injustices under the practices of past generations, and for the hurt and trauma that many Indigenous people continue to feel as a consequence of those practices'.

The leader of the Opposition, Kim Beazley, spoke emotively of the need to '… unreservedly [apologise] to Indigenous Australians for the injustice they have suffered, and for the hurt and trauma that many Indigenous people continue to suffer as a consequence of this injustice'.

Prime Minister Howard and other conservative political and social leaders argued that previous generations were responsible for the experience of Australia's Aboriginal peoples. An apology was therefore not necessary from members of today's society and would place 'blame' on those who were not responsible. They also argued that the intent of those who initiated the actions or events was good, even if the result was damaging.

The Australian Reconciliation Convention

In May 1997, Howard gave a speech at the Australian Reconciliation Convention in Melbourne. This was designed to celebrate the 30 years since the famous referendum of 1967. The aim was to achieve reconciliation by 2001. As prime minister, Howard was to deliver the keynote address. His stance against a formal apology had angered delegates, and when he spoke some turned their backs on him, while others booed (see Source 2).

Howard made his position clear when he stated: 'In facing the realities of the past, however, we must not join those who would portray Australia's history since 1788 as little more than a disgraceful record of imperialism, exploitation and racism.'

He also made it clear that, 'Australians of this generation should not be required to accept guilt and blame for past actions and policies over which they had no control'.

For those who saw such hope in Keating's Redfern Park speech, Howard's approach seemed a step backwards. As prime minister he controlled the political agenda, and Australia had to wait until he lost his seat in the 2007 election to move towards a formal apology to Indigenous Australians.

11.13 The reconciliation movement

Popular support for the Stolen Generations grew significantly around the end of the 1990s. Central to the claims of many Australians was the view that Australia would be strengthened by a formal acknowledgement of past wrongs. This idea was suggested by the Governor General, William Deane, in 1996 and featured as recommendation five in the *Bringing Them Home* report.

The first 'Sorry Day' was held on 26 May 1998, to mark the anniversary of the handing down of the *Bringing Them Home* report. Each year since then, events have been staged to commemorate the findings and consider the government's scorecard on responding to the recommendations in the report (see Source 1). In 2005, the day was temporarily renamed the National Day of Healing for All Australians – a gesture of goodwill from the National Sorry Day Committee who frequently acknowledged the support given to its movement by a wide range of Australians.

Source 1 Sorry Day March in Sydney, 2007

Popular culture and the 2000 Olympics

The reconciliation movement stimulated wide-ranging creative expression, from films such as *Rabbit-Proof Fence* to songs by Archie Roach and Ruby Hunter, and works by performance artists such as the Bangarra Dance Company. Roach's award-winning album, *Charcoal Lane*, contained the heartbreaking song, 'Took the Children Away'. Roach had been removed from his family as a young child and the honesty of his songwriting awoke a wide audience to the pain and trauma that would later surface in the *Bringing Them Home* report.

The 2000 Sydney Olympics also provided a stage for popular support of reconciliation. Cathy Freeman became one of the most popular individuals in Australia when she both lit the Olympic flame at the opening ceremony and then won the 400-metres final (see Source 2). Her victory lap, where she draped herself in both the Aboriginal and Australian flags, was seen as a decisive moment in the history of reconciliation.

The closing ceremony of the Sydney Olympics provided one further step towards reconciliation. The rock band Midnight Oil performed as part of the ceremony. The band chose to perform its song *Beds Are Burning*, a statement of support for Aboriginal and Torres Strait Islander peoples. To Prime Minister Howard's chagrin, the band also performed in specially designed 'Sorry suits' (see Source 3).

Source 2 Cathy Freeman lights the Olympic Torch at the opening ceremony of the 2000 Olympics in Sydney

Source 3 The rock band Midnight Oil performs a concert wearing 'Sorry suits' at the closing ceremony of the 2000 Olympics in Sydney

The international scene

The 2000s saw significant global interest in Indigenous rights. In New Zealand, Māori people had secured more historic rights than Indigenous Australians, yet problems linked to poverty within the Māori population remained significant throughout the 1990s. The film *Once Were Warriors* highlighted the degrading influence of alcohol and violence on poor Māori families.

Government efforts over the following decade saw some gains made, particularly with respect to cultural reconciliation and politics. A Māori Party was formed in 2004 and won five seats at the 2005 election. Māori television began broadcasting in Te Reo (Indigenous language) in 2004.

In Canada, formal recognition of First Nations, Inuit and Métis people was marked by a Statement of Reconciliation in 1998. In 2008, the Canadian government established the Truth and Reconciliation Commission to investigate the impacts and consequences of the Indian Residential Schools on Indigenous Canadian children during the 20th century.

The United Nations declared 2007 the International Year of Indigenous People. By 2010, most governments around the world endorsed the United Nations Declaration of the Rights of Indigenous People.

The apology to the Stolen Generations

In his first week in parliament in 2008, the new Prime Minister, Kevin Rudd, apologised to Indigenous Australians for poor or unwise treatment from the time of European settlement through to recent years. No offer of compensation was made but a nation recognised that Indigenous Australians had been wronged. This had been one of the key election promises, and a moment that many people had been waiting for. Brendan Nelson, the leader of the Opposition, affirmed Rudd's sentiment.

The parliament was packed as the apology was made, and many people gathered in public spaces, schools and offices, all over the country, to view the live telecast of the speeches.

Source 4

> We apologise especially for the removal of Aboriginal and Torres Strait Islander children from their families, their communities and their country.
>
> For the pain, suffering and hurt of these Stolen Generations, their descendants and for their families left behind, we say sorry.
>
> To the mothers and the fathers, the brothers and the sisters, for the breaking up of families and communities, we say sorry.
>
> And for the indignity and degradation thus inflicted on a proud people and a proud culture, we say sorry.
>
> An extract from Rudd's speech

These were words that many Indigenous Australians had died without ever hearing. It was a turning point in our national history, and brought Australia into line with other Commonwealth countries, such as Canada, who had already dealt with this issue and moved on.

Many prominent Aboriginal Rights leaders were in Parliament, including Pat Dodson – sometimes described as the father of the reconciliation movement. Media coverage of the apology continued for many days, with the word 'Sorry' featuring prominently on all major newspapers on 14 February. Opinion polls showed that a significant number of Australians rated Rudd's apology as 'good', 'great' or 'excellent'.

The major criticism of the apology was the ambiguity over compensation. Many in the community still regarded this as a major challenge that the government would have to meet. Others saw the symbolism of the apology as meaningless unless it was immediately accompanied by practical measures to remove Aboriginal and Torres Strait Islander disadvantage and implement true reconciliation.

Source 5 Kevin Rudd giving the Apology

Looking to the future

The path to reconciliation is a long one. It requires much effort to deal with the continuing misery, poverty, poor physical and mental health, low life-expectancy, and general social and political marginalisation of Australia's Indigenous peoples.

Following Prime Minister Rudd's address it was noted by Indigenous leaders that although an official apology is an important step, practical things need to be done as well. They argue that practical measures, rather than symbolic gestures, will be necessary for Aborigines to be in a position where they are on an equal footing with other Australians. Only once health, education and job opportunities are similar to those of non-Aboriginal Australians will it be possible to feel that a true reconciliation has come about and that Indigenous Australians have been recognised fully.

Source 6 Public support at the time of the Apology was high – the word 'sorry' appeared everywhere

A sense of urgency

Unfortunately, the apology to the Stolen Generations and the Mabo victory were not accompanied by improvements in social outcomes for Aboriginal and Torres Strait Islander peoples. In fact, there has been significant worsening of social wellbeing in many communities. Disadvantage is particularly concentrated in rural Aboriginal communities around Australia.

This was certainly not expected by Aboriginal leaders who fought for improved rights from the 1960s onwards. In *The Politics of Suffering*, Peter Sutton chronicles how well-intentioned Aboriginal Affairs policies in Australia from the 1970s, including improved services and welfare, inadvertently resulted in increased child abuse, domestic violence, and drugs and alcohol use. Sutton's message has been difficult to comprehend by politicians and non-Indigenous Australians. How could self-determination, the opposite of the enforced assimilation of generations past, not deliver significant improvements?

Obviously the answers to this question are complicated. Fundamentally, while the policies provided some funding and other resources to Aboriginal communities, they did not provide lasting employment, effective education, adequate policing or regulations against the sale of alcohol – the cause of many of the problems.

The Intervention

In 2007, the Northern Territory Government's *Little Children Are Sacred* report was released. The report highlighted the extent of disadvantage, particularly among children. The Howard Government quickly intervened in this issue. The result was the Northern Territory National Emergency Response – or 'the Intervention'. This policy package included restrictions on welfare payments to ensure money was spent on food and other necessities rather than alcohol; immediate bans on the sale of alcohol and hard-core

Source 9 Noel Pearson (left) with politician Mal Brough

Source 10 Protesters in Alice Springs march against the Intervention

pornography in many Indigenous townships; medical checks for evidence of sexual abuse; and additional police assigned to investigate claims of sexual abuse of children.

While some people in the community expressed concern about the 'heavy-handed' nature of the Intervention, both sides of parliament and many Indigenous leaders ultimately supported it.

Noel Pearson, founder of the Cape York Land Council, was one of the first to give 'qualified' support for the Intervention, and had already argued for a decade that the so-called 'progressive' policies were failing young Aboriginal people. Pearson's 'Light on the Hill' speech, delivered in 2000 to a Labor Party audience, included a frank and honest assessment of the difference between white and black Australia.

The Intervention was not supported by all Aboriginal leaders. Some raised concerns that it would be a return to the **paternalism** of old and that it represented an infringement of the human rights of Aboriginal people, as the laws relating to welfare restrictions and the possession of alcohol applied only to Aboriginal people.

Closing the gap?

Supporters and critics alike have closely observed the progress of the Intervention. In 2010, Mal Brough, the Coalition minister originally responsible for the Intervention, complained bureaucracy and poor leadership had held up key work. Data released by the government at a similar time, in a *Closing the Gap* report, showed that reports of child sex abuse, alcohol-related violence and assault had increased in the three years.

In a more recent *Closing the Gap* report (2011), law-and-order data has been replaced by details of government investments and achievements in areas such as health, education and land rights. Many of these achievements are to be celebrated, but do they collectively amount to overall improvements for Aborigines and Torres Strait Islanders in Australia?

11C rich task

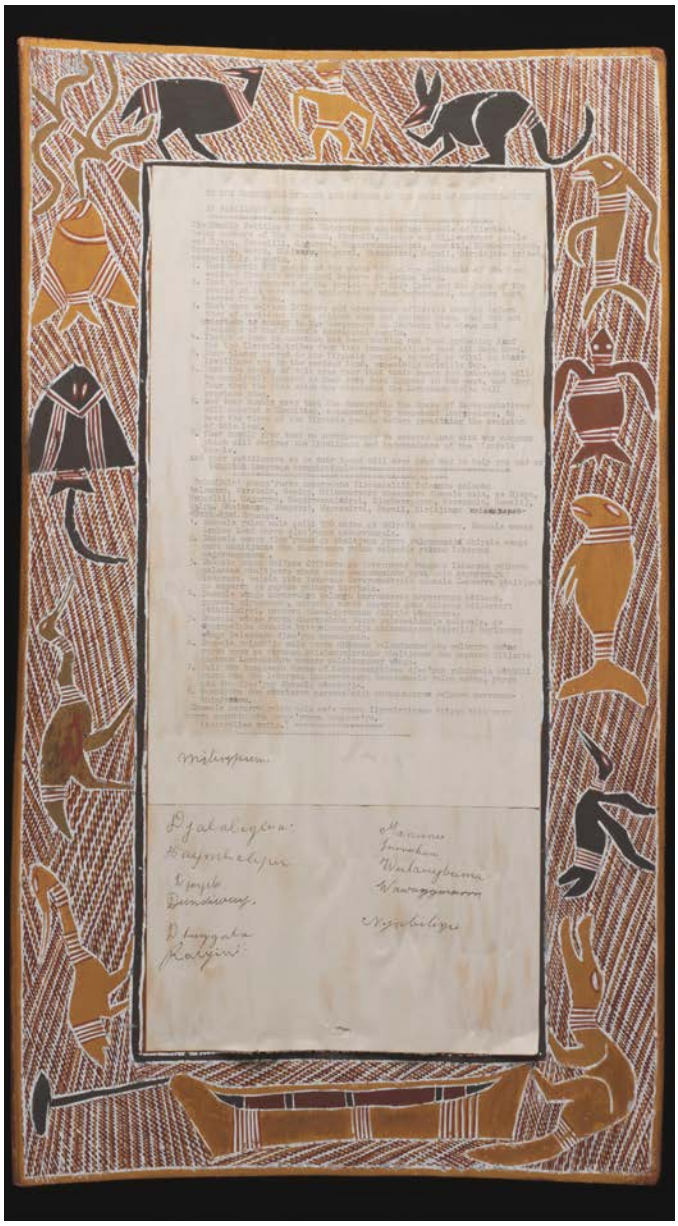

The Yirrkala Bark petitions

In the late 1950s, the Australian government removed more than 300 square kilometres of land from the Arnhem Land Aboriginal reserve in the Northern Territory so that mining company Gominco could extract bauxite. Requesting an inquiry and asserting their ownership of land, the Yolngu people created petitions framed by painted bark to demand that Yolngu rights be recognised. The petitions contained a typed document written in two Yolngu languages and translated into English, surrounded by clan designs of all that was threatened by the mining. They were signed by 12 clan leaders from the Yolngu region and submitted to the Australian Parliament in August 1963.

The Yirrkala bark petitions were the first traditional documents prepared by Indigenous Australians that were recognised by the Australian Parliament, and are therefore the first documentary recognition of Indigenous people in Australian law.

Politicians presented the two petitions to the House of Representatives on 14 and 28 August 1963. A parliamentary committee of inquiry acknowledged the rights of the Yolngu set out in the petitions. It recommended to Parliament on 29 October 1963 that compensation for loss of livelihood be paid, that sacred sites be protected and that an ongoing parliamentary committee monitor the mining project. Despite this, mining did go ahead near Yirrkala, and by 1968 a massive bauxite refinery was built at Gove, 20 kilometres to the north. Appeals to both Parliament and to the courts were also rejected. The petitions, however, led to wider awareness of the problems of Aboriginal people throughout Australia, and set off a debate that would eventually lead to the *Aboriginal Land Rights Act* in 1976 and, in 1992, to the High Court's *Mabo* decision. The petitions also paved the way for the 1967 referendum.

There have been a number of further bark petitions created by Indigenous Australians since the Yirrkala bark petitions of 1963, and all have contributed to a gradual but steady change in the Australian view of the significance of traditional culture and law. In July 2008, for example, Galarrwuy Yunupingu, the son of one of the painters and signatories of the 1963 petition, presented Prime Minister Kevin Rudd with another petition by various Yirrkala artists, requesting 'full recognition of Indigenous rights in the Australian Constitution'.

Source 1 The Yirrkala bark petition was made by the Yolgnu people to protest against mining on traditional land (Yirrkala artists, Dhuwa moiety: Museum of Australia).

skill**drill:** Historical significance

Generate different kinds of questions about the past to inform historical inquiry

One of the first and most important steps in conducting a historical inquiry is to generate or pose key questions. The questions that you generate will frame or direct the research that you then undertake.

Step 1 Usually, historians generate one broad, overarching question for their inquiry for example:

'What was the historical significance of the Yirrkala bark petitions in terms of past and present efforts to secure civil rights for Aboriginal Australians?'

After that, you need to generate more specific questions that are related to your overall inquiry question. You will need to generate a mixture of:

- closed or simple questions – for example, *when* did event X occur?
- open or probing questions – for example, *why* did event X occur?
- questions that relate to the process of historical inquiry – for example, *what* evidence is there?, *what* other sources might be needed?

Step 2 The next step in generating questions is to think about what you already know about the topic. Use this knowledge as a springboard for questions that will help you understand the topic in more depth.

- Use a table similar to Source 2 to brainstorm all the things you know in bullet-point form in one column.
- In the second column, use each dot point from the first column to generate related questions that will help to deepen or build your understanding. Remember to include a mix of the three question types described in Step 1.

Source 2

Overarching inquiry question	
What I already know	**Questions to help deepen or build my understanding**
Point 1	Question/s related to point 1
Point 2	Question/s related to point 2

Apply the skill

1 Use the process described above to generate a range of questions related to the overarching historical inquiry question:

'What was the historical significance of the Yirrkala bark petitions in terms of past and present efforts to secure civil rights of Aboriginal Australians?'

a Copy Source 3 into your notebook. Identify what you already know as a result of reading the information in this section. List these ideas in bullet points in the first column.

b In the second column, generate related questions that help to deepen or build your understanding. The first one has been done for you.

Source 3

Overarching inquiry question: What was the historical significance of the Yirrkala bark petitions in terms of past and present efforts to secure civil rights of Aboriginal Australians?	
What I already know	**Questions to help deepen or build my understanding**
• The Yirrkala bark petitions were created by Indigenous Australians to protest against the Australian government's decision to allow part of Arnhem land to be mined.	• Who were the signatories to the petition? (Simple or closed question) • Why did they decide to respond to the government's decision in this way? (Open or probing question) • What was written and drawn on the petitions and what evidence does this provide about Indigenous perspectives on native title? (Question related to the process of historical inquiry)
Point 2	
Point 3	
Point 4	

Extend your understanding

During July 2013, when Australia celebrated the 50th anniversary of the petitions, Prime Minister Kevin Rudd compared them with the 1215 Magna Carta, one of the founding documents of the British legal system:

> These bark petitions are the Magna Carta for the Indigenous peoples of this land. Both [are] an assertion of rights against the crown and both therefore profound symbols of justice for all peoples everywhere.
>
> Prime Minister Kevin Rudd, July 2013

1 Conduct some research into the Magna Carta and its significance to the British legal system. Write a short report comparing and contrasting the nature, impact and overall historical significance of the Magna Carta and the Yirrkala bark petitions.

Unit 3 The globalising world (1945–the present)

Introduction to the globalising world

Since the end of World War II in 1945, the world has changed immensely. Advances in technology, travel, communication and medicine have had a profound effect on the modern world. Many changes have revolutionised our daily lives. Appliances have replaced back-breaking work in the home, smartphones let us communicate with people all over the world, mass media provides us with entertainment, and aeroplanes make international travel faster and more comfortable. More than ever before, the seven billion human beings on Earth are part of a single global community.

All of these changes, however, come at a cost. The rapid increase in world population and unprecedented growth in the consumption of resources have put our planet under serious strain. In this unit, you will learn about one of the many aspects of our globalising world in more detail.

12A

How have changes in technology influenced the globalising world?

12B

How have changes in health and population influenced the globalising world?

chapter 12

Source 1 Since the end of World War II in 1945, the world has undergone rapid changes in the fields of technology, communication, transport and trade. These changes mean that we are now – more than ever before – part of a global community.

12C

How have conflicts influenced the world since 1945?

The globalising world (1945–the present)

This unit offers a choice of four topics:

- Popular culture
- The environment movement
- Migration experiences
- Political crisis: The Vietnam War

You must choose AT LEAST ONE of these topics for study.

12.1 Changes in technology since 1945

The 20th century was a time of extraordinary technological change and innovation. The first half of the century saw the first powered aeroplane flight, the expansion of industrialisation and mechanisation, the invention of penicillin and advances in theoretical physics that laid the groundwork for the nuclear age. By the second half of the century, people had orbited the Earth and walked on the Moon, developed new treatments for many medical conditions, eradicated diseases like smallpox and witnessed the birth of the Internet.

Source 1 An advertisement for Hoover vacuum cleaners from the 1940s

Technology in the home

Some of the technological innovations that had the most immediate impacts during the 20th century were designed for the home. From the 1920s, the growing availability of electricity in ordinary homes allowed people to change traditional housekeeping routines. Electric ovens and hot water services freed people from the need to burn wood and clean chimneys. Vacuum cleaners meant that rugs and carpets no longer had to be taken up and beaten by hand to remove dust (see Source 1).

By the 1950s, a wide range of appliances and whitegoods were available. Electric kettles, toasters and mixers transformed the kitchen, but the invention of the washing machine and the electric refrigerator were arguably the most important of the time. Before the washing machine, laundry was commonly washed by hand using a copper boiler, soap and a washboard. After that, it was wrung out in a hand-wringer and hung out to dry. The first washing machines had no spin or rinse cycles but still represented enormous savings in time and effort.

Various methods of refrigeration existed prior to 1950, but were far less effective than the type of refrigerators we are used to today. Before the 1950s, food could be stored in a Coolgardie safe, where it was kept cool by the evaporation of water from gauze covering. Alternatively it could be stored in an ice chest, but this method relied on a daily delivery of a slab of ice from the local ice-works. The invention of the electric refrigerator allowed people to store food for much longer periods than ever before. This changed their shopping and eating habits. Later, electric refrigerators were followed by electric freezers and microwaves that once again revolutionised food preparation in the home.

Home entertainment

Entertainment was transformed by the invention of radio and television. The first radio station to go to air in Australia was 2SB in Sydney, in November 1923.

Source 2 Television revolutionised home entertainment for families in Australia from the 1950s onwards.

Others quickly followed. Radio became increasingly popular from the 1920s to the 1940s as the technology improved. Radios became smaller and more portable, and more stations and types of shows were offered.

Television arrived in Australia in 1956. At first, TV was offered in black and white only. By 1975, colour TV became available. In the 1980s the VCR (or video cassette recorder) arrived, allowing people to record TV shows to watch at their leisure. Together, these technologies provided much greater opportunities for people to entertain themselves at home.

Travel and trade

Just a century ago, the world was a much less mobile place than it is today. Horse-drawn transport was still in use in Australia at the start of the 20th century, international travel and trade was only possible by sea, and most Australians spent their holidays much closer to home.

Road travel

In the post-war period, the motor car became much more affordable and more common. The first traffic lights in Australia were installed in Melbourne in 1928 and the first Australian-produced car, the Holden FX, went on sale in 1948 (see Source 3). Roads were sealed to reduce dust from the ever-growing volume of traffic, and highways expanded to connect cities and towns all over the country. By 2010, car registrations exceeded 12 million. While the growth of car ownership has meant greater freedom for many people and a boom to the tourism industry since World War II, many people are now questioning its broader impacts, including pollution and greater congestion in cities

Source 3 The Holden FX, the first Australian-produced car, went on sale in 1948.

Air travel

Passenger aviation arrived in Australia in the 1920s (see Source 4). Qantas was established in 1921 and by the 1950s other commercial airlines were operating domestically, including Trans Australian Airlines (TAA) and Australian National Airways (ANA). Up until the first jet aeroplane arrived in Australia, aeroplanes were propeller-driven. The jet age began in 1959 with the arrival of Qantas's first Boeing 707 and expanded during the 1970s. The arrival of the Boeing 747 (see Source 5) allowed larger planes to travel longer distances. Prices became more affordable and both domestic and international travel by air came within the reach of many Australians.

Trade

Even the nature of shipping has changed dramatically during the post-war period. Ships became far larger and more powerful, allowing for the bulk transport of vast quantities of resources. Containerisation of freight developed after World War II, allowing goods to be shipped all over the world in standard-sized metal containers. These containers can be loaded and unloaded from ships using heavy machinery, and can be easily transferred to trains or trucks for rail or road transport. Containerisation led to the loss of jobs for dock workers who had traditionally loaded and unloaded ships, but also reduced the costs of transport for many goods, helping to make them cheaper.

Source 4 In 1922, Alexander Kennedy, an 84-year-old cattleman, was the first paying passenger on Qantas.

Source 5 Today, Qantas operates around 5600 flights a week to over 182 destinations in 44 countries.

Communications

The way that Australians communicate with each other and the world has transformed entirely since 1900. At the start of the century, Australians often had to wait for significant lengths of time to receive news from interstate friends and relatives overseas. Mail was the main form of communication, transported by ship from overseas or by rail within the country. However, as aviation technology improved postal services began to use airmail.

The other main method of sending messages was the telegraph. Although instantaneous, a telegram still had to be delivered by a messenger to the recipient. Furthermore, messages tended to be short, as the technology was expensive.

Several advances contributed to a gradual reduction of Australian isolation. A telegraph line was connected to Britain by 1927, allowing instantaneous overseas news. Cinema newsreels also became more common. Though these had to travel in the same way as letters, people were now able to see what was happening elsewhere. Radio station broadcasts began in 1923 and, by the middle of the century, telephone use became widespread, with direct long-distance (STD) and overseas telephone services becoming available in the 1970s.

Then, in the last part of the 20th century, another communications revolution began with the invention of the microchip. Mobile phones, computers and the Internet changed personal correspondence and the way people conducted business. The number of emails and SMS messages sent around the world now far outnumber traditional letters. In addition, households are now shifting away from fixed lines ('landlines') in favour of mobile telephone and wireless Internet services. Satellite communication now allows the transfer of data, voice and images instantaneously around the globe. Together, these technologies have allowed people from all over the world to communicate and carry out a range of tasks in real time – something that could never have been imagined at the end of World War II.

Source 7 Early mobile phones

Source 6 The Port of Shanghai in China has been the world's busiest container port since 2010. Each year, over 700 million tonnes of cargo is processed through the port and shipped all around the world.

Apply and analyse

3 Of the inventions discussed in this unit, select two that you believe are the most significant. Justify your decisions.

Evaluate and create

4 What do you consider to be the most serious problem raised by technology? Why is it a problem and how do you think it could be best addressed?

12.2 Changes in health and population since 1945

World population

At the end of World War II in 1945, the world's population stood at approximately 2.2 billion people and Australia had a population of around 7 million. Just 70 years later, the world's population has exceeded 7 billion and Australia's population has more than tripled to around 24 million. Based on current trends, experts believe that world population will reach 9 billion by 2050.

World population has increased so rapidly for many reasons. Advances in agricultural production (leading to better food supply), better sanitation and improvements in health and medicine have all played a role (see Source 1). Life expectancy has also increased in many parts of the world, meaning that many people (particularly in the developed world) are living longer than ever before.

While it is possible to regard the growth of human population as a reflection of human success, concerns have also been expressed in recent years that a large human population, coupled with increasing consumption of natural resources, is putting the natural environment at risk.

Changes in life expectancy across the globe

Australia has one of the highest life expectancies in the world. A non-Indigenous Australian boy born in 2006 can expect to live for 78.7 years, and a girl for 83.5 years. Unfortunately, the picture is not so good for Indigenous Australians. The Australian Institute of Health and Welfare estimated in 2007 that an Indigenous person born in the period 1996–2001 has a life expectancy that is 16–17 years shorter than that of a non-Indigenous person.

Source 1 The capital of Japan, Tokyo, has a population of around 38 million people. This makes it the most populated city on Earth. Since the end of World War II in 1945, the population of Tokyo has grown from around 9 million people. Improvements in health, sanitation and agricultural production have contributed to this growth.

Source 2 A child suffering from HIV in Africa. The spread of HIV/AIDS in Sub-Saharan Africa has dramatically affected the life expectancy of people living there.

By contrast, the United Nations estimates that people living in Swaziland have the lowest life expectancy in the world. There, on average, men only live to the age of 40 and women only live to the age of 39.

Measures of life expectancy are not static, and many areas of the world have seen dramatic increases since the end of World War II. For example, life expectancy rates in developing countries such as China and Brazil have risen substantially over the past 60 years, almost doubling by some estimates. Sadly, life expectancy has also decreased in some places. The AIDS pandemic has been devastating for Sub-Saharan Africa (see Source 2). Botswana, Zimbabwe and South Africa all saw life expectancy drop significantly from the late 1980s as infection rates soared. By 2006, life expectancy in Zimbabwe was only 44 years for men and 43 years for women.

Improvements in public health and standards of living

In 1967, the World Health Organization declared its intention to eradicate smallpox, a disease that killed up to a third of all sufferers and disfigured many survivors. Through a vaccination program the target was achieved, with the last case of smallpox recorded in 1977.

Other diseases, although not eradicated, have been dramatically curbed through widespread vaccination. Polio and measles are two examples, with polio cases in the developed world reduced by 99 per cent.

In spite of these examples, many of the advances in public health have been due to simple factors like improved sanitation, better urban planning and better nutrition. The **Green Revolution**, beginning in the 1950s, vastly increased the food output of farms in all continents except Africa, leading to improved nutrition and food supply. The Green Revolution involved a combination of methods such as:

- increased mechanisation (e.g. the use of tractors and irrigation pumps)
- the development of new, higher-yield crops
- the invention of new fertilisers and pesticides.

World trade also intensified in the years after World War II, aided by improved communications and transport systems. By the end of the 20th century, the world had entered the era of **globalisation**, meaning that goods are now being traded more freely across many parts of the world. Commerce and banking has also become globally integrated, as the 2008 Global Financial Crisis (in which losses by banks in the United States led to worldwide shortages of financial credit) has demonstrated.

Source 3 The Gulf of Mexico oil spill in 2010 is one of the most significant environmental disasters ever recorded. The oil platform operated by BP gushed crude oil for 87 days before it could be capped. During this time it released around 800 million litres of crude oil into the Gulf of Mexico, devastating animal and plant populations and destroying many local businesses.

Many people believe that increased global trade has led to higher standards of living. Advocates of globalisation argue that poorer countries are able to sell their goods to a much greater market than before, and that people in the developing world have access to more jobs. However, critics point out that globalisation does not necessarily mean that any new wealth created will be shared. For Australia, globalisation has seen an increase in exports of mineral resources to overseas markets, but it has also brought with it the collapse of some manufacturing industries as companies have looked to source the skills of cheaper workers in other countries.

Environmental pressures

The 20th century has seen continued urbanisation and industrialisation. As a result of this change, more and more people are now engaged in the production of goods and services rather than the production of food. Urban populations drain energy resources, and create large amounts of waste and pollution. Industry, previously concentrated in Western countries, has become more global since the end of World War II, due to the growth of industries in Germany, Japan, South Korea, and more recently in China and India.

These trends have had serious ecological implications and over time, the environment has come into much sharper focus. By the end of the 20th century, there were clear differences between those who saw the planet as a resource to be exploited, and those who saw it as a unique biological system to be preserved. Development and conservation frequently clashed as a range of issues and campaigns made the environment movement a critical part of historical change.

The second half of the 20th century saw the emergence of environmental thinking. A major development in environmental thinking was the Gaia hypothesis. This proposed that life on Earth was interconnected and formed a self-contained system that allowed life to flourish. In other words, the Earth is a single, inter-dependent system. The idea of **sustainability** has also become increasingly important during the 20th century. It requires human beings to take a long-term view when it comes to the use of resources. It also requires the exploitation of natural resources to be measured and managed so they are safeguarded for future generations.

In the post-war period, environmental movements developed in response to the belief that governments were not dealing with environmental threats

appropriately. Individuals formed activist groups to focus attention on issues at a range of scales – local, regional, national, international and global. International non-government organisations like Greenpeace have brought a range of environmental issues to the world's attention, from nuclear testing in the Pacific to whaling in the Southern Ocean. Local conservation groups in Australia have also fought to protect endangered species and the natural environment against development.

Green politics has gradually made an impact on the international political scene and Green parties now participate at various levels of government in many countries. The environment is increasingly becoming a global issue as world governments recognise the need for coordinated efforts against threats like climate change. The Kyoto Protocol, signed by Australia in 2007, is an international commitment to reduce greenhouse gas emissions in an attempt to limit the potentially devastating effects of global warming.

Check your learning 12.2

Remember and understand

1 Give three reasons for the rapid growth in world population since 1945.
2 What is the estimated life expectancy of an Aboriginal person born in the period 1996–2001?
3 Which disease was eradicated by 1977?
4 In your own words, define the Gaia hypothesis.

Apply and analyse

12.3 Australia's role in global conflicts since 1945

The involvement of Australian troops in Europe and the Pacific during World War II (together with events such as the fall of Singapore and the bombing of Darwin by the Japanese) encouraged Australians to think more closely about issues of national security in the post-war world. In order to protect Australia from future attacks, Prime Minister Robert Menzies (who served in office from 1949 to 1966) set out to build stronger relationships with our neighbours in the Asia region and ally Australia more closely with the United States.

Communism in Asia and the domino theory

In 1949, after years of civil war, Mao Zedong became the communist leader of the People's Republic of China. This was the first powerful communist revolution to take place in Asia. Many people in Australia feared that a communist government in China would have an influence on other countries in the region. As a result, Australia's key foreign policy objective was to increase national security and stop the spread of communism in Asia by joining regional treaty organisations. In 1951, a treaty – known as the ANZUS Pact – was signed by Australia, New Zealand and the USA. The pact was a military alliance that committed the three nations to assisting each other in terms of defence. In September 1954, another alliance – known as the South-East Asian Treaty Organisation (SEATO) – was formed between the USA, Britain, France, Australia, New Zealand, Pakistan, Thailand and the Philippines. The members of SEATO were all anti-communist countries. Like ANZUS, SEATO was essentially a Cold War pact designed to limit or stop the spread of communism around the world. At this time, many leaders in the Western world believed that if one country fell to communism, neighbouring countries would follow. This became known as the **domino theory** because if one country was allowed to fall to communism the rest of South-East Asia would quickly follow, just like dominoes falling one after another.

The Australian government's belief in the domino theory encouraged them to support Britain and the USA in a number of conflicts across South-East Asia in the 1950s and 1960s, especially when communist rebels were attempting to seize power. The most significant of these were Australia's involvement in the Korean War and the Vietnam War.

The Korean War

When Japan surrendered at the end of World War II, the area of land it controlled on the Korean peninsula was divided into two halves – North Korea and South Korea. North Korea was occupied by the USSR, and South Korea was occupied by US-led UN forces.

In June 1950, the leader of the Soviet Union, Joseph Stalin, encouraged the leader of North Korea, Kim Il Sung, to invade South Korea. The US president, Harry Truman, immediately called on the United Nations to take action. The UN ordered the North Korean army to retreat, but they refused. In response, the UN sponsored a military intervention that was led by US troops under the command of General Douglas MacArthur. Australian Prime Minister Robert Menzies, who was strongly anti-communist, believed that if communism was not stopped in Asia, it would eventually spread to Australia. Thousands of Australians enlisted and volunteered to fight in Korea (see Source 1).

The fighting eventually ended with a negotiated ceasefire on 27 July 1953, which left Korea a divided country, just as it had been before the Korean War broke out. It remains this way today.

The Vietnam War

Since the mid-19th century, a large section of Indochina (including modern-day Vietnam, Laos and Cambodia) had been part of the French Empire. During World War II, Japanese forces invaded this region and occupied it. A communist group, known as the Viet Minh, formed under the leadership of Ho Chi Minh to fight the Japanese.

Source 1 Australian troops fighting in the Korean War *c.* 1951

After Japan's surrender in 1945, the Viet Minh formed a government and declared Vietnam's independence. However, the French wanted to take Vietnam back as one of their colonies. By December 1946, the French and the Viet Minh were involved in a war that would last for nine years.

By 1952, Vietnam had become divided. The Viet Minh had control of the north, and the French had set up a rival government in the south under the Vietnamese Emperor Bao Dai. The Soviet Union and China offered support and recognition to the Viet Minh in the north, while the USA and Britain did the same for Bao Dai in the south. Bao Dai was ousted from power in the south by Ngo Dinh Diem, a corrupt landowner who had little support from within Vietnam. However, because he was anti-communist, he had the support of the USA. Diem's police tortured and killed peasants suspected of supporting the Viet Minh.

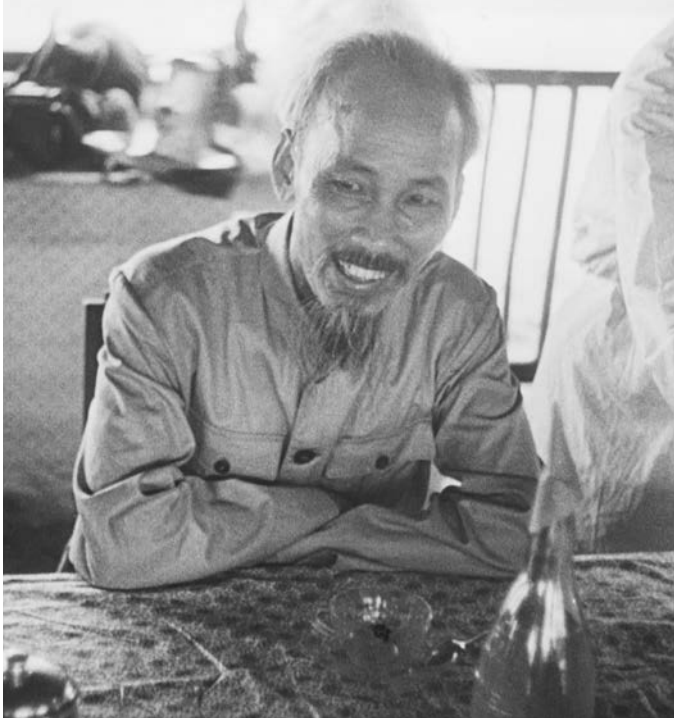

In 1957, the Viet Minh in North Vietnam began a guerrilla war (a war fought by small, independent groups of fighters) against South Vietnam in order to reunify their country. The United States, under President Kennedy, started sending American advisers to support the anti-communist government of South Vietnam.

In December 1960, the National Liberation Front for South Vietnam was formed in opposition to Diem's government in South Vietnam. It allied with North Vietnam and became known as the Viet Cong. North Vietnam dramatically increased its military assistance to the Viet Cong, which then began attacking South Vietnamese military units. The Viet Cong continued to use guerrilla warfare against the government of South Vietnam and the United States through the war.

US military involvement in the Vietnam War increased from 300 military advisers in 1955 to over 500 000 US troops by 1968. To justify this level of intervention, US President Eisenhower, and presidents following him, all declared their belief in the domino theory.

Australia's involvement in Vietnam

Australia's prime minister at the start of the Vietnam conflict was Robert Menzies. Menzies fully supported the United States' anti-communist policy, and was a committed ally throughout the war. Menzies was also a strong believer in the domino theory. In 1962, the Australian government committed its first military advisers to South Vietnam. The initial commitment of 30 men would grow to 60 000 over the next decade and would lead to the introduction of **conscription** in Australia for overseas military service. Public opinion polls at this time indicated that most Australians supported the government's decision. This would change

Source 2 The Viet Minh led by Ho Chi Minh fought for Vietnamese independence.

Source 3 Images of the Vietnam War such as this one of children fleeing a village bombed with napalm (a flammable sticky jelly used in bombs and flame-throwers) caused many Australians to turn against the war.

dramatically in the coming years (see Source 3). By 1970, there were mass demonstrations held in the major capitals of Australia to demand a suspension of the war to allow peace talks.

When the USA began withdrawing troops from Vietnam, Australia followed suit. Between 1970 and 1972, all Australian combat troops were withdrawn. On 27 December 1972, the newly elected Labor government ended all Australian military aid to South Vietnam.

Five hundred Australians died during the Vietnam War, including 185 National Servicemen who had been conscripted to fight. Until the deployment of Australian soldiers to Afghanistan in 2001, Vietnam had been Australia's longest war.

Australian involvement in the UN

Australia was a founding member of the UN and played an active role in the drafting of the Charter of the United Nations at the San Francisco Conference of 1945. The Australian delegation, led by Dr Herbert Evatt, actively promoted the rights of smaller nations. Since then, Australia has served five terms on the Security Council: 1946–1947, 1956–1957, 1973–1974, 1985–1986 and 2013–2015. During 1946, Labour politician Norman Makin served as the first Australian to act as President of the Security Council. Dr Evatt was also elected President of the General Assembly in 1948.

Australia has played an active role in the UN Commission on Human Rights and has been a strong supporter of the work of the expert UN bodies dealing with the implementation of international human rights conventions. Australia also has a long history of contributions to UN peacekeeping operations. Australia currently has peacekeeping forces in many places around the world, including the Persian Gulf and Timor-Leste (East Timor) (see Source 4).

Enduring allies

Despite the best efforts of the UN Security Council, the world remains an unpredictable and uncertain place. Since the end of the Cold War, the United States has served as the last superpower of the 20th century. On 11 September 2001, the world looked on as a series of deadly coordinated attacks on key targets in the United States took place, including the deliberate crashing of two passenger jets into the World Trade Center towers in New York and another into the Pentagon in the state of Virginia. The events of 11 September

marked the beginning of a new era in global conflict that became known as the 'War on Terror'. Military action since 2001 has centred on wars in both Iraq and Afghanistan. Throughout the War on Terror, Australia has continued to be a strong ally of the USA. Australian troops have served both in Iraq and Afghanistan and specialist military advisors and strategists have worked closely with US command. Australian troops were withdrawn from Iraq in 2008 but continued fighting in Afghanistan until 2013. During the 12 years of fighting there, 40 members of the Australian Defence Force were killed and 261 were seriously wounded.

Remember and understand

1 What were the key motivators behind Australia's involvement in overseas conflicts during the Cold War period?
2 Why do you think the Soviet Union and China supported the Viet Minh during the Vietnam War?
3 Why did the USA support Ngo Dinh Diem during the Vietnam War?
4 Explain what is meant by the domino theory.

Apply and analyse

5 Describe the two treaties that Australia signed to help combat the spread of communism.
6 Examine Source 3.
   a What type of source is this?
   b Why do you think this source (and others like it) caused many Australians to reconsider their views on the war?

Evaluate and create

7 Do you think the Australian government made the correct decision to become involved in the Vietnam War? Conduct research and locate at least two reliable sources to support your view.
8 Design and create an anti-communism poster encouraging the Australian public to support the commitment of Australian troops to the conflict in Vietnam during the Menzies era.

Unit 3 The globalising world (1945–the present)

Popular culture

Popular culture includes a wide range of activities that a large number of people in a society engage in. Since World War II, Australia has developed strong industries in four key areas of popular culture: music, film, television and sport.

Television and rock'n'roll music both arrived in 1956 and have had a strong influence on all groups within Australian society – this continues today. Sport has retained an important role in Australian life and has become closely tied to our sense of identity. The Australian film industry has also emerged to tell uniquely Australian stories that entertain and inform.

While British, American and, more recently, European and Asian cultures have influenced us, Australia has developed its own distinct culture. Music, film, television and sport have not only become ways of reflecting who we are, but have also enabled Australia to engage with the rest of the world.

13A

How did developments in popular culture influence Australia after World War II?

1 In what ways do you think popular culture was different in 1946 compared to today?

2 The introduction of television and rock'n'roll changed Australian culture and society forever. Can you brainstorm some of the immediate effects that these changes would have had on people at the time?

13B

How have the music, film and television industries in Australia changed since World War II?

1 How have developments in the music, film and television industries during the last 60 years changed the way that Australians access popular culture?

chapter 13

Remember and understand

1. When was the film *Jedda* released?
2. When was 'Friday on My Mind' recorded, and by whom?
3. When was the first soapie shown in Australia?

Apply and analyse

4. Consider the pictures of Paul Hogan as Mick Dundee in the film *"Crocodile" Dundee* and Chris Lilley as identical twins Daniel and Nathan Sims in the television series *Angry Boys*. Compare and contrast the personalities and traits of these fictional 'Australian' characters. Do you think they demonstrate a change in the way Australians see and portray themselves to the world? Explain your answer using examples from other popular Australian films and television series.

13.2 Defining popular culture

Source 1 Young men and women dancing in 1950s Sydney. American youth culture became popular in Australia after the end of World War II.

Culture is the 'glue' that binds any society together. The values, beliefs, ideas and artefacts that give meaning to any society are its culture. Culture takes in a wide variety of human activities including language, food, religion and art, as well as values such as a belief in democracy or equal rights.

By comparison, popular culture has a slightly narrower definition. The term was first used in the 19th century to describe the 'unofficial culture' of the lower classes in society as opposed to the 'official culture' of the higher classes. Over time, however, the meaning of the term evolved to describe more widely accepted ideas, attitudes and practices transmitted via mass media and aimed particularly at younger people.

People can access popular culture easily, and it lasts for a period of time. When defining popular culture it is important to not simply describe it as 'culture that is popular'. If that simplistic definition is used, it is difficult to tell the difference between cultural activities that are popular for a brief historical moment and those that have a major influence on a society.

Four distinguishing characteristics can be used to recognise an activity as popular culture:

- the activity moves from local to national to global significance
- the activity is associated with commercial products
- the activity continues to change and evolve over time
- the activity allows consumers easy and widespread access through mass media.

Check your learning 13.2

Remember and understand

1 Define the term 'popular culture' in your own words.

2 List four characteristics that distinguish popular culture activities from those that fall under a wider definition of culture.

13.3 Changes to radio and film

The link between technology and popular culture was clearly established in the 1920s. In the period before the arrival of television and rock'n'roll, radio and film were the main sources of popular culture. The impact of technology on popular culture became a consistent theme throughout the second half of the 20th century. Ongoing developments in technology also help to explain the ways in which popular culture is able to change and evolve.

Radio

By 1946, radio was established as the most accessible form of communication in Australia. All capital cities and most regional centres had one or more radio stations, which helped overcome the great distances involved in communicating across the country. Radio first took off during the 1930s, and was the perfect medium for introducing audiences to new forms of recorded music coming from the USA.

The increasing popularity and accessibility of radio led to change. Until World War II, pianos and pianolas (self-playing pianos) were the centrepieces of home entertainment. Sales of sheet music boomed as families gathered to entertain themselves at home. When radio station 2GF in Grafton, New South Wales, first went on air in December 1933, it was the 63rd radio station in the country. When World War II broke out, radio became a crucial means for Australian people to keep updated with military news from overseas and at home. Apart from war-time news and updates from the troops, radio stations broadcast music and drama programs which were important for entertaining the Australian public and keeping up morale.

By the 21st century, radio had split into AM and FM, community and digital broadcasting. Contrary to some expectations, the medium of radio continues to thrive as an important means of entertainment and information.

Source 1 This photograph was taken in the late 1940s and shows a group of young friends sunbaking at Bondi Beach, Sydney, while listening to the radio.

Film

In 1906, the world's first full-length feature film was produced in Australia, titled *The Story of the Kelly Gang*. Until governments banned bushranger films in 1912, Australia led the world in feature film production. The federal government set high import **tariffs** on films during World War I. When they lifted them in 1918, the Australian film industry was destroyed by American imports. There was a brief revival in Australian films in the 1930s, when the influence of Hollywood and the introduction of 'talkies' (films with sound) began to dominate the film industry.

A newsreel documentary, *Kokoda Front Line*, won Australia's first Academy Award in 1943, but the Australian film industry struggled in the years after World War II. Although major Australian stars such as Errol Flynn, Peter Finch and Chips Rafferty became famous in Australia and experienced success overseas, as a general rule American actors were far more successful internationally. American magazines played a major role in this. Around this time, magazines became a popular medium through which popular culture was transmitted and advertised. As a result, Australian actors began to travel to Hollywood to further their careers. Although films were made in Australia in the 1940s and 1950s, these were usually co-productions with American and British film companies. The 1955 film *Jedda* stands out as a significant milestone in Australian cinema because it had two Indigenous lead actors. It was also the first Australian film to be shot in colour (see Source 2). By introducing a mainstream audience to Indigenous issues, it also showed the potential of film to generate debate and stimulate social change.

The Disney studio became the main source of children's entertainment. The animated films *Dumbo* and *Bambi* had been major hits during the war, and by the 1950s Disney films were clearly established as 'must sees' for Australian children. American serials and cartoons also emerged as staples of Saturday afternoon picture shows, and ensured that Australian children in the post-war period were introduced to a constant diet of American popular culture.

Source 2 *Jedda* was the first Australian film to star Aboriginal actors in lead roles.

Source 3 *Smiley* was one of the films that featured the Australian star 'Chips' Rafferty. Like many films made in Australia around that time, it was a US–UK co-production.

These animated cartoons and serials merged different American popular culture influences. They frequently drew on printed comic strip heroes such as Batman, the Phantom and Green Hornet for ideas.

It must be remembered that before television, newsreels at picture theatres were the only way people could actually see major news events in moving pictures. Serials and newsreels were the main reasons why people in the post-war period kept coming to the cinema week after week. As a result, local picture theatres became major sources of popular culture. It also explains why newsreels remained popular even after the Australian film industry went into decline after World War II. In fact, newsreel production continued until television was introduced to Australia in the mid-1950s.

Check your learning 13.3

Remember and understand

1 When radios were introduced into Australian homes during the 1930s, what other forms of home entertainment did they replace?
2 How did Australians see news items before the arrival of television?
3 Why was *Jedda* such an important film?

Apply and analyse

4 Explain the significance of radio for Australian popular culture in the 1940s.
5 Why do you think older Australians in the 1950s would have worried about Disney films and serials becoming so popular with Australian children?

Evaluate and create

6 Conduct research on the Internet into the career of *one* of the following Australian actors: Errol Flynn, Peter Finch or Chips Rafferty. Write a 250-word historical description outlining the contributions your chosen person made to the film industry both in Australia and internationally. Include at least one primary source and reference it.

13.4 Changes to sport

Sport was very popular in Australia in the post-war period, much as it is today. Many historians argue that sport played a key role in restoring normality after the traumas of the war. Cricket was the most widely played sport at the time, perhaps because it provided a strong link with England. The Ashes series with England developed into one of our great sporting traditions. These contests had been disrupted by the war. Both England and Australia were keen to see the contest resume as a sign of life returning to normal.

An English team toured Australia in the summer of 1946–47 on a goodwill tour. Australia played with a determination to show the 'mother country' how strong they were. The result was a 4–1 series win to Australia, a superiority that was confirmed when Don Bradman led the team to England in 1948, and his team (which became known as the 'Invincibles') remained undefeated for the entire tour.

Rugby League was another form of popular culture drawn from Britain. It was popular in New South Wales and Queensland, and the most prestigious competition was the New South Wales Rugby League premiership. Unlike many sports, Rugby League continued throughout World War II. Balmain won the 1946 grand final against St George in a match marred by refereeing controversies.

Rugby League was matched in the southern states by Australian Rules football, a truly home-grown sport. Like Rugby League, it had been played throughout the war, providing some sense of normality, as many young men went off to fight. Unlike Rugby League, however, Australian Rules football at the time could not technically be classed as a form of popular culture due to the fact that it failed to gain popularity at a global level.

Source 1 Australian cricketer Sir Donald Bradman, 1930s

Source 2 The first Australia vs England Rugby League test, 12 June 1950

key**concept:** Continuity and change

The changing face of sport in Australia

Sport provides a strong cultural continuity in Australian society. Cricket, the football codes, tennis, golf and horse racing are all easily recognisable as cultural activities that continue to engage the Australian public to this day. Cricketers still play regularly for the Ashes, the MCG is still the venue for the Australian Rules grand final, and the Melbourne Cup remains the 'race that stops a nation'.

Beneath those continuities, however, are changes that reflect a more modern society. Professionalism has been a major change. In many sports today, playing at the top level is a full-time job. Time required for training and rehabilitation means that maintaining other work is no longer practical.

The racial and ethnic backgrounds of Australia's multicultural society are now also reflected by our sporting men and women.

Domestically, Australian Rules and Rugby League have moved towards national competitions that are financed by lucrative television and sponsorship deals. Rugby Union was the last football code to go fully professional, and has focused on international competition. In 2005, soccer (known as football in most other countries around the world) established a national competition known as the A-League. In addition to this national league, Australia has participated in FIFA World Cups for both women and men.

For more information on the key concept of continuity and change refer to page 241 of 'The history toolkit'.

Check your learning 13.4

Remember and understand

1. Why did England send a cricket team to tour Australia so soon after the end of World War II?
2. What is the name of the cricket test series between Australia and England? Why do you think it became one of our greatest sporting traditions?
3. In which states was Rugby League most popular in the late 1940s?
4. In which states was Australian Rules football popular?
5. Why was Australian Rules football technically not regarded as a popular culture activity? Do you believe that this is still the case today? Justify your response.

Apply and analyse

6. Conduct research on the Internet to collect evidence on the role Don Bradman played during the immediate post-war period in Australia.
   - **a** Use the information you have gathered to write a short response outlining the contributions he made to the sport of cricket as well as the importance he played in broader Australian society.
   - **b** Prepare an argument for or against the case to name Don Bradman as the most important Australian sports person of the post-war period.

13.5 Changes to music

On the surface, Australian society in 1956 did not appear to be too different from Australian society 10 years earlier in 1946. Cricket, Rugby League, Australian Rules football, tennis and horse racing were all popular sports that showed the influence of our largely British cultural heritage. Radio continued to be the most popular and important medium for communication. In addition to this, most city suburbs and country towns had a picture theatre showing American and British films along with newsreels and serials. Then something changed – rock'n'roll arrived in Australia.

The Sun, a Sydney-based newspaper, reported on 21 June 1956 that 'rock and roll raised no more than a flutter' in Australia. Three weeks later, Elvis Presley's *Heartbreak Hotel* was released locally, and the same newspaper published the first rumour that Elvis was to tour Australia. By December, Bill Haley's *Rock Around the Clock* had established an Australian sales record of

Source 1 Saxophone player Len Austin and the Recaps band perform at a rock'n'roll dance in the Manly RSL Hall organised by the Salvation Army, in 1959

175 000 45s and 78s, and 12 000 LPs (all are types of vinyl records). On 20 December, a 'rock dance' was held at Sydney's Redfern Oval, and within six months rock'n'roll had become part of popular culture for good.

There is no doubt rock'n'roll brought about many changes in 1950s Australia. Teenagers had a different outlook from the generation that had experienced the **Great Depression** and World War II. Attending rock'n'roll concerts became a symbol of the fact that teenagers were different from earlier generations and signalled a break with their parents. It also showed how enthusiastically they adopted American popular culture. As Australian musicians such as John Manners and Johnny O'Keefe absorbed these influences, they also started practising playing rock'n'roll and developing their skills in this new form of popular culture. Eventually these artists would start writing and performing uniquely Australian rock songs to sell-out crowds, but in 1957 rock'n'roll was only just starting to bring about social change in Australia.

key**concept:** Significance

Bill Haley's tour

Rock'n'roll became one of the most distinct products designed specifically for teenagers. Radio, television and film all helped spread the music, and tours by live acts were the next step. Although Australia was geographically isolated in the 1950s, an American promoter living in Australia called Lee Gordon realised the potential of rock'n'roll. He organised the first rock'n'roll tour outside North America when he booked Bill Haley and the Comets, Big Joe Turner, The Platters, LaVern Baker and Freddie Bell and the Bell Boys on a package tour of Australia.

As an indication of just what a major undertaking this first tour was, in January 1957 it took Bill Haley six days to travel from the east coast of the United States to Sydney. There were three stops on the trans-Pacific flight for this first ever tour that included mixed races and genders – both certain to attract controversy in a 'white' Australia where women were yet to achieve any kind of equality.

The tour was a huge success, playing to 330 000 people at a time when Australia's population was still under 10 million. Teenagers danced in the aisles before ushers made them sit down. A reviewer called it 'the noisiest show to ever hit Sydney'. It was reported that 'plates rattled half a block away, dogs cringed in their kennels and the boxing stadium at Rushcutters Bay loosened its nails'.

A second tour including Little Richard, Eddie Cochran, Gene Vincent and Alis Lesley arrived in October 1957, and it was clear that rock'n'roll was creating a wide generation gap.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

Source 2 A poster promoting the Bill Haley tour of 1957

Source 3 Police hold back Beatles fans at Sydney airport in June 1964, as Ringo Starr and Brian Epstein (manager of The Beatles) arrive – the pair missed the early part of the Australian tour because Ringo needed to have his tonsils removed.

The Beatles tour Australia

On 11 June 1964, The Beatles arrived in Australia for their first and only visit. By June 1964, The Beatles were the most famous people on the planet. Concerts in Adelaide had been added because of public demand, and 350000 people lined the entire drive from the airport to the centre of Adelaide. The crowds were repeated wherever The Beatles went. For two weeks, Australia was the centre of the popular culture universe.

The Beatles' tour had a direct impact on Australian society. Teenagers disobeyed authority for the first time in their lives, ignoring police instructions as they massed anywhere that The Beatles might appear. The mobilisation of so many teenagers was an early sign of the mass movement that went on to play an important role protesting against the Vietnam War.

The tour also showed that Australia retained very strong cultural links with Britain. The Beatles entered the Australian charts six months before the American charts. British migrants arriving in Australia would bring their records with them, ensuring that Australia was kept up to date with the pop boom that was exploding in England.

The Beatles' tour changed the face of Australian music. Groups replaced singers almost instantly, and pop music became the quickest way for many migrants to assimilate into Australian culture. The Easybeats in Sydney and The Twilights in Adelaide were two bands who formed in the aftermath of The Beatles tour, and both consisted mainly of migrants. These bands would go on to create original Australian music, as well as to tour England.

Check your learning 13.5

Remember and understand

1 What evidence is there to suggest that rock'n'roll became an almost instant success in Australia?

2 Who staged the first rock'n'roll concert tour of Australia? In what year was the tour staged?

Apply and analyse

3 Explain why Bill Haley's and The Beatles' tours of Australia were important developments in Australian popular culture.

4 In which ways did Australian teenagers during the 1950s adopt aspects of American culture? How different do you think this is from the way American popular culture influences Australian teenagers today?

Evaluate and create

5 Listen to the music of some of the artists who toured Australia in the 1950s. Create a line-up for a concert by some of these artists.
   - **a** Design a poster to advertise the concert.
   - **b** Write two reviews of the imaginary concert – one for a daily newspaper and one for a teenage magazine – demonstrating the different attitudes held by older and younger generations of Australians towards rock'n'roll.

6 Research an Australian pop group from the 1950s or 1960s and one current Australian pop artist. Write 2–3 paragraphs comparing their careers and impact on the international music scene.

13.6 The impact of changing technology on television and film

Television had proved critical in the United States in allowing rock'n'roll to develop from local to national acceptance. Regardless of distance, television meant that teenagers across the country could turn on their sets and see Elvis Presley on nationally broadcast shows such as *The Ed Sullivan Show* (originally called *Toast of the Town*) and *The Milton Berle Show*.

Television had the same potential in a country the size of Australia, especially because of its small population, vast distances and physical isolation from the rest of the world. Legal and political arguments in Australia about the ownership model of television stations delayed introduction of television here. After much discussion it was finally decided that Australia would have a joint government (based on the British model) and private (based on the American model) television station ownership model. This compromise between British and American influences was typical of Australian society in the 1950s.

The Melbourne Olympic Games in November 1956 were the main motivation for the introduction of television. Government and commercial stations were operating in Sydney and Melbourne in time to televise the games, and by 1960 Brisbane, Adelaide and Perth also had stations. As with many new technologies, television sets were expensive in the beginning. In 1956, a new set could cost more than $400; this at a time when the average weekly wage was around $30 a week. As a result, it is estimated that only about 5 per cent of households in Melbourne and 1 per cent of households in Sydney had television sets by 1960.

To encourage investment in television stations, the Menzies Government had decided not to have a local content **quota** for programming. As a result of this decision, the early years of television in Australia were dominated by American programs. There were few television studios and other facilities to produce local programs in Australia at the time and very little equipment to record and broadcast material. Therefore, most local content had to be broadcast live. It consisted mainly of quiz and game shows that had been popular on radio. When a Senate Committee reported on Australian television content in 1963, it estimated that 97 per cent of all television drama shown between 1956 and 1963 was American. These programs had a significant influence on Australian society over the period.

With rock'n'roll and television established in Australia by the end of the 1950s, they became major vehicles for social and cultural change around the country. Both enabled the transmission of American popular culture in a more immediate and direct way than either film or the visits of American troops during World War II had been able to achieve.

Source 1 A family watches a television in the television lounge at a department store in Sydney on 24 November 1956

Source 2 The Melbourne Olympics, held in 1956, were one of the main motivating factors for the introduction of television in Australia. The games were broadcast as a test transmission by all three television stations operating in Melbourne at the time.

key**concept:** Contestability

‘Welcome to television’?

For historians, one of the difficulties in studying the early years of Australian television is that so little primary source material survives. With no videotape or equipment to record television shows, live broadcasts were unique events lost to time. There is even controversy surrounding the historic first words spoken on Australian television.

On 16 September 1956, Bruce Gyngell greeted the Australian people in the first television broadcast from TCB 9 in Sydney: ‘Good evening and welcome to television.’ Although these are the first words spoken on Australian television, if you were to watch this footage today, the chances are you’d be watching a fake. According to Gerald Stone (a respected Australian television and radio journalist), the original kinescope film of the event was lost. The version we see today showing Gyngell standing in front of a world map (see Source 3) was recreated a year after the original broadcast. As a result, it probably looks quite a bit more rehearsed and professional than the image that originally went to air on 16 September 1956.

For more information on the key concept of contestability refer to page 246 of ‘The history toolkit’.

Source 3 Bruce Gyngell shown re-enacting his introduction to the first regular television broadcast service that aired in 1956

The great film revival

Australia has had a vibrant film industry at various times throughout its history, and film has become a significant way for Australians to reflect on their national identity and confront aspects of Australian life. The early 1970s saw the emergence of what has been called the ‘new wave’ of Australian film.

The timing of the new wave reflected a growing interest in Australian culture and had the political support of two Australian prime ministers. The Liberal MP John Gorton was prime minister from 1968 until 1971, and Labor’s Gough Whitlam from 1972 until 1975. These two politicians laid the groundwork for Australian film to emerge as a major contributor to a national popular culture in the early 1970s.

Gorton established the Australian Council for the Arts, the Australian Film Development Corporation, and the National Film and Television Training School. Whitlam continued the support by creating the Australian Film Commission to help finance and produce films that could reach an international market. This was the first time film had received such specific government support and the result was a boom in Australian films.

The 1970s saw films as diverse as *Walkabout* and *Wake in Fright* in 1971, *Alvin Purple* in 1973, *Picnic at Hanging Rock* in 1975 and *Mad Max* in 1979. Directors such as Peter Weir, Gillian Armstrong, George Miller and Bruce Beresford got their start during this period. Actors also thrived under the system. Future international stars such as Mel Gibson, Jacki Weaver and Judy Davis all got their start in the 1970s new wave.

The themes the films in this period covered also signalled a new confidence in Australian culture. *Stork*, *The Adventures of Barry McKenzie* and *Alvin Purple* celebrated the larrikin Australian spirit. Uniquely Australian stories such as *Picnic at Hanging Rock*, *Caddie* and *Sunday Too Far Away* all received overseas attention. The vastness of the Australian outback was captured in *Walkabout*, which introduced Australians to the Indigenous actor David Gulpilil. *Wake in Fright* focused on the darker side of country life. This theme was taken to apocalyptic lengths in the *Mad Max* series, which led to international success for the *Mad Max* films, actor Mel Gibson and director George Miller. The sinister depiction of the Australian countryside was a recurrent theme throughout the 1970s, and paved the way for 21st-century successes such as *Wolf Creek*.

Australian literature also became a rich source for film makers, and showed the capacity of Australian culture to change and evolve. *Walkabout*, *Picnic at Hanging Rock* (see Source 4), *The Chant of Jimmie Blacksmith* and *My Brilliant Career* were all 1970s films that were based on great Australian novels. Playwright David Williamson had two plays turned into successful 1970s films, *Don’s Party* and *The Removalists*, and continued that trend into the 1980s.

Since then, the Australian film industry has continued to build on this success – both at home and internationally. In 1986, the film *"Crocodile" Dund*ee became the highest-grossing Australian film of all time, banking US$328 million worldwide. In fact, the highest-earning Australian films have all been made since 1986, including *Strictly Ballroom*, *Babe, Red Dog* and *The Dressmaker.* All of these films have told distinctly Australian stories. In 2015, *"Crocodile" Dundee* was replaced by *Mad Max: Fury Road* as the highest-earning Australian film ever – taking home US$375 million at the box office (see Source 5).

Source 4 A film still from *Picnic at Hanging Rock*, 1975

Remember and understand

1. Explain how television helped the development of rock'n'roll in America.
2. Why was the introduction of television in Australia delayed?
3. What event was the main motivating factor for the introduction of television in Australia in 1956?
4. Which Menzies Government decision allowed television to introduce American culture into Australia?

Apply and analyse

5. Select an Australian film that has been released since World War II. Analyse it to explain the image of Australia it portrays. Discuss the ways in which the film you have chosen has contributed to Australian popular culture.

13.7 The birth of Australian soapies and mini-series

The term 'soap opera' was originally used in reference to ongoing radio serials. They were called soap operas because they were usually sponsored by soap companies and featured commercials for soap throughout. Over time in Australia, soap operas simply became known as 'soapies'. These serials were aired during the day when housewives were the main audience. The idea transferred to television originally in the United States in the early 1950s. Television soapies are characterised by an ongoing storyline that runs across a number of episodes. Soapies often try to depict 'real life', but require viewers to suspend reality. Cliffhanger endings are frequently used to end individual episodes or seasons to encourage the audience to tune in again for the next instalment.

Australia's first television soapie was *Autumn Affair*, which ran on Channel 7 for 15 minutes a day in 1958 and 1959. In 1967, the ABC launched the first early evening soapie, *Bellbird*, dealing with life in a fictional rural town of the same name (see Source 1). The 15-minute episodes were the lead-in to the ABC news. *Bellbird* drew a large and loyal following at a time when the ABC was the only network to broadcast nationally. It was broadcast until 1977 when it ended abruptly as a result of government budget cuts to the ABC.

Source 1 The locals gather in a pub in *Bellbird.* From 1967 to 1977, Australians were glued to their television sets watching the first early evening soapie in Australia on the ABC.

Soapies in the 1970s

The 1970s can be seen as a time of social, political and cultural change in Australia. By this time, there had been 23 years of conservative government by the Liberal–Country Party coalition. Australia at the end of the 1970s was largely unrecognisable from Australia during the 1960s – the 1960s were a time of black-and-white televisions, conscription of young people to fight in Vietnam, and a refusal by the government to allow most Asians to settle here.

The sense of excitement and social change of early 1970s Australia was reflected in television programs at the time. *Number 96* was launched in 1972. The series explored the relationships of the residents of a small, inner-city apartment block named Number 96. It caused a sensation by dealing with issues that had previously been considered taboo (offensive and distasteful) and unsuitable for showing on television. Topics such as nudity, divorce, homosexuality, racism and drugs were explored in the storylines.

Number 96 brought previous cultural barriers crashing down (see Source 2), and it was followed in 1974 by *The Box*. Set in a television station, *The Box* tried to take the sexual themes and nudity of *Number 96* a step further.

The first soapie aimed at teenagers, *The Class of '74*, was launched in the same year, and attracted considerable attention. Set in a high school, it suggested that teenagers had an interest more in social activities than schoolwork. This meant that the program was subject to intense legal scrutiny. The Broadcasting Control Board would often demand script changes to make it more 'acceptable' for early evening viewing.

The first Australian soapie, *Bellbird*, had produced a film version as early as 1971, and films based on *Number 96* and *The Box* soon followed. Film versions of television soapies had several advantages – they could be filmed in colour and they were able to show more nudity than was allowed on television at the time. The arrival of colour television to Australia in 1975 took away some of the advantages held by movie theatres before then.

A new style of soapie was introduced in 1976 when *The Sullivans* was launched. Set in World War II-era Melbourne, it ran until 1982, and drew viewers into following the lives of its fictional family. *The Sullivans* echoed the success of Australian films in the 1970s, and reflected an interest in Australians exploring their own culture. Its success was echoed in the 1980s by *A Country Practice*, which revived a *Bellbird*-style of storytelling set in a country town. *Prisoner* and *Sons and Daughters* also found long-running success in the 1980s, and reinforced the dominant position of television in Australian popular culture.

Source 2 Actors Abigail and Joe Hasham in a scene from the television show *Number 96*

Mini-series in the 1980s

The election of Bob Hawke in 1983 returned the Labor Party to power. Hawke portrayed a down-to-earth Australian image. He had won a beer-drinking competition while a student at Oxford University, and was able to draw a wide following in the community. He still holds the record for the highest approval rating of any prime minister. He was re-elected in 1984, 1987 and 1990.

The Hawke years were characterised by economic reform and a confidence in Australian popular culture. Television launched a number of mini-series that showed aspects of Australian life. Mini-series were longer than traditional films, but limited to a single, self-contained story rather than an open-ended narrative that had previously been the basis of long-running television series.

Mini-series boomed during the 1980s as Australian history and culture became hot topics for the producers to explore. These included *Bodyline*, which looked at the events behind the 1932–33 cricket series between Australia and England; *The Dismissal*, which examined the sacking of the Whitlam Government; *The Cowra Breakout*, a famous incident from World War II; and *Vietnam*, which was a major examination of a war that was still a hotly debated topic in Australian society.

Source 3 A still from *Bangkok Hilton* starring Nicole Kidman which aired on Australian television in November 1989

Australian novels such as Ruth Park's *The Harp in the South* and *Poor Man's Orange*, memoirs such as Albert Facey's *A Fortunate Life*, and novels about Australia such as *A Town Like Alice* all provided material for successful mini-series. Indigenous issues were firmly placed on the television agenda with the acclaimed *Women of the Sun*, while *Bangkok Hilton* starring Nicole Kidman (see Source 3) fictionalised the experience of young Australians caught smuggling drugs from Asia.

Neighbours and *Home and Away*

Australia's interest in gathering around the television to share the lives of fictional soap characters culminated in two extraordinarily long-running shows that aired for the first time in the 1980s – *Neighbours* and *Home and Away* (see Sources 4 and 5). When *Neighbours* was first shown in 1985, Ronald Reagan was president of the United States, the Cold War still pitted the United States and Soviet Union against each other, and Bruce Springsteen was touring Australia for the first time. A 15-year-old who watched the debut episode of *Neighbours* turned 40 in 2010. *Home and Away* followed shortly after, premiering in January 1988 – the same year that Australia celebrated its bicentennial (200th anniversary) of British settlement.

These two television soapies have, between them, aired more than 14 000 episodes. As with the mini-series boom, they emerged from an Australia that was becoming increasingly confident in using popular culture to explore its own stories. As the bicentennial of Captain Cook's landing in Australia approached, there was a focus on national reflection, and a questioning of what being Australian meant. The lives of 'ordinary' Australians shown in fictionalised settings such as Erinsborough (*Neighbours*) and Summer Bay (*Home and Away*) were now seen as a valid source of entertainment. Teen audiences emerged as a major target for advertisers. This helped both soapies to dominate Australian and international ratings throughout the 1990s and early 2000s.

They have proved a rich training ground for aspiring actors and musicians. Among the talent to have emerged from *Neighbours* and *Home and Away* are Guy Pearce, Kylie Minogue, Jason Donovan, Natalie Imbruglia, Delta Goodrem, Melissa George and Julian McMahon. All played recurring roles in the soaps before moving on to major international success.

Although celebrating the life of average Australians, both shows have been criticised for focusing on a 'white' view of Australia. And while both series have dealt with controversial social issues such as drugs, sexuality and teen pregnancy, race and ethnicity have rarely featured. Token attempts at introducing minor characters have failed to challenge criticism that the racial composition of Erinsborough and Summer Bay fails to reflect that of modern Australia.

Both series project a vision of Australia that has proven extremely attractive to overseas viewers. *Neighbours* and *Home and Away* have had extraordinary success being sold internationally. The image of Australia as a country of sunshine, surf and white faces proved irresistible in many markets. *Neighbours* was so

Source 4 Morag Bellingham (Cornelia Francis), Alf Stewart (Ray Meagher) and Eric 'Ric' Dalby (Mark Furze) in the long-running Channel 7 soapie *Home and Away*

successful in Britain that, in 1988, programmers were forced to move it from early to late afternoon because so many school students were failing to return to school after going home at lunch. *Neighbours* has been shown in countries as diverse as Kenya, Barbados, Iceland and Ireland. In the 1990s it was even shown in the prized United States market. *Home and Away* has been popular throughout Europe, as well as Israel and Canada.

Each show has enthusiastically embraced social media as a way of interacting with a new audience, necessary to sustain such longevity. In 2009, *Neighbours* became the first Australian television show to establish Twitter accounts for its characters and, in 2011, was the first television show to be available on an iPhone app for an increasingly tech-savvy young audience. Both shows offer viewers the opportunity to catch up on missed episodes and preview forthcoming stories through their websites.

Source 5 Scott Robinson (Jason Donovan) and Charlene Robinson (Kylie Minogue) in a wedding scene from *Neighbours*, 1987. This episode remains one of the most watched in the history of the show. It aired to an audience of 20 million in the UK in November 1988.

4. How did Australian soapies change during the 1970s?

Apply and analyse

5. Why do you think Australian soapies have become so popular overseas?

Evaluate and create

6. Do you think Australian soapies such as *Neighbours* and *Home and Away* should include characters from a broader range of racial/ethnic backgrounds? Explain your response.

13A rich task

The influence of popular culture in Australia

Many of us today have a television in our bedroom and watch movies online. It's hard to believe that only 60 years ago radio was the main way Australians accessed news and entertainment. The nature of entertainment has evolved radically over that time. The growth of television and new forms of music reflect upheavals in values and culture that our society has undergone since the end of World War II.

For the generation who grew up before the 1950s, the only way to watch moving images was to visit a cinema. The arrival of television in Australia in the 1950s relocated the movie screen into people's living rooms and fundamentally changed the ways in which people accessed popular culture.

Source 1

When television itself first started in 1956, because television sets were, I suppose, very expensive, most people didn't have one, and all of the major department stores would have a television set in their window … People would actually gather outside the department stores at night-time, children in their pyjamas and dressing gowns, adults would bring their own seats and sit there and watch the television in the store windows.

Extract from a 2006 special episode of the *Science Show* on ABC Radio National, 'Celebrating 50 years of television'

With the birth of rock'n'roll around the same time, popular music was undergoing a revolution of its own. Rock'n'roll became more than just another music trend – it came to influence fashion, lifestyle, language and attitudes, especially among teenagers and young people.

Popular culture in the 1950s would come to exemplify the gap between the culture of youth and that of their parents. Older Australians were concerned that the popularity of rock'n'roll through television and radio was encouraging young people to challenge boundaries around taboo topics, such as sex.

Source 2 Bill Haley on tour in 1957 – this and other tours by famous rock'n'roll bands not only influenced music but also fashion, language and attitudes

This letter to the editor appeared in *The Sun* newspaper in January 1957, while Bill Haley was touring Australia. It was printed under the heading 'Menace of rock and roll':

Source 3

It will be interesting to note the effects of the visit to Sydney of a band of American entertainers. Reports of the way 'rock and roll' has been received by overseas audiences, coupled with the almost unanimous acceptance of Elvis Presley who, despite his repulsive antics, is now the current idol of the younger set, lead one to believe that the arrival of Mr Haley could be regretted for years to come.

We have only to glance through the daily papers to read the shocking manner in which teenagers of today, throughout the world, carry on.

The morals of the modern generation, with the exception of a small minority, have nearly reached an all time low, and 'rock and roll' has done nothing to improve them.

Already the general outlook of the Australian teenager has begun to deteriorate rapidly and to such an extent that something must be done to prevent the low level which they are gradually approaching, being attained.

Strongly opposed by most leading musicians, both modern and classical, 'rock and roll' represents a serious threat to the community.

In both Britain and the United States riots are prevalent where this form of entertainment is played. We must see that it is not given the same opportunity to take a grip on our own youth.

Letter to the editor by John J Sutton, *The Sun*, Sydney, January 1957 (reprinted *in My Generation. Growing up in Australia 1950s to 1980s*, Bernie Howitt, Longman Cheshire, Melbourne, 1992, pp. 25–6)

skill**drill:** Historical sources as evidence

Identify and analyse different historical interpretations

As explained earlier, historians use two types of sources to gather evidence about the past:

- primary sources – objects or materials created or written at the time being investigated, for example during an event or very soon after
- secondary sources – accounts about the past that were created after the time being investigated and which often use or refer to primary sources and present a particular interpretation.

Much of the historical study and research you will complete in secondary school will involve you reading secondary sources (for example, textbooks and websites about the historical period you are studying). While these secondary sources at first glance may appear to provide an objective, unbiased and balanced view of the historical events or periods they are writing about, this is not always the case. All historians write from a particular perspective. There is no objective 'truth' that historians uncover; rather, all historians must interpret historical events and issues using their own perspective. Of course, historians must use evidence to justify their interpretations, but there is no absolutely 'correct' way of interpreting evidence, and historians can also use (or disregard) different sources of evidence to support many different interpretations. For example, many historians writing in the early 1900s about the British settlement of Australia presented it in a very positive light, and virtually ignored the negative experiences of Indigenous Australians.

It is therefore very important that you are able to identify and analyse different historical interpretations. To do this, ask yourself the following questions:

- What historical event is being interpreted?
- What particular features, incidents, actions or behaviours are seen as important in this interpretation?
- What particular features, incidents, actions or behaviours are seen as positive in this interpretation?
- What particular features, incidents, actions or behaviours are ignored or left out of this interpretation?
- What particular features, incidents, actions or behaviours are seen as negative in this interpretation?
- What motives or characteristics are being attributed to the humans involved in this interpretation?
- What primary sources are used to support the interpretation? How?
- What primary sources might have been left out or ignored by this interpretation?
- Does this interpretation involve a critique of other interpretations? If so, what is being said about other interpretations?

Apply the skill

1 Use the questions above as a guide to prepare a 250-word report explaining the changing nature of popular culture in Australia since the 1950s. Explain how each of the sources presented in this section offer different interpretations of the changes.

Extend your understanding

1 Consider how the sources in this section provide such different interpretations of the arrival of rock'n'roll in Australia. What technology or trends do you see in society today that might compare to the upheaval older generations of Australians faced when television and rock'n'roll emerged?

2 Prepare a presentation for your class on a modern trend or technology of your choice (such as Facebook or Twitter), describing:

a what benefits the trend is bringing to society

b what problems the trend could have for society

c what effects you believe the trend might have on society in 15 years' time.

13.8 Changes in the music industry

Source 1 Rock icon 'Molly' Meldrum, host of the influential television music show, *Countdown*, which screened from 1974 to 1987

From its earliest days in Australia, rock'n'roll was branded as rebellious music for teenagers. The link between rock'n'roll and teenage misbehaviour was established even before there were any rock'n'roll bands in Australia. The first rock'n'roll film, *Rock Around the Clock*, was released in Sydney on 14 September 1956. Ten days later two youths were fined for dancing in Pitt Street after viewing the film.

The origins of Australian rock

In the early years of the Australian rock industry most songs were covers of American artists and bands. The first original Australian song was probably 'Rock'n'Roll Washboard' by the Schneider Sisters, written in November 1956. The Schneider Sisters came from a country music background. This was typical of the early Australian rock acts, with established artists from other music genres attracted to rock'n'roll because of its novelty value and links to the emerging teenage market.

keyconcept: Contestability

George Assang – Australia's first rock'n'roll star?

To this day there is considerable debate about who released Australia's first rock'n'roll record. The unlikely pioneer of Australian rock'n'roll was an Indigenous Australian called George Assang. He was born on Thursday Island, and his smooth singing voice got him regular work fronting jazz and swing bands on the Australian circuit. On 12 July 1956, under his stage name of Vic Sabrino, he released a version of 'Heartbreak Hotel' simultaneously with Elvis Presley's version. There is still some debate about when he recorded an earlier cover of Bill Haley's 'Rock Around the Clock'. Whether it was 1955 or 1956, the Vic Sabrino jazz/swing version of 'Rock Around the Clock' could make a case for being Australia's earliest attempt at rock'n'roll.

For more information on the key concept of contestability refer to page 246 of 'The history toolkit'.

Johnny O'Keefe

Johnny O'Keefe is remembered as one of the most significant Australian rock'n'roll performers of all time. O'Keefe was born in 1935 and began his singing career in the 1950s. His life changed forever in 1955 after seeing and hearing Bill Haley singing 'Rock Around the Clock'. O'Keefe met Bill Haley at his 1957 tour and impressed Haley so much that Haley gave him a song to record. From that point onwards, O'Keefe knew that he wanted to perform this style of music and dedicated himself to becoming a rock'n'roll singer and star. From humble beginnings, O'Keefe went on to have national and international success with songs such as 'Wild One, Shout!' and 'She's My Baby'.

Source 2 Johnny O'Keefe performing on stage in 1963

One riotous night of partying was the inspiration for O'Keefe's 1958 release, 'Wild One'. This was the first genuinely Australian rock'n'roll hit record. After hearing it performed on tour with O'Keefe, Buddy Holly and the Crickets took it back to the United States where it was released as 'Real Wild Child'. It has subsequently been recorded by artists as diverse as Jerry Lee Lewis, Joan Jett, Status Quo and most famously Iggy Pop. In fact, the Iggy Pop version has been used as the theme to ABC TV's *Rage* for more than 25 years.

In his 20-year career, O'Keefe released more than 50 singles, 50 EPs (extended play records) and 100 albums. To this day he remains Australia's most successful chart performer, with 29 Top 40 hits to his credit in Australia between 1959 and 1974.

Surf music

The massive popularity of surf music that started around 1962 launched the next phase of Australian music. Sydney band The Atlantics created a huge local hit, 'Bombora', which was released internationally, even receiving the US *Cashbox Magazine*'s Record of the Week award. Suddenly surf bands were everywhere, playing suburban dances and sending teenage boys in search of guitars so they could imitate their favourite band and be 'cool'.

The classic rock line-up of guitars, bass and drums emerged at this point, and major international recording labels such as CBS and HMV began investing in the local Australian music industry. As The Beach Boys made the charts, vocals started to influence surf music. A 14-year-old Australian singer by the name of Little Pattie entered the charts with 'He's My Blonde Headed Stompie Wompie Real Gone Surfer Boy' late in 1963. The summer of 1963–64 was the highpoint of the surf music craze in Australia.

The beat boom

The 'beat boom' was a period during the early 1960s when a style known as beat music became popular in the charts. Put simply, beat music was a fusion of rock'n'roll and rhythm and blues (R&B) that developed in Britain at this time and led to a 'British invasion' of the music charts around the world. The overwhelming popularity and success of The Beatles was one example of the British invasion. Their Australian tour in June 1964 revolutionised the Australian music industry (see Source 3). Overnight it seemed as if instrumental groups and solo singers were out, and rock'n'roll bands were in. Smaller, independent recording companies such as W&G in Melbourne, Clarion in Perth and Alberts in Sydney prospered in the wake of Beatlemania. Teenagers across the country were hungry for new records and live concerts. As a result, many new Australian rock bands formed and the music industry in Australia boomed from 1964.

Source 3 The Beatles arrived in Adelaide on 12 June 1964.

A vibrant national scene made up of suburban dances in the major cities and concerts in country towns, gave a number of performers the opportunity to make a career in music. Some of these performers and bands were The Easybeats, and Ray Brown and the Whispers (from Sydney); The Twilights and Masters Apprentices (from Adelaide); Bobby and Laurie, The Loved Ones, and Normie Rowe and The Playboys (from Melbourne); Tony Worsley and The Blue Jays, and The Five (from Brisbane); and Johnny Young Kompany (from Perth).

By 1966, The Easybeats and Normie Rowe, two of the biggest names on the local scene, had moved to England in search of international fame and success. The Easybeats recorded 'Friday on My Mind' in London in 1966. It reached the Top 20 in the US and Top 10 in the UK, and would go on to be voted best Australian song of all time in 2001. Normie Rowe recorded a number of songs in London that were huge hits back in Australia.

The 1970s: *Countdown* and Double J

Australian music became much more diverse in the 1970s as a new range of acts replaced the bands popular during the beat boom. Experimental acts such as Tully, Tamam Shud and Levi Smith's Clefs reflected changes in society as drug use and alternative lifestyles mirrored similar trends overseas. Festivals such as Ourimbah and Sunbury were where the young gathered. Music was growing with the baby boomer generation (those born between 1946 and 1965). And then the ABC launched a television show that brought young people's music to an even wider audience.

Television had played a significant role in allowing access to rock music since Johnny O'Keefe was given a show called *Six O'Clock Rock* in 1959. Because the ABC was the only national broadcaster at the time, any show on the ABC was key in broadcasting information to the more remote areas of Australia.

When a new music program called *Countdown* started on 8 November 1974, its host, Ian 'Molly' Meldrum, became a household name – and he is still one of Australia's most famous television personalities. *Countdown* provided a national stage for promoting new Australian acts to young people. Sunday evenings became primetime viewing for teenagers wanting to know what was happening in Australian music. The show made stars of acts such as Skyhooks, Sherbet and John Paul Young. The show went to air from 1974 until 1987 and became the most popular music program in Australian television history.

In 1975, the Whitlam Government granted the ABC the first new radio licence in an Australian capital city since 1932. The ABC used the licence to set up Australia's first non-commercial rock radio station – known as Double J. Double J started broadcasting in January 1975. Committed to alternative music and challenging the commercial monopoly on rock, Double J started broadcasting with Skyhooks' 'You Just Like Me 'Cos I'm Good in Bed', which had been banned by commercial radio.

Double J changed its name to Triple J in 1980 when the FM band was opened for radio broadcasting. The dream of a national youth radio network was finally realised in 1989, when Triple J became a national network. Since its first broadcast, it has played a crucial role in championing Australian music, often

Source 4 Countdown provided a national stage for promoting new Australian acts to young people.

Source 5 Radio presenters Adam Spencer and Helen Razer in the Triple J studio in Ultimo, 1998 – both Spencer and Razer moved from Triple J to careers in more mainstream media and Triple J continues to give new young radio presenters an opportunity.

playing music that commercial radio programmers deemed unsuitable. The annual Triple J Hottest 100 has become a staple of Australian music. It gives Australian bands the opportunity to compete with international artists. The 2010 Hottest 100, for example, was topped by Australian acts Angus and Julia Stone and Little Red and the number one track in 2011 was by Gotye. Perhaps the greatest indicator of Triple J's contribution to the Australian music industry is its support for emerging independent Australian bands. Sydney band The Jezabels reached number 16 with 'Mace Spray' and number 49 with 'Easy to Love' in the 2010 Hottest 100. This was despite being a totally independent band without the backing of a major label. Providing opportunities for bands such as The Jezabels and thousands of others over the years indicates why the government's support for a youth radio network was such a critical decision in the development of the Australian music industry.

By harnessing new technological developments such as colour television (*Countdown*) and FM broadcasting (Triple J), Australian music was able to enter an era of genuine international acceptance.

Australian music goes global

From Johnny O'Keefe's attempt to get into the American market in 1959 to The Jezabels' independent assault on Europe and North America in 2011, Australian acts have always attempted to test themselves against the rest of the world. The 1980s saw an explosion of Australian acts that had a genuine global impact on the music scene. From the early 1980s, bands such as Brisbane's The Go-Betweens developed a cult following across Europe and North America. Following their path were bands such as INXS, Midnight Oil, AC/DC, Nick Cave and the Bad Seeds, Jet, The Vines and Savage Garden who have achieved global recognition representing a diversity of sounds. More recently Australian artists such as Gotye and Sia have achieved international fame and won a host of awards – an indication of the wider success and acceptance of Australian music on the world stage.

Australian popular music is critical for Australia's cultural life. It allows for a range of Australians to express views and opinions, and establishes an understanding of modern Australia on a global scale. It has also grown from a cultural form that was despised by an older generation into a major contributor to the Australian economy. It was estimated that music-related activities added $1.55 billion value to the Australian economy in 1984–85, and $6.82 billion in 2005–06.

Source 6 Australian singer and songwriter Sia Furler began her career in Adelaide in the 1990s. Today, she is one of the most internationally recognised recording artists in the world. In 2014, her single 'Chandelier' charted in the top 5 in more than 20 countries around the world and the video of the song has been viewed more than 1.2 billion times on YouTube.

That is an enormous change from the days when Vic Sabrino recorded a cover of 'Rock Around the Clock'.

The next step in securing the future of rock music as an Australian popular culture came on 5 October 2011, when Triple J launched Triple J Unearthed, a new station devoted entirely to promoting the music of unsigned Australian bands. The digital and online station was set up to help the next generation of musicians prepare to follow in the footsteps of artists ranging from Johnny O'Keefe to The Jezabels.

Evaluate and create

6. Create a digital museum exhibition that highlights the changing nature of the Australian music industry since World War II.

13.9 Changes in the film industry

By the 1950s most Australian cities and suburbs had access to a picture theatre. Going to the 'flicks' was a popular pastime for people of all ages and generations. Signs of change were apparent in 1954 when the first drive-in cinema opened in Melbourne. This reflected the emergence of the private car as the main means of transport, as suburbs expanded in the post-war baby boom era. The most significant change for the Australian film industry at this stage was the emergence of television from 1956. With families able to stay at home to watch entertainment, many suburban theatres had closed by the end of the decade.

Liberal Prime Minister John Gorton was responsible for saving the Australian film industry. His introduction of a Film Development Corporation and National Film and Television Training School encouraged a new wave of film makers. The Whitlam Government built on Gorton's work with the Australian Film Commission, and these two prime ministers ensured that the 1970s would be a boom period of Australian film.

The 1970s generation of Australian film makers and actors repaid the government's investment in culture many times over by making a major impact on the international film industry. Directors such as Peter Weir, Gillian Armstrong and Bruce Beresford, and actors such as Mel Gibson, Judy Davis, David Gulpilil and Jack Thompson have gone on to win awards and attain international success.

The *"Crocodile" Dundee* phenomenon

On 30 April 1986, the film *"Crocodile" Dundee* premiered in Australia. It was produced on a budget of about $10 million and starred the Australian comic actor Paul Hogan, who had risen to prominence after winning on *New Faces* – a popular talent contest broadcast on television. Two versions of *"Crocodile" Dundee* were released at the time – an Australian version and an international version that replaced Australian slang with more easily understood words.

Hogan's Mick Dundee became a huge hit in Australia with his 'blokey' humour and 'no worries' attitude. The international appeal of such an obviously Australian character was put to the test when *"Crocodile" Dundee* was released in the USA on 26 September 1986. It proved a sensation, eventually becoming the second highest grossing film of the year in the United States, taking more than $174 million at the box office. Hogan also won a Golden Globe award for his performance, and the film was shown worldwide, from Argentina to Zimbabwe.

Source 1 Paul Hogan as Mick Dundee in *"Crocodile" Dundee*, 1986

It placed Australian film firmly on the world stage, and was arguably the greatest boost to the Australian tourist industry ever. Hogan became the face of Australian tourism with his 'put another shrimp on the barbie' campaign. *"Crocodile" Dundee* remained the highest grossing Australian film of all time until 2015, when it was eclipsed by *Mad Max: Fury Road*. Even though the two sequels, *Crocodile Dundee II* and *Crocodile Dundee in Los Angeles*, failed to achieve anything like the success of the original film, it remains the most popular Australian film series of all time in terms of international success.

Towards a global film industry

The American film industry – often referred to simply as 'Hollywood' after the Los Angeles suburb where their modern film industry started – is the most dominant force in world film. Its sheer financial power and deals with distributors mean that independent theatre owners in Australia are often disadvantaged financially if they do not show major Hollywood films. The power exerted by Hollywood has meant that government support and financial assistance has become essential for the Australian film industry to survive.

The success of small-scale films such as *Animal Kingdom* prove that this ongoing support for the Australian film industry is not wasted. *Animal Kingdom* won the 2010 AFI award for best film, and saw Jacki Weaver receive an Academy Award nomination for best supporting actress. Government support has allowed Australia to retain a viable and relevant film industry, essential for genuine cultural expression in the 21st century.

An alternative to Hollywood domination has emerged in the 21st century with the development of Australian links with India's thriving Bollywood film industry. The term Bollywood is a combination of two words: **B**ombay (the city at the heart of the Indian Hindi film industry – now known as Mumbai) and H**ollywood** (a reference to the similarities between the industries in India and the USA). Indian film producers have prepared a handbook for working with Australian film producers and media, and many Bollywood films have started using Australia as an exotic backdrop during filming. By late 2006, major Indian films such as *Love Story 2050*, *Heyy Babyy* and *Chak De! India* were being filmed in Australia, and crews were routinely moving between Australia and India.

The development of major film production studios in Sydney, Melbourne and Queensland has meant that Australian studios have developed a high skill level, and major blockbusters such as *The Matrix* series and *Star Wars* episodes 2 and 3 have been made in Australian studios.

Source 2 A still from Bollywood movie *Love Story 2050*, shot in Australia in 2008

Australia's increasing cultural links with Asia have also seen *anime* (Japanese animated cartoons) emerge as an important element of the film scene. The Japanese *anime* film *Akira* (1988), became a cult hit in Australia, and was the predecessor of an art form that has gained increasing attraction in popular culture through the rise of video and computer games.

6. How important is film in promoting Australia as a tourist destination? What films would you show overseas to promote Australia?

13.10 Changes in the television industry

The arrival of television in Australia in 1956 was a major catalyst for change. It ensured easy access to American popular culture, and the Menzies Government's decision not to apply any local content requirements meant that early television was dominated by American shows. Australian children grew up with the *Mickey Mouse Club* and *The Wonderful World of Disney*, while cowboys such as Roy Rogers and Hopalong Cassidy meant Australians became more familiar with the Wild West than with the outback. Crime-based shows such as *Perry Mason* and *Dragnet* were popular adult fare, and situation comedies (**sitcoms**) such as *Father Knows Best* and *I Love Lucy* also attracted large audiences.

Television expands

The early 1960s saw the expansion of television into more markets with the introduction of regional stations in places such as Gippsland in Victoria in 1961, and Newcastle in New South Wales the following year. The ABC also continued to expand nationally, and in 1964 a new commercial station 0 (Melbourne) and 10 (Sydney) commenced broadcasting. The introduction of a coaxial cable between Sydney and Melbourne paved the way for closer networking between stations in the two major Australian markets. This allowed for such innovations as a split screen that would allow Graham Kennedy in Melbourne and Don Lane in Sydney to appear simultaneously on the Nine network's *In Melbourne Tonight* (see Source 2).

The other major change to television in the 1960s was the development of satellite broadcasts. Perhaps more than any other technological development, this helped bring the world to Australia. In 1964, *Everybody's Magazine* had boldly predicted that Australians would be able to watch the 2000 Ashes series live on television from England. By 1967, they were watching The Beatles recording 'All You Need is Love' live from Abbey Road studios as part of the historic *Our World* broadcast. Broadcast to the largest worldwide audience of the time (400 million) on 25 June, it linked the world by satellite, with contributing countries showing the world an aspect of life in their country. While Britain gave The Beatles, and Italy had Franco Zeffirelli directing his groundbreaking film version of *Romeo and Juliet*, Australia's contribution was a shot of trams leaving their Melbourne depot in the pre-dawn.

Source 1 A still from *Father Knows Best*, a 1950s US television program shown in Australia

Television and sport join forces

The 1967 Sydney Rugby League Grand Final between South Sydney and Canterbury Bankstown was the first sporting event to be broadcast live in Australia. Channel Nine paid $5000 for the rights to a game that was won by Bobby McCarthy's famous intercept try. This telecast proved that sport was the perfect product for television.

By the 1970s, major sports events were regularly televised. The importance of the link between television and sport was shown in 1977 when Kerry Packer launched a raid on the sport of cricket, creating a private

Source 2 Graham Kennedy hosting the television show *In Melbourne Tonight,* 1973

Source 3 The late Kerry Packer

World Series competition in a successful bid to force the Australian Cricket Board to allow him the right to broadcast test matches. The 1976 Olympic Games from Montreal had its opening and closing ceremonies broadcast live, and by the 1984 Los Angeles Games, a wide range of popular events were being broadcast live into Australian homes. The 1977 Australian Rules grand final between Collingwood and North Melbourne was the first shown live in Melbourne. The exciting draw showed that all football codes could be major drawcards in attracting viewers.

Multicultural programming

The composition of the Australian population had changed significantly since World War II, and the establishment of the Special Broadcasting Services (SBS) in Melbourne and Sydney in 1980 under the Fraser Government was the first real mainstream media recognition of this. Broadcasting in a wide range of languages, it played a crucial role in helping immigrants adjust to Australian life. By the mid-1980s, SBS had expanded throughout most of the country.

Children growing up in 1960s Australia had been watching **multicultural** television without the term ever being used. Channel Nine had started showing a Japanese series called *The Samurai* in 1964 to cash in on the interest generated by the forthcoming Olympic Games in Tokyo. They invited viewers to write in if they wished to see more episodes and were deluged with positive replies. *The Samurai* became a massive hit in Australia.

The sight of children jumping from trees while flinging imaginary star knives became commonplace, as Australian viewers were introduced to the intricacies of medieval Japanese society. The success of *The Samurai* revealed the generation gap as vividly as had rock music. For the older people in Australian society, World War II had finished fewer than 20 years earlier, and inviting Japanese culture onto Australian television was unimaginable. For children brought up in the **Cold War**, the communist Russians were a more logical enemy than the Japanese; and Shintaro, hero of *The Samurai*, became a major popular culture figure in Australia.

Japanese *anime* was also introduced to Australian television viewers in the 1960s. *Astro Boy* was a mid-1960s favourite, and the Japanese-style drawing marked it as significantly different from the traditional American cartoons that were the staple of most afternoon television (see Source 4). Its futuristic plot where robots and humans coexist peacefully had resonance with the post-Cuba Cold War-influenced world Australian children were growing up in. The cooperation theme was echoed in the other Japanese cartoon series to be a 1960s hit in Australia, *The Adventures of Kimba the White Lion*. By the time *Sailor Moon* arrived on Australian television screens in the 1990s, Australian viewers had long accepted *anime* as a form of television popular culture.

Source 4 A scene from *Astro Boy* (*Tetsuwan Atomu* or 'Iron Arm Atom'), 1963

Pay TV

The early 1990s saw two major changes to the Australian television landscape. A policy introduced by the Hawke Government meant that regional areas suddenly had access to three commercial channels rather than one. This meant that for the first time regional Australia was able to view virtually the same programs as people living in major cities.

The other change was the introduction of subscription (pay) television. The idea of paying for extra services was a major change to the way Australians viewed television. Paying for something that had always been free (except for television licenses, which had been removed in 1974 by the Whitlam Government), went against the general Australian understanding of the medium.

The first pay TV provider was Galaxy, which commenced operation in 1995. Foxtel, Optus and Austar were introduced to the market in 1995, and by 1998 Foxtel had absorbed Galaxy. The first major impact of pay TV was the Super League Rugby League war. Rugby League had proved a popular sport on television, and Rupert Murdoch's News Ltd realised it would be a key to their investment in Foxtel being profitable. In an attempt to secure exclusive broadcast rights, News Ltd secretly signed clubs and players to create a breakaway competition. Court action during 1995 and 1996 failed to resolve the dispute, and two competitions existed in 1997. The warring parties came together in 1998, with News Ltd gaining a 50 per cent partnership in the running of Rugby League as well as obtaining broadcast rights for most games for their Foxtel network.

Sport has been the main driver in encouraging people to sign up for pay TV, but numbers have stabilised. By the end of 2010, Foxtel had 1.63 million subscribers. The desire of pay TV companies to monopolise sports broadcasting to drive up the purchase of subscriptions has led to heated debate over which sporting events should be guaranteed access to free-to-air television.

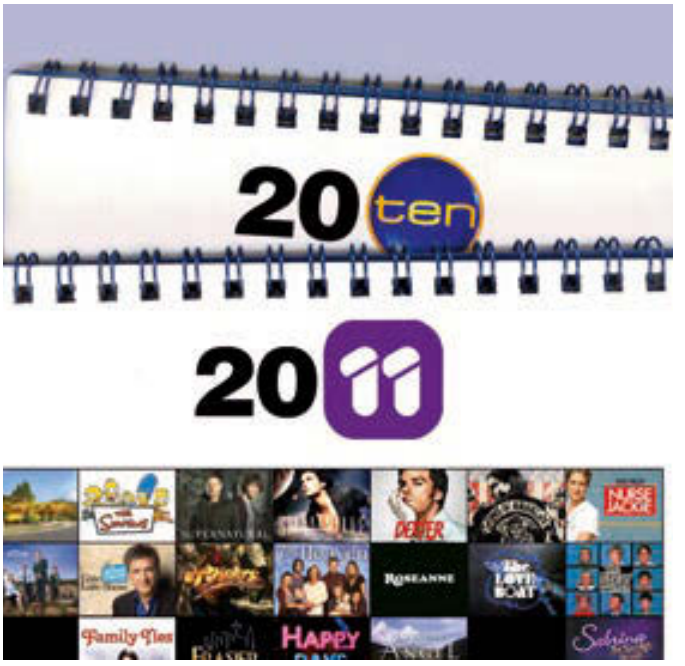

Online streaming TV and movie services

In 2015, a number of new video-on-demand services launched in Australia – once again changing the media landscape. Providers such as Netflix, Quickflix, Stan, YouTube Red, and Foxtel Play offer a different kind of pay TV experience to more established pay TV models. These services enable viewers to stream video content via TV and a range of other devices (like tablets and mobile phone) and access a large bank of content for a single monthly fee. Many of these services also do not require customers to sign up for a minimum contract period.

The introduction of streaming TV and movie services in Australia has been extremely popular and is beginning to challenge existing pay TV services. For example, between April and December 2015, 2.7 million Australians had signed up to Netflix – a greater number of subscribers than established services like Foxtel had managed to build up over more than 15 years. Demand and competition in this area is predicted to grow rapidly, with many similar services set to launch over the coming years.

Source 5 Sport has been the main driver in encouraging people to sign up for pay TV.

Source 6 In Australia there are five major networks that broadcast digital television.

The free-to-air TV revolution

The Australian government committed the country to a digital-only television platform by mid-2010. This was a new means of broadcasting which was slowly implemented across the country from 1 January 2001. Digital broadcasting meant higher quality of image and sound, as well as additional channels. Free-to-air stations were given the opportunity to broadcast smaller niche channels, and each commercial network has developed a number of spinoff channels. The Ten network, for example, launched One (a lifestyle channel), Eleven (a comedy channel) and TVSN (a shopping channel). At the same time, the Seven network launched 7mate (aimed at males aged from 16 to 49), as well as 7TWO and 7flix (a movie channel). The ABC launched a 24-hour news channel, and ABC Kids (a channel aimed purely at children).

The impact of the variety of free-to-air options on pay TV is one of the big questions facing Australian television.

13B rich task

Singles charts

Singles charts have been around for almost as long as there has been recorded music. Rock'n'roll record charts are a valuable primary source for historians. They can give a valuable insight into what was popular at a particular time, the origin of popular culture influences, and names of significant individuals and groups that had an impact in a specific time and place. Like all sources, they then have to be interpreted.

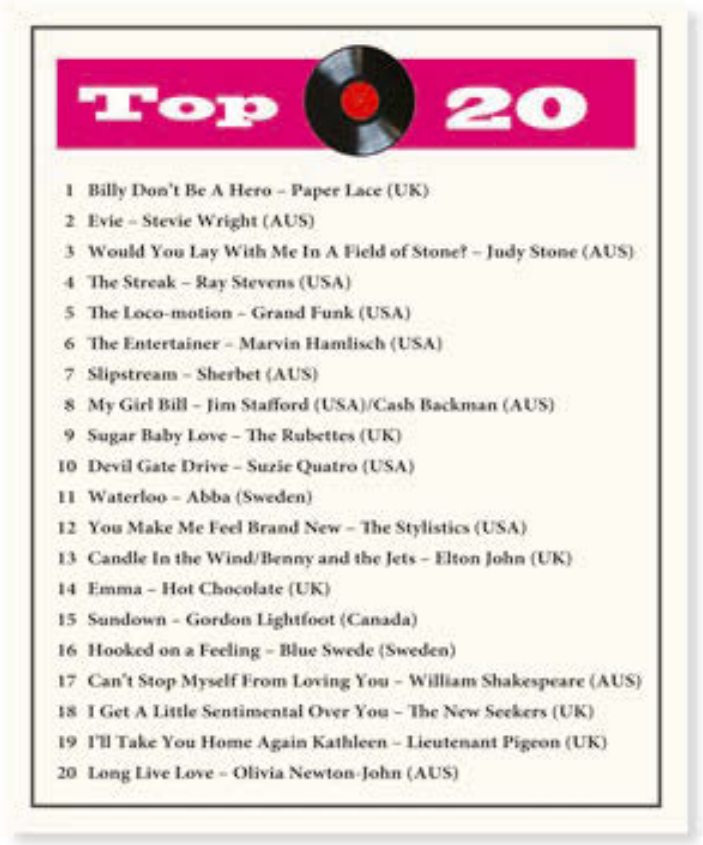

In 1966 the Melbourne pop music newspaper, *Go-Set*, introduced the first national Top 40 song charts in Australia. By doing so, *Go-Set* helped young people stay entertained and informed about the latest news in the pop culture scene.

The *Go-Set* charts were succeeded in 1974 by the Kent Music Report, which published national top 100 charts. In 1988 these charts were taken on by the Australian Recording Industry Association (ARIA), which continues to publish today.

By using sales data from radio stations and retail stores, singles charts are an accurate way of keeping track of the most popular music from a particular time in history. However, songs that were extremely popular in their time do not always seem so significant years later.

In 1980, Australian singer Joe Dolce's single, 'Shaddap You Face', went to Number 1 on the Australian pop charts. It eventually sold more than 350 000 copies Australia-wide and was the most successful Australian-produced single for 33 years. Despite this, many people born in the years since 'Shaddap You Face' was released have never heard it played.

By contrast, rock band Cold Chisel's song, 'Khe Sanh', peaked at 41 on the national charts when it was released in 1978. In the decades since, *'Khe Sanh's'* significance as a song about a Vietnam War veteran trying to cope with Australian life has been increasingly recognised. In 2001 the Australian Performing Rights Association ranked 'Khe Sanh' eighth in its Top 10 Australian Songs of All Time. It is commonly heard in music venues and on the radio.

skill**drill:** Continuity and change

Identify and analyse the perspectives of people from the past

Primary and secondary sources reflect and represent many different perspectives, points of view, attitudes and values. People who create sources are influenced by their gender, age, family and cultural background, education, religion, values and political beliefs, their life experiences and the time in which they live. It is the historian's job to make sure that they consider a range of perspectives in their investigations, allowing more voices to be heard and a more complete picture to be formed. Identifying and analysing the perspectives of different people is a very important historical skill. To do this, you need to understand the social, cultural and emotional contexts and factors that shaped people's lives and actions in the past.

Follow these steps when applying this skill:

Step 1 Identify the historical issue around which there may be different opinions or interpretations.

Step 2 List the various groups and people who may have been involved in or affected by this issue.

Step 3 Identify their role or position in society.

Step 4 Locate some primary sources that provide evidence about their point of view or opinion on the issue.

Step 5 Analyse each source, using the following questions as a guide:

- Why was the source written or produced?
- Who was the intended audience of the source? Was it meant for one person's eyes, or for the public? How does that affect the source?
- What was the author's message or argument? What were they trying to get across? Is the message explicit (obvious), or are there implicit (subtle) messages as well? What can the author's choice of words tell you? What about the silences – what does the author choose *not* to talk about?
- How does the author try to get the message across? For example, do they give a detached, balanced account, or is it biased for or against the issue?
- Compared to what we face today, what relevant circumstances and experiences were different for the author of the source in the past? (Some examples might include religion, economy, family life, technology etc.) How do you think these factors and experiences influenced their thoughts and actions?

Apply the skill

1 In one paragraph, explain why the Top 20 charts are primary sources.

2 Select and listen to three songs from each of the two Top 20 charts provided in Sources 1 and 2. In one or two paragraphs for each question, use the steps shown above to answer the following:

a How can music charts help us to learn more about the perspectives of people from the past?

b What limitations do music charts present to anyone seeking to make conclusions about cultural perspectives?

Extend your understanding

Refer once again to the two Top 20 charts provided in Sources 1 and 2 and use the information you have learned in this chapter to complete the following:

1 Identify the elements of continuity and the elements of cultural change that have occurred between the two charts.

2 Explain how a historian investigating the impact of American and British popular culture on Australia could use these sources.

13.11 Australian music goes global

Rock'n'roll established itself as a significant part of Australian popular culture by the late 1950s. Rock'n'roll quickly became associated with teenagers, and the challenge would be whether it could change and adapt as these teenagers grew older.

The first wave of Australian rock'n'rollers, who followed Johnny O'Keefe's example in the 1957–63 period, stayed in Australia. Rock'n'roll was still considered a novelty, and many musicians were amazed they could get paid for having such fun. The Beatles and other bands made famous during the beat boom of the 1960s made rock'n'roll an international business and broke the American monopoly on originality. The explosion of Australian acts after The Beatles' tour of Australia in 1964 developed a uniquely Australian take on rock'n'roll.

Widespread success

The significant contribution that Australian music has made to international popular culture could not always be measured in record sales. Brisbane band The Go-Betweens became the favourite band of music lovers across three continents without ever having a major hit record. Bands such as Men at Work, INXS and Midnight Oil certainly sold more records internationally, but The Go-Betweens, whose music was described as 'striped sunlight sound', took Brisbane to the world.

Despite this, the desire to achieve overseas success has continued to drive Australian acts to this day.

This type of success can be measured in record sales, as was the case with Savage Garden, who dominated

Source 1 Melbourne singer-songwriter Courtney Barnett – artists such as Barnett are taking Australian popular music to the world

key**concept:** Significance

Source 2 Australian rock band The Easybeats photographed on 17 November 1966

The Easybeats

The Easybeats are regarded by many as the greatest Australian rock'n'roll band of the 1960s. The band formed at Villawood Migrant Hostel in Sydney. After becoming the biggest band in Australia in 1965, they travelled to England in search of international success. They recorded their song 'Friday on My Mind' in London in 1966. Not only did the song reach the Top 10 in England and Top 20 in the USA, but it made The Easybeats major European stars. The song is still played regularly on many classic hits radio stations across America, and was a feature of the 2009 British film, *The Boat that Rocked* about a pirate radio station in the 1960s. Arguably the greatest recognition of the song's impact on a global stage was a tribute found on Bruce Springsteen's 1980 album *The River*. At the end of the second verse of the popular song 'Out in the Street', Springsteen sings, 'I've already got Friday on my mind'. For an artist with Springsteen's deep understanding of rock'n'roll history, this showed just what a major contribution The Easybeats made to international popular culture.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

late 1990s charts in the USA and Britain. A sell-out concert at a key venue is another measure of cultural achievement. INXS at Wembley Stadium in London in 1991 and the John Butler Trio in 2010 at Red Rocks in Colorado are two examples. It has been a continuity in Australian cultural life that overseas success is widely regarded as the measure of 'making it'. A study of the tour itinerary of Melbourne singer-songwriter Courtney Barnett to launch her debut album in 2015 reveals how strongly that desire still burns. Between March and July 2015 she toured extensively in the UK, Europe and North America and well as in Australia.

Australian music continues to make a significant international contribution to the popular culture of rock'n'roll.

2. Which Bruce Springsteen song is linked to The Easybeats' 'Friday on My Mind'?
3. In what ways can international success for Australian musicians be measured?

Evaluate and create

4. Research the career of *one* of the following: The Easybeats, The Twilights or Normie Rowe. How important do you think your chosen subject is in Australian cultural history?
5. With a partner, debate the suggestion that music is Australia's most significant cultural export since World War II.

13.12 Significant individuals: The Go-Betweens

The Go-Betweens' story started in Brisbane when university students Robert Forster and Grant McLennan met in 1977. A shared interest in popular culture, particularly American music and film, led to the formation of a band in 1978. Brisbane at this time was quite conservative. The atmosphere contributed to the band's decision to move overseas.

Source 2 The Go-Between's second single, 'People Say', released in 1979

Political climate in Brisbane

The Queensland government of Joh Bjelke-Petersen (Premier from 1968 to 1987) was well-known for suppressing opposition political activity. As Premier, Bjelke-Petersen extended the rights of police to deal with any dissent. Youth and Indigenous Australians were specific targets, and creative artists such as The Go-Betweens found it easier and safer to leave Brisbane. (A number of police and government ministers were later found to be corrupt in the Fitzgerald Inquiry.)

Early successes

In 1980, The Go-Betweens were joined by Lindy Morrison on drums, Robert Vickers on bass guitar and

Source 1 The Go-Betweens in 1988 – from left to right Amanda Brown, John Wilsteed, Grant McLennan, Robert Forster and Lindy Morrison

Amanda Brown on oboe, violin and guitar. The group initially moved to Melbourne, and then England, where their second album, *Before Hollywood*, was recorded in 1983. A series of critically acclaimed albums followed in the 1980s. Based in London for most of the decade, the band toured constantly, expanding their base of supporters from Europe to include North America. The final album of the original band was *16 Lovers Lane*, released in 1988, which saw their greatest commercial success with the single 'Streets of Your Town'.

The group disbanded in 1989, but Forster and McLennan continued to occasionally perform together at a variety of venues around the world. A new line-up of The Go-Betweens emerged in 2000, and a further three albums were released. *Oceans Apart* finally won mainstream recognition with an ARIA award in 2005. The band formally disbanded after Grant McLennan died in 2006 in Brisbane.

Impact of The Go-Betweens

In terms of record sales, The Go-Betweens had minimal impact on world popular culture. Yet there were messages from 18 different countries on the band's website after the death of McLennan. That alone shows the impact they had on the lives of individuals on a global scale.

To understand the true impact of The Go-Betweens, however, it is important to consider their influence on artists. Obvious tributes included a Swedish rock band called Kent playing 'Quiet Heart' as a tribute to McLennan at a Swedish festival, the Splendour in the Grass Festival naming one of its performance sites the GW McLennan tent, and a new bridge opened in 2010 across the Brisbane River being named the Go-Between Bridge after a public competition.

All these examples indicate a band that had a major effect. However, Robert Christgau's proclamation in New York's influential *Village Voice* that 'Robert Forster and Grant McLennan are the greatest song writing partnership working today' indicated their ongoing contribution at the highest level. Christgau is widely regarded as an important rock critic, and no Australian musical act had ever received such extravagant praise in such an important publication. Even the American television show *24* included a company called McLennan-Forster as a tribute to the band.

When U2 started the final leg of their *Vertigo* tour in Brisbane in 2006, they dedicated the show to Grant McLennan. Bono sang 'Streets of Your Town' twice during the band's concert, moving smoothly into the song during both 'Elevation' and 'Where the Streets Have No Name'. U2 have also named The Go-Betweens' 1982 song 'Cattle and Cane' on their list of the greatest rock'n'roll songs of all time.

As a popular culture, rock'n'roll has to change and evolve to survive. U2 have been able to do that, and the contribution of bands such as The Go-Betweens to inspire U2 is part of the global evolution of rock'n'roll as a popular culture.

6. What makes The Go-Betweens significant?

13.13 Australian film goes global

Australian film since the new wave of the 1970s has helped establish a vision of Australia for many people overseas. The use of *"Crocodile" Dundee* star Paul Hogan in tourism ads ensured the connection between film and a national image.

As discussed, in 1986 *"Crocodile" Dundee* became the highest grossing Australian film of all time because of its international success. Its celebration of Australia as a laid-back culture with a vast outback full of strange wildlife and interesting characters became a highly marketable vision of Australia. This was followed up with 1994's *The Adventures of Priscilla, Queen of the Desert* (see Source 1). Although also bringing Australia's outback scenery onto the screen, the film has been both praised and condemned for its presentation of a variety of sexual preferences and approaches. Its positive depiction of cross-dressing entertainers certainly helped to make it a significant film, and contributed to its international success.

The film gave rise to a musical version, *Priscilla Queen of the Desert* in 2006. This was another example of popular culture changing and evolving over time, and marked a further Australian contribution to international popular culture. The show, based on the film, has mounted successful productions in London, Toronto and New York, with plans for a further American and an Italian tour. The film won an Academy Award for costume design, and the stage versions won a further award on New York's Broadway in 2011.

4 Develop an advertising campaign to attract visitors to Australia using images from *The Adventures of Priscilla, Queen of the Desert.*

key**concept:** Contestability

Gallipoli (1981)

The 1981 film *Gallipoli* was a major example of the revival of the Australian film industry. Directed by Peter Weir, and starring Mark Lee and Mel Gibson, it not only dramatised the role of Australian troops at Gallipoli, but also linked the Australian soldiers to Australian cultural values such as mateship, larrikinism and a disdain of authority.

Source 2 A still from *Gallipoli,* 1981, starring Mel Gibson

The film focused on Western Australian members of the Australian Light Horse enlisting, training in Egypt and finally participating in World War I. The film shows the attempt to capture The Nek on the Gallipoli Peninsula from the Turks. Written by playwright David Williamson, it placed the blame for the needless slaughter of Australian troops firmly on the shoulders of the British leadership. Criticisms of the factual content of the film have been made. These include: The Nek was a diversion for New Zealand troops, not the British; other groups such as the Royal Welsh Fusiliers also suffered losses trying to support the Australians at The Nek; the failure to call off the attack was an Australian, not a British decision.

The film has proved just how influential popular culture can be. Historical inaccuracies have been shrugged off, and it has become a staple of high school history lessons since its release. It has contributed to the elevation of Gallipoli to almost mythical status in Australian history. Since 1981, successive curriculums have focused on Gallipoli as the most significant campaign of World War I for Australia. This is despite its unsuccessful outcome and the far greater losses and higher stakes on the Western Front in France.

By linking the Gallipoli campaign so closely to Australian identity and values such as 'mateship', the film also fostered the politicisation of the Gallipoli campaign. Before 1981, it was an important part of Australia's historical story, but was not politicised or mythologised. In 1990, Prime Minister Bob Hawke travelled to Gallipoli for a Dawn Service with veterans and called the site 'a part of Australia'. John Howard visited there in 2000 and 2005, although his 2005 visit attracted criticism because of his decision to attend a barbecue with Australian soldiers on the beach rather than attend the New Zealand service. The downplaying of the New Zealand contribution to the Anzac legend and the criticism of British leaders have been two aspects of the politicisation of the Gallipoli campaign since the release of the film in 1981. Former Prime Minister Paul Keating ignited further controversy in 2008 when he said, 'the truth is that Gallipoli was shocking for us. Dragged into service by the imperial government in an ill-conceived and poorly executed campaign, we were cut to ribbons and dispatched – and none of it in the defence of Australia'. Keating was roundly condemned for expressing a sentiment that was common in the 1970s.

Perhaps the best evidence of the lasting impact of the film is that it was denied government funding because it was seen as 'uncommercial'. A decade later the Australian government started the process of linking Gallipoli, Anzac Day and Australian identity tightly together with the Dawn Service.

For more information on the key concept of contestability refer to page 246 of 'The history toolkit'.

13.14 Australian television goes global

Australian television suffered initially because of the Menzies Government's decision to not require a **quota** of locally produced shows when television was launched in 1956. As a result, Australian television was filled by American, and to a lesser extent, British popular culture. Despite occasional hit shows, and moments of real originality, such as *The Mavis Bramston Show*, it is difficult to talk about an Australian industry with the potential to contribute globally until the 1980s.

Skippy the Bush Kangaroo

Australians had finally accepted Australian stories on television with the success of *Bellbird* from 1967, and the great soapie boom of the 1970s with *Number 96*, *The Box*, *The Sullivans* and *The Restless Years*. *Skippy the Bush Kangaroo*, which had been made in Sydney between 1966 and 1968, went international. The stories of the adventures of an incredibly perceptive kangaroo that guided his human friends to safety and captured baddies with ease presented a distinctly Australian vision to the world.

Source 1 Actor Garry Pankhurst as Sonny Hammond with Skippy in a scene from the television show *Skippy the Bush Kangaroo*

Skippy's international success was unique at the time. It was sold to the United States and Canada, was translated into Spanish and sold throughout Latin America, where it gave many people their only knowledge of Australia. It was sold in countries as culturally diverse as Spain and Iran. The one country *Skippy* could not get into was Sweden, where authorities refused to show it because they were afraid it would give children false ideas about the capabilities of animals.

From *Prisoner* to *Wilfred*

While Australian music and film had made inroads into the American market, Australian television had traditionally been more closely linked to Britain. Culturally the links to Britain had always been strong, and a shared sense of humour often meant that British and Australian shows were incomprehensible to American audiences.

The premiere of *Prisoner* in 1979 was the start of Australia producing shows that had some potential to influence the global marketplace. *Prisoner* ran from 1979 to 1986 in Australia, but developed strong audiences in Britain and Sweden particularly. By being set in a women's prison it often dealt with controversial social topics such as sexuality, drugs and domestic violence. Despite its often grim content, *Prisoner* generated at least two different stage productions in Britain, and provided employment for many of its actors on the British theatre circuit.

The success of *Prisoner* paved the way for the *Neighbours* and *Home and Away* phenomenon that began in the 1980s. The attractiveness of the Australian lifestyle depicted in these two shows helped boost their popularity in the gloomier climates of northern Europe.

At the start of the 21st century, the hit comedy *Kath and Kim* was remade for American audiences. The show's success in European markets had alerted the Americans to its potential, but they felt the Australian slang and humour would make it incomprehensible in the United States. The American version lasted only a

season, and was a failure both in the USA and when shown on Australian television.

A more recent Australian export to the United States is *Wilfred* (see Source 2). An American version of the SBS comedy series premiered on American television in June 2011. Unusually, its Australian creator, Jason Gann, also starred in the American version, which debuted to strong ratings on the cable channel FX. *Wilfred* had a successful first season in the USA, exporting Australian humour to the most important television market in the world.

Source 2 A still from the television program *Wilfred*

key**concept:** Significance

Chris Lilley

Chris Lilley started parodying Australian life in 2005 when *We Can Be Heroes* appeared on Australian television. It was followed in 2007 with *Summer Heights High*. Both shows created controversial but memorable characters that reflected aspects of the Australian character. Both shows were also sold to overseas markets, including the USA and UK, and *Summer Heights High* reached markets as far afield as Togo and Kenya.

Source 3 Actor comedian Chris Lilley as character Ja'mie King from the television program *We Can Be Heroes*

The internationally financed third program *Angry Boys* premiered in Australia in 2011. The Sims twins from *We Can Be Heroes* returned along with new characters such as their Gran, a warden in a young men's correctional institution. Never one to shy away from controversy, Lilley tackled race, localism, sexuality, exploitation and juvenile incarceration in the 12-part series. Even the size of the viewing audience was controversial, with the ABC arguing that new technologies such as iView and ABC2 meant that repeat showings should be included in ratings figures.

The sense of anticipation for the show was highlighted by the emergence of *Angry Boys* and 'Gran' as worldwide trending topics on social media network Twitter as the first episode went to air. With guaranteed airplay in the major markets of the United States and Britain, as well as New Zealand, *Angry Boys* was an important contributor to international popular culture. Lilley has since created two more shows featuring characters from *Summer Heights High*. The rich characterisations ensured that Lilley will continue to be a pivotal figure in the contribution of Australian television at an international level.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

13.15 Australian sport goes global

Sport has often been seen as one way Australia can 'make a splash' on the world stage. It has been suggested that Australians are much more interested in sport than politics, and Indigenous sportsmen such as Doug Nicholls (Australian rules) and Charles Perkins (soccer) used sport as an entry into broader public life.

The Australian cricket team dominated international cricket for much of the 1990s and 2000s, and contributed a great deal to the sport in terms of preparation, professionalism and developing technology. After the television-driven split of the late 1970s, Australia has led the world in presenting cricket as a television sport to a mass audience. These innovations had a particular influence in South Asia, where the broadcasting of cricket is a highly valued marketing opportunity.

The major football codes have all struggled to establish a strong national foothold in Australia. State rivalries have seen different codes have stronger appeal in specific states. Australian Rules has its heartland in the southern and western states, while the two rugby codes have traditionally been strongest in New South Wales and Queensland. Australian Rules has proved particularly popular with Indigenous Australians, with such illustrious names as Doug Nicholls, Graham 'Polly' Farmer, Adam Goodes and Lance 'Buddy' Franklin establishing outstanding reputations as footballers.

Australia plays 'the world game'

Football (traditionally known in Australia as soccer) is often referred to as 'the world game', and for good reason. The Fédération Internationale de Football (FIFA) has more than 200 member associations. Football's World Cup is only rivalled by the Olympics for global interest, and estimates of more than 3 billion followers worldwide allow it to claim the title of the 'world game'.

Football in Australia has a long history, with the first recorded game being played in 1879. This was only 20 years after Australian Rules football became organised in Melbourne, and 15 years after Sydney University established the first rugby union club in Australia. Rugby League, in contrast, did not start until 1908.

Source 1 Members of the Australian Cricket team celebrate their victory in the ICC Cricket World Cup in 2015 – once again proving Australia's dominance in international cricket

Football in the 20th century has largely been regarded as a 'migrant sport', meaning that only people from overseas played it. Former Australian football captain Johnny Warren, who played in Australia's first World Cup finals team in 1974, called his memoir *Sheilas, Wogs and Poofters*. This reflected the way many mainstream Australians mocked football for most of the 20th century.

The irony of football being perceived as mainly a game for migrants in the 20th century was that the composition of the various football leagues was a much more accurate reflection of post-World War II Australia than any other sport. As a nation built on migration, football represented the greatest opportunity for any single sport to truly represent modern Australia.

World Cup finals qualification has traditionally been the greatest prize in world football, and Australia qualified only once in the 20th century – in 1974 in West Germany. The team failed to score a goal during those finals, with a draw against Chile providing its only point. Subsequent campaigns promised much, but ultimately failed as Australia was drawn to play against teams in Europe, Asia and South America in the final stages of qualifying.

The Socceroos

In 2005, a new national competition, the A-League, was launched as part of a rebranding of Australian football. 'Old soccer' became 'new football', and even the term 'Socceroos' was briefly abandoned. However, the public refused to let the name go and it was as the Socceroos that Australia attempted qualification for the 2006 World Cup finals – again held in Germany.

To reach the World Cup finals, Australia had to defeat Uruguay in a two-legged qualification final. As two-time World Cup winners, Uruguay had a proud footballing heritage, and had knocked Australia out at the same stage of qualification in 2001.

Australia lost the first leg in Montevideo 1–0. The team flew back to Australia to play the game that would decide the final qualification spot for the 2006 World Cup. In front of more than 82000 fans at Sydney's Olympic Stadium, Australia took an early lead with a goal to Mark Bresciano. After extra time, a penalty shootout saw John Aloisi score the most famous goal in Australian football history. It secured Australia a spot in the World Cup finals.

The squad that represented Australia against Uruguay mirrored the audience that cheered them on in the stadium and on television. Although all proudly Australian, the team represented the post-war Australian migration boom. There were Australians of Croatian, German, Slovenian, Italian, Samoan, English, Greek and New Zealand heritage.

The joy that greeted Australia's qualification represented recognition of the unique role football plays in Australian society. As the most popular sport to play, it also captured the aspirations of a multicultural Australia in a way no other component of Australian society has.

In 2015, Australian football came of age as the Socceroos became Asian Cup champions beating South Korea 2–1 in the final at Stadium Australia in Sydney.

The Matildas

The Matildas is the name given to the Australian women's football (soccer) team. Formed in 1978, it was named after the famous Banjo Patterson lyric 'Waltzing Matilda'. Like many women's sporting teams, it has struggled for mainstream media attention. This was highlighted by the decision of the 1998 Matildas to compile a nude calendar as an attempt to raise funds and lift the team's profile. Although it did generate media coverage to support its qualification for the 1999 World Cup, in some circles it was seen as demeaning and a setback for women's sport.

The World Cup has been a much more achievable target for the Matildas than it has for the Socceroos. The team has qualified for each World Cup since 1995, and in 2015 they ranked 7th in the FIFA Women's World Cup. This followed its success in winning Australia's first major international football trophy, when the team won the 2010 Asian Cup. In 2014, they also placed second in the Women's Asian Cup in Vietnam (see Source 3). In the one genuine world team sport, the Matildas were the first Australian team to make such a significant impact by winning a major trophy.

Like their male counterparts, the Matildas reflect a modern, multicultural Australia. With exciting young players such as Servet Unzular, Leena Khamis and Samantha Kerr taking Australia onto the world stage in the world's game, it is a very different Australia to the one commonly portrayed in soapies. The heritage of these players represents the Australian story of migration, opportunity and achievement that our commitment to migration and multiculturalism has produced.

Remember and understand

1. What has Australian cricket contributed to the sport internationally?
2. When did Australia first qualify for football's World Cup? How long did it take to qualify again?
3. Name some of the backgrounds represented in the Socceroos team that defeated Uruguay in 2005.

Apply and analyse

4. In what ways do the Socceroos and Matildas represent a modern Australia?
5. Explain why Johnny Warren called his memoir *Sheilas, Wogs and Poofters.*

Evaluate and create

6. Design a campaign that could convince FIFA to award a future Women's or Men's World Cup to Australia to host.

13C rich task

'Ozploitation'

The Australian New Wave movement of the early 1970s through to the mid-1980s marked the revival of Australian cinema. Nearly 400 movies were produced during these years, more than had ever been made in the history of the Australian film industry. The Australian New Wave movement is best remembered for critically acclaimed movies such as *Picnic at Hanging Rock* (1975) and *Gallipoli* (1981). However, at the same time, a series of low-budget B-grade movies were being produced.

These films exploited controversial themes such as sex, horror, adrenalin-fuelled action and ocker comedy in order to excite audiences and become hits at the box office. Hollywood director Quentin Tarantino became a fan of these Australian 'exploitation films' like *Patrick* (1978) and *Mad Max* (1979). In a 2008 documentary, *Not Quite Hollywood*, Tarantino used the term 'Aussiesploitation' to describe these films. This was later shortened to 'Ozploitation'. Tarantino even cited *Patrick*, the 1978 Australian horror film about a coma patient with psychic powers, as influencing his own blockbuster *Kill Bill* films (2003–04).

Today, 'Ozploitation films' are remembered as some of the most defining artefacts of Australian popular culture.

Violence, car chases and nudity were common themes in these films. The films were frequently R-rated. Many critics also viewed them as having less 'artistic merit' than other mainstream Australian films being made at the same time. In a 1979 article titled 'The Pornography of Violence', film maker and commentator Phillip Adams expressed his reaction to the new post-apocalyptic road movie, *Mad Max*.

Source 1

I saw a preview of *Mad Max* one Friday morning and was still feeling shaken with revulsion 12 hours later. My first reaction was to ring Ken Watts at the Australian Film Commission for fear there may have been government money in this diabolical opus.

The *Bulletin*, 1 May 1979, pages 38–41

Source 2

I always remember that actor. I thought he was amazing looking, with his eyes wide open and everything, and in the original script I had it written like that. I showed it to Uma, and she goes 'I'm not gonna do that', and I go 'Why?' She goes 'You wouldn't have your eyes wide open like that if you were in a coma. That's not realistic.'

And I go 'Actually, I never thought was it realistic or not, it's just Patrick did it, and it looked really cool!'

An extract of an interview with Quentin Tarantino from the documentary *Not Quite Hollywood*, 2008

Despite their often poor reputation at home, many Australian action films did well overseas. *Mad Max* was immensely successful, earning $100 million worldwide and spawning a trilogy of high-budget films. It also launched the international careers of lead actor Mel Gibson and director George Miller.

Source 3 Director Quentin Tarantino was heavily influenced by 'Ozploitation' films like *Patrick* (1978) when writing and filming the blockbuster *Kill Bill* films (2003–04).

skill**drill:** Historical sources as evidence

Identify and locate relevant sources using ICT and other methods

Being able to locate relevant primary and secondary sources using the Internet is an important historical skill. However, you need to keep in mind that not all information you find on the Internet is necessarily true, accurate, reliable or credible. So, in addition to being able to find source material online, you need to be able to evaluate the reliability and credibility of the information you find. Use the following steps to apply this skill:

Step 1 Identify key words related to your topic and type these into a search engine such as Google. (Use only key words – do not type in whole sentences or questions.)

Step 2 Add further relevant key words to refine your search if you cannot find what you want on your first attempts.

Step 3 Look beyond the first page of results. The best results do not always appear first.

Step 4 Assess the reliability of each site by asking yourself the following questions:

- Who is the author or creator? If it is an individual, does this person have credentials listed (for example, a degree, title?) If it is an organisation, is it a reputable organisation such as a government or university department?
- What is the purpose of the website? Is it trying to inform, persuade or sell?
- Is the site objective? Is the author's point of view biased?
- Is the information accurate? Can the information be verified if you cross-check it with other sources of information?
- Does the site contain spelling mistakes or grammatical errors? (If so, this is usually an indication that the site is not particularly reliable.)
- Is the information current? Can you find evidence of recent updates?

Apply the skill

1 Using the steps outlined above, conduct an Internet search to find relevant, credible and reliable source material about the making and reception of:
   - **a** three Australian action or thriller films created and released between 1971 and 1985
   - **b** three other more famous Australian films of the new wave era.

2 Copy the data chart in Source 4 into your notebook. Read the source material you have located and record the key points in the appropriate column. Make sure you also record the URLs of the sites you have used.

Source 4

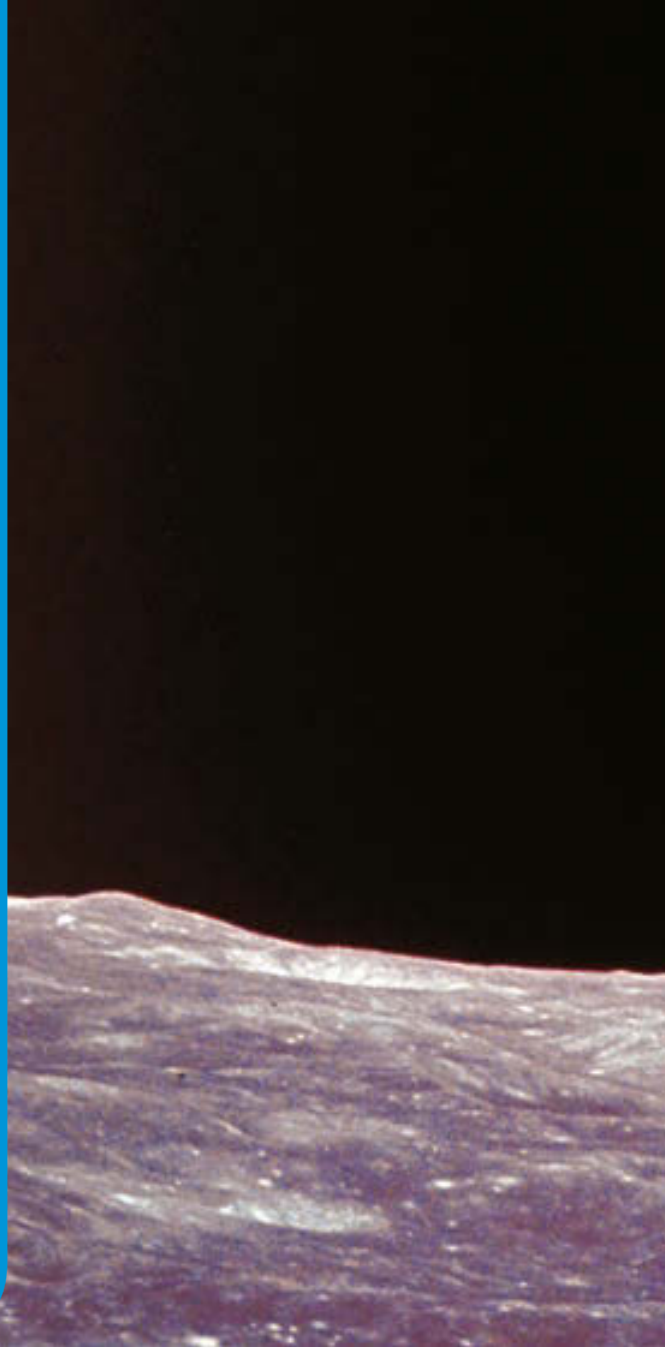

Action films						
	URL	**Title**	**Budget**	**Distribution**	**Reception**	**Earnings**
Source 1						
Source 2						
Source 3						
Mainstream new wave films						
Source 1						
Source 2						
Source 3						

Extend your understanding

Refer to the information about Australian New Wave cinema in this chapter and use the Internet to find posters of two highly acclaimed films from this era (for example, *Picnic at Hanging Rock* or *My Brilliant Career*).

1 Write a report explaining how the different ways the films were promoted can help historians draw conclusions about the different perspectives of audiences at the time.

The environment movement

Ever since people realised that the **Industrial Revolution** had caused changes to air quality in cities, we have slowly become aware of the delicate environmental balance on Earth. This awareness, together with a desire to preserve natural areas for future generations, was behind the first attempts to protect the environment in the 1800s.

Over time, the world's growing dependence on fossil fuels also contributed to a phenomenon called **climate change**. By the twenty-first century, governments and businesses were being pressured to adopt policies that promote environmentally friendly products and procedures.

14A

How and why did the environment movement develop?

1 Suggest why the 'Earthrise' image taken from the Moon affected people's perception of the Earth and environmental issues.

14B

What events led to growing environmental awareness?

1 Brainstorm significant events and developments in the 20th century and discuss the impact they have had on the global environment.

chapter 14

Source 1 This photograph of an 'Earthrise', taken by the Apollo 8 crew from the Moon on 24 December 1968, changed the way people perceived planet Earth.

14C

How have governments and activists around the world responded to environmental threats?

1 Significant campaigns in Australia include Franklin Dam, Save the Whale and Jabiluka. Outline what you know about these campaigns and suggest their effect on green politics in Australia.

14.1 The environment movement – a timeline

1824
Theory about a greenhouse effect first suggested by French physicist Joseph Fourier. His work is extended by British physicist John Tyndall, who proves its existence in 1858.

1900
World population reaches 1.6 billion

1945
The first atomic bombs are dropped on Japan at the end of World War II

1820 | 1870 | 1900 | 1940 | 1950

1852
Acid rain first identified as a result of manufacturing processes

1872
Yellowstone National Park, the first national park in the world, is established in the United States. The second, the Royal National Park south of Sydney, is proclaimed in 1879.

A group of Greenpeace activists protesting against the nuclear testing in Amchitka, Alaska

Protesters form a blockade to stop machinery getting to the proposed dam site on the Franklin River.

Workers recover and clean birds covered by crude oil after the Exxon Valdez oil spill.

1956
Britain begins to conduct nuclear testing in Maralinga in South Australia, to 1957

1962
The influential book *Silent Spring* is published, highlighting the damaging effects of pesticides in the environment

1968
Crew of Apollo 8 orbit the Moon and take the first photo of an 'Earthrise'

1971
Greenpeace is established to protest nuclear testing in Alaska. Australia's first environment ministry created.

1972
Lake Pedder, part of a national park, is destroyed after the building of several dams in south-western Tasmania. This leads to the formation of the world's first 'green' political party.

1983
People power saves the Lower Franklin River in Tasmania

1986
The Chernobyl nuclear power plant goes into meltdown in Ukraine. The world's worst nuclear accident contaminates 24 000 square kilometres around the plant.

1989
The tanker Exxon Valdez spills 11 million gallons of oil into the northern Pacific Ocean near Alaska, destroying local wildlife

1997
The Kyoto Protocol developed at a UN Framework Convention on Climate Change

2014
The total world population rises to 7.2 billion

3 What was the site of the world's worst nuclear disaster?

Apply and analyse

4 When was the existence of the greenhouse effect first proven?
5 By what percentage has the world's population increased between 1900 and 2014?

14.2 The birth of the environment movement

On Christmas Eve in 1968, the three-man crew of *Apollo 8* became the first people to orbit the Moon. When they came around from the dark side of the Moon, they saw Earth rise as a single, fragile ball in space, just as we see the Moon. William Anders, the pilot of the Lunar Module, took a photograph of an 'Earthrise' (see Source 1). That image impressed upon many people the idea that the Earth was a small and vulnerable part of the universe.

Source 1 This well-known photograph of the Earth taken from space in 1968 changed the way people perceived the planet.

The *Apollo 8* mission really emphasised to people how precarious and unique Earth's continued existence was. *Life* magazine commented on the earthrise photo, saying that it 'inspired contemplation of our fragile existence'. Much of what we would regard as **environmentalism** originated in the 1960s. A study of the historical roots of environmental thought and action is essential to really understand what happened in the 1960s.

However, concerns about the human impact on the environment are not new. There is evidence that as early as 6000 BCE, **deforestation** was contributing to the collapse of societies in the Middle East. By 200 BCE, the Greek physician Galen observed copper miners and noted the danger of acid mists.

Throughout history there have been individuals and groups determined to protect their environment. One example is the Bishnois tribe in the eighteenth century. The Bishnois tribe of Rajasthan, a region in modern-day India, linked environmental activism with strong spiritual beliefs. The Bishnois worshiped nature, and their warrior heritage led to their aggressive protection of all living things.

In 1730, more than 300 Bishnois were massacred while protecting a grove of Khejri trees. A local king needed wood to build a palace. He sent officials into Bishnois territory to remove a forest of Khejri trees. A Bishnois woman hugged a tree to protect it, saying that she would rather die than give up her beliefs, so a soldier cut her head off. Eventually, the king gave way to the Bishnois protesters, and today the Bishnois territory is a green oasis in a largely desert area.

Source 2 A Bishnois man meditating under a Jal tree. The tree is estimated to be 1000 years old.

The Industrial Revolution and environmental awareness

From the mid-18th century, the world underwent dramatic and rapid changes that we now refer to as the Industrial Revolution. Britain, and then other countries in Europe, began to **industrialise** quickly. Agricultural changes – in the way crops were produced and the introduction of labour-saving machinery – meant that fewer farm labourers were needed. People had to change their living situations when they moved to cities in search of jobs at the fast-growing factories. The demand for coal increased as it became the fuel to drive the machinery of the Industrial Revolution. The invention of the **internal combustion engine** was the final step in the revolution that saw the increasing use of **fossil fuels** such as petroleum to produce energy. People at this time considered themselves to have gained control over nature.

Early impacts of the Industrial Revolution

Historians have argued about the impact of the changes, but it has become clear that major environmental degradation began in this period. Smoke spewed out of factory chimneys day and night, and the worsening air quality became obvious. The year 1816 has become known as the Year Without a Summer, when a variety of environmental problems – including a major volcanic eruption in Indonesia – caused average temperatures to drop. The result was severe food shortages and mass starvation across the entire northern hemisphere. This event showed that if the environmental balance were disturbed, whether by nature or human action, the consequences could be disastrous.

The burning of coal polluted the air in cities smoke and other by-products of manufacturing. **Acid rain** – which forms when sulphur dioxide and nitrogen oxide mix in the atmosphere – was first identified in 1852 as a result of manufacturing processes. With populations concentrating in cities, the disposal of waste also became a problem. Advanced farming techniques contributed to the rapid degradation of soil, and the deforestation of previously untouched land began in many of the colonised countries of the world.

The demand for fuel resources meant mining expanded rapidly, as did international trade. Steamships required massive amounts of coal – thousands of tonnes for one transatlantic crossing. For the first time in history, large-scale burning of coal, and later oil, was pouring pollution into the atmosphere.

Source 3 The Industrial Revolution saw working people move off the land and into factories. Coal was burned to drive steam-powered engines, causing the first examples of industrial pollution.

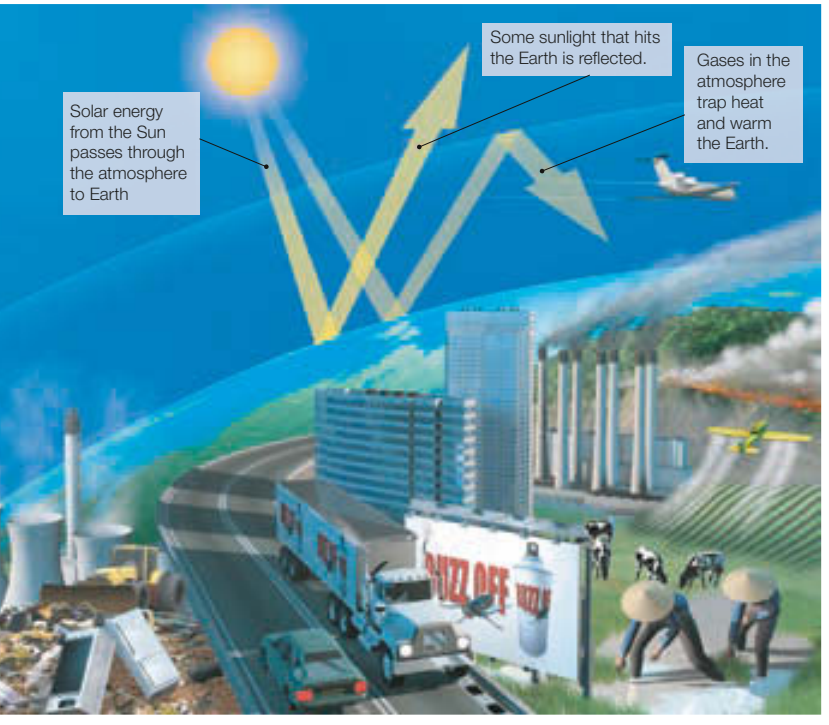

The greenhouse effect

The **greenhouse effect** is a term that has come into common use since the late twentieth century. When gases in the Earth's atmosphere hold onto the heat from the Sun and redirect it back to Earth, the resulting warmth is similar to that of a greenhouse. In its natural state, the greenhouse effect makes life on Earth possible because it allows the Sun's warmth to be retained in the atmosphere and the surface of the Earth.

Since the Industrial Revolution, however, the burning of fossil fuels and clearing of forests has made the greenhouse effect more severe. This is called the enhanced greenhouse effect. Scientists have shown that when we burn fossil fuels, there is an increase in carbon dioxide. This means that less infrared radiation can escape from the atmosphere, which leads to the warming of the planet. Because Earth is warming too much now, sea levels are higher. Higher sea levels have led to the destruction of many island and coastal habitats.

French mathematician and physicist Joseph Fourier first introduced the theory of a greenhouse effect. In 1824, he calculated that the Earth should be significantly colder than it is because of its distance from the Sun. His research suggested that the Earth's atmosphere may act as an insulator, helping it retain warmth. Fourier's work was expanded by British physicist John Tyndall in 1858. Tyndall developed technology that measured the ability of various gases to absorb infrared heat. His experiments proved that water vapour absorbed large amounts of infrared radiation, and was the major controller of air temperature. He was the first to accurately measure the capacity of gases such as nitrogen, oxygen, carbon dioxide and ozone to absorb infrared radiation. This work proved the existence of the greenhouse effect.

Despite the pioneering work of Fourier and Tyndall, there are still arguments among scientists and politicians. There is considerable debate about whether human activity (such as in large-scale manufacturing and the use of fossil-fuelled cars) is responsible for or contributes to global warming and climate change.

Source 4 The greenhouse effect causes the Sun's warmth to become trapped in the Earth's atmosphere.

Check your learning 14.2

Remember and understand

1 What was the contribution of the Bishnois to early environmentalism?
2 What impact did the Industrial Revolution have on the environment?
3 Who first developed a theory about the greenhouse effect?
4 Explain why increasing levels of carbon dioxide in the atmosphere would cause the Earth to become warmer.

Apply and analyse

5 Conduct a survey to find out the percentage of students who believe that human activity contributes to climate change. Write a statement that summarises the results.

Evaluate and create

6 Conduct research on current arguments for and against the concept of the enhanced greenhouse effect. Create a table that briefly outlines these arguments.

14.3 The national parks movement of the 19th century

The national parks movement of the 19th century reflected an emerging awareness of the need to preserve natural landscapes for future generations. At a time when the Industrial Revolution was changing the world forever, national parks represented a vision for the future.

Yellowstone National Park

When US President Ulysses S Grant signed into law the creation of Yellowstone National Park in 1872, he protected nearly 9000 square kilometres of wilderness for future generations. This decision created a tourist site that has continued to attract visitors from around the world. A geological survey conducted in 1871 included both a photographer and artist, and their images helped to convince Congress of the value of preserving the area.

The leader of the geological expedition, Ferdinand Hayden, was the main force behind the area's protection. As well as preserving the area for the future, Hayden believed the area would become a place that people in his own time could visit for recreation. The development of the railway and car eventually allowed that to happen.

In 1978, Yellowstone was included on the United Nations Educational, Scientific and Cultural Organization (UNESCO) World Heritage list.

Source 1 Members of the Hayden survey team, Yellowstone National Park, 1871

Source 2 'Old Faithful' is Yellowstone's most famous geyser, which shoots boiling water up to 55 metres about every 90 minutes.

Its particular significance was that it contained half of the world's known geothermal features. It contains two-thirds of the world's known geysers (see Source 2). It is also a storehouse of information about the history and functioning of the Earth, and has been preserved rather than commercialised. The foresight of those early pioneers ensured that both scientists and tourists could continue to benefit from Yellowstone National Park.

Royal National Park

The National Park in New South Wales was formally opened in 1879, which made it the second national park in the world, after Yellowstone. In nineteenth-century Sydney, which was the first urbanised part of Australia, it was felt that city dwellers needed an outdoor place for recreation and fresh air. Initially, it was this role rather than preservation for future generations that drove the formation of the park.

In keeping with the British influences of the time, the park was seen as a recreational area, and native flora was replaced with imported species. The intention was to try and reproduce the rolling parks of England. Native trees were logged, and deer, rabbits and foxes were imported for hunting. These introduced species remain a major problem in the park.

The park became more popular when a branch line from the Illawarra railway was built in 1886, making direct access from Sydney easier. The park eventually became the Royal National Park in 1955, after a brief visit from Queen Elizabeth. In 1967, the management of the park was taken over by the newly formed National Parks and Wildlife Service, in recognition of the park's increasing importance as an area of conservation and preservation. In 2006, the Royal National Park was added to Australia's National Heritage List.

Source 3 Bushwalkers can enjoy spectacular natural scenery in the Royal National Park, south of Sydney.

Rocky Mountain Parks

The construction of a railway across Canada led to the discovery of hot springs in the Banff area of the Rocky Mountains. A dispute between companies who wanted the rights to exploit them was settled by the prime minister, John Macdonald, with the creation of a 26-square-kilometre public park in 1885. To protect one of Canada's most beautiful mountain regions, four adjoining national parks were added, until it measured 6697 square kilometres. In 1984, the entire area was proclaimed a World Heritage Area by UNESCO because of its natural beauty and the information its geological features provide about the evolution of Earth.

Tongariro National Park

New Zealand also became part of the emerging movement to conserve natural areas for the future when Tongariro National Park on the North Island was set aside as a reserve in 1886. The local Indigenous people (Māori) used a Native Land Court to have the area, based around three sacred volcanoes, set aside in the names of local chiefs. This secured the area against exploitation by European settlers. Like other early national parks, the coming of the railway in 1908 made the area more accessible, and like the Royal National Park in Sydney, an introduced species – heather – was planted to reproduce the landscape of the Scottish highlands. Heather has rapidly spread and still remains a threat to the ecosystem. In 1993, Tongariro National Park was added to the UNESCO World Heritage list because of its cultural significance to the Māori people.

Arbor Day

The national parks movement reflected the emergence of a struggle between the interests of development and preservation. As populations grew in many countries during the nineteenth century, areas for natural recreation became increasingly valued. National parks were a government response to this, but Arbor Day showed the role individuals could play.

Arbor Day was started by a journalist, Julius Morton, in Nebraska in the United States. The first one was held on 10 April 1872. Morton believed that Nebraska's environment would benefit from more trees. As well as modelling tree planting, he decided to involve the public. He advertised a day where everyone should plant a tree, and on the first Arbor Day, a million trees were planted.

From that simple idea, an appreciation of the key role trees play in the ecosystem has developed. Arbor Day spread to Japan in 1883 and, since then, has become a global institution. Today, a diverse range of countries, including Australia, Costa Rica, Lesotho, Malawi, Namibia, China, Sri Lanka and Venezuela, all celebrate Arbor Day. Millions of trees have been planted across the planet as a result of a simple idea started in Nebraska in 1872.

Source 4 Planting a tree for Arbor Day

Check your learning 14.3

Remember and understand

1 What was the world's first national park? Why was it established?
2 Explain how Sydney's Royal National Park reflected a British rather than an American view of a national park.
3 What animals were introduced into the Royal National Park in its early days?
4 What do the Royal National Park and Tongariro National Park have in common?
5 What is Arbor Day?

Apply and analyse

6 As a class, discuss the value of national parks for preserving the natural environment for future generations. Do you think this is a worthwhile goal? Give reasons for your answer.

Evaluate and create

7 Select a national park you are familiar with and find out why and when it was created. How effective has the preservation and management of the natural environment in this area been? Summarise your findings in a table.
8 Henry David Thoreau was an early advocate of what would today be called environmentalism. Thoreau wrote about living a life closer to nature from his experiences in the woods of Walden Pond in Massachusetts in 1845–47. Thoreau was often cited as the inspiration for people who created alternative communities in the 1960s and 1970s. Research the life of Thoreau and write a report about his beliefs, and why he is considered to be a significant individual in the development of the environment movement.

14A rich task

The impacts of the Industrial Revolution

Written and visual sources provide historians with an understanding of the impact of the Industrial Revolution on society and the environment.

Charles Dickens (1812–70) is regarded as one of the great novelists of 19th-century Britain. Dickens' experience of poverty during his childhood, during which he worked in a blacking (shoe polish) factory, influenced much of his writing. In his novels, Dickens wrote about the impact that the growth in industry had on people's lives, including the growth of urban slums. His detailed descriptions of life in 19th century London have become a valuable primary source for historians examining the impact of the Industrial Revolution on the environment.

Source 2

Smoke lowering down from chimney-pots, making a soft black drizzle, with flakes of soot in it as big as full-grown snowflakes – gone into mourning, one might imagine, for the death of the sun.

Charles Dickens, *Bleak House* (1852–53)

Source 3

Time went on in Coketown like its own machinery: so much material wrought up, so much fuel consumed, so many powers worn out, so much money made. But, less inexorable than iron, steel, and brass, it brought its varying seasons even into that wilderness of smoke and brick …

Charles Dickens, *Hard Times* (1854)

Source 1 Throughout his lifetime, Charles Dickens was often referred to as a literary genius. He wrote a great deal about the impacts of industrialisation on people's lives in Britain.

Source 4 Smoking steel mills in Sheffield, England, in the late 19th century.

skill**drill:** Historical sources as evidence

Identify the origin, context and purpose of primary and secondary sources

Historians use primary and secondary sources to gather evidence about the past. Both primary and secondary sources are useful, but sources will almost always reflect the perspective of the person who created them, as well as the attitudes and beliefs of the time when they were created. All sources are affected by the author's own point of view, and in some cases an author may have been paid or forced to write in a particular way or encouraged to ignore certain facts. This is why historians must carefully analyse and evaluate sources. Historians need to identify:

- what a source is and where it came from (origin)
- what life was like when the source was created (context)
- why the source was created (purpose).

Follow these steps when identifying the origin, context and purpose of a source:

Step 1 Identify the origin by asking these questions:

- What type of source is it?
- Who wrote, produced or made the source? What do you know about their age, gender, occupation, position in society or religious background?
- When was the source written, produced or made?
- How old is the source?
- Is it an eyewitness account or is it written by someone at a later date?
- Is the source complete?

Step 2 Identify the context by asking these questions:

- What was life like when this source was created?
- What other events may have been happening at the time and might have influenced the author or source?
- What was the political environment like at the time the source was created?
- What sort of common prejudices and social standards existed at the time that may have influenced the author or the source?

Step 3 Identify the purpose by asking these questions:

- Why was the source written or created?
- Was it designed to entertain, persuade or argue a point of view?
- Does the author have anything to gain personally from the source?
- Does it give a detached, balanced account?
- Were there political reasons for the creation of the source?
- Is it propaganda?

Apply the skill

1 Choose any two of the sources that appear in this section. For each source, write a 150-word summary outlining:

- what the source is and who was responsible for creating it
- what life was like in Britain at the time the source was created
- the reason why the source was created.

Be sure to consider each of the questions that appear under the steps to identify their origin, context and purpose.

Extend your understanding

1 Research to locate written and visual sources that provide evidence of the impact of industrialisation in Australia around 1900.

a Choose one of these sources and use the steps to identify its origin, context and purpose.

b How do these sources add to your understanding of the impact of industrialisation on Australia's environment?

14.4 The 20th century – a rapidly changing world

By the start of the 20th century, improvements in areas such as agriculture, transport, communications and health were some of the positive consequences of the Industrial Revolution. Industrialisation meant that mass-produced goods were more affordable. Reforms in cities that replaced slums with new settlements led to some improvement in living conditions. However, for many urban dwellers, cities were still places where disease thrived and the environmental risks from the ongoing effects of air pollution were starting to emerge.

Threats to the environments

Two world wars in the 20th century also had an impact on the environment. The development of nuclear weapons – and their first military use on the Japanese cities of Hiroshima and Nagasaki – meant that the future of the entire planet seemed doubtful, as people now had the power to destroy their world for the first time in history. The traumas of war and rising tensions brought on by the arms race of the **Cold War** helped create growing environmental awareness. The use of chemical weapons, such as Agent Orange in the Vietnam War, also contributed to widespread environmental degradation.

A technological revolution that called for increasing reliance on fossil fuels, rapid urbanisation, and the increasing use of substances such as fluorocarbons (an artificial chemical compound) and pesticides all emerged as environmental threats during the 20th century.

Population pressures also developed dramatically during the 20th century. This meant greater demand on land and resources, and helps explain the growing awareness of environmental issues. In the following units, we explore how population increase, urbanisation, increasing industrial production and trade has affected the environment in the 20th century.

Source 1 A devastated environment on the Western Front during World War I

Source 2 An aerial view of Nagasaki, one of the two cities that were levelled by atomic bombs in World War II

Source 5 A street scene in Shanghai, China

Check your learning 14.4

Remember and understand

1 Name two impacts of war on the environment during the 20th century.
2 List three environmental threats that emerged during the 20th century.
3 On which two Japanese cities were the first atomic bombs dropped?

Apply and analyse

4 Create a graphic organiser to describe all the possible threats to the environment, based on your examination of Sources 1 to 5. What evidence do the sources provide about the intensification of environmental threats during the twentieth century?

Evaluate and create

5 Conduct research to find out how fluorocarbons are used in products. Create a poster to summarise the effect they have on the environment.

14.5 The impact of population increase and urbanisation

Since the beginning of the 20th century, the population of the world has grown immensely and people have become increasingly urbanised. Where once most people lived in rural communities as farmers and small tradespeople, now half the world lives in urban centres.

Population increase in the 20th century

Over the past century, our planet has sustained a rapidly growing population. The total world population in 1900 was estimated to be 1.6 billion. In 2014, it had reached 7.2 billion. In 1901, the first census of the newly federated Australia revealed a population of 3 773 801. At the end of December 2015, the Australian Bureau of Statistics estimated the population of Australia to be 23 940 300.

Malthus and overpopulation

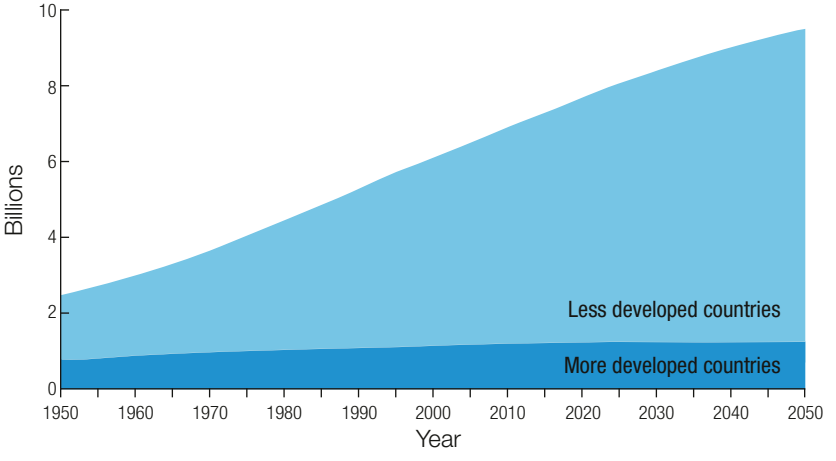

Thomas Malthus (1766–1834) was an English clergyman and scholar. Unlike most people of his time, he did not think that society would endlessly progress. He developed a theory that linked population growth with the ability of the environment to sustain that growth. He believed that population growth is eventually stopped by famine or disease. In 1798 he wrote that 'the power of population is infinitely greater than the power in the earth to provide subsistence for man'.

In 2007, it was suggested that the Industrial Revolution meant the world had broken free of the Malthusian cycles of growth and decline. The following year, it was argued that Malthus was right because of the pressure that rising consumption and industrialisation in developing economies, such as China and India, was placing on the environment.

Future population predictions

According to the United Nations' publication *World Population Prospects: the 2012 Revision*, by 2050 the world will have a population of 9.6 billion. It is expected that India will have the largest population of any country. India and China will both have populations of 1.45 billion by 2028, but China's population will decrease after that date, while India's will continue to grow. Many African countries will continue to see increased populations. For example, the report states that Nigeria's population will be double that of the USA; it is currently about half that of the USA. The population of Europe, in contrast, will decrease by 14 per cent.

UN predictions have historically had to be updated regularly, but they can give us a general idea of what the world can expect in the future. We know that the population of the world will be considerably greater than it is now. It is obvious that there will be major decisions to be made regarding distribution of resources. We also must recognise the impact that providing resources for that population will have on the environment.

Source 1 The United Nations' predicted world population growth to 2050

Urbanisation

The United Nations' World Urbanization report showed that the world's urban (city) population had increased from 13 per cent in 1900 to 49 per cent in 2005. It showed that 2007 was the 'tipping point' year when more people on Earth lived in urban areas than rural areas. The move from rural to urban areas increased quickly after World War II, when increasing industrialisation spread across the globe. Cities became the major source of employment in most countries.

In the early years of the 21st century, city centres that had previously become neglected as people had moved to suburbs started to once again attract people to live as well as work. Australian cities were part of this trend as high-rise living in city centres such as Sydney, Melbourne and Brisbane became more popular.

The growth of cities has major ecological implications. Most of an urban population is engaged in producing goods and services rather than food. Cities are a major drain on energy resources, and they concentrate problems such as waste disposal. If there are industries within cities, pollution increases. It takes energy to process and transport food to urban areas, and cities are built over the natural environment. It is predicted that cities could contain five billion people by 2030, with the greatest growth coming in Asia and Africa. There is no general agreement on what numbers the Earth can sustain.

Source 2 High-density living in large apartment buildings, such as these in Hong Kong, is becoming an increasingly common urban experience.

Source 3 The world's most populous cities through time

Year (CE)	Most populous city	Population
100	Rome, Italy	450 000
1000	Cordova, Spain	450 000
1500	Beijing, China	672 000
1900	London, UK	6 480 000
1950	New York, USA	> 12 000 000
2017	Tokyo, Japan	37 833 000

Check your learning 14.5

Remember and understand

1. Outline the view of Thomas Malthus on population growth.
2. How much did the world's population increase between 1901 and 2014?
3. What does the United Nations predict will be the world's population in 2050?
4. Outline some of the environmental problems associated with cities.
5. What is the predicted population of cities for 2030?

Apply and analyse

6. Use the data provided in the text to calculate the percentage growth in the Australian population between 1901 and 2015, and the world population from 1900 to 2014. Write a statement based on your observations of Source 1.

Evaluate and create

7. In 1987, a historian named Tertius Chandler did the first serious study of urban population through history. Source 3 summarises his findings on the world's most populous cities over time. In 2010, Karachi in Pakistan was the world's largest city (excluding the wider metropolitan area) with 15.5 million people. Conduct research to find out what the world's most populous city is today. What impact is that city having on the environment?

14.6 The impact of increasing industrial production and trade

Industrial powers in the 20th century

At the start of the 20th century, Britain dominated industrial production. It had been the first country to adopt new technologies and systems in the Industrial Revolution. Its empire had grown because of its industrial and military strength.

After World War II, the United States emerged as the world's strongest economy. The war had helped the United States recover from the economic impact of the **Great Depression**, and the Cold War with the Soviet Union helped fuel an economic boom in the 1950s and 1960s. The first major shock to the economic dominance of the United States came with the oil crisis. This crisis resulted when oil-producing Arab nations, such as Saudi Arabia, refused to supply the United States with oil in 1973 and 1974 because of its support for Israel in the 1973 Yom Kippur war. The shortage of oil had a significant impact on the American economy.

Oil became a major commodity in the world after the Second World War. Oil is a limited, **non-renewable resource**, but the world is still largely dependent on it as an energy source. The environmental impact of the reliance on oil became more obvious as East Asian nations started to industrialise.

By the 21st century, the United States was the industrial leader of the world. But as the world began to globalise at this time, East Asia became the most rapidly industrialising region in the world. China, India, South Korea and Japan now represent a huge international industrial power. In 2010, China officially became the world's largest manufacturer with an output of $1.995 trillion dollars, or 19.8 per cent of the worldwide output. It passed the United States, which accounted for 19.4 per cent, worth $1.952 trillion dollars.

Environmental impacts of China's industrialisation

Increasing industrial production, and the trade that goes with it, brings massive rises in energy consumption. With its huge demands for coal, China's industrialisation is now having severe environmental effects. It is estimated that uncontrolled fires in Chinese mines burn 20 million tons of coal each year. The huge

WORLD: GLOBAL INDUSTRIAL PRODUCTION

Source 1

Source: Oxford University Press

industrial output of China, which is largely fuelled by coal, is causing major environmental problems. Already large clouds of pollutants from northern China's industrial region have blown into Korea. It is estimated that the increase in global-warming gases from China's coal use will exceed that for all industrialised countries combined over the next 25 years.

Source 2 An assembly line at an electronics factory in Guangdong Province, China

Source 3 Air pollution in Beijing, China

Environmental impacts of global trade

Shipping has increased throughout the 20th century. It is the main means of transporting industrially manufactured products around the globe. However, shipping brings with it a range of environmental issues.

In 2009, Britain's *Guardian* newspaper reported that the world's 15 largest ships emit as much pollution as all the cars in the world combined. It was found that one giant container ship can emit almost the same amount of cancer- and asthma-causing chemicals as 50 million cars. Other research indicated that pollution from the world's 90 000 cargo ships leads to 60 000 deaths each year in the United States alone, and costs up to $330 billion a year from lung and heart diseases.

The discharging of ballast water (water that has been loaded onto ships for stability) from one port to another affects marine environments. This has led to the transfer of bacteria and species from one ecosystem to another. These introduced species can bring in diseases that affect native species or compete with native species for food and habitat.

The northern Pacific sea star is one example of a pest that has been introduced into Australia's marine environment in this way. Marine experts believe that sea-star larvae were introduced into Tasmanian and Victorian ports in ballast water. The natural habitat of the sea star is coastal China, Korea, Russia and Japan. In Australian waters, it has no natural predators but is itself a predator, forcing open the shells of oysters, mussels and other shellfish. Marine authorities consider it a threat to native species and shellfish fisheries. The only way, at present, to control its numbers is to physically remove it.

Source 4 Ballast water is discharged from a container ship.

Source 5 The northern Pacific sea star

Source 6 Workers spray oil-covered rocks on the shore of an Alaskan island after the Exxon Valdez oil spill.

Source 7 Recovery crews collect dead sea otters along Green Island, Alaska, following the Exxon Valdez oil spill.

Transporting oil by sea poses additional risks. The *Exxon Valdez* oil spill showed the devastating impact of oil spills in pristine areas. On 24 March 1989, the American oil tanker the *Exxon Valdez* struck a reef off the Alaskan coast. Although the actual figure is still disputed, it is estimated that around 41.6 million litres of oil spilt into the pristine waters surrounding Prince William Sound. It had a major impact on the environment.

A wide range of wildlife populations such as seabirds, otters, seals, eagles and orcas were all devastated.

Long-term monitoring of the area has indicated that some species have still not fully recovered, almost 30 years later. The destruction of Alaskan wildlife and environments was a graphic reminder of the impact oil spills can have. Unfortunately, *Exxon Valdez* was simply one of many similar incidents that have occurred since the mass transportation of oil began in the late 1960s. The *Exxon Valdez* spill was neither the first nor the largest, nor will it be the last.

Check your learning 14.6

Remember and understand

1. Which country is now the world's largest manufacturer?
2. How much coal is China burning in mine fires each year?
3. How much pollution do the world's 15 largest ships produce each year?
4. What was the name of the ship that spilt oil in Alaska in 1989?

Apply and analyse

5. Examine Source 1 Write a statement that summarises the information provided in this map.

Evaluate and create

6. Conduct research on marine pests that have been introduced into Australian waters from the discharge of ballast water from container ships. Select one example and evaluate its impact on the environment.
7. Conduct research on the *Exxon Valdez* oil spill or the marine oil spill from BP's *Deepwater Horizon* drilling site in the Gulf of Mexico. Create a presentation to evaluate its impact on the environment, including written and image sources.

14.7 The influence of popular culture

As has been shown, environmental concerns aren't new. During the 20th century, however, awareness rapidly grew. Science was important, but popular culture played a critical role in boosting both awareness and understanding of environmental concerns. Books, magazines and music all helped to bring people together and provide a focus for shared ideas. This, in turn, helped spur the mass movements that have pressured governments over environmental concerns in the 20th and 21st centuries.

Silent Spring

One of the most influential books that helped to increase awareness of the environment was *Silent Spring* by Rachel Carson, published in 1962. At this time, technological developments had led to increasingly effective pesticides that removed pests and allowed larger crop production. In *Silent Spring*, Carson condemned the use of pesticides and their impact on the environment. She explained how the powerful pesticide DDT not only killed insects but also entered the food chain, and accumulated in the tissues of animals, including people.

Carson's willingness to challenge the chemical industry was also controversial, accusing it of spreading misinformation. Her accusations that public officials often failed to critically and objectively analyse chemical industry claims became a blueprint for environmentalists who followed. *Silent Spring* is now seen as one of the foundation stones of the modern environmental movement.

Impact of *Silent Spring*

A year after the book appeared, President Kennedy asked his Science Advisory Committee to investigate Carson's claims. This led to greater regulation of the use of pesticides. The banning of the pesticide DDT – now known to be toxic to birds and fish, and thought to cause cancer in humans – in the United States, in 1972, was hailed as a vindication of Carson's work. Despite these acknowledgements relating to the danger of DDT, it wasn't banned in Britain until 1984, and is still used today in countries such as India and North Korea.

Source 1 Marine biologist and author of *Silent Spring*, Rachel Carson (1907–1964)

A legacy of *Silent Spring* has been its use of scientific evidence to challenge official complacency. By using evidence, Rachel Carson created a strong argument that reached a mass audience and was able to force politicians and public officials to take action. The book also encouraged the public to question the claims of companies who profited from products that affected the environment.

Increased awareness of the effects of pesticides led the development of an organic farming approach. This entailed a reversion to natural methods of fertilisation and pest control. Its popularity increased with the introduction of genetically modified crops. The Organic Federation of Australia was formed in 1998 to draw together all areas of what was an emerging contributor to Australian agriculture. The organic food industry in Australia has now reached mainstream supermarkets; cruelty-free, free-range animal farming has become normalised. The contamination of organic crops by genetically modified crops has also emerged as a significant issue in Australian agriculture.

The Mother Earth News

Two American publications found their way into Australia by the early 1970s, and influenced a movement usually referred to as 'back to the land'. *The Whole Earth Catalogue* and *The Mother Earth News* were influential, initially in the United States, and eventually globally. They encouraged a more sustainable, and often communal, living style that coincided with the social changes of the late 1960s that are associated with the hippie movement.

First published in January 1970 by John and Jane Shuttleworth, from the outset *The Mother Earth News* contained practical advice about 'getting back to nature'. It gave advice on how to build sustainable housing, self-supporting gardens and effective methods of recycling. Although many of these approaches have been incorporated into mainstream thinking since then, at the time, *The Mother Earth News* was revolutionary.

In Australia, the Aquarius Arts Festival of 1973 was held at Nimbin, on the northern coast of New South Wales (see Source 3). At the conclusion, a number of festival-goers remained in the town. An alternative community developed that embraced many of the ideals of the back-to-the-land movement: communal living, sustainable food production and people removing themselves from what they regarded as the commercial rat race.

Source 2 The first issue of the magazine *The Mother Earth News*

The influence of music

From the birth of rock 'n' roll in the 1950s, music was a common form of popular culture for young people. Environmental concerns grew rapidly at the same time as rock 'n' roll, and music became a powerful means of raising consciousness about social and political issues. Protests against the Vietnam War are well known in music, but rock 'n' roll also played a major role in spreading awareness about the fragility of our environment. Well before political campaigns, a range of artists had hits warning about the potential destruction of the Earth. These songs and artists were major hits globally and, as the music spread, countries such as Australia were heavily influenced. Artists who expressed their concern about environmental issues from the 1960s to the 1990s are summarised in Source 4.

Source 3 Festival-goers at the Aquarius Arts Festival, Nimbin, 1973

Source 4 Artists concerned about environmental issues from the 1960s to the 1990s

Artists and year	Song and theme
Verdelle Smith, 1965	'Tar and Cement', an early warning about urbanisation
Joe South, 1969	'Don't It Make You Want to Go Home', describes the changes around Atlanta, Georgia
Zager and Evans, 1969	'In the Year 2525', a look into the future and what it holds
Joni Mitchell, 1970	'Big Yellow Taxi', a song about urbanisation and loss of nature
Marvin Gaye, 1971	'Mercy, Mercy Me (the Ecology)', a song about the spoiling of the natural environment
The Beach Boys, 1971	'Don't Go Near the Water', a song about water quality
Randy Newman, 1972	'Burn On', recounts the Cuyahoga River fire of 1969
Midnight Oil, 1990	'Blue Sky Mine', a song about the experiences of workers who were contaminated at the Wittenoom asbestos mine in Western Australia

Remember and understand

1 Why is *Silent Spring* regarded as a significant environmental text?

2 Which environmental issues were highlighted by artists from the 1960s to the 1990s?

Apply and analyse

3 Use a search engine to find the lyrics for Joni Mitchell's 'Big Yellow Taxi', then respond to the following questions.
   - **a** What environmental perspective does Joni Mitchell present in this song?
   - **b** Identify the environmental changes Mitchell comments on.
   - **c** Why might the song have been successful in 1970?
   - **d** What issues raised by the song are still relevant today?
   - **e** How valid are song lyrics as primary sources for historical study?

Evaluate and create

4 Conduct research on genetically modified crops. Create a table comparing the advantages and risks of such products.

5 Over the last few years, scientists have noticed a severe reduction in the number of honey bees worldwide. Alarms were raised and fingers were pointed at agriculturalists using pesticides to control a variety of insects that are harmful to crops. However, one set of pesticides – known as neonicotinoids – is killing animals, including honey bees, that are vital to the life cycle on Earth.

   Conduct research to find out more about honey bees and the use of neonicotinoids for pest control. In a brief report, answer the following questions:
   - **a** What are neonicotinoids?
   - **b** What do they do to honey bees?
   - **c** What function to honey bees perform that is of benefit to farmers and people in general?
   - **d** What do you think would happen if honey bees were killed off?

14.8 The influence of environmental ideas

As the 20th century progressed, the emergence of theories about the interconnectedness of life and the importance of nature clashed with mainstream beliefs about the necessity of growth and development. Some of the key environmental ideas are explored in this unit.

Gaia hypothesis

One of the developments in environmental thinking was the **Gaia hypothesis**. This proposed that life on Earth was interconnected and formed a self-contained system that allowed life to flourish. In other words, the Earth is a single, interconnected system.

The original theory was developed by a chemist, James Lovelock, and a microbiologist, Lynn Margulis. Their work suggested that the Earth was self-regulating, and organisms adapted the environment in their favour. It has inspired scientific investigation, and is winning acceptance as more evidence is found. Its idea of interconnectedness has had significant impact on environmental thinking.

Source 1 The Gaia hypothesis sees Earth as a self-regulating organism, supporting life.

Limits to Growth

In 1972, a book entitled *Limits to Growth* was published. It was written by a group of economists who used computer modelling to predict the effects of uncontrolled economic and population growth on the Earth's finite resources. They looked at five variables for their modelling: world population, industrialisation, pollution, food production and resource depletion. The authors came to the conclusion that if the average rate of consumption growth continued, virtually all major minerals and energy resources would be used up by 2070.

Critics of the book at the time argued that the authors could not make any accurate predictions as there was no way of knowing the amount of resource supplies available or what new technologies might become available. They also argued that restricting growth levels to conserve resources, as the authors suggested, would create new problems and keep millions of people in poverty.

In 2008, however, Graham Turner at the Commonwealth Scientific and Industrial Research Organisation (CSIRO) in Australia published a paper comparing figures from the past 30 years with the predictions made in 1972. He found that the actual changes in industrial production, food production and pollution matched the predictions made by the authors.

Sustainability

The idea of **sustainability** has become increasingly important during the twentieth century. It takes a long-term view of environmental impacts and use of resources. The exploitation of natural resources needs to be measured and managed so that those resources are still available to be used by future generations.

An example of what happens when sustainable management of the environment is ignored is found in the history of Easter Island. There is evidence that Easter Island once contained giant palms, but that the inhabitants of the island cut them all down until they were extinct. As a result, Easter Island society collapsed when its environment was destroyed. Today it can no longer sustain a large population and relies on tourism for its economy.

Countries today are caught between the need to develop economically and the necessity of doing this without ruining the natural environment. If we want to sustain the natural resources we need, we have to take a long-term view of how we will live in our world. In Australia, we are moving towards a more sustainable way of living and working.

An increased emphasis on recycling is an example of sustainability. The planting of forests specifically for paper production, rather than exploiting natural forests, is another. Water restrictions in many Australian cities have become part of life, as governments seek ways to make our use of water more sustainable. Calls for 'paperless' offices tap into a similar demand for more sustainable practices in business. The annual Earth Hour campaign, which asks that lights be turned off between 8.30pm and 9.30pm on the last Saturday in March, is an example of a global movement for sustainability. Earth Hour started as a lights-off campaign in Sydney in 2007 to raise awareness of environmental issues. It has now spread to more than 7000 towns and cities worldwide.

Source 2 Recycling bottles, papers and cans has become common practice in Australia.

The rights of nature

There has been a growing acceptance of the idea that nature has rights. It picks up on Indigenous people's relationships with the Earth, and recognises that **ecosystems** – plants, oceans and mountains – deserve recognition, as do animals. This has always been a component of many traditional beliefs, and has become increasingly influential. An acceptance of this idea is regarded as essential to the continuation of successful life on the planet.

The rights of nature, however, are frequently in conflict with development and are therefore regarded as a restriction on progress by opponents. It is this division that will prove significant in environmental discussions in the 21st century.

Source 3 A sustainable forest is managed so that older trees, felled to produce paper and other products, will be replaced by younger plants that will grow into mature trees.

14B rich task

Sustainability in business

Today, many companies incorporate the ideas of sustainability into their business practices, and in the design and manufacture of their products. Many individuals also make purchasing decisions or include sustainable practices in their daily lives to reduce their use of natural resources.

Two examples of sustainable practices put in place by multinational companies are outlined below.

Marriott hotels

This company:

- encourage guests to reuse linen and towels to save water, detergents and energy
- replaced all outdoor signs with light-emitting diodes (LED) to reduce electricity consumption
- installed energy-saving shower heads to reduce hot water consumption.

IKEA

This company:

- operates wind farms and installs solar panels on stores and distribution centres to produces more than half of the company's energy requirements
- replaced entire lighting range with products that use LED
- introduced a sustainability assessment tool for its suppliers to help them become more energy efficient
- took part in a campaign to commit 50 of the world's largest companies to move to 100% renewable electricity

Individuals and families can include sustainable practices in their homes, such as:

- recycling papers and plastics
- using energy-efficient light bulbs such as LED
- installing solar power and insulation
- installing water tanks to collect rainwater, and reusing grey water
- composting waste
- keeping poultry and growing fruit and vegetables

Source 1 IKEA is the world's largest furniture retailer. It has a number of sustainable practices in place to help protect the environment.

skill**drill:** Historical sources as evidence

Create and deliver an audiovisual presentation

It is likely that as part of your school work, you have already created many PowerPoint presentations. You may have also tried out some other audiovisual presentation software, such as Prezi, which is freely available on the internet. Whichever program you choose, it is important to use it effectively, and avoid the common problems of these types of presentations. Use the following steps to help you avoid these typical problems.

Step 1 Design your presentation

- Plan your presentation carefully so it has a clear beginning, middle and end.
- Make sure you present the content in clear, concise bullet-point form, not huge slabs of information in paragraph form.
- Do not just fill up your PowerPoint with a collection of images that are only loosely related to the content. Include visuals that relate to the content on that particular slide. Make sure each visual is accompanied by a caption that explains why it is relevant to the presentation.
- A common mistake is to have objects and texts moving on the screen in a way that distracts the audience. Use graphics, sound, video, animations and

transitions only if they add value to the point being made, not just because you think it will look good.

- Use a design that ensures your audience can clearly see and read the slides. Make sure there is enough contrast between the text colour and the background colour on the slide, and make sure your font size is large enough.

Step 2 Deliver your presentation

- When delivering an audiovisual presentation to an audience, do not merely stand up and read out the text on each slide. Rather, talk in a way that develops and expands upon the points on each slide. Carefully plan in advance what you are going to talk about during each slide. Record this plan on cue cards, and refer to these cue cards during your speech to remind you of what to say.
- At any moment, what is on the screen should be the thing that you are talking about. Your audience will quickly read every slide as soon as it is displayed. If there are four points on the slide, they'll have read all four points while you are still talking about the first point. Plan your presentation so just one new point is displayed at any given moment. Click to go to the next point only when you are ready to talk about that next point.
- Speak clearly – not too fast, not too slow. Vary your tone and pitch to make your presentation more interesting.
- Make eye contact with different members of your audience. Do not just look down at your cue cards.

Apply the skill

1 Prepare and deliver an audiovisual presentation about sustainable practices that have been put into action by a community, business or individual.

2 Your presentation should be well researched and based on relevant and reliable sources. For detailed information on this skill, 'refer to page XX of 'The history toolkit'.

Extend your understanding

1 As you listen to your classmates deliver their presentations, complete a peer assessment. Use Source 1 as a guide. You could create a pro forma and ask your teacher to photocopy it so that you can complete one for each presentation.

2 Give each classmate your completed peer assessment. Collect the peer assessments that your classmates completed as they listened to your presentation.

Read their feedback, and then complete a short self-assessment by responding to the following questions:

a What did I do well in terms of my presentation design?

b What could I improve in terms of my presentation design?

c What did I do well in terms of my oral presentation?

d What could I improve in terms of my oral presentation?

Name of presenter:	Name of person completing peer assessment:
Component of presentation:	What did the presenter do well in this regard?
	What could the presenter improve upon in this regard?
Presentation design	
Oral presentation

14.9 Key campaigns and events 1945 to 1975

The introduction and use of nuclear weapons in World War II terrified many, and also helped lead people to seriously consider the environmental consequences of human actions. As the world recovered from World War II, the increasing pressure on economic development also had environmental consequences. As countries in Asia and Africa decolonised, they found the exploitation of their own natural resources was the key to economic and social progress. Environmental groups developed around the world as a response to business and government indifference to environmental threats.

Environmental activists became increasingly militant as threats to the Earth grew during the last half of the 20th century. Just as social activism in areas such as civil rights, conscription and the anti-war movement became increasingly accepted, so did environmental campaigns. People who had previously been dismissed as crackpots and 'tree-huggers' began to be taken seriously. Caring for the environment was becoming normalised.

As the end of the 20th century approached, there were clear differences between those who saw the planet as a resource to be exploited, and those who saw it as a unique **biosphere** to be preserved. Development and conservation frequently became opponents at this time in history.

Smog incidents after World War II

As the world settled into postwar prosperity and industrial expansion after World War II, there were clear warning signs that the environment was suffering. In 1948, in Donora, Pennsylvania, 20 people and 800 animals died, and 7000 of the town's 14000-strong population became ill when a wall of poisonous smog descended on the mill town. A temperature inversion (in which cold air is trapped beneath a warmer airflow) prevented the escape of emissions of hydrogen fluoride and sulphur dioxide from nearby factories. The situation continued for five days until rain helped clear the poisons from the air. The factories didn't begin shutting down until the fifth day, and reopened the next morning after rain fell. About 200 more people died in the days after the smog lifted, and many people were left with permanently damaged lungs and hearts.

The Donora smog incident is credited with starting the campaign for clean air. Around 200 more people died in another major smog incident in New York City in November 1953. These incidents led to campaigns for cleaner air. In 1955, the US Congress passed the Air Pollution Control Act, and finally, the Clean Air Act in 1970.

This movement was echoed in Great Britain after the Great Smog of 1952 in London. In similar conditions to Donora, the smog lasted five days, and it is now thought that up to 12 000 people may have died as a result of the pollution. Britain enacted a Clean Air Act in 1956.

Source 1 London smog in 1952

Other key events

The Minimata Bay incident, 1956

Minimata Bay in Japan was heavily contaminated by mercury during the 1950s. Mercury – which is highly toxic – was a waste product that had been pumped into the bay from a chemical and plastics factory. Fish caught in the bay were contaminated, as were the residents, who regularly ate the fish from the bay. In 1956, mercury poisoning led to the deaths of 9000 people, and an estimated two million others suffered permanent health problems, such as blindness and paralysis.

Maralinga nuclear tests, 1956–57

In Australia, the Maralinga nuclear tests conducted in South Australia by Great Britain in 1956 and 1957 contaminated the food chain, with radioactivity being found in cows' milk far from Maralinga. At the time of the Cold War, Australians tended to broadly accept nuclear tests as necessary for their survival. The anti-nuclear campaign really started to develop as Australia was dragged more deeply into the Vietnam War in the 1960s. Anti-nuclear campaigns are discussed further in Topic 14.14.

Earthrise photo, 1968

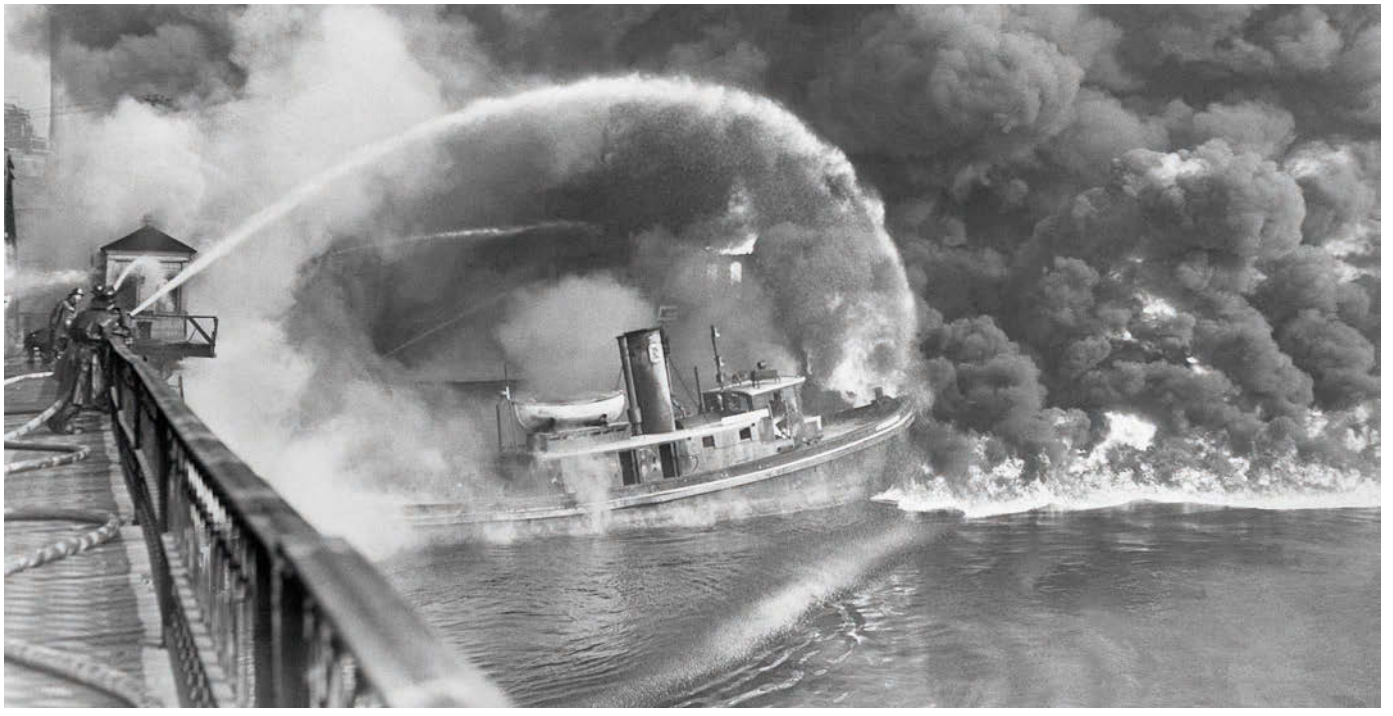

As discussed earlier, the circulation of this single image – which revealed the Earth as a single, fragile biosphere floating in space – was a profound moment in history. It revealed the interconnected nature of all life on the planet, and started movements such as the back-to-the-land movement.

Cuyahoga River Fire, 1969

The Cuyahoga River in northern Ohio was renowned as one of the most polluted rivers in the USA. For many years, industrial waste had been dumped into the river. The first fire on the river was in 1868, and the largest was in 1952, which caused millions of dollars' worth of damage to bridges and other structures. It was not until 1969, however, after there had been several *more* fires on the river, that one fire was reported in *Time* magazine. The incident caught national attention, and stimulated a campaign that culminated in the Clean Water Act of 1972. It showed that people were starting to effectively organise themselves to oppose unrestricted expansion of industry at the planet's expense.

The flooding of Lake Pedder, Tasmania, 1972

In the 1960s, the Tasmanian government cancelled the national parks listing of Lake Pedder and flooded the region as part of a dam system to provide cheap electricity for industry. The environmental and political consequences of Lake Pedder are discussed in Topic 14.12.

Source 2 Fireman spray water at the fire on the Cuyahoga River in 1952.

Karen Silkwood and the Kerr-McGee company, 1974

Karen Silkwood was a chemical technician at the Kerr-McGee nuclear fuel production plant in Oklahoma in the United States. The company was a major employer in the region, producing plutonium pellets for nuclear-reactor fuel rods. As part of her union activities, Silkwood was responsible for investigating health and safety issues. At an Atomic Energy Commission hearing in August 1974, she revealed employee safety risks such as exposure of workers to contamination, faulty respiratory equipment and improper storage of samples.

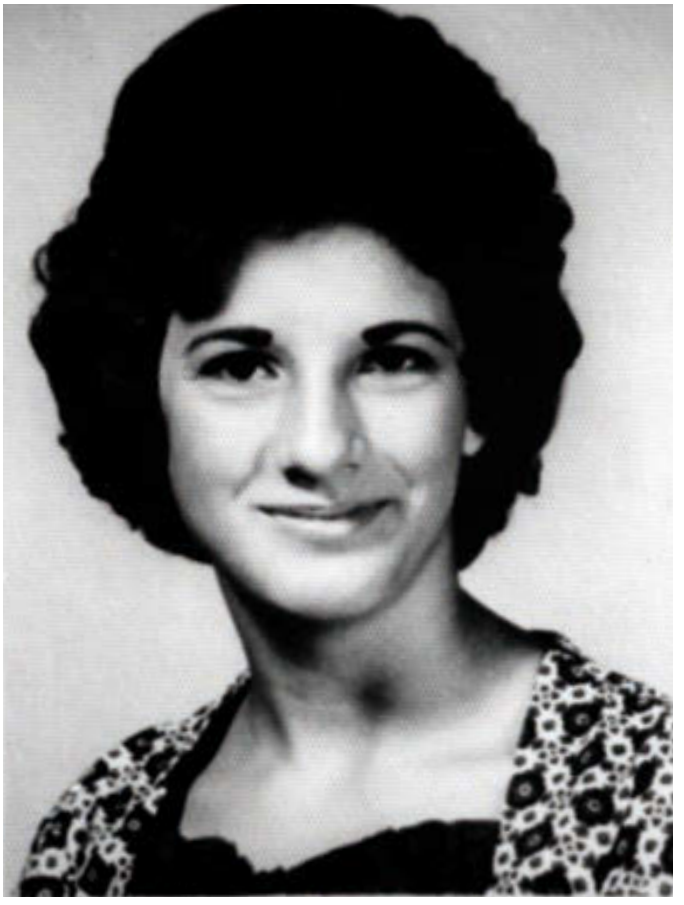

Karen Silkwood was herself tested for contamination on 5 November 1974, where it was found that she was 400 times over the safe limit for exposure to plutonium. There has been considerable debate over how Silkwood became so contaminated at this time. Kerr-McGee later suggested she was deliberately poisoning herself to make the company look negligent. There has been other evidence to suggest the source of the contamination may have been from within her house.

On 13 November 1974, Silkwood had decided to go public with her investigations of safety breaches at Kerr-McGee. According to a witness, she had left a union meeting with a folder of documents to meet a *New York Times* reporter and a union official.

On the way to that meeting, Silkwood's car ran off the road and she was killed. Local police investigations called it a single-car accident in which Silkwood fell asleep at the wheel. Later investigations raised doubts about the circumstances of her death. The documents she was supposedly carrying to her meeting were never found in the car. There was evidence that her car may have been rammed from the back and forced off the road.

Impact of Karen Silkwood's campaign

Karen Silkwood's death led to a number of inquiries into the nuclear-fuel industry. One of the revelations was that more than 40 pounds of plutonium went missing from the Kerr-McGee plant where Karen Silkwood worked. In 1975, Kerr-McGee closed all its nuclear plants. Twenty-five years later, the plant where Silkwood worked was still being decontaminated. The film *Silkwood* (1983) tells the story of Silkwood's time at Kerr-McGee and her death. She has become a symbol of the struggle for regulation of the nuclear-power industry.

3 Choose one environmental event to research further, and write a short story or news article based on the event.

14.10 Nuclear weapons testing

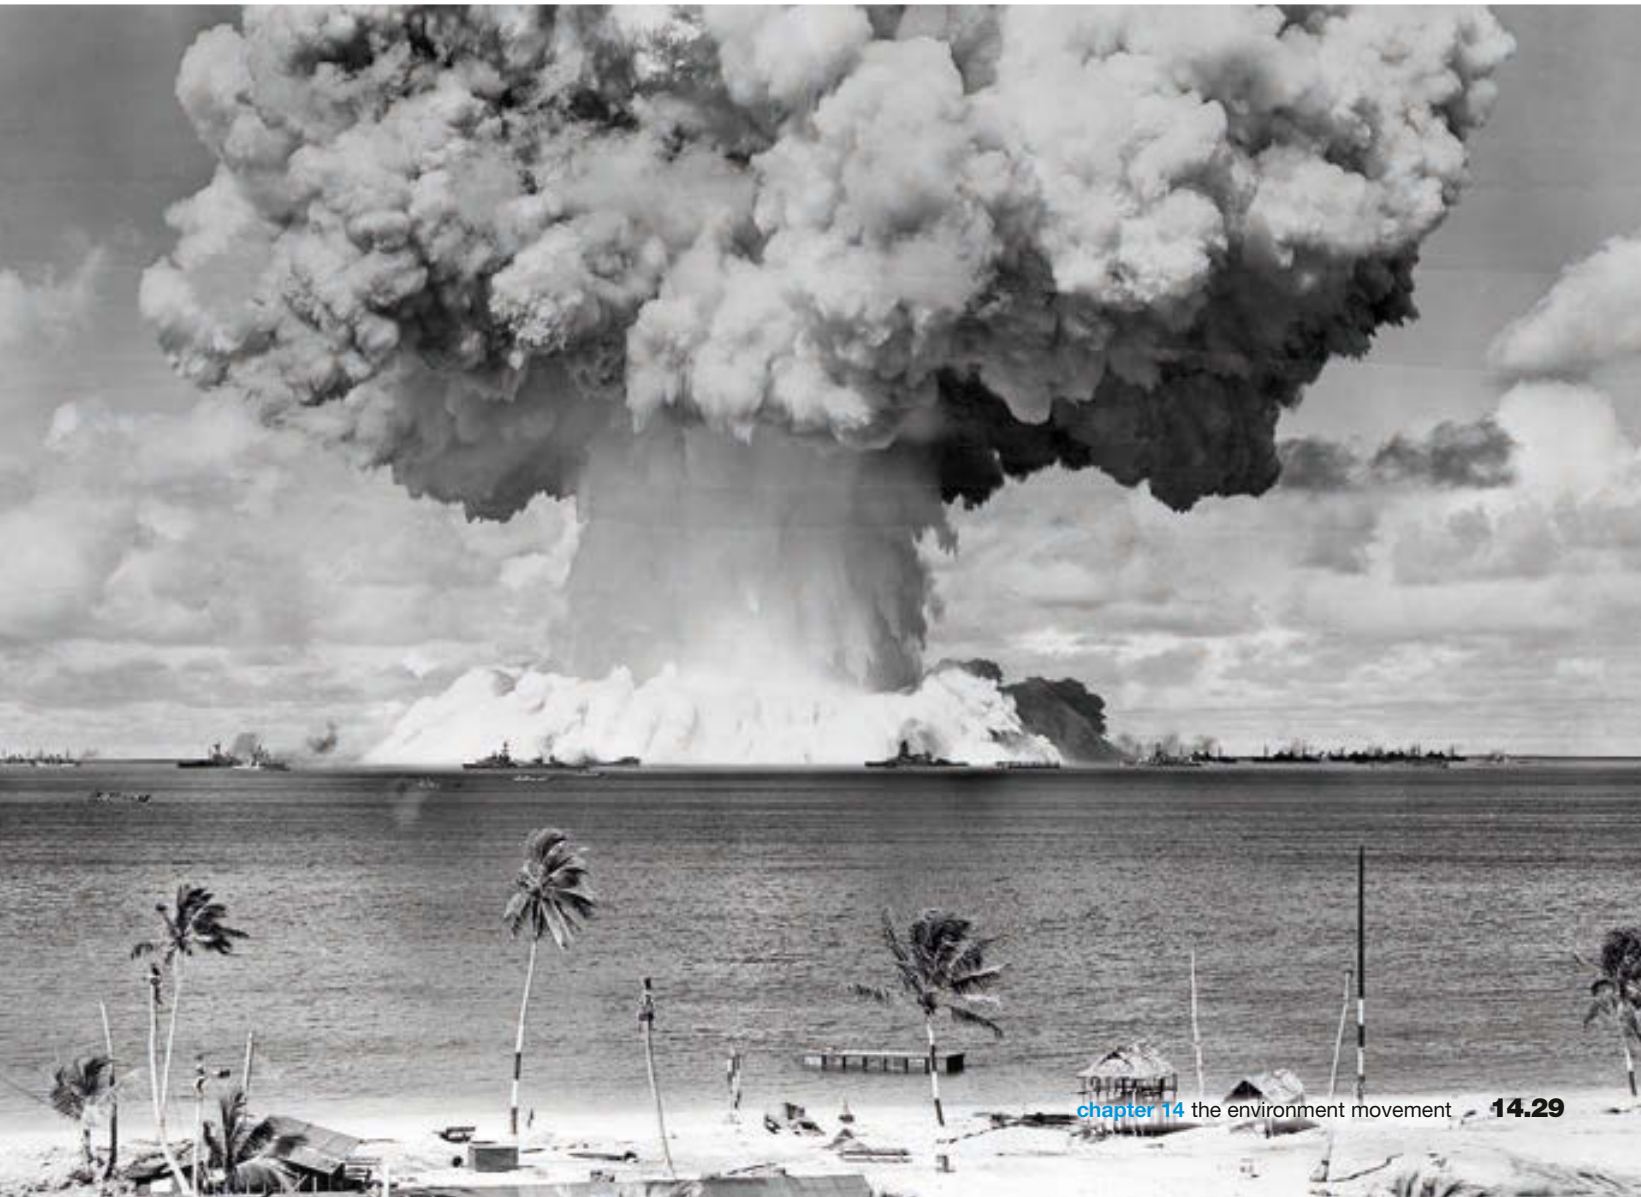

A weapon as powerful as the atomic bomb has to be tested, with each test releasing radioactive material into the atmosphere. The first test of a nuclear weapon came within a month of its use in the Second World War. On 16 July 1945, the United States tested a nuclear weapon in the state of New Mexico. Weapons were also tested above ground in the state of Nevada during the 1950s.

US nuclear tests in the Marshall Islands, 1946–58

As the Soviet Union, Britain and France – and later China, India and Pakistan – acquired nuclear weapons, testing increased. The United States conducted tests in the Marshall Islands in the Pacific between 1946 and 1958. This included the testing of the first hydrogen bomb, codenamed Castle Bravo, on Bikini Atoll in 1954. Its blast was more powerful than scientists expected, contaminating the entire area and fishing boats after the wind changed.

The United States seemed unconcerned about the effects on soldiers and locals who would be exposed to nuclear fallout after the Bikini Atoll nuclear tests. Although the locals were removed from the region before the blasts, they returned within three years. Many people developed symptoms of radiation sickness, so they were removed once again. In 1956, the Marshall Islands were declared the most contaminated place on Earth by the Atomic Energy Commission. The area is still unliveable, 60 years after the test.

Source 1 A view of the 'Baker' atomic bomb explosion at Bikini Atoll on 25 July 1946

Source 2

> It would very interesting to go back and get good environmental data … so as to get a measure of the human uptake, when people live in a contaminated environment … Now, data of this type has never been available … While it is true that these people do not live, I would say, the way Westerners do, civilized people, it is nevertheless also true that they are more like us than the mice.

A statement by a scientist in a secret meeting held before Marshall Islanders were returned to live on the island – temporarily – in 1957.

British nuclear testing in Australia

Britain tested its nuclear weapons in Australia. Weapons were exploded at the Monte Bello Islands just off the Western Australian coast, on Christmas Island in the central Pacific, and in Maralinga and Emu Field in South Australia. Australian newspapers reported air force pilots flying through the aftermath of the nuclear cloud to gather dust samples during the 1950s tests. In spite of British assurances that limited radiation would be released by the tests, there is clear scientific evidence of radioactive material entering the food chain in Australia in the 1950s.

The formation of Greenpeace

In 1970, the United States announced its intentions to continue nuclear testing on the Alaskan island of Amchitka, at the western end of the Aleutian Islands. Knowing that the testing would take place despite the risks of a major tectonic fault in the region, a group of Canadians and Americans formed in British Columbia, Canada, to oppose the tests and sail into the testing area. To raise the funds needed to hire a ship, they organised a fundraising concert in Vancouver, British Columbia with Joni Mitchell, James Taylor and Phil Ochs.

The protesters, who would soon be known as Greenpeace, sailed to Amchitka for the first, and ultimately successful, direct action campaign. Although the United States navy forced them to turn back, the publicity and public exposure of the dangers of the weapons testing meant that this was the last weapon tested at Amchitka.

Greenpeace established itself with the aim of ensuring 'the ability of the Earth to nurture life in all its diversity'. Since its formation, Greenpeace has successfully campaigned against many environmental abuses, including French testing of nuclear weapons in the Pacific, whaling, mining in Antarctica and the illegal dumping of nuclear waste.

In 2011, Greenpeace celebrated its fortieth anniversary. It remains one of the most significant environment activist groups, with branches in 40 countries around the world. On the official Greenpeace website, they describe themselves as 'ordinary people willing to do extraordinary things to protect the environment'. They also acknowledge that after forty years of activism, 'there is still a lot to do'.

Source 3 Activists from Greenpeace Africa place lookalike radioactive barrels on the beach in Cape Town, South Africa, in 2012 to highlight the risks associated with nuclear power.

Sinking of the *Rainbow Warrior*

Rainbow Warrior was the name given to Greenpeace's flagship. In July 1985, the *Rainbow Warrior* was berthed in Auckland Harbour on its way to another protest against French nuclear testing at Mururoa Atoll in the South Pacific. Greenpeace had been sailing into the French nuclear testing zone since 1972, and had embarrassed the French government by exposing the massive environmental degradation the tests had caused in the region.

France's reputation in the Pacific was suffering as protests increased against their nuclear tests. French Intelligence developed a plan to prevent the *Rainbow Warrior* from reaching Mururoa Atoll. On 10 July 1985, an explosion rocked the *Rainbow Warrior*. It was designed to blow a hole in the ship and start it sinking, giving people on board time to leave. A second explosion was triggered to complete the sinking. A Greenpeace cameraman, Fernando Pereira, had gone back into his quarters to retrieve camera gear when the second explosion occurred. He was killed instantly.

Investigations in New Zealand ultimately revealed the involvement of the French secret agents Alain Mafart and Dominique Prieur. They were arrested and jailed but were later released into French custody, after France had instigated an economic boycott of New Zealand.

Many have called the sinking of the protest vessel and the murder of a person on board, in the harbour of an ally, an act of terrorism. It was designed to deflect attention away from France's nuclear testing in the Pacific. Instead, it highlighted the narrow self-interest that can guide the actions of governments, and further consolidated a determination in many ordinary citizens across the world to achieve change.

Source 4 The Greenpeace ship the *Rainbow Warrior* after it had been bombed in Auckland Harbour

Nuclear-testing bans

The impact of nuclear testing in the South Pacific is still being felt. Nuclear contamination will remain for an undetermined number of years. France continued its above-ground testing in the Pacific until 1974, and China tested above ground until 1980. A ban on nuclear weapons testing was signed by most nuclear countries in 1996, when France finally ceased its underground nuclear tests in the South Pacific. India and Pakistan, who did not sign the ban, last tested weapons in 1998. The most recent nuclear weapons test was by North Korea in 2016.

6 Australian Prime Minister Robert Menzies readily agreed to Britain's request for a permanent nuclear-testing site at Maralinga. Write a letter to the editor that supports this decision, from the perspective of an Australian veteran of World War II.

14.11 Nuclear disasters

Since the first commercial nuclear power plant was built in the Soviet Union in 1954, nuclear power has been championed by supporters as a cleaner and more sustainable source than coal-generated power, but it comes with significant risks.

Since the late 1970s, three nuclear disasters, in particular, have had a significant impact on the way people view nuclear power, highlighting the dangers inherently involved with its production.

Three Mile Island, 1979

On 28 March 1979, the Three Mile Island power plant in the state of Pennsylvania (north of New York) experienced a core meltdown. Prior to this event, fears about the safety of nuclear power plants were largely dismissed as alarmist. Three Mile Island changed that complacency forever.

Leading up to the accident, a stuck open valve in one of the reactors released a significant amount of coolant from the reactor. An operator, unable to see a hidden indicator light, misread the situation and thought there was too much coolant in the reactor. He overrode the automatic system and released more steam into the reactor, raising the temperature and causing a partial nuclear core meltdown.

A couple of days after this initial accident, radioactive gas was released into the atmosphere. A state of emergency was declared and contradictory reports from officials at the plant about the amount of radiation released had locals hiding in their houses for fear of contamination. The Nuclear Regulatory Commission then authorised the release of 40 000 gallons of radioactive waste water into the Susquehanna River.

A clean-up of the area commenced in August 1979 and public enquiries were held to try to understand the causes of the disaster. By 1993, after a cost of US$1 billion, the clean-up was complete. Although studies have found that residents have not reported increased levels of cancer as a result of any exposure to radiation from the Three Mile Island meltdown, the incident affected public trust in the nuclear-power industry.

Source 1 Anti-nuclear power protestors near Three Mile Island, 1979

Chernobyl, 1986

On 26 April 1986, the Chernobyl nuclear power plant in Ukraine (then a part of the Soviet Union) exploded. Large quantities of radioactive material were released into the atmosphere – more than 400 times the amount that was released when the atomic bomb was dropped on Hiroshima. For several weeks, weather reports included the location of the cloud of radioactive material as it made its way west across Europe, and eventually spread across Greenland, Canada and the USA. Chernobyl is considered the world's worst nuclear disaster.

The safety of the entire Soviet nuclear industry was questioned following the incident, which led to the establishment of several enquiries. After initially attempting to cover up the incident, Soviet authorities realised that it was simply too large to be hidden. The acknowledgement of the accident at Chernobyl became part of the opening of the Soviet government that ultimately paved the way to the end of the Cold War.

In the months after the accident, more than 100 000 people were evacuated from within a 30-kilometre radius of the nuclear plant. A further 230 000 people would eventually be relocated. The number of deaths that can be attributed to Chernobyl varies widely. There is agreement that 31 workers died as a direct result of the explosion. The problem with a nuclear accident, however, is in accounting for the later deaths from radiation and related cancers. Estimates ranged from 4000 to 200 000. A Russian publication from 2007 conducted major research into the question, and came to the stunning and verifiable conclusion that 985 000 people worldwide had died prematurely from exposure to radiation and fallout from Chernobyl.

Source 2 The abandoned town of Pripyat, near Chernobyl

Regardless of the number of direct and indirect victims, Chernobyl exposed the realities of the world's reliance on nuclear power. Orders for nuclear power plants dropped rapidly after Chernobyl. Supporters of nuclear power still argue that it is the most environmentally safe option for power generation. As Chernobyl showed, however, if it goes wrong, the consequences can be catastrophic.

Fukushima Daiichi, 2011

The Fukushima nuclear power plant suffered major damage when an earthquake and subsequent tsunami hit Japan on 11 March 2011. The earthquake disabled the reactor cooling systems, leading to nuclear radiation leaks and closing the plant. A 30-kilometre evacuation zone was put in place around the plant and 100 000 people were evacuated from their homes. Some areas are expected to stay within an exclusion zone for decades.

The accident is the second-biggest nuclear accident, after the Chernobyl disaster. It is still too early to assess the full environmental impact of this disaster. One thing is clear, the Japanese people no longer feel safe with nuclear power. All but two nuclear reactors across the country have been closed down since the accident because of local opposition to them. Japan currently looks to be moving away from reliance on nuclear power and towards alternative renewable power sources for the future.

3 The Fukushima nuclear disaster and Chernobyl both rank as Level 7 nuclear incidents. Analyse the causes, effects and outcomes of each incident.

Evaluate and create

4 As a class, discuss the lessons to be learned from the Chernobyl and Fukushima incidents. Then, individually write a letter to the United Nations explaining how you think the world should move forward in light of what we know about both incidents.

14.12 Significant events and campaigns in Australia

From the late 1970s to the 1990s, significant events and campaigns led to a growing awareness of environmental issues in Australia and the world. In Australia, Tasmania was again the battleground between developers and environmentalists.

Lake Pedder

The area around Lake Pedder had been a national park since 1955, but in 1967 the Tasmanian government withdrew the national park listing so that the region could be flooded by damming the Gordon, Serpentine and Huon Rivers. The damming was regarded as necessary because Tasmania planned to attract industry to the island with the lure of cheap, renewable electricity. The Hydro Electric Commission was going to provide that cheap electricity.

Both the state government and the Hydro Electric Commission rejected opposition to the damming, and dismissed any environmental issues that were raised. The premier of Tasmania, Eric Reece, even refused an offer from future Prime Minister Gough Whitlam to pay whatever was necessary to save Lake Pedder.

Opposition to the proposal became widespread as awareness of the ecological significance of the region started to grow. Supporters came from around the world to see such unique features as the pink quartzite beach, and demand recognition of the precious nature of the region.

In spite of opposition, the damming took place in 1972. The original, natural Lake Pedder was completely submerged by the new and much larger artificial lake. Three species appear to have been made extinct by the flooding: an earthworm, a flatworm and a fish.

Source 1 A view of Lake Pedder in the Southwest National Park in Tasmania

The growth of green politics

Although the flooding of Lake Pedder was a significant loss for the emerging environmental movement, it encouraged further resistance. The United Tasmania Group, the world's first 'green' party, was formed and it paved the way for green issues to become political. Proper political organisation developed to fight further plans for destruction of the south-western wilderness. In many ways, the loss of Lake Pedder created the modern Greens movement.

The Franklin Dam campaign, 1978–83

The Lake Pedder campaign had been a failure for the Tasmanian environmental movement, but the activists were determined to learn from that failure. When the Tasmanian Hydro Electricity Commission announced plans to dam the Franklin River in 1978, there was immediate and planned opposition. The Tasmanian Wilderness Society had emerged from the United Tasmania Group. They were to emerge as a significant political force.

If completed, the proposed Franklin Dam would destroy even more of the pristine south-western Tasmanian wilderness. Tasmania already had 39 dams and 26 hydroelectricity stations in 1980. The area was being considered for listing as a World Heritage Area, and the decision to build a dam while that process was underway was seen as particularly provocative.

The Tasmanian government tried to negotiate compromises. A referendum to give people the choice of two dam locations or no dam at all suddenly changed to become a vote for one of two dams. Opponents were outraged and almost 45 per cent of the Tasmanian electorate cast informal votes (that is, they spoiled their ballots so they would not be counted) as a protest against the 'no dam' option being removed from the ballot paper. The state Labor government was defeated in the May 1982 election, and a new Liberal government tried to force the dam through.

A national campaign

Under the leadership of a young doctor, Bob Brown, the Tasmanian Wilderness Society's political organisation was supported by a publicity campaign that made the south-western Tasmanian wilderness a national issue. Men and women from all walks of life held public meetings, distributed pamphlets, wrote letters to the media, appeared on television, spoke to politicians and hosted trips up the Franklin.

By mid-1980, Wilderness Society membership had risen to almost 2000. People flocked in their thousands to Tasmania to join a huge blockade. Arrests became common as a wide range of people decided that the Franklin Dam was the issue on which they would make a stand. As Bob Brown says in the foreword to Alice Hungerford's book *UpRiver*, 'All up, some 6000 people registered to help, nearly 1500 protectors of the wilderness were arrested and 600 went in paddy wagons [police vans] across the island, overnight, to Risdon Prison'. For almost a year, this non-violent blockade continued, drawing international attention.

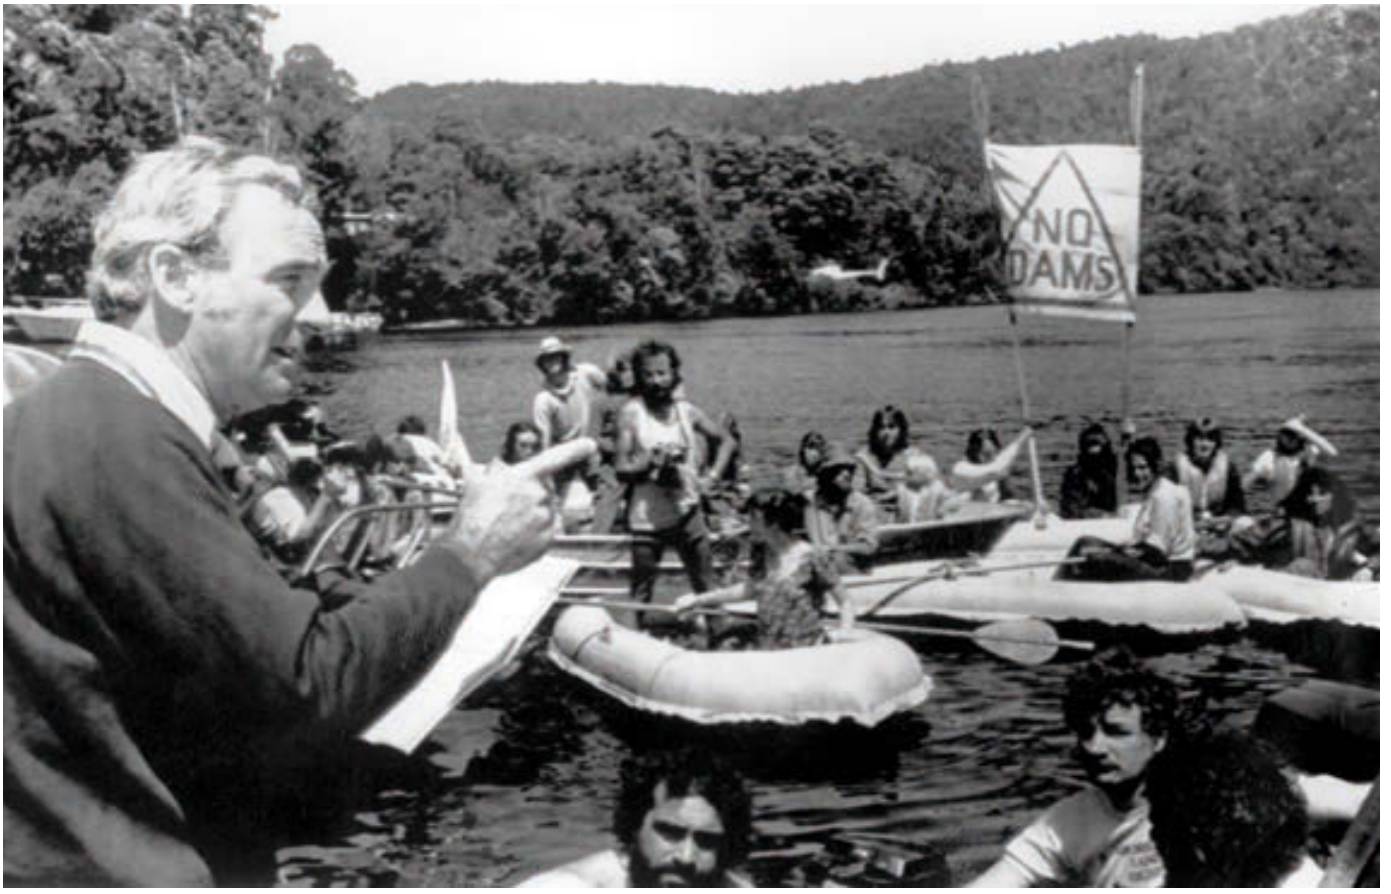

Source 2 Lake Pedder protests were the start of a continued campaign to save Australia's natural environment.

In January 1983, Prime Minister Malcolm Fraser tried to negotiate a compromise by offering the Tasmanian government $500 million in compensation. After Fraser called an election in February 1983, the Labor Opposition, led by Bob Hawke, promised to stop the dam. When Labor won the election, it meant the issue was headed for the courts. The decision of the Australian High Court (by a vote of 4 to 3) on 1 July 1983, that the Federal Government had the power to stop the dam, finally resolved the issue.

The Australian environmental movement took a huge step forward with the Franklin Dam campaign. The lessons of Lake Pedder had been learnt. The combination of political activism, non-violent direct action and effective publicity created a large amount of support. For the first time in Australian politics, the environment had been a major political issue.

Source 3 Bob Brown leading protests against the Franklin Dam in the early 1980s. He would later become the leader of the Australian Greens and a senator in the Federal Parliament.

Source 4 Protestors blockade the Franklin River.

Save the Whale

Whaling was one of Australia's earliest export industries, with whale products earning more than land produce for the first 40 years of the colony. The demand for whale oil for lighting and heating dropped as petroleum became increasingly available in the early twentieth century.

A whaling station operated on Moreton Island in Queensland between 1952 and 1962. In that time, it processed more than 6000 humpback whales. Also, more than 1000 whales were processed in a whale factory at Byron Bay in New South Wales at the same time. In 1977, Australia still had one whaling station at Frenchman's Beach near Albany in Western Australia.

As technology improved, exploding harpoons and faster ships meant that the whaling industry hunted many whale species almost to extinction.

Source 5 Whalers using explosive harpoon heads

The movement against whaling in Australia

The movement against whaling grew in the 1970s as science and popular culture combined to create an awareness of the significance of some of the largest marine mammals. Musicians such as David Crosby and Graham Nash, bands such as Yes, and novels such as *Musco: Blue Whale* by Vincent Smith all helped raise awareness of the disappearance of whale species. Biologists documented the details of whales' family relationships, their communication systems, the cruelty of their slaughter, and their rapidly declining numbers.

Greenpeace started a major campaign in the 1970s to draw attention to the nature of the whaling industry. The formation of the activist group Project Jonah gave a specific focus to moves to ban whaling in Australia. Through direct action and publicity campaigns Project Jonah made whaling an important environmental issue in Australia. Protestors travelled to Albany, taking direct action by riding out to sea in rubber dinghies and placing themselves between whales and the whaling ships' explosive harpoons.

When Phoebe Fraser, daughter of Prime Minister Malcolm Fraser, wore a Save the Whales badge during the 1977 federal election campaign, the campaign to save whales took off. After Fraser won the election, he instigated an inquiry that recommended the end of whaling and a ban on all whale-related products. Australia moved from being a supporter of whaling to a major opponent in the deliberations of the International Whaling Commission.

The legacy of Fraser's decision is seen in the growth in tourism associated with whale-watching cruises, and the public excitement when previously endangered species come close to human habitats, such as Sydney's waterways. There has also been rising hostility towards nations that still participate in whaling, such as Japan.

Source 6 Protestors at Cheynes Beach, Albany, Western Australia

The Jabiluka mine protests, 1990s

Jabiluka is a uranium deposit *within* (but not part of) the World Heritage–listed Kakadu National Park in the Northern Territory. Because uranium is a key ingredient in the nuclear industry, any mining of it has significant economic implications for Australia. The mining of uranium at Jabiluka has been further compromised by the deposit being on land belonging to the Indigenous Mirarr people.

Uranium was discovered in the Northern Territory in the 1960s, and there was a move to mine it at the time of the 1983 federal election. The Hawke government had made it clear it would resist the granting of export licences for uranium, so work on the mine stopped.

There was renewed interest in the project in 1996 when John Howard was elected as prime minister. In 1998, the Mirarr people called for volunteers to join a blockade to prevent the mine's development. In a campaign that was similar to the Franklin Dam confrontation, more than 5000 people took part in an eight-month blockade. More than 500 people were arrested as part of the blockade. Indigenous concerns were largely ignored as work was started.

In 1998, falling uranium prices put an end to the further development of the mine. A further sale of the lease saw the project shelved. The Mirarr people have been given the right to reject any future project, and successfully campaigned for work to begin on restoring the site. Rehabilitation work began in 2003 and involved returning 50 000 tonnes of unprocessed uranium ore back into the mine.

Green parties in Australia and the world

Shortly after the United Tasmania Group contested the 1972 state election, similar parties formed in New Zealand, Switzerland and Britain. Western Europe has been the major centre of green politics. Germany's Green Party was part of a governing coalition between 1998 and 2005.

Source 7 The Jabiluka mine protest in the late 1990s

Today, green participation in various levels of government has become a regular part of political life. The Australian green movement formally organised into the Australian Green political party in 1992, with four core values standing with their broad environmental aims: ecological sustainability, social justice, grassroots democracy, and peace and non-violence.

Since 1992, the Greens have become politically successful, having members elected at state and federal level. In the 2010 election, they had their first member elected to the House of Representatives, when Adam Bandt won the seat of Melbourne. He retained it in the 2013 and 2016 elections.

The European Parliament became a key source of influence for green parties after it elected green representatives from Germany, Belgium and the Netherlands in 1984. They combined with other small groups to form a coalition to push for environmental and animal protection, and safeguards against nuclear power and urban heritage destruction.

Source 8 Adam Bandt was the first Greens candidate elected to the House of Representatives, in the 2010 Federal election.

Apply and analyse

8 The issue of whale conservation emerged again in the 1980s when Japan issued themselves licenses to hunt whales for 'scientific purposes', despite increasing opposition. Conduct research to find out about the direct action campaign against Japanese whaling by Sea Shepherd. Sea Shepherd activists have been involved in violent confrontations with sealers and whalers, using tactics such as hurling stink bombs at the whalers, and using ropes to tangle their propellers.
9 Have a class discussion about whether you think these tactics are successful because they focus media and public attention on the sustainability of marine life, or are more likely to lose mainstream environmental support because of the use of violence.

Evaluate and create

10 On 31 March 2014, the United Nation's International Court of Justice ruled that Japan should halt its annual whale hunt in the Antarctic. Conduct research then write a brief report on the part that Australia played in this court case and the reason for the ruling.
11 Write two diary entries that describe the activity shown in Source 4:

a one from the perspective of a protestor blockading the river to physically stop the building of the dam
b one from the perspective of a dam worker on a barge in the river, whose work is being stopped by protestors.

14.13 Australian government responses

Australian governments have rarely become involved in environmental matters until forced to. Jobs and development have usually been their stronger priorities, and most Australian governments have been followers rather than leaders on the environment.

The first environment ministry, 1971

In 1971, Liberal Prime Minister William McMahon created a Ministry for Environment, Arts and Aboriginal Affairs and appointed Peter Howson as its first minister. Howson had previously been defence minister, and was known to have been angry about his new appointment, complaining: '[McMahon] gave me trees'. Howson's attitude was an indication of the low opinion many politicians had of the environment.

Very little was achieved in Howson's ministry. However, the government's recognition of the need for an environment ministry reflected the changes that were taking place in Australian society. In Sydney, the Builder's Labourers Union started a direct action plan to preserve significant buildings, bush and landmarks. These actions – called 'green bans' – were a refusal to work on sites where development threatened important sites. This movement saved many significant Sydney buildings.

The Whitlam government, 1972–75

When the Whitlam government came to power in December 1972, Gough Whitlam kept the environment ministry. He appointed Moss Cass as Minister for the Environment and Conservation. By allowing his minister to focus completely on environmental issues in his portfolio, Whitlam gave much greater importance to environmental issues.

Source 1 Protestors in 1970s opposing the development of parkland in Hunter's Hill were part of the green bans movement

Although Cass was unable to prevent the flooding of Lake Pedder, he did end sand mining on Fraser Island off the Queensland coast, and helped protect and preserve the Great Barrier Reef. His actions ensured that two significant natural attractions are still available for the current generation of Australians to visit. Cass continued to work in environmental areas after his retirement from parliament in 1983.

The Fraser government, 1975–83

While Malcolm Fraser was prime minister, he had 10 environment ministers. The Fraser government built on some of the achievements of Moss Cass. They actually implemented the recommendation to end sand mining on Fraser Island, and prohibited oil exploration and drilling on the Great Barrier Reef. Fraser also banned whaling and trading in endangered species. However, the Fraser government did allow the development of limited uranium mining in the Northern Territory, and Fraser's conviction about states' rights meant that he refused to intervene meaningfully in the Franklin Dam issue.

The Hawke and Keating governments, 1983–96

When Bob Hawke replaced Fraser in 1983, he arrived in government with a clear understanding of the importance of environmental issues. At least in part, he owed his election to his pre-election promise to stop the Franklin Dam in Tasmania. He used legislation and the courts to ensure the Franklin was saved. He introduced the *World Heritage Properties Conservation Act 1983* to give the Commonwealth government responsibility for World Heritage areas. This was important in battles with pro-development governments such as the Bjelke-Petersen government in Queensland. He also prioritised the selection of Kakadu National Park as a World Heritage site.

Hawke's successor, Paul Keating, confirmed legislation protecting the Antarctic's environment, and endangered species and ecological communities.

The Howard government, 1996–2007

Although the Howard government established a reputation for hard-line conservatism on environmental matters, it must be remembered that Howard did introduce an environmental act: the *Environment Protection and Biodiversity Conservation Act 1999*. This Act was introduced as part of the negotiations with the Australian Democrats to win support for the introduction of the goods and services tax.

Source 2 The selection of Kakadu National Park was prioritised by the Hawke government.

The *Environment Protection and Biodiversity Conservation Act 1999* was the centrepiece of Howard's environmental legislation. The Act outlined the following aims:

- provide for the protection of the environment, especially matters of national environmental significance
- conserve Australia's biodiversity
- protect biodiversity internationally by controlling the international movement of wildlife
- provide a streamlined environmental assessment and approvals process where matters of national environmental significance are involved
- protect our world and national heritage
- promote ecologically sustainable development.

With the goal of achieving these aims, the Act ensured that the Howard government was keeping step with the major demands of the environmental movement. The biggest block to environmental progress under Howard was the refusal to compromise on Australia's economic development. For Howard, this was always the priority, and meant that environmental matters could only be considered if they didn't compromise economic development and advancement.

The Rudd and Gillard governments, 2007–13

While still Opposition leader in 2007, Kevin Rudd commissioned a study by Dr Ross Garnaut, a prominent economist, on the impact of climate change on the Australian economy. It was recognition that environmental decisions were becoming more pressing. The link between climate change and the economy was controversial, and the Garnaut report was an attempt to actually examine the evidence.

By the time the final report was delivered in 2008, Rudd was prime minister. The key findings of Garnaut's report were that Australia should commit to reducing greenhouse gases and implement an **emissions trading scheme**. This would require major polluters to pay for the emissions they were producing. Garnaut also found that Australia could cope economically with the costs of dealing with climate change. Perhaps more crucially, he recognised that the cost of doing nothing would be higher than any action.

In 2010, Garnaut was asked for an update on the 2008 report. The update, which was delivered to the Gillard government in 2011, examined the evidence for climate change. According to Garnaut, 'new data and analysis generally are confirming the likelihood that outcomes will be near the midpoints or closer to the bad end of what had earlier been identified as the range of possibilities for human-induced climate change'.

The Gillard government introduced an emissions trading scheme in 2011 that placed a price on carbon emissions. This basically required a price to be placed on all carbon that was emitted by industry, and that industry would be responsible for paying for their emissions. Businesses could offset the costs by purchasing credits against future emissions.

The Abbott and Turnbull governments, 2013–

The Leader of the Opposition in 2011, Tony Abbott, opposed the emissions trading scheme, and it became a divisive political issue. Abbott's view has been that Australia should not act on its own because it risks losing jobs to countries that do *not* place a price on carbon. Removal of the emissions trading scheme became Abbott's first priority after winning the 2013 federal election. It was finally abolished in July 2014.

Other issues involving climate change and the development and exploitation of resources ensured that the environment would continue to be a matter of political debate. The 2009 Outlook Report into the future of the Great Barrier Reef concluded that the long-term outlook for the reef was poor because of the impacts of climate change.

After the Abbott government's election in 2013, permission was given for the expansion of the Abbot Point coal terminal, which is located near the Great Barrier Reef Marine Park. The expansion requires the dredging of 1.1 million cubic metres of spoil from the sea floor. This expansion was approved following a report by the World Heritage Committee in 2015, which decided not to include the Great Barrier Reef on the World Heritage 'in danger' list.

The election of the Abbott government appeared to tilt the balance in favour of development over environmental protection. Many of the government's first actions in office involved winding back legislation such as the emissions trading scheme and mining tax, and removing advisory or research bodies investigating the impact of climate change. When the Minister for the Environment, Greg Hunt, proposed removing World Heritage listing from 74 000 hectares of Tasmanian wilderness area that had been listed in 2012, it appeared that environmental protection would once again become a major issue in Australian politics.

In his first months as prime minister, Malcolm Turnbull signalled a new approach to climate policy. He announced the government would retain two clean energy funds that Abbott had planned to abolish, but made no substantial changes to government policy.

Source 3 The conservation of the Great Barrier Reef continues to be the subject of political debate.

Remember and understand

1 Who was Australia's first Minister for the Environment?
2 What were the Hawke government's main environmental achievements?
3 Why did the Howard government introduce the Environment Protection and Biodiversity Conservation Act?
4 What were the main findings of the Garnaut Report?
5 What were some of the initial environmental actions of the Abbott government?

Apply and analyse

6 As a class, debate the competing priorities of economic development and environmental protection.

Evaluate and create

7 In this section, you have examined the development (and rejection) of policies to deal with threats to the environment in Australia and globally. You have been given the opportunity to investigate this important issue that concerns your future. Using the historical knowledge you have gained, prepare a recommendation for politicians, giving your assessment about the important environmental issues facing Australia and the world.
   a Review the material in this chapter and create two lists: one that lists the most significant environmental issues facing Australia in the immediate future, and another that lists global issues. You should expect to have issues that appear on both lists.
   b Conduct further research on those issues, and list them in priority order from the most urgent to least urgent.
   c Discuss your initial lists in groups. How different is your perception from the ideas of others? Adjust your priorities if necessary after the discussion.
   d Drawing on your research and discussion, create a recommendation for the federal environment minister. In the recommendation, explain what the government's environmental priorities should be, and provide the evidence to show why your recommendations should be implemented.
   e As a class, discuss your ideas and how you view the future. See if you can come to an agreement about the single greatest environmental priority facing Australia and the world. Discuss solutions and ways in which your findings could be made available to a wider audience.

14.14 International responses

Environmental concern has become an international phenomenon. Established political parties have been reluctant to address environmental concerns. They have valued traditional links between industrialisation, economic wealth and political power. As a consequence, new groups have emerged, particularly the green political parties mentioned earlier, to challenge existing values. Two examples when governments have taken action in response to environmental threats are the United States' Superfund and New Zealand's nuclear ban.

The United States' Comprehensive Environmental Response Compensation Liability Act

The Comprehensive Environmental Response Compensation Liability Act (CERCLA) was passed in 1980 in response to widespread dumping and mismanagement of hazardous waste by industrial companies in the 1970s. Two significant environmental threats from the dumping of toxic waste that spurred the US government to pass this legislation happened in the Valley of the Drums in Kentucky, and in Love Canal, New York. Love Canal was a community in Niagara Falls that was built near a dumping ground for toxic wastes (see Source 1). Toxic chemicals leached into the soil, and surfaced in backyards and the school playground. The entire community was evacuated after health authorities found an increase in miscarriages and birth defects.

CERCLA authorises the Environmental Protection Authority (EPA) to identify sites where the environment or public health are threatened. They are able to take action to remove hazardous materials and clean up contaminated sites if the companies responsible cannot be identified or do not comply with requests to clean up these waste sites.

Source 1 Tanks of toxic waste near houses in Love Canal, New York, USA

New Zealand's anti-nuclear policy, 1984

New Zealand's former prime minister David Lange made international news in 1984, when he barred nuclear-powered or armed ships from entering New Zealand's waters. He effectively created a nuclear-free zone around New Zealand that became enshrined in legislation in 1987. It allowed New Zealand to emerge as a strong, forward-thinking and independent nation.

The roots of Lange's decision were in New Zealand's vulnerability as a Pacific island while Britain, France and the United States tested nuclear devices in the region. The ongoing French testing on Mururoa Atoll, in French Polynesia, caused widespread resentment in New Zealand. France was never able to explain why nuclear testing was not carried out closer to mainland Europe if the testing was as safe as was claimed.

New Zealand's anti-nuclear policy made it the champion of the French South Pacific territories in the South Pacific. The sinking of the Greenpeace ship *Rainbow Warrior* by French secret agents also hardened New Zealand attitudes towards the French. The French agents were responsible for two explosions in July 1985 that sank the ship while it was berthed in Auckland Harbour, killing a Greenpeace cameraman. France's decision to continue testing until 1996 created a strong anti-French movement in many French Pacific territories.

Source 2 Prime Minister David Lange was instrumental in creating a nuclear-free New Zealand.

Global initiatives

Another aspect of international environmental action has been through the United Nations and its associated organisations.

World Heritage listings

The role of UNESCO in preserving significant natural areas through World Heritage listing is well known. World Heritage listings have raised the status of many national parks and other special natural areas to international importance, worthy of preservation for future generations.

United Nations Framework Convention on Climate Change

In 1992, countries joined an international treaty, the United Nations Framework Convention on Climate Change. This was to cooperatively consider what they could do to limit average global temperature increases and resulting climate change. It was also to consider the potential impacts of climate change, which were emerging as a major political topic.

By 1995, countries realised that emission reduction provisions in the Convention were not sufficient to make any meaningful change. They launched negotiations to strengthen the global response to climate change, and two years later adopted the Kyoto Protocol.

Kyoto Protocol

The signing of the Kyoto Protocol became a major political issue in Australia during the first decade of the twenty-first century. The Protocol was developed at the United Nations Framework Convention on Climate Change in 1997 in Kyoto, Japan. It was an international meeting to develop an environmental treaty that would attempt to limit the production of greenhouse gases. It was argued that these greenhouse gases were damaging the ozone layer that surrounded the Earth and contributing to global warming.

Australia refused to sign the protocol, along with the United States. It became a consistent element of the Liberal government's response to environmental issues. It became one of the first actions of the Rudd Labor government after it won power in November 2007. The United States remained the only major country to refuse to sign the protocol.

The main aim of the protocol was to have nations who were members of the UN commit themselves to reducing greenhouse gas emissions from their 1990 levels by 5.2 per cent. It was not radical, but allowed climate change deniers the opportunity to resist potential change. It made the conflict between unrestricted development and environmental protection more obvious.

While Kyoto allowed a number of flexible approaches, the Liberal government consistently argued that they would not compromise economic growth for the sake of cutting greenhouse gas emissions. This stance contributed to the Liberal Party's loss at the 2007 election, as well as Howard's loss of his own seat in parliament.

Following the Kyoto Protocol, delegates from the G8 countries (the United States, Canada, the United Kingdom, France, Germany, Italy and Japan) as well as delegates from Brazil, China, India, Mexico and South Africa met in Washington in 2007. This climate-change summit resulted in a non-binding agreement that developing countries would also have to meet greenhouse-gas-emission targets.

Copenhagen

The major follow-up to Kyoto was the 2009 United Nations Climate Change Conference held at Copenhagen in Denmark. The major aim of the conference (commonly known as the Copenhagen Summit) was to develop a plan for action on climate change that would operate beyond 2012. Ultimately, the Copenhagen Summit reflected all the challenges involved in dealing with environmental issues at a global level. However, countries find it very difficult to move beyond their own narrow interests. Disputes about the validity of scientific evidence give governments an excuse to do very little.

After reports that the conference was not accomplishing its goals, a Copenhagen Accord was drafted by the United States, China, India, Brazil and South Africa. The Accord was never officially adopted, but was merely taken note of. It simply recognised that climate change was one of the greatest challenges of the present day and that actions should be taken to keep any temperature increases to less than 2°C. The document was not legally binding and failed to contain any formal commitments for reducing carbon dioxide emissions.

Source 3 The Kyoto Protocol is an international agreement to limit the emission of greenhouse gases.

As a useful plan for the world, the Accord provided very little positive action. As climate change and global warming continue to be a threat to our world, very little has been achieved at a global level to guarantee that the Earth will be a functioning planet for future generations. The United Nations has continued to host climate change conferences, which have been held annually since 2011. There still remains no fundamental global agreement on how to tackle the world's most pressing environmental issues.

Source 4 Climate-change activists protest on the final day of the UN climate summit in Copenhagen, Denmark.

Check your learning 14.14

Remember and understand

1. Who was the New Zealand prime minister who introduced the anti-nuclear policy?
2. When was the Kyoto climate change conference held?
3. When did Australia sign the Kyoto Protocol?
4. What did the 2009 Copenhagen Summit recognise?

Apply and analyse

5. In your opinion, was the 2009 Copenhagen conference a success in reaching an agreement to limit climate change?
6. Find out about the follow-up meeting to the 2009 Copenhagen conference that took place in Cancun, Mexico, in 2010. What did it achieve and do you think it was more successful?
7. Do some research on carbon emissions trading as a way to tackle climate change. As a class, discuss the arguments for and against the introduction of an emissions trading scheme.

Evaluate and create

7. Explain how Australian governments from the 1960s to the present day have acted on environmental matters, and assess the effectiveness of their policies and actions.
8. Use this chapter and conduct your own research to compile a fact file on a range of Australian Ministers for the Environment. Overall, how effective do you think their contributions have been? Support your position with examples from your research.
9. Create a folio of evidence that shows a range of projects that have taken place in your local area over the past 50 years and how these have positively or negatively affected the environment. Based on your research, what do you think your area will look like in another 50 years? Why? Present your findings to the class as a PowerPoint or poster.

14C rich task

Environmental threats to the Great Barrier Reef

In July 2015, the United Nation's World Heritage Committee decided it would not declare the Great Barrier Reef as 'in danger'. However, it will closely monitor how the Australian government addresses threats to the reef over the next four years.

Source 1

According to Adam Markham, the deputy director of climate and energy at the Union of Concerned Scientists, the Great Barrier Reef's most serious threat is climate change. Aspects of climate change that affect the Reef are rising sea temperatures, accelerating rates of sea level rise, changing weather patterns and ocean acidification. Other significant threats to the reef are 'coastal development, agricultural run-off pollution, port-based shipping activities, illegal fishing and outbreaks of coral-eating crown-of-thorns starfish'. In a draft report for the United Nation's climate change report, Markham assessed the Great Barrier Reef as being 'poor and deteriorating' with half of its coral cover lost over the last three decades.

Source: Adam Markham, 'Australia's iconic Great Barrier Reef World Heritage site at risk from global warming', 26 May 2016

Source 2

The federal environment minister, Greg Hunt, has given the green light to expanding the Abbot Point coal terminal in northern Queensland, on the condition that the dredge spoils are properly disposed of.

About 1.1m cubic metres of dredge spoil from the project would be dumped in nearby industrial land, rather than in the Great Barrier Reef marine park as originally proposed.

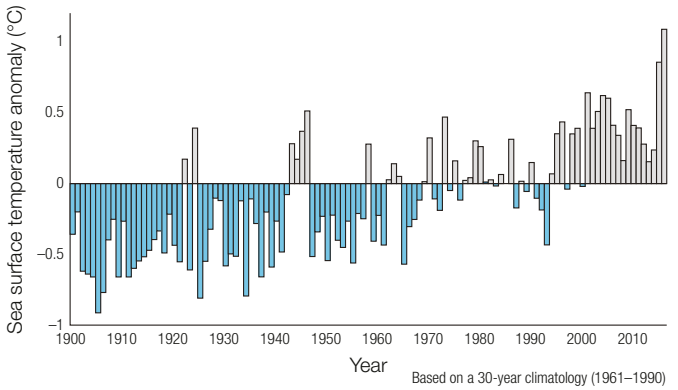

'All dredge material will be placed onshore on existing industrial land. No dredge material will be placed in the World Heritage Area or the Caley Valley Wetlands,' a spokeswoman for Hunt said. 'The port area is at least 20kms from any coral reef and no coral reef will be impacted.'

The Greens said the project was dangerous to the environment and a waste of money.

Conservationists have also condemned the decision to let the project go ahead.

'Thousands of tonnes of seafloor will be torn up and dumped next to the internationally significant Caley Valley wetlands. Sea grasses which feed dugongs and turtles will be torn up for the coal industry,' Imogen Zethoven from the Australian Maritime Conservation Society, said. 'Hundreds more coal ships will plough through the reef every year.'

skill**drill:** Historical sources as evidence

Identify and locate relevant sources using ICT and other methods

Being able to locate relevant primary and secondary sources using the internet is an important historical skill. However, you need to keep in mind that not all information you find on the internet is necessarily true, accurate, reliable or credible. So, in addition to being able to find source material online, you need to be able to evaluate the reliability and credibility of the information you find. Use the following steps to apply this skill:

Step 1 Identify key words related to your topic and type these into a search engine such as Google. (Use only key words – do not type in whole sentences or questions.)

Step 2 Add further relevant key words to refine your search if you cannot find what you want on your first attempts.

Step 3 Look beyond the first page of results. The best results do not always appear first.

Step 4 Assess the reliability of each site by asking yourself the following questions:

- Who is the author or creator? If it is an individual, does this person have credentials listed (for example, a degree or title)? If it is an organisation, is it a reputable organisation, such as a government or university department?
- What is the purpose of the website? Is it trying to inform, persuade or sell?
- Is the site objective? Is the author's point of view biased?
- Is the information accurate? Can the information be verified if you check it with other sources of information?
- Does the site contain spelling mistakes or grammatical errors? (If so, this is usually an indication that the site is not particularly reliable.)
- Is the information current? Can you find evidence of recent updates?

Apply the skill

1 Using the steps outlined above, conduct an internet search to find relevant, credible and reliable source material about:
   - **a** the impact of climate change on the Great Barrier Reef
   - **b** the impact of agricultural, industrial and shipping activities on the Great Barrier Reef.

2 Copy the data chart in Source X into your notebook. Read the source material you have located and record the key points in the appropriate column. Make sure you also record the URLs of the sites you have used.

Extend your understanding

1 Conduct research to write a report on the Australian government's responses to environmental threats to the Great Barrier Reef as well as government decisions that may negatively impact its future.

Unit 3 The globalising world (1945–the present)

Migration experiences

Australia is a nation built on migration. Since the end of World War II, more than seven million new migrants have settled here. Some have come seeking better opportunities. Others have come to escape conflicts, disasters or persecution elsewhere. Major world events, such as the Vietnam War, have influenced the range and number of people arriving in Australia. As a result, government policies have evolved under successive leaders to manage the numbers and types of people wishing to settle here. With time, policies that discriminated on the basis of race have been replaced by a system based on skills and eligibility. With one in four Australians born overseas, migration has made Australia the culturally and ethnically diverse nation it is today.

15A

How have world events influenced migration to Australia since World War II?

1 Brainstorm three important world events that have taken place since 1945 and discuss how these events might have affected migration to Australia. Do you know anyone who came to Australia as a result of these events?

15B

How have government policies influenced migration to Australia since World War II?

1 At the end of World War II, most Australians supported immigration policies that restricted people's entry based on their race. Today, people from all over the world are accepted. What factors do you think led to this change?

chapter 15

Source 1 Refugees fleeing the war in Vietnam for the safety of Australia during the 1970s often had to escape on cargo boats. Many were forced to wait at sea before disembarking and being sent to refugee camps.

15C

How did the Vietnam War affect migration to Australia?

1 What affect do you think the Vietnam War had on the types of people coming to Australia?

2 Why do you think so many Vietnamese people risked their lives by travelling on boats to Australia during the Vietnam War?

15D

How has migration shaped Australia's identity and global relationships?

1 Australia is now a culturally diverse society made up of people from many different cultural, religious and ethnic groups. List some of these groups and think about the contributions they have made to Australian culture in terms of food, art, sport, entertainment and so on

15.1 Migration experiences: a timeline

Arthur Calwell was appointed Australia's first Minister for Immigration in 1945.

1901
Australia federates; Commonwealth Parliament passes the *Immigration Restriction Act* limiting immigration to Australia based on race; this policy together with others forms the basis of the White Australia policy (which included a dictation test to prevent non-whites from gaining entry to Australia).

1939–1945
World War II; migration to Australia effectively stops.

1945
Chifley Government begins post-war 'populate or perish' program to boost migration; Australia's first federal Minister for Immigration is appointed.

1946
International Refugee Organization founded; Australia seeks displaced persons from post-war Europe.

1947
'Ten Pound Pom' scheme begins; Big Brother Movement and child migration increased.

1949
Construction begins on Snowy Mountains Hydro-Electric Scheme employing thousands of migrant workers.

1950
Colombo Plan to assist regional development in Asia begins.

1955
Australia joins SEATO (Southeast Asia Treaty Organization), an organisation that aimed to contain the spread of communism.

1955–1975
The Vietnam War lasts for 20 years.

1958
Revised *Migration Act* passed, introducing a simpler system of entry permits and as a result the dictation test is abolished – this had been a barrier for many non-Europeans attempting to migrate to Australia.

1973
Whitlam Government formally abolishes White Australia policy.

1975
Racial Discrimination Act passed.

1976–1982
First wave of 2000 Vietnamese refugees arrives in Australia by boat.

1900 | 1940 | 1950 | 1970

This badge from 1910 was produced by the Australian Natives' Association, a group made up of Australian-born whites – the prime minister at the time, Alfred Deakin, was a member.

Vietnamese refugees aboard the fishing vessel *Song Saigon* arriving in Darwin in 1979

Source 1 A timeline of some key events and developments regarding migration in Australia

Crowds at North Cronulla on the day of the Cronulla riots

In 2013, Tony Abbott was elected Prime Minister of Australia after a campaign that focused heavily on stopping the flow of asylum seeker boats to Australia.

1977
Multiculturalism becomes the official Australian government policy.

1989
Second wave of boat arrivals, from Cambodia, Vietnam and Southern China.

1992
Keating Government introduces mandatory detention of asylum seekers.

1997
One Nation Party launched on anti-immigration platform.

1999
Third wave of boat arrivals, predominantly from the Middle East.

2001
Yearly asylum seeker boat arrivals exceed 5000 people; the Howard Government's handling of Tampa and 'children overboard' affairs spark local and international condemnation.

2001–2007
Howard Government implements Pacific Solution (offshore processing of asylum seekers in Nauru and Manus Island, Papua New Guinea).

2005
Cronulla riots in Sydney cause racially-motivated violence.

2009–2013
Huge spike in asylum seeker boat arrivals to Australia during this period; more than 17000 arrivals in 2012 alone.

2013
Rudd Government implements the PNG Solution, resettling all new boat arrivals in Papua New Guinea; Tony Abbott elected to government after a campaign focused on 'stopping the boats'.

1990 2000 2010

Check your learning 15.1

Remember and understand

1 How did Australia's migration policies change in the five years following World War II?
2 When did the White Australia policy begin and when was it formally abolished?
3 Identify some of the military conflicts Australian troops have fought in during the 20th century. How did these conflicts affect migration to Australia?

Apply and analyse

4 A number of events are highlighted in the timeline relating to asylum seekers arriving in Australia by boat. Using the timeline, identify how patterns of boat arrivals have changed since the 1970s. How do you think these patterns have affected government policy?
5 Use the timeline to determine the number of years the White Australia policy was enforced in Australia.

15.2 Australia: an immigration nation

Modern Australia has been created and shaped by national and international population movements. From the arrival of the First Fleet in 1788 – loaded with almost 1500 convicts, sailors and soldiers – Australia has been populated by waves of immigrants. First, penal colonies at Sydney, Port Arthur and Fremantle were established. Then large numbers of migrants from Great Britain and Ireland came to establish towns and farms. By the 1860s more than 75 per cent of the population was of Anglo–Celtic origin. This figure remains at about 70 per cent to this day. From the middle of the 19th century, immigrants arrived from across Asia and the Pacific, and new settlers continued to flow from Europe.

During the 1900s, immigrants from Britain continued to dominate. An immigration policy that discriminated against all non-white migrants – known as the **White Australia policy** – was enacted in the first days of the new nation in 1901 and remained in place until the 1970s.

The end of World War II in 1945 saw waves of migrants come to Australia from southern European countries such as Italy and Greece. As immigration policies evolved, these waves were followed by others from the Middle East, Asia and South America.

Because of our history, the Australian population is much more racially and ethnically diverse than other long-established countries in Europe and Asia such as France and Japan. Just like the United States, Canada, New Zealand and Argentina, modern Australia is a nation of immigrants.

Today, Australia is considered by many to be a **multicultural** country. In fact, Australia has one of the highest rates of immigration in the developed world (see Sources 2 and 3). This description acknowledges that the people of Australia come from a wide range of ethnic and cultural backgrounds. In *The People of Australia: Australia's Multicultural Policy*, released in 2011, the Australian government states that 'multiculturalism is in Australia's national interest and speaks to fairness and inclusion. It enhances respect and support for cultural, religious and linguistic diversity'. Although this view is shared by the majority of Australians today, it was not always the case. Since the end of World War II in 1945, Australia's immigration policies have changed in response to major world events. In particular, we will consider the impact that World War II and the Vietnam War had on Australian migration and modern culture. Finally, we will look at how migration has helped shape Australia's global relationships and the contributions migrants of all backgrounds have made to our country and modern cultural identity.

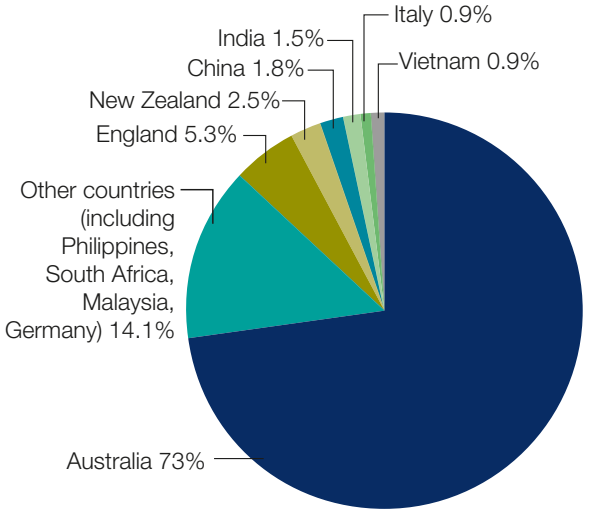

Source 1 Today, Australians speak more than 260 languages and identify with more than 270 ancestry groups.

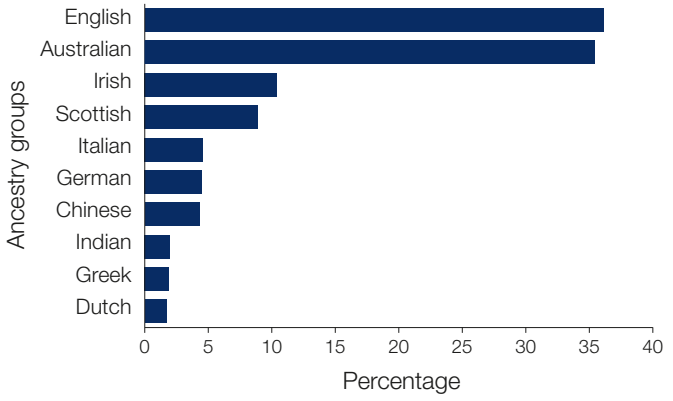

Early migration

The earliest people arrived on the Australian continent around 40 000 years ago. By the time the First Fleet arrived in 1788, Australia's population had reached between 350 000 and 1 million.

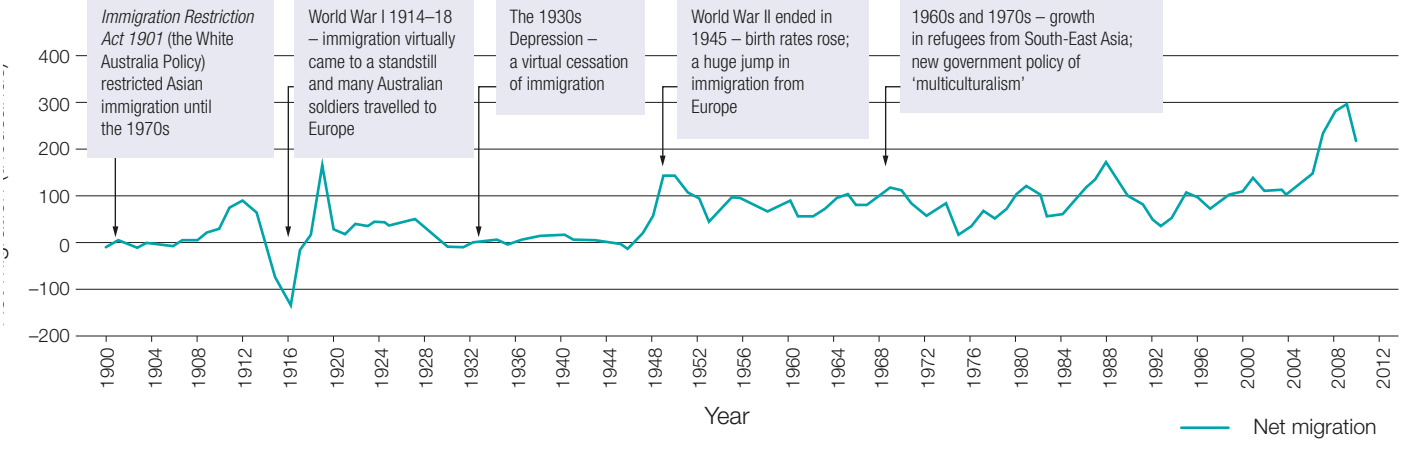

After the British established the first Australian colonies, migration was dominated by arrivals from Britain – both **convicts** and **free settlers**. Migration increased with growth of the wool industry in the 1820s and again during the gold rushes of the 1850s, which saw a major influx of new arrivals. Many people chose to migrate to Australia in search of a better life and greater opportunities. Other events also encouraged people to settle in Australia, such as social changes in Britain brought about by the **Industrial Revolution**, or the disaster of the Irish famine of the 1840s.

Source 2 Australian citizens by country of birth, 2011: Australia's population today is culturally and linguistically diverse – more than one in four Australian residents were born overseas, with people born in the United Kingdom making up the largest group of overseas-born residents, followed by New Zealand, China, India, Italy and Vietnam

Source 4 Graph showing ancestry groups that Australians most commonly identify with, 2011

key**concept:** Perspectives

Defining different types of migration

When discussing migration, there are a number of key perspectives that need to be considered. These perspectives are influenced by how different people view different events. In order to appreciate these perspectives it is first necessary to define some key terms:

- **Migrant:** a person who moves from one country or region to another to settle there; includes both **emigrants** (people leaving a country) and **immigrants** (people entering a country)
- **Economic migrant:** a person who migrates for reasons such as seeking employment or an improved financial position
- **Assisted migrant:** a person who migrates under a targeted government assistance program
- **Skilled migrant:** a migrant granted preferential treatment for their skill or profession
- **Illegal migrant:** a person who enters or remains in a country without a legal right to do so; does not include asylum seekers and refugees
- **Displaced person:** a person forced to leave their home region or country due to war, persecution or natural disaster
- **Refugee:** a person who has fled their home country to another country due to a well-founded fear of persecution for reasons recognised by law
- **Asylum seeker:** a person who has applied for recognition (or sought protection) as a refugee
- **Boat people:** a common term used to describe people who travel by sea to seek asylum, rather than by land, air or via local processing centres.

For more information on the key concept of perspectives, refer to page 240 of 'The history toolkit'.

Although the majority of early migrants came from Britain, migrants did arrive from other parts of the world, including Asia. For example, during the gold rush immigrants from China were the largest non-British group. Labourers were also recruited from Melanesia to work on plantations in Queensland in the 1860s. In the later part of the 19th century, divers from Japan assisted in establishing Australia's pearling industry. Another important contribution was made by Afghani, Pakistani and Turkish camel handlers in the construction of telegraph and railway lines in central Australia in the early 1900s (see Source 5).

Pre-World War II migration

The number of Australians born overseas declined dramatically at the end of the 1800s. This trend continued until the end of World War II in 1945 (see Source 6). After this, immigration rates increased dramatically.

Many factors had contributed to this decline. For example, at the end of the 19th century Australia experienced a major economic depression. Hostility towards Chinese labourers grew because people believed that cheaper labour would decrease jobs and wages for British Australians. This resulted in colonial governments introducing legislation to restrict entry and impose high taxes on any Chinese people arriving in the colonies. More restrictive legislation was introduced upon Australia's Federation in 1901 with the *Immigration Restriction Act*. This Act formed the basis of a number of policies referred to as the White Australia policy. These will be discussed in detail later in the chapter.

Source 6 Graph showing the percentage of Australians born overseas 1891–2011. Migration to Australia increased sharply after the end of World War II and continues to do so today (Source: ABS)

Source 7 The Great Depression of the 1930s saw an end to assisted migration programs in Australia and a downturn in migration that would continue until 1945.

When World War I broke out in 1914, migration to Australia came to a standstill. After the war, the government offered assisted migration programs so British ex-servicemen could immigrate to Australia in large numbers. In the 1920s and 1930s there was an increase in migrants from Italy and Greece seeking to establish lives in Australia, as well as a rise in Jewish people seeking to escape persecution in Europe. However, the **Great Depression** in the 1930s saw an end to government assistance programs (see Source 7) and when World War II broke out in 1939, migration effectively came to a standstill again as travel became difficult, if not impossible.

Post-war migration

The end of World War II marked a turning point in migration in Australia. In the aftermath of World War II, Australians reflected on their role in the new world order. The Australian government reassessed its policies on immigration and began to introduce major policy changes that still influence Australian society and culture to this day. The government opened Australia up to a much broader program of immigration – introducing massive increases in assistance packages, establishing Australia's first immigration department, signing international agreements to begin a regular humanitarian intake program, and accepting displaced persons and refugees from other countries and regions. These changes will be discussed in detail later in the chapter.

Over time and through successive governments, these changes were gradually introduced. Often, they came in response to major world events and as a result of changing needs and attitudes in Australia. As a result of these changes, since the end of the war in 1945 more than 7 million new permanent migrants have settled in Australia, from regions all around the world. Australia's population has since increased from about 7 million people in 1945, to around 24 million people today.

Evaluate and create

4 Terms relating to migration are sometimes confused or misused in everyday conversation and in the media. In groups, use the timeline in Source 1 on pages 414–15 and the terms listed in the key concepts box to evaluate how world events and government policies have influenced the types of migrants arriving in Australia.

15.3 The influence of world events

World events have had a lasting effect on the types and numbers of people arriving in Australia. World War II had a profound effect on people in Europe and Asia, resulting in large numbers of displaced persons fleeing from conflict, persecution and poverty in the post-war period. This in turn affected migration to Australia in the post-war years, as it combined with a shift in Australia's immigration policies and plans to create a larger Australia.

War and conflict, natural disasters, changing economic and political conditions and other **push factors** have historically driven people to seek a better or safer life elsewhere. Australia's migration programs, including assisted migration and refugee programs, have adapted in response to these events and, together with other **pull factors**, have helped to draw migration to Australia.

Since the end of World War II, there have been many significant world events that have influenced the types of new migrants coming to Australia and the places from which they have come. Some of these major events include the **Cold War** (including the Korean War, the Vietnam War and the fear of communism spreading across parts of Asia in the mid-20th century), conflict and famine in parts of Africa in the 1980s, and the Yugoslav conflicts in the 1990s. All of these events saw a large influx of new migrants from these regions. In more recent years, major events influencing migration have included the US-led 'War on Terror' in Iraq, Afghanistan and Pakistan, the global financial crisis in 2008 (which has created a new wave of economic migrants) and civil uprisings in the Middle East from 2010 (collectively called the 'Arab Spring'). Again, these events have all resulted in different groups of people seeking to migrate to Australia for a variety of reasons.

The key concept box on page 422 sets out some of the main push and pull factors that can affect people's decisions to migrate. Source 4 highlights some of the key world events and changes in Australian government policy affecting migration since 1945.

Source 1 Following the Chinese government's suppression of pro-democracy demonstrators in Tiananmen Square, 1989, the Australian government granted permanent residency to 2000 Chinese students studying in Australia at the time.

key**concept:** Cause and effect

Push and pull factors

Migration is influenced by a combination of factors that cause people to leave their home country or region (push factors) and factors that draw people to a new location (pull factors). When analysing historical migrations, the historian needs to be able to understand these reasons in context at the relevant time. Some of the main factors are listed in Source 6.

For more information on the key concept of cause and effect, refer to page 242 of 'The history toolkit'.

Source 6 Main push and pull factors that can affect migration.

Push factors	Pull factors
Lack of opportunities	Safety and security
War and conflict	Family links
Famine or drought	Government incentives
Fear of persecution	Hope of better employment
Unemployment	Shelter, food and money
Lack of political or religious freedom	Better living standards
Natural disasters (earthquakes, floods)	Better medical care
Poor medical care or education	Educational opportunities
Lower standard of living	Political or religious freedom

Source 5 The effects of famine or drought can be a strong push factor for migration.

Source 7 The prospect of better employment opportunities can be a strong pull factor for migration.

Check your learning 15.3

Remember and understand

1 How do push factors connect with pull factors to influence migration?

2 Looking at the lists of push and pull factors, why do you think the events of World War II so heavily influenced migration to Australia?

3 Which world events have created refugees since the end of World War II?

Apply and analyse

4 In pairs and using the table in Source 4, research three major world events since 1945. What push and pull factors, including migration policies, were present at the time? How do you think these events would have shaped migration to Australia?

Evaluate and create

5 'Australia's immigration policy has responded fairly to world events.' Write a short argument outlining why you agree or disagree with this statement. To assist, you can use the table of events in Source 4 and the timeline in Source 1 on page XX.

15.4 Migration to Australia after World War II

In the years following World War II, the Australian government introduced bold new policies and programs designed to boost Australia's population. These changes would transform the face of Australian society forever. The period saw a massive boost in immigration from Britain and Europe, particularly countries such as the Netherlands, Italy, Greece, Latvia and Estonia. Government policies began to actively encourage and assist migrants wishing to make the journey from Europe, and sought to recruit the skills of migrant workers to begin a number of large-scale construction projects. Despite this increase in migrant numbers, restrictions on migrants from non-European backgrounds remained strictly enforced.

Australia after World War II

The threat of Japanese invasion during World War II came as a shock to Australia. Never before had the government and the Australian people felt so vulnerable to a foreign attack. As part of the government's strategy to strengthen the country and recover from the loss and devastation of World War II, it proposed to increase the size of the population and improve military defences. By following a 'safety in numbers' approach, it was believed that Australia would be less vulnerable to any future attacks. As Australia's population was still relatively small, the quickest means of achieving this was to increase Australia's intake of new migrants. Prime Minister Ben Chifley took over as Labor leader in 1945, soon after the death of Australia's war-time Prime Minister John Curtin. In 1946 Chifley was re-elected to lead Australia's post-war recovery. His government decided that a larger population was necessary in order to protect Australia's security and economic future. It developed a slogan to describe this new policy on immigration – 'populate or perish'.

The Chifley Government created Australia's first Department of Immigration in 1945. The first immigration minister was Arthur Calwell who, in his first months as minister, made the government's intentions regarding the size of Australia's population clear (see Source 2). These beliefs were shared by ministers on both sides of politics. As a result, new policies were implemented by the Labor government in the immediate post-war period and continued under the Liberal Menzies Government from 1949.

> If Australians have learned one lesson from the Pacific War, now moving to a successful conclusion, it is surely that we cannot continue to hold our island continent for ourselves and our descendants unless we greatly increase our numbers.
>
> Minister for Immigration Arthur Calwell, extract from *Hansard House of Representatives*, 2 August 1945, pages 4911–15

The government began to actively promote Australia as an attractive destination to resettle for people affected by World War II (see Source 3). As part of this plan, the government began offering new incentives for those looking to make a new start away from the difficulties and challenges facing post-war Europe.

Source 3 This 1948 poster encouraging Europeans to relocate to Australia – the 'land of tomorrow' – was displayed in migration and refugee camps across Europe at the end of World War II.

Source 4 A family gets information about emigrating to Australia from an official at the Department of Immigration at Australia House, 1953.

'Bring out a Briton'

By the end of World War II, the Australian government had made its intentions for a larger Australia known. Tens of thousands of displaced persons across Europe had lost their homes and livelihoods during the turmoil of World War II. While resources and services were overstretched in Britain and Europe, Australia was looking to rapidly grow its population and economy. Even before the end of the war, discussions began between Britain and Australia to establish a large-scale migration program to Australia. Australia's close ties with Britain made this an obvious first choice for immigrants to boost the population. Immediately after the war, large numbers of people from across Britain set sail for Australia. After the wide-scale devastation of World War II, reconstruction in Europe was a massive task and, in Britain, many felt a fresh start in Australia was the best option for their families.

In 1947, the British and Australian governments launched large programs to subsidise the cost of British migrants' voyages to Australia – a process known as assisted migration. Travel for children was free and for adults the fare was reduced to just ten pounds (£10), giving rise to the label 'Ten Pound Pom'. This became a common way of describing British migrants coming to Australia during this period. Assisted migrants were expected to stay for two years. If they did not, they were required to repay their fare and fund their own return home (costing about £120). Although migrants were promised employment and high-quality housing, often the circumstances did not meet expectations.

Source 5 A British family of 15 disembark from their ship as they arrive in Australia, 2 July 1957

In 1957 the government also launched a popular campaign called 'Bring Out a Briton' (see Source 7). This campaign encouraged Australians to nominate British friends and families to come to Australia. Local committees were formed to sponsor and recommend new migrants to the Department of Immigration for assisted passage. The successful campaign continued into the 1960s.

Child migrants

Children and young people were also encouraged to migrate to Australia after World War II. Although most children would arrive with their families under the assisted migration schemes, there were many who emigrated alone. This included children who were orphaned or deprived after the war. In some cases these children were taken from families and communities against their will.

Younger migrants were attractive to the government. They were seen as more adaptable and able to provide a long-term contribution to the country. They were also seen as a source of cheap labour. The best interests of the children were often not the first priority.

The emigration of children was controversial and had occurred for years in the former British colonies, including in the US, Australia and New Zealand. It was revived in Australia following the war. In 1944 the acting prime minister proposed to seek out 50 000 children from Britain and Europe in the first three years after the war. This figure proved impossible, with many countries refusing. Nevertheless, thousands of child migrants did arrive from Britain and Malta between 1947 and the end of the scheme in 1967. Although many had positive experiences, there are reports that many others suffered terrible living and working conditions. In a few cases conditions were reportedly worse that those they had left behind. The governments of Australia and Britain recently gave an official apology to children and families affected by these child migration schemes.

Big Brothers and Little Brothers

The migration of teenagers also boomed after the war. One significant government scheme to encourage this was called the 'Big Brother Movement'. This was based on a similar scheme from the 1920s and 1930s. The scheme allocated boys emigrating from Britain ('Little Brothers') with a responsible adult in Australia ('Big Brothers') who would provide support and advice to help them adjust to their new life in Australia. This provided reassurance and encouragement to youth migrants and their parents who were reluctant to let them go. The scheme was very successful and saw about 500 youths a year arriving under this arrangement throughout the 1950s and 1960s.

Europe: a new source of migrants

As well as attracting new migrants from post-war Britain, the government decided to look toward other areas of post-war Europe to target with new programs of assisted migration for displaced persons affected by the war. The government entered into agreements with many European countries, including the Netherlands, Italy and Greece, to accept post-war migrants. In 1946 the International Refugee Organization (IRO) was also founded as a specialised agency of the new United Nations, with Australia one of its founding members. Part of the IRO's work was to deal with the vast number of displaced persons that had been affected by the war, and Australia's membership enabled it to select displaced persons from camps in Europe and offer them passage to Australia. The government would assess and accept people from camps of displaced persons from across Europe if they were deemed suitable for migration to Australia. The Australian government agreed to accept at least 12000 refugees per year from the European camps.

In particular, the government viewed people from the Baltic states of Lithuania, Latvia and Estonia as a suitable source of new migrants. These countries had suffered invasion from both Nazi Germany and the Soviet Union during the war, so were viewed kindly by Australians. In addition to filling much needed labour shortages, people from these regions were seen as appealing because, according to Minister Calwell, they 'were red-headed and blue-eyed [and] there were also a number of natural platinum blondes of both sexes'. These physical characteristics earned them the nickname 'Beautiful Balts' (see Source 9). As these groups were Caucasian and often wanted to escape communism, they were the perfect candidates for Calwell's 'new Australia'. The government believed these people would more easily fit into the British culture and values of Australia at the time.

Source 9 This photograph, taken in 1948, shows a group of 'Beautiful Balts', some of the first displaced persons from Europe to arrive in Australia. Albury's *Border Morning Mail* described the new arrivals as 'attractive, cheery, eager to work and neatly clad'; the women had 'surprisingly good complexions and figures' with 'splendidly formed white teeth'.

Source 10 Snowy Mountains Scheme labourers in 1968 – many of these workers had migrated from countries across war-torn Europe

In addition to migrants from the Baltic states, large numbers of refugees arrived from Poland, Yugoslavia, Ukraine, Hungary and Czechoslovakia. There was also a large wave of post-war economic migrants from Italy, Greece, Malta, Croatia and Turkey seeking employment and better living conditions. These new migrants were placed in migrant camps across Australia, with allocated huts and often crowded conditions, to undergo training and resettlement. Although circumstances were sometimes difficult, many of these migrants would go on to make significant contributions to post-war Australia.

Post-war construction

As well as being motivated by a fear of invasion, the Australian government was keen to increase the population in order to meet an ambitious post-war building and construction program. Projects proposed by the Australian government required a much larger workforce than was available and the way to increase the workforce and fill the labour shortages was to increase the population. One of these major building projects was the Snowy Mountains Hydro-Electric Scheme, which alone required 10000 new workers. New immigrants from migration camps could be required to work for a period of two years wherever the Australian government decided. As a result, many were sent to work on the large Snowy Mountains scheme and similar projects.

key**concept:** Significance

The Snowy Mountains Hydro-Electric Scheme

As part of the post-war development of Australia, the nation's most ambitious infrastructure project was proposed. The Snowy Mountains Hydro-Electric Scheme proposed the development of a complex series of tunnels and dams to divert the Snowy River in south-east Australia. Hydro-electric power stations would provide electricity from the water flow, and the water would then be used to irrigate inland Australia. This project would require about 100 000 new workers, and the huge amount of labour required would mainly come from the wave of European immigrants the government was proposing to bring to Australia.

In Source 11, journalist, commentator and broadcaster Glenn A Baker gives his perspective on why the scheme, and the people who worked on it, were so important in shaping post-war Australia.

Source 11

> Not that many years ago we marked the 50th anniversary of what was the largest engineering project in the world – the Snowy Mountains Hydro-Electric Scheme – which, in ways that had nothing at all to do with power generation, changed the face of this country.
>
> The almost exclusively white Anglo-Saxon character of society was opened up to new ideas, customs, cuisines and celebrations by the men and their families who came from all over the world.
>
> I am, I suppose, a **baby boomer** and, for my generation, the post-war migration surge provided a defining dimension.
>
> Extract from Australia Day ambassador Glenn A Baker, speech given at Lithgow, 2010

Today, the scheme is considered significant not only because it remains one of Australia's largest-ever construction projects, but also because those who worked on it came from a range of different cultural and ethnic backgrounds. These men, their families and their descendants continue to have a significant impact on the cultural diversity of Australian society to this day.

For more information on the key concept of significance, refer to page 245 of 'The history toolkit'.

Remember and understand

1 Who was Australia's first Minister for Immigration? Which political party did he represent?
2 Where did most migrants come from in the immediate post-war period?
3 What were the two main requirements to be accepted as a migrant to Australia in the period after World War II?
4 In your own words, explain what was meant by the term 'populate or perish'.

Apply and analyse

5 Former Prime Minister Julia Gillard arrived in Australia with her family in the 1960s under the assisted migration scheme. Research some well-known Australians whose families arrived under the 'Ten Pound Pom' assisted migration scheme from Britain. Discuss the impact of this scheme on Australia today.
6 What does Arthur Calwell's speech (Source 2) tell you about immigration policy after World War II? What limits were there on the types of people Australia was willing to accept?
7 Explain what you think Glenn A Baker (Source 11) meant when he said that the Snowy Mountains Scheme 'changed the face of this country'.

Evaluate and create

8 Design a poster similar to Source 3 encouraging displaced persons in Europe to emigrate to Australia at the end of World War II. Your poster should include a slogan and use iconic imagery to portray Australia as a land of opportunity.

15A rich task

The census

A census collects evidence about the population of a country. Governments have used censuses since ancient times. Census information is collected for a variety of reasons, including allowing governments to determine taxation amounts and more accurately distribute services. The Australian government conducts the Australian Census every five years. A census can reveal the origins of a population, occupations, beliefs, age and gender. As such, it contains a wealth of detailed information for historians, but this information must be interpreted.

The following evidence allows us to look for continuities and changes in the birthplace of the Australian population during the 20th century.

As an official record collected at a specific time, a census is a primary source. Interpreting the results of a census is always a challenge, however, as two historians can examine the same statistics and come to very different conclusions. The data found in a census also needs to be placed in its historical context in order to interpret it fairly and correctly. For example, the 1901 census indicates that 3.5 per cent of Australian citizens who were born overseas came from China. A historian using only those figures might take this to show that the White Australia policy did not exist. Therefore, we also need an understanding of the new immigration laws that emerged at the time of Federation to be able to view that statistic in its proper context.

Source 1 gives statistics on the birthplace of immigrants living in Australia at three distinct points in 20th-century Australian history: at Federation (1901), post-World War II (1947) and at the end of the 20th century (1996). Since other censuses were also held between these events, the material shown here would only be a starting point for a historian. Nevertheless, it provides an interesting opportunity to take a brief look at the changes in immigration to Australia during the 20th century.

skill**drill:** Continuity and change

Generating questions about the past to inform a historical inquiry

One of the first and most important steps in conducting a historical inquiry is to generate or pose key questions. The questions that you generate will frame or direct the research that you then undertake.

Usually, historians generate one broad, overarching question for their inquiry, for example: 'What do census results from different times tell us about Australia's migration policies?' After that, you need to generate more specific questions that are related to your overall inquiry question. You will need to generate a mixture of:

- **closed** (or simple) questions – for example, 'When did event X occur?'
- **open** (or probing) questions – for example, 'Why did event X occur?'
- questions that relate to the *process* of historical inquiry – for example, 'What evidence is there?' and 'What other sources might be needed?'

The first step in generating questions is to think about what you already know about the topic. Use this knowledge as a springboard for questions that will help you understand the topic in more depth. Use a table, similar to Source 2, to brainstorm all the things you know in dot-point form in one column. In the second column, use each dot point in the first column to generate related questions that will help to deepen or build your understanding. Remember to include a mix of the three question types described above.

Source 2

Overarching inquiry question:	
What I already know:	**Questions to help me deepen my understanding:**

Point 2	Question/s related to point 2
Point 3	Question/s related to point 3

Apply the skill

1 Use the process described above and the census data in Source 1 to generate a range of questions related to the overarching historical inquiry question: 'How does the census reflect key events in the history of migration to Australia?'

a Copy Source 3 into your notebook.

b Identify what you already know as a result of reading this chapter and the information in this section. List these ideas in dot points in the first column.

c In the second column, generate related questions that help to deepen or build your understanding. The first one has been done for you.

Source 3

Overarching inquiry question: 'How does the census reflect key events in the history of migration to Australia?'	
What I already know:	**Questions to help me deepen or build my understanding:**
Australia sought to attract more migrants from war-ravaged Europe during the post-World War II recovery.	What countries were the biggest source of migrants in 1901, 1947 and 1996? (Simple or closed question) How did the countries of origin for migrants change from 1901 to 1996? (Open or probing question) What evidence can be applied to the census data to produce an alternative interpretation? (Question related to the process of historical inquiry)
Point 2	
Point 3	

Extend your understanding

1 Conduct some research online to find the latest census statistics and use the results to make a table of the top 10 countries of origin for new Australian migrants. Next, use one or two paragraphs to answer the following questions:

a What are the major changes in migration that have occurred since the 1996 census?

b What continuities does your table reveal about migration to Australia since Federation in 1901?

c Which world events of the 21st century can you see reflected in your table?

2 Using what you have learned in this chapter, make a new table that features your forecasts of the top 10 countries of origin for new Australians in the next census.

15.5 White Australia policy

The White Australia policy was not a single policy – the term refers to a series of migration policies in Australia that gave favourable treatment to immigrants from Europe (predominantly Britain) and discriminated against those from other parts of the world. The *Immigration Restriction Act 1901*, along with other pieces of legislation, became the basis of the White Australia policy after Federation. Although the original Act did not specifically ban people based on race, it was designed to exclude migrants who were considered 'undesirable'.

Since the British colonised Australia in the late 1700s, Australia's relationship with its Asian and Pacific neighbours had at times been tense. The large numbers of Chinese migrants who arrived during the gold rushes of the 1850s often clashed with the British majority over access to resources and competing claims. A period of severe economic depression in Australia during the 1890s also saw a rise in anti-Asian sentiment. Many in Australia feared that cheap immigrant labour would take jobs away from British Australian workers. Sources from the time provide many examples of the kind of racial prejudice and fear held by many Australians towards foreigners (see Source 1).

This ethnic tension combined with a new sense of **nationalism** that grew in the lead up to Australia's Federation. One of the first acts of the new federal government in 1901 was to create laws that could grant access to European migrants, mainly British, and exclude all others. Australia's first Prime Minister, Edmund Barton, expressed this sentiment at a speech in 1902: 'We can bring in, without delay, our kinsmen from Britain and, if the numbers be insufficient, such other white races as will assimilate with our own. Or we can … see the doors of our house forced, and streams of people from the lands where there is hardly standing room pour in and submerge us.'

The dictation test

The *Immigration Restriction Act 1901* did not mention race or include any reference to excluding migrants based on their ethnic or racial background. This type of openly discriminatory behaviour was frowned upon by Britain and its allies at the time. Instead, the Act included a less obvious legal mechanism to ensure immigration officials could exclude migrants they considered 'undesirable'. A simple 'dictation test' allowed officials to dictate a 50-word passage in any language they chose for potential migrants to write down. Initially this was any European language, but later it could be given in any language at all.

Source 1 'The Mongolian Octopus – His Grip on Australia', cartoon by Phillip May in *The Bulletin*, 1886, showing some of the fears Australians had about Chinese migration

To restrict access to potential migrants, Australian officials simply chose languages that they knew would be unfamiliar – guaranteeing failure. This was particularly used against Chinese migrants, but other Asian and African migrants were also targeted.

The White Australia policy after World War II

As we have learned, at the end of the World War II Australia began to actively pursue a policy of population expansion under the slogan 'populate or perish'. New migration policies focused almost exclusively on new migration from Britain and elsewhere in Europe. In line with the White Australia policy, the government's approach was to target whites from European countries that it believed could assimilate easily into Australian society. In particular, the new program of accepting displaced persons focused on Europe, particularly the Baltic States and Eastern Europe. It deliberately excluded those displaced by the conflict in Asia, Africa or the Middle East.

The threat of Japanese invasion during World War II, together with the threat of communism spreading across Asia, added to the fears of many Australians. The harsh effects of these fears were felt particularly by migrant families who had been granted permission to live and work in Australia during the war as displaced persons or refugees or to assist with the war effort. These included thousands of migrants from Asia, including Malays, Indonesians and Filipinos. Once the war was over, Immigration Minister Arthur Calwell controversially sought to eject migrants who did not meet the strict requirements of the White Australia policy.

In a speech to the House of Representatives on 2 December 1947, Calwell made clear the government's views on continuing the White Australia policy.

Source 2

> The government has decided that all persons who came to Australia as evacuees or refugees during the war and who, under our immigration laws, are not eligible to become permanent residents of this country, must leave. We have been very tolerant of these people. We could have asked them all to go immediately the war ended, but we have allowed them to stay for a certain period, in some cases so that they may wind up their affairs here and in other cases so that they might get decent shipping facilities to take them back to their own countries. In all 15 000 evacuees of all nationalities came to Australia during the war. Of that number, 4400 were Asiatics. Most of the evacuees, including the Asiatics, have gone. There are about 500 Chinese, mostly seamen, and about fifty Malays left. All of these people will have to leave Australia … What this government proposes to do is not unusual. I am carrying out the policy of every Australian government since Federation, and, as far as I am concerned, it will not be altered …
>
> Cited in *Well May We Say … The Speeches That Made Australia*, Sally Warhaft (ed.), Black Inc., Melbourne, 2004, pages 245–6

It was not until the second half of the 20th century that the White Australia policy finally began to unravel and Australia's modern immigration policies began to take shape. This will be discussed in the following sections.

Source 3 A poster from King's Theatre *c.* 1909, promoting the play 'White Australia or the Empty North' – the play illustrated the role that race had in creating a national identity after Federation.

Check your learning 15.5

Remember and understand

1. In your own words, describe the impact of the *Immigration Restriction Act.*
2. What was the legal mechanism used by immigration officials to exclude non-Europeans from entering Australia?
3. What reason does Arthur Calwell give for deporting Asian migrants in Australia in Source 2? How does he justify the decision?

Evaluate and create

4. Use the Internet to research the well-known story of Egon Kisch and the dictation test. Write a 300-word explanation describing the events and explaining how the dictation test was used by the Australian government to deny entry to 'undesirable' migrants. Outline the relevant background, describe how the test was applied (and challenged) and discuss the implications for other migrants.

15.6 The end of White Australia

During World War II and in the years after it ended, the Australian government made its intentions regarding the White Australia policy clear – the policy was and would continue to be central to Australia's migration program. But as time moved on, this position became increasingly difficult to maintain. Dissatisfaction with the policy was growing in parts of Australian society and the international community. The government's attempts to expel displaced persons after the end of the war were not well received and Australia's growing involvement in Asia was in direct conflict with its policies at home. The years that followed saw the policy gradually dismantled, before finally being abolished in 1973.

Initial steps

In 1949 a new Liberal government was elected under Prime Minister Robert Menzies. Menzies appointed Harold Holt as Minister for Immigration, replacing Arthur Calwell. The new Minister for Immigration would oversee a period of change. Shortly after taking office Holt made the historic decision to allow the remaining 800 non-European refugees to stay in Australia. Assisted migration schemes were expanded in parts of Europe including Italy, West Germany, Belgium, Greece and Spain.

Source 1 Prime Minister Robert Menzies making a radio announcement *c.* 1950

Source 2 Japanese war brides and their husbands in the garden of the Parker family home, Ringwood, 1953

Holt also made the historic decision to grant permission to a number of Japanese wives of returned Australian soldiers to settle in Australia. By the end of 1956, more than 650 Japanese women had migrated to Australia as wives and fiancées of Australian soldiers. In 1957, rules were changed to allow non-European residents over 15 years of age to become Australian citizens.

In the following year, the government passed the *Migration Act 1958*. This Act introduced the most significant changes to Australia's migration laws since Federation, replacing the longstanding *Immigration Restriction Act 1901*. Importantly, the Act abolished the dictation test, for so long used as a way of restricting immigration of non-European migrants. The revised Act removed questions of race, instead focusing on qualifications as a primary criterion for selection. This opened the door to highly skilled Asian migrants. As then Immigration Minister, Sir Alec Downer, stated 'distinguished and highly qualified Asians' could begin to immigrate. In 1959, Australian citizens were also allowed to sponsor Asian spouses for citizenship.

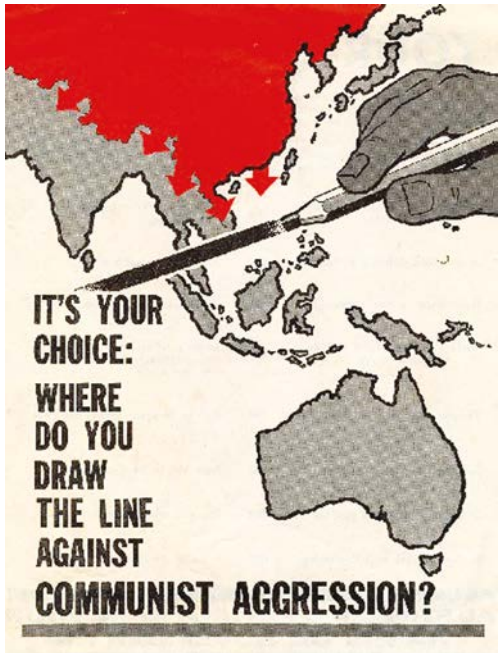

Increasing ties with Asia

In 1950, the government set up a fund with other countries in the Asian region to help improve the economic and social development of people in need of assistance. This fund became known as the Colombo Plan. The Colombo Plan was an important step towards increasing Australia's ties with Asia and improving stability in the region. The original signatories to the Colombo Plan were Australia, Ceylon (Sri Lanka), India, Canada, New Zealand, Pakistan, the United Kingdom, North Borneo and Malaya. Australia would donate more than $300 million to the scheme, in expertise, food and equipment. The scheme also provided funding for thousands of Asian students to study or train in Australian universities. Although students were supposed to leave Australia after their studies, many would end up settling in Australia permanently.

Domino theory and the fear of communism

One of the reasons Australia and other countries gave support to the Colombo Plan was the belief that improving development and stability would help stop the rising spread of communism in the Asian region. The spread of communism was of particular concern to Australia. Many Australians feared that a communist victory in one country would lead to a chain reaction of communist takeovers in neighbouring states, including Australia. This became known as the **domino theory**. It was highly influential on US and Australian foreign policy in the 1950s.

In 1949, fear of China grew when the Chinese Communist Party under Mao Zedong claimed victory after a long civil war, founding the People's Republic of China. The Menzies Government came to power just two months later and its response was to follow the lead of the American government by refusing to officially recognise the existence of China. This was a policy that continued for decades, until Richard Nixon in the US and Gough Whitlam in Australia finally gave formal recognition to communist China in 1972. The Australian government exploited the fear of communism, with post-war propaganda portraying communism as a disease spreading through Asia (see Source 3). Australia's fear of communism was not just confined to events occurring overseas. During the 1950s within Australia, there was a growing fear of communist spies infiltrating the government and union movement. This fear of 'Reds under the bed' resulted in the government attempting to ban the Communist Party of Australia in 1951.

Source 3 The Australian government exploited the fear of communism, with post-war propaganda portraying communism as a disease spreading through Asia.

Communism and conflict in Asia

As the fear of communism spread in the 1950s, Australia became increasingly involved in conflicts across Asia. This would have a significant influence on domestic migration policies as ties across the region increased, leading to the eventual abolition of the White Australia policy in the 1960s and 1970s.

Conflict broke out on the Korean Peninsula in 1950 as tensions boiled over between the capitalist south (which had been aligned with the West since the end of World War II) and the communist north (which was aligned with the Soviet Union). This was the first major war of the larger worldwide conflict known as the Cold War. The Cold War was a political, economic and military contest between the two post-war superpowers, the USA and the Soviet Union. Australia quickly offered military assistance after the United Nations resolved to protect the south from invasion by the north. About 17 000 Australians served in the Korean War from its beginning in 1950 to the ceasefire of 1953, with 339 Australian casualties. At the time, this was Australia's largest military involvement since World War II.

Australia also became involved in a regional conflict known as the Malayan Emergency. This was a **guerrilla war** (a war fought by small, independent groups of fighters) fought between British armed forces and the Malayan National Liberation Army, the military arm of the Malayan Communist Party. Australian military forces were sent to Malaya from 1950 until 1960, to support the British and Malayan governments in

opposing communists, with dozens of Australians killed and wounded.

In 1955, as part of regional efforts to stem the spread of communism, Australia joined the Southeast Asian Treaty Organization (SEATO). This was an alignment of Western powers and Asian countries intending to block communist gains in South-East Asia. The alliance lasted 20 years but achieved very little in practical terms due to internal conflicts, except for its educational programs, which had a lasting effect in the region.

The fear of communism culminated in the Vietnam War, a conflict in Vietnam, Laos and Cambodia lasting from 1955 to 1975. Strongly influenced by the domino theory and intending to contain the threat of communism, the US increased its involvement in the war throughout the 1960s. Australia became heavily involved in the conflict between 1962 and 1975, sending about 60 000 troops. In total, 521 Australian soldiers were killed and more than 300 wounded. The war was ultimately unsuccessful and, after 1975, communism arose in Vietnam, Laos and Cambodia, but failed to spread any further as had been suggested by the domino theory. The Vietnam War and its effect on Australian migration is discussed in detail later in this chapter.

Abolishing the White Australia policy

Australia's increased ties with the local region and involvement in successive wars inevitably led to the removal of the White Australia policy. After the gradual relaxing of restrictions following the *Revised Migration Act 1958*, the Holt Liberal Government in 1966 introduced major changes to the system of non-European immigration. This changed the criteria for migration to that of suitability as settlers, ability to integrate into Australian life, and possession of qualifications useful to Australia. This was a critical breakthrough because it finally removed race as a determinant when assessing the suitability of a migrant to enter Australia. As a result, non-European settler arrivals rose from 746 in 1966 to 2696 in 1971.

In October 1971, Gough Whitlam made an address to the press in which he outlined three changes he would be making to the Labor Party's immigration platform ahead of the 1972 federal election (see Source 8).

After winning the election and becoming prime minister in 1972, Whitlam and the Labor government formally removed the last remnants of the White Australia policy in 1973 when it issued new instructions to totally disregard race as a factor in selecting migrants. This was supported with legislation that all migrants, regardless of origin, could apply for citizenship after three years' permanent residence. In addition to this, the government ratified (signed) all international agreements relating to race and immigration. In 1975, this was followed by the introduction of the *Racial Discrimination Act* which made the use of racial criteria for official purposes illegal.

Mitsuru and Keiko Maeda and their son were among the first Japanese migrants to settle in Australia after changes to immigration laws in 1966.

Source 8

> We removed the assertion that a primary national objective must be to increase population. We removed the commitment to expand the immigration program. We related our immigration needs simply to the capacity of Australia to provide 'employment, housing, education and social services' – in other words a very specific instruction to the incoming Labor Government that people, the welfare of people, the people already here and the people who may come, must be the prime consideration, not mere numbers. And thirdly we said unequivocally that there must be no discrimination on grounds of race or colour or nationality.

Check your learning 15.6

Remember and understand

1. Explain the term 'Cold War'.
2. What was the name of the Minister for Immigration who allowed the first non-European immigrants to remain in Australia after World War II?
3. What changes did the *Revised Migration Act 1958* introduce to Australia's immigration policy?
4. What was the Colombo Plan and how did it affect migration?
5. In what year was the White Australia policy officially abolished? What did the Whitlam Government do to formally end the policy?

Apply and analyse

6. Communism played a major role in Australia's involvement in the region and its immigration policies between the 1950s and 1970s. Discuss how the domino theory, fear of communism and Australia's military engagements might have affected the development of Australia's immigration policies at the time.

Evaluate and create

7. Write a 500-word response arguing for or against the following statement:

   'The abolition of the White Australia policy in 1973 is one of the most significant events in Australia's history.'

   Your response should include the following:

   - **a** a brief account of how and why the policy was first introduced
   - **b** arguments raised at the time for its continuation
   - **c** arguments raised at the time against its continuation
   - **d** at least two primary or secondary sources referenced appropriately.

15.7 Towards a multicultural Australia

As the White Australia policy was gradually dismantled during the 1950s and 1960s, new policies began to take its place. Initially, a policy of **assimilation** was introduced, followed by one of **integration**. These policies were based around the idea that new migrants should conform to the attitudes, values and beliefs of the wider population and abandon or hide their traditional customs and languages. Over time, it became clear that these approaches were neither possible nor appropriate. As a result, the current policy of **multiculturalism** was adopted. Multicultural policies aim to recognise and embrace different cultures and traditions.

Source 1 Sydney's Indian community celebrates the Diwali festival at Parramatta Stadium as part of the Parramasala Festival, 2011

Monoculturalism, assimilation and integration

Immigration policy in the 1950s was based on the concept of assimilation. Broadly, this meant migrants were expected to give up their old culture and adopt Australian culture and customs. Assimilation was part of a push to preserve a single Australian culture by excluding the influence of other cultures and traditions – a practice known as **monoculturalism**. By the 1960s, assimilation gave way to a policy of integration. Under this policy, migrants were encouraged to celebrate their own cultures at home but to adopt mainstream Australian values and customs while in public.

The problem with assimilation as a policy was that it demanded people deny the culture, beliefs and values they had grown up with. This is an inherent part of an individual's identity, not easily changed by government policies that discourage cultural and ethnic diversity. The advantages of a monocultural society over one made up of diverse cultures were also unclear.

Even British arrivals, with similar language and culture, would experience a type of culture shock on arrival in Australia, and could often find it difficult to adapt to new life here. When language and cultural difficulties were added to the mix, it is easy to understand why many migrants struggled to assimilate and integrate. Italian migrant and musician Mario Millo provides a view of assimilation in Source 2. In an interview, he shares some of the difficulties he encountered as a new migrant in the school playground in the early 1960s.

Source 2

> For me, growing up with the name 'Mario' was a hassle most of the time. I remember my first horrific day at school barely knowing how to speak English, I only knew a few words here and there taught to me by my older sister Rosanna, who must have been through the same ordeal. I was in fourth class primary school (guess I was about 9 years old) – we lived very close to the public school and one day I invited one of my best friends home for some lunch. It was my mum's day off and she prepared spaghetti and also an Italian native lettuce (radicchio) which looks like leaves. He thoroughly enjoyed the food but a few days later the gossip in the playground was, Mario Ovaltine eats worms and grass'. From that point on we were no longer friends.
>
> From an interview with musician Mario Millo, whose family emigrated from Italy in 1954

Even integration was difficult where appropriate support was not available. Migrants would often find that their education, skills and qualifications were not officially recognised in Australia. Instead, they had to work in physically demanding labouring jobs in order to earn money. Mario Millo remembered the experience

of his Italian father, who had emigrated to Australia after border changes in Europe after World War II had meant that his home town was no longer in Italy but had become part of Yugoslavia. 'My father was a qualified diesel mechanic, but as a result of not being able to read or write English, spent his working years in Australia as a factory hand, on the lowest of wages.' This was the reality of assimilation and integration for many migrants in the 1950s and 1960s

The beginnings of multiculturalism

By the mid-1960s there was an increasing awareness of the difficulties migrants faced when adjusting to a new life, new language and new culture in Australia. The end of the White Australia policy and the influx of new migrants to Australia from all parts of the world meant Australians were increasingly exposed to new cultures, traditions and beliefs that challenged the concept of a monocultural Australia.

Multiculturalism involved accepting and embracing the cultural practices and traditions that migrants brought with them to Australia. It was a natural transition from the White Australia and assimilation policies that had rejected other cultures and ignored the importance of culture to individuals and social groups. Multiculturalism allowed Australians to accept diversity and cultural uniqueness, and the benefits of interaction between people of different backgrounds. For migrants, it allowed them to celebrate their cultural origins while still embracing their adopted country.

Multiculturalism was officially recognised by the government in 1973 when the Whitlam Labor Government's Minister for Immigration, Al Grassby (see Source 3), issued a reference paper called 'A multicultural society for the future'. Grassby had been instrumental in formalising the end of the White Australia policy and calling for increased migration

Source 3 Al Grassby speaking at the Griffith Wine Festival in 1973

from non-English speaking countries. Although Grassby's seat was targeted by anti-immigration groups in 1974, causing him to lose his seat, Whitlam appointed him the first federal Commissioner for Community Relations, responsible for administering the new *Racial Discrimination Act 1975*.

Both Prime Minister Whitlam and Opposition Liberal leader Malcolm Fraser embraced the vision of a multicultural Australia in a **bipartisan** manner. This cooperation was significant during one of the most divisive periods in Australian politics and, when the Fraser Government replaced the Whitlam Government in 1975, this approach continued. In 1977 the Ethnic Affairs Council, set up by the Fraser Government, recommended multiculturalism become official public policy. The first official programs were implemented the following year, and in 1979 the Australian Institute of Multicultural Affairs was established by an act of parliament to raise awareness of cultural diversity and promote social cohesion, understanding and tolerance.

Check your learning 15.7

Remember and understand

1. Describe the difference between monoculturalism and multiculturalism.
2. Who was Al Grassby, and what role did he play in developing a multicultural Australia?
3. What evidence does Source 2 provide that the policy of assimilation adopted in 1950s Australia was difficult for new migrants?

Apply and analyse

4. Why do you think the Whitlam and Fraser governments introduced and supported a multicultural policy for Australia?
5. Create a flowchart to illustrate the different immigration policies implemented in Australia since the 1950s. Include the dates for each and a brief description of what ideas the policies were based around.

15.8 The migration debate since 1980

After the government's acceptance of multiculturalism in the 1970s, migrants of different backgrounds had largely become accepted in Australian life. Officially Australia continued to support a migration policy based on skills and not race, and Australia significantly expanded its intake of refugees and displaced persons from around the world.

The arrival of the first Vietnamese refugees by boat in the late 1970s, following the end of the Vietnam War, marked a turning point in Australia's humanitarian migrant intake. By the mid-1980s Australia was accepting tens of thousands of Vietnamese refugees under international arrangements (refer to section 15C of this chapter on the Vietnam War), and migration from ordinary channels was still increasing. Over the next two decades, the number of asylum seekers arriving by boat each year would also increase as conflicts broke out around the world, reaching 5500 in 2001 and sparking heated public debate in government, the media and society. This would set the scene for a new Australian debate on immigration relating to refugees and asylum seekers that continues to this day.

New political debate

In 1983, Bob Hawke was elected prime minister. The Hawke Labor Government remained in power from 1983 to 1991 and maintained the political and legislative support it needed to keep multiculturalism as a central immigration policy. In 1984, historian Geoffrey Blainey delivered a speech in which he argued that the rates of Asian immigration to Australia were too high, threatening the social cohesion of Australian society. This helped spark a media and political debate that broke the bipartisan support on migration levels that had characterised much of the previous decade. Although the White Australia policy had long since been abolished, the debate on levels of Asian immigration continued. Increasingly it became linked to debate on the acceptance of refugees.

The debate reached its peak at the end of the 1980s, when then Opposition leader John Howard developed a new Liberal Party policy on immigration and ethnic affairs called 'One Australia'. When discussing it on radio in 1988, Howard suggested the rate of Asian immigration should be slowed. He questioned multiculturalism, arguing it meant that it was impossible to have an Australian ethos or common Australian culture under the policy. He also commented that 'multiculturalism suggests that we can't make up our minds who we are or what we believe in'.

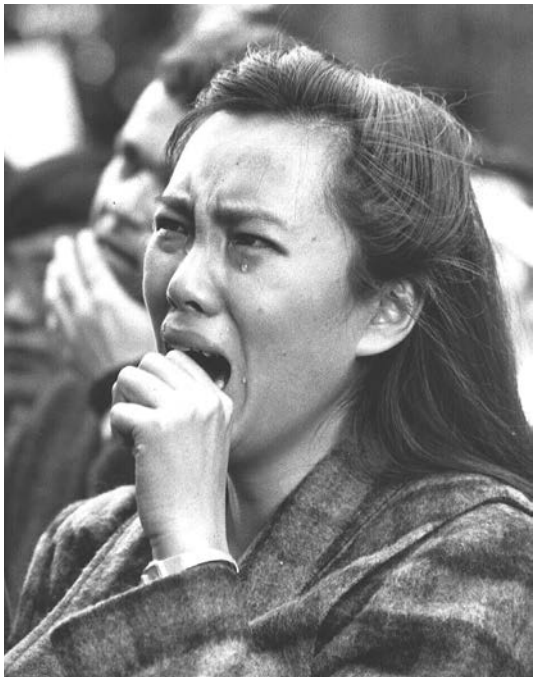

Source 1 Australian Prime Minister Bob Hawke in 1983

Source 2 John Howard in 1988, as Leader of the Opposition

The Hawke Labor Government quickly reacted to this, introducing a parliamentary motion rejecting the use of race to select immigrants. In 1989 the government released a statement titled *National Agenda for a Multicultural Australia*, which defined the principles of multiculturalism based on three rights and three obligations (see Source 4).New initiatives also included a National Office of Overseas Skills Recognition, improved access to government services for all groups, greater support for English language teaching and second language learning, and stronger relationships between government and ethnic communities through a community relations campaign.

Source 3 A Chinese student in Sydney in tears on hearing of the pro-democracy uprising taking place in Tiananmen Square, 1989

Source 4

> The right to cultural identity (expressing and sharing one's individual cultural heritage, including their language and religion); social justice (equality of treatment and opportunity, and the removal of barriers of race, ethnicity, culture, religion, language, gender or place of birth); and economic efficiency (the need to maintain, develop and utilise effectively the skills and talents of all Australians).
>
> The obligation to have an overriding and unifying commitment to Australia, to its interests and future first and foremost; to accept the basic structures and principles of Australia; and to accept that the right to express one's own culture and beliefs involves a reciprocal responsibility to accept the right of others to express their views and values.
>
> Australian Government (Office of Multicultural Affairs), *National Agenda for a Multicultural Australia*, Australian Government Publishing Service, July 1989

In 1989, after the Chinese government's brutal suppression of pro-democracy demonstrators in Tiananmen Square, Beijing, Prime Minister Hawke granted permanent residency to 2000 Chinese students in Australia at the time, and refused China's request to force the students to return home.

Mandatory detention

In 1991, Prime Minister Paul Keating took over as leader of the Labor Government and introduced the next major policy change for migration. In response to the increasing number of Vietnamese, Chinese and Cambodian refugees seeking asylum in Australia and the apparent levels of community concern, the Keating Government in 1992 introduced a system of **mandatory detention** of asylum seekers. This meant anyone arriving in Australia without a valid visa would be detained immediately on arrival until they underwent relevant checks and assessments. The government wished to signal that 'migration to Australia may not be achieved by simply arriving in this country and expecting to be allowed into the community'. In 1994, the initial time limit on detention was also removed, meaning asylum seekers could be detained indefinitely.

One Nation

Despite the government's attempts to control the migration debate, the issue continued to grow. It became central to the 1996 federal election, when the Howard Liberal Government was voted into power. Queensland member Pauline Hanson was also elected to federal parliament. Initially a Liberal candidate, she became an Independent after being disendorsed (no longer supported by the party) due to comments she made about the 'special treatment' of Indigenous Australians. In her maiden speech after being elected as the Member for Oxley, Hanson said, 'I and most Australians want our immigration policy radically reviewed and that of multiculturalism abolished. I believe we are in danger of being swamped by Asians'. Hanson went on to form her own political

Source 5 Pauline Hanson and One Nation, 1996

party, One Nation, which attracted support in the late 1990s in her native Queensland. Her divisive policies on immigration and ability to play on the fears of some voters permanently affected the political landscape. After more than a decade away from politics, in 2016 Hanson was elected to the Senate representing Queensland.

Migration during the Howard years

Since his time as opposition leader in the 1980s, Liberal politician John Howard had rejected multiculturalism. Howard saw an 'Australian tradition' at the centre of national identity and argued that migrants should embrace that tradition. In 1996, Howard was elected prime minister of Australia. He remained in power until 2007. During his time in office he attempted to implement a citizenship test that required migrants to demonstrate an understanding of Australian history and sport. He also argued for a new preamble to the Australian Constitution that recognised God and 'mateship'. Howard summarised his beliefs on multiculturalism in a 2006 Australia Day address to the National Press Club (see Source 7).

Source 7

> Most nations experience some level of cultural diversity while also having a dominant cultural pattern running through them. In Australia's case, that dominant pattern comprises Judeo-Christian ethics, the progressive spirit of the Enlightenment and the institutions and values of British political culture. Its democratic and egalitarian temper also bears the imprint of distinct Irish and non-conformist traditions.
>
> John Howard, excerpt from address to the National Press Club, 26 January 2006

Source 6 A Nicholson cartoon reflecting on the Howard Government's immigration policies, *The Australian*, 11 June 2000

key**concept:** Contestability

The 'Children overboard' affair

On 6 October 2001, the HMAS *Adelaide* intercepted a boat, the *Olong*, carrying Iraqi asylum seekers towards Australia. This event took place the day after Prime Minister Howard had called a federal election in which the question of asylum seekers was to be a key issue.

Two days later the *Olong* started to sink, and some of the *Adelaide*'s crew dived into the water to help rescue the passengers. Confused reports meant that Canberra was originally told that parents on the *Olong* had threatened to throw or actually had thrown their children overboard so they would be rescued by the *Adelaide*.

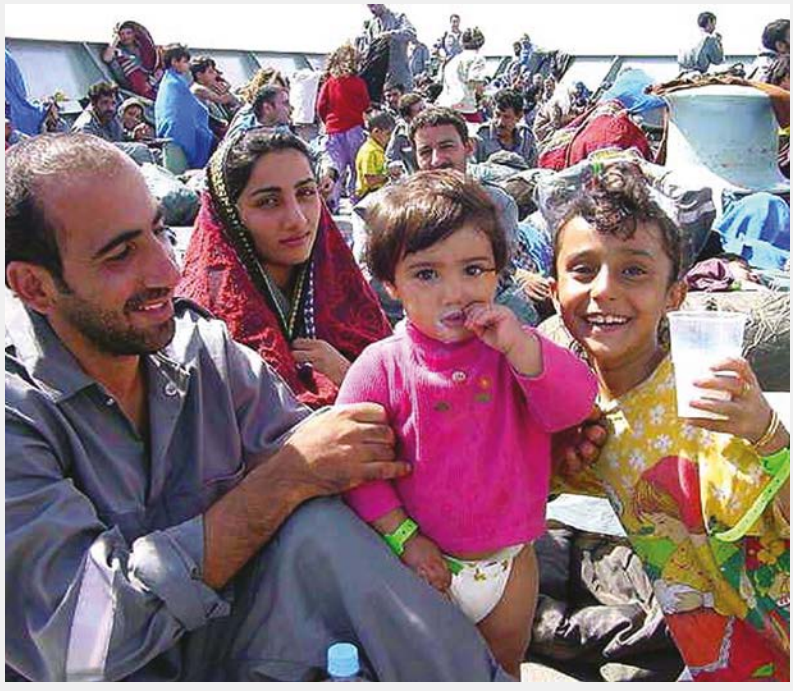

Prime Minister Howard, Minister for Immigration Ruddock and Minister for Defence Reith all condemned the asylum seekers for such cruel treatment, and used this as a reason to be harsh on all asylum seekers. Investigations indicated that there was real doubt about whether children had been thrown overboard, but the government continued to insist they had. The government also refused to release most photographs from the *Adelaide*, other than those that showed the crew of the *Adelaide* in the water with children.

A Senate committee later found no children had been at risk of being thrown overboard and that the government had known this prior to the election. The government was criticised in the media for misleading the public and cynically exploiting voters' fears of a wave of illegal immigrants. The sailor shown in Source 8 later had her aunt tell ABC News, 'at no stage was anybody throwing anyone overboard'.

For more information on the key concept of contestability refer to page 246 of 'The history toolkit'.

Source 8 This picture, taken with a mobile phone, shows Able Seaman Laura Whittle rescuing a mother and son from the water – they were among those who had been on the *Olong* on 8 October 2001.

During Howard's time as prime minister, asylum seekers and refugees became the main focus of Australia's migration debate because the numbers of arrivals continued to rise. During his 2001 campaign for re-election, Howard famously stated 'We will decide who comes to this country, and the circumstances in which they come' in reference to boat people arrivals. Later that year, the issue of asylum seekers became highly controversial during the *Tampa* and 'Children overboard' affairs.

During his first term in office, Howard continued the mandatory detention policy introduced by the Keating Government. The Howard Government took this one step further by also introducing a tough new approach to 'deter and deny'. Central to this approach was the 'Pacific Solution' – a policy that involved transporting asylum seekers to offshore detention centres set up on the Pacific islands of Nauru and Manus Island (in Papua New Guinea) where their refugee status would be determined. The government also increased border surveillance and patrols. Islands where boat arrivals usually attempted to land (such as Christmas Island) were also legally excluded from Australia's migration zone. This allowed the Australian government to avoid being subject to ordinary legal processes that refugees would otherwise be entitled to by law.

4 In pairs, consider how the debate about multiculturalism changed between its acceptance in the 1970s to the position held by the Howard Government. Debate the advantages and disadvantages of the approach promoted by the Hawke Government and the Howard Government.

Evaluate and create

5 What was the significance of John Howard's 2001 election statement: 'We will decide who comes to this country, and the circumstances in which they come'? Write a short paper evaluating whether this statement reflected any significant change in Australia's approach to immigration since the time of Federation.

15.9 The ongoing migration debate

Since the Howard years, 'boat people' and refugees have become the defining feature of the Australian political debate around migration. This is largely because the number of boat arrivals has continued to rise. Discussions around the reintroduction of the White Australia policy – although briefly revived by the One Nation party in the 1990s – have now been consigned to history. In its place is a policy of multiculturalism established in the 1970s by the Whitlam (Labor) and Fraser (Liberal coalition) governments. Despite the commitment to multiculturalism in Australia, debate still continues about the best ways in which to manage the numbers of new migrants arriving each year.

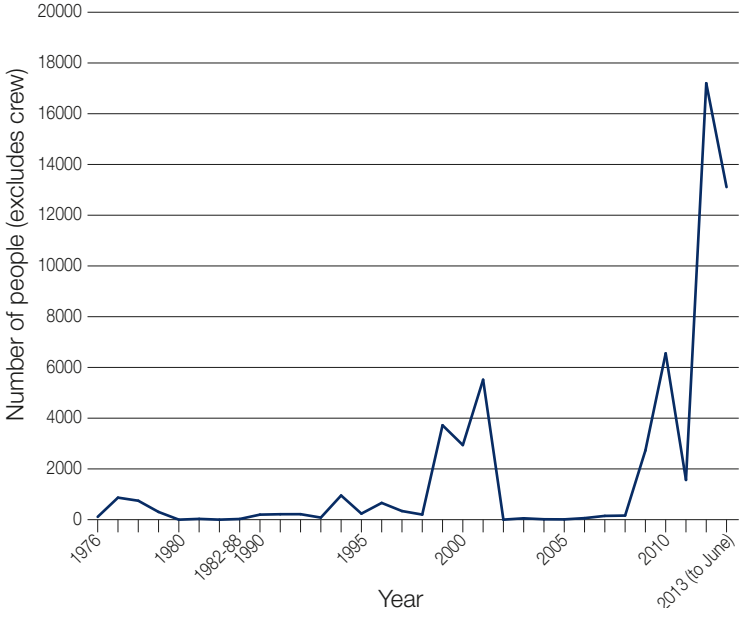

Boat people

The term **'boat people'** was introduced with the arrival of the first wave of Vietnamese refugees in the late 1970s and early 1980s, fleeing Vietnam through neighbouring Asian countries after the end of the Vietnam War. A second wave of asylum seekers arrived in 1989 and in the early 1990s, mainly from Cambodia, Vietnam and Southern China, at the time the Keating Government introduced its policy of mandatory detention. This was followed by a third wave in 1999 and in the early 2000s, mainly from the Middle East. The numbers of arrivals were larger than ever before, triggering the Howard Government's tough response – the Pacific Solution and 'deter and deny' policy described in the previous section. A fourth wave would soon arrive, bigger than any before, reaching 17 000 people in 2012 alone, and triggering another intense political debate. Source 2 illustrates this pattern of boat arrivals and the increase since 1976.

A noticeable difference with the recent waves is that asylum seekers often arrive with the help of intermediary 'people smugglers', people who arrange for refugees to make the voyage in return for a fee. These voyages are extremely dangerous, with overcrowded boats and equipment in terrible condition not fit for high seas, and trips often result in many people drowning. During the third and fourth waves, regular stories arose of tens or even hundreds of people dying from the sinking of a single ship at sea. Many of these boats sank near the shore of Australia's Christmas Island, close to Australia's maritime border with Indonesia and the most common destination. As these drownings became increasingly visible to the public via the media, the political debate became one of deterrence for reasons of safety, as much as slowing the number of arrivals.

Source 1 Children and women on a boat from Vietnam arrive in Darwin, November 1977

Source 2 Boat arrivals in selected years since 1976 (adapted from information at the Australian Parliamentary Library)

Despite regular changes in Australian government policy and repeated attempts to deter arrivals, the issue of boat arrivals is hugely complex. Push factors from source countries are outside the control of Australian policy, and for many people outweigh the risks and dangers of attempting the voyage. Although the number of arrivals has increased significantly since 1976, relative to the rest of the world the number remains comparatively small. The increase in people seeking asylum has raised concerns globally, with many destination countries facing much larger numbers. For example, in 2011 in Italy alone there were more than 61000 irregular boat arrivals, via North Africa, Greece and Turkey. The number of asylum seekers arriving by land, a problem that does not affect Australia, is even higher and often falls on the world's poorest countries. For example, in 2011, Pakistan hosted 1.7 million refugees and Iran almost 900000.

The Malaysia Solution

Successive Australian governments since the Howard years have attempted to address the issue. In 2007, the newly elected Labor government led by Prime Minister Kevin Rudd set about softening Australia's policies. Soon after taking office, Rudd closed offshore processing centres in Nauru and Manus Island (Papua New Guinea).

As new waves of boat arrivals increased, the Australian government (now under the leadership of Prime Minister Julia Gillard) set about toughening these policies again. In 2011, the government reached a deal with Malaysia to send a quota of boat arrivals to resettle in Malaysia, in exchange for Australia accepting a much larger number from Malaysia through normal refugee processing centres. The 'Malaysia Solution' was soon challenged by refugee advocates in the High Court of Australia. The court ruled by a large majority that the proposed arrangement was legally invalid. In response, the Gillard Government soon reopened detention centres in Nauru and Manus Island and introduced a new 'No advantage' policy in an attempt to deter people from making the voyage.

The PNG Solution

After Kevin Rudd took over from Julia Gillard as Prime Minister in 2013, one of the government's first actions was to announce a new refugee resettlement plan. The plan, which was developed in agreement with the Papua New Guinean Prime Minister Peter O'Neill, was called the 'Regional Resettlement Arrangement between Australia and Papua New Guinea'. This new plan became known simply as the 'PNG Solution'. Under the PNG Solution, any asylum seeker arriving by boat without a valid visa would be refused settlement in Australia, even if found to be a refugee. Instead the asylum seeker would be resettled in Papua New Guinea. The intent of this plan was to remove any attraction or pull factor for asylum seekers to make the voyage to Australia, and in turn dismantle the business of people smugglers offering voyages.

Both major parties welcomed the PNG Solution in an effort to appear tough on boat people, but the policy was strongly opposed by the Greens and there were several public demonstrations in major cities.

Operation Sovereign Borders

Boat arrivals and refugees were central to the 2013 federal election campaign between the Rudd Labor Government and Liberal Opposition, led by Tony Abbott. During the election campaign, the Liberal Party proposed a range of policies that were even 'tougher' than the PNG Solution. Central to the policy was a promise to 'Stop the boats'. The policy proposed a military-led response, similar to the one proposed by the Howard Government in 2001. It involved either 'towing' or 'turning' back any boats discovered on course for Australia, and included new proposals to buy any boats from people smugglers in Indonesia.

After being elected prime minister in 2013, Tony Abbott set about implementing these new policies under the name 'Operation Sovereign Borders'. During his first days in office, the policy created some diplomatic tensions with Indonesia. Indonesian officials complained publicly that their government had not been consulted on the policy and argued that the plan could interfere with Indonesia's sovereignty as a country.

Commitment to multiculturalism

Even though the political debate on migration in recent years has focused almost exclusively on boat people, Australia's commitment to a policy of multiculturalism has remained strong and is widely seen by Australians as successful. Despite some attempts by the Howard Government to revert to a policy of integration, multiculturalism has remained the dominant migration policy for almost 40 years and has been reinforced by successive governments.

In 2008 the Rudd Government announced the creation of the Australian Multicultural Advisory Council (AMAC). The council's purpose was to advise the government on 'practical approaches' to overcoming

Source 3 People from all over the world have chosen to become Australian citizens.

racism and intolerance and promoting diversity. The Gillard Government reaffirmed its commitment to multicultural policy in 2011, as illustrated by the quote in Source 4. It remains to be seen how future governments will approach the issue, but the success of multiculturalism in Australia today suggests any going back to the historical policies of the 20th century is unlikely.

Source 4

> Australia's multicultural policy embraces our shared values and cultural traditions. It also allows those who choose to call Australia home the right to practise and share in their cultural traditions and languages within the law and free from discrimination.
>
> Australia is a multicultural nation. In all, since 1945, seven million people have migrated to Australia. Today, one in four of Australia's 22 million people were born overseas, 44 per cent were born overseas or have a parent who was, and four million speak a language other than English. We speak [more than] 260 languages and identify with more than 270 ancestries. Australia is and will remain a multicultural society.

1 What was the Malaysia Solution and why did it fail?

2 Explain the differences between the Pacific Solution, the PNG Solution and the policy of 'Stop the boats'.

Apply and analyse

3 Look at the information provided in Source 2 showing boat arrivals. How does your study of history help you explain the variations in boat arrivals in Australia between 1976 and 2010?

4 Looking at this section and the last section, analyse how successive governments since the 1970s have viewed multiculturalism.

Evaluate and create

5 Governments since the early 1990s starting with the Keating Government have proposed tougher and tougher measures to deter asylum seekers arriving by sea. Looking at the graph of boat arrivals in Source 2, and considering the push and pull factors looked at earlier in this chapter, evaluate how effective you think these policies have been.

15B rich task

The *Tampa* crisis

On 23 August 2001, two vessels set sail from different ports. A Norwegian freighter called the *Tampa* left Fremantle headed towards Singapore. The *Palapa* left Java, heading towards Australia. On board the *Palapa* were 438 asylum seekers, most of whom were fleeing the Taliban regime in Afghanistan. The paths of the two vessels would cross in the Indian Ocean, creating an incident that would see Australia attract international criticism for the way it was handled.

On 25 August, the *Palapa* was spotted drifting without power, and the Australian Coastwatch called for shipping to help rescue its passengers. Captain Arne Rinnan on board the *Tampa* diverted his ship to assist the *Palapa*. Australian authorities told Rinnan to take those he had rescued to Indonesia. They informed him he would be prosecuted if he attempted to take the asylum seekers to Australian territory.

Rinnan attempted to turn towards Indonesia, despite Christmas Island being the closest land. However, the asylum seekers on board the *Tampa* became distressed and demanded to be taken to Australia. Responsible for ensuring the safety of his vessel, and with several asylum seekers becoming increasingly ill, Rinnan turned for Christmas Island.

The context of the incident was an impending federal election in Australia. To show firm leadership against asylum seekers arriving by boat, Prime Minister Howard rejected Rinnan's request to land the refugees. When the *Tampa* refused to leave, the Howard Government ordered troops from the Australian Army's Special Air Services Regiment to board the vessel. Norway responded by condemning Australia in the United Nations as 'inhumane and contravening international law'.

Source 1

> I have seen most of what there is to see in this profession, but what I experienced on this trip is the worst. When we asked for food and medicine for the refugees, the Australians sent commando troops onboard. This created a very high tension among the refugees. After an hour of checking the refugees, the troops agreed to give medical assistance to some of them … The soldiers obviously didn't like their mission.
>
> Excerpt of an interview with the *Tampa*'s captain, Arne Rinnan, in *Norway Today*

Source 2 Many of the asylum seekers on board the *Tampa* feared returning to Afghanistan.

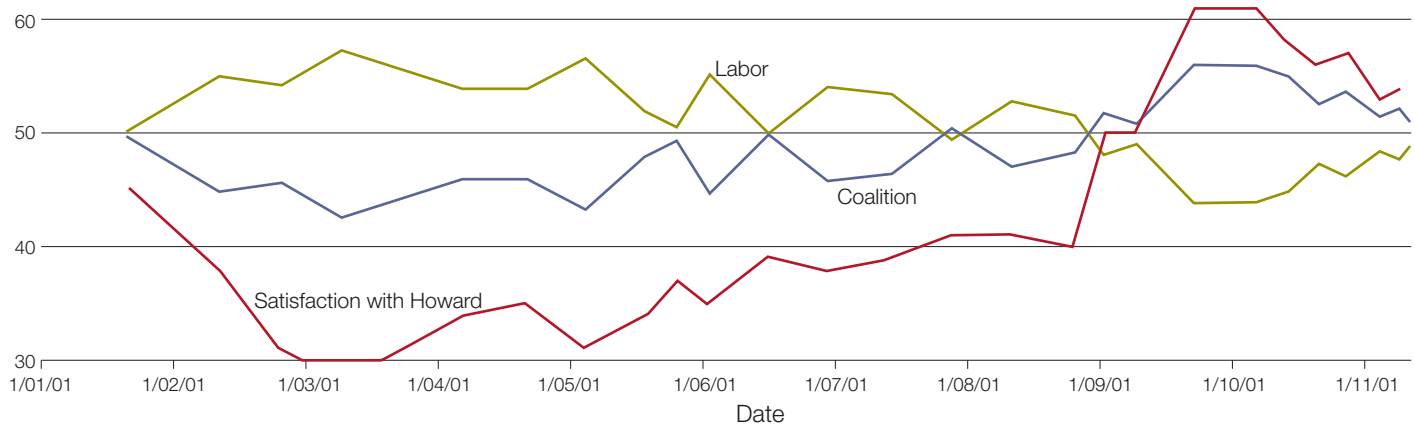

After frantic negotiations, Howard organised a $16.5 million deal to allow the asylum seekers to land on the tiny Pacific island of Nauru, his 'Pacific Solution'. A Nielsen poll showed that 74 per cent of Australians approved of Howard's handling of the *Tampa* affair (see Source 3). On 5 October, Howard called an election for 10 November, and ran on the slogan, 'We will decide who comes to this country, and the circumstances in which they come'.

From Nauru, New Zealand took 208 asylum seekers. Sweden, Canada and Norway each took 10; a further 179 Afghans, four Sri Lankans and three Pakistanis were convinced to return home. Australia ended up accepting just 28 of the 438 asylum seekers from the *Palapa*.

skill**drill:** Historical sources as evidence

Process and synthesise information from a range of sources for use as evidence in a historical argument

The primary sources that historians use to form opinions and arguments about the *Tampa* crisis can tell different stories. It is the job of historians to analyse these sources,

Source 3 Newspoll showing Prime Minister John Howard's approval ratings in 2001 – approval increased significantly around the time of the *Tampa* incident (the *Australian*, November 2001)

identify what evidence they provide to support or refute particular arguments, and come to a conclusion about their usefulness and reliability. It is important to identify who created each source and the reason why it was created. That way you can identify any potential bias. Once you have done this, you can write your argument, using the sources as evidence. You should explain why particular sources support your argument, and give reasons why the sources that disagree with you are not as important or valid.

Apply the skill

1 Examine Sources 1, 2, and 3 carefully. Copy the table in Source 4 into your notebook.

Source 4

	Source 1	Source 2	Source 3
What evidence does this source provide about the *Tampa* crisis?			
Who wrote or created it?			
Why was the source created?			
Is the source reliable?			

2 Once you have completed the table, use the information you have gathered to write a historical argument about the *Tampa* incident, using the plan provided below.

Title: Was Australia's treatment of asylum seekers aboard the *Tampa* justified?

Introduction: The *Tampa* crisis occurred when … (introduce the context of your piece and focus on the origins of the asylum seekers and the political situation in Australia at the time).

Paragraph 1: Some sources say … (explain which sources describe the asylum seekers' background and give examples of some of the conditions they were fleeing in Afghanistan).

Paragraph 2: However, other sources say … (explain which sources indicate that Australia's response to the situation was acceptable or necessary and give examples of some of the arguments provided).

Paragraph 3: We have to be careful about which sources we use because … (explain the problems with some of the sources in terms of reliability and bias).

Conclusion: Overall, the evidence suggests … (summarise the evidence and give your informed opinion about Australia's response to the *Tampa* incident).

Extend your understanding

1 The treatment of asylum seekers who reach Australia by boat continues to provoke debate and divide public opinion today. Do some research on the Internet to find out more about:

a how and why the countries of origin for asylum seekers have changed since 2001

b how Australian government policy towards asylum seekers has changed during this period.

Present a report of your findings in class.

15.10 The impact of the Vietnam War on migration

Before the end of the Vietnam War there were less than 2000 Vietnamese-born people living in Australia. These people were mainly tertiary students, the wives of Australian servicemen or orphans of the war. After the end of the war, when US and Australian troops withdrew and South Vietnam was overtaken by the communist North, people fleeing through neighbouring Asian countries began to arrive in Australia by boat after perilous voyages by sea.

During the war years it is estimated more than half the Vietnamese population was displaced. Huge numbers of Vietnamese would leave Vietnam to seek asylum in countries around the world and Australia would enter international agreements to accept refugees in large numbers not seen before. Most of the people would remain in Australia and begin new lives here, leaving a permanent impression on Australian culture and making positive contributions to the country. This section will proved a detailed case study of the Vietnam War and how if affected migration to Australia. We will look briefly at the background and how it unfolded, and its affect on Vietnamese migration to Australia. It will also look at some important Vietnamese and the contributions they have made to Australian culture and society today.

Source 1 Refugees from Vietnam land safely at Darwin Harbour, November 1977

Background to the Vietnam War

The Vietnam War was a military conflict fought between North Vietnam and South Vietnam. The conflict broke out in 1955 between pro-communist and pro-capitalist countries and was part of the Cold War. North Vietnam was supported by the USSR, China and North Korea, while South Vietnam was supported by the United States with its allies: Thailand, Australia, New Zealand, and the Philippines. The war was part of the American effort to prevent the spread of communism in Asia. Australia strongly supported this anti-communist stance and became involved in the war in 1962. During the Vietnam War – referred to in Vietnam as the American War – Australia fought alongside the United States, intervening in what was an internal conflict in Vietnam.

Historians have traced the beginnings of Vietnamese society back to as early as 2879 BCE. Since then, the Vietnamese have fought to preserve their independence. A failure of other countries to understand this fundamental element of Vietnamese society was at the root of the Vietnam War. Since the mid-19th century, Vietnam had been part of the French Empire. During World War II, however, Japan invaded Vietnam and treated the Vietnamese very badly. During this time, a Vietnamese communist revolutionary by the name of Ho Chi Minh led a resistance group to fight both the Japanese and the French occupation. In May 1941, Ho Chi Minh founded a communist coalition (known as the Viet Minh) to fight for Vietnamese independence from Japan.

After Japan's surrender in 1945, the Viet Minh formed a government and declared Vietnam's independence. However, British forces sent to Vietnam to accept the Japanese surrender were ordered by the Allies to restore French rule. The Viet Minh saw this as a betrayal, as they had supported the Allies during World War II and now expected to have independence recognised. By December 1946, the French and the Viet Minh were involved in a war that would last for another nine years.

By 1952, Vietnam had become divided. The Viet Minh had control of the north, and the French had set up a rival government in the south under the Vietnamese Emperor Bao Dai. The Soviet Union and China offered support and recognition to the Viet Minh in the north, while the USA and Britain did the same for Bao Dai in the south. With the election of Eisenhower in the USA in November 1952, the war was no longer regarded as a colonial war by the USA. Instead it became seen as a war between the free world and communism.

Bao Dai was ousted from power in the south by a man named Ngo Dinh Diem in 1955. Ngo Dinh Diem was a corrupt landowner who had little support from the Vietnamese people. However, because he was against communism, he had the support of the USA. Diem's police tortured and killed peasants suspected of supporting the Viet Minh.

Source 2 Captured Viet Cong member, 27 January 1967

In 1957, the Viet Minh in North Vietnam began a guerrilla war (a war fought by small, independent groups of fighters) against South Vietnam in order to reunify their country. The United States, under President Kennedy, sent American advisers to support the anti-communist government of South Vietnam. It also sent military advisers to help train and support the South Vietnamese army.

In December 1960, the National Liberation Front for South Vietnam was formed in opposition to Diem's government in South Vietnam. It allied with North Vietnam and became known as the Viet Cong. North Vietnam dramatically increased its military assistance to the Viet Cong, which then began attacking South Vietnamese military units. The Viet Cong continued to use guerrilla warfare against the government of South Vietnam and the United States through the war.

Australian involvement in the war

Australia's prime minister at the start of the Vietnam conflict was Robert Menzies. He fully supported the United States' anti-communist policy, and was a committed ally throughout the war. Menzies was a strong believer in the domino theory – the belief that, if Vietnam was allowed to fall to communism, then the rest of South-East Asia would quickly follow, just like dominoes falling one after another. In 1962, the Australian government committed its first military advisers to South Vietnam. That initial commitment of 30 men would grow to 60 000 over the next decade. It would also lead to the reintroduction of **conscription**

Source 3 Australian troops during the Vietnam War, 8 June 1965

for overseas military service, an issue that divided Australian society.

Five hundred Australians died during the Vietnam War, including 185 National Servicemen who had been conscripted to fight. By fighting for the South Vietnamese, the Australian military worked closely with many Vietnamese. Until the deployment of Australian soldiers to Afghanistan in 2001, Vietnam had been Australia's longest war.

How the war ended

Over the years, the Vietnam War became increasingly drawn out. Although it was a guerrilla war, all levels of the armed forces were involved. The conflict is referred to as the 'first television war' because television news crews accompanied soldiers into the field. News bulletins reported ever-increasing death tolls. Politicians continued to speak of a 'light at the end of the tunnel', while television viewers were becoming depressingly familiar with the sight of body bags and coffins.

In 1968, North Vietnamese and Viet Cong troops launched one of the largest military campaigns of the war against South Vietnam, the United States and its allies. It was known as the Tet Offensive and involved a series of surprise attacks on cities in the south. Although the offensive was eventually repelled, many troops were killed and any illusions that the war effort was going well for the United States and its allies were shattered. With public confidence and support dwindling in both the United States and Australia, politicians looked for ways to remove themselves from a conflict that looked to have no end.

Australia pulled out of the war in 1972, and the United States followed in 1973. All foreign support personnel and advisers pulled out in 1975 as the North Vietnamese approached Saigon. As the tanks rolled into the former Presidential Palace in Saigon, the USA calculated the cost of involvement in the conflict. More than 58 000 Americans had died.

The final result of the conflict was the collapse of the South Vietnamese government in 1975. That year, North Vietnamese troops gained control of South Vietnam and the country was reunified. In the aftermath of the war, both the United States and Australia opened their doors to refugees from the conflict. As a result, the Vietnam War changed the nature of migration to Australia.

4 In what year did the North finally overtake the South?

Apply and analyse

5 Why was the Tet Offensive of 1968 so important in the Vietnam War?
6 What was the 'domino theory'? Do you think it provides an appropriate justification for Australian involvement in the Vietnam War?

15.11 Vietnamese emigration: moral obligations

While fighting in Vietnam, the US and Australian troops had relied heavily on the South Vietnamese people for supplies and support. They required translators, administrative support staff and guides simply to function as an armed force. There were also a range of support services used to maintain the army in the field, such as shopkeepers, bar owners, taxi drivers and owners of accommodation used by soldiers. When the war ended, many people in the United States and Australia felt they owed a debt to these people and wanted to help them.

Re-education camps

At the end of the war, anyone who had worked with the United States was regarded as a traitor by North Vietnamese and Viet Cong troops. The victorious communists set up re-education camps to force those influenced by the West to change their previous loyalties. Investigations in the USA have concluded that about one million Vietnamese were imprisoned in re-education camps after the end of the war in April 1975, but there are many debates about the actual statistics. It is thought that about 165 000 people died in these camps, and that torture and ill treatment did take place. Generally, people were held in these camps from 3 to 10 years, but some people were locked up for up to 17 years. About 150 camps were built, and in the years following the war around one in three Vietnamese families had a relative in a prison.

As the re-education camps were set up, it appeared to many in the former South Vietnam that the West had simply abandoned them. The lucky ones had managed to secure passage with the Americans during the frantic final hours of the evacuation of Saigon. It was the million left behind who were to be the greatest test of moral obligation for the West.

Vietnamese displaced persons, refugees and asylum seekers

Given the horrors of war and the fear of imprisonment in re-education camps after reunification, many Vietnamese became desperate to leave the country. Some chose to leave because they feared political persecution because of their pro-American beliefs. Others felt their opportunities to prosper in a communist Vietnam would be limited by the new political system.

The United Nations Human Rights Commission (UNHCR) places people who flee from their country in various categories. Internally displaced persons are those who have been forced to flee their residence because of armed conflicts while they were still living within their country. Stateless people are those who are not considered a citizen of a particular state. Vietnam in the late 1970s had people in both these situations.

The greatest number who fled, however, were refugees (see Source 1) and asylum seekers (see Source 2). The UNHCR is regarded as the authority in determining the status of people after armed conflicts. These two definitions are still used today when assessing the victims of conflicts throughout the world who seek safer lives and more secure futures for their families.

Source 1

> [A refugee is someone who] owing to well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it.
>
> UNHCR guidelines

Source 2

> [An asylum seeker is] an individual who is seeking international protection. In countries with individualized refugee status determination procedures, an asylum-seeker is someone whose claim has not yet been finally decided on by the country in which he or she has submitted it. Not every asylum-seeker will ultimately be recognized as a refugee, but every refugee is initially an asylum-seeker.
>
> UNHCR guidelines

Boat people

As discussed earlier, the term boat people, has become highly politicised in Australian society since the 1970s. Border security has long been a concern for our island nation with a relatively small population. Boats have been arriving in Australia since first settlement, but the arrival of Vietnamese refugees began a new era of foreign migration.

The first boat refugees from Vietnam to arrive in Australia landed in Darwin in April 1976. This was a year after the end of the Vietnam War, and these new arrivals were driven by fear and desperation. According to government figures, the initial boat was followed by a further 2058 boats from Vietnam, with the final boat arriving in August 1981. The composition of the Australian population was changing, and the stereotype of a 'real Australian' was being challenged.

The journey to Australia

For most Vietnamese boat people the journey was horrendous. After bribing local officials, they took to dangerous seas, often on makeshift boats and rafts. The main hope was to drift into open sea lanes, and be picked up by a vessel that could take them to a safe destination. Sturdier vessels did make it as far as Australia, but many only made it as far as neighbouring countries such as Thailand.

Before leaving Vietnam, families had to sell all their belongings, and any money was usually converted to gold, which was easier to carry. Unfortunately, that made the boats prime targets for pirates, particularly along the coast of Thailand. Pirates became a major risk for potential refugees, and added further danger to a voyage that was already risky with storms and rough seas.

Source 3 This boat containing Vietnamese refugees was moored in Darwin Harbour on 5 October 1981.

Source 4 A refugee camp in Asia for Vietnamese refugees

There are no clear statistics, but estimates suggest 250000 to 500000 refugees perished in their attempts to leave Vietnam. There are graphic accounts by survivors of robbery, rape and murder by Thai pirates. Families were typically split before leaving Vietnam in the hope that at least one would survive and reach safety. Those fleeing survived on very little food and water, and with a voyage to Darwin lasting four weeks, many arrived in Australia in an emaciated condition.

Refugee camps

The UNHCR recognised the scope of the tragedy that was unfolding and established refugee camps in Malaysia, Hong Kong, Thailand, the Philippines and Indonesia to try and process the claims of the fleeing Vietnamese. Their work won the UNHCR the Nobel Peace Prize for 1981. From these camps, refugees were processed and resettled in countries willing to accept them.

The main countries to accept Vietnamese refugees were the United States (823000), Australia and Canada (137000 each), France (96000), Germany (40000), the United Kingdom (19000) and Japan (11000).

5 What is the difference between a refugee and an asylum seeker? How are they similar? How are they different? Use a Venn diagram to organise your ideas.

15.12 Significant individuals: the contribution of immigrants to Australia

One of the great achievements of Australia's acceptance of Vietnamese boat people has been the number of outstanding young Australians of Vietnamese heritage that have gone on to contribute to Australian life. Two Young Australians of the Year were Vietnamese refugees, and Vietnamese Australians have made major contributions to Australian culture.

Vietnamese immigrants have spread throughout Australia, enriching local communities when they start businesses. They have introduced new flavours with traditional Vietnamese cooking and brought new ideas to Australian thinking. The Vietnamese immigrants have established a reputation for hard work and an enthusiasm for community life.

A study of the significant contributions that talented young Australians of Vietnamese background have made reveal the true value Australia has gained from accepting the first 'boat people'.

Tan Le

Tan Le was named Young Australian of the Year in 1998 for her work in the community as well as outstanding contributions to telecommunications and business. Born in Vietnam in 1977, she arrived in Australia as a refugee in 1982. By the time she was 18 she was president of the Vietnamese Community of Footscray, finding jobs for Vietnamese Australians. In 2000 she was admitted as a barrister and lawyer, and in 2003 co-founded Emotiv, the neuro-engineering company that developed a breakthrough interface technology for digital media, taking inputs directly from the brain. It is regarded as technology that utterly transforms the way we interact with computers. By 2011 Tan Le was named by *Forbes Magazine* as one of 50 names to watch because of her work on a headset that takes orders directly from the brain.

Anh Do

Anh Do was born in Vietnam in 1977 and arrived in Australia in 1980 after leaving Vietnam on a fishing boat and reaching a refugee camp in Malaysia. Do chronicled the family's journey from Vietnam to Malaysia crammed aboard a fishing boat in his award-winning memoir *The Happiest Refugee*. After a degree in Business/Law, Anh Do decided that life as a stand-up comedian was preferable to the corporate world, and he developed a reputation on Sydney's comedy circuit as a witty observer of life as an immigrant. His acceptance into mainstream Australia is reflected by his popularity. He has made appearances on television shows such as *Dancing with the Stars* and *The Footy Show*. The popular and critical success of *The Happiest Refugee* showed the Australian public's willingness to engage with refugee stories.

Source 1 Tan Le was named Young Australian of the Year in 1998.

Source 2 Anh Do and Khoa Do

Source 3 Nam Le at the Melbourne Writer's Festival, 24 August 2008

Khoa Do

Khoa Do is Anh Do's brother, and was born in Ho Chi Minh City in 1979. He has a passion for drama, and this was the vehicle he used to reach other Vietnamese youths in Sydney's western suburbs. His first short film, *Delivery Day*, looked at the problems for a Vietnamese girl of balancing demands in Australian society. It was nominated for an AFI award in 2001. He was named Young Australian of the Year in 2005 for showing 'leadership, compassion, a will to inspire and inform Australians on issues that affect our communities'. In 2006, his film *Footy Legends* used his experience of Rugby League as a comedic bridge across cultures and featured his brother in the starring role. He has continued to use film to focus on Australian life, and his 2011 film *Falling for Sahara* details the lives of Ethiopian and Somali refugees in Melbourne.

Nam Le

Nam Le was born in Vietnam in 1977, and came to Australia by boat as a refugee when he was less than a year old. He grew up in Melbourne, graduating from the University of Melbourne with Honours in Arts and Law. He worked briefly in law, but discovered his passion for writing. In 2004, he attended a writing workshop in Iowa, and completed a Masters degree in Creative Writing. His first book, *The Boat*, dominated literary awards in 2008. It is a collection of short stories, ranging from material that echoes his memories of Vietnam to stories of a Hiroshima orphan and a 14-year-old Colombian assassin. Among the host of international awards Le received was the Dylan Thomas Award for writers under 30. It confirmed his arrival as one of the most exciting writers of his generation.

Remember and understand

1 How did each of these four people reach Australia?
2 What contribution has each made to Australia?

Apply and analyse

3 What do you think would happen to each of these people if they arrived in Australia the same way today?
4 Watch Khoa Do's film *Footy Legends*. How does it help you understand the experiences of migrant groups when they come to Australia?

Evaluate and create

5 Do you think these successes justify the post-Vietnam War immigration policy?
6 Undertake some further research and do some reading on the Internet about other significant Vietnamese Australians. Prepare a one-page profile including a photograph, outlining this person's achievements and contribution to society.

15C rich task

SBS and the *Thoi Su* controversy

A large proportion of Vietnamese Australians are either refugees or related to the refugees who fled to Australia after the collapse of the South Vietnamese government. Many of them are still haunted by the ill treatment and persecution they received from the communist government before they escaped. This issue came back into public attention in October 2003 when Australian multicultural broadcaster SBS began screening a Vietnamese-language news service, *Thoi Su* (which translates as Current Affairs).

The 35-minute bulletin was produced by the state-controlled VTV4 and broadcast by SBS as part of its WorldWatch line-up of news and current affairs from around the world. On 16 October 2003 the Melbourne *Herald Sun* published an opinion piece by Vietnamese Community in Australia (VCA) national president, Trung Doan, who criticised SBS for acting as a mouthpiece for state propaganda.

Source 1

> SBS TV's target audience are Vietnamese Australians, the great majority refugees or their reunited relatives. Many were among the one million put into labour camps when Saigon fell, or the millions whose houses and other properties were confiscated by the regime. They do not have to go far to see their former tormentors' faces and propaganda – it's right there, in their home.
>
> … I have met and heard of scores of non-viewers around Australia who have lost sleep or had nightmarish flashbacks just because they know the program is there.

Extract from 'Every Day SBS Twists the Knife', Trung Doan, *Herald Sun*, 16 October 2003

Over the following two months, thousands of Vietnamese Australians protested outside SBS's offices in Melbourne and Sydney to demand an end to the *Thoi Su* broadcasts.

Source 2 Members of the Vietnamese community protesting outside the SBS office in Sydney, 2003

SBS Television initially resisted the complaints. Appearing before a Senate estimates committee, SBS managing director Nigel Milan argued for editorial independence and suggested that VCA did not represent the majority of the Vietnamese community.

Source 3

> Mr Milan: It is a bit hard to say in terms of individuals because the no campaign is highly organised. There are coupons to cut out on the front of the Vietnamese language newspapers and send in to SBS, whereas the yes campaign is –
>
> Senator Conroy: Are you suggesting that this is like TV Week – one person is cutting out 10 coupons and sending them in? Is that what you think is happening?
>
> Mr Milan: Yes. The switchboard identified 23 calls from the same person on one evening. So it is quite an organised campaign. Up until this week, the numbers have been running substantially in favour of the no vote, probably on a 10 to one ratio, but since the demonstration and the issue getting broader community awareness, the yes vote is beginning to increase.

Extract from a meeting of the Senate Environment Communications Information Technology and the Arts Legislation Committee, 3 November 2003

The campaign against *Thoi Su* was well organised and had the support of high profile media commentators, including Alan Jones and Andrew Bolt. VCA delegations visited the offices of at least 20 MPs, including Communications Minister Daryl Williams and Labor's spokesman Lindsay Tanner.

In December 2003 SBS conceded to pressure and withdrew *Thoi Su* from broadcast. It also amended its code of practice 'to provide guidance for future additions to the WorldWatch line-up'.

Source 4

> [SBS] Television really acted very much as a broadcaster, you know: 'We will determine what goes to air based on quality and our charter', and they never really talked directly to people. What the Vietnamese were trying to say was, 'We'd really like to talk before you put something like that on the air!' They're not saying, 'Never, ever put this on, or else!' They were trying to have a conversation with us.

SBS Radio presenter Olya Booyar. Quotation from *The SBS Story: The Challenge of Cultural Diversity*, Ien Ang, Gay Hawkins and Lamia Dabboussy, 2008, page 43

skill**drill:** Historical sources as evidence

Identify the origin, context and purpose of primary and secondary sources

Historians use primary and secondary sources to gather evidence about the past. Both primary and secondary sources are useful, but sources will almost always reflect the perspective of the person who created them, as well as the attitudes and beliefs of the time in which they were created. All sources are affected by the author's own point of view, and in some cases an author may have been paid or forced to write in a particular way or persuaded to ignore certain facts. This is why historians must carefully analyse and evaluate sources. Historians need to identify:

- **origin** – what a source is and where it came from
- **context** – what life was like when the source was created
- **purpose** – why the source was created.

Follow these steps to identify the origin, context and purpose of a source:

Step 1: Identify the origin

To identify the origin of a source, ask yourself:

- What type of source is it?
- Who wrote, produced or made the source? What do I know about their age, gender, occupation, position in society or religious background?
- When was the source written, produced or made?
  - How old is the source?
  - Is it an eyewitness account or is it written by someone at a later date?
  - Is the source complete?

Step 2: Identify the context

To identify the context of a source, ask yourself:

- What was life like when this source was created?
- What other events may have been happening at the time that might have influenced the author or source?
- What was the political environment like at the time the source was created?
- What sort of common prejudices and social norms existed at the time which may have influenced the author or the source?

Step 3: Identify the purpose

To identify the purpose of a source, ask yourself:

- Why was the source written or created?
- Was it designed to entertain, persuade or argue a point of view?
- Does the author have anything to gain personally from the source?
- Does it give a detached, balanced account?
- Were there political reasons for the creation of the source?

Apply the skill

1 Write a 400-word report analysing two of the sources that appear in this section. For each source, make sure you explain:
   - **a** what the source is and who was responsible for creating it
   - **b** the political environment in Australia at the time the source was created
   - **c** the reason why the source was created.

   Be sure to work through each of the questions listed above while conducting your research.

2 Conduct some further research into the history of Australia's relationship with Vietnam since the end of the Vietnam War and add anything you consider relevant to your original report.

Extend your understanding

1 The *Thoi Su* controversy spread outside the Vietnamese–Australian community and led to arguments within the public at large both for and against its continued broadcast. Write a letter to the editor presenting your opinion on the issue. Your argument should take into account the perspectives presented by both sides.

15.13 The changing face of Australia

Australia has always been a culturally diverse continent. Before the arrival of the British, it is estimated that there were around 700 Indigenous cultural groups speaking more than 250 different languages across Australia. When the First Fleet arrived in Sydney Cove in 1788, there were around 60 different nationalities among the crew and convicts. Although the White Australia policy of the early 20th century sought to promote a monocultural Australia by restricting entry to non-Europeans, this was ultimately unsuccessful. Over time, Australia opened up and embraced a diverse society made up of many cultures, backgrounds and traditions.

Source 1 Australian cricketer Usman Khawaja – one of many Australian sporting personalities born overseas

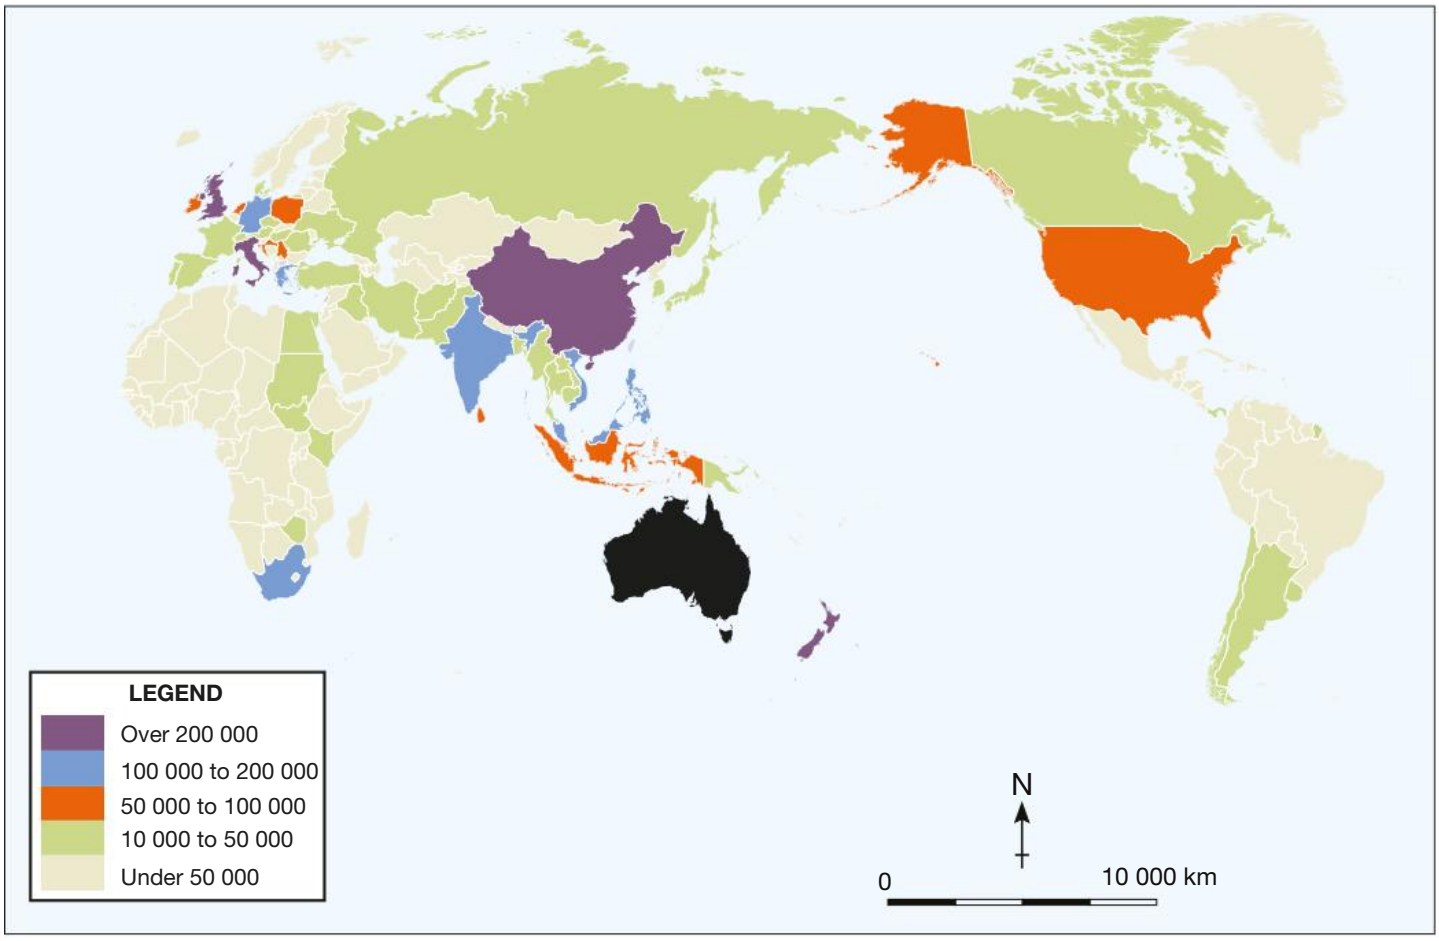

Multiculturalism at work

Source 2 shows the origins of people who make up the population of modern Australia. As we have seen, the countries of origin of Australia's migrants have changed continuously since the time of Federation in response to world events and changes in government policies. For example, in the 1960s around 45 per cent of all immigrants to Australia were born in Great Britain and Ireland. Although British-born immigrants were still the largest group in 2011, this number had declined to about 19 per cent. In addition to people from Britain, significant numbers of migrants now also come from New Zealand, China, India, Italy and Vietnam to settle in Australia. More recently, the Philippines, South Africa, Malaysia and Germany have also become major sources of migrants to Australia. These changes represent a significant departure from previous eras of Australian immigration history. As the White Australia policy was dismantled, other groups of non-European migrants increased. For example, Vietnamese immigration after the Vietnam War increased and Chinese and Indian immigrants also began to arrive. After the migration reforms of the 20th century and the establishment of multiculturalism, refugees from various trouble spots around the world, including Lebanon, Somalia, Sudan, Iraq and Afghanistan, began to arrive, making Australia their home.

Embracing diversity

In 2011, the Labor government launched a new policy called *The People of Australia: Australia's Multicultural Policy*. The policy was designed to reaffirm the importance of a culturally diverse and socially cohesive nation. As an indication of the changes in Australia since 1945, it was released in 11 different languages: Arabic, Chinese (simplified and

NUMBERS OF AUSTRALIAN PERMANENT RESIDENTS IN 2011 BY COUNTRY OF BIRTH

Source 2

Source: Australian Bureau of Statistics

traditional scripts), Dinka, French, German, Greek, Hindi, Italian, Spanish and Vietnamese. The geographical and cultural spread of these languages represents the history of Australian post-war immigration. In a speech at the time, Prime Minister Julia Gillard acknowledged her own immigrant roots. Gillard was the sixth Australian prime minister to have been born overseas:

Source 3

> Australia is a multicultural country. We sing 'Australians all' because we are. Our country's story is the story of our people in this place. Australia has provided a new home and a chance at a better life for millions of people. I am a migrant. My family embraced the sense of opportunity and community that they found in Australia and the possibilities for their children that this multicultural country offered them. I remember the debates in the family home as my parents decided to become citizens of this nation. And having chosen this country, my family have loved it with a fierce determination and passion ever since.

Prime Minister Julia Gillard in the foreword to *The People of Australia: Australia's Multicultural Policy*, Australian Government, 2011

Source 4 As a young girl, Julia Gillard came to Australia with her family from Wales.

Migration and global relations

Throughout Australian history, migration has been closely tied to its relationships with other countries around the world. Australia's history as a British colony and maintenance of close political ties has seen Britain retain its position as Australia's dominant source of migrants. Australia's close historical, political and cultural links to New Zealand, together with its close proximity, has seen a rise in the number of New Zealand immigrants – now second only to Britain as a source of Australia's migrants. Australia's historical relationships with countries in the Asian region such as Vietnam and China have also influenced the numbers of migrants choosing to settle here.

The influence of migration on foreign relations has also been two-way – close foreign relations have encouraged certain groups of migrants to travel to Australia, but the arrival of certain migrant groups has had the effect of strengthening ties between the two countries. For example, Australia's close ties with Britain have enabled it to take advantage of its membership of the Commonwealth of Nations, an international organisation of 53 countries with ties to the former British Empire. This relationship has permitted close links on trade, travel, foreign policy and encouraged other cooperation.

The arrival of large numbers of migrants has also improved Australia's relations with other countries around the world. The close familial and community bonds between people in Italy, Greece, China and Vietnam and migrant families from those countries in Australia have led to closer trade ties, cultural understanding and international cooperation. Informal estimates quoted by the Department of Foreign Affairs and Trade suggest Australia's Greek community could be as large as 600000, with Melbourne often described as the third largest Greek 'city' in the world after Athens and Thessaloniki.

Source 5 Close familial ties between people in Italy, Greece and other countries with migrants who live in Australia have led to deeper understanding and better international cooperation.

key**concept:** Significance

The Indian student controversy

Although Australia's international ties have been strengthened through migration, these ties can also result in new challenges. In 2009 the Australian and Indian media published reports of crimes and robberies against Indians living in Australia (particularly in Melbourne and Sydney). Australia has close ties with India and a significant Indian population (more than 1.5 per cent of all Australians). India is also the second largest source of international students for Australian institutions, and in 2009 there were more than 120 000 Indian students enrolled to study in Australia.

Although police evidence suggested that a number of crimes may have been racially motivated, a number were also opportunistic. Although it does not appear that any of the crimes were linked, the Australian and Indian media reported them all as racially motivated. This led to an Indian government investigation into the attacks. The investigation concluded that out of the 152 reported assaults against Indian students in Australia that year, 23 incidents had involved 'racial overtones'.

The findings received widespread media coverage and resulted in a strong negative reaction in India against Australia. As a direct result of these events, there was a 46 per cent drop in Indian students applying to study in Australia. As international education is Australia's second largest export after mining, the events had significant consequences for the Australian government and Australian educational institutions.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

Source 6
There were 152 assaults against Indian students reported in Australia in 2009. Of those, 23 were believed to have 'racial overtones'.

Remember and understand

1 How many different Indigenous cultural groups are estimated to have lived in Australia before the arrival of the British in 1788?
2 Which countries are the largest sources of migrants to Australia today?
3 How did Australia's close immigration ties affect the Indian student controversy of 2009? What effect did the incident have on Australia's economy?

Apply and analyse

4 Research the background of one wave of migrants arriving in Australia since 1975. What are the push factors that caused the group to leave their homes for Australia? How were they received in Australia and what influences has the group had on Australia's culture today?

15.14 Challenges and positive developments

Any migrant attempting to build a new life in an unfamiliar country will inevitably face challenges. Trying to adapt to a new language, culture, laws, values, food and other ways of life can be difficult. But the reverse can also present challenges – the arrival of new or unfamiliar people and customs into another group's culture can lead to misunderstandings, or in some cases suspicion and tension. While multiculturalism aims to embrace these differences, sometimes community tensions can arise and increase. While some see such tensions as a sign of failure on the part of multicultural policy, others see these problems as an opportunity to look closely at ourselves and draw strength from our differences.

One such event that drew widespread media attention and polarised certain sections of the community took place in the Sydney suburb of Cronulla in 2005.

Embracing diversity

The ability of Australia to openly discuss issues and adapt to the changing cultural mix of its citizens is a sign of its success as a multicultural nation. The following examples show how two of Australia's well-known institutions are making concerted efforts to be inclusive of other cultures and more representative of their communities.

After the Cronulla riots a program called 'On the same wave' was established to encourage Muslims to train as lifesavers. It was run by Surf Life Saving Australia in partnership with Sutherland Council (where Cronulla is located) and the Department of Immigration and Multicultural Affairs. Lifesavers are an iconic part of Australian beach culture and this program was designed to make surf lifesaving clubs more inclusive and multicultural.

Surf Life Saving Australia has more than 300 clubs and around 115 000 lifesavers patrolling the country's beaches. Young volunteers from the Muslim community were asked to complete a three-month training course in summer before obtaining bronze medallions and commencing patrols.

key concept: Significance

The Cronulla riots

In December 2005, Australia was shocked by a series of riots that erupted in the Sydney beachside suburb of Cronulla.

Conflict broke out on 4 December mainly as a result of a large influx of visitors to Cronulla beach. The riots first began as a result of a dispute between a group of young men of 'Middle Eastern appearance' and volunteer lifesavers patrolling Cronulla beach. The week after the 4 December incident saw increasing tensions, partially fuelled by talkback radio programs in Sydney.

A series of SMS texts was widely circulated during the week calling on 'Aussie pride' to come to a 'Leb and wog bashing day' at North Cronulla on Sunday 11 December. A crowd of about 5000 assembled at North Cronulla beach chanting slogans and wearing clothing with racially offensive messages. A number of people were injured in violent attacks and beer bottles smashed, as police moved to restore order.

For more information on the key concept of significance refer to page 245 of 'The history toolkit'.

Source 1 A police officer trying to separate two men fighting at Cronulla

Source 2 Mecca Laalaa on Cronulla Beach in 2007 wearing a 'burqini'

Source 3 Constable Singh in his adapted police uniform

But for Muslim girls, there was an additional barrier. The outfits worn by female lifesavers were too revealing and were against traditional Muslim beliefs. So a local designer, who is of Lebanese background, came up with the 'burqini'. It is a full-length lycra suit, which is loose enough to fulfil Muslim dress requirements and light enough to enable Muslim lifesavers to swim. It comes with a built-in hijab (headscarf).

Mecca Laalaa is one of the female volunteers who completed her training to qualify as a lifesaver. Like many others, she grew up hanging out at the beach with her friends and wanted to contribute by becoming a lifesaver. She received worldwide attention when she went on patrol in her burqini (see Source 2).

Victoria Police is also actively looking at ways to attract recruits from a range of cultural backgrounds into the police force. The state of Victoria is one of Australia's most multicultural, and Victoria Police is keen for its recruits to reflect the mix of groups in the community. In 2011, the first officer of the Sikh faith was inducted into Victoria Police.

Constable Amitoj Singh wears a newly designed police-issue turban, featuring the service's checkerboard pattern (see Source 3).

Multicultural broadcasting

In 1975, the government launched two multilingual radio stations (2EA in Sydney and 3EA in Melbourne). Following their success, the government announced a new television channel that would provide programs aimed specifically at the growing number of Australian citizens for whom English was not their first or native language. This new television channel, operated by the Special Broadcasting Service (SBS), would also be a reflection of Australia's multicultural society.

The new television service made its first broadcast in April 1979 with a test transmission broadcasting a compilation of special multicultural programs on the ABC. On 24 October 1980, SBS (then called Network 0/28), made its debut with its first program, a documentary called *Who are we?*

SBS's charter is to 'provide multilingual and multicultural radio and television services that inform, educate and entertain all Australians and, in doing so, reflect Australia's multicultural society'. Since its launch, SBS has provided news programs and other shows in many different languages as well as special interest programs, including sports telecasts, for cultural minority groups.

SBS now broadcasts in more languages than any other broadcaster in the world: more than 68 on radio, more than 60 on television, and more than 50 online.

Remember and understand

1 What evidence is there that the Cronulla riots were motivated by racism?
2 What program was started after the Cronulla riots to promote multiculturalism on Cronulla beach?
3 How is Victoria Police attempting to ensure a police force that is representative of multicultural Australia?
4 In what year did SBS start broadcasting?

Apply and analyse

5 What evidence is there that technology played a role in the Cronulla riots? What problems does this pose for future historians researching the riots?

15D rich task

Big Australia

Australia has undergone tremendous change since the Chifley Government announced its 'populate or perish' immigration policy at the end of World War II. Our population has grown from less than 8 million in 1947 to nearly 22 million by the time of the 2011 census. As the first 'baby boomers' born in the decade after World War II enter retirement, Australia has relied on an influx of younger skilled migrants to help replace the ageing workforce. An increasing proportion of these migrants are from China and India.

In 2009, Treasury forecasts showed that Australia's population was likely to increase to more than 35 million by 2050. Much of this growth was expected to come from high rates of immigration. Labor Prime Minister Kevin Rudd stated his support for high immigration and population growth and used the term 'Big Australia' to describe the policies needed to react to it.

Rudd's support for high population growth built on high immigration was controversial. Many agreed that support for Big Australia was vital to drive innovation and the economy. However, some high profile Australians, including Greens leader Bob Brown and entrepreneur Dick Smith, questioned the sustainability of a big Australia. Others believed high immigration would damage Australian culture.

Source 1

> One in two exporters are born overseas, two thirds of our entrepreneurs, one in four Australians. Just look at a city skyline and you see Westfield, Myer, Bing Lee. Everyone who's come here has been a migrant who's created great jobs for everyone.

> [Dry Liberal says: 03:32pm | 28/09/12]
>
> I'm sick of this xenophobia masquerading as Chicken-little doomsday-ism. Whenever this topic gets raised, we have all the negative-nellies coming out of their crank-hovels to shake their heads and tut-tut about the 'dire predicament' of having a larger population in our country …
>
> We ought to be proud our Country is growing healthily like it is! What these negative-nellie chicken-little dooms-day shriekster inexplicably fail to understand is that every new addition to our population adds net potential to our wealth and power …
>
> So we'll have more migrant workers … Awesome! Now we can undertake big projects like the Snowy river hydro scheme again, perhaps a network of Dams in the tropical north and a series of pipes running inland into the interior to create a huge inland sea and irrigate the desert.

Online comment responding to an article titled 'We're Hurtling Down the Track to a Big Australia'

skill**drill:** Historical sources as evidence

Writing historical discussions that use evidence from a range of sources

Historians study the past to figure out what happened, why things happened, and how specific events and developments affected individuals and societies. The more we know about the past, the better we can understand how societies have evolved into what they are today.

The answers historians offer are all more or less educated guesses about the past, based on interpretations of various primary and secondary sources of information. Historians also revise earlier explanations of the past, adding new information.

Historical discussions present different opinions about particular historical questions or issues. They consider evidence from a range of sources, and outline different possible interpretations of that evidence. This involves considering not only various primary sources (such as newspapers, photographs or political and legal documents from the period being studied), but the ideas of other historians, presented in secondary sources such as textbooks and on websites. Historical discussions conclude with the writer's own point of view on the question or issue, and include a bibliography which references all sources used in the discussion.

Source 4 Summary of the structure of a written discussion

Introduction	Introduces the topic, question or issue Outlines why the topic, question or issue is important
Main body	A series of paragraphs that outline different arguments or opinions about the topic, question or issue Each opinion or argument that is presented should also refer to the evidence which supports it.
Conclusion	Sums up the issue and gives the writer's opinion

Any sources that you have used in your written discussion must be referenced. First, you need to mention in your writing where information is coming from. Some examples of how you can do this include:

'According to the economist Tim Harcourt …'

'The depiction of migrants from non-English speaking backgrounds in the article 'The Risks of High Migration' shows that …'

You then need to include any sources you have referred to in your discussion in a bibliography. When citing a book in a bibliography, include the following information, in this order:

1 author surname(s) and initial(s)
2 year of publication
3 title of book (in italics)
- edition (if relevant)
- publisher
- place of publication
- page number(s).

Example: Easton, M and Saldais, M, 2011, *Oxford Big Ideas Geography/History 9 Australian Curriculum*, Oxford University Press, Melbourne, pp. 18–19

When citing an online source in a bibliography, include the following information, if available:

1 author surname(s) and initial(s) or organisation name
2 year of publication or date of web page (last update)
3 title of document (article) enclosed in quotation marks
- date of posting
- organisation name (if different from above)
- date you accessed the site
- URL or web address enclosed in angle brackets.

Example: Birrell, B, 2010, 'The Risks of High Migration', accessed 30 March 2016, <http://www.cis.org.au/images/stories/policy-magazine/2010-autumn/26-1-10-bob-birrell.pdf>

Apply the skill

1 Write a 500-word discussion tracking the history of arguments for and against high immigration and population policies in Australia. Some points to consider:
   - **a** When planning your essay you should use the information and sources included in this section.
   - **b** You will also need to conduct your own research to locate a range of primary and secondary sources of information that provide evidence about other factors, events and attitudes that contribute to the debate.
   - **c** Make sure you include a bibliography that references all your sources using the conventions outlined above.

Extend your understanding

1 Consider how Sources 1, 2 and 3 in this section present quite different perspectives on the contribution that migrants have made to Australian society. Does one of the perspectives seem more reliable to you than the others?
   - **a** Write a paragraph explaining what evidence would be needed to support the source you have chosen.
   - **b** Prepare a presentation for your class in which you defend the source you identify with. Your presentation should take into account the points raised by the competing perspectives included in this section.

Unit 3 The globalising world (1945–the present)

Political crisis: The Vietnam War

The Vietnam War erupted as tensions over the conflicting political ideals of **communism** and **capitalism** reached their peak. The global political crisis surrounding the Vietnam War would lead Australia to become involved in one of its longest military commitments, stretching from 1962 until 1973. The political impact of this war was felt not just in Vietnam where the fighting took place but all over the world. For those who experienced the war and its aftermath, the effects can still be felt today.

Differing views on Australia's involvement in the Vietnam War divided families and communities, and many expressed their opposition through mass anti-war rallies and marches. The legacy of the Vietnam War was Australia's recognition of its place in Asia and its need to foster closer relationships with its Asian neighbours.

16A

Why did Australia become involved in the Vietnam War between 1965 and 1973?

1 In the six years after the end of World War II (1945–1951) many of the countries of Eastern Europe and closer to Australia in Asia fell under the control of communism. Suggest why in the 1960s the Australian government and people may have feared that communism would take over Australia as well.

16B

What was the nature of Australia's involvement in the Vietnam War?

1 Between 1965 and 1973, approximately 60 000 Australian troops and support staff served in Vietnam. Just over 500 were killed and about 3000 suffered injuries.

2 Over the same period, nearly 10 million US soldiers served in the Vietnam conflict and nearly 60 000 died. How would you explain the different loss of life between the two nations?

chapter 16

Source 1 The seventh battalion of the Royal Australian Regiment waiting to be picked up by US helicopters. Australia and the US were allies during the Vietnam War.

16C

How was Australia changed as a result of involvement in the Vietnam War?

1 The Vietnam War caused great divisions in Australia. Some supported the war throughout the period while some opposed it all along. A further group changed their attitudes as the war continued. Suggest two influences that could have caused some people to change their minds over the course of the war.

16.1 Australia in the Vietnam War era: a timeline

16.2 French Indochina

Vietnam, Laos and Cambodia were gradually colonised by France in the late 19th century. By 1898, the area was known as French Indochina. The colonies provided France with a steady supply of rubber, coal, silk and rice. However, the rights and wellbeing of the Indochinese people suffered under the French.

The French Legacy

The influence of the French undermined the social system of Vietnam. Large plantations replaced peasant farms and many former peasants were forced to work in dangerous and unhealthy factories and mines. The French promoted the Catholic religion over the local beliefs of Buddhism and Confucianism. They also encouraged the Chinese to take over merchant and shopkeeper roles from the Vietnamese in the towns and cities.

However, the French claimed to have made some positive contributions to Vietnam. These included the development of **infrastructure**, a Western education system and Western-style medical care. Unfortunately, access to these modern developments was denied to most Vietnamese.

Source 1 Ho Chi Minh

Source 2 The capture of Nam Dinh, 1883, was one of the earliest conflicts that helped the French take control of Tonkin (northern Vietnam). The French colonised Vietnam as part of Indochina from the late 19th century up until 1954.

Ho Chi Minh

Ho Chi Minh (see Source 1) is Vietnam's greatest national hero. Ho was from a middle-class family and educated in French schools in Vietnam. In 1917, he went to Paris to continue his studies. Here, Ho Chi Minh learned about nationalist and communist ideas. By the time he returned to Vietnam, in 1940, he had developed a plan for Vietnam's independence. During the Second World War, Ho Chi Minh founded the Vietnamese Independence League, or **Vietminh**. This communist group organised the resistance against French colonisation and Japanese occupation.

The Second World War

Following the German occupation of France in May 1940, the French position in Vietnam was weakened. In the same month, the Japanese invaded Vietnam, wanting to use its rich natural resources for their war effort. Throughout the Japanese occupation, the Vietminh used their members to perform organised military attacks, or **guerrilla warfare**, on the Japanese to undermine their control and assist the allies to defeat Japan in the Pacific war.

The fight against the Japanese also made the Vietminh more and more popular among the Vietnamese people. By 1945, the Vietminh

was strong in the north and was gaining increasing support in the south. When the war ended in August 1945, Ho Chi Minh believed that the USA, Britain and France would support Vietnamese independence. After all, the Vietnamese had helped them to win a war against Japanese oppression. On 2 September 1945 Ho Chi Minh declared the Independent Republic of Vietnam.

Unfortunately, this declaration came at the beginning of the **Cold War**, a period of political crisis between the USA and the Soviet Union after World War II. Neither side actually fought each other, but there was extreme tension over their conflicting political ideals, specifically that of communism and capitalism (see Source 3).

Source 3 Comparison of the key features of capitalist and communist economic systems

	Capitalism	Communism
Government control	Belief that government should not interfere in the economy any more than necessary.	Belief that the government should control the economy for the benefit of all citizens.
Competition	Competition is healthy and encourages individuals to be the best that they can be.	Competition puts people against each other. All should work together for the common good.
Profit	Profits are a fair reward for owners of business. Different wages and salaries for different jobs are fair and encourage people to aim higher.	Profits kept in the hands of a few represents the exploitation of workers.

Fear of communism among the Western powers was strong. As the Vietnamese nationalists were also communist, Western powers felt their republic could not continue without threatening Western political stability. Just three weeks after Vietnam's declaration of independence, French forces, with the support of the USA, returned to Vietnam to re-establish control.

For eight years a war was fought between the French and the Vietminh. The French fought a traditional war but were no match for the guerrilla tactics of the Vietminh. This war ended with the defeat and humiliation of the French at the Battle of Dien Bien Phu in May 1954. For the second time in nine years, the Vietnamese declared their independence.

The partition of Vietnam

In July 1954, at peace talks in Geneva, Vietnam was officially divided from Indochina and given its borders (see Source 4). Both North and South Vietnam agreed to hold elections to form one government that would reunify Vietnam. However, once again the plans for an independent Vietnam were crushed. The elections were never held. The idea was opposed by the USA, as it feared a victory by the communists, led by Ho Chi Minh. The country remained divided and the conflict continued.

16.3 Fear of communism in Australia

The rapid spread of communism after the Second World War was the backdrop to many of the tensions and conflicts of the 1950s and 1960s. It was an important factor in Australia's decision to become involved in the Vietnam War. Communism was seen as a threat to the Australian way of life and to have the potential to destabilise the whole country.

The spread of communism in Asia

After the Second World War, the focus of Australia's foreign policy had shifted. Despite a continued connection to Europe, there was an increasing awareness of Asia. The establishment of the People's Republic of China in 1949 and communist threats in Korea, Malaya (Malaysia) and Vietnam were thought to pose a real threat to Australia.

These fears led to the **domino theory** – the idea that if one country in South-East Asia fell to communism, others in the region would follow. This theory was readily accepted by many Australians because of the Second World War experience. They had witnessed the Japanese 'island hopping' through China, Indochina, Malaysia, Indonesia and to Australia's northern shores between 1940 and 1942. If the Japanese could achieve this within a few years, then many assumed that Chinese communists would be able to do the same.

Australian responses to the threat of communism

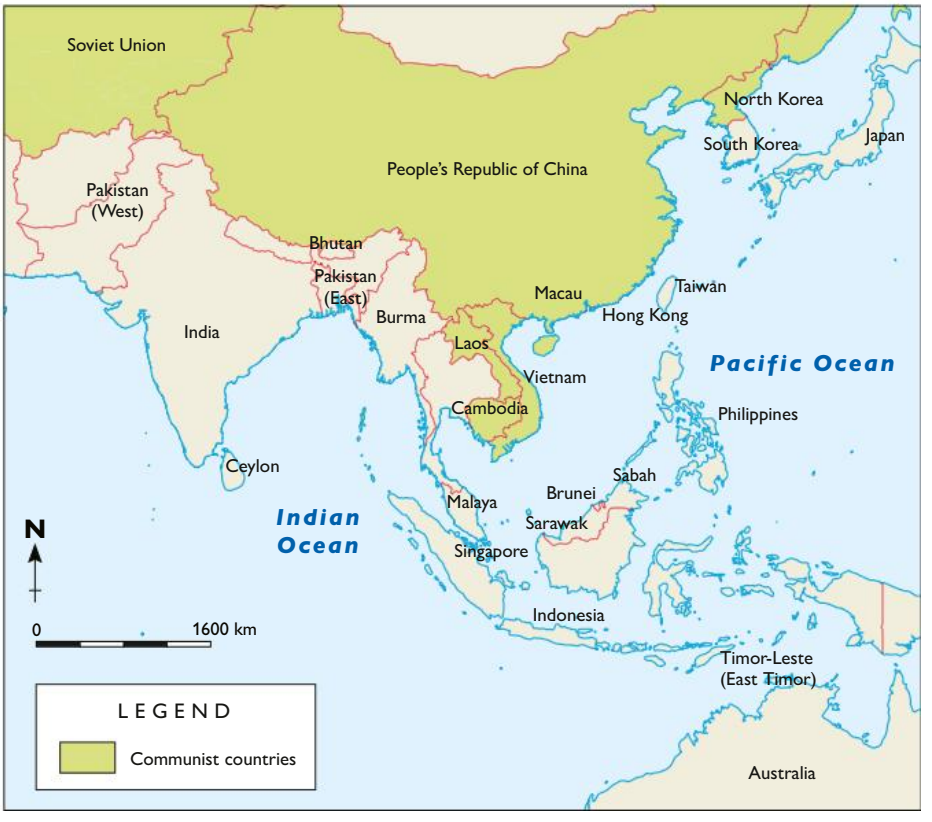

The Australian government's response to the domino theory was 'forward defence'. This meant that they would send troops into conflicts, to meet any possible communist threat before it came too close to Australian shores. This strategy was followed by the Menzies Government in its decisions to send forces to the conflicts in Korea (1950–53) and Malaya (1950–60).

The Menzies Government also responded to the fear of communism by establishing the Australian Security Intelligence Organisation (ASIO) in 1949. Its main purpose was to watch and report on people suspected of being communists.

The government also attempted to ban the Communist Party of Australia (CPA). The party had been formed in Australia in the 1920s but it had never really been popular. By the early 1950s, the party had fewer than 7000 members. Nevertheless, many people still believed the CPA was a real threat that might take over Australia.

In April 1950, the Australian Parliament, under the leadership of Prime Minister Robert Menzies,

ASIA: COMMUNISM AFTER WORLD WAR II

Source 1 Source: Oxford University Press

Source 2 'All I want is the power to deal with these reds!', Ambrose Dyson, published in The Guardian, 2 August 1951 (Reds was the term used to describe communists)

passed the **Communist Party Dissolution Bill**, to outlaw the Communist Party. When the bill was declared unconstitutional by the High Court, Menzies introduced a referendum for everyone in Australia to vote on the issue. The idea was again defeated by a narrow margin. While many Australians opposed and feared communism, they were also uncomfortable with the idea of banning a political party or limiting the freedom to hold an opinion.

The Petrov case

In 1954, fear of communism was again brought to public attention by the Petrov case. An official at the Soviet Embassy, Vladimir Petrov, defected (changed his allegiance to Australia) and asked to stay in Australia. In return, Petrov provided the Australian government with information about Soviet spying.

The news that Soviet agents had been spying on Australia raised anxiety about communism to an extreme level. The Petrov defection came on the eve of a federal election – an election that the Menzies Government had been tipped to lose. Menzies campaigned on the claim that his government could deal with the communist threat more effectively than the Labor Party. The Menzies Liberal Government won a resounding victory.

When Petrov defected, Soviet officials swooped on his wife Evdokia and placed her on a plane to Moscow. However, the plane had to stop in Darwin for refueling and ASIO officials took the opportunity to snatch Mrs Petrov. The case attracted enormous publicity. It helped to create a climate in which any action seemed acceptable if it was designed to combat communism.

Evaluate and create

4 Conduct further research on Vladimir and Evdokia Petrov and write a newspaper article on their experience as Soviet defectors.

5 Examine Source 2. What point is the cartoon making about Menzies and about the people who opposed banning the communist party?

16.4 Australia's initial involvement

With the fear of communism in the region, it is not surprising that the Australian government was eventually to become involved in the conflict in Vietnam.

Following the division of Vietnam in 1954, two separate governments were established. The South was officially democratic and became the Republic of Vietnam, under the Presidency of Ngo Dinh Diem. The communist North became the Democratic Republic of Vietnam under the Presidency of Ho Chi Minh. The subsequent war over whether Vietnam should be communist or democratic was to continue for almost 30 years.

Australia's alliances

After the Second World War II, Australia joined two alliances that would have a major influence on foreign policy decisions during the 1950s and 1960s.

The first was the ANZUS Treaty, signed by Australia, New Zealand and the USA in 1951. ANZUS is a military alliance between the three countries, formed in response to China becoming a communist republic. It was also a long-held desire of Australia to formalise an alliance with the USA. Nevertheless, some people questioned the fact that Australia had entered a defence alliance that did not include Britain. Because the USA was by far the most powerful of the three countries, Australia felt a certain obligation to comply with US policy in the region.

Source 1 The ANZUS logo

Australia also became part of SEATO, the South East Asian Treaty Organisation, in 1954. Like ANZUS, the organisation was formed because of the fear of communism, however it was much bigger. The USA, Britain, France, Pakistan, the Philippines and New Zealand joined Australia in pledging to support each other to resist the spread of communism in South-East Asia.

Australia was also a founding member of the United Nations (UN). During the Cold War period, the UN initiated a number of peacekeeping missions and military operations to resolve conflicts. The first example of the UN's use of military intervention was in the Korean War (1950–53).

Australia's initial commitment to South Vietnam

By 1962, the USA had more than 16000 advisers based in South Vietnam. They were not officially there to take part in combat, but to help train the Army of South Vietnam to fight against the North. A further role taken on by the USA was to help win over the **'hearts and minds'** of the South Vietnamese villagers and encourage them to be loyal to the government of South Vietnam. They did this by providing civilian aid such as medical help and construction work.

In July 1962, in response to requests for assistance from President Diem and because of treaty obligations with the USA, the Australian Government agreed to send 30 advisers to South Vietnam. These advisers made up the Australian Army Training Team Vietnam (AATTV), also known as just 'the Team'. Their duties were to provide security and military assistance to help the government of South Vietnam fight against communism. However, they were under strict instructions to not attend any military operations run by the Vietnamese forces they were training.

Benefits associated with 'hearts and minds'	Difficulties of 'hearts and minds'

16.5 Commitment of ground troops to the Vietnam War

For three years after 1962, Australia maintained a small, advisory force in Vietnam. By early 1965 it was obvious that the advisers were not making much of a difference in the fight against communism. A series of events in the USA and in Australia led to the commitment of ground troops. Australia and the USA changed from having just an advisory role to having an active military role in the Vietnam War.

The US decision to send troops to Vietnam

In August 1964, an unsuccessful attack was made on the US destroyer *Maddox*, off the coast of North Vietnam. In retaliation, the *Maddox* attacked three North Vietnamese patrol boats, damaging two and sinking the third. Despite this, the USA saw the attack on the *Maddox* as an act of aggression and became more involved in Vietnam. The US Congress passed a resolution on 7 August 1964 allowing the air force to begin bombing North Vietnam. Soon afterwards, the decision was made to commit two battalions of ground troops to fight on Vietnamese soil. They landed in Vietnam in March 1965.

Australia's decision to send troops to Vietnam

Less than two months later, Australian Prime Minister Robert Menzies announced that Australia would follow the USA and commit one infantry battalion to South Vietnam. This decision was influenced by a number of situations within Australia and in the Asia-Pacific region. Among these were:

- general fears about communism and the speed with which it was spreading
- particular fears about the threat of communism spreading down through South-East Asia to Australia – the domino theory
- the Indonesian 'Confrontation' with Malaysia in 1963, which heightened fears of a communist takeover in Australia's nearest neighbour, Indonesia
- Australia's obligations as a member of the United Nations and of ANZUS and SEATO.

The Menzies Government also argued that the decision to commit troops was in response to an invitation from the government of South Vietnam (see Source 1). It has since emerged that this was only partly true. The decision to send troops to Vietnam without being asked by the South Vietnamese government had the potential to create diplomatic and media problems for the Menzies Government. Therefore, the Australian government asked the South Vietnamese government to issue a formal request for troops. The request was duly sent and on 29 April, Menzies made his announcement.

Source 1

> The Australian Government is now in receipt of a request from the Government of South Vietnam for further military assistance. We have decided – and this has been done after close consultation with the Government of the United States – to provide an infantry battalion for service in South Vietnam …
>
> We have not, of course, come to this decision without the closest attention to the question of defence priorities. We do not, and must not, overlook the point that our alliances, as well as providing guarantees and assurances for our security, make demands upon us …
>
> Assessing all this, it is our judgment that our decision to commit a battalion in South Vietnam represents the most useful additional contribution which we can make to the defence of the region at this time. The takeover of South Vietnam would be a direct military threat to Australia and all the countries of South and South-East Asia. It must be seen as a thrust by China between the Pacific and Indian oceans.

Prime Minister Menzies' announcement in the House of Representatives that 800 men of the 1st Battalion Royal Australian Regiment would be sent to Vietnam, 29 April 1965

Source 2 Australian soldiers in Vietnam

The announcement that Australia was to send troops to Vietnam was met with mixed reactions. A poll conducted in September 1965 showed that 56% of Australians supported the war and 16% were undecided. Only 28% were directly opposed to Australia's involvement. Although the majority of people supported the war in 1965, there was already a small but determined opposition that was to grow steadily over the next seven years.

Check your learning 16.5

Remember and understand

1 What was the official role of the forces that the USA and Australia based in Vietnam between 1962 and 1965?

2 What incident prompted the USA to agree to send ground troops to Vietnam?

Apply and analyse

3 We now know that Prime Minister Menzies was not telling the full story when he announced that he had received an invitation to send troops to Vietnam.
Give and support your opinion as to whether this was justified.

Evaluate and create

4 Create a circular flow chart showing the process of events that led from the end of the Second World War to the arrival of Australian ground troops in Vietnam. You may also consult the timeline and earlier units in this chapter.
Your flow chart should have 'Fear of Communism' as its centre.

16.6 Conscription

Controversy about Australia's role in the Vietnam War was heightened by the issue of **conscription**. People who were conscripted, or chosen for compulsory military service, had no choice but to go to war. Conscription for 20 year olds, chosen by ballot, was introduced in November 1964. Initially, it was not expected that Australian conscripts would be sent overseas, but this changed in 1965. Throughout the Vietnam War, conscription was to cause bitterness, division and protest.

Source 1 The conscription ballot takes place.

History of conscription in Australia

Australia had traditionally resisted sending conscripts into overseas wars. During the First World War, the nation was bitterly divided on the issue of conscription and two referenda on the matter were defeated. In the Second World War, Australia was under threat from Japan and required more troops overseas. Prime Minister John Curtin (1941–45) announced that the nation's borders would be extended to include Australia's Overseas Territories, such as New Guinea. Conscripts could be sent to these territories, without technically being sent 'overseas'.

Support for conscription

The Menzies Liberal Government, the Democratic Labor Party and many older Australians supported conscription. Former Minister for the Army Jim Forbes was interviewed in 2014. In this interview, he argued that the system was necessary because the regular army was not attracting sufficient recruits. He also believed that the method was fair.

Source 2

> It (conscription) was never terribly popular, but it was a very fair system, and I had to take the burden for that. It never worried me … because I was completely convinced that we had to do it and it was a very fair system. A lot of people mocked the idea of putting marbles in a ballot box … It was very Australian way of doing it, and we never got the credit for doing it. People got knocked off in Vietnam, and it became very unpopular.
>
> Former Liberal Minister Jim Forbes, 2014

Source 3 Results of the conscription scheme in Australia, known as the National Service Scheme

Results of the National Service Scheme	Number of men
20 year olds registered for national service between 1964 and 1972	804 286
20 year olds selected and enlisted in the army	63 740
National servicemen who served in Vietnam	15 381
Exemptions from national service (including students and ministers of religion and for reasons of physical or mental disability. Or conscientious objection determined by court)	3563
Indefinite deferments from national service (including 20 502 married between selection and call-up; being a married man entitled you to a deferment)	35 548
Imprisoned after refusing to obey a call-up notice	14

Opposition to conscription

Opposition to conscription during the Vietnam War became stronger in May 1965, when the federal government announced that national servicemen

(conscripts) could be sent overseas to fight. Even some who supported the war, expressed doubts about the morality of sending conscripts overseas to fight against their will. Between 1965 and 1972, over 15 000 conscripts served in Vietnam and approximately 200 lost their lives.

During the war, opposition to conscription increased steadily. Organisations including the Draft Resisters' Union and the Youth Campaign Against Conscription (YCAC) were largely supported by those in the age group who were at risk of being conscripted. In June 1965 the YCAC, in an open letter to *The Australian*, urged the government: 'not to pursue the murderous path to world conflict through prolonging the slaughter in Vietnam.' Some young men went into hiding, refusing to register for the ballot. By 1972, 14 'draft dodgers' had been imprisoned. One of the most famous of these was Bill White, whose arrest was photographed and published in several daily newspapers.

However, it was not just young people who opposed conscription. Increasingly, parents, war veterans and people who had never been engaged in protest before began to express opposition to conscription. The most famous of these opponents was Save Our Sons, a group of women whose sons were of conscription age and in danger of being sent to war. They demonstrated peacefully, using placards and handing out leaflets, often outside national service registration sites. The efforts of the protesters met both support and hostility. Five members of Save Our Sons were imprisoned in 1971 for handing out leaflets to men coming to register for the ballot. They spent 11 days in Fairlea Women's Prison and became known as the Fairlea Five.

Source 4 Conscientious objector Bill White, a school teacher, was dismissed from the public service and arrested outside his home in Gladesville in November 1966 after refusing to serve in the national service.

The end of conscription

By 1971, public opinion was swinging against the Vietnam War and even more strongly against conscription. In the 1972 election campaign Labor Party Leader Gough Whitlam pledged to end conscription. One of the first actions of the new government, elected in December 1972, was to free the seven draft resisters still in prison and to bring conscription to an end.

Source 5 Members of the Save Our Sons movement typically held silent demonstrations.

Check your learning 16.6

Remember and understand

1 What was the Australian government policy on conscription in the First World War, the Second World War and during the Vietnam War?

2 Identify three organisations that opposed conscription during the Vietnam War.

Apply and analyse

3 Why did some people who supported Australia's participation in Vietnam still oppose conscription?

Evaluate and create

4 Construct a dialogue between two mothers. One has a son in the regular army, serving in Vietnam. The other has a son who is in the age group to be conscripted. Each mother has a different viewpoint on the issues of the war and conscription. Each mother should speak at least four times and must present and support arguments to support her point of view.

16A rich task

The referendum on communism

In March 1951, the High Court declared that the Communist Party Dissolution Bill was unconstitutional. Six months later a referendum was held to change the constitution. The question that voters were asked was:

Do you approve of the proposed law for the alteration of the Constitution entitled 'Constitution Alteration (Powers to deal with Communists and Communism) 1951'?

Campaigning on both sides of this issue was fierce and many posters were produced, for and against the proposal.

Source 2 A poster released by the Communist Party of Australia, against the Communist Party Dissolution Bill referendum, 1951

Source 1 A NO poster for the referendum on communism

Source 3 Election poster, 1950s

skill**drill:** Historical sources as evidence

Analysing propaganda posters

Propaganda is anything that has been deliberately created to influence an audience's beliefs or actions. It can provide historians with lots of information about the period being investigated. However, it needs to be very carefully analysed and evaluated. Use the following steps to guide your analysis of a propaganda poster.

Step 1 Establish the intended audience – that is, who the producer of the poster intended to influence.

Step 2 Check the context of the poster. Consider:

- other events that may have been happening at the time and might have influenced the producer of the poster
- the political environment at the time the poster was created
- the common prejudices and social norms that existed at the time, which may have influenced the producer of the poster.

Step 3 Check the message that is being conveyed. Consider:

- the main images on the poster and what they seem to suggest or represent
- any text written on the poster – what it says or whether the message is direct or suggestive
- the persuasive techniques used – these can include:
  - emotional appeals
  - generalisations
  - stereotypes
  - name calling (direct or indirect)
  - repetition
  - social disapproval (that is, the suggestion that attitudes or actions contrary to what is being promoted in the poster will result in social rejection or disapproval).

Step 4 Establish the intended effect on the audience – what the producer of the poster hopes the audience will think/do/feel.

Step 5 Establish the overall purpose served by the poster.

Apply the skill

1 Choose one poster supporting a Yes vote and one supporting a No vote and analyse them, using the steps above as a guide.

2 Which of the four posters do you believe would have been most effective in convincing a wavering voter to vote one way or the other? Support your answer with reference to features of all four posters.

Source 4 A poster for the Yes case in the communism referendum

Extend your understanding

1 Propaganda is not always untrue, but it is often exaggerated and one sided, to convince the audience of a particular point of view. Think of an example from modern advertising where the truth is exaggerated and other features of a product or service are downplayed (e.g. an advertisement for a sale, which emphasises lower prices for certain goods but ignores the fact that most prices are unchanged). Describe the advertisement and identify examples of exaggeration or omission.

2 Create a propaganda poster designed to influence public opinion on one of the following:

- an environmental issue
- a building or development issue
- a social issue such as the acceptance of refugees or stopping bullying.

16.7 Where did Australians fight?

The Vietnam War between 1962 and 1973 was really two wars fought at the same time. There was one war between the armies of the North and the South. The North was largely supported by China and the South by the USA and its allies.

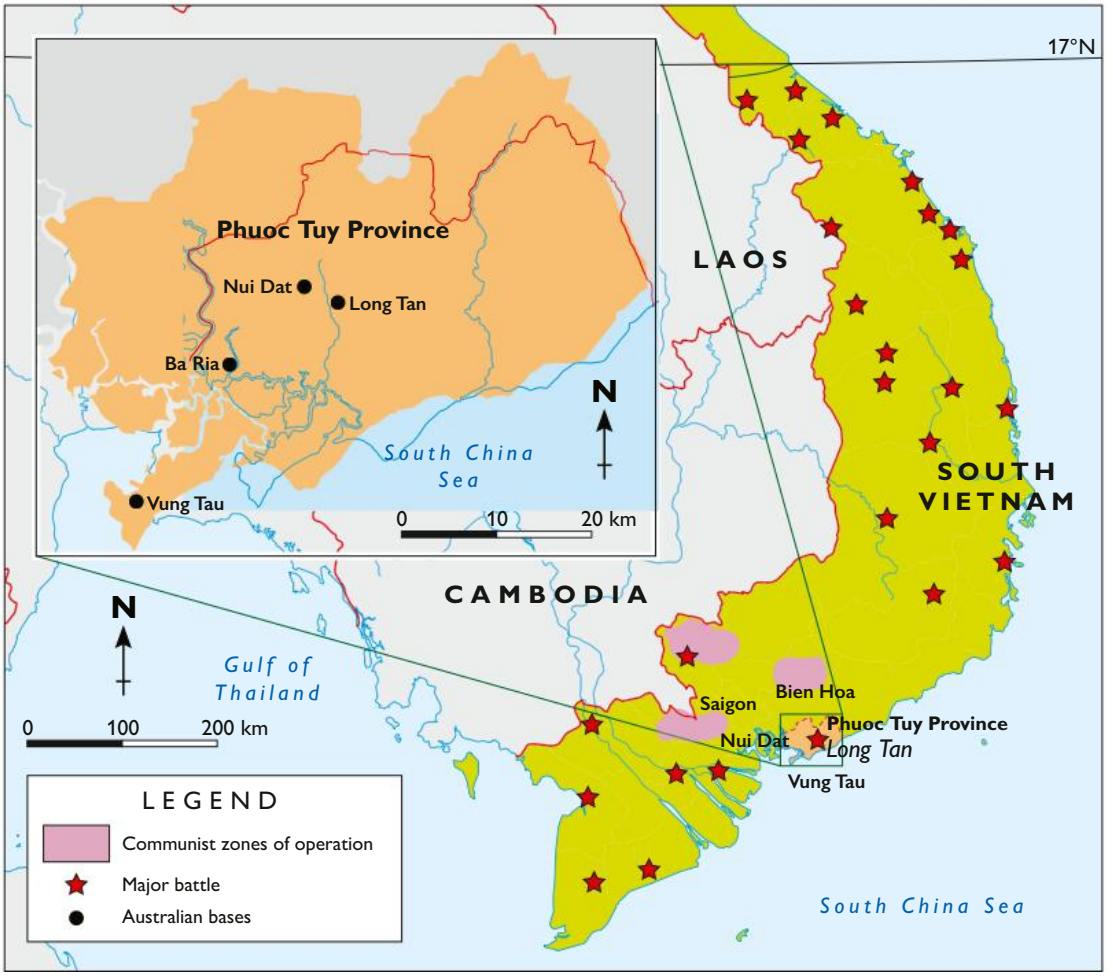

The other war took place *within* the south. A guerrilla campaign was waged by the South Vietnamese communists (known as Viet Cong) against the army of the Republic of Vietnam and its supporters. It was in this latter war that Australian troops were largely involved. They were supporting the Army of the Republic of Vietnam in its fight against communism not only in the north and also in the south.

Australian bases

The first group of 800 combat troops from Australia arrived in May 1965. They were sent to Bien Hoa province, north of Saigon, in South Vietnam. Initially this first battalion operated under US control, serving with a US airborne brigade.

In May 1966, the Australian Task Force was established at Nui Dat in Phuoc Toy province. Soldiers lived and trained at Nui Dat when they were not on patrol operations. For the first time, Australian operations were conducted independently of US command. A Logistical Task Force was also set up at Vung Tau on the coast. This was also where wounded soldiers were sent to recover, and where troops went for their rest and recreation periods. The main base for the Australian air force was also located at Vung Tau.

VIETNAM: THE LOCATION OF AUSTRALIAN BASES IN PHUOC TUY PROVINCE

Source: Oxford University Press

Source 2

> The majority of Australian servicemen and women served in Phuoc Tuy province, south-east of Saigon … The Australians were given this province to control because it allowed good access by air and sea, and so could be reinforced or evacuated easily if necessary.

Extract from Australia and the Vietnam War, Department of Veteran Affairs, 2007, p. 30

Fighting the Viet Cong

In the Australian area of operations, Phuoc Tuy province, the enemy was referred to as Viet Cong, or VC. The term Viet Cong was coined by US command and referred to Vietnamese communists in the south. However, most VC would have referred to themselves as Vietminh. The Viet Cong was not one single group but a range of people with different skills and expectations.

Some were soldiers of regular Viet Cong army units who were well-trained and equipped. They lived in bases away from their home villages. Others were guerrilla fighters, part-time soldiers, who were not as well-trained or equipped as the regular soldiers. They could be farmers or skilled workers in local villages. The villagers went about their normal occupations by day, and took part in guerrilla warfare activities at night. These could be ambushes or attacks on Australian soldiers or their local Vietnamese supporters, sabotage or intelligence gathering.

In addition to ground troops, the Royal Australian Air Force had a limited role in Australia's war effort. Helicopters and a squadron of Canberra bombers provided support for the fighting units. The aircraft transported equipment and personnel, and the helicopters helped with evacuations. Bombers launched raids on strategic targets in the south, serving alongside the USA's Tactical Fighter Wing.

4. Conduct some further research on the town of Vung Tau. Explain why it was developed as a base for American and Australian soldiers to enjoy 'rest and recreation' leave.

16.8 The nature of warfare in Vietnam

Guerrilla tactics

For the most part, the Vietnam War was a **guerrilla war**. This means that instead of fighting on a battlefield, the North Vietnamese and Viet Cong armies used 'hit and run tactics', specialising in raids and ambushes. US tactics included a massive bombing campaign, known as Operation Rolling Thunder. Its aim was to bomb strategic targets in the north, especially supply lines to the south. They also used helicopters to locate and attack enemy positions. Their approach was to draw the enemy out and engage them in battle. This often resulted in high US and enemy casualties.

The Australian army's counter-guerrilla warfare tactics

Australian military leaders preferred a different approach. While the aim of the US operations was to destroy the enemy, the main purpose of Australian operations was to stop enemy soldiers from receiving supplies and other support. One of the main ways of doing this was to patrol their area of operation in small units. They used stealth to locate and ambush enemy camps. They blocked off villages between dusk and dawn, to block Viet Cong access to food supplies and other support. In some cases, they grouped into larger forces for 'search and destroy' missions on enemy bases.

Source 1 An Australian soldier uses a mine detector to search a village for booby traps that may have been left by the Viet Cong, while another soldier stands guard. Australian troops had evacuated then destroyed the village, which had been dominated by the Viet Cong. The villagers were resettled.

Historians' evaluations of different approaches to guerrilla warfare

Source 2

There were significant differences in operational techniques between [the US and Australian] forces. The United States Army had vast resources of men, equipment and firepower at its disposal, which the Australians could never hope to have. The Americans were trained to deploy all these resources quickly to rapidly overwhelm the enemy and kill as many as possible. The Australians, with their tradition of jungle warfare and counter-revolutionary operations, had a more patient doctrine of patrolling and ambush, with less fire support. Their way caused fewer enemy casualties as well as restricting their own losses – vitally important in such a small army.

Extract from Richard Pelvin, *Vietnam: Australia's Ten Year War 1962–1972*, Hardie Grant Books, 2013, p. 41

Source 3

For some Viet Cong leaders there was no doubt the Australian jungle warfare approach was effective. One former Viet Cong leader is quoted as saying; 'Worse than the Americans were the Australians. The Americans style was to hit us, then call for planes and artillery. Our response was to break contact and disappear if we could … The Australians were more patient than the Americans, better guerrilla fighters, better at ambushes. They liked to stay with us instead of calling in the planes. We were more afraid of their style.'

Extract from David Chanoff & Doan Van Toai, *Vietnam: A Portrait of its People at War,* Taurus & Co., London (1996), p. 108

Chemical warfare

One of the problems facing the South Vietnamese Army and its allies was the density of the jungle. From the air it was very difficult to pick out villages, let alone places where the Viet Cong could be hiding or storing supplies.

From as early as 1961, US advisers began using chemical sprays to kill the jungle vegetation. By the late 1960s, the use of chemical agents known as **defoliants** had become a major weapon. The main chemical used was **Agent Orange**, which contained the dangerous poison dioxin. Large areas of South Vietnam were stripped of vegetation and agricultural land was made barren. The most serious consequence of the spraying of these chemical agents was its impact on humans. Cancers, miscarriages, birth defects, skin diseases and other illnesses have all been attributed to the use of these chemicals.

Source 4 Australian service personnel in the Vietnam War

Another chemical widely used in Vietnam was napalm. This is a jelly-like substance that sticks to the skin and causes unbearably painful burns. At first, napalm was used in bombs directed at military and infrastructure targets. However, as the war progressed, it was increasingly used against the enemy. As the US and Australian soldiers had no way of knowing which villagers were Viet Cong, whole village populations were killed or injured by napalm.

One of the most famous and disturbing images of the Vietnam War is the picture of Kim Phuc, a 9-year-old girl running naked from her village after a napalm attack (see Source 5).

Source 5 Nine-year-old Kim Phuc (centre) and family members run for help after being severely burnt in a napalm (a petrol-like substance used in bombs) attack, 8 June 1972.

Battle of Long Tan

The Battle of Long Tan was different to the typical guerrilla and counter guerrilla tactics of the Vietnam War. On the night of 16 August 1966, the Australian base at Nui Dat was attacked by mortar fire (short-range shells lobbed at targets). On 18 August, 105 Australian soldiers moved into the Long Tan rubber plantation, believed to be the source of the mortar shelling. The Australians immediately came under attack by up to 3000 North Vietnamese and Viet Cong troops.

The fighting at Long Tan went on for four hours, until the Australians received backup. The accuracy of the Australian artillery fire had a devastating effect on the enemy. The Viet Cong retreated, carrying many of their dead and wounded with them. The Australians counted 245 enemy dead on the battlefield, while 18 Australians were killed and 24 wounded. Later research revealed that the North Vietnamese Army and Viet Cong losses were as high as 800 deaths and 1000 wounded.

For many years, commentators believed the initial attack had been part of a Viet Cong plan to tempt the Australians out of their base and into an ambush. Evidence now suggests that the Australians had not been lured into an ambush but had in fact come across a regular North Vietnamese Army regiment who were moving in for a full-scale attack on the Nui Dat base. The battle probably saved the Australian Task Force at Nui Dat from a major attack from the combined North Vietnamese and Viet Cong armies. After this battle, the Viet Cong had far less power in the area.

Civilian aid

From 1967, Australian personnel were also involved in providing aid to the South Vietnamese. Civilian aid had two purposes. One was a genuine attempt to assist the people, with medical and dental care and other necessities. The other was described as a 'hearts and minds' policy. It was hoped that by providing care and support for villagers, they would be won over to the anti-communist side and would no longer support the Viet Cong. There is little evidence that this policy was successful. Nevertheless, thousands of South Vietnamese people benefitted from the many civilian aid projects initiated by the Australian Army.

Source 6 Australia's service personnel in Vietnam

Total number of Australians who served in Vietnam	Almost 60 000 (including around 15 000 National Servicemen)
Greatest number of servicemen in Vietnam at the one time	7672
Usual length of service	12 months
Dead	520 (including 185 National Servicemen)
Wounded	3000

2 How many Australians were killed or wounded in Vietnam?
3 What were the two purposes of civilian aid?

Apply and analyse

4 Explain the main tactics used by Australian soldiers?
5 Why do you think the Battle of Long Tan is seen as one of the most important engagements for the Australian Army during the Vietnam War?

Evaluate and create

6 Using the text and sources in this unit and additional research, prepare a class debate on the topic: 'The Australian approach in Vietnam was more suited to jungle warfare than the US approach.'
7 The napalm girl, Kim Phuc, is still alive and her life story is an amazing example of resilience. Conduct further research into her life and write a newspaper article or blog titled 'Success against all odds'.

16.9 The Australian withdrawal from Vietnam

Source 1 A South Vietnamese chief of police fires his pistol at a suspected Viet Cong official during the Tet Offensive, Saigon. This image was shown on the TV news.

In January 1973, after nearly eight years of war, the Australian government announced plans for the final withdrawal of troops from Vietnam. It was November 1973 before the last Australian personnel were withdrawn and Australia's involvement in the war could truly be over.

The decision to end Australia's commitment to the Vietnam War came down to a number of reasons. The war had become increasingly unpopular and there were widespread protests, especially after 1968. However, there were other factors including the increasing death and injury toll. Australia had also realised the war was becoming increasingly unwinnable. Peace talks to end the war had begun in May 1968 and the USA had started to wind down the number of its troops in Vietnam.

Growing opposition to the war

In 1967, a poll showed that 62% of Australians supported the nation's participation in the Vietnam War. By 1970, this figure had fallen to 42%. The nature of opposition to the war had also changed. In the early years, most anti-war protests involved university students, the Labor Party, trade unionists and some religious groups. By 1970, opposition had become more mainstream and the range of anti-war arguments broader. By 1970, 389 young Australian men had lost their lives in Vietnam and several thousand had been injured. There was also a growing recognition that many returned soldiers were suffering post-traumatic stress syndrome (PTSD) as a result of the horror and trauma they had witnessed and experienced at war.

Even those not directly touched by losses were brought into contact with the harsh reality of war through television. Most nights, graphic footage of events in Vietnam was beamed into living rooms across the nation.

Source 2

> It was the novelty of seeing war for the first time that led many Australians to oppose it … In this sense, the technology, the TV – and not the messengers, the reporters – lost support for the war. Had TV cameras filmed the bombing of Dresden or Tokyo, viewers may similarly have turned away in horror. Western viewers weaned on the notion of war as heroic … and 'just' were suddenly seeing thousands of dead, millions of refugees, unspeakable suffering … in short, the things common to all wars.

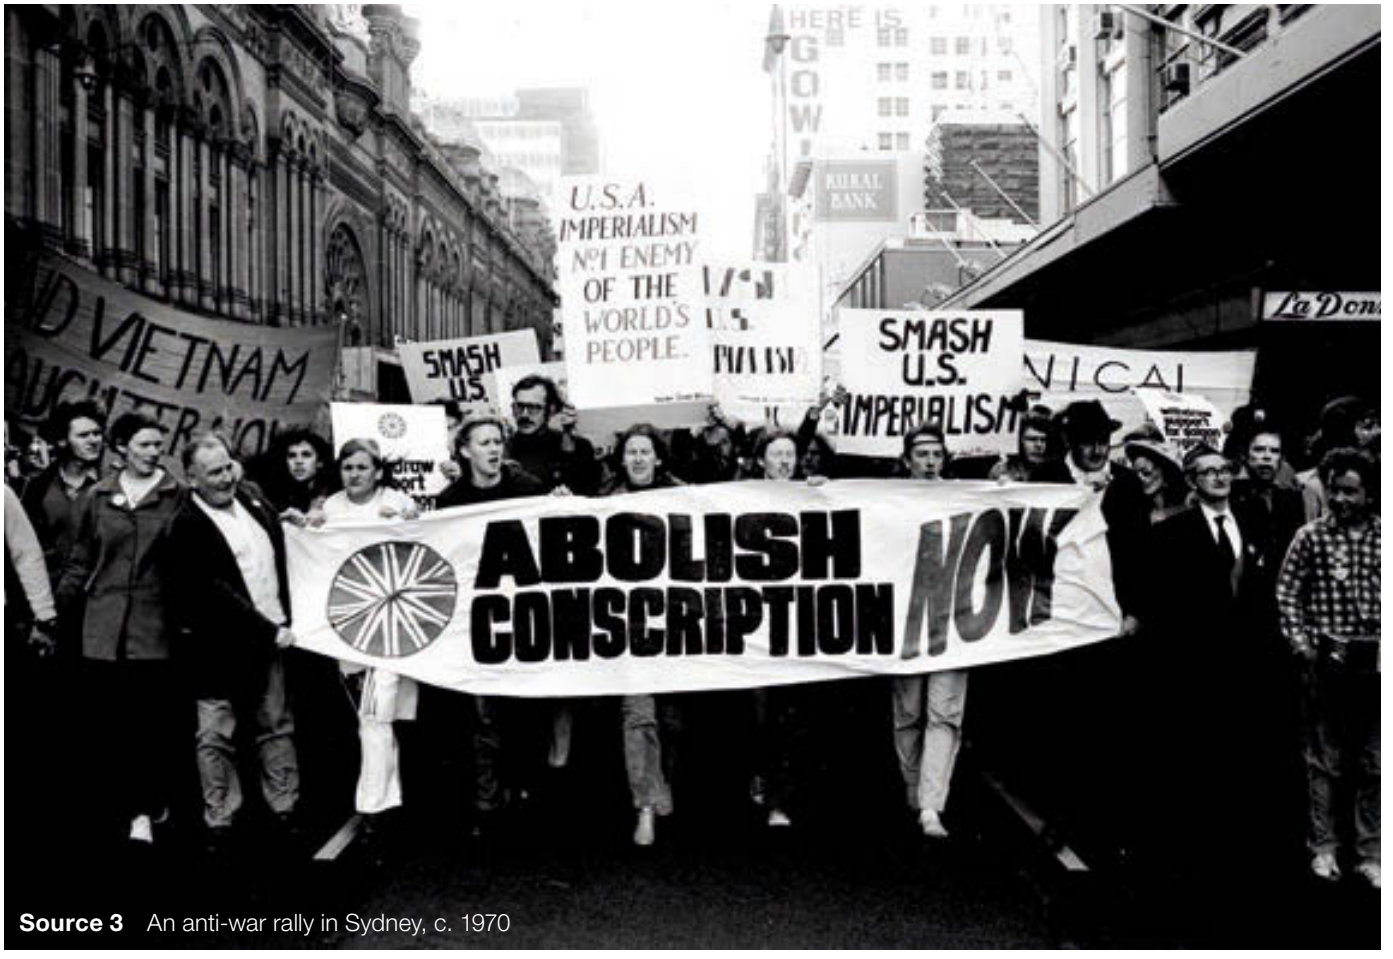

Extract from Paul Ham, *Vietnam: The Australian War*, Harper Collins, 2007, p. 413

The Tet Offensive

One of the most significant influences on changing attitudes is believed to have been the Tet Offensive. The Tet Offensive was a well-planned, surprise attack by the Viet Cong and the North Vietnamese army on South Vietnamese, US and Australian forces. It took place during the celebration of Tet (New Year) in early 1968, at a time when there was supposed to be a truce in fighting. The attack by the Viet Cong was very successful but the success lasted only a few days before the USA retaliated. Ironically, it was the ruthless suppression of the Tet Offensive that led many people to question the war. Films of public executions of Viet Cong leaders horrified many Australians who had previously been supportive of the war.

Protest

Some say it was the anti-war protests that swept across the USA and Australia from 1968 that brought the war to an end. The various rallies, marches, sit-ins and songs played an important role in changing public attitudes and in convincing governments that the war was losing voter support.

Source 3 An anti-war rally in Sydney, c. 1970

Source 4 Part of the crowd at a Vietnam War Moratorium march, Melbourne, 1970

As early as October 1966, Melbourne students rallied to protest against the Vietnam War during the visit of US President Lyndon Johnson. Two brothers, one at secondary school and one at university, threw red and green paint over the president's car. By 1968, the anti-war movement had become bigger and better organised. In the USA, in November 1969, millions of Americans across the nation paused and gathered to express their opposition to the war.

The term '**moratorium**' was adopted for these protests. Traditionally, a moratorium is an agreed pause in normal activity. It is most often used to describe a temporary break in debt repayments, or an agreed delay in meeting legal requirements. The leaders of the November 1969 protest in the USA used the term 'moratorium' because they wanted the nation to pause and reassess its commitment to the war.

Moratoriums were held across Australia during 1970. Hundreds of thousands of people brought the centres of capital cities to a halt. They carried banners, sang songs and chanted slogans. One of the most popular refrains was John Lennon's 'All we are saying, is give peace a chance'. By 1970 the anti-war movement had become more mainstream, involving middle-class people, mothers with prams, businesspeople in suits, teenagers in school uniforms, 'tradies', nuns and priests.

Government decisions

The anti-war marches that took place across Australia during 1970 sent a message to the government that this was an unpopular war. However, protest alone would not have been enough to achieve an end to the Vietnam commitment. Peace talks had begun in Paris in 1969 and, in that same year, the USA began to withdraw troops. President Nixon also began the policy of 'Vietnamisation'. This involved providing the South Vietnamese army with further training and resources, with the expectation that it would eventually be able to continue the fight without needing any help from the USA.

In Australia, Prime Minister John Gorton and his Liberal Government began the withdrawal of troops in 1970. In 1971, the base at Nui Dat was handed over to the South Vietnamese Army. Following the election of the Whitlam Labor Government, in December 1972, the commitment to Vietnam was finally ended and the last advisers returned to Australia in November 1973.

Australia's withdrawal from the Vietnam War was met with mixed reactions. While anti-war and conscription protesters were glad Australia was no longer part of the war, Source 5 shows the frustration felt by many soldiers who thought they were abandoning the South Vietnamese people.

Source 5

> …it very simply wasn't finished the way it should have been. I'm not saying we should have won. That would have been preferable of course to losing, but the way it was done … we left many, many good South Vietnamese people in the lurch and it was like turning your back on your best mate and walking away. It shouldn't have happened. That is politics though… Nothing to do with us, but it left a very nasty, dirty taste in a lot of people's mouths. It still does.
>
> Corporal Anthony Hughes, 7RAR

Source 6 A Vietnam Moratorium badge. The words around the edge of the badge are 'Vietnam Moratorium. Withdraw all troops now'.

Check your learning 6.9

Remember and understand

1. List the various influences that combined to bring Australia's commitment to the Vietnam War to an end.
2. What is meant by the term 'moratorium' and why was it adopted by anti-war protesters?

Apply and analyse

3. Examine the posters in Source 3. If you did not know anything about the war, who would you think was the enemy? Can you explain this?
4. What do you believe was the main reason why Australian troops were withdrawn from Vietnam? Support your answer.

Evaluate and create

5. Design an anti-war badge or poster.
6. During the Vietnam War many popular songs reflected an anti-war or a pro-peace message. They included 'Masters of war', 'Blowin' in the wind' and 'The times they are a changin' by Bob Dylan, 'Give peace a chance' by John Lennon, 'The universal soldier' by Buffy Saint Marie, and 'The eve of destruction' by Barry McGuire.
   - Look up the lyrics of at least three of these songs and list all of the anti-war ideas and arguments used. For each idea, record a brief quote.
   - Write your own anti-war or pro-peace song or poem.

16B rich task

Entertaining the troops

Over the course of the Vietnam War, more than 100 entertainers and groups travelled to Vietnam to entertain the troops. Their concerts played a very important role in keeping up morale among the soldiers. Entertainers went to Vietnam for a variety of reasons – patriotism, a spirit of adventure, even career prospects. Some entertainers supported the war and others opposed it, but still wanted to support the soldiers.

Source 1 The real Sapphires: sisters Laurel Robinson and Lois Peeler and their cousins Beverley Briggs and Naomi Mayers, 2012

Many popular Australian acts performed in Vietnam. Among those who entertained in Vietnam were Little Pattie, Lorrae Desmond, Ian Turpie, Col Joye, Patti McGrath, Joy Yates, Denise Drysdale, Johnny O'Keefe and many others. Norman (Normie) Rowe, an Australian singer, was a conscripted soldier who often joined the entertainers. The Indigenous singing group the Sapphires was a popular act and the story of the group was told in the 2012 film *The Sapphires*.

Source 2 The Sapphires in the 2012 movie

Source 3

LORRAE DESMOND: "So we came back from America and then a really interesting thing happened when the Australian Dance Band asked me if I would go with them to Vietnam. And, of course, having entertained troops from other countries, suddenly all those young men are my babies. And I kept going back and forth until I'd been there five times.

… whenever I had a few weeks spare, I mean, I didn't sit around. I'd say, 'Let's go out to the boys.'

… But then when I got to Vietnam, they were my boys and they still are my boys. They even gave me a plaque saying, 'To the mother of all Vietnam veterans' which I love.

PETER THOMPSON: It seems to have affected many performers that way. That those that have gone to these war zones to perform fuelled an incredibly special relationship with those that they performed for.

LORRAE DESMOND: Do you know, you get letters like about 50 years afterwards saying thank you … That's very special that you stay in somebody's life for that long.

Extract from the program *'Talking Heads',* ABC, 14 April 2008.

skill**drill:** Historical significance

Create and deliver an audiovisual presentation

One of the most popular and engaging ways to present the findings of an historical inquiry is through an audiovisual presentation. To prepare and present a successful audiovisual presentation there are several steps to follow.

Step 1 Develop the question or questions that your audiovisual presentation will explore.

Step 2 Gather your research.

Use the images in this text along with other texts and internet resources. Make sure that you record the dates and reference details of all sources.

Step 3 Plan and create your presentation.

Once you have gathered your research, plan your presentation to make sure that it addresses the question or questions that you wish to explore. If yours is a group presentation, make sure that the workload is distributed evenly. Decide on the format that you will use – PowerPoint, Prezi, a short film, a website, a talk supported by a poster, etc. You could also use suitable and relevant music.

Step 4 Deliver your presentation.

- Make sure that you have rehearsed your presentation so that you can deliver it with confidence.
- Engage your audience by speaking slowly and clearly and making eye contact. You may begin by posing one or two questions to the audience to get them involved from the start.
- Finish strongly. Your presentation should finish on a high note.
- Prepare for the worst by having a back-up plan in case technology lets you down.
- Encourage your audience to comment or ask questions at the end of the presentation.

Apply the skill

1 Research a number of Australian performers who entertained the troops in Vietnam. Develop an overarching question such as:

What role did visiting entertainers play in keeping morale high during the Vietnam War?

OR

Why were entertainers willing to travel to Vietnam to perform for the troops and what impact did the experience have on them?

2 Develop a series of questions to guide your research such as:

- What had the entertainers achieved before going to Vietnam?
- What motivated the entertainers to go to Vietnam?
- What were their experiences of the travel, performing conditions, dangers, etc.?
- What songs did they perform?
- How were they received by the troops?
- How do they now look back on the experience?

3 Collect a range of visual resources and short quotes and prepare your audiovisual presentation. Present your finished product to the class.

Extend your understanding

The Australian film *The Sapphires* (2012) tells the story of a group of Indigenous Australian entertainers who travelled to Vietnam to entertain the American troops. It was based on a play written by Tony Briggs. Briggs based the story on the experience of his mother and aunt, who had been entertainers in Vietnam. View the film and complete the following tasks:

1 Conduct some research into the true story of the Sapphires.

2 What can you learn from the film about values relating to Indigenous people, to women and to the war in the 1960s?

3 There are some differences between the real story and the film. One of the main differences is that Naomi and Beverley refused to go to Vietnam because they opposed the war. Identify other differences. Why do you think that these changes were made? Do you think that it matters that the true story was not told?

4 Use the material you have researched to answer the following question, in essay form:

To what extent is *The Sapphires* a useful historical resource about the Vietnam War era?

16.10 Impact of the war on Vietnam veterans

The homecoming for Vietnam veterans was very different from the experiences of their grandfathers and fathers who served in the First and Second World Wars. The Vietnam War had become so unpopular that there was no real welcome home. To avoid protestors, returning troops were often flown into Australian airports after dark. Some marched in parades in their home towns and cities on their return, but there was no official parade or welcome for the Vietnam veterans until 1987 (see Source 1).

Health problems

Some veterans returned with physical injuries – wounds, lost limbs, skin rashes, hearing problems or respiratory problems. In some ways, they were better off than those with psychological issues, because their problems were visible, they received sympathy and there were medical treatments available.

Those who returned with stress disorders were given very little sympathy from the public. At the time, the population did not really understand the seriousness of poor mental health. Returned soldiers felt like no one understood the fear and anxiety that they were experiencing. Sometimes family and friends made matters worse, by telling veterans how lucky they were to have survived the war unscathed. By the 1990s, it had been established that the suicide rate for Vietnam veterans was higher than that for all Australian males in the same age group.

Source 1 For many Vietnam veterans, the October 1987 Welcome Home Parade in Sydney was the first official parade or welcome since their return from Vietnam.

Source 2

> One minute I was in Vietnam and the next minute I was home, and I was totally lost … I know my mum and dad found it very hard to handle me … In fact, they told me quite plainly that I wasn't the same person any more. I was prone to get violent, punch walls, get into rages very quickly. I've never slept right since the day I came home.

Michael Scrase, from Stuart Rintoul, *Ashes of Vietnam: Australian Voices*, William Heinemann Australia, 1987, pp. 181, 182, 184

As a response to the sense of neglect felt by many Vietnam veterans, the Vietnam Veterans Association was formed in 1979 to actively represent the interests of those who served in the Vietnam War. Since then, there has been increasing awareness of the psychological impact of war and great improvements in the treatments available to returned soldiers. Most Vietnam veterans are now in their sixties and seventies.

Exposure to chemicals

One of the main concerns of Vietnam veterans was the possible harmful effect of their exposure to chemical pesticides including Agent Orange. Exposure was thought to lead to higher instances of certain diseases and cancers, as well as birth defects in some children of Vietnam veterans. It was a source of anger and disappointment among Vietnam veterans when governments were slow to react to their concerns.

Source 3

> This study provides good evidence that Australian male veterans of the Vietnam War have an increased rate of cancer overall [compared to the general male population] … Rates of melanoma and … prostate cancer were consistently elevated … The reason for these increases is unclear. In addition to exposure to known carcinogens [substances that cause cancer], lifestyle changes, including alcohol and tobacco consumption may play a role. For several other malignancies [cancers] … Australian Vietnam War veterans have rates lower than the rate in the Australian population.

Extract from 'Cancer incidence in Australian Vietnam War Veterans Study 2005', Department of Veterans' Affairs, in Bruce Davies, *Vietnam: The Complete Story of the Australian War*, Allen & Unwin, 2012, p. 583

Source 4 Many of Australia's Vietnam veterans returned from war with post-traumatic stress disorder (PTSD).

Check your learning 16.10

Remember and understand

1. What problems faced some returned servicemen after the Vietnam War?
2. What are some of the health problems believed to have been caused by Agent Orange?

Apply and analyse

3. Why do you think the welcome given to returned Vietnam soldiers was different from that given to returning soldiers at the end of the First and Second World Wars?
4. Michael Scrase says 'One minute I was in Vietnam and the next minute I was home'. How does this statement help us to understand some of the distress faced by returned soldiers? How could the situation have been better handled?

Evaluate and create

5. Read Source 4.
   - **a** What claims does the document make about the incidence of cancer in Vietnam veterans?
   - **b** What reasons does the report offer for these cancer rates?
   - **c** How might you explain the lower rate for some cancers?
6. Conduct further research into the Vietnam Veterans Association. Prepare a pamphlet that outlines the work of the Association and the ways in which it can be of assistance to returned soldiers. The pamphlet is to be made available in the Returned and Services League (RSL) branches, doctors' waiting rooms and hospital entrances.

16.11 The impact of war on the Vietnamese people

The long years of conflict in Vietnam had a devastating effect on both North and South Vietnam. By the time the war ended, the Vietnamese people had been living in a war zone since 1940. Bombing had destroyed much of the nation's infrastructure, and hundreds of thousands of hectares of rich agricultural land had been rendered useless. There was also an enormous human toll, not just in terms of people who had lost their lives but also those affected by injury and displacement.

Source 1 The entrance to a 'friendship village' in Van Canh commemorating child victims of Agent Orange poisoning. The monument was built in 1998 by French, American, English, German, Japanese and Vietnamese war veterans.

The human toll

The number of soldiers killed on both sides reached the hundreds of thousands. An unknown number of civilians, possibly over a million, also died as a result of the armed conflicts, bombings and assassinations. An even greater number would suffer from the effects of Agent Orange and other chemical agents sprayed by allied forces. Many villages in the south had been deliberately destroyed in an attempt to force Viet Cong out of hiding. The people were relocated to newly built settlements, but many felt great sorrow about their separation from traditional lands and the graves of their ancestors.

The economy of Vietnam was also in ruins. Despite the destruction, during the war, the presence of foreign troops had been good for the economy, especially in the south. The American and Australian troops spent lots of money on food, drink and accommodation, taxis, entertainment and recreation. When the soldiers left, many businesses collapsed and many people were left without a job. The economy was made worse by the US decision, in 1975, to stop trading with Vietnam and to cease foreign aid.

The new regime

After Australian and US troops withdrew from Vietnam in 1973, the North Vietnamese advanced southwards. After a further two years of fighting, their tanks rolled into the former Presidential Palace in Saigon on 29 April 1975. Vietnam was finally unified as a communist country. Any South Vietnamese who had worked with or supported the West were regarded as suspect by the communist government. These included South Vietnamese army personnel and also the translators, administrative support staff and guides who had helped the US and Australian troops.

People who were thought to be influenced by the West were imprisoned in '**re-education camps**'. It is estimated that about one million Vietnamese were imprisoned in these camps, most without a trial. Many were tortured and about 165 000 people died in these camps. Most people in the camps were imprisoned for periods of three to 10 years, but some people were held for up to 17 years.

Source 2 Numbers of Vietnamese casualties in the Vietnam War

Type of casualty	Number of people
South Vietnamese troops killed or missing in action	220 357
South Vietnamese troops wounded	1.17 million
North Vietnamese and Viet Cong troops killed	660 000
South Vietnamese civilian casualties	325 000–1 million
North Vietnamese civilian casualties from US bombings	65 000
Civilians assassinated by North Vietnamese and Viet Cong	166 000
Vietnamese affected by chemical agents	3 million

Check your learning 16.11

Remember and understand

1 Study Source 3. Which section of Vietnam, North or South, suffered most as a result of the Vietnam War?

2 What were the negative consequences of the village destruction and relocation program?

Apply and analyse

3 List all of the consequences of the war for Vietnam and the Vietnamese people. Which outcome do you believe to be the most negative? Explain your decision.

4 Explain why the USA cut off trade and foreign aid wto Vietnam after the communist victory.

Evaluate and create

5 Imagine you were a Vietnamese shopkeeper who traded with Australian soldiers during the Vietnam War. After the war, you are charged with disloyalty and could be sent to a re-education camp. Prepare a speech in which you argue that you should not be imprisoned. You must provide at least two different arguments.

6 Conduct some further research on the direct and longer-term impacts of chemicals such as Agent Orange. Use the information and images to create a poster with the message 'Chemical Warfare is NEVER justified!'

16.12 Immigration and 'boat people'

Many Vietnamese families, whose lives had been disrupted by the war and the communist takeover, became desperate to leave the country. Some chose to leave because they feared political persecution. Others saw fewer opportunities under a communist system.

Boat people

In the months following the fall of Saigon in April 1975, thousands of Vietnamese began fleeing their country, many of them in unseaworthy fishing boats. The United Nations High Commission for Refugees (UNHCR) recognised the tragedy that was unfolding. Refugee camps were established in Malaysia, Hong Kong, Thailand, the Philippines and Indonesia to process the claims of Vietnamese fleeing their country. From these camps, refugees were processed and resettled in countries willing to accept them.

The Australian government's response to this wave of refugees was cautious at first. Only the Vietnamese spouses and children of Australian citizens were to be accepted. Later in 1975, two airlifts brought nearly 300 war orphans to Australia for adoption. It was not until the election of the Fraser Government in December 1975 that a slightly more welcoming attitude was adopted.

Source 2 A refugee camp in Asia for Vietnamese refugees

The first five Vietnamese 'boat people' arrived in Darwin Harbour on 26 April 1976. After several weeks of debate, the group was given permission to stay. However, this generous response was to change in coming years as the numbers of boat people increased. By 1977, over 1000 refugees from Vietnam and Cambodia had arrived by boat, and public opinion was turning against them. Through the UNHCR, over 3000 refugees were brought in by air, from camps in Malaysia and Thailand.

Different opinions developed in Australia on the issue of accepting refugees. Some believed that boat people should be welcomed. Others thought that only people coming through 'official channels' should be accepted. This dilemma was reflected in *The Age*, on 15 November 1977: 'while Australia can afford to be generous, it cannot be expected to play host to every unscheduled refugee.'

Source 1 Vietnamese refugees arriving at Sydney Airport in June 1975. Many were accepted as refugees by the Australian government after the war and flown to Australia.

Source 3

To flee one's country is not an easy choice to make. You're leaving behind your homes, your relatives and friends, your culture, your possessions, your memories, your childhood. Fleeing a country on a boat is also a dangerous affair. People speak of the savagery of being looted, raped and killed by pirates at sea. People talk about the unspeakable horrors of resorting to cannibalism of the dead to regain enough strength to fix the boat's engine. Many of us had knowledge of this so why did we take the risk? We seek freedom because the government we were escaping did not respect our freedom. You will find this is a common story among refugees.

Extract from a talk by Minh Nguyen given to high school students at St Scholastica's College, Glebe, Sydney, 8 March 2004

Source 4 Vietnamese asylum seekers arrive in Darwin Harbour in 1981.

Vietnamese Australians

Source 5 Anh Do is one of the many Vietnamese refugees who have made a better life in Australia.

Over 130 000 Vietnamese and Cambodian refugees were settled in Australia in the 1970s and 1980s. These people, their children and now their grandchildren are making an outstanding contribution to the richness of Australian life. Vietnamese Australians are to be found in all fields of life and work – medicine, education, business, construction, sport and the arts. One of the most high profile Vietnamese Australians is Anh Do, who arrived in Australia as a refugee on a flimsy fishing boat when he was a baby. Anh completed a combined business law degree and is now a comedian, writer, actor and painter. His first book, *The Happiest Refugee*, chronicles his family's journey to Australia and his life growing up here as a refugee.

Check your learning 16.12

Remember and understand

1 What factors led so many Vietnamese to want to leave their country after the fall of Saigon?

Apply and analyse

2 The decision to airlift Vietnamese orphaned babies to Australia was praised by some and criticised by others. Suggest two arguments in support of this program and two against it.

3 Using the text, Source 1 and other research on Vietnamese boat people to make a list of the qualities and characteristics that such people demonstrated in their attempts to find a new life in Australia.

Evaluate and create

4 One of the five Vietnamese people who first landed by boat in Darwin was Lam Tac Tam. In 2013 he took part in an interview to mark the 35th anniversary of his arrival in Australia. The interview can be found on the SBS website at www.sbs.com.au/news/article/2011/04/27/anniversary-first-vietnam-boat-marked or via a link in your obook. Read the interview and answer the following:

- **a** What does the interview tell you about the difficulties that the five faced on their journey?
- **b** How were the five received in Australia? How does this compare with attitudes to boat arrivals today?
- **c** Was there anything that you learnt through the interview that surprised or even shocked you?

16.13 Australia's growing relationship with South-East Asia

At the end of the Second World War, Australians still felt more closely aligned with Britain than with Asia. Australia has had a history of suspicion towards its Asian neighbours, dating back to the goldrush days of the 1850s.

During the 1950s, many Australians still felt the threat of an Asian invasion, which was heightened by Japan's show of military strength during the Second World War and the communist takeover in China. The White Australia Policy was still firmly in place and the vast majority of post-war immigrants came from Britain, southern or eastern Europe. Britain was still seen by many as the 'Mother Country' and the visit of the Queen in 1954 saw one of the largest celebrations that the nation had experienced.

Changing attitudes

Despite this dominant European focus, Australians were increasingly forced to recognise the country's position in the Asia-Pacific region. Even before the Vietnam War, the wars and conflicts in Korea, Malaysia and Indonesia turned the attention of the government and the military towards the local region.

By the late 1960s, Australians had experienced a decade of further change. The generation born after the Second World War was growing up and had more progressive ideas about gender, race, human rights, war and peace. Views were changing about the role of women and there was a relaxation of the White Australia Policy under the Holt Government. The

Source 1 The 25th gathering of APEC leaders, October 2013

campaigns against conscription and the Vietnam War led some to question the role of government and also contributed to greater political awareness.

These changes played a role in the election of Gough Whitlam's Government in 1972, the first Labor government in Australia in 23 years.

The Whitlam Government established diplomatic relations with China and the unified government in Vietnam. The White Australia Policy was officially ended and Australia began to welcome immigrants from Asia, including Vietnamese refugees. As a result, Australian society became much more culturally diverse. A new era of cooperation and trade with Asia was also established and Australia became a member of Asia-Pacific Economic Cooperation (APEC), firmly placing itself as a part of Asia.

Today, China is Australia's most important trading partner and one of the country's largest sources of tourism. Asian countries are also among the most popular destinations for Australian tourists, and hundreds of thousands of Asian students come to Australia each year to complete their education.

The legacy of the Vietnam War

It is now more than 40 years since the last Australian soldiers left Vietnam, and since the conscription policy was terminated. The White Australia Policy is officially over and Vietnamese immigrants form a vital and respected part of Australian society.

However, many of the issues that characterised the Vietnam War period still resonate today. There is still suspicion, in some quarters, of immigrants who do not fit the 'traditional Australian' mould. Since the late 1990s, there has been growing suspicion and negativity about refugees and asylum seekers who arrive on Australia's shores, especially by boat. The Australian Prime Minister John Howard said in his 2001 election speech, 'We will decide who comes to this country and the circumstances in which they come.' Issues such as multiculturalism, the flag and the republican movement are still debated. It appears that a significant percentage of the population, mainly but not exclusively older Australians, still clings to the notion that Australia is predominantly a British nation.

Source 2 This cartoon by Bill Leak represents former Prime Minister John Howard as Captain Cook arriving in Australia.

Check your learning 16.13

Remember and understand

1 What evidence is there that Australia has a heritage of suspicion towards Asian immigration?

2 How did Australia's relationship with Asia change from the late 1960s and through the 1970s?

Apply and analyse

3 Explain the social changes that took place in the 1960s that led to new attitudes towards war, race, gender and human rights.

4 Thousands more people seeking asylum arrive in Australia by aeroplane than by boat. Many of them arrive on visitor visas then seek to stay on. Yet, the boat people are still regarded with more suspicion and hostility. How do you explain the different attitudes towards these two groups?

Evaluate and create

5 Analyse Source 2. Use the following questions as the basis for your analysis:
- Explain the context for this cartoon (i.e. what had been happening that prompted Leak to draw this particular cartoon?).
- What points is the cartoon making and what techniques are used to make these points?
- How effective do you think this cartoon would have been in reinforcing or changing attitudes?

6 Prepare a speech to be delivered at a school assembly. The topic for your speech is:
'The 21st century will be Australia's Asian century.'

16C rich task

SBS and the *Thoi Su* controversy

A large proportion of Vietnamese Australians are either refugees or related to the refugees who fled to Australia after the collapse of the South Vietnamese government. Many of them are still haunted by the ill treatment and persecution they received from the communist government before they escaped.

In October 2003, many members of the Vietnamese community were upset when the multicultural broadcaster SBS began screening a Vietnamese language current affairs program called *Thoi Su.* The program is produced by the state-run (communist) Vietnamese news service.

The decision to screen *Thoi Su* caused a mixed reaction in Australia. One of the first to object was Trung Doan, National President of the Vietnamese Community in Australia (VCA). He wrote an article in the Melbourne *Herald Sun*.

Source 1

SBS TV's target audience are Vietnamese Australians, the great majority refugees or their reunited relatives. Many were among the one million put into labour camps when Saigon fell, or the millions whose houses and other properties were confiscated by the regime. They do not have to go far to see their former tormentors' faces and propaganda – it's right there, in their home.

… I have met and heard of scores of non-viewers around Australia who have lost sleep or had nightmarish flashbacks just because they know the program is there.

Extract from 'Every Day SBS Twists the Knife', Trung Doan, *Herald Sun,* 16 October 2003

Over the following two months, thousands of Vietnamese Australians protested outside SBS's offices in Melbourne and Sydney to demand an end to the *Thoi Su* broadcasts.

SBS Television initially resisted the complaints. The broadcaster argued that the vast majority of the Vietnamese Australian population would not find the program offensive.

SBS Managing Director Nigel Milan appeared before a Senate Estimates Committee where he argued for the station's right to freely show any program they saw fit. He suggested that VCA did not represent the majority of the Vietnamese.

Source 2

Mr Milan: It is a bit hard to say in terms of individuals because the no campaign is highly organised. There are coupons to cut out on the front of the Vietnamese language newspapers and send in to SBS, whereas the yes campaign is –

Senator Conroy: Are you suggesting that this is like *TV Week* – one person is cutting out 10 coupons and sending them in? Is that what you think is happening?

Mr Milan: Yes. The switchboard identified 23 calls from the same person on one evening. So it is quite an organised campaign. Up until this week, the numbers have been running substantially in favour of the no vote (i.e. don't withdraw the program), probably on a 10 to one ratio, but since the demonstration and the issue getting broader community awareness, the yes vote is beginning to increase.

Extract from a meeting of the Senate Environment Communications Information Technology and the Arts Legislation Committee, 3 November 2003

The campaign against *Thoi Su* was well organised and had the support of high profile conservative media commentators, including Alan Jones and Andrew Bolt. VCA delegations visited the offices of at least 20 MPs, including Communications Minister Daryl Williams and Labor's spokesman Lindsay Tanner.

In December 2003 SBS conceded to pressure and withdrew *Thoi Su* from broadcast. It also amended its code of practice 'to provide guidance for future additions to the WorldWatch line-up'.

Source 3

[SBS] Television really acted very much as a broadcaster, you know: 'We will determine what goes to air based on quality and our charter', and they never really talked directly to people. What the Vietnamese were trying to say was, 'We'd really like to talk before you put something like that on the air!' They're not saying, 'Never, ever put this on, or else!' They were trying to have a conversation with us.

SBS Radio presenter Olya Booyar. Quotation from *The SBS Story: The Challenge of Cultural Diversity*, Ien Ang, Gay Hawkins and Lamia Dabboussy, 2008, page 43

Source 4 Members of the Vietnamese community protesting outside the SBS office in Sydney, 2003

skill**drill:** Historical sources as evidence

Identify the origin, context and purpose of primary and secondary sources

Historians use primary and secondary sources to gather evidence about the past. Both primary and secondary sources are useful, but sources will almost always reflect the perspective of the person who created them, as well as the attitudes and beliefs of the time in which they were created.

When considering the value of sources, the student of history should ask the following questions:

- What is the context – that is, what was going on at the time that led to the creation of the source?
- Who created the source – what do you know about the creator? Did the creator have reasons for presenting a particular point of view?
- Where did the source appear – a mainstream newspaper, a special focus publication, a family memoir, a public place, etc.? What does this tell you about its reliability?
- Is it an eyewitness account or was it produced later?
- What was the purpose of the source – to inform, to persuade, to entertain, to provide an alternative viewpoint, to gain support, to discredit another viewpoint, etc.?

Having considered the source in the light of these questions, the student of history should be able to assess its value as a piece of historical evidence.

Apply the skill

1 Using the questions above, analyse Source 1.

2 Which of the four sources do you believe to be most helpful in explaining the *Thoi Su* controversy? Why?

3 Which of the four sources do you believe is most likely to be accurate and reliable? Explain your choice.

4 Suggest one additional source or piece of information that would help you to understand whether the program *Thoi Su* should have been withdrawn or allowed to continue.

Extend your understanding

1 The *Thoi Su* controversy spread outside the Vietnamese-Australian community and led to members of the general public arguing both for and against its continued broadcast. Write a letter to the editor presenting your opinion on the issue. You may draw on the sources on these pages and any additional information that you can gather. Your argument should take into account the perspectives presented by both sides.

economics and business

Concepts and skills

Chapter 17 The economics and business toolkit 470

Unit 1 Enterprising behaviours and capabilities

Chapter 18 Measuring Australia's economic performance 478

Chapter 19 Living standards 492

Unit 2 Work and work futures

Chapter 20 The business environment 506

Concepts and skills

The economics and business toolkit

Economics – why is everyone so concerned about it? It is important because economics is about people producing goods and services to be consumed, used and shared. It is about maximising the **goods and services** that can be produced with a limited amount of resources.

Over 23 million people live in Australia, which amounts to a lot of production and consumption of goods and services. To coordinate and organise these processes we have an economic system that is modelled on how a market works.

The government and the Reserve Bank also have roles to play in managing the Australian economy.

At the heart of every economy is **business**. Business is about producing goods or providing services in exchange for money. In the 21st century, young people will need to adapt to change and seek new and innovative ways to do business in a global marketplace.

17A

What are the economics and business skills?

chapter 17

Source 1 The Internet allows buyers and sellers to easily exchange goods and services on a global basis. It's an exciting time to be in business.

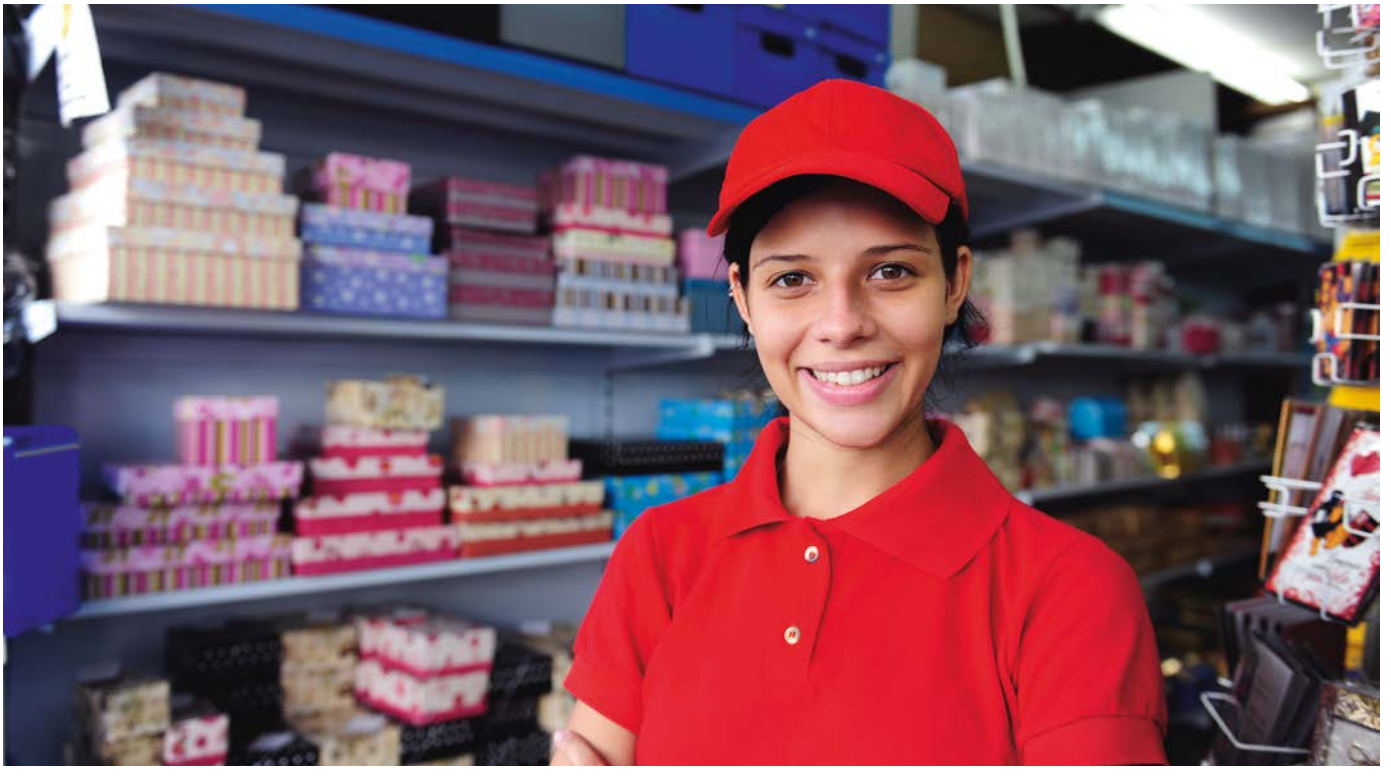

17.1 Economics and business skills

Economics and business students use real-life case studies of the economy and business to generate questions, interpret information and argue their point of view. They also learn and experience how to investigate economic and business issues through simulations and enterprising activities. These experiences provide an opportunity to be innovative, show leadership and demonstrate the ability to make wise business decisions.

Studying economics and business requires you to analyse information and ask a range of questions to find out more about a topic. You will learn to question and research information by asking what, why, when, who and how to uncover the truth about an issue. Your investigation may involve weighing up the costs and benefits of an economics or business proposal and making recommendations.

Source 1 The four categories of skills used in economics and business inquiries

Ask questions and conduct research	• Develop questions and hypotheses about an economic or business issue, then plan and conduct an investigation • Gather relevant and reliable data and information from a range of sources
Interpret and analyse sources	• Analyse data in different formats to explain cause-and-effect relationships, make predictions and illustrate alternative perspectives
Apply strategies to resolve economic and business issues	• Generate a range of viable options in response to an economic or business issue, use cost–benefit analysis and appropriate criteria to recommend and justify a course of action and predict the potential consequences of the action • Apply economics and business knowledge, skills and concepts in familiar, new and hypothetical situations
Communicate your findings and reflect	• Present arguments and evidence-based conclusions in a range of formats using economics and business conventions, language and concepts • Reflect on the intended and unintended consequences of economic and business decisions

Source 2 'Learning on the job' provides great insights and opportunities for economics and business students.

17.2 Ask questions and conduct research

Develop questions and hypotheses about an economic or business issue, then plan and conduct an investigation

Economics and business students ask lots of questions. They seek out economic and business cases and undertake an investigation to try to learn from and avoid mistakes made in the past. They also check facts and look at the arguments for and against a certain issue before reaching their own conclusions. When economists state their own viewpoint they support this with evidence such as statistics, cases from the past, quotes from what others have said and sound reasoning.

Source 1 It is important as an economics and business student that you continue to ask in the classroom whenever you need more information.

skill**drill:** Reasoning and interpretation

Developing a hypothesis

Developing a hypothesis is a useful tool in economics and business. A hypothesis is a proposition that provides an explanation or reason why something has occurred or a problem exists. It can be likened to taking an 'educated guess' or prediction. In business, developing a hypothesis and testing whether it is true or not could mean that personal and financial loss is avoided. Here is an example of a hypothesis that could be tested.

'Youth unemployment is unacceptably high because of insufficient training and education programs.'

It may help you to write a hypothesis on an economic or business issue or event by remembering the 'If and then' model of hypothesis writing. For instance, 'IF the **employer** pays extra bonuses for good performance THEN his **employees** will work harder'.

Step 1 Identify a question or make a statement that will become your hypothesis.

The following sentence may help you to create your hypothesis: 'IF_____ THEN_____.' (You can then reword the hypothesis to make it read better if you need to.)

Step 2 Make an educated guess about whether your hypothesis is correct. Test your hypothesis by using data and surveys, analysing any information about the topic and learning what experts in the field say about it.

Apply the skill

1 Janet plans to sell her unique brand of handmade knitted jumpers via her own website, which she intends to build herself. These jumpers are made from pure wool and are more expensive than other jumpers on the market. It takes Janet at least three days to make one jumper. Write a hypothesis about the likely success of Janet's business.

2 How could you test whether your hypothesis about Janet's business is likely to be correct?

Source 2 Taking someone else's work in any form whether it is from a book or the Internet is a form of stealing called plagiarism that can result in serious consequences.

Gather relevant and reliable data and information from a range of sources

Although books and newspapers are valuable sources of information, most research today is conducted online. In order to ensure that sources gathered online are accurate, reliable and relevant, a number of guidelines should be followed:

- Search engines such as Google are useful research tools, but much of the material on these sites is not reliable and may contain inaccuracies, false and misleading information or material that is out of date. When using search engines, be sure to define your search using keywords. Your librarian is a good person to ask for help and information. Most schools will also have a website devoted to providing information about developing good research skills.
- A reliable way of searching for sources is to use sites linked to educational institutions, government departments, reputable companies and universities. A quick way of telling if a site is reputable is to look at the domain name in the URL (internet address).
- Avoid blogs posted by unknown individuals. If you find information relevant to your investigation on a blog or social media site, always verify it by using a more reliable source.
- Never cut and paste information from the Internet straight into your own work. Taking someone else's work, ideas or words and using them as if they were your own is called plagiarism and can result in very serious consequences.

Check your learning 17.2

Remember and understand

1 Why is it important for economics and business students to ask a lot of questions?

2 How can economics and business students ensure the sources they find online are reliable?

Apply and analyse

3 Develop a hypothesis to explain the following situations.

- **a** In order to pay his business' bills, John has decided to pay his employees less. Not long after, many of his employees quit.
- **b** Krupa owns an ice cream shop. During the summer months, business is good and she sells lots of ice cream, but during winter, not many people want to buy her ice cream.

Evaluate and create

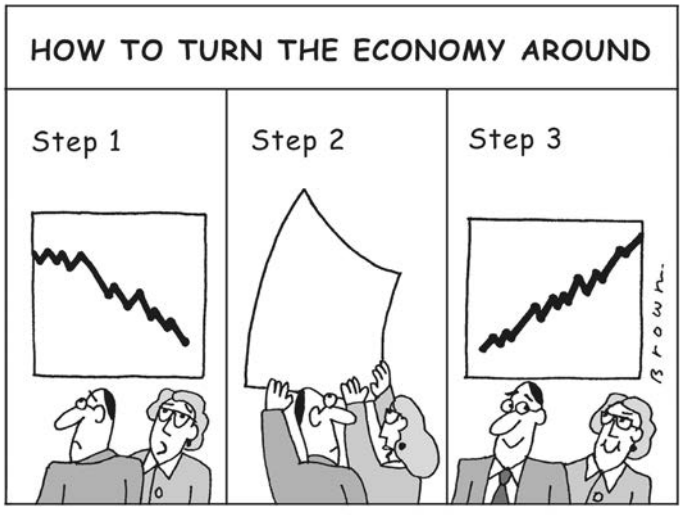

4 Develop five questions that might help an economist investigate whether or not it is a good idea for Sandy to open a fish and chip shop in the main street of her town.

17.3 Interpret and analyse sources

Analyse data in different formats to explain cause-and-effect relationships, make predictions and illustrate alternative perspectives

Economics and business students use charts, statistical tables, case studies, interviews and simulation games to help identify the cause of a problem or event and its likely outcome or effects. For example, the decline in demand for mining commodities such as coal, iron ore, zinc, nickel, copper and bauxite (the cause) has led to unemployment (the effect) in some parts of rural Australia. This is an example of a cause-and-effect relationship.

In economics and business the answer to a question may not always be black or white but many shades of grey. This is because it is a subject area where there are many alternative perspectives. For example, there are many reasons why youth unemployment is higher than the general rate of unemployment in Australia and statistics may not provide all the answers. Many issues require you to weigh up alternative perspectives, all of which may be valid.

Source 1 In economics there may be multiple perspectives on a certain issue or event. Sometimes, statistics can be illustrated to give the wrong impression.

Source 2 Interviewing different people in your community, such as your friends, neighbours or local business people, about a problem can offer a variety of interpretations.

Check your learning 17.3

Remember and understand

1 Why is there often more than one answer to an economic question?

2 What sources of information can economists use to identify the cause of a problem?

Apply and analyse

3 Identify the cause and the effect for each of the following scenarios.

- **a** A lot of people were angry when a concert featuring singer Sam Smith was cancelled.
- **b** As the Zika virus spread around the world and more people became affected, the federal government decided to put more funding into researching a cure for the virus.
- **c** Fewer people bought CDs after the first MP3 player was released.

17.4 Apply strategies to resolve economic and business issues

Generate a range of viable options in response to an economic or business issue, use cost–benefit analysis and appropriate criteria to recommend and justify a course of action and predict the potential consequences of the action

There's usually more than one way to solve an economic problem or find the right solution in business. Before examining possible options, you must first do some preliminary work to find out about the topic. Read widely, consult your textbook, conduct an Internet search and find out what experts say about the issue or question you are examining. Write a summary and then refine these notes by writing a list of all the options. Next to each option write the advantages and disadvantages or costs and benefits and then delete those that are weak. Concentrate on the stronger options and either make a decision about which one is best or do further research before deciding the best option.

Apply economics and business knowledge, skills and concepts in familiar, new and hypothetical situations

Reading about economics or business in your textbook or using online resources can only teach you so much. Applying knowledge to a real business situation is a valuable experience and there are a number of ways you can do this:

- Talk to someone in business about their experiences to see how the things you have learned in class apply in real life.
- Observe the world around you. When you next go shopping think about some of the things you've been studying such as customer service, competition, **marketing** techniques and types of businesses.
- Try coming up with your own innovative business idea and discuss it with others.
- Use opportunities to role play or play simulation games as a chance to hone your skills and put what you have learned into practice.

Check your learning 17.4

Remember and understand

1 Why do you think it is important to find out about an issue before making a decision on how you will deal with it?

2 Name three ways you could apply your knowledge of economics and business to real life situations.

Apply and analyse

3 Imagine you must choose how to spend the weekend. Conduct an analysis of the options below, based on your personal preferences, and decide which option is the best. Your analysis should take into account advantages and disadvantages for each option:

- **a** bike riding
- **b** watching a movie
- **c** doing homework
- **d** reading a book
- **e** playing footy with your friends
- **f** visiting your grandparents
- **g** cleaning your room.

17.5 Communicate your findings and reflect

Present arguments and evidence-based conclusions in a range of formats using economics and business conventions, language and concepts

Just like in science, a common language is used in economics and business. Source 1 lists and defines some commonly used terms in economics and business; additional economics and business terms can also be found in the glossary at the end of this book.

Reflect on the intended and unintended consequences of economic and business decisions

The decision to change a **product**, undertake a marketing campaign or change the price of a product or service can lead to business success or failure. According to the Australian Bureau of Statistics, more than 60 per cent of **small businesses** close within three years of starting out. Business closure is certainly an unintended business outcome. Good business planning, research and reflecting on previous experiences can provide a valuable guide for future business success.

Source 1 Some useful economic and business terms

business	Activity that involves producing goods or providing services in exchange for money
capitalism	A set of economic and political ideas that states that private individuals should own productive resources such as land and capital from which they can earn **profit**
Consumer Price Index (CPI)	A measurement of retail price changes of a constant basket of goods and services representative of what households in Australia spend
cost–benefit analysis	Estimating what will need to be paid (costs) and possible profits (benefits) derived from a business proposal
economics	The study of how people produce, consume and share wealth
Gross Domestic Product (GDP)	The total market value of all goods and services produced within Australia in a given time frame
interest rates	The amount a borrower must pay to a lender for the use of assets such as money. Usually expressed as a percentage of the total amount borrowed
investing	Putting money into **shares**, **property** or other financial schemes in the hope of making a profit
opportunity cost	The cost of the next best alternative use of resources
unemployment rate	The percentage of people who are in the labour force who are unemployed. The labour force includes those who are employed and unemployed

Check your learning 17.5

Remember and understand

1 Use your own words to define the following economics and business terms:
   - **a** business
   - **b** investing.

2 Why is it important to reflect on business decisions?

Apply and analyse

3 Reflect on the following scenario and determine which decisions were good or bad economic decisions.

Elan and Judy open a small bakery together. They decide to rent a shop opposite a local primary school and develop a partnership with the school filling lunch orders. They have a big sign out the front of their bakery, but decide not to do any other advertising like dropping flyers in letterboxes or sponsoring the local netball team. Elan and Judy find most of their business comes from the primary school, but they don't get many other customers.

Measuring Australia's economic performance

If you were driving a car and saw a road sign saying 'hazardous conditions ahead', would you change driving behaviour? Most of us would.

It's the same with the economy. **Economists** measure economic performance as a way of seeing what lies ahead so that changes can be made to keep us travelling along the road safely.

There are many signs or indicators that can tell us how well the economy is performing. Measuring rates of production, the price of goods and services, and levels of employment are just some of the indicators that can tell us how well the economy is performing.

18A

How is the performance of the Australian economy measured?

1 Do you think you have more goods and access to more services than your grandparents did when they were children? Why?

2 List at least ten things that provide a better life for citizens living in Australia's economy.

18B

How well does the Australian economy perform compared with other economies around the world?

1 Do you think that Australia is a great place to live compared with other countries? Why?

2 How could you measure whether one place was better to live in than another?

chapter 18

Source 1 Increased rates of production and levels of employment can be indicators that an economy is performing well.

18.1 Measuring growth in the Australian economy – GDP

One way of measuring your performance at school is checking how well you have performed on a test. One way of measuring the performance of the **economy** is checking **Gross Domestic Product** (**GDP**) figures. GDP is a measure of the total value of all **goods and services** produced in Australia over a year, so if GDP increases we know that the economy is growing. If GDP decreases, we know the economy is contracting, or shrinking.

Understanding Gross Domestic Product (GDP)

As mentioned, GDP is a measure of the total value (in dollars) of all goods and services produced in Australia over a specific period of time. Let's look at this term in more detail:

- '**Gross**' means that tax or other deductions (like **depreciation**) are not taken into account when calculating GDP. GDP is a measure of value before these are deducted. For example, machinery decreases in value over time due to wear (known as depreciation), but this is not taken into account when calculating GDP.
- '**Domestic**' refers to production within a country such as Australia.
- '**Product**' includes goods (such as bread, mobile phones and clothes) and services (such as haircuts, tax returns, school fees). Only **final goods** and services are included when calculating GDP. For example, an apple pie is a final good because it is no longer being used to produce another good.

The importance of economic growth

The Australian Bureau of Statistics (ABS) releases its GDP figures every quarter (i.e. every three months). It is the percentage change in GDP that makes the news and tells us whether the economy is growing. On a yearly basis, economists hope to see **economic growth** exceed 2 per cent.

Economic growth is important because if more goods and services are being produced it means that more people are being employed (and paid wages) to make them. People are then able to spend their wages on a wider variety of goods and services that may improve their living standard. When economic growth falls, it means that there is a decline in the number of goods and services being produced, which usually means a decline in the number of people being employed, and the wages they are paid. In turn, this often means a decline in their standard of living.

An economic **recession** is where economic growth falls for two or more quarters (i.e. six or more months) in a row. Australia has had four recessions since 1960: 1961, 1974–75, 1982–83, and 1990–91. A **depression** is more severe, and is classed as an extreme recession lasting two or more years. In a depression, economic growth falls, there is a decrease in available credit, a significant increase in unemployment, and there is little consumer confidence.

Source 1 Gross Domestic Product (or GDP) is one way to measure economic growth in an economy.

Limitations of GDP as a measure

At school, your test results alone don't always paint a true picture of your performance. Most of the time, good performance can only be assessed by looking at a range of different measures, like your attitude and behaviour in class, and your relationships with your classmates.

Likewise, GDP alone does not accurately assess the true performance of the economy. Producing more goods and services may have some undesirable environmental and social consequences. All of the factors in Source 4 below are not considered when calculating GDP. Prioritise what you consider to be the most important factors for a worthwhile life and then decide whether GDP alone is a good measure of progress in Australia.

Source 2 Boys collect bricks during the Great Depression (1929–39). At the time, young people found it easier to get jobs, but as they got older their work options reduced. In mid-1932 almost 32 per cent of Australians were out of work.

Source 3 Annual percentage change in real GDP for Australia

Year	2010	2011	2012	2013	2014 (a)	2014 (b)
Annual percentage change	2.4	2.6	3.6	2.0	2.6	2.4

Source: ABS, the IMF and various international sources. (a) All recent data subject to revision; (b) IMF/EIU forecast.

Source 4 Important factors for a worthwhile life

Factors	Priority 1–8 (number 1 being the highest priority)
Enough leisure time	
Spending time with family and friends	
Contributing to the community	
A job that is rewarding	
Enjoying nature	
Good health	
A pollution-free environment	
Income and wealth are distributed fairly in society	

Check your learning 18.1

Remember and understand

1 What does GDP stand for?
2 Why do we measure GDP?
3 List at least three limitations of GDP as a measure of the nation's progress.
4 What is the definition of an economic recession?
5 What is the definition of an economic depression?

Apply and analyse

6 Explain the consequences when there are two or more quarters of negative growth in GDP.
7 What percentage change in GDP is considered suitable by economists?
8 How might producing more and more goods and services each year affect our environment?
9 Explain why the pursuit of increasing production can affect a citizen's health and welfare?

Evaluate and create

10 Refer to the chart pack at the Reserve Bank's website and find the latest annual and quarterly GDP figures. Describe how GDP has changed since 2015.
11 Create a diagram showing that one in three people were unemployed during the Great Depression.
12 Draw a picture or create an image that clearly shows how increases in GDP can lead to increased employment and a better standard of living.

18.2 Measuring price changes in the Australian economy – inflation

Inflation occurs when there is an increase in the general level of prices paid for goods and services over a certain period of time. Usually we measure the change in prices on a yearly basis. Rising prices means the **consumer** must pay more for goods and services if they want to continue to consume the same amount and maintain their standard of living. For example, $100 spent on goods and services in 1980 would cost $408.63 in 2015 (assuming an average inflation rate of 4.1 per cent over those 35 years). It must be remembered, however, that wages and salaries do increase. In 1980, the average weekly wage (before tax) for a man was $245.70 and in May 2015 it was $1674.80.

Inflation is thought to be sufficiently low if it does not exceed the Reserve Bank and Treasury target of 2–3 per cent per year (see Source 3).

Reasons for inflation

A major factor causing rising prices is stronger demand in the economy for goods and services. This stronger demand can lead to shortages of goods and services with companies unable to keep up with the demand for their products and therefore prices increase. Increased spending might be due to:

- consumers feeling confident about their income and employment in the future
- businesses feeling confident about the future – they may therefore expand their business operations, employ more staff and invest in better capital equipment
- trading partners such as China performing well and demanding our exported goods and services
- relatively low **interest rates** encouraging consumers and business to borrow more in order to spend
- lower taxes and increased government spending may also lead to increased demand and therefore expenditure.

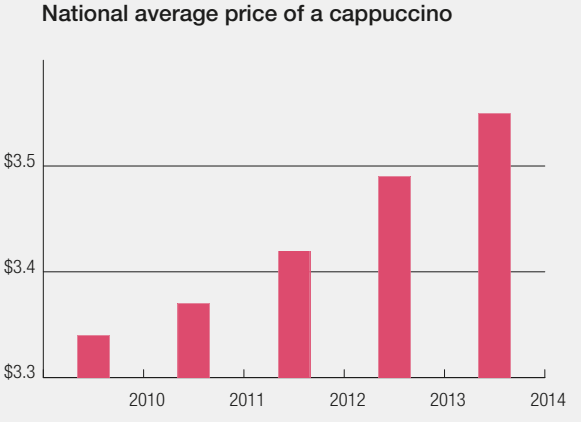

Inflation may also occur due to increasing costs. If wages increase this extra cost might be passed on to consumers in the form of higher prices. Higher taxes and higher interest rates on money borrowed may also lead to increased costs that businesses must bear.

casestudy

Have you noticed how much you pay for a cup of coffee?

Inflation refers to the rise in the general level of prices, not just the price of a can of Coke or a cup of coffee. Nevertheless it's interesting to look at the price of frequently consumed items such as a cappuccino. A Brisbane coffee machine supplier, Gilkatho, started a coffee price index in 2003. They first started monitoring coffee prices in Brisbane in 2003 and now monitor the major capital cities in Australia. In the last quarter of 2010 the average price of a takeaway cappuccino in Melbourne was $3.15. The average cost of a cappuccino in Melbourne is now well over $3.50. The most expensive place to buy a cappuccino is Perth and the least expensive is Sydney.

If you think your coffee is already expensive, the news is that the price of coffee is likely to increase soon. Emerging markets like China, India and Brazil may start demanding more coffee, resulting in rising coffee bean prices (the key raw ingredient used to make cappuccino). Added to this is the drought in Brazil. Brazil supplies one third of the world's coffee so it's likely a shortage will drive coffee bean prices up.

Source 1 The average price of a takeaway cappuccino has increased by just over 7 per cent in recent years (Data derived from the Gilkatho Cappuccino Price Index™).

Inflation winners

- **High-income earners** – people with jobs, whose incomes increase at the same rate or faster than inflation
- **Borrowers** – rising prices means it may be better to borrow with a **fixed interest** rate and make the purchase now
- **Importers** – the price of imported goods may be cheaper than the price of goods produced in Australia

Inflation losers

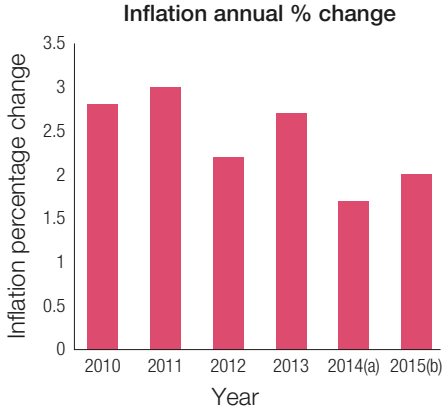

- **Low- to middle-income earners** – people on incomes that do not increase as fast as inflation, like part time workers, the unemployed and pensioners
- **Bank savers** – money sitting in the bank may not buy as much as it previously did due to price rises
- **Exporters** – as exported goods become more expensive, demand from overseas consumers will fall

Source 2 Higher inflation rates affect purchasing power, adversely affecting some groups in our community, meaning some people benefit while others don't.

Businesses using imported raw materials may also have to pay more if the Australian dollar falls. An increase in oil or energy prices can also have a big impact on costs such as transportation for many businesses.

Measuring inflation – the Consumer Price Index (CPI)

The Australian Bureau of Statistics measures inflation by using the **Consumer Price Index (CPI)**. The CPI measures the price change of a typical basket of goods and services purchased by Australian households every quarter. The change in these prices from one quarter to another is referred to as the inflation rate. We therefore know the rate at which prices are changing in the economy.

Source 3 Compiled by the Trade Advocacy and Statistics Section, DFAT, using the latest data from the ABS, the IMF and various international sources.

Check your learning 18.2

Remember and understand

1 What is inflation?
2 Why does inflation reduce our ability to purchase as much as before with the same amount of money?
3 What is a sufficiently low level of inflation according to the Reserve Bank of Australia?
4 How is inflation measured in Australia?

Apply and analyse

5 Which of the following factors may contribute to an increase in inflation caused by strong demand?
   a Consumer confidence falls.
   b Business confidence rises.
   c Interest rates rise.
   d The government increases income tax.
6 Why would an increase in the cost of coffee beans lead to higher cappuccino prices?
7 Why are pensioners more likely to be affected by higher inflation rates compared to employed people?

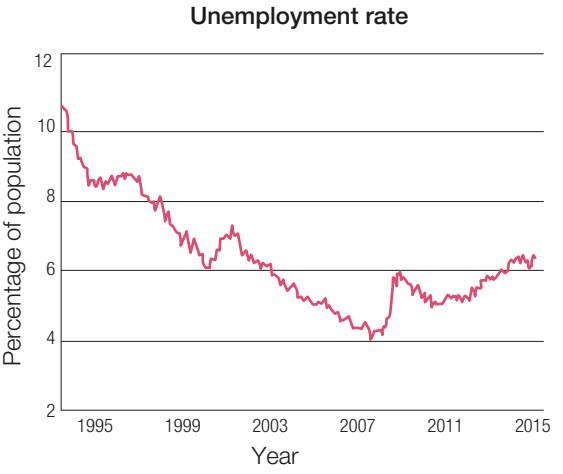

Evaluate and create

8 Find out what hyperinflation means and give an example of one country that experienced it. Write a paragraph describing how it was affected.
9 Think of at least three items you have purchased in the past that now cost more to buy. Explain why the price for these items may have increased.

18.3 Measuring participation in the Australian economy – the unemployment rate

According to the Australian Bureau of Statistics (ABS), a person only needs to be employed for one hour per week to be considered 'employed'. This includes all Australians aged 15 years and over, from teenagers (who might mow lawns or deliver newspapers) to older people (who might work as school crossing supervisors or classroom assistants).

An important indicator of how well the Australian economy is performing is the **unemployment rate**; the percentage of people in the labour force who are unemployed. Source 1 shows that Australia's unemployment rate was over 10 per cent at the beginning of the 1990s but in 2015 was just over 6 per cent.

Source 1 Australia's unemployment rate fell from over 10 per cent in the early 1990s to under 5 per cent in the mid-2000s. In 2015, it sits at just over 6 per cent.

Employed
Working at least one hour a week

+

Unemployed
Ready to start work and taking active steps to find a job

=

The labour force
Total number of people in Australia willing and able to work

Will robots take our jobs in the future?

According to a recent study conducted at Oxford University, nations in the **industrialised** world like Australia could lose half of all jobs to **automation**. Automation is when a machine does the work of a human. Automation is already impacting the mining industry, where half of the iron ore in the Pilbara is being transported by driverless robots. One of the country's largest port operators, Patrick Stevedores, is also set to slash its workforce by employing driverless robots at the port.

Source 3 Robots are now used in many fields and industries such as medicine, manufacturing, the military and the police. This robot is being used by the Civil Defence Force in Singapore to diffuse and dispose of a bomb during a training drill.

The big advantage to business is the prospect of cutting labour costs and therefore remaining competitive on the world market. Australia's largest brickworks, Austral, now employs two robots that work 24 hours a day, 365 days of the year, stacking 75 million bricks. It would have normally taken ten men at a time working eight-hour shifts to complete this same amount of work.

Some experts say that the advance in technology means that the type of work we do is changing. There will be fewer low-skilled jobs but the opportunity to do higher-skilled work that robots cannot do will provide increased opportunities for some.

Overall unemployment rate

Source 4 Some key unemployment statistics in Australia in 2015

When the total unemployment rate in Australia is high, the government collects less revenue in the form of taxes and must also pay more to assist the unemployed in the form of social benefits (e.g. unemployment payments) and welfare programs (e.g. social housing). There are, of course, a range of other social consequences associated with high unemployment rates, such as a reduced standard of living, loss of skills from the workforce, and the possible psychological effects of not working (such as depression).

It is useful to look at unemployment rates for various groups in society as an economic and social indicator of how well our economy is performing. Source 4 provides a snapshot of unemployment for various groups.

Causes of unemployment

There are many causes of unemployment. When production or GDP is weak and spending in the economy has decreased, businesses may cease to hire new staff or cut back on staff in order to save money and stay in business. Unemployment may also rise because of factors such as increased competition from overseas, making it difficult for Australian businesses to compete. Businesses may take their operations offshore (to other countries) or may close down. Labour-saving technology may also be introduced which may lead to unemployment, even if it is in the short term.

Check your learning 18.3

Remember and understand

1 How has the unemployment rate in Australia changed since the early 1990s?

2 List some of the social consequences of unemployment.

Apply and analyse

3 Who out of the following people would be considered to be unemployed?
   - **a** Abbass wants to work but did not look for a job because he is busy painting his own house.
   - **b** Babette works for four hours after school on a Friday night.
   - **c** John lost his job but has been attending job interviews and is ready to start work any time.

4 Compare the total unemployment rate (Source 4) to the Indigenous unemployment rate. Why is this statistic concerning?

5 Jot down at least four examples where machines have reduced the need for labour.

6 What barrier might people aged 55 years and over have to gaining employment?

7 Why are lower levels of production likely to result in increased unemployment?

8 Explain how unemployment affects government revenue.

Evaluate and create

9 In pairs, brainstorm reasons why the youth unemployment rate is more than triple the total unemployment rate. See if you can think of any strategies to address this imbalance.

10 Read the following statement and write a paragraph responding to its message.

> A business that doesn't take advantage of automation risks closing down and then no one will be employed in that business.

18A rich task

Youth unemployment

The youth unemployment rate in Australia is over 13 per cent – that's more than double the general unemployment rate according to ABS figures released in 2015. Some geographical regions, however, suffer higher rates of youth unemployment.

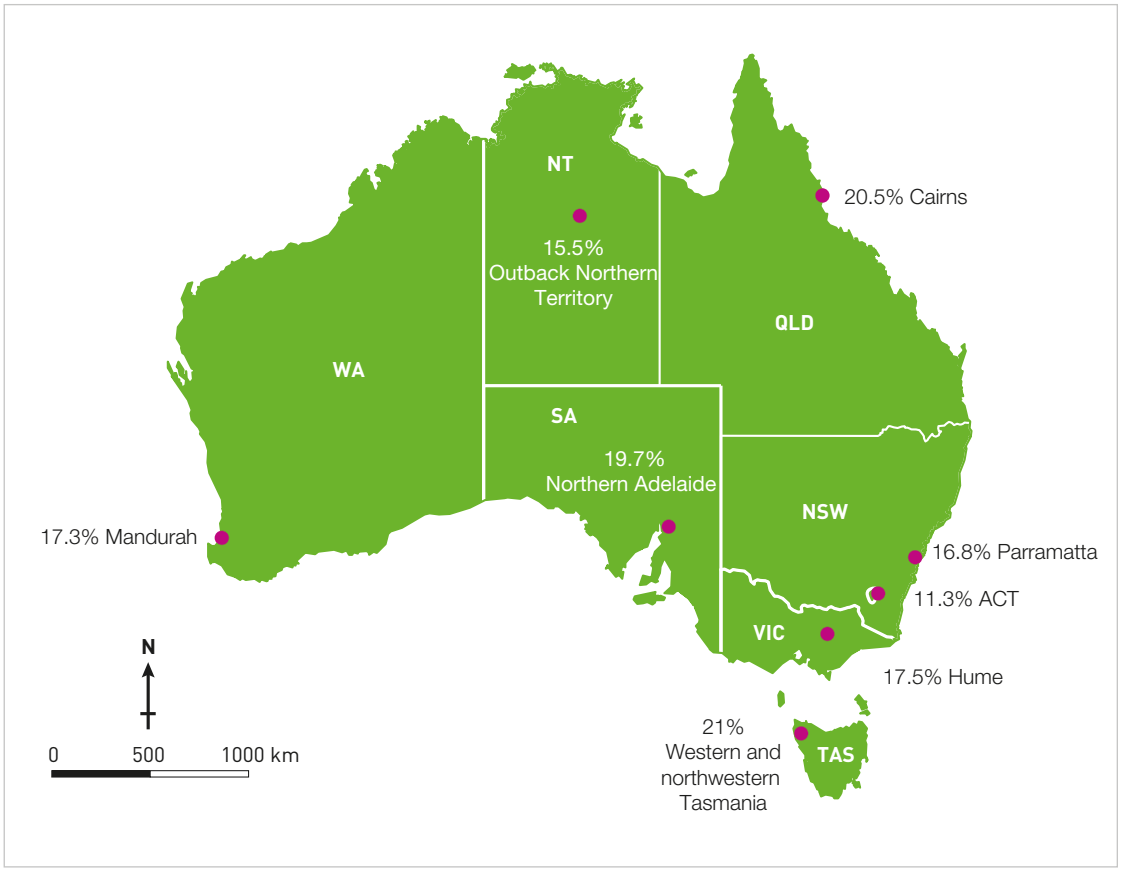

Technological change has contributed to youth unemployment. Jobs like working on a cash register, or becoming a sales assistant, a filing clerk or a typist are no longer as plentiful as they once were. This has meant that many young people have found it difficult to 'get their foot in the door' and gain much needed work experience. Professor Phil Lewis at the University of Canberra says,

'Employers increasingly want people with skills and experience and that's a challenge for young people… A young person who leaves school in year 10 would be very lucky to find a job these days.'

Source 2 Work not only builds a person's self-esteem but their bank balance and future. While youth unemployment in Australia is over 13 per cent, in Spain nearly half of those under 30 years of age are unemployed. Many young people in Spain have no hope for their future. This young man is writing 'Busco Trabajo', which means 'looking for work'.

YOUTH UNEMPLOYMENT AROUND AUSTRALIA

Source 1 Western and northwestern Tasmania suffer higher youth unemployment than anywhere else in Australia, with Cairns affected almost as severely.

skill**drill:** Reasoning and interpretation

Formulating questions about an economic issue

Formulating questions is an important skill which will help you investigate an economic issue on your own. The questions that you generate will frame or direct the research that you then undertake.

Once you have established the economic issue you would like to explore, it is useful to generate one broad, overarching question to guide your inquiry. For example, if the economic issue was 'the problem of youth unemployment', the question posed might be, 'Why is youth unemployment a problem in Australia?'

After that, you need to generate more specific questions that are related to your overall inquiry question, and a mixture of question types.

Step 1 Identify the economic issue you wish to explore.

Step 2 Decide on your broad, overarching question.

Step 3 Generate some closed (or simple) questions – for example, 'Are youth more likely to be unemployed than others in a higher age brackets?'

Step 4 Generate some open (or probing) questions – for example, 'What are the consequences of youth unemployment?'

Step 5 Formulate some questions that relate to the evidence surrounding an economic issue. For example, 'What evidence is there that confirms youth unemployment is rising?' and 'What other sources might be needed?'

Use a table, similar to Source 3, to guide you through the process of proposing questions. Remember to include a mix of the three question types already discussed.

Apply the skill

1 Pick an issue about youth unemployment or propose an issue about youth unemployment yourself. Some examples are given here:
   - the social impact of youth unemployment
   - the economic impact of youth unemployment
   - solutions to youth unemployment
   - problems caused by youth unemployment.

2 Now that you have picked an issue propose an overarching question and fill in a table similar to Source 3. Conduct some Internet research to find out the answers to the questions you have proposed.

Source 3 Process for generating questions about an economic issue

1: Devise an overarching inquiry question	
2: Make a list of what you already know about this issue and then create sub-questions related to each point	Sub-questions
Point 1	Sub-questions related to point 1
Point 2	Sub-questions related to point 2
Point 3	Sub-questions related to point 3
3: Make a list of what you don't know about this issue and then create sub-questions related to each point	
Point 4	Sub-questions related to point 4
Point 5	Sub-questions related to point 5
Point 6	Sub-questions related to point 6

Extend your understanding

1 Explore the issue of Indigenous unemployment in Australia. Propose an overarching or broad question first and then fill in a table similar to Source 3 to help guide you through your research. Use the Internet to find the answers to the questions you have posed.

18.4 Australia's economic scorecard

The performance of an economy is sometimes measured by how well it compares to other economies around the world. Australia ranked 12th in the world in terms of GDP (see Source 2) but is still a relatively small economy, responsible for around 2 per cent of the world's production. Let's look at how well Australia compared with other countries in terms of achieving low unemployment and inflation rates and higher economic growth.

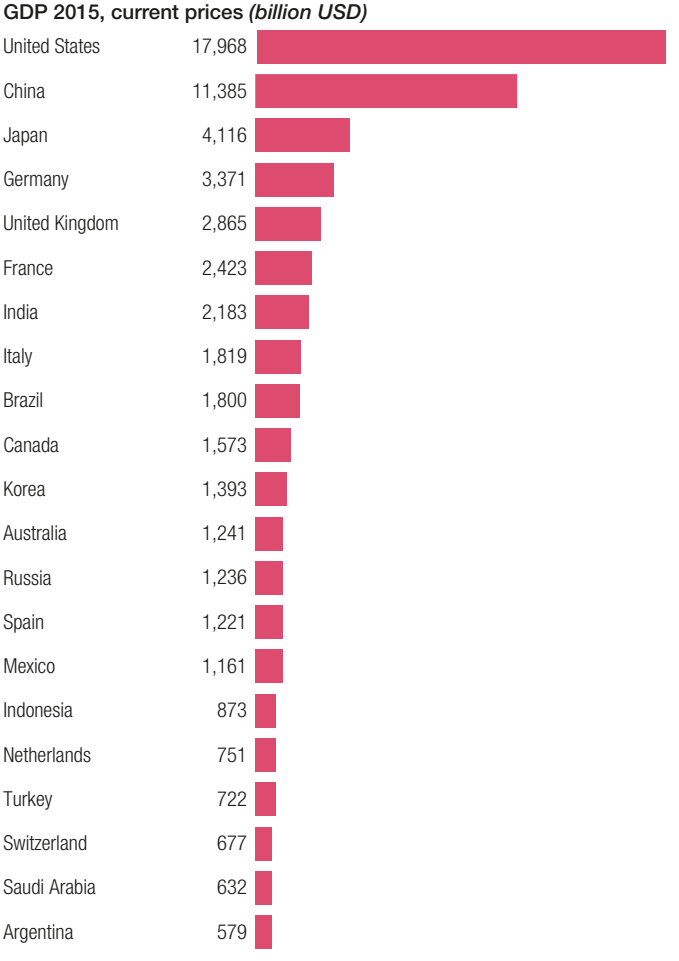

Source 1 Australia's long period of uninterrupted economic growth has contributed to the boom in high-rise building for offices and apartments, particularly in cities like Melbourne.

The unemployment rate

Australia has a relatively low rate of unemployment compared to other countries (see Source 3). In 2014 it ranked the fifteenth-lowest out of 36 countries using unemployment statistics released by the OECD (Organisation for Economic Co-operation and Development). Korea had the lowest unemployment rate (3.5 per cent) and Greece had the highest unemployment rate (26.3 per cent). The unemployment rate according to Reserve Bank figures released in 2016 is 5.8 per cent.

Gross Domestic Product (GDP)

Australia has experienced uninterrupted economic growth over the past 25 years. This sets a record that has not yet been equalled by any other developed nation in the world. GDP fell in many developed countries during the global financial crisis of 2007–2008 (a time when many businesses collapsed and consumer confidence was very low), but Australia was one of the few countries that still experienced positive economic growth. It is forecast that Australia's economy will continue to grow, with GDP forecast to increase between 3 and 4.5 per cent by June 2017.

Source 2 Gross Domestic Product 2015 – IMF World Economic Outlook (WEO), October 2015

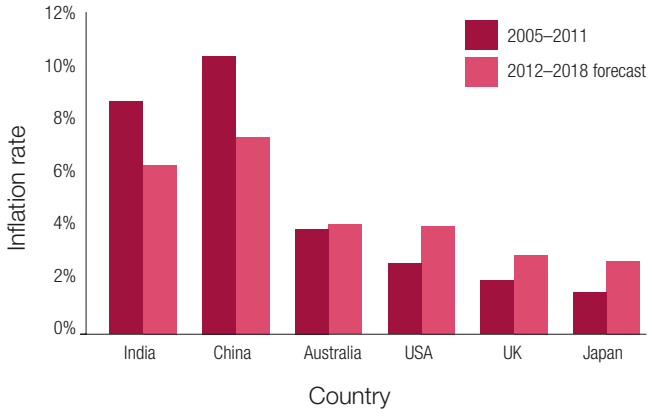

Source 3 OECD unemployment rates

Country	2007	2008	2009	2010	2011	2012	2013	2014 (Feb figures)
Australia	4.4	4.2	5.6	5.2	5.11	5.2	5.7	6.0
United Kingdom	5.3	5.7	7.6	7.8	8.1	7.9	7.5	6.6
United States	4.6	5.8	9.3	9.6	9	8.1	7.4	6.7
Germany	8.4	7.3	7.8	7.1	6	5.5	5.3	5.2

Note: These unemployment rates indicate the percentage of the labour force that is unemployed and are **seasonally adjusted**. This means the data has been corrected to allow for some sort of comparison.

Inflation

Source 4 shows the inflation rate for selected countries. Australia and trading partners such as China and the United States have experienced relatively low levels of inflation in recent years.

Source 4 This graph is derived from the International Monetary Fund World Economic Outlook Database, October 2014, Austrade

Source 5 When prices rise, we can no longer buy as much as we previously did for the same amount of money.

2 Where did Australia rank in terms of its share of world GDP in 2015?

3 Where did Australia rank with other countries in terms of its unemployment rate in 2014?

Apply and analyse

4 Refer to Source 4. Which two countries are forecast to achieve the highest economic growth in the period from 2015 to 2018?

5 How did the Australian economy perform compared to other countries during the global financial crisis in terms of economic growth?

Evaluate and create

6 How does the performance of the Australian economy compare to the performance of other economies? Write a short analysis based on your reading.

18B rich task

The story behind our economic growth

Australia's good record in economic growth has largely been dependent on the fact that it has abundant **natural resources**. Natural resources include such things as fossil fuels, minerals, forests, farmland and fisheries. The unfortunate side effect of this is that these resources become depleted over time and their extraction can cause environmental damage.

Source 1 Australia has abundant natural resources, the exports of which have boosted our economy.

The *Inclusive Wealth Index* (IWI) measures whether our production is reducing the resources we need to produce goods and services in the future. Using the IWI, the growth rate of GDP per person was 47 per cent from 1990 to 2008 in Australia. When you take into consideration the effect it had on our natural resources (referred to as natural capital), GDP per person was reduced to 2 per cent.

> "We need new indicators that tell us if we are destroying the productive base that supports our well-being."

Source 3 Partha Dasgupta and Anantha Duraiappah *Inclusive Wealth Report 2012*

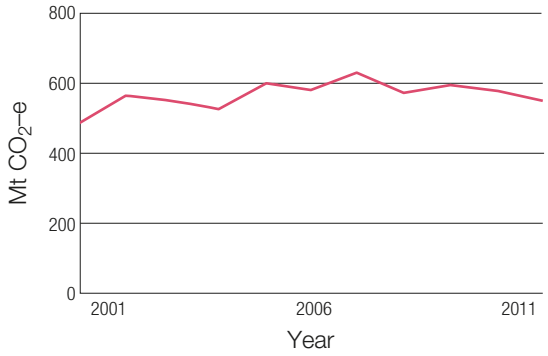

The Australian Bureau of Statistics collects data on measuring Australia's progress. Australia has regressed, or gone backwards, in the area of sustainably managing the environment. Source 4 shows Australia's net greenhouse gas emissions, up to 2011. Australia's net emissions have increased by 11 per cent since 2001, according to figures released by the ABS in 2013. Greenhouse gas emissions such as carbon dioxide and methane are released into the atmosphere and are caused by pursuing more production each year.

Source 2 provides in pictorial form, some of the future ramifications of increased greenhouse gas emissions.

Source 2 An increase in greenhouse gas emissions has serious consequences.

Australia's net greenhouse gas emissions, excluding wildfires

Source 4 Measures of Australia's progress, 2013, ABS

skill**drill:** Reasoning and interpretation

Preparing an infographic

An increasingly popular way for economists to present their findings and data is to prepare an infographic. Infographics use pictures and symbols to represent complex ideas and data so that information is clear and quickly accessible.

Step 1 Decide on a topic and the message that you want to communicate to your audience. In the infographic in Source 2, for example, the key message is that production causes greenhouse gases and adversely affects the environment we live in.

Step 2 Research your topic and collect data that helps to communicate your key idea. Try not to have too much data; don't include more than 10 key facts or numbers.

Step 3 Use a simple picture to communicate each of your key facts as shown in Source 2.

Step 4 Lay your graphics out in a logical way that links together the key ideas. Make sure your infographic is not too cluttered. Give your infographic a catchy title that communicates your message.

Apply the skill

1 Design and present an infographic that compares the performance of the Australian economy with the performance of another country or countries. Use the statistics on pages 488 and 489 as the basis for your infographic. You may like to do some additional research on the Internet to find relevant statistics that enhance your infographic.

2 When completed, look closely at your classmates' infographics. Which techniques did others use to best present the data in a visual way? How did they make the data easier to interpret?

Extend your understanding

1 Create another infographic on the effects of pursuing higher economic growth rates through increased production. Pick anyone of the following topics and do some initial research about the topic before creating your infographic.

- Deforestation
- Desertification
- Extinction of species
- Soil erosion
- Oil depletion
- Ozone depletion
- Greenhouse gas emissions
- Water pollution
- Natural hazards/natural disasters

Living standards

Meet Australian twins, Sam and Anna, born 1 May 2016. According to the latest life expectancy figures, Sam will live until he is 80.1 years of age and Anna will live until she is 84.3 years of age. Because Sam and Anna are Australians, statistics show that they are likely to enjoy a high **living standard**. They are unlikely to experience extreme poverty.

Despite these statistics, Sam and Anna's prosperity isn't guaranteed. Will the **economy** stay strong and offer them good job opportunities throughout their lives? Will their quality of life they be affected by climate change?

Nothing is certain with regards to the economy, but the government must manage economic factors to ensure we continue to enjoy high living standards as a nation.

19A

Why do living standards vary around the world?

1 Brainstorm a list of all the things you need to have a good life.

2 Why are non-material factors such as having adequate leisure time or living in a clean environment important when considering living standards?

3 Why might some people enjoy a higher standard of living than others?

19B

What is the connection between economic performance and living standards?

1 Jen is a casual worker in a supermarket and has had her work hours reduced. How might this reduced income affect her spending?

2 If the government decides to increase taxes how might this affect consumer spending?

chapter 19

Source 1 Newborn twins Sam and Anna are Australians. Based on current statistics, they are likely to enjoy a high living standard compared to babies born in many other countries around the world.

19.1 Defining and measuring living standards

A standard is a certain level of attainment or achievement. For example, you either pass year 10 or you don't. When we talk about a country's living standards, we are specifically looking at what it's like to live in that country in terms of the material and non-material wellbeing of its citizens.

The living standard of a population can be measured in two different ways: **material living standards** and **non-material living standards**.

Material living standards

Material living standards refer to our access to physical goods and services. The car we drive, the house we live in and the food we eat are all examples of physical possessions that contribute to our material living standards. The material living standards of a nation are usually assessed or measured by the quantity of goods and services available each year as measured by **Gross Domestic Product (GDP)**, (as discussed on pages 480–481).

Many would agree that if the citizens of a country have access to more goods and services to satisfy their needs and wants, life is generally better. Producing goods and services provides citizens with employment, and therefore an income to buy goods and services that improve their lives.

Source 1 Physical possessions such as cars and houses contribute to our material living standards.

Non-material living standards

Non-material living standards must also be considered when assessing the quality of life. Non-material living standards cannot be measured in dollar terms, and are intangible (cannot be touched), but affect our enjoyment of life.

The following factors affect our non-material living standards:

- freedom of speech – such as being able to peacefully protest against the government of the day
- free elections – that provide the right to choose and dismiss parliamentary representatives (see Chapter 22)
- low levels of crime and **discrimination** – where citizens can live without fear of constant crime or being treated differently because of factors such as race, disability or age
- preservation of the environment – allowing citizens to enjoy nature, breathe clean air and drink clean water
- adequate leisure time – so that employees have adequate rest periods away from work and time to spend with family.

Non-material living standards are not as easily measured as material living standards. Some indicators, however, do attempt to include non-material living standards to assess overall wellbeing. For example, the **OECD** (Organisation for Economic Co-operation and Development) **Better Life Index**, which is explained below.

The OECD Better Life Index

Gross Domestic Product is an indicator of economic wellbeing that does not take into consideration the environmental costs of producing goods and services. The OECD Better Life Index seeks to provide a more holistic picture of the true living standards of 40 different countries by measuring progress based on 11 criteria, one of which is the environment. Source 2 provides a snapshot of five of the 11 criteria used to assess wellbeing in just two nations: Australia and Chile.

Source 2 Wellbeing in Chile and Australia

What are living standards like in Chile? 	**What are living standards like in Australia?** 
Jobs: Over 62 per cent of people aged 15 to 64 in Chile have a paid job. *OECD average: 66 per cent*	**Jobs:** Over 72 per cent of people aged 15 to 64 have a paid job. *OECD average: 66 per cent*
Income: The average household income per capita is $15 094 USD per annum. *OECD average: $29 016*	**Income**: The average household income per capita is $33 138 USD per annum. *OECD average: $29 016*
Education: The average student scored 436 in reading literacy, maths and science in the OECD's Programme for International Student Assessment (PISA). *OECD average score: 497*	**Education:** The average student scored 512 in reading literacy, maths and science in the OECD's Programme for International Student Assessment (PISA). *OECD average score: 497*
Health: Life expectancy at birth is 79 years. *OECD average: 80 years*	**Health**: Life expectancy at birth is 82 years. *OECD average: 80 years*
Environment: **Level of atmospheric PM10** (air pollutants that can cause damage to the lungs) is 46.2 micrograms per cubic metre. *OECD average: 20.1* **Water quality:** 73 per cent of people say they are satisfied with the quality. *OECD average: 81 per cent*	**Environment:** **Level of atmospheric PM10** (air pollutants that can cause damage to the lungs) is 13.1 micrograms per cubic metre. *OECD average: 20.1* **Water quality:** 91 per cent of people say they are satisfied with the quality. *OECD average: 81 per cent*

Check your learning 19.1

Remember and understand

1 What does the term 'living standard' mean?
2 Give three examples of non-material living standards.
3 Refer to Source 2.
   a Based on the criteria presented, which country has the highest living standard?
   b Does Australia compare well in all criteria compared to the OECD average?

Apply and analyse

4 Rate the following living standard criteria from 1 to 5 according to its importance to you. If you don't consider this criteria to be all that important when assessing living standards, rate it as 1, and rating it as 5 indicates you think it is extremely important.
   a Primary and secondary school education is available.
   b The air is clean.
   c You can drink the water because it is clean.
   d You have the right to vote.
   e You are expected to live a long life.
   f You are happy.
   g You feel safe in your community.
   h You have enough leisure time.
   i You are likely to get a job.
   j You can earn a decent income.
   k You have enough to eat.
   l You have shelter.
5 Compare your ratings in Question 4 with another classmate and explain why assessment of living standard can be subjective.
6 Consider a country that is relatively wealthy, producing an abundance of goods and services, but where the majority of the population is close to poverty and only a minority are wealthy. Would you consider the living standard in that country to be high or low? Why or why not?

Evaluate and create

7 Create a similar table to Source 2 but choose another country to compare Australia's living standard with. Go to the OECD Better Life Index website for your research.

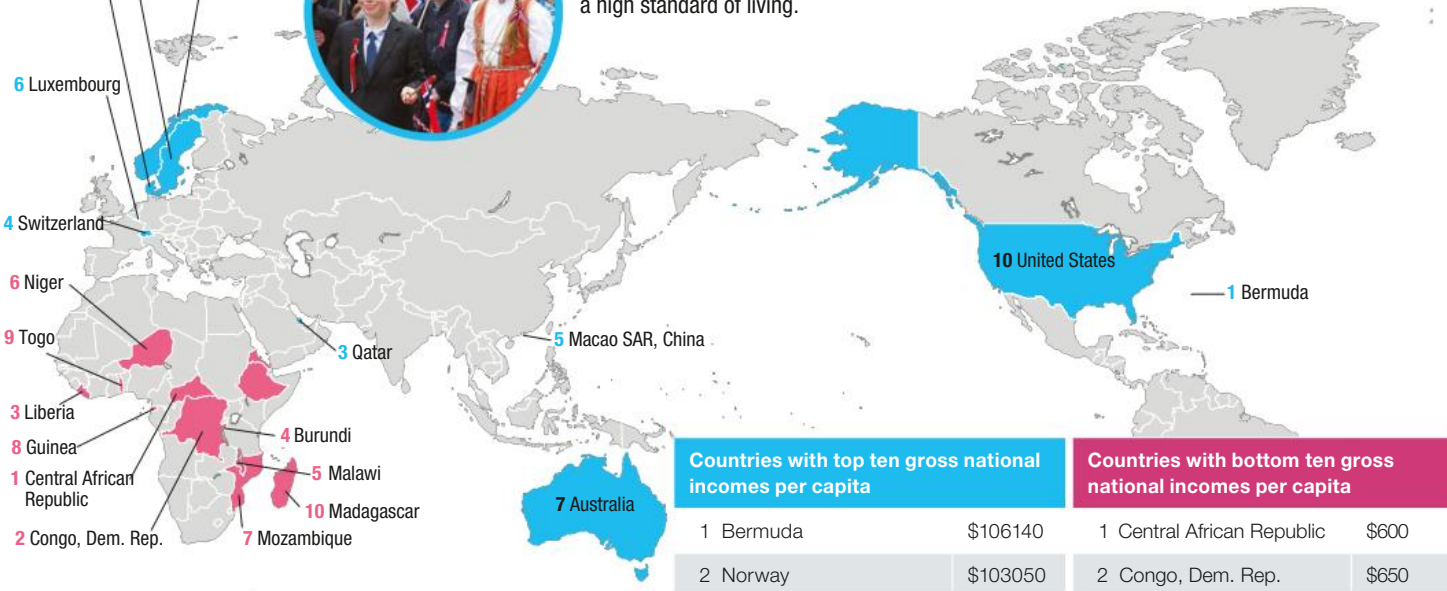

19.2 Factors that affect a country's living standard

If you had a choice, what country would you most like to live in? Many might choose Australia, because our living standard is high by world standards.

The income that citizens earn on average is an important indicator of living standard, as it means that consumers can buy basic goods and services such as food, shelter and clothing, but also afford additional goods and services that make life easier. These additional goods – such as cars, refrigerators, washing machines and computer equipment – provide an additional level of convenience and enjoyment.

Children in Norway live in a country with a high standard of living.

Children from Malawi (one of the world's least developed countries) carry water long distances to their home. During drought many children do not attend school to help carry water to their village.

Countries with top ten gross national incomes per capita		Countries with bottom ten gross national incomes per capita	
1 Bermuda	$106140	1 Central African Republic	$600
2 Norway	$103050	2 Congo, Dem. Rep.	$650
3 Qatar	$94410	3 Liberia	$700
4 Switzerland	$90670	4 Burundi	$770
5 Macao SAR, China	$71060	5 Malawi	$790
6 Luxembourg	$69880	6 Niger	$910
7 Australia	$64680	7 Mozambique	$1120
8 Sweden	$61600	8 Guinea	$1130
9 Denmark	$61310	9 Togo	$1290
10 United States of America	$55200	10 Madagascar	$1400

Source: Gross National Income per capita 2013 (Data derived from the World Bank)

Source 1 Why are there such huge variations in the living standard between countries?

Why living standards vary from one country to another

During his lifetime, the **economist** Adam Smith (1723–1790) spent a lot of time pondering why some countries were rich while others were poor. In the end, he concluded that the economies of countries that gave people the freedom to work and benefit directly from their labour were more likely to be wealthy. He thought the motivation of each citizen to generate profit would create prosperity for the population as a whole. As a result, Smith recommended that the government of all countries should only play a limited role in the economy.

Other economists believe factors such as a nation's **natural resources** have a bearing on the wealth that can be created and the living standard. Australia has large supplies of natural resources such as coal, iron, copper, gold, natural gas, uranium, and renewable energy sources that have allowed us to trade with other nations, earn income and improve our living standard.

The stability of government is another factor that is also cited as having an impact on living standards. In countries where there is political instability and civil war, the focus on producing more goods and services for the population becomes secondary, making it difficult for a nation to raise its living standard.

Many believe the main reason some countries enjoy a better living standard is due to labour productivity. Labour productivity is the amount of goods and services that a worker produces in a given amount of time. Labour productivity can be increased by providing workers with machines that can help them produce better quality goods and services faster. Improving the skill of the labour force through education and training can also improve labour productivity.

How a country utilises its labour resources also impacts upon living standards. The proportion of those in the labour force who are employed rather than unemployed is important. An increase in employment means a country is better off using one of its most important resources – people. Employment provides people with a means to earn an income and income tax paid to the government allows it to improve infrastructure such as roads, ports, water and power, which in turn allows firms to operate more efficiently.

Check your learning 19.2

Remember and understand

1. How does earning a higher income lead to a better material living standard?
2. How do a country's natural resources affect its living standard?
3. How might political instability such as a civil war affect a country's ability to raise the living standard?

Apply and analyse

4. Imagine your class is told to make as many paper planes as they can in a lesson.
   - **a** If each student was paid for each plane, what might happen to the level of production of planes in the classroom?
   - **b** Explain the link between the profit motive and a country's living standard.
5. Decide which of the following factors might lead to increased labour productivity and then explain why it would be the case.
   - **a** Staff are not given a wage rise.
   - **b** Staff are trained to give better customer service.
   - **c** A library uses 'robocall' to remind borrowers books are overdue.
   - **d** A business refused to adopt new technology.
   - **e** A high proportion of a country's population now completes year 12.
   - **f** Staff are given regular performance reviews.

Evaluate and create

6. Select one of the lowest income earning countries from Source 1 and conduct some research about that country on the Internet. Explain the possible causes for the country's low comparative material living standard and the effects of having such a poor standard.

19A rich task

Poverty in Australia

Many of us think of poverty in terms of not having basic human necessities such as enough food, water, shelter and clothing. This type of poverty, called absolute poverty, is often found in developing countries such as Malawi. However, absolute poverty can be found in some remote Indigenous communities in Australia. In Australia, we tend to think of poverty in terms of people who do not have the amount of income they need to sustain the average living standard that we expect. There are many ways of measuring poverty, such as setting a poverty line where anyone who falls below a certain amount of income is considered to be in poverty.

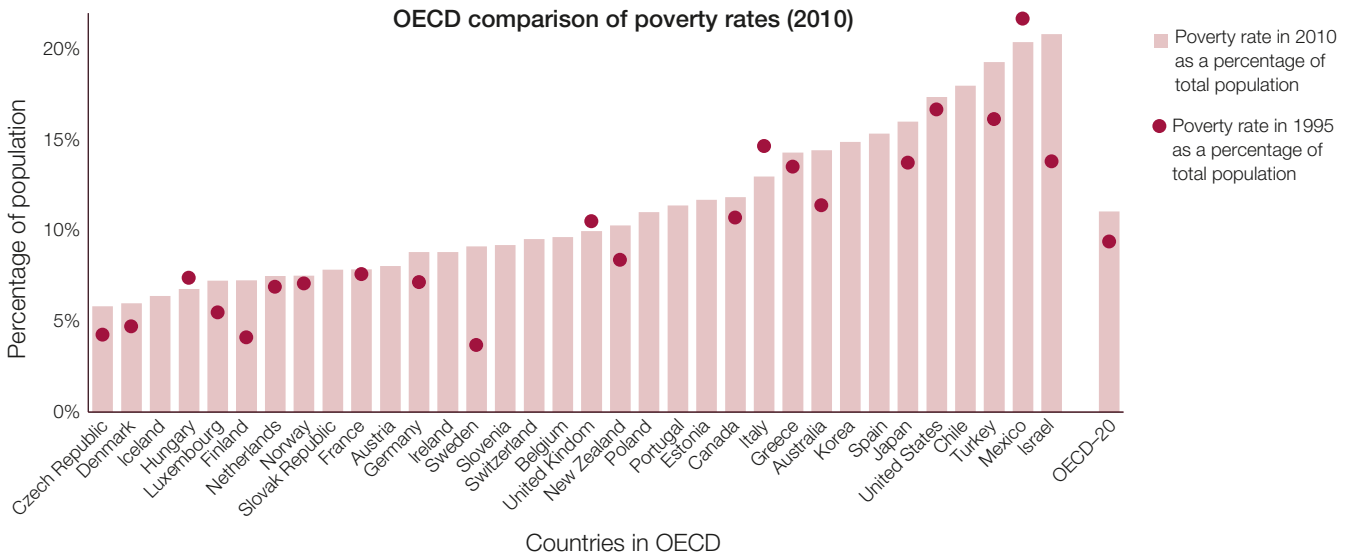

According to the Organisation for Economic Cooperation and Development's method of measuring poverty, 14.4 per cent of Australians live on an income that is less than half the median (middle) household income in Australia and are therefore said to live in poverty.

Some of the general reasons why some Australians fall below the poverty line include:

- not having paid employment – Indigenous Australians are three times more likely to be unemployed than non-indigenous Australians
- low levels of income – those relying on social security payments as the main form of income experience higher rates of poverty
- low levels of education which ultimately affect a person's ability to gain employment and earn income
- difficulty finding affordable and suitable housing
- a person's family and health situation. Families with sole parents often struggle economically as do those suffering physical and mental illness.
- lack of access to affordable community services to assist the economically disadvantaged.

Source 1 According to ABS census data from 2011, there are 105 237 homeless people in Australia.

Source 2 This column graph shows that out of 34 developed nations, Australia ranked 26th in terms of its poverty rate in 2010. Australia has a lower poverty rate that the United States but a much higher poverty rate than some of the Scandinavian countries such as Denmark, with a 6 per cent poverty rate.

skill**drill:** Reasoning and interpretation

Identifying causes and effects in economics

A cause is the reason an event, problem or success actually occurred – the 'why'. An effect is what actually happened as a result of the cause. We learn about cause and effect from an early age. If we touch something that is too hot (the cause) we might burn ourselves (the effect) and if we run on a wet floor we may slip and hurt ourselves. In simple terms, cause and effect is identifying why 'this leads to that'. Identifying causes can help us take steps to make changes so that effects or outcomes are more suitable.

It may be difficult to make a distinction between cause and effect. Here are some simple steps to help you.

Step 1 Ask yourself what event, problem or success has occurred so you can isolate the effect.

Step 2 Note who or what has been affected as a result of what has taken place. There may be several effects. Words associated with 'effect' include: situation, ramification, outcome, result, and consequence.

Step 3 To help identify 'cause' ask 'why' the event, problem or success occurred. Look for reasons that provide a good explanation.

Step 4 Remember there can be several causes, so it may be useful to prioritise what the major and minor causes are. Words associated with 'cause' include: reasons for, due to, since, and because.

Apply the skill

1 Read the information provided about poverty in Australia. Use the above steps to help you identify the causes of poverty and then describe the effects of poverty. When describing the effects of poverty you will need to think more broadly than the information provided here. Think about the human or social cost of living below the poverty line and also the economic impact of having such a disadvantaged section of the community.

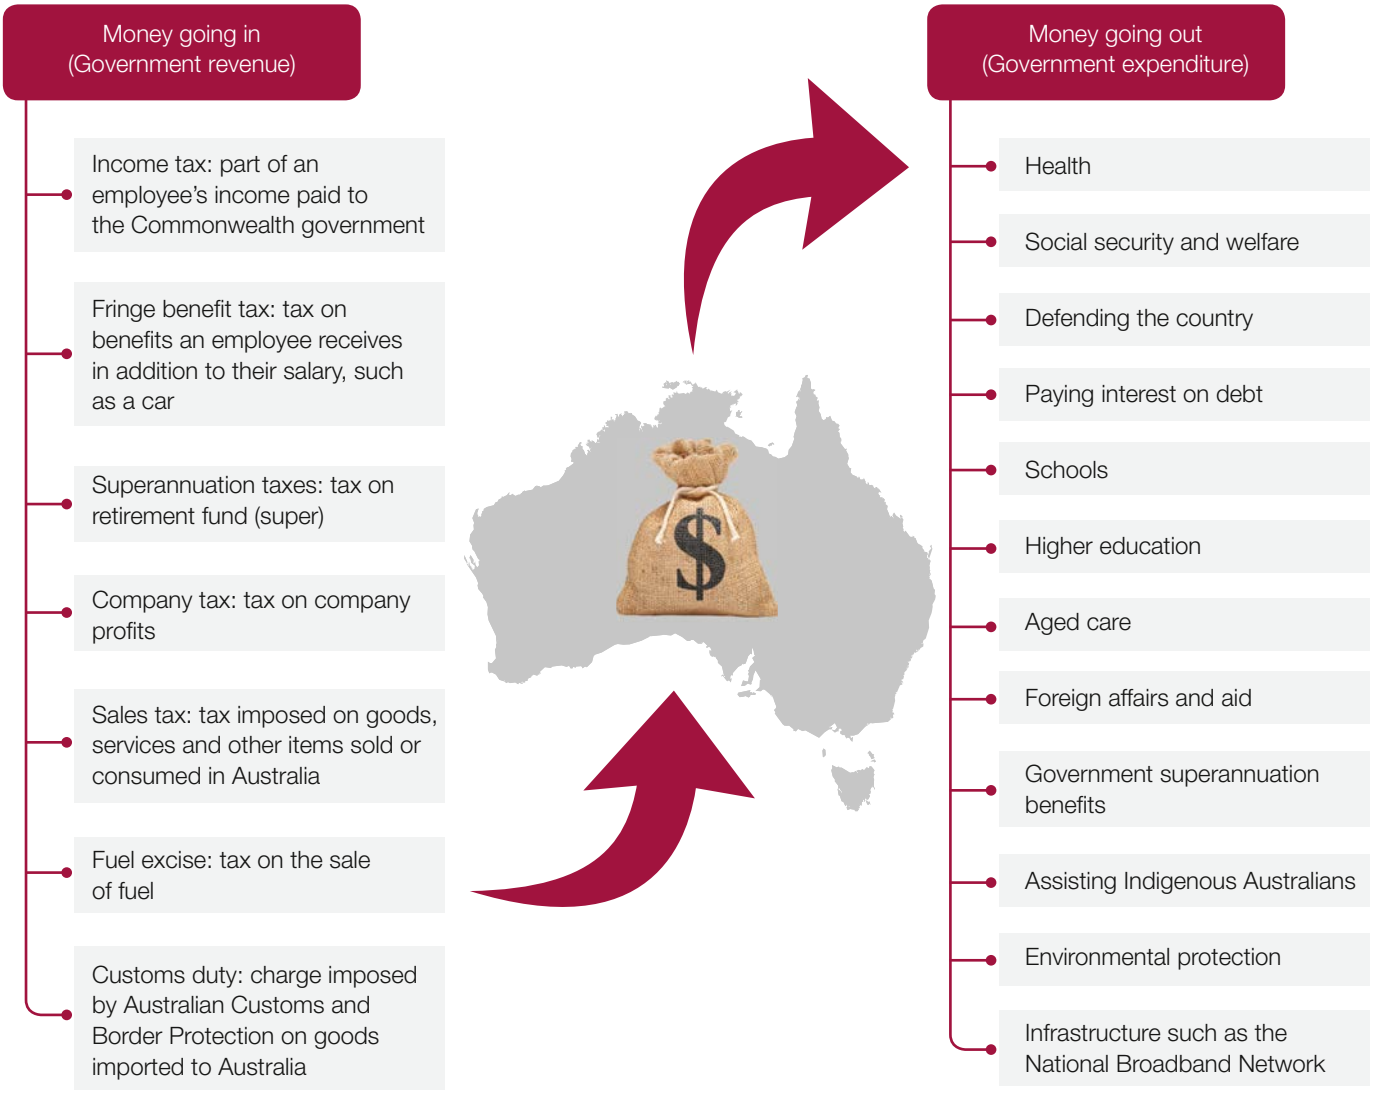

Extend your understanding

1 Gain a better understanding of what it is like to live in extreme poverty. Access the link in your obook and go to the *Live below the line* website. Try living on $2 a day for five days. Describe what you ate and what the experience has taught you.

19.3 Policies to improve living standards

Improving living standards is a key economic goal of many countries. This is mainly because a higher living standard leads to a stronger and more prosperous nation – and a stronger and more prosperous nation in turn maintains a higher living standard. When the citizens of a country are employed and earning an income, more goods and services can be purchased. Government **revenue** earned from taxes paid by workers (from the money they earn and the products they buy) can then be used for services such as education and health care. These government services benefit us all.

The government of any country is constantly making economic policy decisions – outlining actions that need to be taken in order to manage different aspects of the economy. Let's first look at **macroeconomic policy** – economic policy that affects the whole of the nation – such as budgetary policy and monetary policy.

Source 1 The federal, or Commonwealth, budget is like any other budget that itemises money coming in and money going out.

Budgetary policy

You or your family may use a budget to track revenue and **expenditure**. The Australian government has the role of managing the budget for the whole of Australia and therefore sets budgetary policy (also referred to as **fiscal policy**). Each year the government delivers or hands down the budget (usually in the month of May) which provides a plan of the government's revenue and spending. Source 1 outlines the revenue that the government receives and the areas in which it spends this revenue.

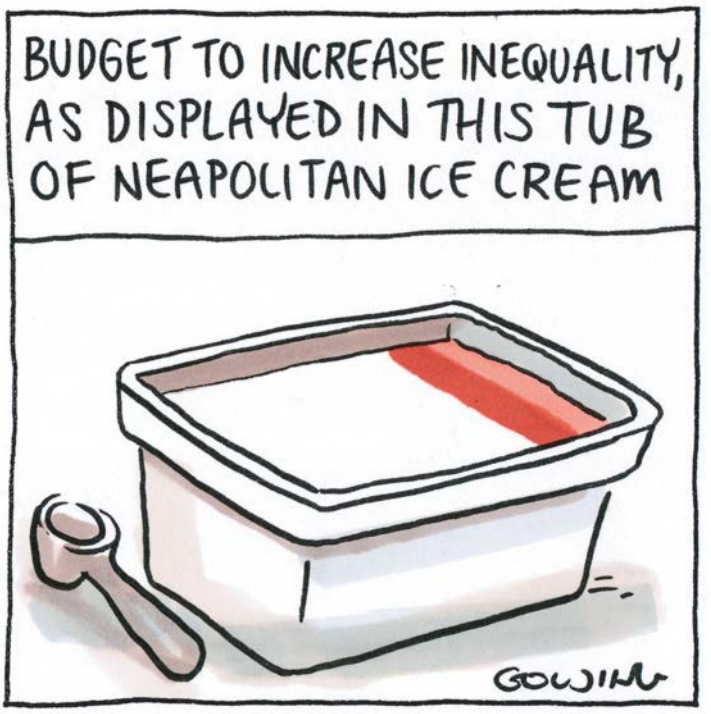

The federal budget affects the living standards of all Australians. If taxes increase or spending on services and welfare are changed, it can affect each person's personal budget. There are three different budgets the government may hand down depending on the economic circumstances.

1. A **balanced budget**: government revenue is exactly equal to expenditure.
2. A **deficit budget**: government revenue is less than government expenditure. In simple terms it means the government has spent more than the revenue it has received.
3. A **surplus budget**: government revenue is greater than government expenditure. This means the government has more revenue than it has spent.

The type of budget chosen depends on the economic conditions being experienced. When a deficit budget is used, more money is being 'pumped in' to the economy than is taken out. This tends to increase consumer and business spending, and therefore production of goods and services. This in turn can lead to increased employment as companies need more labour to produce more goods and services. Greater demand may, however, lead to inflation as stronger demand may lead to shortages of goods and services. This causes prices to rise. At the time of the global financial crisis of 2007–08 many governments around the world (including our own) tried to 'kick start' their economies through spending more than they received in revenue in the hope of reversing the economic downturn.

Source 2 The federal budget can affect your personal household budget, depending on the government's revenue and spending plans.

Source 3 Cuts to spending have to be made in order to reduce a budget deficit or return a balanced or surplus budget. Spending cuts, particularly in relation to unemployment benefits and the disability support pension, can disproportionately hurt poorer Australians.

When a surplus budget is used, more money is being 'pumped out' of the economy. This tends to decrease consumer and business demand and can restrict production and employment while inflation is unlikely to rise substantially. Since 2008, Australian federal budgets have been in deficit. When the Liberal–National Party (LNP) coalition was elected they vowed to reduce the budget deficit and repay debt, believing the country should live within its means. The LNP government plans to return the budget to surplus in future. If there is an economic downturn the government believes reducing the budget deficit will put them in a better position to increase spending to stimulate the economy.

Returning the budget to surplus means some areas of expenditure have to be cut. This may include cutting expenditure on welfare payments for the unemployed.

casestudy

Why should the government support small business?

Ninety-six per cent of all businesses in Australia are small businesses. The Fair Work Commission defines a **small business** as one that has fewer than 15 employees. Small businesses are important to the overall health of the economy, employing over 4.5 million Australians. We probably all know someone who runs a small business. Recent budget measures are good news for small business owners who have been offered tax cuts and a promise to reduce unnecessary administration (often referred to as 'red tape'). Small businesses have also been offered government incentives to take on unemployed job seekers.

One specific tax measure many small businesses are excited about is the opportunity to get a tax deduction on any asset costing less than $20 000 (available until mid 2017). It is hoped that this will stimulate the economy as small business owners buy equipment such as printers, computers and cars.

Source 4 As the mining boom comes to an end, it is hoped that small business will strengthen the economy.

Monetary policy

The Reserve Bank of Australia (RBA) provides banking services to the government and other banks in Australia. It also implements **monetary policy**. The main focus of monetary policy by the RBA is changing the official **interest rate**, which ultimately changes the rate of interest paid on a bank loan. **Interest** is the cost of **borrowing** money or the return on lending money.

Changes in interest rates affect living standards. If interest rates rise, demand for goods and services may be curbed, as consumers and businesses who have borrowed money devote more of their money to paying higher interest rates on their loans rather than spending. Some may defer borrowing entirely because of higher interest rates. The opposite occurs when interest rates fall. The RBA uses interest rates as a 'lever' to adjust the level of spending, or demand, depending on the economic circumstances (see Source 5).

Source 5 When the RBA raises interest rates, spending in the economy will be affected.

Higher demand or spending in the economy may lead to inflation, which may prompt the RBA to increase interest rates to curb spending and reduce inflation. Unfortunately, this reduced spending in the economy may reduce inflation but possibly lead to higher unemployment.

Microeconomic policy

Microeconomic policy is policy that affects a particular company (such as Qantas), an **industry** (such as the car industry) or a market (such as the export market). It often focuses on promoting competition, productivity and efficiency. The following are examples of some government microeconomic policies.

Trade liberalisation

Trade liberalisation involves opening up markets for free trade so that countries can trade without restrictions. Trade restrictions include **tariffs** (a tax on imported goods), **subsidies** (payment by the government to producers to support their business)

and **import quotas** (restriction on the quantity of imported items). It is thought that the removal of these trade restrictions will promote efficiency, as Australian producers must find ways to compete on the world market by cutting costs and becoming more innovative. There will be some producers, however, that will not survive.

Deregulation

Deregulation is the removal of government regulation (rules) in a certain area of the economy. For example, wool growers were once guaranteed a minimum price for their wool by the government but this policy was abandoned over 20 years ago. Another example is the deregulation of the telecommunications industry which saw Optus, Vodafone, AAPT and other small providers enter the market in the 1990s, resulting in price decreases and growth in mobile phone and Internet markets.

Labour market reform

Labour market reform has seen a movement away from government institutions determining wages and working conditions to a system where wages and working conditions are determined directly at the enterprise level between employers and employees. Through negotiating what is called an **enterprise agreement** the employer may gain improvements in work efficiency and the employee might gain better benefits and more flexibility.

Source 6 Enterprise agreements are negotiated between employers and employees in many workplaces. This gives both sides the chance to gain improvements in conditions.

Check your learning 19.3

Remember and understand

1 What is the difference between a budget surplus and a budget deficit?
2 Explain what trade liberalisation is and how it may be beneficial to Australians.
3 Why are small businesses important for the Australian economy?

Apply and analyse

4 Is the RBA likely to increase or decrease official interest rates in the following situation? Economic growth is negative, the unemployment rate continues to increase while inflation remains low.
5 What type of budget would be appropriate if a severe economic downturn is predicted, spending has slumped and growth in the economy has declined?
6 Inequality results when resources are unevenly distributed amongst people. Why might returning the budget to a surplus in the long-term cause some groups in society to suffer?
7 Why do you think the government wants to encourage small business in Australia?

Evaluate and create

8 Refer to Source 3 and examine the cartoon. What point is the cartoonist trying to make about the effects of budget cuts?
9 Conduct some research about areas where expenditure in the latest budget has been cut. Draw a cartoon, create a photographic image or a word cloud that illustrates the effects these recent budget cuts may have.

19B rich task

Climate change and living standards

Climate change refers to the long-term trend or shift in climate over many decades. The long-term climate trend shows that the world's atmosphere and oceans are getting warmer; that is called global warming. Since 1910, Australia's average air and ocean temperatures are almost a degree warmer, and most of this increase has occurred since 1950.

Source 1 Finding a solution to climate change has been a challenge for politicians such as US President Barack Obama.

The effects of global warming

As previously mentioned in Chapter 18, greenhouse gas emissions have serious consequences. The projected effects of the change in climatic conditions for Australia includes an increase in the number of extreme fire weather days in southern and eastern Australia, an increase in the severity of cyclones, more hot days and drought in southern Australia. Those in the midst of cyclones, fires and drought will find their living standard change and future generations may not be able to enjoy our environmental assets such as the Great Barrier Reef. It is also believed that climate change will affect our agricultural productivity and increase bushfire and flood costs.

Environmental policy

Governments can take action to reduce carbon dioxide (CO_2) and other greenhouse gas emissions. There are two methods of cutting greenhouse gas emission that involve businesses paying for the emissions they make. It is thought that if businesses have to pay for their emissions they will eventually move to more environmentally friendly production methods.

1 An **Emissions Trading Scheme (ETS)** involves the government setting a limit on how much carbon dioxide can be produced by businesses. Some businesses will emit carbon dioxide below this limit and will therefore have 'credits' they can trade with companies that have emitted carbon dioxide above the set limit.

2 A **carbon tax** introduced by the Labor government in 2012 and axed by the LNP coalition government in 2014, involved forcing polluting companies emitting over 25 000 tonnes of CO_2 to purchase emission permits from the Australian government. The companies would have to purchase permits set at $23 per tonne of carbon with a 2.5 per cent increase each year until the transition to an ETS.

Successive polls between 2006 and 2012 by the Lowy Institute revealed declining concern about climate change. The latest poll taken in 2015 has, however, seen this trend reverse with more Australians concerned about climate change.

Policy in relation to how businesses pay for the pollution they cause has been controversial. Whatever scheme is used, businesses will be paying for their pollution. This extra cost pressure may result in job losses and the possibility of businesses passing the extra costs on to the consumer by raising prices. The carbon tax was scrapped by the LNP coalition government, as it was thought to cause an unnecessary burden on the cost of living for all Australians. The Australian government aims to reduce emissions by 26–28 per cent below the 2005 levels by 2030. A new global agreement on emissions (referred to as the Paris Agreement) was struck at the Paris UN climate change conference in December 2015, with nearly 200 countries agreeing to take action to reduce greenhouse gas emissions.

skill**drill:** Reasoning and interpretation

Presenting an oral report to an audience

Presenting an oral presentation is an important skill to master.

Step 1 Decide on a topic that will interest both you and your audience. Consider your audience and think about what they already know about the topic. What would you like them to understand by listening to your presentation?

Step 2 Research your topic. You could start with a question that you then seek to answer through your presentation. Collect information from a wide variety of sources and keep a bibliography of these sources. Try to find visual material and perhaps even audio resources that may add variety to your presentation.

Step 3 Organise your findings into a draft outline of your report. It should have a clear introduction and conclusion. In your introduction it is often a good idea to use something to 'hook' your audience. It may be your overarching question, a personal story or a challenging image. After your introduction, develop your report in a series of clearly defined sections (like paragraphs in a written report). Your conclusion usually summarises your key points. If your report is going to be assessed, make sure you have fulfilled the criteria for assessment.

Step 4 Support your verbal report with some visual material.

Step 5 Practise your presentation. Avoid holding a single piece of paper if you are prone to nerves – memory cards are sturdier and won't tremble. If you are worried about being nervous, practice will help.

Step 6 Deliver your presentation. Make sure that you speak clearly and vary pitch and tone. Stand up straight, keep your hands out of your pockets and don't lean on a desk.

Step 7 Invite your audience to ask questions and do your best to answer them. If you are unsure of an answer don't make something up, just answer as best you can.

Apply the skill

1 Prepare and deliver a verbal report on an aspect of climate change and living standards. Your report must be supported by visual material and include responses to questions asked by the audience. Here are some possible topics to choose from, or you may like to develop your own.

- Australia's greenhouse gas emissions compared to other countries
- Why climate change will lead to lower living standards
- The UN Paris Agreement 2015 and what it seeks to achieve
- How emissions trading schemes and a tax on carbon works in order to reduce greenhouse gas emissions

Source 2 Practising and preparing your presentation in your own time can help you feel more confident.

Extend your understanding

Do some further reading on the **Millennium Development Goal** target to ensure environmental sustainability beyond 2015 before answering the following questions.

1 Research the Millennium Development Goals fact sheets online. List three goals which have been achieved and three which have not reached the targets.

2 Which regions of the world seem least likely to reach the Millennium Development Goals? Which seem most likely? Why do you think these differences exist between world regions?

The business environment

Successful businesses must change and adapt in order to survive and remain competitive in the global environment. Sometimes in business it is a case of trial and error. The co-founders of Twitter, pictured here, had two weeks to come up with new ideas after they realised their product, called Odeo (a network used to subscribe to podcasts), was unlikely to work because of the growing success of iTunes. Their innovative business idea was Twitter, that now has over 300 million active users.

Although Twitter has been successful, it must continue to change if it is to remain a viable business, by boosting the number of users and increasing its advertising sales.

20A

What is a competitive advantage and how does it benefit business?

1 Do you know of a business that has closed down? Why did it close?

2 Why is competing in a global marketplace a threat to some businesses and an opportunity for others?

3 Why might the employees of a business be its most important asset?

20B

What is innovation and how can it be used in business?

1 Why do you think fast food chains regularly change the products on their menu?

2 Why do you think the iPhone has been a business success?

3 An innovative idea may lead you to change the way you do something such as homework or travelling to school. Think of something you do every day and how you could do it faster or better.

chapter 20

Source 1 Twitter co-founders (front row, from left) Jack Dorsey, Evan Williams and Biz Stone are seen here at the New York Stock Exchange. Twitter is one of the most visited social media platforms today, but it must continue to innovate if it is to remain a viable business.

20.1 Gaining a competitive advantage

A **competitive advantage** gives a business the ability to outperform other similar businesses in a market. The business is able to better satisfy the consumer than other similar businesses and this may result in increased sales and **profit**. Profit is the revenue a business receives minus any expenses such as the cost of raw materials, the cost of **labour** (wage costs) and taxes.

Businesses that gain a competitive advantage have worked out how to best satisfy the consumer – the buyer of their good or service. There are several methods a business can use to gain a competitive edge.

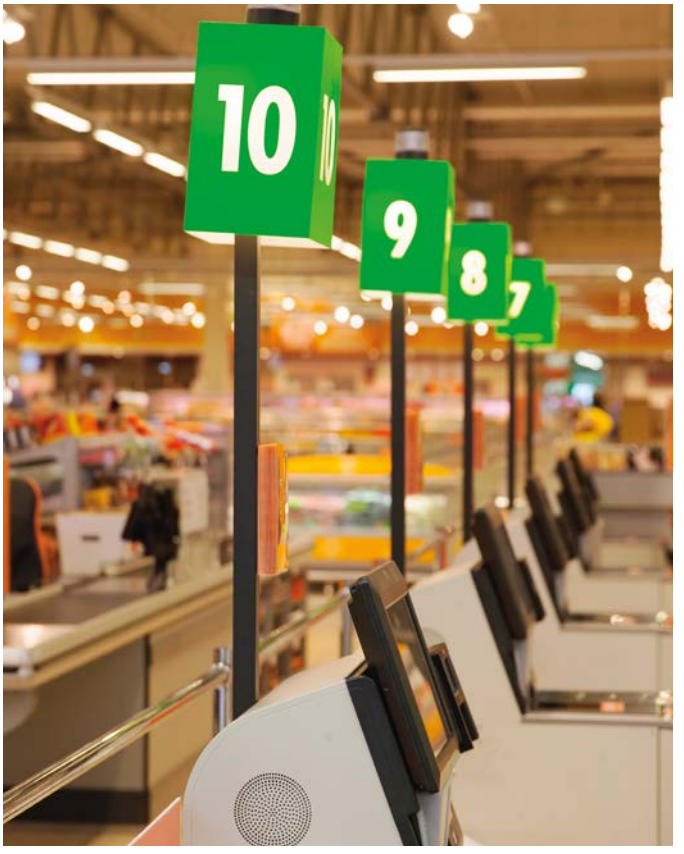

Source 1 Some businesses strive to gain a competitive edge by creating something entirely new in the market. They stand out from the crowd because their business idea is unique. Nick D'Aloisio, an Australian-born entrepreneur, created an app called Summly from his London home when he was just 17. Summly summarises news for smartphones. The technology behind it was sold to Yahoo for millions of dollars.

Offering the consumer a better price

Lower prices are an important way of enticing the consumer to buy goods and services. Some businesses are able to offer consumers lower prices because they find ways to reduce the cost of making a good or providing a service. New technology may be used to cut labour costs. Self-scan checkouts in supermarkets, for example, may reduce the need for employees to work on a checkout (see Source 2). Sourcing cheaper materials from suppliers may be another method of cutting production costs.

Larger businesses have the advantage of lower costs of production because it is cheaper to produce larger

Source 2 Self-service checkouts such as this are one of the ways in which businesses can use technology to reduce their labour costs, in an attempt to offer consumers cheaper prices on the goods they sell.

volumes of goods or services than smaller volumes. This is referred to as **economies of scale**. The reason for this is that firms have fixed production costs such as equipment, advertising and marketing costs. Consider a cake manufacturer, who has the capacity to cook 10000 cakes per day. The electricity costs of using ovens might be the same whether 8000 cakes or 10000 cakes are produced so there is an advantage in producing more, rather than fewer, cakes.

Outsourcing part of their operations is another cost-cutting measure some businesses choose to use. This can mean that work that was once undertaken in Australia is now completed overseas at a reduced cost. Qantas, for example, has recently outsourced the heavy maintenance of two of its largest planes to a company in Hong Kong.

Cost cutting is one way of reducing the price of a good or service, but a business may also decide it is in their interests to lower prices, accepting lower profits in order to ensure continued sales, and ultimately the survival of their business.

Making the consumer aware of the product or service

In order to buy a particular product or service, the consumer must first be made aware that it exists. Advertising is one way a business can gain a competitive edge. Advertising involves drawing the public's attention to a product through various media such as websites, social networks, television, print material such as newspapers and magazines, or even product placements in film and television.

Offering consumers better quality or perceived quality

There are some goods and services that many consumers are willing to pay more for because of their quality. There are many different aspects of quality. David Garvin developed the concept of there being eight dimensions of quality.

1 Performance – how well does the product work?
2 Features – what additional features does the product have compared to similar products?
3 Reliability – can the product be tested to work without fail?
4 Conformance – does the product meet expected standards?
5 Durability – will the product last a reasonable amount of time?
6 Serviceability – how quickly and efficiently can the product be repaired if it does break down?
7 Aesthetics – does the product's look, feel, sound, taste or smell appeal to the consumer?
8 Perceived quality – does the consumer think the product is a quality product?

Source 3 Next time you're browsing your favourite website or watching your favourite TV show, see if you can detect any product placement.

casestudy

Would you buy a bag for $5000?

What makes a customer buy a luxury handbag for nearly $5000 when they could buy a handbag for less than $50? Some say you pay for quality and craftsmanship. But is a well-made quality handbag that costs close to $5000 really worth it?

For some customers, the worth may be in a combination of beautiful craftsmanship, the aesthetics (how the leather feels, looks and smells) and the bag's features – whether it is versatile, allowing the customer to remove the straps and carry it in different ways, for example.

However, there may be something else that the customer is buying when they buy such a handbag – perceived value. This is intangible and cannot be measured. It may be about how that product makes them feel and how they are viewed by others when they use it. According to Uché Okonkwo, a management consultant specialising in the luxury sector, 'Luxury is neither a product, an object, a service, nor is it a concept or a lifestyle. It is an identity, a philosophy and a culture'.

Source 4 Louis Vuitton is an example of one of the world's biggest luxury brands. The company sells a range of luxury products, such as handbags, luggage, small leather goods, shoes, stationery, timepieces and jewellery.

Creating a brand helps the consumer to quickly identify who made the product and sets the product apart from similar products sold by others. Advertising and marketing can therefore have a dramatic effect on whether a company gains a competitive advantage. Examples of well-known global brands include Apple, Google, IBM, Microsoft, General Electric and McDonald's. Source 5 lists the top seven luxury brands. Do you recognise any of them?

Rank in top 100 brands	Brand Name	Brand Value ($m)
17	Louis Vuitton	24,893
38	Gucci	10,151
54	Hermès	7,616
60	Cartier	6,897
72	Prada	5,570
75	Tiffany & Co.	5,440
77	Burberry	5,189

Source 5 Best luxury brands in 2013, according to Interbrand's top 100 brands

Being more responsive to consumer needs

Being responsive to consumer needs may be as simple as bringing products to market 'on time'. The motor-mechanic that is known for their quality work will soon grow out of favour if the customer has to wait an unreasonable amount of time for their car to be repaired.

Responding to consumer needs also means treating the customer well. Helping the customer when and if they need help is called customer service. Depending on the product, many customers need staff that have product knowledge. After-sales service is also important.

Businesses can improve their customer service by ensuring staff are properly trained. Technology may also assist a business to deliver faster, more efficient customer service. For example, airports that provide customers with self-check-in facilities minimise delays.

Responding to consumer needs is not just about customer service and fast delivery. Businesses who produce new products in response to consumer needs, such as Nick D'Aloisio did, also gain a competitive edge. Many consumers also demand that ethical business practices are used in the production of goods and services. Ethics are standards that provide us with a guide to what is right and wrong. Goods or services produced without harming humans, animals or the environment are considered favourable by many consumers today.

Source 6 Supermarkets use many methods to gain a competitive advantage. In Australia, the two largest supermarket chains are Coles and Woolworths. These supermarkets combined take up 71 per cent of the national food market share in Australia.

Check your learning 20.1

Remember and understand

1 What is the main advantage of a business obtaining a competitive advantage?
2 List five ways a business might reduce their production costs in order to obtain a competitive edge.
3 What is the difference between quality and perceived quality?

Apply and analyse

4 Each of the eight dimensions of quality consist of a question. Answer each question in relation to a product you were given for your birthday or at Christmas.
5 Why is a brand so important when it comes to selling luxury goods?
6 Consider the goods you buy. Explain why you buy these goods. Do you think it is because they are considered to be cool?

Evaluate and create

7 Pick a food product and have five people undertake a blind taste test. Choose at least three different brands of the same food and ask five blindfolded testers to rate each from one to three, with one being the best rating.
   a What was the most expensive product out of the three and what rating did the taste testers give it?
   b What have you learnt from this experiment about the power of brands?
8 Describe when you were last given poor customer service in a store and how the business could improve in this area.
9 Look in your pantry, laundry or bathroom cupboard and list any products that claim their product is superior because of the ethical way it was produced. For example, the label claims the product is environmentally friendly. Do you think these claims are true? Why or why not?

20A rich task

Undertaking a small business venture

Successful business ideas can sometimes be so simple. Setting up a sandwich shop hardly seems extraordinary but for Fred DeLuca, co-founder of the SUBWAY® chain, fresh and healthy sandwiches proved to be a phenomenal business success.

Fred was just 17 years old when he set up his first sandwich shop in Connecticut in 1965, with $1000 he borrowed from his friend Peter Buck. Peter had suggested to Fred at a barbecue one day that setting up a sandwich shop would be a way of funding Fred's college education.

The first sandwich shop provided a valuable learning experience. Both Fred and Peter learned that a visible location and marketing were key factors to success.

Today there are more than 30 000 SUBWAY® outlets in 87 countries. In Australia there are over 1200 SUBWAY® restaurants with plans to open more **franchise** stores in the future. A franchise gives an individual business the permission to market and distribute another firm's goods or service and use their business name for a fixed period of time.

Source 1 Subway franchises are popular in Australia.

skill**drill:** Reasoning and interpretation

Planning and conducting a small business venture at school

This activity gives you a chance to practise your business skills by running a small business. It is important that anyone embarking on a business venture conducts proper planning before commencing their business, to ensure success. Many small businesses fail because of:

- an inability to manage costs
- inexperienced management
- an inadequate or no business plan
- insufficient funds to commence the business.

Sources 2 and 3 provide a guide to help plan a small business venture at school. If setting up a more extensive business, a proper business plan should be undertaken.

Organising your small business venture

Big picture	What are you selling? Who will buy it?
Price	What are your costs of production (materials you may have to purchase, the cost of phone calls, transport, marketing and whether you pay yourself and others a wage)? What will you charge? Will you make any profit (revenue earned from sales - cost = profit)?
Marketing	How will customers learn about your business venture? List marketing activities in the accompanying table.
Timing	When must your good or service be available for sale?
Organisational	What steps need to be taken in order to produce your good or service? Fill in the accompanying table adding as many columns as you like.
Legal	Do you need to seek permission before carrying out your small business venture?
Success	Why is your small business venture likely to be a success?

Source 2 Some basic steps to guide you in your small business venture

Steps involved in producing your good or service AND marketing it	How long will this take?	Who will undertake this?	Where will your business venture be undertaken?
1			
2			
3			

Source 3 It is best to itemise the steps involved in producing and marketing your good or service, determine how long each step will take and who will carry out each task.

Apply the skill

1 Undertake your own small business venture, either individually or in groups. Remember that this is a small business venture, and so you should be able to complete it in a reasonably short time frame. Consult with your teacher about the time frame you will work to. Your business venture could be as simple as setting up a second-hand goods stall, holding a concert, making and selling birthday cards or providing a service, such as gardening.
Use Sources 2 and 3 to help you plan your small business venture.

Extend your understanding

After you have completed your small business venture, evaluate how you went by answering the following questions.

1 Do you think you charged the right price for your good or service? If not, what price should you have charged?

2 What were the overall costs of the business venture and what revenue did you earn? Did you make a profit? Regardless of whether you made a profit or not, what could you do better next time?

3 What marketing did you undertake and was it successful?

4 Do you think you provided good customer service? Give reasons for your answer.

5 What were the business ventures that seemed to be really successful in the class overall? Explain why you think they were successful.

20.2 Innovation in business

Innovation is changing an existing process or product so that it is more effective than ever before. It is important to understand that innovation can be used in many parts of a business to create a competitive edge. Let's first look at how innovative ways to market a product can lead to business success.

Innovation in marketing

A company's **marketing** methods can influence a consumer's decision to buy a product. Marketing is conveying the value of **goods or services** to a customer in order to sell that product to them. Marketers today

casestudy

How do marketers reach young people?

Marketers now have to communicate with consumers in the digital world to ensure they continue to influence buying decisions. This means communicating via websites, email, apps and social networks. Recent statistics found that both teenage boys and girls spend 2.5 hours a day using the Internet, so businesses that wish to connect to a younger audience of consumers need to have online marketing strategies.

In 2011, Coca-Cola Australia embarked on an innovative marketing campaign to increase sales, particularly among younger adults. The 'Share a Coke' campaign used both traditional and online marketing to get their message across. Sales increased by 7 per cent after the campaign. The company printed 150 of the most popular Australian names on Coke bottles, inviting consumers to share a Coke with a friend. Consumers could go online and create a personalised virtual Coke can and even SMS one of their friends' names, which would then display on a huge Coca-Cola billboard at Kings Cross in Sydney. The campaign succeeded in creating awareness among younger users and gaining media attention, and was rolled out successfully in other countries, including the United Kingdom in 2013–14.

Source 1
Coca-Cola's 'Share a Coke' campaign.

realise that they will be more successful if they produce goods and services consumers want. They do extensive research to find out what consumers want and set about creating goods or services that meet consumer needs better than other competitors in the same market.

Marketers use different techniques to influence consumers to buy their products. Not all consumers have the same needs and wants, so marketers set about dividing the market into groups or subsets of consumers who have common needs and characteristics. This is called market segmentation (see Source 2). For example, all consumers eat, but what and how we eat is affected by our culture, and perhaps religion. To illustrate, McDonald's does not sell beef and pork products in their Indian restaurants because of Hindu and Muslim beliefs.

Segmentation is used so that consumers with common characteristics can be pursued or targeted to purchase the product. For example, older people are usually targeted to buy funeral **insurance** so that in the event of their death the person's family is paid a lump sum to cover funeral expenses.

A technique called **positioning** is also used by marketers. This technique aims to create a distinct image for the product that differentiates it from other similar products on the market. The benefits of the product are communicated to the consumer as well as how unique that product is. For example, chocolate-covered popcorn called 'chocorn' has managed to gain consumer attention among other snack foods because consumers see it as a new and distinct product.

Geographical market segment	Where the consumer comes from, for example their nation, state or region
Demographic market segment	The age of the consumer, gender, amount of income, ethnicity and religion
Behavioural market segment	Includes the level of knowledge the consumer has of the product or whether the consumer uses the product regularly
Lifestyle segment	Includes the consumers' attitudes and opinions or the way they spend their leisure time

Source 2 Marketers may target their product or service at a particular segment of the market.

Innovation in business culture

Each business will have its own particular way of conducting business. The 'culture' of each business is influenced by things like values, beliefs, the vision for the business, and habits. If an organisation is considered to be a good place to work, labour productivity (the amount of goods and services that a worker produces in a given amount of time) is likely to be higher.

Businesses that have an innovative business culture take active steps to ensure creativity is encouraged within their business. A business may, for example, have employees undertake training to help foster creativity and innovative thinking. Innovation may be specifically stated as a business goal, and time and resources may be devoted to help staff develop great ideas. Amantha Imber, the founder of Inventium (an innovation consultancy firm) says, 'If you do not innovate, you risk becoming irrelevant because so many other companies are innovating and looking to stamp out their competition. We're seeing it becoming a priority for more and more CEOs'.

Innovation can be applied to how a business operates. John Lewis (see the case study on page 516) is a UK company that has a different way of conducting business, which has contributed to its business success.

Source 3 Garth Midgley came up with his chocorn idea when he accidentally mixed his chocolate icecream with popcorn at the movies.

Would you like to work for this business?

Imagine working for a business that divides a percentage of its annual profit among the people who work in the business. At John Lewis, a chain of upmarket department stores in the UK, this is exactly what happens. The 91 000 employees (who are referred to as 'partners' rather than 'employees'), each own a share of the 31 John Lewis department stores and 319 Waitrose supermarkets in the United Kingdom.

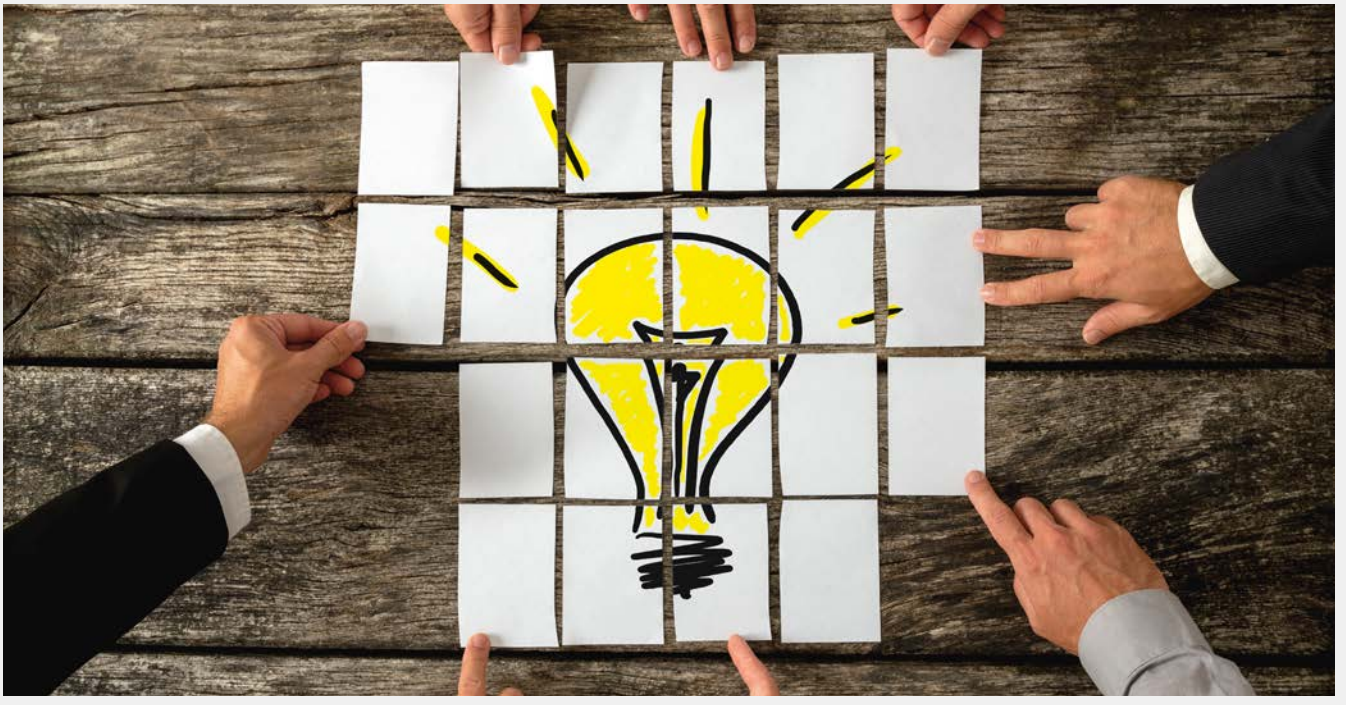

Source 4 Employees or 'partners' at John Lewis find out about their annual bonus which is linked to the business's performance.

All workers, from top management to cashiers, receive the same percentage cash bonus each year, provided that the company makes a profit. In 2013 this amounted to 15 per cent of each worker's annual pay; an amount roughly equivalent to eight weeks' wages.

The radical idea to give employees a share of the profits came from John Spedan Lewis (1885–1963) who began distributing profits to employees in his stores in 1926. The John Lewis department stores and Waitrose supermarkets have been a financial success, with both increasing their share of the market for the fifth consecutive year. The chairman of John Lewis, Charlie Mayfield, believes that ownership by the partners plays a key role in the business's success.

Employee ownership is popular in the United States, Britain and Europe but is yet to catch on in Australia. Research suggests that there are significant productivity gains to be made through employees owning a share in the business they work for.

John Lewis' business success cannot only be attributed to its profit share policy. The company has been leading the charge in online retailing and actively uses technology to appeal to its customers. In-house staff have just produced an app which shows a sofa in 3D, and where the shape and colour of the fabric can be changed to give the customer a more informed choice.

Source 5 Innovative ideas can sometimes occur when many people work together on a project.

Innovation in business processes

All businesses use a number of processes to create a product (either a good or service). A process is a series of tasks or actions. **Businesses processes** must be efficient or productivity will decline. If you have ever waited a long time for a meal in a restaurant it may be because the process of ordering a meal could be more efficient (see Source 6). To use another example, if a shop regularly runs out of a product it may be because the process of keeping track of its stock is inefficient. Computerised stock systems can help a business control stock. Some manufacturing businesses use just-in-time inventory systems so that materials arrive at the right time without the need to hold vast amounts of stock, thus reducing storage costs and the possibility of waste or damage to stock.

Source 6 Tired of seeking the attention of waiting staff himself in restaurants, restaurateur Noel Hunwick came up with the idea of an interactive table. The customer chooses from the menu by tapping the touchpad on the table and the order is sent straight to the kitchen.

Check your learning 20.2

Remember and understand

1 What is innovation?
2 Why is the UK business John Lewis considered to be an innovative company?
3 Why would marketers use different techniques to influence the buying choices of consumers?
4 Describe two marketing techniques commonly used to influence consumers.

Apply and analyse

5 In order to make a product or service more effective it is useful to think about the problems that might be experienced using it. For example, one of the problems with buying a fresh lettuce is that it has to be washed. Many supermarkets now supply washed lettuce for consumer convenience. Think of at least three products or services that you use that have been improved or could be improved.
6 What particular market segment or segments would the following products likely appeal to:
   a shaving cream
   b hairspray
   c walking frame
   d Nike runners
   e outdoor heater.
7 Think of two products you have purchased and explain how these products have been specifically marketed to consumers in your age group.
8 How did Coca-Cola manage to increase sales through the 'Share a Coke' campaign?

Evaluate and create

9 Read the following cases and give each business owner some ideas on how to be more effective in their business.
   a Maree owns a bakery but has noticed that the bakery at the end of the street is much busier than she is. Maree has been making the same cakes since she started the business three years ago and has not changed anything about the shop.
   b Lee runs an online rubber stamp business. Businesses can order a custom-made business stamp and ink pads. Lee analyses the number of customers to his website and realises that his business is just not being seen. He set up a webpage to get customer feedback and one customer said she had trouble visualising what the stamp looked like, so wouldn't buy it.
   c Kyla has an online gift shop. She prides herself on having the greatest range of gifts for the home but her competitors are more popular. Customers find it difficult to find what they want and the photography is very unappealing.

20B rich task

The importance of innovation in business

Innovation can be the key to business success. Take the Rubik's Cube, for example, invented by sculptor and professor of architecture Ernö Rubik in 1974. We had all seen puzzles before, but not a 3D combination puzzle that was so entertaining it became the best-selling puzzle game in the world.

Innovation isn't always about the creation of novel (i.e. new and original) products such as the Rubik's Cube, though. Innovation can be used in all businesses to add value to existing products and services. For example, we all need and are familiar with shoes, but normally we buy them ready made in a shop or online. One Australian business called Shoes of Prey is changing the way we think about shoes, as customers can design their own shoes, choosing the shape, colour and height of their shoes, which are then custom-made and delivered.

Source 1 The Rubik's cube is an example of a novel innovation that has enjoyed huge commercial success.

Product or service innovation can give a business a competitive edge. One of the keys to innovation, though, is realising that change is necessary. Change in technology has meant that businesses must change the way they produce their product or service, or be left behind. One small business operating a 1950s clothes shop in the historic country town of Braidwood in NSW understands the importance of innovation. The co-owner of the business, Michelle Watkins-Sully, knew the business could not survive on local custom alone, so set up an online store to capture customers further afield. The business has also used social media to build a strong customer base.

Innovative products or services that allow other businesses to reduce labour costs, reduce materials needed to make a product, or reduce environmental damage are much sought after. Japanese scientists have just unveiled their first robotic newsreader that has perfect language skills and can read the evening news (see Source 2).

Source 2 The world's first robotic newsreader was unveiled in Tokyo in 2014.

skill**drill:** Reasoning and interpretation

Being innovative in business

You may not have ever thought about innovation as a skill before, but like many aspects of business, it is something that can be learned, practised and improved upon. A business that strives to add value to their product or service and changes according to consumer demand is more likely to stay in business and remain competitive. Businesses now compete in a global market and the emphasis is not only to produce good products but to produce them in a cost-effective way.

Roger La Salle is an innovation expert and has developed a 'four seeds' approach to product innovation. This approach provides a structure that can be followed to help a business find innovative ways to improve their business, whether it is creating a new product, improving an existing service, streamlining work processes or simply finding new business opportunities.

Follow these steps to use the 'four seeds' approach to business innovation:

Step 1 Change the product or service. How can the product be changed for the better? (Seed 1)

Step 2 Add accessories. It's not just the product that is important, it is the accessories, such as the iPad cover or the mobile phone holder, that can add value to a business. (Seed 2)

Step 3 Add complementary products. When a business is selling a product such as a hamburger, fries and drinks that might go along with it are offered for purchase as well. (Seed 3)

Step 4 Enhance the sales channels. A sales channel is a business's access to a customer. You might have heard a salesperson ask you whether there is anything else they can do for you. Coles is an example of a business that has used their relationship with customers to sell other products, such as insurance, in addition to their main business of selling groceries. (Seed 4)

Apply the skill

Practise your innovation skills by devising a new way to produce each product or service outlined in the table in Source 3 (first column).

The following task focuses on Seed 1 from La Salle's 'four seeds' approach that relates to changing a product or service. Here are just some of La Salle's suggestions to get innovative ideas flowing.

1 **Make a wish for the product.** For example, if you take a simple product like a pen you may wish it did the writing for you if you told it what to do. Make a wish for each product or service listed in the first column and put your answer in each row of column 2 of the table. The first answer has been done for you.

2 **Think about the life cycle of the product or service.** For example, if we use the example of a pen again it might only last a month depending on how much you write. State the life cycle of each product or service in column 1 and put your answer in column 3 of the table.

3 **Analyse the problem with the product currently.** For example, pens are never there when you need them! State the problem with each product or service in column 1 and put your answer in column 4.

4 **Review your answers for each of the products or services in the table.** State (A) what your innovative idea is and (B) whether your idea would have commercial success. Put your answer in the last column.

Source 3 will help you practise your innovation skills. See the sample answer to the first product (tablecloth) as an example.

5 If you have a great idea, this becomes your intellectual property (IP). You can legally protect this idea from being taken by others. Access your obook link and go to the IP Australia website and use the interactive called 'IP in everyday life'. List the products or services you have used today and tick the ones you think have protected intellectual property.

The product or service to change	A wish for the product	The life cycle of the product or service	The problem with the product currently	Innovation (a) What is your idea? (b) Do you think it would have commercial success? Why/Why not?
Tablecloth 	It's always clean, you can design your own tablecloth and change the colour.	It becomes stained and only lasts a year or so.	Requires constant laundering. You can't find one to suit your decor and are tired of the colour.	(a) Design a table for restaurants that consists of a table that has a self-cleaning tablecloth. (b) Further research and development required.
Mobile phone 				
Can of drink 				
Chair 				
Calculator 				
Getting a haircut 				
Going out to dinner 				

Source 3 This table can help you practise your innovation skills.

Extend your understanding

1 Choose two of the following Australian innovations and conduct some research on the Internet to find out more about them.

Australian innovations:

- fire-stick farming
- Granny Smith apples
- Pink Lady apples
- Vegemite
- pre-paid postage
- School of the Air
- Clean up Australia (and the world)
- Earth Hour
- Speedos
- Sydney Opera House
- Caroma dual-flush toilet
- Solar Sailor
- wave piercing catamaran.

2 For each innovation, explain:

a why this product or service was innovative

b how it has been successful

c who led the innovation and when they did it.

Source 4 Vegemite, Earth Hour, Pink Lady apples and the Sydney Opera House are just a few Australian innovations.

part 4

civics and citizenship

Concepts and skills

Chapter 21 The civics and citizenship toolkit 524

Unit 1 Government and democracy

Chapter 22 Australia's democracy and the global context 534

Unit 2 Laws and citizens

Chapter 23 The Australian Constitution and the High Court 568

Chapter 24 Australia's international legal obligations 584

Concepts and skills

The civics and citizenship toolkit

A **citizen** is a person who legally lives in a geographical area such as a town or country. Being a citizen is like having a membership where you belong to a community and have certain rights and responsibilities. In Australia, citizens have the right to vote for members of **parliament** to represent their views. They have the right to go to school and work and speak freely about the issues concerning them. Australian citizens also have responsibilities to abide by the laws of the nation. **Civics** and **citizenship** is the study of these rights and responsibilities and how the **government** works.

Understanding how the political system works gives us insight into how our vote can impact the future of our country and the global community. Knowledge of democratic values, such as freedom of movement and the right to a fair trial, provides reassurance that our political and legal system respects the rights of citizens.

21A

What are the civics and citizenship skills?

chapter 21

Source 1 Parliament House in Canberra is the meeting place of the elected Parliament of Australia.

21.1 Civics and citizenship skills

Civics and citizenship studies help us learn to question, interpret information and argue our points of view. The classroom is a forum for you to share your opinions and see things from a wider range of perspectives when examining topics such as compulsory voting, the right to a fair trial and Australia's treatment of asylum seekers.

Studying civics and citizenship requires you to analyse information and ask a range of questions to find out more about a topic. You learn to question and research information by asking what, why, when, who and how to uncover the truth about an issue. Through investigating an issue you will be able to arrive at your own viewpoint while understanding the reasons why others may have different points of views.

Source 1 The four categories of skills used in civics and citizenship inquiries

Ask questions and conduct research	• Develop, select and evaluate questions to investigate Australia's political and legal systems • Identify, gather and sort information and ideas from a range of sources, and reference as appropriate
Interpret and analyse sources	• Critically evaluate information and ideas from a range of sources in relation to civics and citizenship topics and issues • Account for different interpretations and points of view
Apply strategies to resolve civics and citizenship issues	• Recognise and consider multiple perspectives and ambiguities, and use strategies to negotiate and resolve contentious issues • Use democratic processes to reach consensus on a course of action relating to a civics or citizenship issue and plan for that action
Communicate your findings and reflect	• Present evidence-based civics and citizenship arguments using subject-specific language • Reflect on their role as a citizen in Australian, regional and global contexts

Source 2 Australian citizens are legally required to vote in both state and federal elections.

21.2 Ask questions and conduct research

Develop, select and evaluate questions to investigate Australia's political and legal systems

Active citizens ask lots of questions. Often they don't believe everything they read and they seek to detect the motivation behind why someone takes a certain point of view or acts in a certain way. For example, when they see politicians talking in the media they listen to their arguments and seek out differing points of view. They also check facts and look at the arguments for and against a certain issue before reaching their own conclusions. When active and informed citizens state their own viewpoint, they support this with evidence such as statistics, cases from the past, quotes from relevant sources and sound reasoning.

Source 1 Cartoonists present their viewpoints on current issues using images and humour.

skill**drill:** Reasoning and interpretation

Developing civics and citizenship questions

Source 1 is a political cartoon about Australia's response to global warming. Protection of the environment and what our lawmakers and citizens are going to do in the future to conserve the environment are important issues at home and abroad. You can learn to investigate a civics and citizenship issue such as this by starting your questions with the words 'what', 'where', 'how', 'why', 'what impact' or 'what should'. When examining a source, whether it is a cartoon, video footage, a newspaper article or election slogan, the following approach may be helpful.

Step 1 Brainstorm a list of questions and then try to answer them. Some questions, such as 'What is happening?', might be easily answered whereas other questions, such as 'Why is it happening?', might need further research.

Step 2 Look at the source itself to try to understand the context. The 'who' question is important here. 'Who is saying this?' can be just as important as 'What is being said?' Identifying where the source comes from can alert you to whether the truth of their statements should be examined more carefully.

Step 3 The 'how' question is also important. You might ask, 'How is this happening?' or 'How does this source affect me?' Are there any emotions such as fear, persuasion or humour that are being used to influence your judgement?

Apply the skill

1 Where could you look to find answers to the question 'What are the impacts of global warming?'

2 Why is it important to know the author of the source when discovering the truth about an issue?

3 Why is examining how the source affects you sometimes more important than basic descriptive questions such as 'What is happening'?

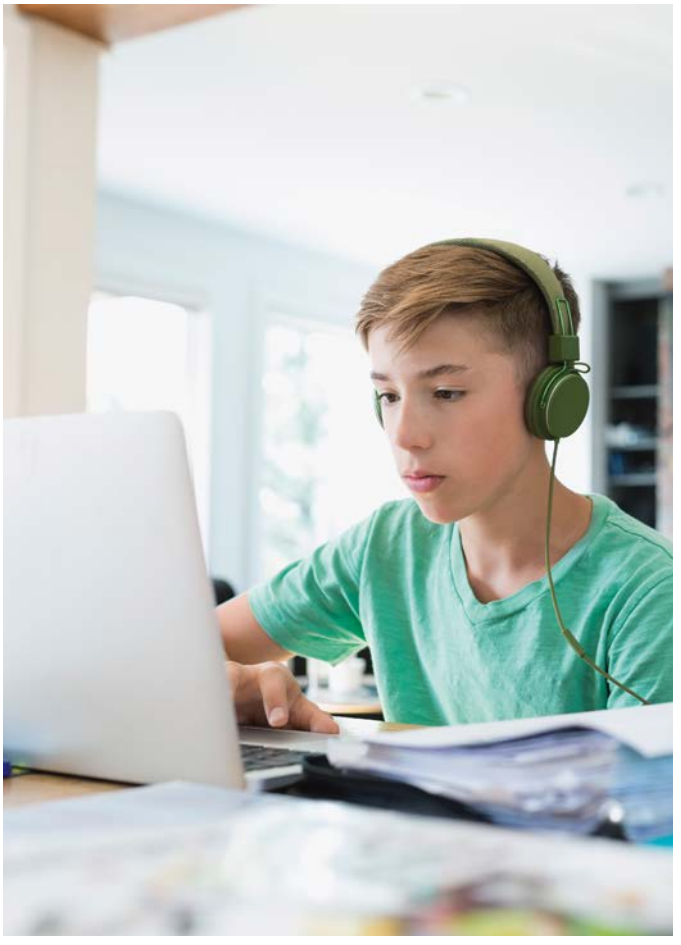

4 What tactics have been used to convey the cartoonist's message about the future of the planet due to global warming in Source 1?

Identify, gather and sort information and ideas from a range of sources and reference as appropriate

Sources provide information for informed citizens. They can take many different forms, from written records in books or online to live interactions that may be captured by varying forms of media. Some examples of sources include case transcripts and judgments, newspaper articles, letters, tweets, blogs or Facebook posts, cartoons, diaries, interviews and live debates.

Locating a range of relevant sources is a valuable skill and usually involves a number of different search methods, such as:

- using online search engines such as Google
- visiting government websites
- looking at newspaper and magazine articles online
- contacting local members of parliament or asking a person with expertise in the subject
- interviewing other class members or family members to gain an insight into their views on a particular issue.

Source 2 You need to ensure that sources of information gathered online are accurate and reliable.

Using ICT to locate relevant sources

Although books and newspapers are valuable sources of information, most research today is conducted online. In order to ensure that sources gathered online are accurate, reliable and relevant, a number of guidelines should be followed:

- Search engines such as Google are useful research tools, but much of the material on these sites is not reliable and may contain inaccuracies, false and misleading information or material that is out of date. When using search engines, be sure to define your search using keywords.

  Your librarian is a good person to ask for help and information. Most schools will also have a website devoted to providing information about developing good research skills.
- A reliable way of searching for sources is to use sites linked to educational institutions, government departments, reputable companies and universities. A quick way of telling if a site is reputable is to look at the domain name in the URL (Internet address).
- Avoid blogs posted by unknown individuals. If you happen to find information relevant to your investigation on a blog or social media site, always verify it by using a more reliable source.
- Never cut and paste information from the Internet straight into your own work. Taking someone else's work, ideas or words and using them as if they were your own is called plagiarism and can result in very serious consequences.

Check your learning 21.2

Remember and understand

1 Why is it important for citizens to ask questions?
2 What can citizens use as a reliable source of information?
3 What is plagiarism?

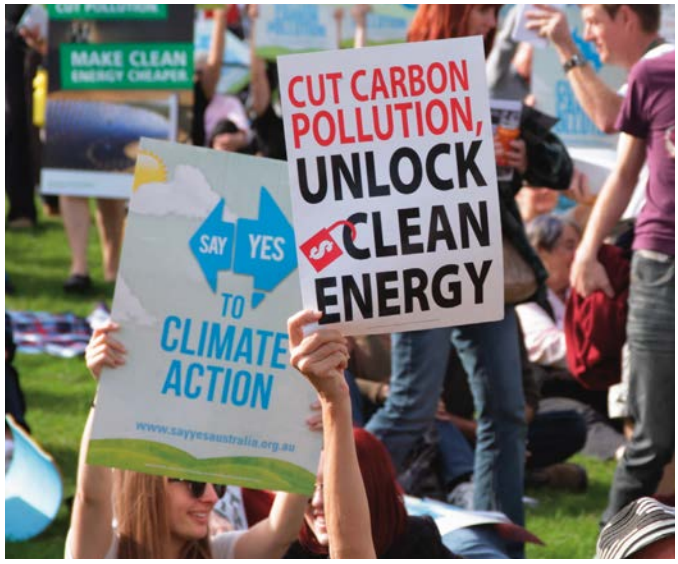

Apply and analyse

4 Kim wants to know why housing is so expensive in Australia. Where might she go to find the answer to a question like this?
5 Katie has noticed that a local swimming pool has been closed for a long time. Despite a local politician promising to reopen the pool, nothing has happened. Suggest three questions Katie might ask about this as an active citizen?

21.3 Interpret and analyse sources

Critically evaluate information and ideas from a range of sources in relation to civics and citizenship topics and issues

All sources are affected by the author's own attitudes or beliefs. In some cases, the author may have been paid or forced to write in a particular way or to ignore important facts from an event or story. This is referred to as a bias and is often aimed at persuading a reader or viewer to agree with the person who created the source. In politics and therefore in the study of civics and citizenship, people often write or speak about issues from their own perspective. This is why we must carefully evaluate and analyse sources when we are drawing conclusions from them.

Source 1 Sources are influenced by the author's attitudes and beliefs.

skill**drill:** Reasoning and interpretation

Identify and describe points of view, attitudes and values in sources

A person's perspective is their point of view – the position from which they see and understand events going on in the world around them. The more controversial an issue is, the more likely that there will be strong, competing points of view. Controversial civics and citizenship issues include:

- Australia becoming a republic
- Australia's treatment of asylum seekers
- the treatment of Indigenous Australians
- retaining the jury system
- policy on climate change
- foreign investment in Australia.

Step 1 Identify a controversial issue. You can choose one of the above issues or choose a more localised issue such as the use of mobile phones at school or your school's efforts to protect the environment.

Step 2 List those affected by the issue.

Step 3 Locate sources depicting each point of view.

Step 4 For each point of view, describe the point of view being expressed. Why is the view being expressed? Who is expressing it? What are they saying?

Step 5 What affects this person's point of view? Think about the person's role, personal experience, whether they stand to benefit financially and their ability to tolerate difference in others.

Apply the skill

1 Use the steps above to look closely at another controversial issue of your choice. You can choose one of the above issues or a more localised issue such as the use of recycled goods at school or your school's efforts to provide healthy food and drink options at the canteen.

Draw conclusions about the usefulness of sources

A useful source is one that will add to your understanding of a civics and citizenship inquiry.

The source needs to be relevant to the topic or question asked and must also be reliable. The following are good questions to ask in order to determine the usefulness of a source:

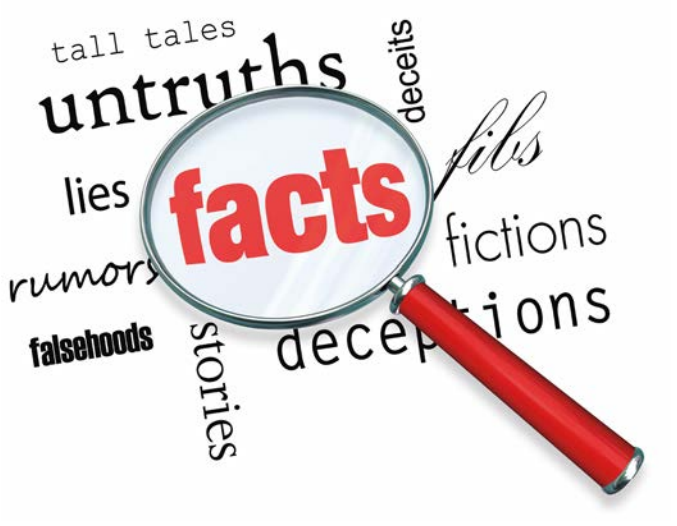

- Is it a reliable source?
- Is there enough information and sufficient detail to help me answer the inquiry question?
- Does the information support and reinforce evidence from other sources?
- Is it balanced or does it present one point of view (bias)?
- Is it based on fact or opinion?
- Is the information current?

Separating fact from opinion

The conclusions you draw about the sources you have found will determine their usefulness. In many cases, this means separating fact from opinion. A fact is something that can be proved: when an event took place, what happened and who was involved. An opinion is based on what a person, or persons, may believe to be true. A simple way to detect whether a statement is fact or opinion is to look closely at the language used. The use of words such as 'might', 'could', 'believe', 'think' and 'suggests' all indicate that an opinion is being expressed.

For example:

- Fact: Australia has compulsory voting.
- Opinion: Australia is a democracy so citizens should have the right to choose if they want to vote in an election rather than be told they have to by law.

Source 2 Separating fact from fiction in civics and citizenship is an important skill.

Account for different interpretations and points of view

Perspective and bias is not just limited to the people who create source material. Interpretations of sources can also vary widely from person to person. Age, gender, social position, beliefs and values can affect perspective.

Check your learning 21.3

Remember and understand

1 What is bias?
2 What is the difference between a fact and an opinion?
3 Name five factors that might influence a person's perspective?

Apply and analyse

4 George is researching the political issue of whether or not Australia should accept more refugees. He has found several sources of information. Which of the following should George think of as reliable? Provide a reason for your decision.
   - **a** a blog called 'Get your own country'
   - **b** a report released by the Australian Bureau of Statistics
   - **c** the United Nations official website
   - **d** an article from *The Australian* newspaper

5 Identify whether the below statement is fact or opinion and explain why.

   Asylum seekers and refugees might be happier if the facilities they stayed in were in better condition.

21.4 Apply strategies to resolve civics and citizenship issues

Recognise and consider multiple perspectives, and use strategies to negotiate and resolve contentious issues

There's an old saying that before you criticise a person you should walk a mile in their shoes. In civics and citizenship it is important to understand not only what opinion is being expressed but why it is being expressed. It is useful to consider why a person may have a certain point of view. For example, the family of a victim of crime may say to the media that a sentence given to a criminal was insufficient and unjust. This may be true but it's important to consider how the harm or loss of a family member due to crime may influence opinion. Listening and being respectful of opinions that may be different to our own is an important skill to practise in civics and citizenship so that we can discuss issues rationally with others. If we are unable to listen or do not try to understand other people's perspectives we can create conflict. When issues have clear sides or perspectives it can be better to hold open discussions to address people's ideas or to negotiate a middle ground, rather than just escalating the issue by fighting.

Use democratic processes to reach consensus on a course of action relating to a civics or citizenship issue and plan for that action

A democratic process is one in which everyone has an opportunity to have their say. This might include giving all members of a group the opportunity to contribute to a discussion, ensuring that information is conveyed to all group members, providing group members with adequate time and opportunity to respond and voting on an issue.

Source 1 One way to reach a decision that reflects the majority view is to take a vote.

Check your learning 21.4

Remember and understand

1 Why is it important to recognise multiple perspectives on an issue?

2 Describe a democratic process. Why is it a good way to make decisions?

Apply and analyse

3 A PE teacher gives a class the chance to choose what sport they will all play during a double period. The class disagrees about whether or not they should play basketball or soccer. How could this problem be solved?

4 Amy and Todd are arguing about whether or not funding from the local council should go to the kindergarten or the cricket club. After only minutes of discussion, their arguments begin to get personal and offensive. Suggest how they could handle this situation better.

21.5 Communicate your findings and reflect

Present evidence-based civics and citizenship arguments using subject-specific language

Just like in mathematics, a common language is used in civics and citizenship. Source 1 lists and defines some commonly used terms in civics and citizenship; additional civics and citizenship terms can also be found in the glossary at the end of this book.

Reflect on their role as a citizen in Australian, regional and global contexts

Many Australian citizens go beyond the legal responsibilities they have as citizens because they care about the community they live in and believe they have a social responsibility to make it a better place.

Local citizens

At the local level a citizen may give their time or resources to help others in need such as by giving to a local charity or helping out on the local school fete. Lucas Patchett and Nicholas Marchesi are Young Australian volunteers and school friends who decided to set up a mobile laundry service for the homeless in their local community. There are now nine services across Australia providing the 'Orange Sky' laundry experience where the homeless can talk to someone while their washing is being cleaned (Source 2).

Source 2 Lucas Patchett and Nicholas Marchesi serve their local community through their mobile laundry service for the homeless.

Source 1 Some useful civics and citizenship terms

citizen	A citizen is a person who legally lives in a geographical area such as a town or country.
citizenship	A person's status as a citizen. In a wider context citizenship encompasses the rights and responsibilities citizens exercise.
civics	The study of the rights and responsibilities of citizens and how government works.
diversity	Having many different forms. When referring to people it means that people come from different racial, ethnic, socio-economic, geographic, educational or professional backgrounds.
globalisation	The process that involves all the countries of the world being linked together, resulting in an exchange of views, ideas, products and culture
government	The elected members of parliament who make decisions for a nation or state. The government is made up of the party or coalition that has won a majority of seats in the lower house of parliament. The lower house of federal parliament is the House of Representatives. The lower house of the Victorian state parliament is the Legislative Assembly.
parliament	The national or state law making body that is made up of elected representatives in both the upper and lower house with a head of state. In Australia the national parliament is referred to as the Commonwealth or Federal parliament.
parliamentary democracy	A system of government where people elect representatives to parliament in order to make laws that reflect the majority of voters' views
pluralist society	A diverse society where there is tolerance of different beliefs

Regional citizens

A regional citizen may often work at a national level to provide a better future for all Australians. One of the most common ways for regional citizens to achieve this is by supporting a charity or cause. Rosie Batty is an example of an Australian citizen who has campaigned to stop domestic violence in Australia after her own son, Luke, was murdered by his father.

Source 3 In 2015 Rosie Batty was appointed Australian of the Year for her work in educating people about the impact of domestic violence and her involvement in establishing the Royal Commission into Family Violence in Victoria.

Global citizens

A citizen may also act on a global level to make the world a better place to live in. The late Fred Hollows is an example of a citizen who used his skills to restore eyesight to thousands of people in Australia and in many other countries around the world.

Source 4 Fred Hollows is known for working with people around the world to restore eyesight of those who could not access corrective surgery otherwise.

Check your learning 21.5

Remember and understand

1 Use your own words to define the following terms:
   - **a** civics
   - **b** citizenship.

2 Why might someone contribute to society, beyond their usual responsibility as a citizen?

Apply and analyse

3 Suggest a way you could contribute to society as:
   - **a** a local citizen
   - **b** a regional citizen
   - **c** a global citizen.

Australia's democracy and the global context

A **democracy** is a system of government in which the people have the power to determine how they will be ruled or managed. As US President Abraham Lincoln stated in 1863, representative democracy is 'government of the people, by the people, for the people'. This implies that democratic governments should be elected by the people to make and implement laws on their behalf, and be able to justify their actions.

A strong and resilient democracy must be based upon the core beliefs and values held and respected by the majority of society.

22A

What are the key features of Australia's democracy?

1 List five laws that help all Australians live together in a peaceful manner.

2 State three basic rights or freedoms that you think all Australians should have. What laws exist to protect these basic rights?

3 What processes or safeguards exist in Australia to ensure our laws reflect the views and values of most Australians?

22B

How is Australia's democracy influenced by the international community?

1 Decide which of the following countries currently has the greatest influence on the 'Australian way of life': China, the UK or the USA. Give reasons for your answer.

2 In what ways do you think the UK might have influenced Australia's system of government?

3 Describe three recent global events that have influenced the government of Australia.

chapter 22

Source 1 A key feature of a united society is a strong sense of belonging and pride in your nation.

22C

What are the features of a resilient democracy and a cohesive society?

1 What do you think the image on this spread is saying about Australia?

2 Why are Australians able to live together in a united society despite many people having diverse and multicultural backgrounds?

22.1 Key features of Australia's system of government

Australia is a unique country made up of over 24 million people. Australia's population includes Indigenous Australians, whose culture is the oldest in the world, dating back over 50000 years. It also includes people who have migrated from countries all around the world. Indeed, with over 6 million Australians – one quarter of our total population – being born overseas, Australia is truly a multicultural society. Despite the fact that many of us may eat different foods, celebrate different festivals, play different sports and embrace different religions and values, most of the time we all manage to live together in a cohesive and unified society.

The role of government in Australia

In Australia we have a variety of systems, structures and laws designed to ensure that all members of our society can live together in a united, safe and peaceful manner. For example, we have a system of courts to enforce the law and resolve disputes in a fair and unbiased way. We also have a system of government to make laws that reflect the prevailing views and moral standards held by most Australians. Our governments also aim to ensure that all Australians are provided with access to basic services, including health care, education, roads, public transport and utilities such as water, electricity and Internet connection.

It is also considered the role of government to support all Australians in maintaining a reasonable standard of living. This involves making sure that people who wish to work have jobs, and that those who are unable to work or find it difficult to work – the elderly, people with disabilities, carers, refugees – are provided with income support and access to basic services.

Australia's system of government

In Australia, we have a system of government where our laws are made by parliaments. A **parliament** is a group or assembly of representatives who have been elected by the people to make laws on their behalf. Once a parliament has been elected it must perform a variety of tasks including:

Source 1 People protesting to urge the Australian government not to reduce its spending on basic services

- making new and altering existing laws so they reflect the views and values of the majority of the people and benefit society
- discussing and debating matters that affect the voters
- examining problems that exist within society
- reviewing perceived injustices in the law.

A federal system of government

Australia's system of government is based on a **federal system.** This means that the nation is divided into states, each of which has its own parliament that is responsible for making laws for the residents of that state. In addition, there is one central or federal parliament, which has the power to make laws that apply to the entire country. In Australia, we have six state parliaments and one Commonwealth Parliament (often referred to as the federal parliament) which is located in our nation's capital, Canberra.

In addition to the state and Commonwealth parliaments, we also have three territories that have been given the power by the Commonwealth Parliament to have their own elected parliament to make laws that apply within each territory. These are the mainland territories of the Australian Capital Territory and the Northern Territory, and offshore Norfolk Island.

Each state of Australia and the Northern Territory also has local governments. These are called local or municipal councils, and have been given the power by the state and territory parliaments to make local laws – often called by-laws – and provide services for a local community, district or region.

Source 2 Australia's three levels of government have different law-making powers, covering areas such as defence, education, and drainage and waste collection.

Source 3 Australia's three levels of government

The three levels of government in Australia	Examples of areas of law-making power
Commonwealth (Federal)	• currency • defence • marriage • customs and border protection • Australian citizenship
State	• primary and secondary education • health services • water • electricity • public transport
Local	• local infrastructure (e.g. provision of roads, footpaths, drainage and waste collection) • recreational facilities (e.g. parks, libraries and swimming pools) • aged care facilities • child care facilities

Remember and understand

1 Outline three roles of government in Australia.

2 Explain why Australia's system of government is referred to as a federal system.

Apply and analyse

3 Prepare a chart that distinguishes between the three levels of government in Australia.

4 Use the Internet to investigate the role of your state or territory government and complete the following tasks.
- **a** List ten different services that your state or territory government provides to the community.
- **b** List five departments or agencies that are operated by your state or territory government and briefly explain why these agencies exist.
- **c** State the name of the premier or leader of your state or territory's government, and identify the political party to which he or she belongs.
- **d** Outline three laws that have been introduced or changed by your state or territory government within the last two years. Suggest why these laws were introduced or changed. Discuss whether or not you support the introduction or change of these laws.
- **e** Imagine you could introduce two new laws in your state or territory. What would they be? Justify and compare your choice with your classmates.

5 Use the Internet to investigate the role of your local or municipal council and complete the following tasks.
- **a** State the name of your local municipality or council.
- **b** Download or prepare a map showing your municipal council's boundaries.
- **c** List ten different types of services provided by your council. Indicate which of these services you or your family has used within the last 12 months.
- **d** Imagine you had the power to choose three more services to be provided by your local council. What would you select? Justify your choice.

Evaluate and create

6 Create a PowerPoint or poster that illustrates the role and responsibilities of one of the three levels of government in Australia. You can use online tools for poster creation.

22.2 Principles of Australia's system of government

A national 'system of government' broadly refers to the way in which a nation or country is managed or controlled. In Australia, our system of government is based on a variety of principles that aim to manage our nation in a fair and just manner.

Principles of government

We have already learned that Australia's system of government is based on the federal system where, we have one central Commonwealth Parliament, six state parliaments and two mainland territory parliaments.

But there are other important principles or beliefs upon which our system of government is based. These include the underlying principles that:

1 governments must protect the rights and freedoms of individuals
2 governments must make laws that reflect the views and values of the people
3 governments must be accountable to the people
4 governments must not abuse their power.

1 Governments must protect the rights and freedoms of the individual

Our system of government is also often referred to as a **liberal democracy.** This means it is a system that aims to protect individual rights and freedoms, and place limits on the level of government control or interference. While the parliaments have the power to make laws that regulate the behaviour of people, they should not make laws that are excessive, or unnecessarily limit the activities of individuals.

For example, we have laws that:

- protect our broad right to freedom of speech
- protect our basic right to freedom of assembly and expression
- limit individuals from behaving in an offensive or indecent manner in public.

Source 1 The law protects our right to assembly and expression.

2 Governments must make laws that reflect the views and values of the people

One key principle of the system of government in Australia is that the parliaments must make laws that reflect the views, values and moral standards of the people. This is referred to as **representative government**. Australia achieves this by holding regular free and fair elections where the people can vote for individuals to represent them in parliament. If these elected members of parliament fail to make laws that represent the views and values of the majority of voters, they jeopardise their chance of being re-elected. In Australia, federal parliament elections are held every three years while elections are held for state parliaments every four years.

In Australia, voting in federal and state elections is compulsory for all eligible citizens aged over 18 years. Those who do not enrol to vote, or do not vote on election day, may be fined up to $180. Interestingly, Australia is one of only a few nations throughout the world that has compulsory voting in elections.

Source 2 Arguments for and against compulsory voting

For compulsory voting	Against compulsory voting
• helps ensure our parliaments have the support of the majority of people, not just those who voted	• forces those who are uninterested to cast an ill-informed vote
• may force candidates and political parties to consider the needs of all society when making policies	• is a violation of individual rights

3 Governments must be accountable to the people

Another principle that underpins the Australian system of government is that the government must be accountable or answerable to the people (often referred to as the principle of **responsible government**). Being accountable to the people means that governments must be able to justify their actions and decisions to the voters.

In Australia, one way that governments are held to account is through the process of parliamentary question time, where all members of parliament are given the opportunity to question the government on its policies and actions. Often parliamentary question time can become quite intense as members of the government and the opposition debate and argue about political issues. Members of the public can also directly contact and question their local member of parliament by emailing or visiting their local member's office.

The principle of responsible government also ensures our governments are accountable by stating that any member of the government who acts in a dishonourable or irresponsible manner has a duty to resign from their position. Throughout the years many elected members of state and federal governments have voluntarily resigned from their positions after being accused or proven to have acted dishonestly.

Source 3 Australians vote for their members of parliament in free and fair elections.

casestudy

Are our politicians responsible?

In 2014, the leader of the NSW State government, Premier Barry O'Farrell, resigned after he gave false evidence to an anti-corruption hearing that was examining corruption within the government. The Premier offered his resignation after failing to remember and declare to the hearing that he had received an expensive bottle of wine as a gift. The gift was from a business executive whose company was involved in dealings with the state government and the provision of the state's water infrastructure. All gifts received by members of the government must be declared to avoid allegations of bribery. Upon his resignation, Mr O'Farrell claimed that while he did not deliberately intend to mislead the hearing, as 'a person who believes in accountability' he accepted responsibility for his actions.

Similarly, in 2015 Bronwyn Bishop was forced to step down from her senior position within the federal parliament after she was criticised for misusing her government travel entitlements by spending $5000 to pay for a helicopter to take her from Melbourne to Geelong to attend a Liberal Party fundraising event.

Source 4 In 2014 NSW Premier Barry O'Farrell resigned to uphold the principle of responsible government.

4 Governments must not abuse their power

Another key principle that underpins Australia's system of government is that our governments must not abuse or make laws beyond their power. In order to make sure this does not occur, our system of government is based on a principle called the **separation of powers**. This principle ensures that no single group or body within our parliamentary system – that is, the government, the parliament or the courts – has power over both the political and legal systems.

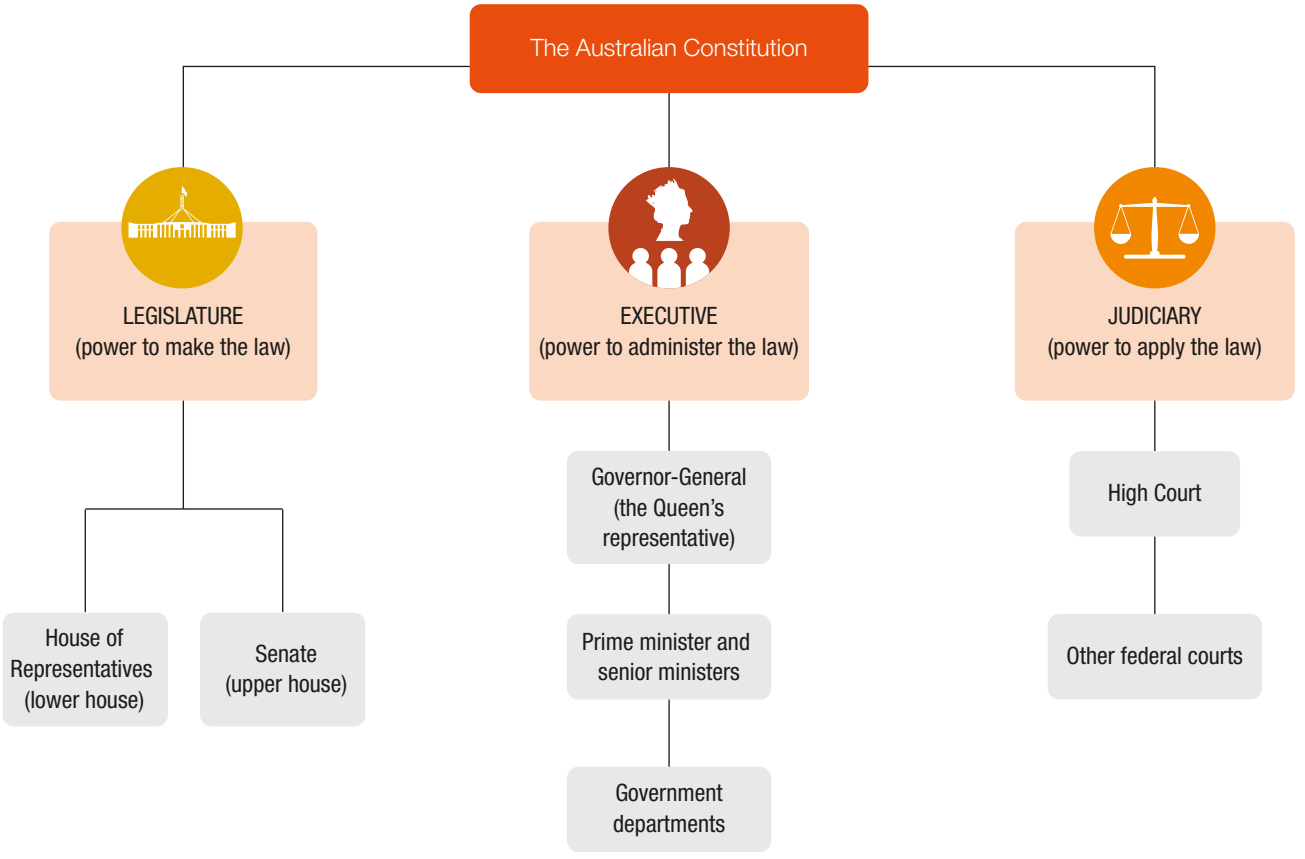

The three main powers at federal level consist of:

- *Executive power* – the power to administer or implement the law, held by the Governor-General (as the Queen's representative), and the prime minister and senior ministers
- *Legislative power* – the power to make the law, held by parliament
- *Judicial power* – the power to apply and interpret the law, held by the courts and allows them to enforce the law and settle disputes.

In the Constitution, the three powers are separated. In practice, the duties of the executive (senior ministers) and the legislature (parliament as a whole) are combined. The **judiciary**, or court system, remains independent. For example, the government and the parliament have the power to make and administer the laws, but they don't have the power to apply and interpret the law, which is the role of the courts. This independent court system allows our judges to resolve disputes without any outside influence from government, party politics or voters. Judges are free from political bias, and are therefore impartial when they are applying the law.

Keeping the judiciary independent means the courts can act as a checking system, and makes sure that the parliament does not make any laws beyond its power. If a person or organisation believes that parliament has made a law that abuses its powers, they can challenge the law in court. If their challenge is successful, the law can be declared invalid by an independent and unbiased judge.

The principle of the separation of powers is an important feature of our parliamentary system. No single body can make, administer and apply the law, so this principle acts as a check to make sure that governments cannot abuse their power.

Source 5 The principle of the separation of powers at federal level, as set out in the constitution

Check your learning 22.2

Remember and understand

1 The Australian system of government is based on the principle of 'liberal democracy'. Explain what is meant by this term.
2 Explain two other principles upon which the Australian system of government is based.
3 How does Australia achieve representative government?

Apply and analyse

4 With reference to the separation of powers, explain why judges are not able to be elected as members of parliament and serve in the government.
5 Suggest and explain one way, other than the risk of not being re-elected, that governments in Australia are held accountable for their actions.
6 The term 'nanny state' is used to describe a nation, state or territory where the government makes too many laws that restrict individual freedoms. Research the term 'nanny state' and suggest three federal or state laws that you believe unnecessarily restrict the rights or freedoms of individuals. Give reasons for your views.

Evaluate and create

7 Imagine you have been commissioned by the federal government to investigate compulsory voting. Undertake some research on the pros and cons of compulsory voting and prepare a 300-word submission that supports or opposes the abolition of compulsory voting in Australia.
8 Design a mind map using 'Australia's system of government' as the central theme or heading.

22.3 Australia's Commonwealth Parliament

The first inhabitants of Australia, the Aboriginal and Torres Strait Islander peoples, had their own system of law and well established rights, responsibilities and codes of behaviour. Despite this, the British established Australia's current system of government after they began settling in Australia from 1788 onwards.

The history of Australia's system of government

Upon arrival in Australia, the British swiftly imposed their own laws and legal system and began developing a system of government whereby each of the colonies, now called states, was able to establish its own parliament. Together with the British parliament, these colonial parliaments had the power to make laws for their own colony.

Source 1 Our parliamentary system is based on the Westminster parliamentary system.

The colonial parliaments each followed the British parliamentary model called the **Westminster parliamentary system**. Under this system of government each parliament consisted of:

- the upper house
- the lower house
- the reigning English monarch or 'Crown'.

The Westminster system of parliament still exists in Australia today, with all state parliaments (except Queensland) and the Commonwealth Parliament consisting of two houses and the Crown or Queen of England. Queensland's state parliament only consists of the lower house and the Crown.

As Australia grew throughout the 1800s it became increasingly obvious that, in addition to having separate parliaments in each colony, a central parliament was needed to make consistent laws that could apply to and benefit the entire country. Problems were beginning to arise between the colonies as each made different laws in a range of common areas. These included:

- constraints on inter-colony trade, due to the colonies having:
  - different railway systems
  - different postage stamps
  - different taxes, or tariffs
- defence concerns:
  - each colony had its own independent 'militia', or army
  - there was no uniform defence force capable of protecting the entire country
  - concern was growing over the arrival of non-British immigrants and the lack of a common immigration policy.

Source 2 This souvenir booklet was published to celebrate Federation Day on 1 January 1901 when each of the separate colonies united to form one Australian nation. This process was known as Federation.

By the 1880s each of the six colonies began formal discussions to consider which laws would be best made by a central parliament and which areas of law-making power should be kept by the individual colonies. For example, it was considered best that a central parliament be given the power to make laws on national matters that affected the whole country.

The central parliament was to be given the power to make laws relating to:

- defence
- currency
- postal services.
- overseas matters
- immigration and trade

The colonial parliaments would keep the power to make laws relating to:

- hospitals
- roads
- education
- public transport
- water
- law enforcement.

In the 1890s each of the colonies sent a group of representatives to special meetings (called Conventions) where it was decided that a new central Commonwealth Parliament would be created. On 1 January 1901, known as **Federation Day**, the British Parliament passed a law called the *Commonwealth of Australia Constitution Act 1900 (UK)* (referred to as the Constitution) to unite the separate colonies (which became states) to form one nation with a federal system of government and create the new federal or Commonwealth Parliament of Australia.

Source 3 The structure of the Commonwealth Parliament

Lower House	Upper House	Crown
House of Representatives	**Senate**	**Governor-General**
150 members elected by the people to serve a three-year term	76 members elected by the people to serve a six-year term	One person chosen by government to serve a five-year term

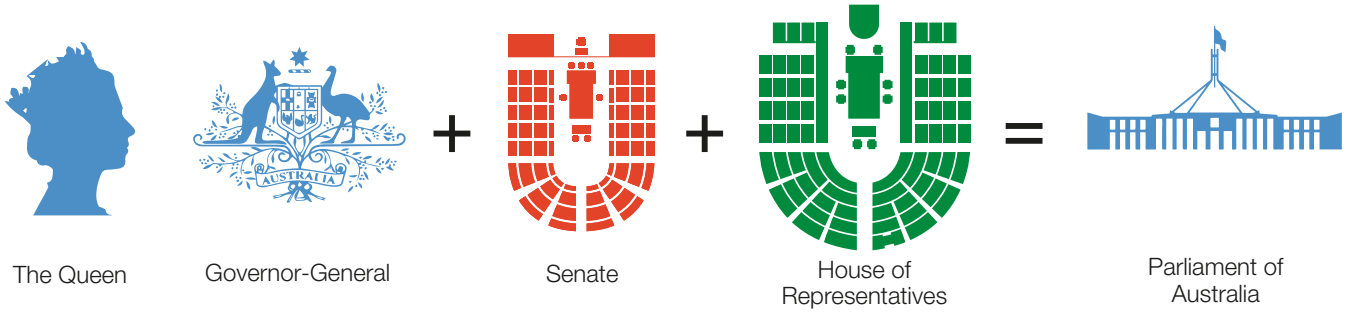

The structure of the Commonwealth Parliament

In addition to creating the Commonwealth Parliament and establishing a new federal system of government, the Commonwealth Constitution outlined the structure and law-making powers of the Commonwealth Parliament. In keeping with the Westminster parliamentary system, the Constitution states that:

- the Commonwealth Parliament must consist of two houses and the Crown – that is, the Queen, who is represented by the Governor-General.
- the lower house of Commonwealth Parliament is called the House of Representatives and the upper house is called the Senate.
- all laws made by the Commonwealth Parliament must be passed or approved by a majority of members in both houses of parliament and the Crown.

House of Representatives

The lower house in the Commonwealth Parliament, the **House of Representatives**, consists of 150 members. Each of these members is elected by eligible voters who live in one of 150 designated areas – called **electorates** – throughout Australia. The electorates are determined in proportion to population size, meaning that the most populated states, such as New South Wales and Victoria, have more elected representatives in the lower house. In this way, the House consists of members who can represent the views, values and desires of people from all around the country. For this reason it is often referred to as the 'People's House'. Members of the House of Representatives are elected for a three-year term.

Source 4 The key elements of the Commonwealth Parliament of Australia

The main role of the House of Representatives

The main role of the House of Representatives is to:

- determine the government of the day. In simple terms, the government is the political party that has a majority of members in the lower house (that is, the party who wins at least 76 of the 150 electorates in the House). For example, at the federal election in 2013, members of the Liberal–National Party Coalition won 90 of the 150 electorates and so formed the government of the day.
- discuss, debate and scrutinise proposals for creating and changing Commonwealth laws. In fact, most proposals for introducing new or changing existing laws commence in the lower house.

Source 5 Question Time in the House of Representatives in 2015

The Senate

The upper house in the Commonwealth Parliament, the **Senate**, consists of 76 members, with 12 members being elected from each of the six states and two elected from each of the mainland territories. In this way, the Senate can, in theory, equally represent views, values and interests of each state of Australia. This differs from the composition of the House of Representatives, which consists of members elected from 150 different electorates throughout Australia, which are determined in proportion to population size. The Senate, however, consists of equal members from each state regardless of the state's population size. Individuals elected to the Senate, called **Senators**, are elected for a six-year term.

Source 6 The Senate in 2015

The main role of the Senate

The main role of the Senate is to:

- represent the interests of the states. Given the Senate consists of an equal number of senators from each state, in theory it can equally represent the interests of each state, regardless of that state's population size. It can also help prevent the Commonwealth Parliament from passing any laws that discriminate against any particular state. This is because all proposals for new laws must be passed or agreed to by a majority of members in both houses of parliament.
- initiate, discuss and review new laws. Like the House of Representatives, most proposals for creating new Commonwealth laws, or changing existing Commonwealth laws, can be initiated and discussed in the Senate. However, because most laws commence in the lower house, the Senate tends to act more as a 'house of review', debating and scrutinising proposals that have already been passed by the House of Representatives.

casestudy

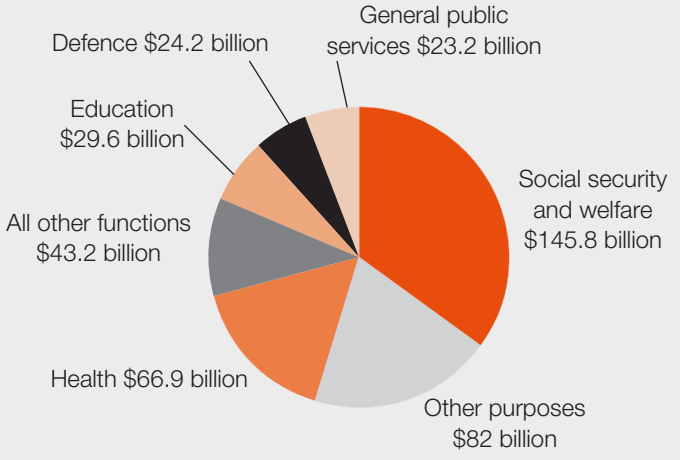

How does the federal government spend its money?

One of the main responsibilities of the federal government in Australia is to manage the nation's finances and provide services to the community. Each year, the federal government must prepare a **national budget** that outlines how much money the government expects to receive and how they plan to spend it. In 2015–16, the federal government had to determine how it would spend the estimated $405 billion that it expected to receive – mainly from the imposition of taxes, including income tax and the goods and services tax (GST).

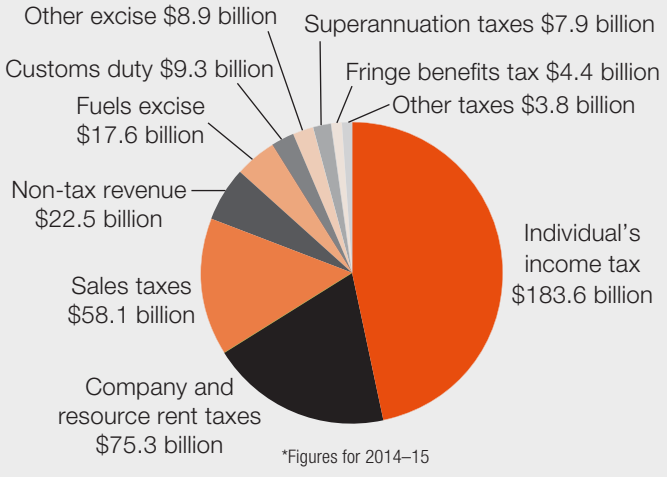

The government budgeted to spend approximately:

- 35 per cent on the provision of social security and welfare. This includes the provision of pensions and other forms of support to the aged, people with disabilities and their carers, families with children, the unemployed and veterans.
- 16 per cent on health care
- 7 per cent on education
- 6 per cent on national defence.

Allocating the government revenue is a difficult task and always creates controversy. This is because some individuals and groups benefit by receiving assistance, while others feel their needs are overlooked.

Source 7 From where does the federal government gain its money?

Source 8 Where does the federal government spend its money?

The Crown

In addition to the two houses, the third component of our Commonwealth Parliament is **the Crown**, or Queen, who is represented in Australia by the **Governor-General**. The Governor-General is selected by the federal government or prime minister of the day, and is always a prominent and well-respected Australian. The current Governor-General, who took up his five-year position in March 2014, is Sir Peter Cosgrove. He is a retired senior officer in the Australian Army, former Vietnam veteran, and Commander-in-Chief of the Australian Defence Force.

The main role of the Governor-General

The main role of the Governor-General is to:

- grant royal assent or give final approval, on behalf of the Queen, for a Bill (or proposed law) to become an Act of Parliament or law.
- perform ceremonial duties. For example, the Governor-General often represents Australia at important national and international events, such as ANZAC Day ceremonies and the Olympic and Commonwealth Games. They also present awards granted under the Australian Honours system, recognising individuals who have made outstanding contributions to our society and offer encouragement to Australians by supporting a wide range of charitable, educational and cultural events.

The Governor-General may also 'dissolve', or end, the term of parliament and call a new federal election if both houses fail to agree over the passing of a significant law. This power is used rarely, and only in extreme circumstances.

Source 9 The Queen is represented in Australia by the Governor-General.

Source 10 In 1975, the Governor-General, Sir John Kerr (left), dissolved both houses of the Commonwealth Parliament, effectively dismissing the Labor Prime Minister Gough Whitlam and his government, and called a new election.

The structure of state and territory parliaments

Each state parliament throughout Australia – with the exception of Queensland, which only has a lower house – follows the Westminster parliamentary system, and consists of two houses and the Crown. The parliaments of the two mainland territories – the Australian Capital Territory and the Northern Territory – only consist of one house and do not include the Crown. This is because they were created and given limited power to govern themselves by the Commonwealth Parliament after Federation.

The table in Source 11 outlines the structure and names of each house in the Australian state and territory parliaments.

Source 11 The Australian state and territory parliaments

State	Lower House	No of elected members	Upper House	No of elected members	Crown
Victoria	Legislative Assembly	88	Legislative Council	40	Governor-General
New South Wales	Legislative Assembly	93	Legislative Council	42	Governor-General
Western Australia	Legislative Assembly	59	Legislative Council	36	Governor-General
South Australia	House of Assembly	47	Legislative Council	22	Governor-General
Tasmania	House of Assembly	25	Legislative Council	15	Governor-General
Queensland	Legislative Assembly	89	None		Governor-General
Australian Capital Territory	Legislative Assembly	25	None		None
Northern Territory	Legislative Assembly	25	None		None

Remember and understand

1 Explain what is meant by the Westminster parliamentary system.

2 Explain the main reason that the Commonwealth Parliament was established in 1901.

3 Name three areas in which the central parliament, in the 1880s, was given law-making powers.

Apply and analyse

4 Go to the Australian Electoral Commission website and, using the 'Electorates' menu, find your federal electorate. Then, complete the following activities.
   - **a** State the name of your electorate.
   - **b** List the main suburbs within your electorate and state how many people live in your electorate.
   - **c** State the name of your electorate's sitting member, the political party (if any) to which they belong, and the percentage of first-preference votes they won at the last election.
   - **d** Provide a brief summary of the types of laws and reforms your member (and their political party) supports and discuss whether these views and values broadly reflect yours.

5 Use the Internet to research the results of the last federal election.
   - **a** Prepare a table showing how many electorates were won by each of the political parties or independents in the House of Representatives and the Senate.
   - **b** Which party formed the government and why?
   - **c** Analyse the composition of the Senate and suggest how it may affect the government's ability to make law.

Evaluate and create

6 Prepare a PowerPoint, poster or flyer that outlines the composition and role of the two houses of the Commonwealth Parliament.

7 Create a word search puzzle or crossword using at least 12 key terms that relate to the Australian parliamentary system. You may wish to use one of the many free puzzle-making programs and apps available on the Internet.

8 In 1999, a proposal was put to the Australian people to remove the Crown from the Commonwealth Parliament, so Australia could become a republic. While the proposal failed, support for the republican movement has grown over recent years.
   - **a** Access the clip on the republic debate using the link in your obook.
   - **b** Investigate the strengths and weaknesses associated with Australia becoming a republic. Prepare a 500-word report that evaluates whether 'Australia should become a republic'.

22.4 Comparing systems of government in Australia and Indonesia

The Republic of Indonesia is made up of over 17 500 islands including the largest and most well-known islands of Java, where the capital city Jakarta is located, Sumatra, Kalimantan, Sulawesi and Papua – the western part of New Guinea. Over 253 million people live in Indonesia, making it the fourth-most populated nation in the world, following China, India and the United States of America. Indonesia is also one of the most ethnically diverse nations in the world, consisting of approximately 300 different ethnic groups who speak over 740 different languages and dialects. A range of different religions are also practised in Indonesia, with approximately 85 per cent of the population being Muslim, 6 per cent Roman Catholic, 3 per cent Protestant and the remainder mainly practising the Hindu, Buddhist and Confucian religions.

Source 1 A range of different religions are practised in Indonesia.

Key features of Indonesia's system of government

Indonesia's system of government is referred to as a **republic**, meaning the people vote to determine government (or Head of State) rather than having a hereditary monarch or the Crown.

A representative democratic republic

Indonesia became a republic in 1945 after the Indonesians claimed their independence from the Dutch and Japanese. In more recent years, Indonesia has moved towards a **representative democracy** in which the people vote to elect the parliaments and governments that make and implement Indonesian law.

History of Indonesian democracy

The Dutch ruled Indonesia for 300 years, until the Japanese invaded and occupied the nation in 1942 during World War II. After the Japanese surrendered in 1945, a small group of Indonesians set up a temporary government and declared the nation an independent republic. However, the existence of many different political and religious groups and ongoing disputes with the Dutch meant that it was difficult to form a stable government.

In 1966 General Haji Muhammad Suharto, the head of the military, was installed as the nation's president. He led the country for the next 30 years. During his authoritarian rule, President Suharto was often criticised for restricting individual freedoms, including the right to protest and freedom of speech. Suharto was also criticised for breaching human rights, including ordering the 1991 massacre of hundreds of East Timorese, who resisted Indonesian's occupation of their nation in 1975. In 1988, after months of anti-government riots and economic and political unrest President Suharto resigned and Indonesia slowly moved towards establishing more democratically elected parliaments.

In 2004, Dr Susilo Bambang Yudhoyono, won the nation's first direct presidential elections by popular vote after approximately 110 million people, or 70 per cent of the 150 million registered voters, participated in a relatively free, fair and non-compulsory election. Dr Yudhoyono was re-elected in 2009 but was unable to stand again in the 2014 elections. This was because, under changes to the Indonesian Constitution, the president can now only serve a maximum of two five-year terms. In 2014 Mr Joko Widodo was elected as the Indonesian president.

Three levels of government

Indonesia has three levels of government: the national, **provincial** and district (or city) levels. Each of the parliaments at each level of government is elected by the people to make laws on their behalf, and elections are held once every five years, on the same day.

Having the national and provincial elections on the same day makes the electoral process challenging. Enrolment must be finalised and ballot papers must be printed and distributed throughout each of the provinces, including many in remote and isolated places. In 2014, approximately 19 700 seats were contested in the national, provincial and district parliaments, with approximately 6600 candidates standing in the national election and 16 000 at provincial and district level.

The structure of the national parliament

The Indonesian national parliament, which is responsible for making laws that apply to the whole country, is called the **People's Consultative Assembly**. It is similar to Australia's Commonwealth Parliament in that, since 2004, it consists of two houses:

- the lower house, the **People's Representative Council** (often referred to as the House of Representatives), which consists of 560 seats, or members
- the upper house, the **Regional Representatives Council**, which consists of 132 seats.

Interestingly, however, while the Indonesian parliament, the People's Consultative Assembly, consists of two houses, it differs from the two house or **bicameral system** in that a bill or proposed law does not have to be passed by both houses to become a law. The final power to make and change laws is held solely by the People's Representative Council (or lower house).

The political party that wins at least 281 of the 560 seats in People's Representative Council also earns the right to govern. In 2014, approximately 15 different political parties and 6600 candidates contested the national election.

Source 5 A political party must win at least 281 seats in the lower house to secure the right to govern in Indonesia.

Each of Indonesia's 34 provinces, except one, has its own parliament, called the Provincial Legislative Assembly, that is elected by the residents of the province. Each province is then further subdivided into municipalities, or regencies, most of which also have their own parliaments or District Legislative Assemblies.

Interestingly, to encourage greater female participation in parliament, a political party could not contest the 2014 Indonesian elections unless at least 30 per cent of their candidates at each level were women.

Source 6 President Joko Widodo (popularly known as Jokowi) was elected as the President of Indonesia in 2014.

Separation of powers

Like Australia, the Indonesian system of government is based on the principle of the separation of powers. This means that no one group or body can ever hold each of the three main branches of power in the Indonesian parliamentary system. For example, in Indonesia:

- The power to *make the law* is held by the national, provincial and district parliaments who are elected by the people in parliamentary elections held every five years.
- The *power to administer* (or implement) *the law* is held by the president who is elected as the head of the Indonesian government in a separate presidential election held a few months after the parliamentary elections.
- The power to *apply and interpret the law* to resolve disputes is held by the courts and judges.

The Indonesian system of government is also similar to Australia's in that different political parties contest each election, although in Australia the two major parties (the Liberal Party and the Australian Labor Party) dominate the voting while in Indonesia a variety of large and small political parties compete at election time. This means the party composition of the People's Consultative Assembly can significantly change with each election. Some of the main parties that contested the 2014 elections were:

- the Indonesia Democratic Party, led by a former president, Megawati Sukarnoputri
- the Functional Groups Party, referred to as Golkar, led by Aburizal Bakrie
- the Democratic party, referred to as the Demokrat party, led by the president at the time, Susilo Bambang Yudhoyono.

case**study**

Should Indonesia have the death penalty?

In April 2015, two Australians, Andrew Chan and Myuran Sukumaran, along with six other 'death row' prisoners, were executed by the Indonesian government after being convicted for drug trafficking offences. Both men were members of the 'Bali Nine', a group of nine Australians who were arrested in Denpasar, Bali, in 2004, for trying to smuggle approximately 8 kilograms of heroin, worth $4 million, from Indonesia to Australia. Four other members of the group were also sentenced to death but had their sentences reduced to life imprisonment on appeal.

In 2014–15, Indonesia was one of 22 countries throughout the world to carry out the death penalty and, although 101 countries have abolished the use of the death penalty, there is still great support for capital punishment within Indonesia. Support for the death penalty exists particularly among members of the police and security forces and some Muslim groups who believe that it is an appropriate punishment for those who commit very serious crimes – such as terrorism, mass murder and trafficking large quantities of illegal drugs. Those who oppose the death penalty, in Indonesia and elsewhere, argue it is 'state-approved murder' and does not make a society safer or reduce the likelihood of similar crimes happening in the future.

Source 7 In 2015, Australian citizens Andrew Chan and Myuran Sukumaran were executed by an Indonesian firing squad after being convicted for drug trafficking in 2005.

Check your learning 22.4

Remember and understand

1 Who ruled Indonesia before the Japanese invasion in 1942?
2 Who was the first directly elected president, and when was he elected?
3 How many levels of government does Indonesia have?
4 State the name and outline the basic role and structure of Indonesia's national parliament.

Apply and analyse

5 Prepare a table that compares Indonesia's system of government with Australia's. Explain two main differences and two similarities between the two systems of government.
6 Distinguish between the types of government that existed in Indonesia under the rule of President Suharto compared to President Susilo Bambang Yudhoyono.

Evaluate and create

7 Draw a timeline that illustrates key changes in the Indonesian government since the Dutch rule ended in 1942.
8 Conduct some Internet research into the last national elections held in Indonesia and prepare a 'summary facts sheet'. You may wish to include:
   a the date of the parliamentary and presidential elections
   b the voting age and number of votes cast
   c the name of the successful parties and president.
9 Conduct some Internet research into Indonesia's use of the death penalty and the arguments for and against its use. Prepare an editorial for an Indonesian newspaper that discusses whether or not Indonesia should abolish the death penalty. Create an image or cartoon to support your editorial.

22A rich task

Should our government limit free speech?

One basic feature of our democratic system of government is that all citizens have the broad right to freedom of speech so they can express their views and discuss economic, political and social issues without fear of being punished. But to what extent should we protect freedom of speech?

Source 1 Thousands of people protested all around the world in support of free speech after 12 people were killed in an attack on a French magazine *Charlie Hebdo* in 2015.

In 1975, the Australian federal government passed the *Racial Discrimination Act* to ensure that all people, regardless of their nationality and background, would be treated equally. More specifically, Section 18C of this Act effectively limits freedom of speech by making it illegal for any individual to act in a way that is reasonably likely to 'offend, insult, humiliate or intimidate' another person or group due to their race, colour, national or ethnic origin.

In 2014, the federal government announced their intention to strengthen freedom of speech by altering Section 18C of the *Racial Discrimination Act* to remove the words 'offend, insult or humiliate' so that it would only be unlawful to 'intimidate or **vilify**' another person or group on the basis of their race or ethnicity. The proposal created great controversy and started a debate about whether or not our laws should allow an individual the right to speak in a manner that would offend or humiliate another on the basis of their race.

Eventually this proposed change in the law was dropped because it was too controversial. Since the 2016 federal election, the issue has re-emerged because some new members of parliament, such as Victorian Senator Derryn Hinch, have expressed concerns over such laws that restrict our freedom of speech. Many prominent Australians have differing opinions regarding this proposed change, demonstrated in the following set of quotes.

'People do have a right to be bigots, you know. In a free country, people do have rights to say things that other people find offensive, insulting or bigoted.' – Commonwealth Attorney-General, George Brandis

'The best counter to a bad argument is a good one, and the best antidote to bigotry is decency, proclaimed by people engaging in a free and fair debate.' – former Prime Minister of Australia, Tony Abbott.

'Section 18C empowers minorities with the ability to fight back, with the force of the law and the sanction of our state, in the face of the outrageous and malign, which could otherwise be the first step down a dark and evil path.' – Leader of the Australian Labor Party, Bill Shorten.

'It may make our hearts sink, but we owe it to our democracy to defend the rights of the most offensive people in our community.' – Journalist Antony Lowenstein.

'For them [journalists, politicians] it's a game, it's a debate about words and abstract principles. For people who have experienced racism, it is a deeply personal debate, and it's actually a debate about real people and real hurt.' – Labor Senator, Penny Wong.

'This matters because – if I may speak freely – plenty of white people (even ordinary reasonable ones) are good at telling coloured people what they should and shouldn't find racist, without even the slightest awareness that they might not be in prime position to make that call.' – Lawyer and media commentator, Waleed Aly.

skill**drill:** Reasoning and interpretation

Evaluating and comparing information

One main skill you need to develop in your senior years of schooling is the ability to specifically address key 'task words' when preparing a response to a question, and avoid simply writing everything you know about a topic. The following table lists and explains the meaning of some common task words used in humanities subjects such as Commerce, Legal Studies and Economics.

Task word	Meaning
Evaluate	To explain (or consider) strengths and weaknesses, and provide an overall conclusion or judgment about the value or worth of what is being evaluated.
Compare (or contrast)	To explain and/or discuss similarities and differences.
Discuss	To examine all sides of an issue and provide strengths and weaknesses (if applicable). You should also provide a concluding statement that expresses your opinion.
Define	To provide a precise meaning.
Explain	To define and give reasons for.
Describe	To accurately depict, illustrate or outline in a logical sequence.

Two of the most important task words used in humanities subjects are *evaluate* and *compare* (or *contrast*).

For the task word *evaluate,* follow these steps.

Step 1 Provide any key definitions or basic explanations about the specified topic in an introduction.

Step 2 Explain the strengths and weaknesses, or pros and cons, of the issue. For example, the question '*Evaluate* the benefits of changing section 18C of the *Racial Discrimination Act*' requires you to explain the strengths and weaknesses – or pros and cons – that the proposed changes will have.

Step 3 Provide a conclusion that summarises the key points and includes your own view, based on the evidence.

For the task word *compare* (or *contrast*), follow these steps:

Step 1 Examine the texts and highlight similarities and/or differences between them. For example, the task 'Compare the views expressed in the quotes by prominent Australians about the freedom of speech' requires you to examine the set of quotes and highlight and discuss any similarities or differences.

Step 2 Provide a conclusion that summarises the key points and includes your own view, based on evaluating the different opinions.

Apply the skill

1 Form into small groups and compare the quotes made by prominent Australians in response to changing the *Racial Discrimination Act*.

- **a** Read and determine the meaning of each quote and categorise each as either supporting or opposing the changes to the Act.
- **b** Outline and explain the similarities between the two categories of quotes – that is, those that support and those that oppose changing the Act – and the differences between the views expressed in each category.
- **c** In your group, discuss which quotes you most agree with.
- **d** Select two quotes of opposing views and research the person responsible for the statement. Suggest possible factors that may influence their position on freedom of speech.

Extend your understanding

1 Prepare a written report that discusses the extent to which our laws should uphold and protect the freedom of speech. Your report should include:

- **a** an explanation and evaluation of the main arguments supporting laws that protect free speech
- **b** a comparison between two opposing views (expressed in the quotes provided)
- **c** a conclusion expressing your personal view.

22.5 How Australia's democracy is shaped by international factors

As we have already seen, Australia's system of government was established by the British and as such has many features that are similar to the British system of government. For example, our system of government is broadly referred to as a **constitutional monarchy**, in that while we are self-governing and each state and federal parliament has the power to make law in accordance with its respective constitution, the Queen's representative remains the head of state.

Evolving democracy – recognition of Indigenous Australians

Another feature of our system of government inherited from the British is that it is a democracy, meaning the people determine how they will be governed and may exercise the power to directly govern themselves or elect representatives to govern on their behalf.

Unfortunately, when the British arrived in Australia to set up the first colonies, they simply imposed British laws and failed to respect and acknowledge the rights and existing laws of the Indigenous people. In fact, when the Australian Constitution was drafted in the late 1800s, it reflected the prevailing prejudices that existed against the Indigenous people at the time.

Source 1 The formal acknowledgement of Aboriginal and Torres Strait Islander peoples in the Australian Constitution is a symbolic step towards reconciliation.

In fact, the Constitution originally contained a clause that specifically prohibited the Commonwealth Parliament from making laws for Indigenous people. This meant that the federal parliament could not make uniform laws that applied to, and for the benefit of, Indigenous people. Indigenous people were also not counted in the national **census**, which symbolised a blatant disrespect for the people and their cultures.

It took until 1962 – 60 years after women were granted the right to vote – for all Indigenous people to be given the right to vote in Australia. It took until 1967 for a successful public vote – called a **referendum** – to change the Australian Constitution and allow the Commonwealth Parliament to make laws with regard to Indigenous people, and to include them in the national census.

Since the 1967 referendum, other significant events and changes in the law have taken place, albeit relatively slowly, to increase the rights of Aboriginal and Torres Strait Islander peoples and improve democracy in Australia. These include:

- the 1975 abolition of the White Australia policy and subsequent introduction of a policy of self-determination. Indigenous peoples were given the limited right to 'cultural and linguistic management of natural resources on Aboriginal land'.
- the 1987 'Royal Commission into Aboriginal deaths in custody' which highlighted the alarmingly high proportion, and death rate, of Indigenous people in Australian prisons
- the 1992 High Court of Australia Mabo judgement, which overturned the false legal perception that Australia was an 'empty land belonging to no one' (*terra nullius*) before British colonisation, and legally recognised Indigenous land rights
- the 2008 National Apology, by Labor Prime Minister Kevin Rudd, to Aboriginal and Torres Strait Islander peoples for the discriminatory and unjust policies of past governments, including policies that lead to the 'Stolen Generations'.

While these changes have aimed to improve the rights of Indigenous Australian peoples, much more needs to be done to improve the living standards in Australia's Indigenous communities and acknowledge the importance of Australia's Indigenous heritage. Perhaps the next major step in evolving our democracy will be to alter the Constitution to include a formal acknowledgement of Aboriginal and Torres Strait Islander peoples as the first Australians and original inhabitants of the land. This recognition would help continue the process of reconciliation between the Aboriginal peoples and the wider Australian community, and increase awareness and acknowledgement of Indigenous rights, cultures, languages and heritage.

Evolving democracy – Australia's involvement with the United Nations

Australia's approach towards the protection of basic human rights and freedoms has reflected the democratic principles that are set out in the United Nations Universal Declaration of Human Rights. These ultimately aim to uphold the fundamental right of all people to be treated with equality and dignity. Australia also aims to assist in the promotion and adoption of the UN human rights and standards in developing countries and, over the years, has made significant contributions to the promotion of democracy, peace and security throughout the world. In fact, Australia is the 12th largest financial contributor to the UN regular and peacekeeping budget, and has provided more than 65 000 personnel to United Nations and other multilateral peace and security operations, since 1947. Over most recent years, Australians have served in various UN peace and security operations including in the Middle East, Cyprus, Afghanistan and South Sudan.

Source 2 Australian soldiers have been involved in UN peacekeeping missions to help restore peace and stability to East Timor.

Check your learning 22.5

Remember and understand

1 Explain two legal changes that have taken place to improve the legal rights of Indigenous Australians.
2 What principle did the Mabo judgement overturn?

Apply and analyse

3 Prepare a timeline that shows the significant events and changes in the law that have taken place since the 1967 referendum to increase the rights of Aboriginal and Torres Strait Islander peoples.
4 Research one of the legal changes identified on your timeline. Discuss whether the change has improved the living standards and rights of Indigenous Australians.
5 Conduct research into the types of rights that Australia has agreed to uphold as a signatory to the UN Universal Declaration of Human Rights. Explain two ways that Australia has promoted the adoption of the UN human rights and standards by other countries.

Evaluate and create

6 Research and discuss the reasons many Australians support changing the Australian Constitution to formally recognise Aboriginal and Torres Strait Islander peoples. A great place to start is the Recognise website.
7 Research and prepare a 300-word report on Australia's involvement in one UN peacekeeping mission. Provide the date, level of commitment – in terms of forces, personnel sent and dollars – and reasons for Australia's involvement in the mission.

22B rich task

Australia's international democratic ranking

Various organisations gather statistics and publish information on global democracies in an attempt to determine which nations are the most and least democratic. The Democracy Index (which has been published by the Economist Intelligence Unit each year since 2006) is one of the most well-known surveys on global democracy.

Source 1 Norwegians enjoy being the most democratic country in the world, according to the Democracy Index.

The Democracy Index attempts to measure the level of democracy in 167 countries and rank them in terms of regional and global performance. In order to assess the degree of democracy in each country, the Index examines approximately 60 different indicators to assess five broad criteria including:

- the nation's electoral process
- basic civil rights and freedoms
- the manner in which the government operates
- the level of political participation
- the nation's overall political culture.

Source 2 The 10 most democratic countries in the world

1	Norway	9.93
2	Iceland	9.58
3	Sweden	9.45
4	New Zealand	9.26
5	Denmark	9.11
6	Switzerland	9.09
7	Canada	9.08
8	Finland	9.03
9	Australia	9.01
10	The Netherlands	8.92

Source: The Economist Intelligence Unit Limited 2015

After assessment has been made in each of these areas, each country is classified as being either a full democracy, a flawed democracy, a hybrid regime – that is, a mix of democracy and authoritarian rule – or an authoritarian regime. Then it is given a ranking from 1 to 10, with the most democratic countries being awarded 10.

According to the 2015 Democracy Index, Norway was the most democratic country in the world, with Australia ranked 9th. The United States ranked 20th, and the United Kingdom 16th. Some of the lowest ranked, or least democratic, countries in the world included North Korea, Chad, Central African Republic, Iran, Syria, Suadi Arabia, Turkmenistan, Laos and Libya.

Source 3 Our civil rights to broad freedom of speech are protected under Australian law.

Interestingly, only 12 per cent of the 167 countries examined in the Index were classified as having a full democracy, while approximately 35 per cent were categorised as having authoritarian regimes. This is where the nation is ruled by a central organisation or a government that is not accountable or responsible to the people, and often relies on mass acceptance by the people, rather than being popularly elected in free and fair elections.

skill**drill:** Reasoning and interpretation

Developing a range of questions to investigate a legal issue

One key skill that all students need to develop so they can become effective learners is the *ability to ask relevant and probing questions*. This enables us to discover new information and knowledge rather than just memorising information that has been provided to us. In fact, better students often seek to expand their knowledge and understanding of a topic or issue by asking thoughtful questions, or, as teachers like to say, by 'conducting an inquiry'.

While asking relevant and thoughtful questions is an excellent way to investigate and develop a deeper understanding of an issue or topic, it is not an easy task. It requires careful consideration and planning.

When developing a set of questions to help you explore an issue or topic, or undertake an inquiry, follow these steps:

Step 1 Ask yourself what you already know about the general topic.

- How can the topic be simplified (or divided into small parts)?
- What sort of information might you need to collect to help investigate the topic?
- Where might you be able to obtain this relevant and useful information? For example, what references, places and people might be able to provide you with information and answer your probing questions?

Step 2 Think about what might be the best way to examine the information and data that you collect. For example, you might examine the information in pairs, groups, or individually by reading, discussing, and preparing summary notes. If you work in a group you might use Google docs so each member can add information and comments throughout the research process.

Step 3 Decide on the best way to evaluate your information. For example, you might prepare a table of pros and cons, draw diagrams and/or create a flow chart or concept map.

Step 4 Prepare how you will present or display the information you have gathered from your inquiry questions.

Apply the skill

1 Conduct an inquiry into the extent to which Australia is a democracy. To do this you will need to:

- **a** design a set of questions that will enable you to examine the topic
- **b** undertake research to gather relevant information
- **c** prepare and present your response.

2 Use the steps listed above to help you design your inquiry questions. Consider posing some questions based on the key features of a democracy that have been outlined in this chapter. For example:

- How *free and fair* are Australian elections?
- Does the parliament really make laws that *represent* all Australians?
- Is the government really *accountable* to the people?
- What are some of the *major threats* to our democracy in Australia?

Extend your understanding

1 Create a poster or presentation that outlines and examines one or more key features of our Australian parliamentary system. For example, you may wish to use Prezi to make a class presentation, Popplet to prepare a mind map poster, Voki to create a recording with customised speaking characters, or Glogster to create a poster.

22.6 Safeguards to Australia's democratic society

In order to have a strong society that is able to meet challenges, Australia's system of government is based upon core beliefs and attitudes that are respected and valued by most people in our democratic society. For example, our democracy is based on the prevailing beliefs that the people, in free and fair elections, must elect the government and that the government must promote tolerance, cooperation and the freedom of the people by upholding basic human rights.

The people elect the government

Each of the state, territory and federal parliaments throughout Australia is elected by the people to make laws on their behalf. Compulsory voting aims to make sure that our governments have the support of the majority of the people and not just those who bother to vote.

Source 1 Over 15 million Australians cast their vote at one of 8500 polling places in the 2016 federal election.

Elections are free and fair

Independent state and federal electoral commissions have the role of ensuring that all state, territory and federal elections held throughout Australia are free, fair and conducted in accordance with state and Commonwealth law. For example, the Australian Electoral Commission (AEC) is responsible for managing federal elections and maintaining the Commonwealth electoral roll, which lists the names and addresses of all eligible citizens who have enrolled to vote. The AEC must confirm that approximately 16 million people throughout Australia are able to cast their vote in secret. This can be at venues or polling booths on election day, or through postal votes for those who cannot attend a polling booth on the day of the election. The AEC must also check that votes are honestly counted.

In Australia all elections allow citizens to cast their vote in secret to reduce the risk of voters being intimidated or forced into voting for a person or party against their will. Each citizen may only vote once and every vote has the same value, regardless of whose it is.

Source 2 Malcolm and Lucy Turnbull voting in the 2016 federal election. Malcolm Turnbull was re-elected as Prime Minister.

Governments uphold basic human rights

An underlying feature of democracy in Australia is that our parliaments and governments make and enforce laws that protect basic human rights, so that all citizens are treated with dignity, equality and mutual respect. This aims to promote social cohesion. Some basic human rights upheld by Australian laws include the right to:

- not be discriminated against on the basis of race, nationality, religion, sex, age, marital status, impairment, or disability
- broad freedom of speech, assembly and protest, which enables citizens to debate political issues and openly express their views without fear of being punished
- a fair trial and freedom from torture
- life, liberty and security of person
- working and living in a healthy environment
- basic health care and education.

Governments also aim to provide structures (including courts, tribunals, and government departments) and services (including hospitals, schools, universities, prisons, the defence and police forces) and social welfare benefits such as aged pensions and unemployment benefits. This is so that Australians can live together in a peaceful, orderly, cooperative and tolerant manner.

Source 3 Some of the demonstrations between Reclaim Australia and anti-racism groups held throughout Australia have required police intervention.

Check your learning 22.6

Remember and understand

1 Suggest three structures or services provided by Australian governments that aim to help people live together in an orderly, tolerant, and peaceful manner.
2 What is the aim of having a system where voting is compulsory?
3 List at least six basic human rights that are upheld by Australian law.

Apply and analyse

4 Collect three images that express aspects of Australia's democracy.
5 What do you think would eventuate if core beliefs and attitudes were not protected? Give two examples of possible outcomes.

Evaluate and create

6 Imagine you were employed by the federal government to improve social cohesion and unity within Australia.
   a Explain three programs, laws or initiatives you would implement. Give reasons for your suggestions.
   b Create an advertisement (either print or audio-visual) to promote one of your proposals.

22.7 Threats to Australia's democratic society

While Australia is generally a cohesive and united nation built on democratic principles, various factors including media bias, our ageing population and the existence of groups with vested interests could potentially threaten our democratic and harmonious way of life.

Media bias and voting

A democratic system relies on individuals being able to make informed decisions about which political party (or independent candidate) would make laws that best reflect their views and values. When making such decisions, most voters gain their information from the media. It is therefore essential that the media present impartial and unbiased information, especially in the lead-up to an election. But just how impartial is the Australian media and to what extent does the content in the mainstream media reflect the political interests of their owners and the senior editors rather than an independent and unbiased view?

Source 1 Print media is often criticised for showing political bias.

In Australia the two biggest and most influential media organisations, News Limited and Fairfax, and other media organisations such as the ABC, are often criticised for showing political bias. Given that News Limited and Fairfax account for approximately 85 per cent of all newspaper sales in Australia, these organisations certainly have the ability to influence a wide audience.

It is important to remember that the media is not impartial. There are digital-only media outlets as well as print media that have perceived bias or political leanings. For example, Crikey.com is often viewed as being a 'left-leaning' organisation, meaning they have less conservative views. Different media outlets also have their own way of presenting events and issues of the day. It can be an interesting exercise to scan different online news services or flick across TV news channels (on free-to-air and/or pay TV) to see how the same issue is being presented in a single day by different sources. You may notice subtle or more obvious bias across different news organisations as you look around.

Source 2 A summary of some major Australian media organisations and their perceived political biases.

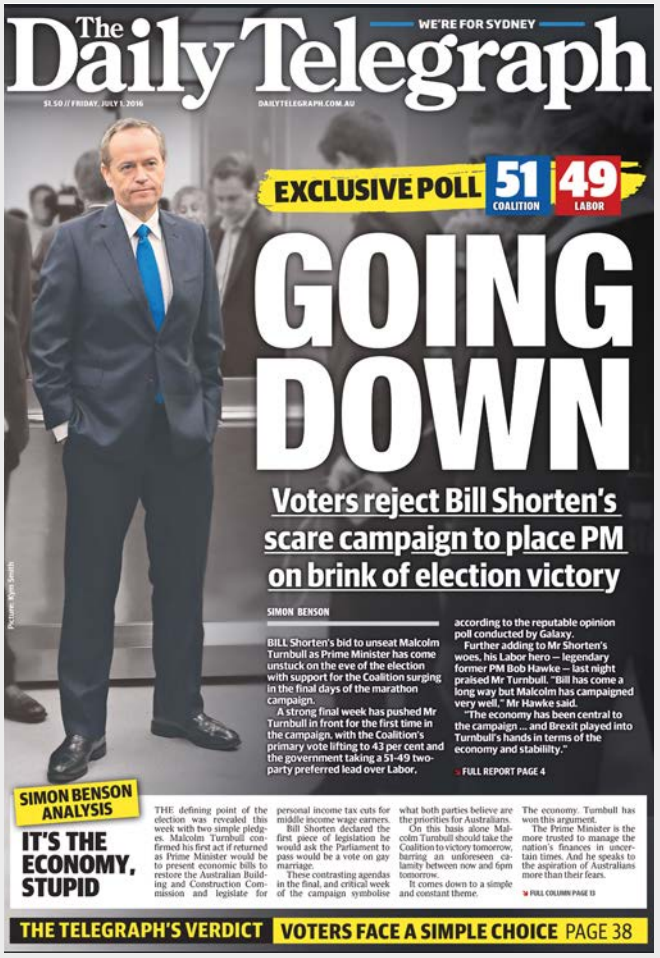

Print/digital media organisation	Publications	Perceived bias
News Corp Australia	*The Australian* *Daily Telegraph* (Sydney) *The Herald Sun* (Melbourne)	Generally recognised as supporting the Liberal–National Coalition
Fairfax Media	*The Age* (Melbourne) *The Sydney Morning Herald*	Often viewed as supporting the Labor Party
Australian Broadcasting Commission (ABC)	*ABC News* *Lateline*	Often viewed as supporting the Labor Party and the Australian Greens

casestudy

Does the media decide who wins an election?

Over the years, various media organisations have been accused of showing particular bias for and against certain political parties during federal election campaigns. For example, during the 2016 federal election campaign, News Corp Australia was accused of biased anti-Labor reporting, aimed at ensuring the Liberal–National government of the day, under the leadership of Prime Minister Malcolm Turnbull, was re-elected. News Corp Australia is mainly owned by News Limited, a media organisation managed and directed by Rupert Murdoch. News Limited is Australia's largest print media organisation selling approximately 60 per cent of the nation's daily newspapers – or approximately 17 million newspapers per week. With such a large readership it certainly has a great ability to influence a wide audience and potentially sway many voters.

It has long been suggested that Mr Murdoch influences anti-Labor reporting in News Corp newspapers to further his business interests. For example, it is alleged that Mr Murdoch considers the Labor Party's commitment to a National Broadband Network a threat to Foxtel, another News Limited-owned company. Examples of the negative media coverage in New Corp's publications included a front-page cover of the Daily Telegraph displaying a cartoon of the Leader of the Australian Labor Party, Bill Shorten, being likened to 'Pinocchio' for allegedly telling deliberate lies to gain power. The newspaper even printed an article with a headline implying that Mr Shorten had 'man boobs' that could damage his image and hinder his chances of becoming the Prime Minister.

Source 3 The headline on the front page of the *Daily Telegraph* the day before election day in 2016.

Source 4 The headline on the front page of the *Herald Sun* the day after the 2016 election. At this point it was unclear if the Liberal–Nationals had won. The result wasn't made official until 10 July.

An ageing society

Because families are having fewer children and life expectancy is increasing, Australia is becoming an ageing nation. This will have political consequences that could affect our democracy. For example, in the early 1970s only approximately 8 per cent of Australia's population was aged over 65 years. By 2012 this amount had increased to 13 per cent and by 2061 it is predicted to rise to 22 per cent. As more voters enter the over-65 age group, the elderly will have more political power and be able to place greater pressure on governments. Presumably, the elderly would seek to implement policies and laws that focus on their needs, including pensions, and health care for the elderly. This could sway policy-making away from the priorities of younger voters, potentially unbalancing and threatening social cohesion.

Influence of those with vested interests

Individuals and organisations with vested interests may also threaten democracy. Over recent years, therehas been an increasing concern that a small number of very wealthy individuals and large corporations have been able to have a disproportionate amount of influence over government policy in Australia by making large donations to political parties who benefit their interests. For example, prior to the 2016 federal election, both the Liberal and Labor parties received large donations from wealthy individuals who owned businesses that might benefit from the election of either party. The Liberals received approximately $200 000 in donations from Charles Bass, the co-founder of a major mining company, Aquila Resources, while the ALP received nearly $200 000 from a large union group, that supports workers' rights, called United Voice. Other companies that are often amongst the largest donors to both political parties include the Australian Hotels Association, who have a vested interest in many areas of the law including liquor licencing and gaming machines, and Phillip Morris, a tobacco company who fought against the plain packaging of tobacco laws.

Source 5 On International Women's Day in 2016, a group of childcare workers and members of United Voice chained themselves to the entrance of Primer Minister Malcom Turnbull's office demanding equal pay for women.

Source 6 The Australian Hotels Association has a vested interest in lobbying both state and federal governments on areas of the law including liquor licencing and workers' rights in the industry.

Check your learning 22.7

Remember and understand

1 What are two threats to Australia's democratic society?

2 How can someone with a vested interest influence political outcomes?

3 Explain how an ageing society could be a potential threat to democracy.

Apply and analyse

4 Consider Sources 1, 3 and 4.
- **a** What do you think each image is saying about Australian society?
- **b** Briefly outline what you consider to be the three biggest threats to social cohesion and unity in Australia today. Suggest ways these threats could be minimised.
- **c** Collect three images that express what you consider to be the greatest strengths of, and threats to, Australian society.

5 Examine the headlines that appeared in a leading newspaper prior to the 2016 federal election (Sources 3 and 4).
- **a** What do you think the headlines are saying to readers?
- **b** Explain whether or not you believe newspapers have a responsibility to present facts and information in an unbiased manner.
- **c** Do you think bias presentation of information in the media could potentially influence Australia's democracy? Give reasons for your response.

6 Decide whether the following policies or law changes might potentially strengthen or threaten our democratic and cohesive society. Give reasons for your view.
- **a** bringing back the death penalty as a punishment for very serious crimes like mass murder and terrorism
- **b** banning the building of an Islamic mosque in a country town
- **c** continuing to severely restrict the number of asylum seekers allowed into Australia
- **d** abolishing compulsory voting
- **e** banning political parties from advertising on television and radio during election campaigns
- **f** teaching about domestic violence in primary schools

Evaluate and create

7 Prepare a poster that identifies factors that strengthen our democratic and cohesive society and factors that threaten our democratic and cohesive society.

8 Research one country that does not have a democratic system. Evaluate the ways that this country's citizens experience their system, and compare it with Australia's democratic system. Prepare your findings in a PowerPoint to present to the class.

22C rich task

Maintaining Australia's democratic and cohesive society

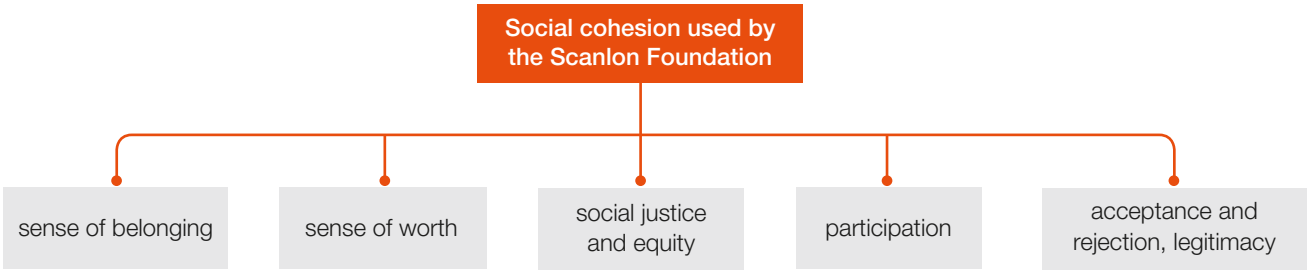

Many different factors influence **social cohesion** in Australia. For example, when the Scanlon Foundation, an organisation that aims to enhance social cohesion in Australia, conducts research, it examines five key indicators, including whether or not Australians:

- feel a *sense of belonging and pride* in being Australian
- have a *sense that social justice and equity* exists in our country
- have a *willingness to participate in voluntary work and the political process* (including have a right and willingness to vote, and protest for law changes)
- feel a *sense of legitimacy* – that is, feel accepted and not subject to discrimination
- feel a *sense of self-worth* or have a general feeling that they are happy and satisfied with life and have positive expectations about the future.

Source 2 There are five key indicators for social cohesion in Australia, including having a sense of legitimacy and not being subject to discrimination.

Over recent years, research undertaken by the Scanlon Foundation has indicated that while Australia is a relatively tolerant society, our sense of social cohesion may have slightly diminished. For example, the foundation's 2013 national survey revealed that 16 per cent of respondents felt they had experienced discrimination on the basis of their race, ethnic origin or religion compared to only 9 per cent in 2012. Similarly, there was a decline in the level of trust respondents had in the government. Only 27 per cent indicated they trusted the federal government 'most of the time' in 2013, compared to 48 per cent in 2009. Views on immigration had also changed, with 42 per cent of respondents believing that immigration levels were 'too high', up from 37 per cent in 2012. There was also a disturbing increase in negative sentiment against asylum seekers, with approximately 80 per cent of respondents believing that asylum seekers arriving by boat should not be eligible for permanent settlement. This perhaps reflects the sentiment behind the Liberal–National coalition election campaign strategy which included a promise to 'stop the boats'.

Creating an online survey

Surveys are an effective way to gather information and data so it may be more easily understood and evaluated. Many online tools and programs exist to allow for the easy generation and analysis of surveys, including Google docs, Excel, SurveyMonkey and Survey Builder.

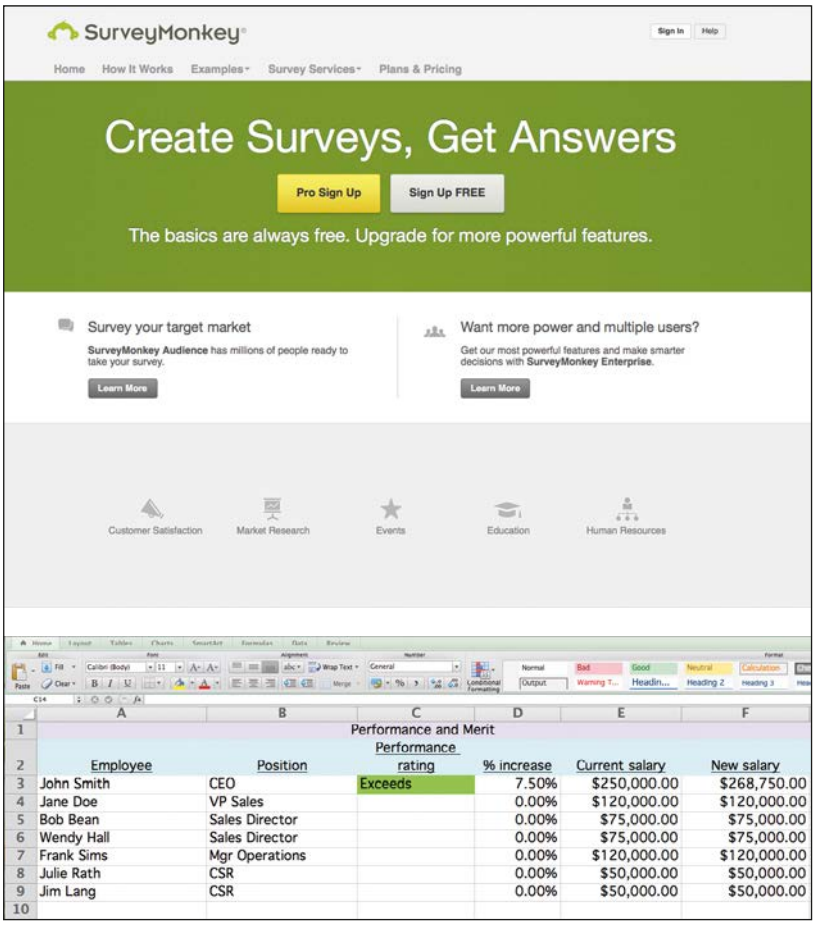

When designing an online survey you should follow these basic steps:

Step 1 Determine the purpose or aim of your survey. Ask yourself what information you wish to collect.

Step 2 Design appropriate questions. Ask yourself what you already know about the general topic.

- Simplify the topic by breaking it down into small parts.
- Think about the sort of information you might need to collect to help investigate the topic.
- Identify where you might be able to obtain this information.

Step 3 Consider how long you would like your survey to be. People will be reluctant to participate if the survey is too long, confusing or takes too long to complete.

	A	B	C	D	E	F
1	Performance and Merit					
2	Employee	Position	Performance rating	% increase	Current salary	New salary
3	John Smith	CEO	Exceeds	7.50%	$250,000.00	$268,750.00
4	Jane Doe	VP Sales		0.00%	$120,000.00	$120,000.00
5	Bob Bean	Sales Director		0.00%	$75,000.00	$75,000.00
6	Wendy Hall	Sales Director		0.00%	$75,000.00	$75,000.00
7	Frank Sims	Mgr Operations		0.00%	$120,000.00	$120,000.00
8	Julie Rath	CSR		0.00%	$50,000.00	$50,000.00
9	Jim Lang	CSR		0.00%	$50,000.00	$50,000.00
10						

Source 5 SurveyMonkey is a useful online tool to build and analyse surveys.

Step 4 Choose which online survey tool you will use. Go to the websites and follow the steps each outlines to get started. For example, with SurveyMonkey you will need to enter your details to set up a free account to get started.

Step 5 Select what kinds of questions you will ask. SurveyMonkey has more than 15 types of questions you can use, including multiple choice and True or False options.

To do this you should consider the range of responses you might expect to receive and provide appropriate options. For example, you may elect to use:

- 'yes or no' questions
- 'true or false' statements
- rating scale – such as, 'on a scale of 1 to 5 (with 1 being most likely and 5 being least likely) answer the following questions
- comment box for more personalised responses.

Step 6 Consider what personal details and information you would like your respondents to provide or whether you would prefer to allow them to remain anonymous. Which of these forms will encourage high participation and honest responses?

Step 7 Consider how many completed surveys you will need to form an accurate assessment. You will need to get a big enough sample size and a mixture of ages, genders, and cultural backgrounds in order to give results that represent the general population.

Step 8 You will need to set up a mailing list to email out your surveys. Your chosen online survey platform will help you do this.

Step 9 Prepare a chart or graph to help analyse your responses. Many online survey programs will compile this information for you.

Apply the skill

1 Source 3 presents results from a survey asking recipients 'What do you think is the most important problem facing Australia today?'

a Follow the steps above to design and conduct your own online survey that will help you to determine which concerns or issues currently threaten social cohesion in your community.

b Send the survey out to those on the mailing list you have created. Remember to keep your survey relatively short so people will be more likely to complete it.

c Prepare a summary of your findings, including a list of the top five problems or issues that concerned your respondents. Suggest possible reasons for these concerns.

d Compare your survey results with the table provided in Source 3 and identify any similarities and differences in your findings. Suggest some reasons for any differences.

e Explain any strengths and/or limitations associated with your survey.

Extend your understanding

1 Conduct some extra research on social cohesion. Explain what is meant by social cohesion in a sentence or two. Then, identify the three most significant factors that you believe have the potential to detract from Australia's sense of social cohesion. Jot down your ideas and then discuss your views with a partner or the class.

Source 6 Springvale in south-eastern Melbourne is home to a diverse range of Asian cultures.

The Australian Constitution and the High Court

The Australian **Constitution** is a document that outlines how Australia is to be governed. It came into operation on 1 January 1901. In simple terms, the Constitution can be thought of as a 'rule book' that sets out how our nation is to be run or managed.

The Constitution created the Commonwealth Parliament and outlined the areas in which it can make law. The Constitution also protects some basic rights of the Australian people and empowers the High Court of Australia to interpret and resolve **disputes** involving the meaning of the Australian Constitution itself.

23A

How does the Australian Constitution work?

1 Why do you think it might be good that our country has a 'rule book' or Constitution? What would happen if we didn't have one?

2 Do you know any of the basic rights or features outlined in the Constitution?

3 Have you ever visited our Commonwealth Parliament, or have you seen it on TV? What were your impressions?

23B

What role does the High Court of Australia play in interpreting the Constitution?

1 What do you know about the High Court of Australia? Do you know where it is located or what it looks like?

2 What do you think the High Court does? Why is it called the 'High Court'?

chapter 23

Source 1 The High Court of Australia was established by the Australian Constitution in 1901 and is the highest court in the Australian court hierarchy.

23.1 The Australian Constitution – an introduction

A Constitution is a document that creates the basic structure and powers of an organisation, state or nation.

Why have a Constitution?

Many organisations, including schools, local sporting clubs, community groups and volunteer organisations (like Rotary, and RSL clubs) have a constitution that outlines the aims of the organisation and the rules regarding how it will be governed and operate. Australia also has a national or Commonwealth Constitution that outlines how our country is to be governed. Indeed, the Australian Constitution, which came into operation on 1 January 1901, is the document that created and outlined the law-making powers of the Commonwealth Parliament and created the High Court of Australia.

Reasons for establishing Australia's Constitution

Prior to the Australian Constitution being established in 1901, Australia consisted of six separate British colonies – Victoria, New South Wales, Queensland, Tasmania, South Australia and Western Australia. Each of these had the power to make laws for its own residents, while also being under the authority of the British parliament.

While this system of government worked when our country was relatively small, as the population grew, problems started to arise from the lack of consistent laws between the colonies. By the late 1800s support grew for the idea of Australia becoming a **federation** where each of the colonies would become the states of Australia and be united by one central or federal parliament. Under this system, the new federal parliament would be given the power to make certain laws in areas of national interest that applied to all Australians. Reasons for federation included:

- *to increase economic growth*. Many supporters of federation believed the economy could grow more rapidly if the colonies had consistent trade, banking and commercial laws and common infrastructure. By the end of the 19th century the separate colonies had imposed various taxes (or tariffs) on one another that limited inter-colony trade and the existence of three separate railway systems, each with different gauge railway tracks, made trade and travel difficult.
- *to improve national defence*. By the late 1800s, there were fears that the separate colonies, each of which had its own individual 'militia' (or army), would not be able to defend themselves from potential European 'invasion' and would benefit from having

Source 1 Delegates from each of the colonies met together in 1890 at a constitutional conference to discuss Federation.

one uniform defence force that was capable of protecting the entire country.

- *to enhance the national identity*. By the late 1800s, with more than three-quarters of the population being born in Australia, many citizens felt an increased sense of national pride, recognising the Australian, rather than British, culture and way of life. The desire to minimise the arrival of non-British immigrants and the lack of a common immigration policy also increased support for federation.

In 1891 the first of a series of meetings, known as **constitutional conventions**, were held, where representatives from each colony considered a draft Commonwealth Constitution that would essentially create and outline the law-making powers of the new central Commonwealth Parliament. After the draft Constitution was approved by the representatives of the colonies, the voters in each colony, and the British Parliament, it came into operation. On Federation Day, 1 January 1901, Australia became a nation.

The purpose of the Australian Constitution

The Australian Constitution established Australia as an independent nation and set out the rules by which it would be governed. More precisely, the Constitution:

- established a federal system of government in Australia where the nation consisted of six states, each with the power to make laws for the residents of that state, and one central or federal parliament, with the power to make laws that apply to the entire country
- created and outlined the law-making powers of the Commonwealth Parliament
- outlined the structure of the Commonwealth Parliament, stating that it must consist of two houses and the Crown
- created the High Court of Australia to resolve disputes over the meaning of the Constitution
- outlined and protected some basic rights of the Australian people by placing restrictions on the law-making powers of the Commonwealth and state parliaments. For example, the Constitution prevents the Commonwealth Parliament from making law that imposes or restricts religious practices.
- ensured that the Australian parliamentary system be based upon various parliamentary principles such as the principle of representative and responsible government and the **separation of powers** (examined in Chapter 22).

Check your learning 23.1

Remember and understand

1 What is a Constitution?
2 Explain three reasons the colonies throughout Australia agreed to become a united federal nation on 1 January 1901.
3 Explain three main purposes of the Australian Constitution.

Apply and analyse

4 Explain why the Australian Commonwealth Parliament is often referred to as federal parliament.
5 State three laws that are made by the Commonwealth Parliament. Explain the benefits of having these laws made by the Commonwealth Parliament.

Evaluate and create

6 Draw a cartoon or image that demonstrates the main reasons that the colonies supported federation.
7 The people listed below had significant involvement in the creation of Australia's Constitution. Conduct some Internet research to discover how these people influenced the Constitution and any other important roles they held. Present your findings in a multimedia format such as PowerPoint, Prezi, or Publisher Brochure.
   - Sir Henry Parkes
   - Edmund Barton
   - Andrew Inglis Clark
   - Samuel Griffith
   - Sir Richard Baker
   - Sir Robert Randolph
   - Garran John Quick

Source 2 Sir Edmund Barton attended constitutional conventions and became Australia's first prime minister.

23.2 How the Australian Constitution works

The Australian Constitution was carefully drafted to provide a stable and long-lasting system of government for Australia. Its function was also to define the law-making powers of the newly established Commonwealth Parliament.

The law-making powers of the Commonwealth Parliament

One of the main roles of the Australian Constitution was to create the Commonwealth Parliament and outline its law-making powers. This means the Commonwealth Parliament can only make laws in the areas specifically stated in the Constitution as belonging to the Commonwealth Parliament. These are referred to as specific areas of law-making power. Most of the **specific powers** of the Commonwealth Parliament are listed in Section 51 of the Constitution and include the power to make laws on:

- marriage and divorce
- currency (i.e. bank notes and coins)
- taxation (e.g. the goods and services tax)
- social welfare benefits (e.g. the aged pension and unemployment benefits)
- trade and commerce (e.g. with other countries and between the states)
- defence (e.g. naval and military forces)
- customs and excise (i.e. taxes on the production or export of goods).

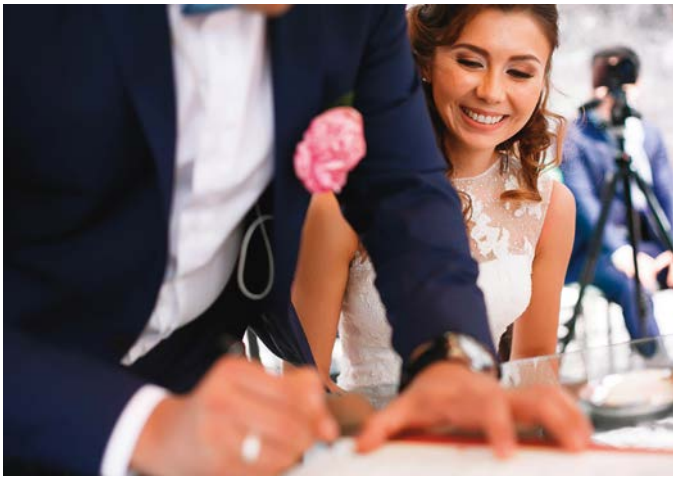

Any areas of law-making power that are *not* stated in the Constitution as specifically belonging to the Commonwealth Parliament belong solely to the state parliaments. These are referred to as **residual powers**. For example, the Constitution does not mention or give the Commonwealth the power to make laws in many areas including:

- adoption, surrogacy or IVF technology (which did not exist in 1901)
- childcare and education
- public transport
- water and electricity supply.

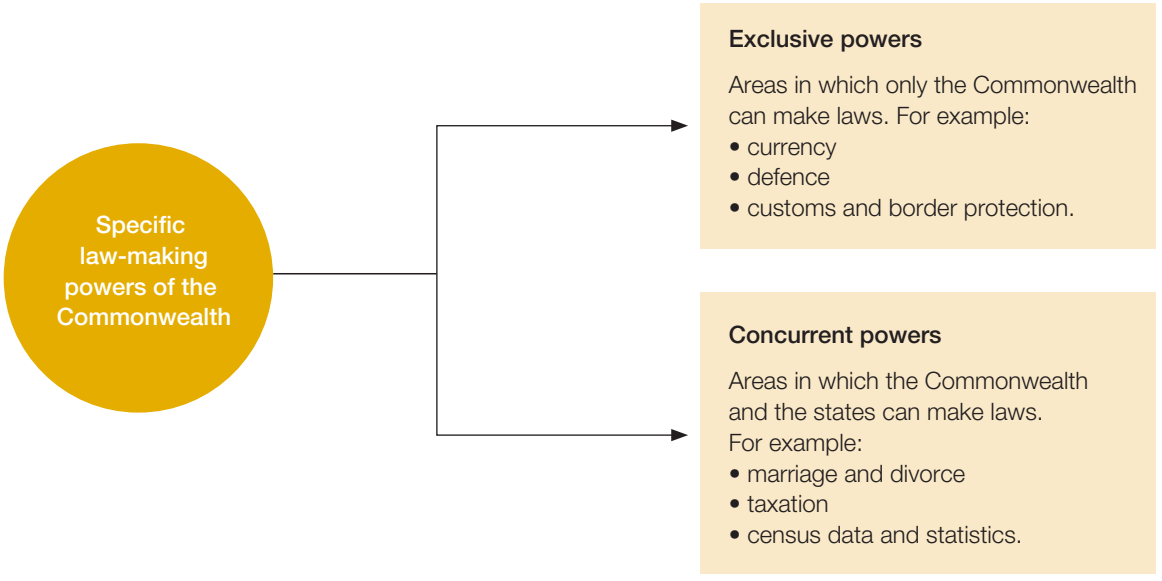

As such, the state parliaments have the sole power to make laws in these areas.

Source 1 Some areas in which the Commonwealth Parliament can make laws include matters related to defence, mining, and marriage.

Source 2 The specific law-making powers of the Commonwealth Parliament

Types of specific law-making powers

The specific law-making powers of the Commonwealth Parliament that are outlined in the Constitution, can be divided into two types – exclusive or concurrent powers.

Exclusive powers

Exclusive powers refer to those specific areas of law-making power that *only* the Commonwealth Parliament can make law in. For example, only the Commonwealth is able to make laws in the areas of currency, defence, and customs and excise duties.

Concurrent powers

Concurrent powers are those specific areas of law-making power that are shared by both the Commonwealth and state parliaments. For example, both the Commonwealth and the state parliaments can make laws in the areas of taxation, marriage, and census and statistics. If the state and Commonwealth Parliaments pass laws in concurrent or shared areas of power that conflict, the Commonwealth's law will prevail over, or override, the state law.

Changing the Constitution

The Australian Constitution took many years to draft and was carefully framed to provide a stable and long lasting system of government for Australia. One of the key features of our Constitution is that it cannot be easily altered and cannot be altered by the government of the day without the approval of the Australian people. This aims to reduce the risk of a federal government misusing its power and changing the Constitution to promote its own interests.

The only way the wording of the Australian Constitution can be altered is via a process called a **referendum**. The referendum process is outlined in the Constitution itself (in section 128) and involves a compulsory public vote.

The referendum process

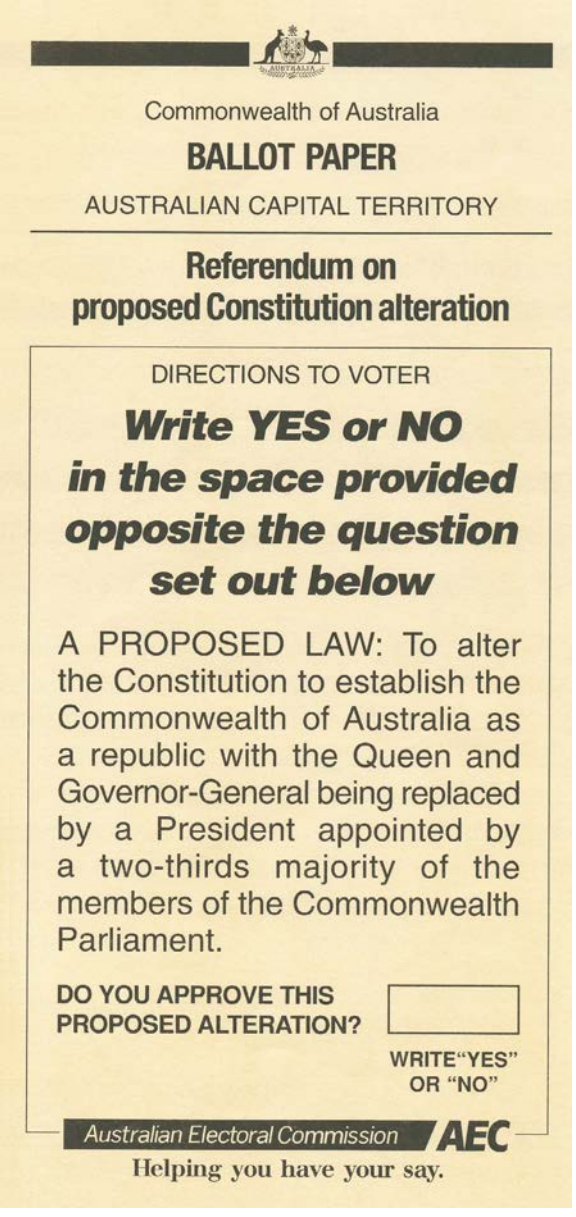

A proposed change to the wording of the Constitution must be drafted and generally approved by a majority of members in both houses of Commonwealth Parliament. Between two and six months later, the proposed change must be put to the Australian people in a compulsory public vote and approved by a **double majority** of eligible Australian voters. This means the proposal must be approved by:

- a majority of voters throughout the whole of Australia, including the territories
- a majority of voters in at least four out of six states.

Once approved by a double majority of Australian voters, the proposed change must be given **royal assent** – that is, final approval by the Governor-General on behalf of the Crown, or Queen.

Strengths of the referendum process

- The referendum process requires the support of the Australian public, which prevents the federal government from changing the Constitution to benefit its own agenda.
- A compulsory public vote means the Constitution is only changed if it has great support from the entire community rather than just a small number of people who choose to vote.
- The requirement that a referendum must be passed by a double majority of voters makes sure that any change to the Constitution has a large amount of public support, including support from most of the states.

Commonwealth of Australia

BALLOT PAPER

AUSTRALIAN CAPITAL TERRITORY

Referendum on proposed Constitution alteration

DIRECTIONS TO VOTER

Write YES or NO in the space provided opposite the question set out below

A PROPOSED LAW: To alter the Constitution to establish the Commonwealth of Australia as a republic with the Queen and Governor-General being replaced by a President appointed by a two-thirds majority of the members of the Commonwealth Parliament.

DO YOU APPROVE THIS PROPOSED ALTERATION? ☐

WRITE "YES" OR "NO"

Australian Electoral Commission **AEC**

Helping you have your say.

casestudy

Why was the 1967 referendum so important?

Australia's most successful referendum took place in 1967, when over 90 per cent of voters agreed that the Constitution should be changed to give the Commonwealth Parliament the power to make laws for all Australians including 'Aboriginal people', who had previously been exempted from the Constitution. This change was extremely important because it reduced the possibility of discrimination against Aboriginal peoples. The referendum also allowed the Constitution to be changed so that Aboriginal people could be counted when determining the size of the population.

The success of the referendum also had symbolic significance, as it demonstrated the willingness of many non-Indigenous Australians to accept and recognise the rights of Indigenous Australians.

Today, the date of the historic 1967 referendum (27 May) marks the commencement of National Reconciliation Week – when the Australian community recognises and celebrates the Aboriginal and Torres Strait Islander peoples, including acknowledging and promoting the understanding of past injustices suffered by these Indigenous Australians.

Source 4 A poster urging Australians to vote 'yes' to the 1967 referendum

Problems with the referendum process

Since Federation, 44 proposals to change the Constitution have been put to the Australian voters at referendums, but only eight have been successful. Reasons referendums tend to fail include:

- Voters may vote against a proposal to change the Constitution if they do not understand the proposal or are disinterested.
- Proposals for change are unlikely to succeed if both major political parties do not support the change, because many people vote in accordance with the views of their chosen political party.
- The double majority provision is very difficult to achieve, particularly the requirement for the residents of at least four states to support the change.
- For convenience and to reduce costs, referendums are often held at the same time as a federal election and people are more concerned with voting for the government rather than the proposal for constitutional change.

Check your learning 23.2

Remember and understand

1 Distinguish between specific and residual powers and list five examples of each type of power.

2 What is an exclusive power?

Apply and analyse

3 Suggest one reason why some specific areas of law-making power might have been designated as being exclusive powers of the Commonwealth Parliament. Provide two examples to support your response.

4 Explain two strengths and two weaknesses of changing the Constitution via a referendum.

5 Below is a selection of proposals for changing the Constitution that have been put to Australian voters. Consider each and decide whether you would accept or reject each proposal. Give reasons for your choice.

Proposals for changing the Constitution:

- The 1999 proposal to make Australia a republic, by altering the Constitution to replace the Queen's representative as a part of the Commonwealth Parliament with a President.
- The 1988 proposal to change the maximum terms for members of the Commonwealth Parliament (from three years for the House of Representative and six years for the Senate) to four years.
- The 1977 proposal to change the retirement of judges for all federal courts to 70 years.
- The 1988 proposal to include a section in the Constitution requiring that all parliamentary elections in Australia be fair and democratic.

Evaluate and create

6 Using a multimedia format, prepare a flow chart that outlines the process for changing the Constitution via a referendum.

7 Conduct some research at the Australian Electoral Commission website and provide answers to the following questions:

- **a** Who is required to vote in a compulsory referendum?
- **b** What were the proposals and result of the last referendum held in Australia in 1999?
- **c** What was the cost of the referendum held in Australia in 1999?
- **d** What was the date, proposal and year of the first referendum held after Federation?
- **e** Which three referendums have been passed by the largest majority of Australian voters?
- **f** Which three referendums have failed by the greatest percentage of Australian voters?

8 Briefly explain how the Australian Constitution can be changed via referendum and provide one example of a successful referendum and one example of an unsuccessful referendum. You may wish to download the booklet *Closer Look: The Australian Constitution* from the Parliament Education Office website, which provides an excellent overview of the Australian Constitution, including examples of referendums and relevant High Court Cases.

23A rich task

Constitutional recognition of Indigenous Australians

A **preamble** is a short introduction, commonly provided at the beginning of an Act of Parliament (or a Constitution), which explains its broad aims and objectives. Over recent years, support has grown in favour of changing the preamble in Australia's Constitution to include a statement that recognises the Aboriginal and Torres Strait Islander peoples as being the first occupiers of Australia. It is hoped that making such a change to the Constitution will formally recognise and acknowledge the unique Aboriginal and Torres Strait Islander cultures, and the significant way in which these cultures have enriched our national identity. It is also hoped it would promote an awareness and respect for Aboriginal and Torres Strait Islander peoples and Indigenous cultures, languages, heritage and rights.

Source 1 Red Bean Republic encourages young people to support the constitutional recognition of Aboriginal and Torres Strait Islander peoples.

Source 2 Adam Goodes, Australian of the Year 2014, and fellow Australian Football League champion, Michael O'Loughlin, show their support of Constitutional recognition of Indigenous Australians via the Recognise Organisation.

skill**drill:** Reasoning and interpretation

Gathering and assessing the reliability of information

Having the ability to gather and sort relevant information and ideas from a range of sources is an important skill. It enhances your ability to make an informed decision, especially considering that not all information is accurate and reliable. For example, while the Internet is a valuable source of information, you must remember that information found there may be factually incorrect. It may also have been prepared in a biased manner by an individual or group who wishes to promote one particular view or perspective.

When you are conducting research into an issue or topic and gathering your information it is vital that you carefully check its reliability and authenticity. The following steps can help you assess the reliability of information you gather.

Step 1 Gather your information from a range of sources. These could include a variety of different websites, newspapers, magazines, local papers and documents.

Step 2 Decide if the information is factual or opinion-based.

Step 3 Identify if the information has been prepared by a recognised authority – such as a government, university or expert panel – that has specialist knowledge in the area being examined. Websites that have an .edu suffix are often for universities or schools, so the information should be reliable.

Step 4 Find out if the individual or organisation that prepared the information is independent and impartial. Alternatively, find out if they have a special interest in, or stand to benefit from, presenting a one-sided view.

Step 5 Check if the information you have gathered can be supported or verified by another source.

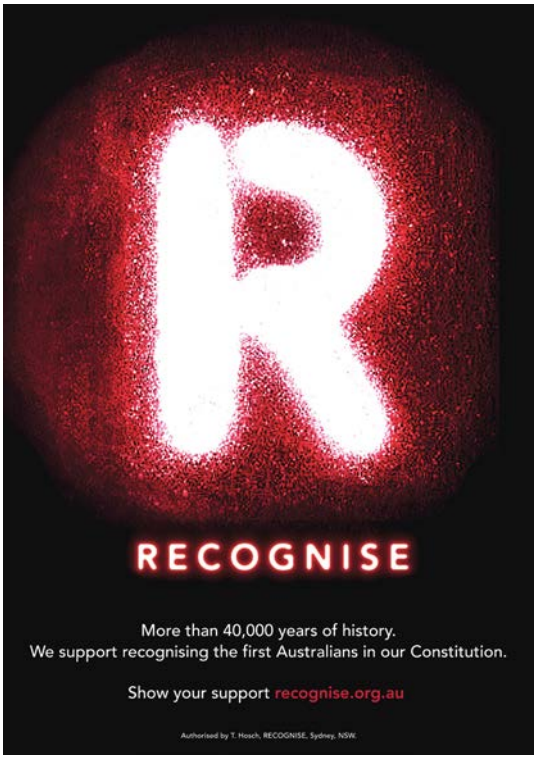

If you are not sure that your information has been created by a dependable source, you should try to gather additional information from an alternative source to verify its authenticity. As a final tip, you should also check the date on which your information was prepared to make sure it is current and relevant.

Apply the skill

1 Conduct an Internet search to find relevant and reliable information about the campaign to change the preamble in the Australian Constitution to include recognition of the Aboriginal and Torres Strait Islander peoples. Follow the steps in the skilldrill to help you assess the reliability of the information you gather.

2 Use your information to prepare a written report on the campaign to recognise Aboriginal and Torres Strait Islander peoples in the Australian Constitution. Your report should include:

- an introduction that explains the general proposal
- an explanation of the role of two groups or organisations that support the constitutional recognition, such as Recognise and ANTaR.
- a short discussion about whether or not these organisations have an independent and impartial view
- an explanation of arguments against or difficulties associated with changing the Constitution
- a short conclusion that explains your own personal view on the topic
- a list of all the sources (including URLs) from which you obtained your evidence, and a brief comment regarding the reliability and accuracy of the information gathered from each source.

Source 3 Recognise is an organisation that develops awareness of the need to recognise Aboriginal and Torres Strait Islander peoples in our Constitution.

Extend your understanding

1 Using the Internet, research and download a copy of the current preamble to the Australian Constitution. After reading it, write a new preamble (maximum of 500 words) for the Constitution. When preparing your preamble consider:

- what parts of the existing preamble you would like to keep or discard
- the key values and principles that you might like to acknowledge in your preamble, including whether or not you would like to specifically recognise the Aboriginal and Torres Strait Islander peoples.

23.3 The Australian Constitution and the High Court

The High Court, located in Canberra, is the highest in Australia's court hierarchy. It is the only court that has the power to interpret the Constitution.

Interpreting the Constitution

The High Court is needed to interpret the Constitution. In addition to creating and outlining the law-making powers of the Commonwealth Parliament and providing a process for changing the Constitution, the Australian Constitution (in section 71) established the High Court of Australia to hear and resolve disputes over the meaning of the Constitution. In fact, the High Court of Australia is the only court in Australia with the power to interpret the meaning of the words and phrases in the Australian Constitution.

Keeping the Constitution relevant

The High Court helps keep the Constitution relevant. While those who drafted the Australian Constitution took great time and care to make sure that it was clearly worded, it was necessary to describe some of the Commonwealth's law-making powers in rather broad or general terms so the Commonwealth would have the power to make laws in areas that were not in existence at the time. Over the years, the use of these broad terms has caused disputes, which the High Court has been called upon to resolve. For example, the Constitution gives the Commonwealth Parliament the broad power to make laws with respect to '*Postal, telegraphic, telephonic, and other like services*'. Do you think this means the Commonwealth Parliament has the power

Source 1 Seven **judges** (known as **Justices**) sit on the full bench of the High Court to hear disputes involving the interpretation of the Australian Constitution.

casestudy

Interpreting the Constitution

In the cases of *R V Brislan (1935)* and *Jones v Commonwealth (1965)* the High Court of Australia was called upon to interpret the wording of the Australian Constitution. Seven Justices of the High Court were required to interpret whether the Commonwealth Parliament's specific power to make laws with regard to 'postal, telegraphic, telephonic, and other like services' included the power to make laws on radio and television broadcasting, respectively. In each case, the High Court broadly interpreted the phrase 'other like services' to include radio and television broadcasting, and in doing so, while not changing the actual wording of the Constitution, effectively expanded the Commonwealth's power to make laws in these areas of communication that were not even created when the Constitution was written.

Source 2 New technologies create many areas of law-making not foreseen by those who wrote the Constitution in 1901.

to make laws in the areas of communication that were created after the 1900s, including making laws about radio and television broadcasting and the Internet?

As illustrated in many High Court cases, like the Brislan and Jones cases, by interpreting the meaning of the words and phrases in the Constitution, the High Court can help keep the Constitution relevant and up-to-date. It can allow, when appropriate, for new technologies to be included in the Commonwealth's law-making powers.

The High Court as 'umpire'

When interpreting the meaning of the Constitution, the High Court is able to act as an independent and impartial umpire to check that the Commonwealth Parliament does not make laws that exceed its constitutional law-making power.

Protecting the rights of the Australian people

Finally, when resolving disputes between individuals and the state and Commonwealth parliaments over the meaning of the Constitution, the High Court is able to interpret the Constitution and **imply** that various rights of the Australian people exist – even though the are not expressly stated. For example, although the Constitution does not explicitly state that Australians have the right to freely discuss and debate political issues – referred to as the **freedom of political communication** – in various cases throughout the years, the High Court has decided that this right is suggested or implied in the Constitution.

casestudy

Can the Constitution restrict packaging?

In 2012, the High Court was called to determine whether the Commonwealth Parliament had the constitutional power to pass the *Tobacco Plain Packaging Act (2011)*, a law banning cigarette companies from using logos, brand images and promotional text on their tobacco products. It would require all tobacco products sold in Australia to be presented in a plain package and contain specific health warnings.

While the law was introduced by the Labor Federal Government in an attempt to discourage smoking and reduce its harmful affects, it was challenged by some major tobacco companies. These companies, including British American Tobacco and Philip Morris, claimed the plain packaging laws breached the Australian Constitution by unfairly allowing the federal government to acquire or seize their intellectual property – that is, their trademarks, branding and logos. Section 51 (xxxi) of the Constitution bans the Commonwealth from unfairly acquiring property without giving adequate compensation. The High Court, however, ruled in favour of the government and declared the Commonwealth Parliament's law constitutionally valid. In simple terms, the High Court ruled that the government was not acquiring the use of the tobacco companies' intellectual property but was simply restricting the way in which the tobacco companies could use their logos and trademarks.

Source 3 The High Court has declared the Commonwealth's 'tobacco plain packaging' laws to be constitutionally valid.

casestudy

Can the High Court protect our freedom of speech?

In the case of *Australian Capital Television Pty Ltd v Commonwealth* (1992), the High Court was required to resolve a dispute relating to the freedom of speech. In simple terms, the court had to determine whether a Commonwealth law banning political parties from making political broadcasts and placing advertising on radio and television during election campaigns was unfair and made in breach of the Constitution. The court decided that while our Constitution does not expressly mention or protect the broad right to 'freedom of speech' in Australia, it does indirectly imply that Australians have a more narrow right to 'freedom of political communication'. This is because the Constitution states that the government must make laws that *represent* the views and values of the people – which suggests that political parties should be able to advertise their views and policies prior to an election so people can make an informed decision when voting to elect the government.

Source 4 Political parties and their candidates are allowed to advertise their views before an election so that voters can make an informed choice when voting.

Resolving disputes

Over the years, the High Court has also been called upon to resolve disputes involving whether or not a state or Commonwealth law has been made in breach of any existing Australian law. In addition, it has also resolved issues involving international human rights treaties and conventions that Australia has agreed to uphold. It has declared any **contravening** laws, or laws that breach the Constitution, invalid. In this way the High Court can help protect the basic human rights of Australian citizens.

casestudy

What was the 'Malaysian Solution'?

In mid-2011, the Australian federal government made an agreement with the Malaysian government regarding the offshore settlement of asylum seekers who had arrived on Australian shores. Under the proposed agreement, commonly known as the 'Malaysian Solution', the Malaysian government agreed to accept 800 asylum seekers, who had arrived on Australian shores and were being held in detention centres. In return, Australia would receive 4000 refugees who were waiting for re-settlement in Malaysia.

The agreement caused great controversy in Australia. Many refugee, human rights and legal organisations believed the proposal was inhumane. They stated it was against the spirit of the Refugee Convention – under which Australia has agreed to treat refugees and asylum seekers with respect and compassion – and in breach of the *Commonwealth Migration Act*. Amongst other obligations, this Act requires asylum seekers who arrive in Australia to have legal protection from further persecution.

In the 2011, lawyers acting on behalf of two Afghani asylum seekers lodged a challenge against the Malaysian Solution in the High Court, which subsequently held that the proposal breached the existing *Migration Act* and was therefore illegal. The case illustrated the ability of the High Court to declare laws and proposals that breach existing Australian law and human rights treaties and conventions invalid.

casestudy

Can the High Court influence laws on bikie gangs?

In 2013, the Queensland state parliament, under the leadership of Liberal National Premier Campbell Newman, introduced a range of laws referred to as the 'anti-association' laws. These were designed to reduce the power and amount of illegal activities undertaken by criminal gangs, including criminal motorcycle or 'bikie' gangs, in Queensland. For example, the *Tattoo Parlours Act* 2013, banned members or associates of a criminal organisation – including criminal bikie gangs – from owning, operating or working in a tattoo or 'body art' studio. Another law banned members of criminal bikie gangs, such as the Hells Angels and Comancheros, from entering licensed premises while wearing their gang or club 'uniforms'.

Perhaps the most controversial of the new laws was the *Criminal Law (Criminal Organisations Disruption) Amendment Act* 2013, which made it illegal, amongst other activities, for three or more members of a criminal gang to associate together in a public place.

In March 2014, lawyers representing a group of criminal bikie gangs lodged an application to the High Court to have the Queensland anti-association laws declared invalid. The lawyers claimed the laws were invalid because they breached the Australian Constitution, by violating the basic right of all Australians – including bikies – to freedom of association. Or, in other words, the freedom to peacefully meet together in public to discuss and express their views. The challenge was ultimately rejected by the court.

Source 5 The introduction of anti-association laws in Queensland has prompted other states to consider and implement the same action.

Check your learning 23.3

Remember and understand

1 Using examples to support your response, explain why the High Court might be needed to interpret the Australian Constitution.

Apply and analyse

2 Explain what the following statement means: 'The High Court can help keep the Constitution relevant in a modern society'.

3 Suggest two areas that have recently been created through the development of new technologies that would not have been envisaged in 1901 when the Australian Constitution was being drafted.

4 Explain the importance of the following High Court cases:
- *Australian Capital Television Pty Ltd v Commonwealth (1992)*
- *British American Tobacco Australasia Limited v Commonwealth (2012)*

5 a State the name of two 'anti-association' laws introduced by the Queensland government in 2013 and explain what each of these laws banned.

b Explain why the Queensland government introduced the anti-association laws.

c Why were the anti-association laws challenged in the High Court?

23B rich task

Freedom of 'hate speech'

Over the years, the High Court of Australia has ruled that the Australian Constitution implies that Australians have the right to freedom of political communication (i.e. the right to express their political views). But what exactly does this mean, and to what extent should people have the freedom to express their political views? For example, should an individual or group have the legal right to make public comments on political issues – for example, same-sex marriage, adoption, abortion, or euthanasia – that might be considered cruel or offensive? Or should our freedom to political communication be restricted?

Preaching in a public space

In February 2013, in the case of *Attorney-General for South Australia v Corporation of the City of Adelaide* – known as the Corneloup Case – the High Court caused controversy. It ruled a local council by-law banning two brothers from 'preaching in a public space without a permit' was legally valid and did not breach the implied constitutional right to political communication.

The contentious High Court case originated back in 2009, after Caleb and Samuel Corneloup were fined by the Adelaide Council, for breaching a council by-law that banned individuals and groups from 'preaching, canvassing or haranguing' in a public space without a permit. The Corneloup brothers regularly gave public addresses in the Adelaide CBD to 'preach the Gospel' and offer their views on a range of religious, social and political topics. These included pornography, abortion, teenage binge drinking and same-sex marriage. The brothers were fined after the Council received complaints from local traders that some of the opinions expressed by the brothers were disruptive, homophobic, racist and offensive.

Source 1 To what extent should people have the freedom to express their political views?

In 2010, the Corneloup brothers mounted a successful challenge against the Council's by-law in the South Australian District court. They claimed the law restricted their right to free speech, and was made beyond the Council's legal authority. In 2011, the Council lodged an appeal against this verdict. The Full Court of the Supreme Court of South Australia dismissed the appeal, claiming the by-law breached the implied constitutional right of the brothers to have freedom of political communication.

In 2013, however, the High Court reversed this decision and ruled the Council's by-law did not breach the implied right to political communication and was made within the Council's power to make by-laws for the good governance of the local area. The Council and various individuals who were adversely affected by the brothers' preaching obviously supported the verdict. Others, however, believe it sets a dangerous precedent – restricting the right to freedom of political communication by allowing local councils to suppress individuals expressing their opinions in public spaces.

skill**drill:** Reasoning and interpretation

Creating a timeline

Timelines are an effective way to organise and present information and ideas so they may be more easily understood and evaluated. Constructing a timeline involves presenting information – such as key terms, events and concepts – in a logical chronological or sequential order to illustrate a sense of time and a common relationship. Displaying events and concepts in a sequential order helps develop a linear perspective, and can assist in the analysis and evaluation information and ideas.

To create a timeline, follow these steps:

Step 1 Consider the length of time you want to represent on your timeline. You may want to show, for example, 1901 CE to 1999 CE.

Step 2 Divide the timeline evenly into suitable blocks of time. For example, if you were illustrating the success of referendums since federation, you could prepare a timeline of the years since 1901, in 10-year intervals.

Step 3 After determining your time intervals, you need to accurately measure and mark the dates of your intervals.

Step 4 Mark specific events on the timeline, including their dates. Provide a brief description or explanation of the significant events you have entered.

Apply the skill

1 Using the information provided, create a timeline of the Corneloup Case, *Attorney-General for South Australia v Corporation of the City of Adelaide and Ors HCA 3* [2013]. Your timeline should include the dates, and provide an accompanying explanation, of the significant stages of the case. It should cover the period from when the Corneloup brothers were alleged to have initially breached the Adelaide Council's by-law, to the final High Court of Australia decision.

Extend your understanding

1 Explain whether or not you believe the High Court's decision effectively restricted the right of the Corneloup brothers, and all Australians, to freedom of political communication.

2 Explain to what extent restrictions should be placed on individuals with respect to their right to express their views on controversial political issues in public spaces.

Australia's international legal obligations

'No man is an island, entire of itself; every man is a piece of the continent, a part of the main.' These words from 16th-century poet John Donne still resonate in our world today. All countries need to act together to combat world issues such as poverty, the effects of climate change and human rights abuses.

Australia is one of the 195 countries that has a shared responsibility to promote security, health and wellbeing in the world. Australia is a member of the United Nations, an organisation set up to promote international cooperation and world peace. Membership of the **United Nations** (UN) provides an avenue for Australia to fulfil its international obligations.

24A

What are Australia's global roles and responsibilities?

1 Australia has provided humanitarian assistance to countries experiencing crises, such as earthquakes. Why do you think Australia might help other countries in this way?

2 List some of the possible consequences if a country failed to act in accordance with the international community and attempted to take control of another country.

24B

How are government policies in Australia shaped by our international legal obligations?

1 Name some policy areas where it would not be in Australia's best interest to act alone and contrary to the approval of the international community.

2 Have you ever heard of instances when Australia has failed to meet its international obligations?

3 Why should all countries meet their international obligations in relation to the environment?

chapter 24

Source 1 Australia is a member of the United Nations, and so has shared responsibilities to act with other UN member countries to tackle international issues.

24.1 Australia's role as a member of the United Nations

You may have heard of the United Nations (the UN), or of UN ambassadors such as actors Emma Watson and Angelina Jolie. You may not be aware, however, of the purpose of the UN, its role in the international community, or what it sets out to achieve. The work of the UN is to bring all the nations of the world together, focusing on human rights and international justice, and provide a forum, called the General Assembly, where the member nations meet to discuss issues and problems of global importance.

The United Nations

The United Nations is an international organisation created in 1945 that seeks to promote international cooperation. After World War II it was hoped that this international organisation, devoted to world peace, would prevent war and horrors such as the Holocaust from happening again.

Source 1 The United Nations headquarters in New York is built on international land owned by people of the world. The UN has its own flag, showing a map of the world encircled by olive branches, which are a symbol of peace. The UN also has its own postage stamp.

The UN has 193 members and is committed to:

- international peace and security in the world
- creating friendship between nations
- helping nations work together to assist poor people, alleviate hunger and disease, promote literacy, and promote respect for people's rights and freedoms
- providing a central point where nations can come together in order to achieve the above-mentioned goals.

Source 2 A summary of the type of work the United Nations carries out across the world

Australia's role as a member of the United Nations

Australia was one of the first 51 countries to become a member of the UN when it began in 1945. Australia is not a powerful nation by world standards, compared to countries such as China and the United States of America. Membership of the United Nations allows Australia to have a voice in international affairs, and play a role in promoting stability in the world. Membership of the United Nations also helps Australia protect its own economic and security interests.

From 2012 to 2014, Australia had a seat on the United Nations Security Council, the council's most important decision-making body. Australia recently played a leading role in writing a **resolution** that called for access to the crash site where 298 civilians (including 28 Australians) lost their lives when the Malaysian airplane MH17 was shot out of the sky in Ukraine. The crash site was controlled by armed groups who hindered an international investigation into the crash and caused international concern that not all the bodies would be recovered and returned to their families with dignity and respect.

Source 3 Australia's role as a member of the United Nations Security Council has provided an avenue for Australia to voice international concerns. Here, the Australian Foreign Minister Julie Bishop puts forward a resolution to the United Nations Security Council.

Check your learning 24.1

Remember and understand

1 Why was the UN created?

2 List four groups of people that might benefit from the work of the United Nations.

Apply and analyse

3 Explain why membership of the United Nations is beneficial for Australia.

4 The former Secretary General of the United Nations Kofi Annan once said:

> More than ever before in human history, we share a common destiny. We can master it only if we face it together. And that, my friends, is why we have the United Nations.

a Do you think it is true that our future can only be assured if we work together? Write a paragraph explaining your position.

b In your own experience, has there been a situation or problem that could only be solved by several people working together? Outline this situation, telling how it was resolved.

Evaluate and create

5 The United Nations has named certain days to be observed as international days. Go to the UN website and choose a day in the upcoming months that you are interested in. Devise a way to create awareness of the day within your school. You could do one of the following:

- write a paragraph for the school newsletter or daily bulletin
- make an announcement to the school
- create a symbol for the day that will spark curiosity or a slideshow that can be projected onto a wall as students enter a common room.

24.2 Australia's international role and responsibilities

Australia works with the United Nations to provide foreign aid and peacekeeping, and to work towards protecting the environment and upholding human rights.

Australia's foreign aid responsibilities

Foreign aid is assistance in the form of money, skills or other resources transferred from one country to another, mainly for humanitarian reasons. Countries in our immediate region are the main recipients of foreign aid; these include Indonesia, the Solomon Islands, Cambodia, East Timor, Myanmar and Fiji.

Foreign aid may be given to alleviate poverty and assist a community to develop a better standard of living by providing schools, roads, water supply and medical assistance. Emergency aid may be offered in a humanitarian crisis that threatens the health and safety of a community. Australia gave this type of emergency aid after Typhoon Haiyan devastated the Philippines in 2013.

Source 1 Australia regularly gives foreign aid in many forms, mostly to countries in need in our region.

In 2000, many countries, including Australia, adopted eight UN goals called the **Millennium Development Goals** (MDGs). These included such things as wiping out poverty, providing universal primary education, stopping the spread of infectious diseases and providing foreign aid equal to 0.7 per cent of a country's national income. Australia needs to more than double its aid contribution to meet this goal. The goal was downgraded in 2007 to 0.5 per cent but there are doubts even this downgraded goal will be met given that spending on foreign aid was cut in the 2015–16 budget.

Source 2 Top 20 aid-giving countries

Rank	Country	% of nations' total annual income given to aid
1	Norway	1.07
2	Sweden	1.01
3	Luxembourg	1.00
4	Denmark	0.85
5	United Kingdom	0.71
6	Netherlands	0.67
7	Finland	0.54
8	Switzerland	0.47
9	Ireland	0.46
10	Belgium	0.45
11	France	0.41
12	Germany	0.38
13	Australia	0.33
14	Canada	0.27
15	Austria	0.27
16	New Zealand	0.26
17	Iceland	0.25
18	Japan	0.23
19	Portugal	0.23
20	United States	0.18

Source: OECD Table 1 Official Development Assistance 2013

Australia's peacekeeping responsibilities

UN peacekeeping assists countries who have been torn by conflict to achieve lasting peace. It does this by:

- maintaining peace and security in a region
- protecting civilians – civilians are those who are not on active duty with the military, navy, police or fire fighting organisations
- overseeing elections
- disarming those who were involved in fighting – for example, controlling and disposing of weapons
- protecting and promoting human rights
- restoring rule of law to a region, meaning that legal institutions including the government, police, courts and prisons are strengthened and accountable for their actions.

The three basic principles that guide UN peacekeeping include the consent of parties, impartiality and use of force as a measure of last resort. Peacekeepers can be instructed by the UN to 'use all necessary means' to protect civilians under attack, assist authorities to maintain law and order and deter any use of force that disrupts political processes, such as an election.

Australia has contributed to the UN's peacekeeping missions with 3500 Australians serving in peace and security operations in various parts of the world today.

casestudy

Why does the world's youngest nation need our help?

Australia is involved in the UN's peacekeeping mission in South Sudan. South Sudan became a nation in 2011 but is still a war-torn country with fighting taking place between seven armed groups within the country. One and a half million people have been displaced due to war, and thousands have been killed. There have been massacres of civilians in hospitals and churches, with bodies being dumped in mass graves. Starvation continues to grow, compounded by no rain for the crops that have been planted.

The South Sudan peacekeeping mission involves protecting civilians, delivering **humanitarian** assistance such as providing food and setting up camps for those who have been forced to leave their homes. Support is also provided to help establish rule of law in South Sudan and assist in the economic development of the nation.

The Australian government has recently pledged $3 million in emergency assistance for communities affected by continuing unrest in South Sudan in addition to $40 million already pledged.

Source 3 An Australian peacekeeper carries a Rwandan child who was injured in a brutal massacre by soldiers of the Rwandan Patriotic Army (RPA) at the UN administered refugee camp at Kibeho in 1995.

Australia's responsibility to protect the environment

Australia has been involved in many international agreements that serve to protect the environment. Perhaps the most important area of environmental protection is dealing with climate change. Australia has a national and international responsibility to reduce its greenhouse gas emissions to avert the effects of climate change.

The United Nations plays an important role in bringing countries together to agree on set targets to reduce greenhouse gas emissions. In 2008, Australia became a full member of the **Kyoto protocol**, an international agreement in which internationally binding emissions-reductions targets were set. Australia must cut its emissions by 5 per cent below 2000 levels, by 2020. Australia took part in a new international climate change agreement in 2015, setting emissions-reduction targets for 2020 and beyond.

Australia's responsibility to uphold human rights

Human rights are entitlements that all human beings possess regardless of their nationality, place of residence, sex, ethnic origin, colour, religion or any other status. The **Universal Declaration of Human Rights** (referred to as the Universal Declaration) was adopted by the United Nations in 1945 and is considered to be the basis of international human rights law. Australia was one of the countries that helped to create the Universal Declaration. Some of the rights in the Universal Declaration are:

- All people are born free and equal.
- Everyone is entitled to the same rights and freedoms.
- Everyone has the right to life.
- No-one should be subject to torture or slavery.
- Everyone is equal before the law.
- No-one should be subject to randomly being arrested, detained or exiled.

Source 4 Pressure is mounting on the international community to seriously consider climate change and commit to emissions-reduction targets for the future. Many believe the international community needs to turn talk into action.

- Everyone has the right to be presumed innocent until proven guilty.
- A person from another country has the right to seek and be given **asylum** from persecution.

Australia is party to seven international human rights agreements. Two of these agreements elaborate on the principles established in the Universal Declaration of Human Rights and are legally enforceable. They are:

- the International Covenant on Civil and Political Rights (ICCPR) which includes, among many rights, the right to life, freedom of religion, freedom of speech and assembly, the right to vote and the right to a fair trial
- the International Covenant on Economic, Social and Cultural Rights (ICESCR) which includes, among many rights, the right to equal pay, the right to health and education, as well as to an adequate standard of living.

Source 5 Actor Angelina Jolie works with the United Nations as the Special Envoy of the United Nations High Commissioner for Refugees. Jolie has undertaken 40 field missions to some of the most remote regions of the world, bringing the plight of refugees to the attention of millions of people. Here she meets schoolgirls in a village in Afghanistan.

Check your learning 24.2

Remember and understand

1 Why do some countries need foreign aid?
2 Name two of the Millennium Development Goals and explain why they are important.
3 Name two international human rights agreements that Australia is party to.

Apply and analyse

4 Imagine you are involved in a peacekeeping operation. What dangers might you face as you carry out your work?
5 Do you think Australia gives enough foreign aid compared to other countries?
6 Explain why South Sudan requires help from the International community.

Evaluate and create

7 Why is it important that all counties, including Australia, agree on greenhouse gas emissions-reduction targets? Can you think of any problems that would arise if no agreements are reached? Conduct some Internet research on greenhouse gas emission targets, and summarise your findings.
8 What are Australia's global responsibilities? In pairs, spend five minutes discussing this question, making notes as you go. Report your conclusions back to the class.

24A rich task

Australia's treatment of asylum seekers

Australia has international obligations to **asylum seekers** and **refugees**. An asylum seeker is a person who flees their country and asks for protection from another country. An asylum seeker is waiting for their claim as a refugee to be processed. A refugee is someone who has been forced to flee their country due to war, persecution, or natural disaster. If the asylum seeker's claim to be a refugee is found to be valid, the asylum seeker will not be returned to their country of origin.

Reasons people seek asylum

Australia signed the 1951 *Convention Relating to the Status of Refugees* and its 1967 Protocol (the Refugee Convention). According to this Convention, a refugee is a person who has fled their country because of a well founded fear of being persecuted if they remain in their country. They may fear persecution on the basis of race, religion, nationality, membership of a social group or because of their political opinion. The refugee must be unable or unwilling (because of their fear) to seek protection from the authorities in their country. Australia has agreed under the Refugee Convention that refugees will not be sent back to their country of origin where their freedom may be threatened.

It is important to understand that not all asylum seekers who arrive by boat without visas are refugees. The current government's policy discourages asylum seekers arriving without visas by boat. Often asylum seekers pay huge amounts of money to people (called people smugglers) to transport them to another country. Currently, asylum seekers who arrive by boat in Australia without a valid visa must be transferred to a third country and their claims for protection processed individually according to that country's laws. The Minister for Immigration and Border Protection may, however, exercise his discretion to exempt an asylum seeker from transfer. If the asylum seeker is transferred to a third country and is found to be a refugee, they will be resettled in that third country rather than in Australia.

Source 1 Asylum seekers who arrive in Australia by boat risk their lives to get here. Since 2008 it is reported that there have been 1000 asylum seeker deaths at sea.

Asylum seekers must live in an immigration detention centre while their refugee claim is being assessed. Some say Australia's treatment of those in immigration detention centres violates our international human rights obligations. This is because of the conditions in the immigration detention centres, and the length of time these people are being detained.

Perspectives on asylum seekers

> My name is Najeeba Wazefadost, and 12 years ago I risked my life on a dangerous journey. I escaped my country Afghanistan and came to Australia by boat…
>
> Afghanistan has been in a state of war for many decades, a war that has left little evidence of justice, humanity and peace for its people. Even now, villages are frequently attacked and there is continuous persecution of minorities.
>
> – Najeeba Wazefadost (refugee from Afghanistan)

> These people just see that Australia is open for business. It's hotel Australia, the red carpet is laid out and there's no attempt to contain any of this. Border security does not exist.
>
> – Alan Jones (radio broadcaster) commenting on the arrival of 66 Sri Lankan asylum seekers in 2013 while the Labor Party was still in government.

> If you pay a people-smuggler, if you jump the queue, if you take yourself and your family on a leaky boat, that's doing the wrong thing, not the right thing, and we shouldn't encourage it. We will stop these boats in any test of will between the Australian government and the people-smugglers. We will and we must prevail.
>
> – Tony Abbott (former Prime Minister of Australia)

skill**drill:** Reasoning and interpretation

Recognising and considering multiple perspectives

A person's perspective is their point of view – the position from which they see and understand events going on in the world around them. People often have different points of view about particular events or issues depending on their age, gender, social position and beliefs or values. Looking at multiple perspectives can help you understand an issue in greater depth.

Follow these steps to practise the skill of identifying multiple perspectives.

Step 1 Identify a civics and citizenship issue about which there may be different opinions.

Step 2 List the various groups and people who may have been involved in or affected by this issue.

Step 3 Identify the role or position of these people and/or groups in society.

Step 4 Locate sources that provide evidence about the point of view these people had on the issue.

Step 5 Analyse each source, using the following questions as a guide:

- Why was the source written or produced?
- Who was the intended audience of the source?
- Was it meant for one person's eyes, or for the public? How does that affect the source?
- What was the author's message or argument? What ideas were they trying to get across? Is the message explicit (obvious), or are there implicit (subtle) messages as well? What can the author's choice of words tell you? What about the silences?
- What does the author choose *not* to talk about?
- How does the author try to convey the message? For example, do they give a detached, balanced account, or is it biased for or against the issue?

Apply the skill

1. Identify as many different individuals or groups who are involved in or affected by travelling by boat to Australia in order to seek asylum.
2. Describe the roles or positions that these people or groups hold in society.
3. Consider the quotes provided. Identify and analyse the perspectives portrayed in each of these sources, using the process outlined in step 5.
4. Now that you have considered multiple perspectives, what is your opinion of how Australia treats asylum seekers who arrive by boat without a visa?

Extend your understanding

1. Undertake some research about the government's 'enhanced screening process' for asylum seekers who arrive by boat. Explain what it is and whether it may violate our international human rights obligations.
2. Find the latest *Australia and the United Nations: Report Card* and explain the areas Australia needs to improve. The executive summary provides a report card that gives a mark for various categories such as Australia's treatment of asylum seekers and refugees.

24.3 Australia's international legal obligations

Australia has international obligations in a wide variety of areas such as human rights, the environment, defence, security and trade. These international obligations are written down in documents called **treaties**, which Australia is compelled or bound to observe. A treaty can also be called a 'convention', 'protocol', 'covenant' or 'exchange of letters'.

Bilateral and multilateral treaties

Australia may enter into **bilateral** or **multilateral** treaties. A bilateral treaty is a treaty between Australia and one other country. A multilateral treaty is between Australia and two or more countries. Multilateral treaties are usually developed and overseen by an international organisation such as the United Nations or the International Labour Organization (ILO).

The Commonwealth Government has the power to enter into treaties and contribute to international negotiations. A minister, and in many cases, cabinet make the final decision to sign and ratify a multilateral treaty. Signing a multilateral treaty indicates that Australia intends to be bound by the treaty at a later date. There is an obligation, however, to refrain from any acts that would defeat the object and purpose of the treaty. **Ratification** is the process that legally binds Australia to implement the treaty.

The impact of treaties on Australian law

Parliament plays a role in examining treaties that Australia enters into, apart from those considered urgent or sensitive. It also plays a role in passing legislation, if it is needed, to ensure the provisions of the treaty become law in Australia. Source 2 provides some examples of treaties Australia has entered into and how these treaty principles are now included in Australian law. It is not always necessary to pass new laws to ensure we comply with our treaty obligations. Existing Commonwealth or state/territory legislation may be sufficient to implement the provisions of at treaty.

Source 1 Australia and the UK signed a historic treaty that allowed significant sharing of information, technology, policy and personnel.

Treaty area	International treaty Australia has entered into	Australian law that reflects the principles of the treaty in part or full
Protecting endangered species 	*Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES)* Ensures that international trade in wild animals and plants does not threaten their survival.	The *Commonwealth Environment Protection and Biodiversity Conservation Act 1999* Example: The trapping of orange-bellied parrot (an Australian endangered species) is illegal.
Eliminating racial discrimination 	*International Convention on the Elimination of All Forms of Racial Discrimination (ICERD)* Eliminates racial **discrimination** and promotes understanding among all races.	The *Commonwealth Racial Discrimination Act 1975* (Cth) and state law in this area Example: A job advertisement stating people of certain nationalities need not apply is against the law.
Protecting women against discrimination 	*The Convention on the Elimination of All Forms of Discrimination against Women (CEDAW)* Defines what constitutes discrimination against women and sets out a national plan to end such discrimination.	*Sex Discrimination Act 1984* (Cth) and state law in this area Example: A women told she can't apply for a promotion because she has family commitments is being discriminated against on the basis of being a woman.
Protecting the environment 	*The Convention for the Protection of the World Cultural and Natural Heritage* Protects cultural and natural heritage around the world that has outstanding universal value that must be preserved for current and future generations.	*World Heritage Properties Conservation Act 1983* (Cth) Example: An attempt to destroy a World Heritage site (such as Gondwana Rainforests of Australia) through mining is unlawful.

Source 2 Examples of treaty principles included in Australian law

The influence of international legal obligations on policy

International **legal obligations** can shape domestic policy in Australia. Policy making involves the government taking action in a certain area to achieve a desired outcome. Protecting the ozone layer is one example where Australia worked closely with other countries and implemented policies at home to reduce ozone-depleting chemicals, such as chlorofluorocarbons, in the atmosphere. The ozone layer serves to protect us against excessive ultraviolet radiation from the sun that can cause health problems such as skin cancer. Australia has surpassed all of its legal obligations under the Montreal Protocol on Substances that Deplete the Ozone Layer. Ozone depletion still continues but the Montreal Protocol was successful in controlling the global production and consumption of ozone depleting substances.

Source 3 Scientists predicted that without drastic action the depletion of the ozone layer would restrict outside activity such as going to the beach, playing cricket or taking a walk.

The reduction of greenhouse gas emissions is another area that requires sustained effort from all countries in order to make a difference. As mentioned, Australia is a full member of the Kyoto Protocol and did introduce a **carbon tax** aimed at reducing greenhouse gas emissions, but this has subsequently been repealed. Greenhouse gas emission reduction targets that other countries commit to will most likely shape future policy and law in Australia.

Failure to live up to our international obligations can result in international pressure to change policy. The United Nations plays a role in monitoring how Australia is performing in relation to its international legal obligations. The 'Australia and the United Nations: Report Card' recently gave Australia poor scores in the following areas:

- Climate change: Australia scored a 'D+' in this area. Australia is said to rely too heavily on fossil fuels and needs to set stronger targets for reducing the effects of climate change in the future.
- Refugees and asylum seekers: Australia was given 'F' in this area. It was noted that there is increased hostility towards asylum seekers and it was questioned whether the current policy is fulfilling our international legal obligations.

Shining a light on Australia's poor performance in these areas may influence future policy change.

Source 4 This is an Australian government poster discouraging asylum seekers from entering Australia. Some say Australia's policy on asylum seekers is at odds with its international legal obligations.

Source 5 Australia, like many other countries, relies heavily on fossil fuels for energy. Fossil fuels include coal, oil and natural gas. Australia needs to find innovative energy solutions if it is to reduce its impact on climate in the future. International pressure will affect policy in this area.

Check your learning 24.3

Remember and understand

1 Give two examples of an international treaty Australia is a party to and explain the main purpose of each treaty.

2 What is the difference between a bilateral and multilateral treaty?

Apply and analyse

3 Give an example of how Australian law reflects the principles in the *International Convention on the Elimination of All Forms of Racial Discrimination (ICERD)*.

4 Why do you think the power to enter into treaties is a Commonwealth government power rather than a state government power?

5 Do you think one country acting alone would be able to solve environmental problems such as the depletion of the ozone layer and climate change?

6 Is new law always needed to comply with an international treaty Australia has signed and ratified?

Evaluate and create

7 In small groups, discuss how Australia's international legal obligations can affect domestic policy. Write down the main points from your discussion and report back to the class.

8 Read the following quote.

> 'Paying it forward.' In many ways that is a succinct expression of the major obligation of our existence. Doing things now for the protection and upliftment of relatively helpless future generations, which either don't exist yet or are presently too young to take action themselves. Australians don't have this obligation uniquely - every society on earth shares it equally. But in this country we have opportunities not widely available. We not only have an abundance of brilliant people with great energy and inventiveness, we are comparatively rich and thus can do what others might only dream of.
>
> General Peter Cosgrove, *A Very Australian Conversation,* Boyer Lectures 2009

a Why does Sir Peter Cosgrove (Governor-General of Australia) think that Australia is in a unique position compared to other countries to protect future generations?

b In your opinion what is the most important area of policy all countries need to participate in to protect future generations? Write a statement, similar to Sir Peter Cosgrove's, stating your beliefs.

24B rich task

Australia's international obligations to Aboriginal and Torres Strait Islander peoples

The colonisation of Australia by the British from 1788 heralded the beginning of severe and devastating problems for Indigenous Australians, the effects of which are still being seen today. Indigenous Australians have lower life expectancy, higher child mortality rates and higher unemployment compared to non-Indigenous Australians.

Government policy in relation to Aboriginal and Torres Strait Islander peoples has been fraught with difficulties in the past. While there may have been good intentions there has been a failure to properly work in partnership with Aboriginal and Torres Strait Islander peoples in deciding policy that affects them.

Source 1 A salute given to Prime Minister Kevin Rudd during the 'sorry speech'

Former Prime Minister Kevin Rudd formally apologised to Indigenous Australians in 2008 for the policies of previous governments, where children of Australian Aboriginal and Torres Strait Islander descent were forcibly removed from their families. In 2009, former Prime Minister Rudd formally endorsed the *United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP)*. There are also plans to hold a referendum to include Aboriginal and Torres Strait Islander peoples in the Constitution.

In 2008 the Labor Government introduced practical measures to 'close the gap in Indigenous disadvantage'. It set six targets aimed at improving life expectancy for Indigenous Australians:

1. closing the gap in life expectancy by 2031
2. halving the gap in child mortality rates by 2018
3. halving the gap in reading, writing and numeracy achievements for children by 2018
4. ensuring access to early childhood education for all four-year-olds in remote communities by 2013
5. halving the gap for year 12 student attainment rates by 2020
6. halving the gap in employment outcomes by 2018.

Former Prime Minister Tony Abbott added a seventh goal in 2014 which seeks to end the gap between Indigenous and non-Indigenous school attendance within five years.

Does Australia meet its international obligations in relation to Indigenous Australians?

The most recent *Australia and UN Report Card* praises the support of UNDRIP. It is hoped that UNDRIP will guide the development of policy for Indigenous Australians in the future. Constitutional recognition of Indigenous Australians is also seen as a way of 'resetting' and building the relationship between governments and Indigenous Australians.

The UN report, however, criticised mandatory alcohol treatment legislation passed by the Northern Territory Government effective from 2013. The new laws mean:

- Anyone taken into custody for drunkenness three times in two months is to be assessed for treatment.
- Some alcoholics could be forced into three months of rehabilitation.
- Patients may be criminally charged for absconding from the program.

The UN report says that alcoholics need treatment for addiction rather than locking up and subjecting them to treatments 'untested by credible research'.

The UN report also noted that Australia had not lived up to its international obligations when it suspended the Australian *Racial Discrimination Act* in order to implement the Northern Territory Emergency Response (NTER). NTER is a policy that aims to protect women and children from abuse by enforcing a range of measures such as the restriction of alcohol, greater police presence and quarantining of welfare payments. The decision to suspend the Act was overturned in 2010.

skill**drill:** Reasoning and interpretation

Creating and delivering an audiovisual presentation

Creating and delivering effective presentations is an important skill because it gives you practice talking in front of large groups of people; a task most of us are faced with at some stage in our lives. The following steps will help you avoid some of the pitfalls of creating and delivering a presentation and increase the chances of the audience remembering and enjoying what you said.

Step 1 Plan and design your presentation

- Plan your presentation carefully so it has a clear beginning, middle and end.
- Make sure you present the content in clear, concise dot-point form, *not* as large slabs of text.
- Choose appropriate images.
- Objects and text moving on screen is distracting.
- Use a design that ensures your audience can clearly see and read the slides.

Step 2 Deliver your presentation

- Do not just stand up and read out the text on each slide. Plan what you will say during each slide. Record this on cue cards, and use these during your speech.
- One thing at a time! At any moment, what is on the screen should be the thing you are talking about.
- Speak clearly – not too fast, not too slow. Vary tone and pitch to make your presentation more interesting.
- Make eye contact with different members of your audience. *Do not* just look down at your cue cards.

Apply the skill

1 Research, prepare and present an audiovisual presentation about Australia's international obligations to Aboriginal and Torres Strait Islander peoples. In your presentation include the following:
   - **a** why Indigenous Australians are a disadvantaged group within Australia
   - **b** positive steps in government policy affecting Indigenous Australians
   - **c** an assessment of whether Australia meets its international obligations towards Indigenous Australians.

2 Your presentation should be based on relevant and reliable sources.

Extend your understanding

1 As you listen to your classmates, complete the following peer assessment proforma for each presentation

Name of person completing peer assessment:				
Name of presenter	**What did the presenter do well?**	**PowerPoint design**	**Presentation style**	**What could the presenter improve upon?**

Glossary: Geography

A

annotate to add notes that explain, comment or clarify

aquifer an underground water supply consisting of a layer of rock or other permeable materials that hold water

arid a term used to describe land and climate conditions that are too dry to support vegetation

atmosphere all of the gases that surround the Earth

B

bar graph a graph that shows information as a series of horizontal bars

biodiversity the variety of living organisms (i.e. plants, animals, bacteria and fungi) found in an environment

biological pollutant a term used to describe the negative effects of invasive species (such as bacteria, parasites and invasive plants and animals) that do harm to an environment

biome a large area of the Earth that is home to similar plant and animal communities that have adapted to a particular environment over time (e.g. desert, forest, grassland, etc.)

biosphere all living things on Earth (i.e. plants, animals, humans and other organisms)

breakwater a wall constructed out into the sea to help prevent waves from reaching the coastline and causing erosion

C

cartogram a type of map that is distorted to show a representation of statistical data (e.g. access to water, rates of obesity, etc.) rather than land area

change a key concept in geography: the dynamic nature of all processes on Earth, whether slow or fast, small or large

chemical pollutants a term used to describe a range of heavy metals, oils, pesticides, industrial chemicals and salts that do harm to the environment

child mortality rates a measure of the number of deaths among children under five years of age per 1000 children born

choropleth map a map that shows changes in particular data or characteristics across an area (e.g. population density, GDP per capita, etc.) by using shades of the same colour (e.g. light green through to dark green)

climate change a change in global or regional climate patterns; in particular a change apparent from the mid to late 20th century onwards and attributed largely to the increased levels of atmospheric carbon dioxide produced by the use of fossil fuels

climate graph a combination bar and line graph that shows the rainfall and temperature of a given place; also known as a climograph

coastal degradation the deterioration of a coastline due to natural effects (such as erosion) or human effects (such as pollution)

complex map a type of map that displays more than one set of data or information

compound column graph a type of column graph that features two or more sets of related data at the same time so that they can be compared; information provided in each column is sub-divided for further comparison

confluence the place or junction where two rivers meet

contour line a line on a map (e.g. topographic map) joining points of equal height above or below sea level; contour lines can also be used to show the steepness of the land on a map

correlation a statistical measure that indicates the extent to which two or more variables are related or interlinked

culture a term used to describe the shared characteristics (e.g. language, food, religion, beliefs, etc.) of a population or group of people

D

deforestation the removal of trees and other plant life from a forested area, either by cutting down or burning; usually carried out to clear the land for farming

demographics the statistical data of a population or of particular groups within a population, especially those related to average age, gender, income, education level, etc.

demographic transition model a geographic model designed to help explain changes in populations over time, especially the transition from high birth and death rates to low birth and death rates as countries becomes more developed

deposition the laying down of solid material that has been eroded and transported from another part of the Earth's surface

desertification the transformation of fertile land into relatively dry desert

developed country an industrialised country with a well-developed economy and relatively high standard of living that is able to support the needs of its citizens (*see also* developing country)

developing country a non-industrialised (i.e. largely agricultural) country with a relatively fragile economy and low standard of living that is not always able to support the needs of its citizens (*see also* developed country)

Digital Terrain Model (DTM) a topographic illustration (or digital model) that uses a range of data to generate a 3-D representation of the Earth's surface

dot distribution map a type of map that uses dots or other shapes to show the location and size of particular features

E

economic (adjective) a term used to describe a range of issues relating to employment, income and trade

ecosystem a complex community made up of living organisms that interact with each other and with their environment; an abbreviation for 'ecological system'

ecosystem services a term used to describe a range of important resources, processes and benefits that healthy ecosystems provide to humans; there are four categories of ecosystem services: 1. **sources** (or provisioning services) such as providing food and materials, 2. **sinks** (or regulating services) such as purifying air and water, 3. **services** (or supporting services) such as seed dispersal and nutrient cycling, 4. **spirituality** (or cultural services) such as spiritual enrichment and recreation

ecotourism a form of responsible and sustainable tourism that involves travel to areas of natural or ecological interest with the goal of conserving the environment and improving the wellbeing of the local people

environment a key concept in geography: a specific place on Earth and all the things, both animate and inanimate, that are there

erosion the wearing away of the Earth's surface by wind, water or ice

estuary a wide tidal mouth of a river

extinction the dying out and complete disappearance of a species (e.g. plant or animal)

F

false colour image an image that depicts an object or area in colours that differ from those seen in nature; false colour images use colours that are different or more exaggerated than those shown in standard photographs, in order to make the thing being shown easier to interpret

fertility rate a statistical measure of the average number of children that all women in a particular area or population will have throughout the course of their lives; expressed as births per 1000 women

fieldwork geographical study that takes place outside the classroom at the site of inquiry

flow diagram a diagram that shows the sequence or stages in a process

flow map a type of map that shows the movement of objects (e.g. people or goods) from one place to another

food insecurity a term used to describe a condition in which not all people have access to enough safe nutritious food to sustain a healthy life (*see also* food security)

food security a term used to describe a condition in which all people at all times have access to enough safe nutritious food to sustain a healthy life (*see also* food insecurity)

fossil fuel a fuel made from the decomposed (fossilised) remains of plants and animals that lived millions of years ago (e.g. coal, oil, gas)

G

gender inequality unequal treatment of individuals within a society based on their gender, whether male or female

Geographic Information System (GIS) a software application designed to capture, store, manipulate, analyse, manage and present all kinds of geographical information

geographical sketch a sketch focusing on those parts of the environment relevant to the geographic study; often completed in the field but also from photographs

Global Positioning System (GPS) a device that uses satellites to accurately pinpoint the location of an object on the Earth's surface (e.g. a car, satellite navigation device, mobile phone) and provide data and directions to help with navigation

global warming a gradual increase in the overall temperature of the Earth's atmosphere generally attributed to the release of greenhouse gases such as carbon dioxide, CFCs and other pollutants into the atmosphere

grasslands a biome of wide open spaces, where the vegetation is dominated by grasses; sometimes called a prairie, steppe or savanna

greenhouse gas a gas, such carbon dioxide, that absorbs radiation from the Sun's rays trapping heat in the Earth's atmosphere

Gross Domestic Product (GDP) the total monetary value of all the goods and services produced by a country over a specific time period (usually a year)

ground level photograph a photograph taken from ground level (i.e. the photographer is standing on ground level and camera lens is parallel to the ground)

groyne a man-made barrier that juts out from a beach into the water, built to prevent erosion of the beach from the power of destructive waves and longshore drift

H

Human Development Index (HDI) a tool developed by the United Nations to grade and rank the social and economic development of the world's countries in order from most to least developed; used as a measure of human wellbeing

hydrosphere all of the water on Earth (i.e. in solid, liquid and gaseous forms)

I

infant mortality a statistical measure of the proportion of children in an area or population under the age of 12 months who die; expressed as deaths per 1000 live births

interconnection a key concept in geography: the relationship between all things, both animate and inanimate, and all processes, both natural and human

Internally Displaced Person (IDP) a person who has been forced to flee their home to escape conflict, but who remains within their own country's borders

invasive species a plant, animal or other organism that is not native to an area, and whose introduction has negative effects on its new environment

irrigation the watering of otherwise dry land by artificial means (e.g. pipes, ditches, sprinkler systems) to help in the growing of crops

L

land reclamation the process of creating new land from oceans, bays, harbours and estuaries by dumping rocks, silt from the sea bed or other materials into the water

landfill a method used to dispose of rubbish by burying it; also used to describe the place where rubbish is buried

landform a natural geographical feature or shape that appears on the Earth's surface (e.g. dune, hill, valley, beach and cave)

life expectancy a statistical measure of the average number of years a person in an area or population can expect to live; expressed in years

line graph a type of graph that displays data as a line

literacy rate a statistical measure of the percentage of people in an area or population that can read and write

lithosphere the outer rocky layer of Earth (i.e. crust)

location a place or position on the Earth's surface

longshore drift the process that moves sediment in a zigzag pattern along a beach by wash and backwash of waves approaching the shore at an angle

M

map a simplified plan of an area shown from directly above the area (i.e. plan view)

N

national park an area of natural beauty which is protected by law for the use of the general public and the protection of the environment

non-government organisation (NGO) any not-for-profit organisation independent of the government which is organised and administered on a local, national or international level; NGOs often rely on the support of volunteers

O

oblique aerial photograph a photograph of an object or area taken from a high point (i.e. a hilltop or aircraft) on an angle that is neither horizontal (see ground level photograph) nor directly above (see vertical aerial photograph)

ocean acidification the ongoing decrease in the pH level (a measure of acidity and alkalinity) of the Earth's oceans, caused by the uptake of carbon dioxide from the atmosphere by the water

overlay map a type of map that uses information on a piece of transparent paper or plastic (known as an overlay) placed over a base map; used to show the relationship between features or processes taking place on the Earth's surface

ozone layer a layer of ozone high in the atmosphere that protects the Earth from harmful amounts of the sun's rays

P

physical map a type of map that shows the locations and names of physical features of the Earth, such as mountains and rivers

physical pollutants a term used to describe a range of substances (e.g. particles of soil, chemicals, plastic bags, cigarette butts and other rubbish) that do harm to an environment

place a key concept in geography: a part of the Earth's surface that is identified and given meaning by people

political map a type of map that shows the locations and names of built features of the Earth, such as cities, roads, dams and railways

pollution any substance that is released into the environment that causes damage

population pyramid a type of graph that displays the percentage of males and females in a region or population grouped by age

primary data data collected first-hand for a geographical inquiry by the person conducting the inquiry (e.g. survey data, hand-drawn maps or photographs)

Q

qualitative data any information that can be recorded in words (e.g. Uluru is very large)

quantitative data any information that can be recorded as numbers (e.g. Uluru is 3.6 kilometres long)

R

radial pattern a pattern with its features spreading out like spokes on a wheel

rainforest a dense forest area found in tropical areas with warm temperatures and heavy rainfall

raw material the basic organic resources from which things are made; often used to refer to the Earth's natural materials such as oil, wood and water

refugee a person who travels from one country to another country to escape the effects of a natural disaster or conflict or to avoid persecution

relief the variations in elevation (height) of areas on the Earth's surface; on maps, the relief of an area (e.g. the hills and valleys) are often shown more clearly by shading rather than by using contour lines alone

S

salinity a measure of the amount of salt present in the soil

satellite image an image of an object or area taken from a satellite orbiting above the Earth's surface

savanna a biome of wide open spaces, where the vegetation is dominated by grasses; sometimes called a prairie, steppe or grassland

scale a key concept in geography: the level at which a geographical inquiry take place – personal, local, regional, national or global

scale (mapping) a system used to give an indication of distances on a map and the corresponding actual distances in the real world (e.g. line scale, written scale, ratio scale)

scatter plot a type of graph that shows two sets of data by plotted points along two axes, the pattern of which shows their correlation; also called a scatter graph or scattergram

secondary data data used for a geographical inquiry not collected by the geographer conducting the inquiry (e.g. textbooks, atlases and government websites)

semi-arid a term used to describe land and climate conditions that only receive enough rainfall to support limited vegetation (*see also* arid)

services one of the four categories of ecosystem services (also known as supporting services); processes that take place in the environment that support life (e.g. seed dispersal and absorption of carbon dioxide by trees and oceans

sinks one of the four categories of ecosystem services (also known as regulating services); processes that take place in the natural environment that absorb waste (e.g. microorganisms in the soil and water breakdown waste from humans and animals)

sources one of the four categories of ecosystem services (also known as provisioning services); these are natural products that can be used or converted by humans for use (e.g. wood from trees)

space a key concept in geography: the way things are arranged on the Earth's surface

spatial variation a term used to describe differences in the way built and natural features (e.g. towns, cities, rivers, mountain ranges, farming regions) are arranged on the Earth's surface

spirituality one of the four categories of ecosystem services (also known as cultural services); a sense of wellbeing and spiritual connection offered by the environment (e.g. aesthetic appreciation of certain landscapes, deep connections to the land)

spit a curved build-up of eroded material that forms at the mouth of a river

sustainability a key concept in geography: the ongoing capacity of Earth to maintain all life

sustainable development goals a set of 17 goals developed by the United Nations in 2015 that are designed to end poverty, protect the Earth from unsustainable development, and improve the wellbeing of all people

T

thematic map a type of map that shows details of a particular topic or data set (e.g. land use or the distribution of resources)

topographic map a type of map that shows the shape of the land, its relief and landforms

V

vertical aerial photograph a photograph taken from a high point directly above the object or area being photographed (i.e. plan view)

W

water scarcity a term used to describe a lack of sufficient water to meet the demands of an area or population

water table the highest underground level at which the rocks and soil in a particular area are completely wet with ground water

weather map a type of map that show conditions in the Earth's atmosphere, such as air pressure, wind speed, wind direction, and warm and cold fronts

wellbeing the ability of human beings to access the things they need in order to live happy and healthy lives (e.g. food, water, education, safety and security)

Glossary: History

A

acid rain rain that becomes acidic by mixing with polluting gases

Agent Orange one of the most poisonous defoliants used in Vietnam. It is believed to have been responsible for deformities and birth defects among Vietnamese people, and soldiers who fought in the war.

antisemitism prejudice, hatred or discrimination against Jews

apartheid a system of racial segregation enforced in South Africa from 1948 to 1994; literally meaning 'the state of being apart'

appeasement a policy adopted by Britain and France towards Germany from the mid-1930s until 1939; the policy was designed to avoid a second world war by granting certain allowances to Hitler and the Nazi government

arms race, the a situation in which rival countries compete to build and possess the largest stockpile of weapons; commonly used during the Cold War to refer to the competition between USA and USSR to stockpile nuclear weapons

artefact any object that is made or changed by humans (e.g. a primitive tool, the remains of a building)

assimilation (in Australian history) the process by which a minority group adopts the language and customs of a dominant population; in the mid-1900s assimilation of Indigenous Australians into white society became official government policy in Australia

assisted migrant a person wanting to settle in Australia whose transportation costs were paid by the government in exchange for a set period of unpaid work on arrival

asylum seeker a person who has applied for recognition (or sought protection) as a refugee

B

baby boomer someone born between 1946 and 1964; this was the time when there was a spike in birth rates after World War II (known as a baby boom)

bias a particular view or attitude towards someone or something, especially one that prevents the fair and reasonable consideration of an issue; prejudice

biosphere all living things on Earth (i.e. plants, animals, humans and other organisms)

bipartisan (in a two-party political system such as Australia) an action or vote involving agreement from both parties

***Blitz*, the** a term used to describe a period during World War II when major cities across the United Kingdom were the target of sustained bombing campaigns by the German air force

Blitzkrieg a German term meaning 'lightning war'; a military tactic adopted by German forces during World War II that involved launching sudden, intense attacks on enemies using fighter aircraft and tanks followed by the advance of ground troops

boat people a common term used to describe people who travel by sea to seek asylum (as opposed to gaining entry by land, air or via local processing centres)

C

capitalism a way of organising a society in which trade and industry are controlled by private owners for profit

cause and effect a key concept in history: the link between what causes an action and the outcome of that action; an appreciation of the fact that events that take place (both short-term and long-term) are linked and can have impacts on people and places for many years to come

censorship the act or practice of banning or limiting access to information, books or ideas that are considered sensitive or damaging

census a 'head count' or audit of the number of people living in a particular place at a particular time; information collected during a census can often include age, occupation, income, religious beliefs, etc.

chronology a record of events in the order they took place

civil rights the rights belonging to every individual including civil liberties, due legal process, equal protection under the law and freedom from discrimination; a term commonly used in the United States to refer to a set of rights and freedoms guaranteed by Amendments to the US Constitution and by subsequent acts of Congress

climate change a change in global or regional climate patterns; in particular, a change apparent from the mid to late 20th century onwards and attributed largely to the increased levels of atmospheric carbon dioxide produced by the use of fossil fuels

Cold War, the the state of political conflict and hostility that existed between the USSR (and its allies) and the USA (and its allies) from 1945 to 1990; characterised by threats, propaganda, public competition (see arms race) but not resulting in direct fighting or military conflict

colony a country or area under the full or partial political control of another country and occupied by settlers from that country

communism a way of organising a society in which the means of production (e.g. factories, farms and machinery) are publicly owned (by the state) and goods are distributed equally according to need; as opposed to privately owned and controlled systems such as capitalism

Communist Party Dissolution Bill a Bill introduced by the Menzies Government in 1950 to ban the Communist Party. The Bill was defeated.

conscription the compulsory recruitment of people to serve in the armed forces, often during times of war

contestability a key concept in history: an appreciation of the fact that some historians may challenge or dispute particular interpretations of historical sources, historical events or issues put forward by other historians

continuity and change a key concept in history: an appreciation of the fact that while some aspects of a society stay the same over time (continuity), others will develop and transform (change)

convict a person found guilty of a crime and sentenced by a court to serve some kind of punishment

Crown land land belonging to the monarch or to the state in a dominion (i.e. a self-governing country that is part of the British Commonwealth)

D

decolonisation the process by which a country that was previously a colony of an imperial power becomes politically independent

defoliants chemicals used by the Americans and Australians to kill the jungle vegetation during the Vietnam War

deforestation the removal of trees and other plant life from a forested area, either by cutting down or burning; usually carried out to clear the land for farming

displaced person a person forced to leave their home region or country due to war, persecution or natural disaster

dispossession to deprive a person or people of the possession or occupancy of land and property; when the British colonised Australia in the 18th century large numbers of Indigenous Australians were dispossessed of their ancestral lands, their hunting grounds and water resources; they were also cut off from their spiritual and cultural heritage as a result of dispossession

domino theory, the the theory put forward by US President Eisenhower that if one nation in South-East Asia adopted communism, others would follow; just like a row of dominoes topple once the first one is pushed over

E

economic migrant a person who migrates for reasons such as seeking employment or an improved financial position

ecosystem a complex community made up of living organisms that interact with each other and with their environment; an abbreviation for 'ecological system'. Made up of biotic and abiotic components.

emigrant a person who departs (leaves) their native country or region in order to settle permanently in another

emigration the act of leaving one country or region in order to settle in another

emissions trading scheme a scheme devised to cap the level of emissions, or pollution. Each country has an emission limit expressed in units, and countries can trade these units. For example, a country that has spare units (that is, it has not used all the emissions it is allowed) can sell them to another country that is over its emissions target.

empathy a key concept in history: the ability to understand another person's point of view, way of life, or decisions by taking their special circumstances and values into consideration

environmentalism a broad philosophy and social movement concerned with environmental protection

eugenics the belief in (and practice of) improving the genetic qualities of the human race by discouraging people with genetic defects or negative genetic traits (characteristics) from reproducing and/or encouraging people with positive genetic traits to reproduce

evidence a key concept in history: the information or clues gathered from a historical source; evidence can be used to support a hypothesis (theory) or prove it wrong

F

fascism a way of organising a society in which a government ruled by a dictator has complete power over the lives of the people, commerce and industry and in which any criticism of or opposition to the government is suppressed by force; an extreme form of nationalism

Federation the process by which separate colonies or states form a unified nation with a central government; the Commonwealth of Australia was established in 1901 after the six colonies were joined

fossil fuels fuel made from the decomposed (fossilised) remains of plants and animals that lived millions of years ago (e.g. coal, oil, gas)

free settler a person who leaves their homeland by choice to settle in a new country or colony

G

Gaia hypothesis the theory that the Earth is a single, interconnected, self-contained system

Geneva Convention, the a term used to describe a number of international treaties and agreements that established a code of conduct for all countries during times of war; the agreement outlines the rights of prisoners (both military and civilian), and outlines protections for the wounded, and for civilians living in or around war zones

genocide the deliberate and systematic (planned) mass killing of people based on their race, ethnicity, religion or culture

ghetto a section of a town or city established by the Nazis during World War II to confine and isolate Jews and other 'undesirables' from the wider population

globalisation the increasing interconnections between countries all around the world, particularly economic, political, trade and cultural exchanges

Great Depression, the a period of severe economic downturn between 1929 and 1934, that affected most countries around the world

greenhouse effect gases, such as carbon dioxide, absorb radiation from the Sun's rays trapping heat in the Earth's atmosphere

Green Revolution, the a period of research, development and alteration of agricultural techniques that took place between the 1940s and 1960s, most markedly in the developing world, which saw increased global agricultural production

guerrilla war a form of warfare in which small and independent groups of combatants (known as guerillas) take part in non-traditional fighting methods such as ambushes, sabotages and raids

guerrilla warfare (tactics) unconventional method of warfare used by the Vietminh. It involved an unseen enemy, surprise and ambush tactics.

H

'Hearts and Minds' a policy pursued by the US and Australian Governments during the Vietnam War. The aim was to win the enemy over by care and kindness and medical aid. The policy had some success.

historical inquiry the process of examining historical evidence, conducting research and asking questions about it to find out about the past

Holocaust, the the deliberate and systematic (planned) mass murder of Jews and other 'undesirables' by the Nazis during World War II (*see also Shoah*)

hyperinflation when a country experiences very high and rapidly increasing rates of inflation, which quickly devalues the local currency

hypothesis a considered opinion, theory or statement, based on research and evidence, about something that has not been proven

I

illegal immigrant a person who enters (arrives in) a country or region illegally in order to settle permanently

immigrant a person who enters (arrives in) a country or region to which they are not native in order to settle permanently

immigration the act of entering and settling permanently in a country or region to which a person is not native

industrialise to transform from an economy based primarily on agriculture and farming to one based on manufacturing and industry

Industrial Revolution, the the name given to the period of rapid development in manufacturing and industry from 1750 to 1900, particularly in Britain

infrastructure manmade structures for public use – for example, roads, bridges, wharves and dams

integration (in Australian history) an immigration policy introduced during the 1960s after the failure of assimilation; integration was based around the belief that new migrants should conform to the attitudes, values and beliefs of the wider society while concealing their traditional cultures and languages

internal combustion engine an engine that generates power by burning petrol, oil or another fuel with air inside the engine

internment the detention or imprisonment of people (commonly in large numbers) without trial, especially during times of war

K

Ku Klux Klan a secret society of white supremacists originally formed in the southern states of the USA after the American Civil War to protest against the granting of civil rights to freed black slaves; the group uses violence and acts of intimidation to achieve its goals

L

League of Nations, the an international organisation established at the end of World War I to maintain world peace and prevent the outbreak of future wars by encouraging nations to negotiate with one another; the League of Nations had some early successes but ultimately failed in its primary purpose of preventing future wars

M

mandatory detention (in Australian history) a feature of Australian immigration policy under which the Australian government legislated for the compulsory detention of all persons entering the country without a valid visa while security and health checks are undertaken and the legitimacy of their claims are processed

manifesto a public document outlining a set of principles, policies, or intentions, especially of a political nature

migrant a person who moves from one country or region to another to settle there permanently

migration the movement of people from one place to another

militarism a focus within a country on boosting the strength of the military by growing the armed forces and spending on military equipment

militia a term used to describe a fighting force that is made up of non-professional (civilian) fighters

mission (in Australian history) a settlement established during the 19th century (usually by Christian missionaries) to accommodate, educate and convert Indigenous Australians into Christians by teaching them European culture and beliefs

monoculturalism the practice of actively preserving a single national culture through the exclusion of external influences; a policy of monoculturalism aims to achieve a single, homogeneous society without diversity through approaches like assimilation and integration

moratorium an anti-war protest intended to make the nation pause and reassess its commitment to the war

multiculturalism the practice of a doctrine that several different cultures can coexist peacefully and equitably in a single country; a policy of multiculturalism aims to achieve a society in which a range of different cultures are made to feel included, accommodated and protected by law

N

nationalism a sense of pride in, and love of, one's country; also the idea that one nation's culture and interests are superior to those of another nation

native title (in Australian history) the recognition by Australian law that some Indigenous people have rights and interests to the land that come from their traditional laws and customs; native title overturned the long-held legal position that Australia was *terra nullius* ('land belonging to no one') when European settlement occurred

Nazi a member of the National Socialist Party in Germany, led by Hitler before and during World War II

non-renewable resource a resource that cannot be regenerated once it is used up (e.g. oil, coal)

P

paternalism the practice of people in positions of authority restricting the freedom of others. There was paternalism from European Australians towards Indigenous Australians until the mid-20th century.

perspectives a key concept in history: a point of view about an event or issue; a person's perspective is often influenced by their knowledge, culture or beliefs

popular culture film, television, music, sport, etc., that has broad appeal and is international in scope

primary source a source that existed or was made at the time being studied

prisoner of war (POW) a person (particularly a member of the armed forces) who is captured and held by enemy forces during times of war

propaganda information or material that attempts to influence the behaviour or opinions of people within a society; propaganda can take many forms (e.g. posters, flyers, advertising campaigns, films) and is designed to promote a particular cause or course of action and/or damage the cause of an enemy

protection (in Australian history) a government policy introduced in Australia from 1850 onwards, designed to give the government extensive power over the lives of Aboriginal people (including the regulation of where they lived, where they worked, who they married and what languages they spoke); under this policy, a number of reserves and missions were established around Australia and many Aboriginal people were forced to move and live there

protectorate a section of land under the control of a protector (a government official responsible for administering the affairs of the Indigenous population)

pull factors factors or characteristics that are attractive about a place that a person is considering moving to

push factors factors or characteristics that are unattractive about a place that a person is considering moving away from

Q

quota an official limit on the number or amount of people or things that are allowed

R

rationing the carefully controlled distribution of resources, goods, or services that are scarce; during World War II, rationing systems were introduced by the governments in Britain and Australia to ensure that the limited supplies of basic goods were distributed among the population evenly

reconciliation (in Australian history) a term used to refer to the bringing together of Indigenous and non-Indigenous Australians; reconciliation is a process that involves working to overcome past divisions and address inequalities between Indigenous and non-Indigenous Australians

re-education camps places of harsh punishment established after the communist victory in Vietnam in 1975

referendum (in Australian history) a national vote of the people on actions proposed by the government; any proposed changes to the Australian Constitution must be put to a vote in a referendum

refugee a person who has fled their home country to seek safety in another country as a result of conflict or persecution (or a range of other reasons recognised by law)

reparations money paid by one country to another as compensation for damage, injuries and deaths it has caused during war

reserve (in Australian history) a settlement established during the 19th century in Australia (usually by colonial powers) to accommodate, educate and 'civilise' Indigenous Australians by teaching them European culture and beliefs

reserved occupations occupations that were considered vital to the war effort at home, such as farming and manufacturing. Men working in these occupations were not allowed to enlist in the armed forces.

S

secondary source a source created after the time being studied

segregation (in Australian history) the government policy and practice of separating the Aboriginal and Torres Strait Islander peoples from the European settlers; (in US history) the policy of separating African American people from white people

self-determination the right of the people in a particular place to choose the form of government they will put in place and the course of action they will take

Shoah a Hebrew word meaning 'catastrophe', used to describe the extermination of Jews by the Nazis during World War II (*see also* Holocaust)

significance a key concept in history: the importance given to a particular historical event, person, development or issue

sitcom an abbreviated term used to describe a 'situation comedy'; a television show with set characters who, every episode, find themselves in humorous situations

skilled migrant a type of migrant granted preferential treatment based on their skill or profession

source any item (e.g. artefact, building, document) that has been left behind from the past; historical sources can be divided into two categories depending on when they were created (see primary source and secondary source)

Stolen Generations, the the children of Aboriginal and Torres Strait Islander descent who were forcibly removed from their families by government officials and church missions in Australia and raised by white Australians; this practice was part of official government policy between around 1909 and 1969

superpower a very powerful and dominant nation; especially used during the Cold War era to refer to the USA and the USSR (both nuclear powers considered to be most powerful nations on Earth)

sustainability a concept that relates to the ongoing capacity of the Earth to maintain all life; this means developing ways to ensure the Earth's resources are used and managed responsibly so they can be maintained for future generations

T

tariff a tax (usually applied to goods being imported or exported)

timeline a visual representation of time showing a sequence of related historical events in chronological order

Treaty of Versailles, the a treaty (binding agreement) that ended World War I and forced Germany to accept responsibility for starting the war and to pay reparations

U

United Nations (UN), the an intergovernmental organisation founded on 24 October 1945 after the end of World War II to promote peace and prevent the future outbreak of armed conflicts around the world

Universal Declaration of Human Rights, the an international document that outlines basic rights and fundamental freedoms to which all human beings are entitled; the Declaration was adopted by the General Assembly of the United Nations in 1948

V

Vietminh a political party devoted to Vietnamese independence, formed by Ho Chi Minh in 1941

W

White Australia policy, the a term used to describe a series of government policies introduced after Federation in 1901 that prevented 'non-white' immigrants from settling in Australia, favouring instead those from certain European nations (especially Britain); these policies were progressively overturned between 1949 and 1973

Glossary: Economics and business

A

automation when work once completed manually is replaced with automatic equipment in manufacturing or other production processes

B

balanced budget when government revenue is exactly equal to expenditure

Better Life Index the OECD Better Life Index measures wellbeing across countries, based on 11 topics that cover areas of material living conditions and quality of life

borrowing to take money from a bank or financial institution with the intention of paying it back over a period of time with interest

business the production of goods or services in exchange for money

business processes a series of tasks or actions that are undertaken by a business to produce its product

C

capitalism a set of economic and political ideas stating that private individuals should own productive resources such as land and capital from which they can earn profit

carbon tax polluters being charged a tax to pay per tonne of carbon released into the atmosphere

competitive advantage when a business is able to outperform similar businesses in a market. The ability to outperform may be due to factors such as skilled personnel, the ability to reduce costs and improve quality.

consumer an individual who purchases goods or services for personal use

Consumer Price Index (CPI) a measurement of retail price changes of a constant basket of goods and services, representative of what households in Australia spend

cost–benefit analysis estimating what will need to be paid (costs) and possible profits (benefits) derived from a business proposal

D

deficit budget when government revenue is less than government expenditure

depreciation an asset such as a computer reducing in value over time due to wear and tear

depression when economic activity is in decline over the long term

deregulation reducing or eliminating government power in an industry to promote better competition in that industry

domestic within a country

E

economic growth an increase in the amount of goods and services produced per person within a specific period of time

economics the study of how people produce, consume and share wealth

economies of scale producing larger quantities of a good or service that results in reduced unit costs of production

economist an individual who studies the relationship between the resources that a geographic area (a country for example) has and what it is able to produce

economy a system that involves the production, distribution, trade and consumption of goods and services by individuals, businesses, organisations or governments

Emissions Trading Scheme businesses having to pay for emitting carbon dioxide above the government's set limit. If a business emits carbon dioxide below the set limit, they can receive a credit which can be purchased by other businesses who have emitted carbon dioxide above the government's limit.

employee an individual who is hired to perform specific tasks in return for monetary payment

employer business or organisation hiring worker/s to perform specific tasks in return for payment

enterprise agreement

1 an agreement made directly at the enterprise level between employers and employees about wages and working conditions

2 improving a company's ability to make decisions about their workforce in relation to employee wages and conditions

expenditure the amount of money spent by a person or government

F

final goods goods that are ready to be consumed now rather than being used to make other goods

fiscal policy the government's management of the federal budget, adjusting expenditure and tax rates to influence the performance of the economy

fixed interest an interest rate on a loan or mortgage that remains the same for the term of the loan or part of its term

franchise a type of business where one party has a legal agreement to use an existing business's name, knowledge, processes and trademarks to sell goods or services

G

globalisation the process that involves all the countries of the world being linked together, resulting in an exchange of views, ideas, products and culture

goods and services products made for consumers. Goods are tangible products that can be touched, such as bread. Services are intangible products that cannot be touched but benefit the consumer in some way, such as tutoring.

Goods and Services Tax a tax added to the value of some goods and services. Currently in Australia the tax is 10% of the value of goods and services sales.

gross tax or other contributions have not been deducted

Gross Domestic Product (GDP) the total market value of all goods and services produced within Australia in a given time frame

I

import quotas a physical limit is placed on the quantity of an imported good that can enter the country

industrialised a country or region that has developed industries on a wide scale, *see* industry

industry the productive activity of manufacturers or businesses that are involved in the process of making goods and services

inflation when the general level of prices paid for goods and services over a certain period of time increases

innovation a new idea or more effective product or process which makes the product better than ever before

insurance a guarantee that there will be compensation for loss, damage, illness or death should it occur in the future in return for a specified payment

interest (on a loan) money paid at a particular rate for the use of money lent

interest rates the amount a borrower must pay to a lender for the use of assets such as money – usually expressed as a percentage of the total amount borrowed

investing putting money into shares, property or other financial schemes in the hope of making a profit

L

labour market reform reducing or eliminating government power in an industry to promote better competition in that industry

labour resources inputs from human effort (physical and/or mental) used in the production of goods and services

living standards the level of wealth, material goods, comfort and life necessities available to people living in a geographical area

M

macroeconomic policy economic policy that focuses on an industry or market segment. It focuses on improving production over the medium to longer term.

marketing activities that convey the value of a good or service to a customer in order to increase sales

material living standards standards that can be easily measured in terms of income per person, or consumption or purchase of goods and services

microeconomic policy economic policy that affects a particular company, industry or market. It often focuses on promoting competition, productivity and efficiency.

Millennium Development Goals a UN initiative in which eight international development goals were established following the Millennium Summit of the United Nations in 2000. One of the goals is to halve poverty.

monetary policy actions by the Reserve Bank of Australia that affect the money supply and interest rates

N

national budget a law outlining a nation's expected income and spending for a given period of time

natural resources inputs from nature such as water, forests and fertile land used in the production of goods and services

non-material living standards standards that are not easily measured as they are intangible, and refer to the qualitative aspects of our lives, such as enjoyment of nature and feeling safe in the community

O

OECD the Organisation for Economic Cooperation and Development (OECD) consists of 30 member countries formed to discuss and promote economic and social policy

opportunity cost the cost of the next best alternative use of resources

P

positioning a marketing strategy that creates a unique position for a product compared to similar products on the market

product an item (either a good or service) that is offered for sale

profit the difference between what was earned and what was spent in order to buy, operate or produce something

R

recession when economic growth falls for two or more quarters in a row

revenue income a business receives from its business activities such as the sale of goods and services to customers

S

seasonally adjusted a statistical method that removes seasonal variation in time series data to gain a truer representation

segmentation dividing into parts

service sector companies, business and government enterprises that provide intangible goods that benefit the consumer such as tutoring, accountancy, hairdressing and legal advice

small business according to the Australian Bureau of Statistics a small business is one that employs fewer than 20 people

subsidies a payment by the government or a public body to assist a producer or industry to keep the price of the goods or services low or competitive

surplus budget when government revenue is greater than government expenditure

T

tariffs a tax on imported goods and services

trade liberalisation removing or reducing restrictions or barriers to trade between nations

U

unemployment rate the percentage of people who are in the labour force who are unemployed. The labour force includes those who are employed and unemployed.

Glossary: Civics and citizenship

A

Acts laws made by parliament. Also referred to as legislation or statutes.

asylum protection by a nation to a person who has left their native country as a political refugee

asylum seeker a person who seeks protection as a refugee and is still waiting to have his/her application for refugee status assessed

B

bicameral system a parliament consisting of two houses

bilateral where a treaty exists between Australia and one other country

C

concurrent powers areas in which both the Commonwealth and state parliaments can make law (e.g. marriage & taxation). If the Commonwealth and the states make laws in an area of power that conflicts, the Commonwealth law will prevail

constitution a set of rules by which a country or state is governed

constitutional conventions a series of meetings held in the late 1800s, where representatives from each colony discussed the creation of a new central Commonwealth Parliament.

constitutional monarchy a form of government in which the elected parliament has the power to make law but a monarch (e.g. a Queen) remains the head of state

contravening disobeying or breaching

Crown the Queen of England, who is the Head of State and a part of each parliament in Australia. The Governor-General at Commonwealth level and the Governor at state level represents the Queen.

D

democracy a system of government in which the people have the power to determine how they will be ruled or managed and so elect a parliament to make and implement laws on their behalf

discrimination treating, or proposing to treat, a person or a group of people unfavourably because of personal characteristics such as age, race, disability, physical features or political beliefs

dispute legal, an argument or disagreement between two or more parties to be resolved by the legal system

double majority the requirement that any proposed change to the wording of the Australian Constitution must be passed by a majority of voters in Australia and a majority of voters in a majority of states

E

electorate a designated geographical area that is represented by an elected member in parliament

exclusive powers areas in which only the Commonwealth parliament can make law (e.g. defence and currency)

F

federal system a system of government where, for the purposes of governing and law-making, the nation has one central parliament (with the power to make laws for the entire nation) and numerous state parliaments (each with the power to make laws for the residents of their state)

federation the establishment of a system of government with one central parliament (to make laws for the entire nation) and numerous state parliaments (with the power to make laws for the residents of the states)

Federation Day 1 January 1901 – the day when the British Parliament passed a law called the *Commonwealth of Australia Constitution Act 1900* (UK) to unite the separate colonies of Australia and form one nation with a federal system of government

freedom of political communication the right of Australians to freely discuss and debate political issues

G

global citizen a person who identifies as being part of the world community and acts according to and seeks to build world community values and practices

government the elected members of parliament who make decisions for a nation or state. The government is made up of the party or coalition that has won a majority of seats in the lower house of parliament. The lower house of federal parliament is the House of Representatives. The lower house of the Victorian state parliament is the Legislative Assembly.

Governor-General the Queen's Representative in Australia

H

House of Representatives the lower house of the Commonwealth parliament

house of review term often used to refer to the Senate in its role as reviewing legislation that has come from the House of Representatives.

human rights rights that all human beings possess whatever their nationality, place of residence, sex, national or ethnic origin, colour, religion, language, or any other status

humanitarian concerned with or seeking to promote the welfare of humans

I

implied rights rights that are deemed to exist by the High Court interpreting the Constitution. For example, over the years the High Court has, in various cases, implied the right to freedom of political communication.

J

judge the person who presides over the Victorian County and Supreme Courts (Trial Division)

judiciary the courts

Justices experienced and senior judges that generally sit in the Supreme Court or higher

K

Kyoto protocol an international treaty to reduce greenhouse gases emissions

L

laws formal 'legal rules' that are designed to govern the way in which people behave and act so we can all live together in one peaceful and united society

legal obligations a duty that is enforced by law

legislation a law made by parliament. Also referred to as an Act of Parliament or statute.

liberal democracy a form of government that is a representative democracy. A liberal democracy seeks to protect the rights of the individual such as the right to vote in free and democratic elections

M

majority rule the party or coalition that has won the majority of seats rules, usually determined by 50 per cent plus one

Millennium Development Goals a UN initiative in which eight international development goals were established following the Millennium Summit of the United Nations in 2000. One of the goals is to halve poverty.

multilateral where a treaty exists between Australia and two or more countries

N

national budget an annual outline of how much money the government expects to receive and how it plans to spend it

P

parliament the national or state law-making body that is made up of elected representatives in both the upper and lower house with a head of state. In Australia the national parliament is referred to as the Commonwealth or federal parliament.

parliamentary democracy a system of government where people elect representatives to parliament in order to make laws which reflect the majority of voter's views

People's Consultative Assembly the Indonesian national parliament, which is responsible for making laws that apply to the whole country.

People's Representative Council the lower house of the Indonesian national parliament (or People's Consultative Assembly), often referred to as the House of Representatives

pluralist society a diverse society where there is tolerance of different beliefs

preamble a short introduction commonly provided at the beginning of an Act of Parliament (or a Constitution) that explains its broad aims and objectives

Provincial Legislative Assembly local or state parliaments elected by the residents of specified geographical area called a province

R

ratification a process that legally binds Australia to implement the treaty

referendum the process for changing the wording of the Australian Constitution. This requires a proposal for change to be passed by both houses of the Commonwealth Parliament and a large proportion (i.e. a double majority) of Australian voters.

refugee someone who has been assessed as having been forced to flee their country due to war, persecution, or natural disaster

Regional Representatives Council the upper house of the Indonesian national parliament (or People's Consultative Assembly)

representative government a parliamentary principle that requires members of parliament to make laws for and on behalf of the majority of voters. If a government does not make laws that reflect the views and values of the majority they risk not being re-elected.

republic a system of government where the people vote to determine the government (or Head of State) rather than being governed by a hereditary monarch or Crown (e.g. a King or Queen)

residual powers areas of law making power not mentioned in Constitution and so belong to the states only. (e.g. education, public transport, water, and hospitals)

resolution a formal proposal to be adopted in law

responsible government a parliamentary principle that requires members of parliament to be answerable to the voters and carry out their duties in an honest manner or resign

royal assent written approval by the Queen's representative, on behalf of the Queen, for a bill to become law given after both houses of parliament have passed the bill

S

Senate the upper house of the federal parliament of Australia has 76 senators, 12 from each of the six states and two each from the Northern Territory and the Australian Capital Territory

senators individuals elected to the upper house of the federal parliament (i.e. the Senate)

separation of powers a parliamentary principle that ensures no single group or body within our parliamentary system – that is, neither the parliament, the government or the courts – has the power to make, implement, apply and interpret the law

social cohesion the ability of a group of people or community to live together in a peaceful and unified manner

specific powers areas in which the Commonwealth parliament can make law (e.g. defence, currency, marriage and taxation). Specific powers may be concurrent or exclusive

T

treaties written international obligations which a country is bound to observe

U

United Nations an international organisation formed in 1945 with the aim of increasing political and economic cooperation among member countries

Universal Declaration of Human Rights adopted by the United Nations General Assembly on 10 December 1948 that sets out basic human rights that should be universally protected

upper house the second chamber of a two-chamber parliament. The Senate is the upper house in the federal parliament and the Legislative Council is the upper house of the Victorian state parliament.

V

vilify to speak or write about another person in an insulting or degrading manner

W

Westminster parliamentary system the parliamentary system of Great Britain where parliament consists of two houses and the Crown. It is the parliamentary system used in Australia.
